Welcome to the Guide for Aviation Medical Examiners. The format of this version of the Guide provides instant access to information regarding regulations, medical history, examination procedures, dispositions, and protocols necessary for completion of the FAA Form 8500-8, Application for Airman Medical Certificate.

To navigate through the Guide PDF by Item number or subject matter, simply click on the “BOOKMARK” tab in the left column to search specific certification decision-making criteria. To expand any “BOOKMARK” files, click on the corresponding + button located in the front of the text. To collapse any of the expanded files, click on the + button again.

The most current version of this guide may be found and downloaded at the following FAA site:
http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/aam/ame/guide/

NOTE: Future updates to the 2021 AME Guide are scheduled for the last Wednesday of each month, as indicated below. Please refer to the Archives section for a description of changes that are made.

Title 14 Code of Federal Regulations  
Part 67 — Medical Standards and Certification:

Convention on International Civil Aviation  
International Standards on Personnel Licensing:

The international Standards on Personnel Licensing are contained in Annex 1 — *Personnel Licensing* to the Convention on International Civil Aviation. The FAA maintains an updated, hard copy of all the ICAO Annexes and also an on-line subscription. The FAA makes copies of Annex 1 available at seminars and can provide Examiner’s access upon request.

http://www.icao.int/safety/AirNavigation/Pages/peltrgFAQ.aspx
GENERAL INFORMATION
This section provides input to assist an Aviation Medical Examiner (AME), otherwise known as an Examiner, in performing his or her duties in an efficient and effective manner. It also describes Examiner responsibilities as the Federal Aviation Administration's (FAA) representative in medical certification matters and as the link between airmen and the FAA.

1. Legal Responsibilities of Designated Aviation Medical Examiners

Title 49, United States Code (U.S.C.) (Transportation), sections 109(9), 40113(a), 44701-44703, and 44709 (1994) formerly codified in the Federal Aviation Act of 1958, as amended, authorizes the FAA Administrator to delegate to qualified private persons; i.e. designated Examiners, matters related to the examination, testing, and inspection necessary to issue a certificate under the U.S.C. and to issue the certificate. Designated Examiners are delegated the Administrator's authority to examine applicants for airman medical certificates and to issue or deny issuance of certificates.

Approximately 450,000 applications for airman medical certification are received and processed each year. The vast majority of medical examinations conducted in connection with these applications are performed by physicians in private practice who have been designated to represent the FAA for this purpose. An Examiner is a designated representative of the FAA Administrator with important duties and responsibilities. It is essential that Examiners recognize the responsibility associated with their appointment.

At times, an applicant may not have an established treating physician and the Examiner may elect to fulfill this role. You must consider your responsibilities in your capacity as an Examiner as well as the potential conflicts that may arise when performing in this dual capacity.

The consequences of a negligent or wrongful certification, which would permit an unqualified person to take the controls of an aircraft, can be serious for the public, for the Government, and for the Examiner. If the examination is cursory and the Examiner fails to find a disqualifying defect that should have been discovered in the course of a thorough and careful examination, a safety hazard may be created and the Examiner may bear the responsibility for the results of such action.

Of equal concern is the situation in which an Examiner deliberately fails to report a disqualifying condition either observed in the course of the examination or otherwise known to exist. In this situation, both the applicant and the Examiner in completing the application and medical report form may be found to have committed a violation of Federal criminal law which provides that:

"Whoever in any matter within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact, or who makes any false, fictitious or fraudulent statements or representations, or entry, may be fined up to $250,000 or
imprisoned not more than 5 years, or both” (Title 18 U.S. Code. Secs. 1001; 3571).

Cases of falsification may be subject to criminal prosecution by the Department of Justice. This is true whether the false statement is made by the applicant, the Examiner, or both. In view of the pressures sometimes placed on Examiners by their regular patients to ignore a disqualifying physical defect that the physician knows to exist, it is important that all Examiners be aware of possible consequences of such conduct.

In addition, when an airman has been issued a medical certificate that should not have been issued, it is frequently necessary for the FAA to begin a legal revocation or suspension action to recover the certificate. This procedure is time consuming and costly. Furthermore, until the legal process is completed, the airman may continue to exercise the privileges of the certificate, thereby compromising aviation safety.

2. Authority of Aviation Medical Examiners

The Examiner is delegated authority to:

- Examine applicants for, and holders of, airman medical certificates to determine whether or not they meet the medical standards for the issuance of an airman medical certificate.

