The FAA computer-assisted testing system is supported by a series of supplement publications. These publications, available through several aviation publishers, include the graphics, legends, and maps that are needed to successfully respond to certain test items. Use the following URL to download a complete list of associated supplement books: [http://www.faa.gov/pilots/testing/supplements/](http://www.faa.gov/pilots/testing/supplements/)

The Learning Statement Reference Guide for Airman Knowledge Testing contains listings of learning statements with their associated codes. It can be located at: [http://www.faa.gov/training_testing/testing/media/LearningStatementReferenceGuide.pdf](http://www.faa.gov/training_testing/testing/media/LearningStatementReferenceGuide.pdf)

1. PLT018 CFI
(Refer to figure 18.) What is the stall speed of an airplane under a load factor of 2 if the unaccelerated stall speed is 100 knots?
A) 115 knots.
B) 129 knots.
C) 140 knots.

2. PLT238 CFI
Aspect ratio of a wing is defined as the ratio of the
A) wingspan to the wing root.
B) wingspan to the mean chord.
C) square of the chord to the wingspan.

3. PLT238 CFI
(Refer to figure 21.) Which aircraft has the lowest aspect ratio?
A) 2.
B) 3.
C) 4.

4. PLT095 CFI
Action of the elevators moves the plane on its
A) lateral axis.
B) longitudinal axis.
C) vertical axis.

5. PLT095 CFI
Aileron deflection moves the airplane about its
A) lateral axis.
B) longitudinal axis.
C) vertical axis.
6. PLT237 CFI
Maximum gliding distance of an aircraft is obtained when
A) parasite drag is the least.
B) induced drag and parasite drag are equal.
C) induced drag equals the coefficient of lift.

7. PLT127 CFI
What can a pilot expect when landing at an airport located in the mountains?
A) Higher true airspeed and longer landing distance.
B) Higher indicated airspeed and shorter landing distance.
C) Lower true airspeed and longer landing distance.

8. PLT134 CFI
How does increased weight affect the takeoff distance of an airplane?
A) The airplane will accelerate more slowly with the same power output, but the same airspeed is required to generate necessary lift for takeoff.
B) The airplane will accelerate more slowly with the same power output, and a higher airspeed is required to generate necessary lift for takeoff.
C) Every airplane has the same acceleration factor with the same power output, but a higher airspeed is needed to overcome the increased ground effect.

9. PLT013 CFI
(Refer to figure 30.) What is the crosswind component for a landing on Runway 18 if the tower reports the wind as 220° at 30 knots?
A) 19 knots.
B) 23 knots.
C) 30 knots.

10. PLT132 CFI
In a twin-engine airplane, the single-engine service ceiling is the maximum density altitude at which VYSE will produce
A) 50 feet per minute rate of climb.
B) 100 feet per minute rate of climb.
C) 500 feet per minute rate of climb.

11. PLT127 CFI
What effect does high density altitude have on aircraft performance?
A) It increases engine performance.
B) It reduces climb performance.
C) It increases takeoff performance.

12. PLT008 CFI
(Refer to figure 31.) What is the total landing distance over a 50-foot obstacle?
Temperature 15 °C
Pressure altitude: 4,000 ft
Weight: 3,000 lb
Headwind: 22 kts

A) 1,250 feet.
B) 1,175 feet.
C) 1,050 feet.

13. PLT074 CFI
(Refer to figure 17.) The airspeed indicated by point A is
A) maneuvering speed.
B) normal stall speed.
C) maximum structural cruising speed.

14. PLT497 CFI
When making routine transponder code changes, pilots should avoid inadvertent selection of which codes?
A) 0700, 1700, 7000.
B) 1200, 1500, 7000.
C) 7500, 7600, 7700.

15. PLT023 CFI
Under what condition is indicated altitude the same as true altitude?
A) If the altimeter has no mechanical error.
B) When at sea level under standard conditions.
C) When at 18,000 feet MSL with the altimeter set at 29.92.

16. PLT023 CFI
What is pressure altitude?
A) The indicated altitude corrected for position and installation error.
B) The altitude indicated when the barometric pressure scale is set to 29.92.
C) The indicated altitude corrected for nonstandard temperature and pressure.

