AVINOR FLYSIKRING  NORWAY ACC - BODØ
Oceanic overflights in Bodo Oceanic

Graph showing the number of oceanic overflights from January to December in 2018 and 2019.

- In January 2018, there were approximately 2500 overflights.
- The number of overflights decreased in February and March.
- April saw a slight increase, followed by a steady rise until July.
- August saw the highest number of overflights, reaching around 3000.
- September and October showed a decline.
- November had a few overflights, and December saw a slight increase.

The graph indicates a general trend of overflights decreasing from August to November and then increasing again in December.