- Issue, defer, or deny airman medical certificates to applicants or holders of such certificates based upon whether or not they meet the applicable medical standards. The medical standards are found in Title 14 of the Code of Federal Regulations, part 67.

The Examiner may NOT:

- Perform self-examinations for issuance of a medical certificate to themselves*;
- Issue a medical certificate to themselves or to an immediate family member*; or
- Generate or author their own medical status reports. Reports regarding the medical status of an airman should be written by their treating provider. A report completed by an airman will NOT be accepted, even if that airman is a physician.

*For more information, see FAA Order 8000.95 Designee Management Policy.

A medical certificate issued by an Examiner is considered to be affirmed as issued unless, within 60 days after date of issuance (date of examination), it is reversed by the Federal Air Surgeon, a RFS, or the Manager, AMCD. However, if the FAA requests additional information from the applicant within 60 days after the issuance, the
above-named officials have 60 days after receipt of the additional information to reverse the issuance.

**Aviation Medical Examiner Letter of Denial**  
*(NOTE: This denial letter supersedes the former Form 8500-2).*

### 3. Equipment Requirements

For the conduct of the medical examination, Examiners shall have adequate facilities for performing the required examinations and possess the following equipment prior to conducting any FAA examinations. History or current findings may indicate a need for special evaluations. Examiners shall certify at the time of designation, re-designation, or upon request that they possess (and maintain as necessary) the equipment specified.

1. **Standard Snellen Test**. Types for visual acuity (both near and distant) and appropriate eye lane. FAA Form 8500-1, Near Vision Acuity Test Card may be used for near and intermediate vision testing. Metal, opaque plastic, or cardboard occluder.

2. **Eye Muscle Test-Light**. May be a spot of light 0.5cm in diameter, a regular muscle-test light, or an ophthalmoscope.

3. **Maddox Rod**. May be hand-type.

4. **Horizontal Prism Bar**. Risley or hand prism are acceptable alternatives.

5. **Other vision test equipment** that is acceptable as a replacement for 1 through 4 above include any commercially available visual acuities and heterophoria testing devices.

7. **A Wall Target** consisting of a 50-inch square surface with a matte finish (may be black felt or dull finish paper) and a 2-mm white test object (may be a pin) in a suitable handle of the same color as the background. Note: this is not necessary if an AME chooses the acceptable option of performing field of vision testing by direct confrontation.

8. **Standard physician diagnostic instruments and aids** including those necessary to perform urine testing for albumin and glucose and those to measure height and weight.
9. **Electrocardiographic equipment.** Senior Examiners must have access to digital electrocardiographic equipment with electronic transmission capability.

10. **Audiometric equipment.** All Examiners must have access to audiometric equipment or a capability of referring applicants to other medical facilities for audiometric testing.

### 4. Medical Certification Decision Making

The format of the Guide establishes aerospace medical dispositions, protocols, and AME Assisted Special Issuances (AASI) identified in Items 21–58 of the FAA Form 8500. This guidance references specific medical tests or procedure(s) the results of which are needed by the FAA to determine the eligibility of the applicant to be medically certificated. The request for this medical information must not be misconstrued as the FAA ordering or mandating that the applicant undergo testing, where clinically inappropriate or contraindicated. The risk of the study based upon the disease state and test conditions must be balanced by the applicant’s desire for certification and determined by the applicant and their healthcare provider(s).

After reviewing the medical history and completing the examination, Examiners must:

- Issue a medical certificate,
- Deny the application, or
- Defer the action to the Manager, AMCD, AAM-300, or the appropriate RFS

Examiners **may issue** a medical certificate only if the applicant meets all medical standards, including those pertaining to medical history unless otherwise authorized by the FAA.

Examiners **may not issue** a medical certificate if the applicant fails to meet specified minimum standards or demonstrates any of the findings or diagnoses described in this Guide as "disqualifying" unless the condition is unchanged or improved and the applicant presents written documentation that the FAA has evaluated the condition, found the applicant eligible for certification, and authorized Examiners to issue certificates.

The following medical conditions are specifically disqualifying under 14 CFR part 67. However, the FAA may exercise discretionary authority under the provisions of Authorization of Special Issuance, to issue an airman medical certificate. See **Special Issuances** section for additional guidance where applicable.