17. PLT023 CFI
What is true altitude?
A) The vertical distance of the aircraft above sea level.
B) The vertical distance of the aircraft above the surface.
C) The height above the standard datum plane.

18. PLT253 CFI
To properly purge water from the fuel system of an aircraft equipped with fuel tank sumps and a fuel strainer quick drain, it is necessary to drain fuel from the
A) fuel strainer drain.
B) lowest point in the fuel system.
C) fuel strainer drain and the fuel tank sumps.
19. **PLT145**

An airport has pilot controlled lighting but runways without approach lights. How many times should you key your microphone to turn on the MIRL at medium intensity?
A) 5 clicks.
B) 3 clicks.
C) None, the MIRL is left on all night.

20. **PLT141**

A military airfield can be identified by
A) a white and red rotating beacon.
B) white flashing sequence lights (strobos).
C) a green and dual-peaked white rotating beacon.

21. **PLT141**

A series of continuous red lights in the runway centerline lighting indicates
A) 1,000 feet of runway remaining.
B) 3,000 feet of runway remaining
C) the beginning of the runway overrun area.

22. **PLT147**

The visual glidepath of a 2-bar VASI provides safe obstruction clearance within plus or minus 10° of the extended runway centerline and to a distance of how many miles from the runway threshold?
A) 4 NM.
B) 6 NM.
C) 10 NM.

23. **PLT147**

An on-glidepath indication from a tri-color VASI is
A) a green light signal.
B) a white light signal.
C) an amber light signal.

24. **PLT147**

A slightly below glidepath indication on a 2-bar VASI glidepath is indicated by
A) two red lights over two white lights.
B) two white lights over two red lights.
C) two red lights over two more red lights.

25. **PLT141**

The ‘No Entry’ sign identifies
A) paved area where aircraft entry is prohibited.
B) an area that does not continue beyond intersection.
C) the exit boundary for the runway protected area.
26. PLT141 CFI
What is the purpose for the runway hold position markings on the taxiway?
A) Identifies area where aircraft are prohibited.
B) Holds aircraft short of the runway.
C) Allows an aircraft permission onto the runway.

27. PLT141 CFI
The 'ILS critical area boundary sign' identifies
A) the exit boundary for the runway protected area.
B) the edge of the ILS critical area.
C) the area where an aircraft is prohibited from entering.

28. PLT373 CFI
When density altitude is beyond capability as indicated on the performance chart,
A) interpolate the data and attempt takeoff.
B) extrapolate the data and attempt takeoff.
C) do not attempt takeoff until conditions permit calculations to provide the data to determine a safe takeoff and climb out.

29. PLT253 CFI
During preflight, the fuel vent system should always be checked
A) to ensure the vent is closed.
B) to ensure the vent is open.
C) to ensure the vent system pressure is in the green range.

30. PLT393 CFI
Flight through a restricted area should not be accomplished unless the pilot has
A) filed an IFR flight plan.
B) received prior authorization from the controlling agency.
C) received prior permission from the commanding officer of the nearest military base.

31. PLT161 CFI
What minimum avionics equipment is required for operation within Class C airspace?
A) Two-way communications.
B) Two-way communications and transponder with automatic altitude reporting capability.
C) Two-way communications, transponder with automatic altitude reporting capability, and VOR.

32. PLT064 CFI
(Refer to figure 46.) What is the ceiling of the Class C airspace surrounding San Jose International Airport (area 2)?
A) 2,500 feet AGL.
B) 4,000 feet MSL.
C) 6,000 feet MSL.
33. PLT064 CFI
(Refer to figure 46.) What is the height of the Class D airspace over Livermore Airport (area 5)?
A) 2,900 feet MSL.
B) 3,000 feet AGL.
C) Base of the overlying Class B airspace.

34. PLT064 CFI
(Refer to figure 46.) At what altitude does the Class D airspace terminate over Hayward Airport (area 3)?
A) Surface.
B) 1,500 feet MSL.
C) 3,000 feet MSL.

35. PLT376 CFI
Public figures are protected by
A) special use airspace.
B) prohibited areas.
C) temporary flight restriction.

36. PLT119 CFI
Pilots are encouraged to turn on their landing lights when operating below 10,000 feet, day or night, and when operating within
A) Class B airspace.
B) 10 miles of any airport.
C) 5 miles of a controlled airport.

