Federal Aviation Administration

CHARTING NOTICE

Date: January 12, 2023

To: Users of Enroute IFR Charting Products

From: Aeronautical Information Services

Subject: Foreign Data on Enroute IFR Aeronautical Charts

Foreign Data on Enroute IFR Aeronautical Charts

This notice advises of aeronautical content changes in foreign areas on Enroute IFR Charts anticipated with the June 15, 2023 (or later) effective date.

In order to ensure the Enroute IFR chart users have the most current and accurate information outside of the U.S. domestic Flight Information Region (FIR), limited foreign information will be charted on the FAA Enroute IFR charts to provide situational awareness and transition planning. Operators transitioning through foreign regions should utilize that country's Aeronautical Information Publications within their airspace.

Aeronautical content outside of U.S. domestic Flight Information Region (FIR) shall be reduced, i.e. "skeletonized", and symbolized in black and/or a black screen applied to all appropriate Enroute US, Alaska and Pacific High/Low IFR aeronautical charts.

This change will highlight the intent that U.S. Charts should only be used for navigation within domestic airspace and that charts of other countries should be used within their respective airspace.
