

Now on the Anchorage/Fairbanks Terminal Area Chart (TAC)
Matanuska-Susitna Valley Designated CTAF Areas!

The Designated Common Traffic Advisory Frequencies (CTAF) in the Matanuska and Susitna (Mat-Su) Valleys are now depicted in a panel on the TAC as of publication of the November 13, 2014 edition to improve situational awareness and clarify frequency use.

Pilots are encouraged to use ATC Flight Following and FSS airport advisory services, when available. When not in contact with ATC or flight service, pilots should use the assigned CTAF frequencies to make position reports while operating in the depicted areas. Outside these areas, standard CTAF guidelines apply.