37. PLT170 CFI
A go-around from a poor landing approach should
A) not be attempted unless circumstances make it absolutely necessary.
B) generally be preferable to last minute attempts to prevent a bad landing.
C) not be attempted after the landing flare has been initiated regardless of airspeed.

38. PLT170 CFI
What normally results from excessive airspeed on final approach?
A) Bouncing.
B) Floating.
C) Ballooning.

39. PLT195 CFI
Most midair collision accidents occur during
A) hazy days within the traffic pattern environment.
B) clear days in the vicinity of navigational aids.
C) night conditions during simulated instrument flight.
40. PLT194 CFI
The most effective technique to use for detecting other aircraft at night is to
A) turn the head and sweep the eyes rapidly over the entire visible region.
B) avoid staring directly at the point where another aircraft is suspected to be flying.
C) avoid scanning the region below the horizon so as to avoid the effect of ground lights on the eyes.

41. PLT112 CFI
To properly compensate for a crosswind during straight-and-level cruising flight, the pilot should
A) hold rudder pressure toward the wind.
B) establish a proper heading into the wind by coordinated use of the controls.
C) hold aileron pressure toward the wind and hold opposite rudder pressure to prevent a turn.

42. PLT006 CFI
(Refer to figure 29.) What is the approximate glide distance?
Height above terrain 5,500 ft
Tailwind 10 kts
A) 11 miles.
B) 12 miles.
C) 13 miles.

43. PLT219 CFI
What will cause the nose of an aircraft to move in the direction of the turn before the bank starts in a
turn entry?
A) Rudder being applied too late.
B) Rudder being applied too soon.
C) Failure to apply back elevator pressure.

44. PLT486 CFI
When explaining the techniques used for making short- and soft-field takeoffs, it would be correct to
state that
A) during soft-field takeoffs, lift-off should be made as soon as possible.
B) during soft-field takeoffs, lift-off should be made only when best angle-of-climb speed is attained.
C) during short-field takeoffs, lift-off should be attempted only after best rate-of-climb speed is attained.

45. PLT103 CFI
Hazardous attitudes occur to every pilot to some degree at some time. What are some of these
hazardous attitudes?
A) Poor risk management and lack of stress management.
B) Antiauthority, impulsivity, macho, resignation, and invulnerability.
C) Poor situational awareness, snap judgments, and lack of a decision making process.

46. PLT022 CFI
In the aeronautical decision making (ADM) process, what is the first step in neutralizing a hazardous
attitude?
A) Making a rational judgment.
B) Recognizing hazardous thoughts.
C) Recognizing the invulnerability of the situation.

47. PLT104  CFI
When a pilot believes advanced avionics enable operations closer to personal or environmental limits, 
A) greater utilization of the aircraft is achieved.
B) risk is increased.
C) risk is decreased.

48. PLT104  CFI
Automation in aircraft has proven to 
A) present new hazards in its limitations.
B) that automation is basically flawless.
C) prevent accidents.

49. PLT104  CFI
The lighter workloads associated with glass (digital) flight instrumentation 
A) are instrumental in decreasing flightcrew fatigue.
B) have proven to increase safety in operations.
C) may lead to complacency by the flightcrew.

50. PLT104  CFI
Human behavior 
A) rarely results in accidents unless deliberate actions are performed.
B) causes three out of four accidents.
C) is well understood, so behavioral induced accidents are exceedingly rare occurrences.

51. PLT333  CFI
One aid in increasing night vision effectiveness would be to 
A) look directly at objects.
B) force the eyes to view off center.
C) increase intensity of interior lighting.

52. PLT438  CFI
Although not required, supplemental oxygen is recommended for use when flying at night above 
A) 5,000 feet.
B) 10,000 feet.
C) 12,500 feet.

53. PLT096  CFI
What physical change would most likely occur to occupants of an unpressurized aircraft flying above 15,000 feet without supplemental oxygen? 
A) Gases trapped in the body contract and prevent nitrogen from escaping the bloodstream.
B) The pressure in the middle ear becomes less than the atmospheric pressure in the cabin.
C) A blue coloration of the lips and fingernails develop along with tunnel vision.

