This handbook supersedes FAA-H-8261-1A, Instrument Procedures Handbook, dated 2007. It is designed as a technical reference for all pilots who operate under instrument flight rules (IFR) in the National Airspace System (NAS). It expands and updates information contained in the FAA-H-8083-15B, Instrument Flying Handbook, and introduces advanced information for IFR operations. Instrument flight instructors, instrument pilots, and instrument students will also find this handbook a valuable resource since it is used as a reference for the Airline Transport Pilot and Instrument Knowledge Tests and for the Practical Test Standards. It also provides detailed coverage of instrument charts and procedures including IFR takeoff, departure, en route, arrival, approach, and landing. Safety information covering relevant subjects such as runway incursion, land and hold short operations, controlled flight into terrain, and human factors issues also are included.

This handbook conforms to pilot training and certification concepts established by the FAA. The discussion and explanations reflect the most commonly used instrument procedures. Occasionally, the word “must” or similar language is used where the desired action is deemed critical. The use of such language is not intended to add to, interpret, or relieve pilots of their responsibility imposed by Title 14 of the Code of Federal Regulations (14 CFR).

It is essential for persons using this handbook to also become familiar with and apply the pertinent parts of 14 CFR and the Aeronautical Information Manual (AIM). The CFR, AIM, this handbook, AC 00-2.15, Advisory Circular Checklist, which transmits the current status of FAA advisory circulars, and other FAA technical references are available via the internet at the FAA Home Page http://www.faa.gov. Information regarding the purchase of FAA subscription aeronautical navigation products, such as charts, Airport/Facility Directory, and other publications can be accessed at http://faacharts.faa.gov.

This handbook is available for download, in PDF format, from the FAA’s Regulations and Policies website at:
http://www.faa.gov/regulations_policies/handbooks_manuals/aviation/instrument_procedures_handbook/

This handbook is published by the United States Department of Transportation, Federal Aviation Administration, Flight Technologies and Procedures Division, Flight Procedures Standards Branch, AFS-420, 6500 S. MacArthur Blvd, Ste 104, Oklahoma City, OK 73169.

Comments regarding this publication should be sent, in email form, to the following address: 9-AMC-AFS420-IPH@faa.gov

John S. Duncan
Director, Flight Standards Service
The following individuals and their organizations are gratefully acknowledged for their valuable contribution and commitment to the publication of this handbook:

FAA: Project Managers: Lt Col James Rose and Maj Brian Strack (USAF); Assistant Project Manager: Gilbert Baker; Editor: Tara Savage; Technical Illustrator: Melissa Spears; Subject Matter Experts: Dean Alexander, John Bickerstaff, Barry Billmann, John Blair, John Bordy, Larry Buehler, Dan Burdette, Kel Christianson, Jack Corman, Rick Dunham, Dave Eckles, Gary Harkness, Hooper Harris, Harry Hodges, John Holman, Bob Hlubin, Gerry Holtorf, Steve Jackson, Scott Jerdan, Alan Jones, Norm Le Fevre, Barry Miller, John Moore, T.J. Nichols, Jim Nixon, Dave Olsen, Don Pate, Gary Powell, Phil Prasse, Larry Ramirez, Mark Reisweber, Dave Reuter, Jim Seabright, Eric Secretan, Ralph Sexton, Tom Schneider, Lou Volchansky, Dan Wacker, Mike Webb, and Mike Werner.

The Instrument Procedures Handbook was produced by the Federal Aviation Administration (FAA) with the assistance of Safety Research Corporation of America (SRCA).

The FAA also wishes to acknowledge the following contributors:

Aircraft Owners and Pilots Association (www.aopa.org) for image used in chapter 5.

Volpe National Transportation Systems Center (www.volpe.dot.gov) for image used in chapter 5.

Gary and Cecil Tweets at ASAP, Inc. (www.asapinc.net) for image used in chapter 1.

The staff of the U.S. Air Force Advanced Instrument School (HQ AFFSA/AIS) for various inputs.
The United States Government does not endorse products or manufacturers. Trade or manufacturers’ names appear herein solely because they are considered essential to the objective of this handbook.
# Table of Contents

Preface ........................................................................................................ iii
Acknowledgments ....................................................................................... iv
Table of Contents ....................................................................................... vii