- Angina pectoris;
- Bipolar disorder;
• Cardiac valve replacement;
• Coronary heart disease that has required treatment or, if untreated, that has been symptomatic or clinically significant;
• Diabetes mellitus requiring insulin or other hypoglycemic medication;
• Disturbance of consciousness without satisfactory medical explanation of the cause;
• Epilepsy;
• Heart replacement;
  • Myocardial infarction;
• Permanent cardiac pacemaker;
• Personality disorder that is severe enough to have repeatedly manifested itself by overt acts;
• Psychosis;
• Substance abuse and dependence; and/or
• Transient loss of control of nervous system function(s) without satisfactory medical explanation of cause.

An airman who is medically disqualified for any reason may be considered by the FAA for an Authorization for Special Issuance of a Medical Certificate (Authorization). For medical defects, which are static or non-progressive in nature, a Statement of Demonstrated Ability (SODA) may be granted in lieu of an Authorization.

The Examiner always may defer the application to the FAA for action. In the interests of the applicant and of a responsive certification system, however, deferral is appropriate only if: the standards are not met; if there is an unresolved question about the history, the findings, the standards, or agency policy; if the examination is incomplete; if further evaluation is necessary; or if directed by the FAA.

The Examiner may deny certification only when the applicant clearly does not meet the standards.

5. Authorization for Special Issuance and AME Assisted Special Issuance (AASI)

A. Authorization for Special Issuance of a Medical Certificate (Authorization).
At the discretion of the Federal Air Surgeon, an Authorization for Special Issuance of a Medical Certificate (Authorization), valid for a specified period, may be granted to a person who does not meet the established medical standards if the person shows to the satisfaction of the Federal Air Surgeon that the duties authorized by the class of medical certificate applied for can be performed without endangering public safety during the period in which the Authorization would be in force. The Federal Air Surgeon may authorize a special medical flight test, practical test, or medical evaluation for this purpose. A medical certificate of the appropriate class may be issued to a person who fails to meet one or more of the established medical standards if that person possesses a valid agency issued Authorization and is otherwise eligible. An airman medical certificate issued in accordance with the special issuance section of part 67 (14 CFR § 67.401), shall expire no later than the end of the validity period or upon the withdrawal of the Authorization upon which it is based. An airman must again show to the satisfaction of the Federal Air Surgeon that the duties authorized by the class of medical certificate applied for can be performed without endangering public safety in order to obtain a new medical certificate and/or a Re-Authorization.

In granting an Authorization, the Federal Air Surgeon may consider the person's operational experience and any medical facts that may affect the ability of the person to perform airman duties including:

- The factors leading to and surrounding the episode;
- The combined effect on the person of failing to meet one or more than one requirement of part 67; and
- The prognosis derived from professional consideration of all available information regarding the person.

In granting an Authorization, the Federal Air Surgeon specifies the class of medical certificate authorized to be issued and may do any or all of the following:

- Limit the duration of an Authorization;
- Condition the granting of a new Authorization on the results of subsequent medical tests, examinations, or evaluations;
- State on the Authorization, and any medical certificate based upon it, any operational limitation needed for safety; or
- Condition the continued effect of an Authorization, and any second- or third-class medical certificate based upon it, on compliance with a statement of functional limitations issued to the person in coordination with the Director of Flight Standards or the Director's designee.
- In determining whether an Authorization should be granted to an applicant for a third-class medical certificate, the Federal Air Surgeon considers the freedom of
an airman, exercising the privileges of a private pilot certificate, to accept reasonable risks to his or her person and property that are not acceptable in the exercise of commercial or airline transport pilot privileges, and, at the same time, considers the need to protect the safety of persons and property in other aircraft and on the ground

An Authorization granted to a person who does not meet the applicable medical standards of part 67 may be withdrawn, at the discretion of the Federal Air Surgeon, at any time if:

- There is an adverse change in the holder's medical condition;
- The holder fails to comply with a statement of functional limitations or operational limitations issued as a condition of certification under the special issuance section of part 67 (14 CFR 67.401);
- Public safety would be endangered by the holder's exercise of airman privileges;
- The holder fails to provide medical information reasonably needed by the Federal Air Surgeon for certification under the special issuance section of part 67 (14 CFR 67.401); or
- The holder makes or causes to be made a statement or entry that is the basis for withdrawal of an Authorization under the falsification section of part 67 (14 CFR 67.403).