54. PLT330 CFI
Anemic hypoxia has the same symptoms as hypoxic hypoxia, but it is most often a result of
A) poor blood circulation.
B) a leaking exhaust manifold.
C) use of alcohol or drugs before flight.

55. PLT334 CFI
A rapid acceleration can create the illusion of being in a
A) left turn.
B) noseup attitude.
C) nosedown attitude.

56. PLT280 CFI
An illusion, that the aircraft is at a higher altitude than it actually is, is produced by
A) atmospheric haze.
B) upsloping terrain.
C) downsloping terrain.

57. PLT278 CFI
As power is reduced to change airspeed from high to low cruise in level flight, which instruments are
primary for pitch, bank, and power, respectively?
A) Attitude indicator, heading indicator, and manifold pressure gauge or tachometer.
B) Altimeter, attitude indicator, and airspeed indicator.
C) Altimeter, heading indicator, and manifold pressure gauge or tachometer.

58. PLT187 CFI
What is the primary bank instrument once a standard-rate turn is established?
A) Attitude indicator.
B) Turn coordinator.
C) Heading indicator.

59. PLT186 CFI
Which instruments are considered primary and supporting for bank, respectively, when establishing a
level standard-rate turn?
A) Turn coordinator and attitude indicator.
B) Attitude indicator and turn coordinator.
C) Turn coordinator and heading indicator.

60. PLT185 CFI
What is the first fundamental skill in attitude instrument flying?
A) Aircraft control.
B) Instrument cross-check.
C) Instrument interpretation.

61. PLT185 CFI
What is the correct sequence in which to use the three skills used in instrument flying?
A) Aircraft control, cross-check, and instrument interpretation.
B) Instrument interpretation, cross-check, and aircraft control.
C) Cross-check, instrument interpretation, and aircraft control.

62. PLT166 CFI
What is the primary pitch instrument when establishing a constant altitude standard-rate turn?
A) Altimeter.
B) VSI.
C) Airspeed indicator.

63. PLT320 CFI
The angular difference between true north and magnetic north is
A) magnetic deviation.
B) magnetic variation.
C) compass acceleration error.

64. PLT015 CFI
If fuel consumption is 15.3 gallons per hour and groundspeed is 167 knots, how much fuel is required for an aircraft to travel 620 NM?
A) 63 gallons.
B) 60 gallons.
C) 57 gallons.

65. PLT012 CFI
How far will an aircraft travel in 3-1/2 minutes if its groundspeed is 65 knots?
A) 2.8 NM.
B) 3.8 NM.
C) 4.5 NM.

66. PLT012 CFI
On a cross-country flight, point X is crossed at 1015 and arrival at point Y is expected at 1025. Use the following information to determine the indicated airspeed required to reach point Y on schedule.
Distance between X and Y 27 NM
Forecast wind 240° at 30 kts
Pressure altitude 5,500 ft
Ambient temperature +05 °C
True course 100°
The required indicated airspeed would be approximately
A) 162 knots.
B) 140 knots.
C) 128 knots.

67. PLT012 CFI
If an aircraft is consuming 91 pounds of fuel per hour and groundspeed is 168 knots, how much fuel is required to travel 457 NM?
A) 291 pounds.
B) 265 pounds.
C) 248 pounds.

68. PLT202 CFI
Which distance is commonly displayed by a DME indicator?
A) Slant-range distance in statute miles.
B) Slant-range distance in nautical miles.
C) The distance from the aircraft to a point at the same altitude directly above the VORTAC.

69. PLT202 CFI
Which DME indication should you receive when you are directly over a VORTAC site at approximately 6,000 feet AGL?
A) 0.
B) 1.
C) 1.3.

70. PLT090 CFI
(Refer to figure 43.) Which RMI indicator shows you crossing the 115° radial?
A) 2.
B) 5.
C) 8.

71. PLT202 CFI
Which statement is true concerning the operation of DME?
A) DME operates in the VHF frequency band.
B) Distance information received from DME is the actual horizontal distance from the station.
C) DME coded identification is transmitted once for each three or four times that the VOR coded identification is transmitted.

72. PLT064 CFI
(Refer to figure 45.) What is the elevation of the San Patricio County (T69) Airport (area 5)?
A) 122.8 feet MSL.
B) 43 feet MSL.
C) 48 feet MSL.