## Chapter 1

**Departure Procedures** ........................................................................ 1-1
Introduction .................................................................................................. 1-1
**Surface Movement Safety** .................................................................... 1-2
Airport Sketches and Diagrams ................................................................. 1-2
Airport Facility Directory (A/FD) ................................................................. 1-2
**Surface Movement Guidance Control System (SMGCS)** ....................... 1-3
**Advanced Surface Movement Guidance Control System (A-SMGCS)** ... 1-4
**Airport Signs, Lighting, and Markings** .................................................. 1-4
**Runway Incursions** ................................................................................. 1-5
**Runway Hotspots** .................................................................................. 1-6
**Standardized Taxi Routes** ..................................................................... 1-6
**Taxi and Movement Operations Change** .............................................. 1-6
**Weather and the Departure Environment** ............................................. 1-8
**Takeoff Minimums** ............................................................................... 1-8
**Takeoff Minimums for Commercial Operators** ..................................... 1-8
**Operations Specifications (OpSpecs)** ................................................. 1-8
**Ceiling and Visibility Requirements** .................................................... 1-10
**Visibility** ................................................................................................. 1-10
**Prevailing Visibility** .............................................................................. 1-10
**Runway Visibility Value (RVV)** ............................................................ 1-10
**Tower Visibility** ..................................................................................... 1-10
**Runway Visual Range (RVR)** ................................................................. 1-10
Adequate Visual Reference ........................................................................ 1-11
**Ceilings** .................................................................................................. 1-11
**Automated Weather Systems** ................................................................. 1-11
**Automatic Terminal Information Service (ATIS)** ................................ 1-12
**Digital Automatic Terminal Information Service (D-ATIS)** ................. 1-12
**IFR Alternate Requirements** ................................................................ 1-12

## Chapter 2

**En Route Operations** ........................................................................... 2-1
Introduction .................................................................................................. 2-1
**En Route Navigation** ............................................................................. 2-2
**Airways** ................................................................................................ 2-2
**Air Route Traffic Control Centers** ......................................................... 2-3
**Safe Separation Standards** .................................................................. 2-4
**Sectors** .................................................................................................. 2-5
**In-flight Requirements and Instructions** ................................................. 2-6
**High Altitude Area Navigation Routing** ............................................... 2-7

**Alternate Minimums for Commercial Operators** .................................. 1-14
**Departure Procedures** .......................................................................... 1-14
**Design Criteria** ..................................................................................... 1-14
**Low, Close-In Obstacles** ....................................................................... 1-17
**One-Engine-Inoperative (OEI) Takeoff** ................................................ 1-19
**Obstacle Clearance Requirements** ......................................................... 1-19
**Categories of Departure Procedures** .................................................... 1-22
**Obstacle Departure Procedures (ODPs)** ............................................... 1-22
**ODP Flight Planning Considerations** ..................................................... 1-23
**Standard Instrument Departures (SIDs)** ............................................. 1-23
**Transition Routes** ................................................................................ 1-26
**SID Flight Planning Considerations** ...................................................... 1-26
**Area Navigation (RNAV) Departures** .................................................. 1-30
**SID Altitudes** ........................................................................................ 1-36
**Pilot Responsibility for Use of RNAV Departures** ................................ 1-36
**Radar Departures** ................................................................................ 1-37
**Diverse Vector Area** ............................................................................. 1-38
**Visual Climb Over Airport (VCOA)** ...................................................... 1-38
**Noise Abatement Procedures** ............................................................... 1-42
**Procedural Notes** ................................................................................ 1-42
**DP Responsibilities** .............................................................................. 1-42
**Departures From Tower-Controlled Airports** ...................................... 1-43
**Departures From Airports Without an Operating Control Tower** ........ 1-43
**Ground Communication Outlet** ............................................................. 1-43
**See and Avoid Techniques** .................................................................. 1-43
**VFR Departures** .................................................................................. 1-44
Preferred IFR Routes ......................................................... 2-7
Substitute Airway or Route Structures ...................... 2-9
Substitute Airway En Route Flight Procedures .......... 2-9
Tower En Route Control .................................................. 2-10
Tower En Route Control Route Descriptions .......... 2-10
Airway and Route System .............................................. 2-13
Airway/Route Depiction ................................................ 2-13
IFR En Route Low Altitude Chart .............................. 2-14
IFR En Route High Altitude Chart ............................... 2-17
VHF Airways .................................................................. 2-18
VOR Airway Navigation Procedures ........................... 2-18
LF/MF Airways .............................................................. 2-18
En Route Obstacle Clearance Areas ........................... 2-18
Primary and Secondary En Route Obstacle
Clearance Areas .............................................................. 2-19
Changeover Points ......................................................... 2-20
Direct Route Flights ......................................................... 2-21
Published RNAV Routes ................................................ 2-23
Composition of Designators ......................................... 2-23
Use of Designators in Communications ..................... 2-24
Random RNAV Routes .................................................... 2-25
Off-Airway Routes .......................................................... 2-26
Off-Route Obstruction Clearance Altitude ................. 2-27
Monitoring of Navigation Facilities ............................ 2-29
Navaid Accuracy Check .................................................. 2-29
VOR Accuracy ............................................................... 2-29
VOT ............................................................................ 2-30
VOR Checkpoint Signs .................................................. 2-31
Dual VOR Check ............................................................ 2-31
Airborne VOR Check ..................................................... 2-31
NDB Accuracy Check ..................................................... 2-31
RNAV Accuracy Check .................................................. 2-32
Waypoints ..................................................................... 2-31
User-Defined Waypoints ............................................. 2-32
Floating Waypoints ......................................................... 2-32
Computer Navigation Performance .......................... 2-33
Required Navigation Performance ............................ 2-34
RNP Levels .................................................................. 2-35
Standard RNP Levels ..................................................... 2-35
Application of Standard RNP Levels ......................... 2-35
IFR En Route Altitudes .................................................... 2-35
Minimum En Route Altitude (MEA) ......................... 2-35
RNAV Minimum En Route Altitude ......................... 2-35
Minimum Reception Altitude (MRA) ......................... 2-35
Maximum Authorized Altitude (MAA) ....................... 2-36
Minimum Obstruction Clearance Altitude (MOCA) .... 2-36
Minimum Turning Altitude (MTA) ............................... 2-38
Minimum Crossing Altitude (MCA) ......................... 2-40
Minimum IFR Altitude (MIA) ....................................... 2-40
Minimum Vectoring Altitudes (MVA) ......................... 2-41
IFR Cruising Altitude or Flight Level ....................... 2-42
Reduced Vertical Separation Minimums (RSVM) ........ 2-43
Cruise Clearance ......................................................... 2-43
Lowest Usable Flight Level .......................................... 2-43
Operations in Other Countries ................................. 2-44
Altitude Above Ground (QFE) ................................. 2-45
Barometric Pressure for Standard
Altimeter Settings (QNE) ............................................. 2-45
Barometric Pressure for Local
Altimeter Settings (QNH) ............................................. 2-45
En Route Reporting Procedures ................................. 2-46
Non-Radar Position Reports ....................................... 2-46
Flights in a Radar Environment ................................. 2-46
Position Report Items ................................................... 2-46
Additional Reports ....................................................... 2-47
Communication Failure ............................................... 2-47
Artcc Radio Frequency Outage .................................. 2-48
Climbing and Descending En Route ......................... 2-48
Aircraft Speed and Altitude ........................................ 2-49
En Route Holding Procedures .................................. 2-51
ATC Holding Instructions .......................................... 2-51
Maximum Holding Speed .......................................... 2-52
High Performance Holding ........................................ 2-52
En Route Safety Considerations ............................... 2-52
Fuel State Awareness ................................................... 2-52
Diversion Procedures ................................................... 2-52

