

# Frames

The background features a gradient from dark blue to black. A thin, light blue curved line starts from the left edge and curves downwards towards the center. A larger, semi-transparent blue triangular shape is positioned in the lower right quadrant, pointing towards the center.

# Frames

- Definition
  - Frames shall be titled with text that facilitates frame identification and navigation

# Frames

- Issue
  - Frames present difficulties for users with disabilities when those frames are not easily identifiable to assistive technology

# Frames

- Solution
  - Use the “TITLE” attribute.
- Why
  - When frames are used in a web page, the first page that is loaded must include a `<frameset>` tag that encloses the basic layout of the frames on the page. Within the `<frameset>` tag, `<frame>` tags specify the name, initial contents, and appearance of each separate frame including a description of the `<frame>` using the “TITLE” attribute.

# Frames

- Code Example:

```
<FRAMESET border=0 frameSpacing=0 frameBorder=0 cols=145,*>  
  <FRAME title="Side Navigation Menu" name=left  
  src="AHR_files/left_side.htm">  
  <FRAMESET border=0 frame Spacing=0 rows=140, *  
  frameBorder=0>    <FRAME title="Top Navigation Menu"  
  name=welcome src="AHR_files/welcome.htm" scrolling=no>  
    <FRAME title="Main Content Area" name=right  
  src="AHR_files/right_side.htm">  
  </FRAMESET>  
</FRAMESET>
```

# Frames

- Common Errors
  - Leaving out the TITLE attribute
  - TITLE text is too vague or not descriptive
    - i.e. For left navigation bar saying “left side” instead of “left side menu navigation bar”