73. PLT132 CFI
What is V2 speed?
A) Takeoff decision speed.
B) Takeoff safety speed.
C) Minimum takeoff speed.

74. PLT448 CFI
What is the minimum age required to be eligible for a Commercial Pilot Certificate?
A) 17.
B) 18.
C) 21.

75. PLT457 CFI
The minimum age requirement for the applicant who is seeking a Student Pilot Certificate limited to glider operations is
A) 14 years.
B) 16 years.
C) 17 years.

76. PLT457 CFI
To be eligible for a Student Pilot Certificate limited to airplanes, an applicant is required to be at least how old?
A) 14 years.
B) 16 years.
C) 17 years.

77. PLT407 CFI
What night flight training is required for an unrestricted Private Pilot Certificate with an airplane rating?
A) 3 hours to include 10 takeoffs and 10 landings and one cross-country flight of over 100 nautical miles.
B) 3 hours to include five takeoffs and five landings (each landing from a traffic pattern).
C) 1 hour to include three takeoffs and three landings.

78. PLT461 CFI
Position lights are required to be displayed on all aircraft in flight from
A) sunset to sunrise.
B) 1 hour before sunset to 1 hour after sunrise.
C) 30 minutes before sunrise to 30 minutes after sunset.

79. PLT451 CFI
Your student holds a private pilot certificate with an airplane rating and wishes to obtain a rotorcraft category rating. You inform the student that
A) none of the training/flight experience obtained toward the airplane rating can be used for the rotorcraft rating.
B) he/she must complete the rotorcraft practical test in its entirety as per the private pilot rotorcraft practical test standards.
C) some of the training/flight experience acquired toward the airplane rating can be used to meet the
requirements for a rotorcraft category rating.

80. PLT372 CFI
An aircraft’s last annual inspection was performed on July 12, this year. The next annual inspection will be due no later than
A) July 13, next year.
B) July 31, next year.
C) 12 calendar months after the date shown on the Airworthiness Certificate.

81. PLT220 CFI
If an aircraft is not equipped for night flight and official sunset is 1730 EST, the latest a pilot may operate that aircraft without violating regulations is
A) 1629 EST.
B) 1729 EST.
C) 1829 EST.

82. PLT463 CFI
Under what condition, if any, may a pilot allow a person who is obviously under the influence of intoxicating liquors or drugs to be carried aboard an aircraft?
A) Under no condition.
B) Only if a second pilot is aboard.
C) Only if the person is a medical patient under proper care or in an emergency.

83. PLT451 CFI
As pilot, what is the minimum flight time in an aircraft an applicant must have for a Commercial Pilot Certificate with an airplane rating?
A) 250 hours.
B) 200 hours.
C) 150 hours.

84. PLT404 CFI
When must each occupant of an aircraft wear an approved parachute?
A) When flying over water beyond gliding distance to the shore.
B) When practicing spins or other flight maneuvers for any certificate or rating.
C) When an intentional maneuver that exceeds 30° noseup or nosedown relative to the horizon is made.

85. PLT404 CFI
How often are emergency locator transmitters required to be inspected?
A) Every 12 months.
B) Every 24 months.
C) After every 100 hours of flight time.

86. PLT081 CFI
(Refer to figure 5.) In the TAF for KMEM, what does `SHRA` stand for?
A) Rain showers.
B) A shift in wind direction is expected.
C) A significant change in precipitation is possible.

87. PLT081 CFI
(Refer to figure 5.) What is the valid period for the TAF for KMEM?
A) 1200Z to 1200Z.
B) 1200Z to 1800Z.
C) 1800Z to 1800Z.

88. PLT291 CFI
For a brief summary of the location and movement of fronts, pressure systems, and circulation patterns, the pilot should refer to
A) a Radar Summary Chart.
B) an Aviation Area Forecast.
C) a Significant Weather Prognostic Chart.

89. PLT288 CFI
Which primary source should be used to obtain forecast weather information at your destination for the planned ETA?
A) Area Forecast.
B) Radar Summary and Weather Depiction Charts.
C) Terminal Aerodrome Forecast (TAF).

90. PLT076 CFI
(Refer to figure 7.) What wind is forecast for STL at 9,000 feet? (Consider "FD" chart to be an "FB" product.)
A) 230° true at 32 knots.
B) 230° true at 25 knots.
C) 230° magnetic at 25 knots.