Chapter 3
Arrivals ................................................................. 3-1
Introduction ............................................................. 3-1
Navigation in the Arrival Environment .................... 3-2
Descent Planning ......................................................... 3-3
Vertical Navigation (VNAV) Planning ....................... 3-4
LNAV/VNAV Equipment ............................................. 3-6
Descent Planning for High Performance Aircraft ...... 3-6
Descending From the En Route Altitude ................. 3-8
Controlled Flight Into Terrain (CFIT) .................... 3-9
Standard Terminal Arrival Routes (STARs) ............. 3-10
RNAV STARs or STAR Transitions ......................... 3-12
Interpreting the STAR ................................................ 3-12
STAR Procedures ....................................................... 3-16
Preparing for the Arrival ............................................ 3-16
Reviewing the Approach ............................................ 3-16
Altitude ................................................................. 3-16
Airspeed ................................................................. 3-20
Holding Patterns ......................................................... 3-21
Approach Clearance ........................................ 3-22
Present Position Direct ................................... 3-24
Radar Vectors to Final Approach Course .......... 3-24
Special Airport Qualification ............................ 3-26

Chapter 4
Approaches ................................................... 4-1
Introduction ................................................ 4-1
Approach Planning ........................................ 4-2
Weather Considerations ................................ 4-2
Weather Sources .......................................... 4-2
Broadcast Weather ....................................... 4-5
Automated Terminal Information Service (ATIS) ... 4-5
Automated Weather Observing Programs ........... 4-5
Automated Weather Observing System ......... 4-5
Automated Surface Observing System (ASOS)/
  Automated Weather Sensor System (AWSS) .... 4-5
Center Weather Advisories (CWA) .................. 4-6
Weather Regulatory Requirements ................. 4-6
Weather Requirements and Part 91 Operators .... 4-6
Weather Requirements and Part 135 Operators ... 4-7
Weather Requirements and Part 121 Operators ... 4-7
Aircraft Performance Considerations ............. 4-7
  Airplane Performance Operating Limitations .... 4-7
  Aircraft Approach Categories ........................ 4-8
Instrument Approach Charts .................... 4-9
  Approach Chart Naming Conventions .......... 4-9
  Straight-In Procedures ............................. 4-9
  Circling Only Procedures ............................ 4-11
Communications ........................................ 4-11
  Approach Control ..................................... 4-13
  Air Route Traffic Control Center (ARTCC) ... 4-13
  High or Lack of Minimum Vectoring ............ 4-14
    Altitudes (MVAs) .................................. 4-14
    Lack of Approach Control Terrain Advisories .. 4-15
  Airports With an ATC Tower ..................... 4-15
  Airports Without A Control Tower ............ 4-15
Primary NAVAID ........................................ 4-17
Equipment Requirements .............................. 4-17
Courses .................................................... 4-17
  Traditional Courses ................................ 4-17
  Area Navigation Courses ........................... 4-18
Altitudes .................................................... 4-19
  Minimum Safe Altitude .............................. 4-19
  Final Approach Fix Altitude ....................... 4-19
  Minimum Descent Altitude (MDA), Decision
    Altitude (DA), And Decision Height (DH) ... 4-20
Enhanced Flight Vision Systems (EFVS) and
  Instrument Approaches ............................... 4-21
Vertical Navigation ....................................... 4-23
  Wide Area Augmentation System ................. 4-23

