AOC-HRR, 2nd, 1-11	Any errors on plates 5-10	Richmond Products Richmond Products
Dvorine 2nd Edition	More than 2 errors on plates 1-15	Richmond Products

**Special Instructions**

Test Administration	The Examiner must document the color vision test instrument used, version, answer sheet with the actual subject responses and the score. If MEDEXpress is used the examiner may fax or mail the results to the Flight Surgeon or may document the findings in block 60.	
AME Office Inspection	AME office inspections: The inspector must visually inspect the condition of the color vision test instrument, for fading, finger prints, pen or pencil smudges; and lights used. Only a Macbeth Easel or a Verilux True Daylight Illuminator (F15T8VLX) are acceptable. Room lights must be off.	
False Negatives	Any test device with a restricted test set, like the Titmus testers, generally have a high false alarm test. If a disproportionally high number of subjects are failing, it may be necessary to review the acceptability of that test instrument. Regional Medical Offices are expected to monitor this situation.	

**UNACCEPTABLE TEST INSTRUMENTS FOR COLOR VISION SCREENING OF ATCS  
(FAA EMPLOYEE 2152 SERIES and CONTRACT TOWER ATCSs)**