91. PLT290 CFI
Which in-flight advisory would contain information on severe icing?
A) PIREP.
B) SIGMET.
C) CONVECTIVE SIGMET.

92. PLT291 CFI
(Refer to figure 6.) What sky condition and type obstructions to vision are forecast for upper Michigan in the western portions from 0200Z until 0500Z?
A) Ceiling becoming 1,000 feet overcast with visibility 3 to 5 statute miles in mist.
B) Ceiling becoming 1,000 feet overcast with visibility 3 to 5 nautical miles in mist.
C) Ceiling becoming 100 feet overcast with visibility 3 to 5 statute miles in mist.

93. PLT081 CFI
What is the meaning of MVFR, as used in the categorical outlook portion of an Aviation Area Forecast?
A) A ceiling less than 1,000 feet and/or visibility less than 3 miles.
B) A ceiling less than 1,000 feet and/or visibility less than 1 mile.
C) A ceiling of 1,000 to 3,000 feet and/or visibility of 3 to 5 miles.

94. PLT294 CFI
Below FL 180, en route weather advisories should be obtained from an AFSS/FSS on
A) 122.0 MHz.
B) 122.1 MHz.
C) 123.6 MHz.

95. PLT068 CFI
(Refer to figure 14.) Interpret the weather symbol depicted in Utah on the 12 hour Significant Weather
Prognostic Chart.
A) Moderate turbulence, surface to 18,000 feet.
B) Thunderstorm tops at 18,000 feet.
C) Base of clear air turbulence, 18,000 feet.

96. PLT051 CFI
Regarding Convective Outlook Charts, when well-organized severe thunderstorms are expected, but in
small numbers and/or low coverage, the risk is referred to as
A) SLGT.
B) POSSIBLE.
C) MDT.

97. PLT288 CFI
When the visibility is greater than 6 SM on a TAF it is expressed as
A) 6PSM.
B) P6SM.
C) 6SMP.

98. PLT288 CFI
What is the wind shear forecast in the following TAF?
TAF
KCVG 231051Z 231212 12012KT 4SM -RA BR OVC008
WS005/27050KT TEMPO 1719 1/2SM -RA FG
FM1930 09012KT 1SM -DZ BR VV003 BECMG 2021 5SM HZ=
A) 5 feet AGL from 270° at 50 KT.
B) 50 feet AGL from 270° at 50 KT.
C) 500 feet AGL from 270° at 50 KT.

99. PLT290 CFI
Convective SIGMETs are issued for which weather conditions?
A) Any thunderstorm with a severity level of VIP 2 or more.
B) Cumulonimbus clouds with tops above the tropopause and thunderstorms with 1/2-inch hail or funnel clouds.
C) Embedded thunderstorms, lines of thunderstorms, and thunderstorms with 3/4 inch hail or tornadoes.

100. PLT512 CFI
An increase in temperature with an altitude increase
A) is indication of an inversion.
B) denotes the beginning of the stratosphere.
C) means a cold front passage.

101. PLT512 CFI
A surface inversion can
A) indicate the chance of gusty winds.
B) produce poor visibility.
C) mean an unstable air mass.

102. PLT021 CFI
What is the maximum weight that could be added at Station 150.0 without exceeding the aft CG limit?
Aircraft weight 5,000 lb
CG location Station 80.0
Aft CG limit Station 80.5
A) 70.0 pounds.
B) 69.5 pounds.
C) 35.9 pounds.

103. PLT328 CFI
With respect to using the weight information given in a typical aircraft owner’s manual for computing gross weight, it is important to know that if items have been installed in the aircraft in addition to the original equipment, the
A) allowable useful load is decreased.
B) allowable useful load remains unchanged.
C) maximum allowable gross weight is increased.

104. PLT021 CFI
(Refer to figure 36.) What effect does a 35-gallon fuel burn (main tanks) have on the weight and balance if the airplane weighed 2,890 pounds and the MOM/100 was 2,452 at takeoff?
A) Weight is reduced by 210 pounds and the CG is aft of limits.
B) Weight is reduced by 210 pounds and the CG is unaffected.
C) Weight is reduced to 2,680 pounds and the CG moves forward.