Benefits Of WAAS In The Airport Environment
  Advantages Of WAAS Enabled LPV ................. 4-25
  Approaches ............................................ 4-25
  Ground-Based Augmentation System (GBAS) ... 4-26
  Required Navigation Performance (RNP) ....... 4-26
  RNAV Approach Authorization .................... 4-30
  Baro-VNAV ........................................... 4-31
  Hot and Cold Temperature Limitations .......... 4-31
  LNAV, LNAV/VNAV and Circling Minimums .... 4-33
  Airport/Runway Information ....................... 4-33
  Instrument Approach Procedure (IAP) Briefing .. 4-33
  Navigation and Communication Radios ........ 4-33
  Flight Management System (FMS) ............... 4-35
  Autopilot Modes .................................... 4-35
Descent ................................................................ 4-36
  Stabilized Approach ................................ 4-36
  Descent Rates and Glidepaths for Nonprecision
    Approaches ........................................... 4-37
    Maximum Acceptable Descent Rates ............ 4-37
  Transition to a Visual Approach ................ 4-39
  Missed Approach ..................................... 4-39
  Example Approach Briefing ....................... 4-46
Instrument Approach Procedure Segments ........ 4-49
  Feeder Routes ........................................ 4-49
  Terminal Routes ..................................... 4-50
  DME Arcs ................................................ 4-50
  Course Reversal ...................................... 4-51
  Initial Approach Segment ......................... 4-53
  Intermediate Approach Segment ................ 4-53
  Final Approach Segment ............................. 4-54
  Missed Approach Segment ......................... 4-54
  Approach Clearance ................................ 4-54
  Vectors To Final Approach Course ............. 4-54
Nonradar Environment .................................. 4-56
Types of Approaches .................................... 4-56
  Visual and Contact Approaches ................. 4-56
  Visual Approaches .................................. 4-57
  Contact Approaches ................................ 4-59
  Charted Visual Flight Procedures ................. 4-59
  RNAV Approaches .................................. 4-59
  Terminal Arrival Areas ............................. 4-62
  RNAV Approach Types ................................ 4-62
  GPS Overlay of Nonprecision Approach ....... 4-62
  GPS Stand-Alone/RNAV (GPS) Approach ....... 4-64
  RNAV (GPS) Approach Using WAAS ............. 4-68
  ILS Approaches ...................................... 4-68
  ILS Approach Categories ............................ 4-71
  CAT II and III Approaches ......................... 4-71
Operational Limitations of Airborne Navigation Databases
Closed Indefinitely Airports
Storage Limitations
Charting/Database Inconsistencies
Naming Conventions
Issues Related To Magnetic Variation
Issues Related To Revision Cycle

Chapter 7
Helicopter Instrument Procedures
Introduction
Helicopter Instrument Flight Rule (IFR)
Certification
Flight and Navigation Equipment
Miscellaneous Requirements
Stabilization and Automatic Flight Control System (AFCS)
Helicopter Flight Manual Limitations
Operations Specifications
Minimum Equipment List (MEL)
Pilot Proficiency
Helicopter VFR Minimums
Helicopter IFR Takeoff Minimums
Helicopter IFR Alternates
Part 91 Operators
Part 135 Operators
Helicopter Instrument Approaches
Standard Instrument Approach Procedures to an Airport
Copter Only Approaches to An Airport or Heliport
Copter GPS Approaches to an Airport or Heliport
Helicopter Approaches to VFR Heliports
Approach to a PinS
Approach to a Specific VFR Heliport
Inadvertent IMC
IFR Heliports

Appendix A
Emergency Procedures
Introduction
Emergencies
Inadvertent Thunderstorm Encounter
Inadvertent Icing Encounter
Precipitation Static
Aircraft System Malfunction
Generator Failure
