Chapter 1. General Information

1-1. Purpose of This Order. This order provides standard abbreviations (aircraft type designators) for the most common aircraft that are provided with air traffic services (ATS). This order also provides additional reference information used by ATS.

1-2. Audience. This order applies to all Air Traffic Organization (ATO) personnel and anyone using ATO directives.

1-3. Where to Find This Order. This order is available on the MYFAA employee Web site at https://employees.faa.gov/tools_resources/orders_notices/ and http://faa.gov/air_traffic/publications.

1-4. Cancellation. This order cancels FAA Order JO 7360.1E, Aircraft Type Designators, on the effective date of this order.

1-5. Distribution. This order is distributed to selected offices in Washington headquarters, service area offices, regional offices, the William J. Hughes Technical Center, the Mike Monroney Aeronautical Center, all air traffic field facilities, international aviation field offices, and interested aviation public.

Chapter 2. Contents of This Order

2-1. Aircraft Type Designators. An aircraft type designator is an abbreviated form of an aircraft type. This designator is used in air traffic service automation systems that exchange data. The aircraft type designator is primarily used in flight plans and air traffic service messages but may be used in other matters when needed. Appendix A of this order contains an alphabetized list of aircraft type designators.

2-2. How Designators are Formulated. The International Civil Aviation Organization (ICAO) has the role of creating standard aircraft type designators for aircraft that commonly request air traffic service. ICAO assigns an aircraft type designator using the following principles:

a. Only one designator will be assigned per aircraft type.

b. A designator will be derived from the manufacturer's model number or name, or from a common military type.

c. The designator will not be longer than four characters and will generally begin with a letter.

d. An assigned designator will not be changed for: license-built aircraft, when an aircraft model is sold to or manufactured by another company, when the manufacturer's name changes, or when the aircraft type is derived or converted from another type.

e. A different designator for an alternate or subtype version of the aircraft will only be allocated when there is a significant difference in performance for ATS or no shared designator can be assigned.

f. Homebuilt, amateur-built, or kit plane aircraft that exist in operationally significant numbers will be assigned a designator; however, these aircraft will only be listed under the original designer or under the manufacturer that produces or produced the aircraft type in series.

g. In general, an aircraft type designator will be assigned to all aircraft heavier than micro-/ultra-light. For the purpose of ICAO Document 8643:

(**1**) Micro-/ultra-light are those aircraft types with a maximum certified take-off weight of 1,000 pounds or less and a stall speed not greater than 35 knots.

(**2**) Micro-/ultra-light helicopters and gyrocopters are those helicopters or gyrocopters with a maximum certified take-off weight of 1,000 pounds or less.

h. Roman numerals used as part of aircraft model names or numbers will be replaced by Arabic numerals.

NOTE – Amphibians are denoted as "@Fixed-wing" and seaplanes are denoted as "$Fixed-wing."

b. Gyrocopter.

c. Helicopter.

d. Tiltrotor.

2-7. Aircraft Engine Number and Type. The number of engines and engine types are included as part of the aircraft description. The following are abbreviations for engine types:

2-9. Wake Turbulence Category (WTC). In an ICAO flight plan, the WTC indicator follows the aircraft type designator in Item 9 (Number and Type of Aircraft and Wake Turbulence Category), for example, A345/H, GAZL/L, E737/M, and is based on the maximum certificated take-off weight, as follows:

a. SUPER (J) – aircraft types specified as such in ICAO Doc 8643, Aircraft Type Designators;

b. Heavy (H) – aircraft types of 300,000 pounds or more, with the exception of aircraft types listed in ICAO Doc 8643 in the SUPER (J) category;

c. Medium (M) – aircraft types less than 300,000 pounds and more than 15,400 pounds;

d. Light (L) – aircraft types of 15,400 pounds or less.

NOTE *–*
1. *Where variants of an aircraft type fall into different ICAO wake turbulence categories, both categories are listed, such as Light/Medium or Medium/Heavy. In these cases, it is the responsibility of the pilot or operator to enter the appropriate single character WTC indicator in Item 9 of the ICAO flight plan.*

2. *Special Designators, such as GLID, UHEL, ZZZZ, etc., require a WTC in an ICAO flight plan using the criteria above. In these cases, it is the responsibility of the pilot or operator to enter the appropriate single character WTC indicator in Item 9 of the ICAO flight plan.*

FAA Order JO 7110.118, Land and Hold Short Operations (LAHSO), includes procedures and conditions for conducting land and hold short operations at designated airports. Aircraft with an assigned LAHSO group are listed in the appendices of this document.

a. TBL 1 is an air traffic control tool for identifying aircraft, by groups, that are able to land and hold short based on the available landing distance. Air traffic managers must utilize TBL 1 for identifying aircraft by groups that are able to land and hold short at their facility in accordance with FAA Order 7110.118, Land and Hold Short Operations.

b. At locations requesting to utilize LAHSO with aircraft requiring greater than 8,000 feet of available landing distance, air traffic managers must coordinate with the appropriate Flight Standards office and Air Traffic Operations to obtain a letter of authorization approving LAHSO.