A person who has been granted an Authorization under the special issuance section of part 67 (14 CFR 67.401), based on a special medical flight or practical test, need not take the test again during later medical examinations unless the Federal Air Surgeon determines or has reason to believe that the physical deficiency has or may have degraded to a degree to require another special medical flight test or practical test.

The authority of the Federal Air Surgeon under the special issuance section of part 67 (14 CFR 67.401) is also exercised by the Manager, AMCD, and each RFS.

If an Authorization is withdrawn at any time, the following procedures apply:

- The holder of the Authorization will be served a letter of withdrawal, stating the reason for the action;
- By not later than 60 days after the service of the letter of withdrawal, the holder of the Authorization may request, in writing, that the Federal Air Surgeon provide for review of the decision to withdraw. The request for review may be accompanied by supporting medical evidence;
- Within 60 days of receipt of a request for review, a written final decision either affirming or reversing the decision to withdraw will be issued; and
A medical certificate rendered invalid pursuant to a withdrawal, in accordance with the special issuance section of part 67 (14 CFR 67.401) shall be surrendered to the Administrator upon request.

B. AME Assisted Special Issuance (AASI).

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization to an applicant who has a medical condition that is disqualifying under 14 CFR part 67. An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the requisite medical information required for determination. Examiners may not issue initial Authorizations. An Examiner's decision or determination is subject to review by the FAA.

6. Privacy of Medical Information

A. Within the FAA, access to an individual's medical information is strictly on a "need-to-know" basis. The safeguards of the Privacy Act apply to the application for airman medical certification and to other medical files in the FAA's possession. The FAA does not release medical information without an order from a court of competent jurisdiction, written permission from the individual to whom it applies, or, with the individual's knowledge, during litigation of matters related to certification. The FAA does, however, on request, disclose the fact that an individual holds an airman medical certificate and its class, and it may provide medical information regarding a pilot involved in an accident to the National Transportation Safety Board (NTSB) (or to a physician of the appropriate medical discipline who is retained by the NTSB for use in aircraft accident investigation).

The Examiner, as a representative of the FAA, should treat the applicant's medical certification information in accordance with the requirements of the Privacy Act. Therefore, information should not be released without the written consent of the applicant or an order from a court of competent jurisdiction. Whenever a court order or subpoena is received by the Examiner, the appropriate RFS or the AMCD should be contacted in order to ensure proper release of information. Similarly, unless the applicant's written consent for release routine in nature (e.g., accompanying a standard insurance company request), the FAA must be contacted before releasing any information. In all cases, copies of all released information should be retained.

B. Health Insurance Portability and Accountability Act of 1996 (HIPAA) and Examiner’s activities for the FAA.
This Act provides specific patient protections and depending upon an Examiner’s activation and practice patterns, you may have to comply with additional requirements.

C. Examiners shall certify at the time of designation, re-designation, or upon request that they shall protect the privacy of medical information.

7. Release of Information
(Updated 08/29/2018)
Except in compliance with an order of a court of competent jurisdiction, or upon an applicant’s written request, Examiners will not divulge or release copies of any reports prepared in connection with the examination to anyone other than the applicant or the FAA. A copy of the examination may be released to the applicant upon request. (See: Request for Airman Medical Records Form 8065-2). Upon receipt of a court subpoena or order, the Examiner shall notify the appropriate RFS. Other requests for information will be referred to:

MANAGER
Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-300
PO Box 25082
Oklahoma City, OK 73125-9867

8. No "Alternate" Examiners Designated

The Examiner is to conduct all medical examinations at their designated address only. An Examiner is not permitted to conduct examinations at a temporary address and is not permitted to name an alternate Examiner. During an Examiner’s absence from the permanent office, applicants for airman medical certification shall be referred to another Examiner in the area.

9. Who May Be Certified

a. Age Requirements

There is no age restriction or aviation experience requirement for medical certification. Any applicant who qualifies medically may be issued a Medical Certificate regardless of age.

There are, however, minimum age requirements for the various airman certificates (i.e., pilot license certificates) are defined in 14 CFR part 61, Certification: Pilots and Flight Instructors, and Ground Inspectors as follows:

1. **Airline transport pilot (ATP) certificate**: 23 years
2. **Commercial pilot certificate**: 18 years
(3) Private pilot certificate: powered aircraft - 17 years; gliders and balloons - 16 years

**Note:** As of April 1, 2016 (per Final Rule [81 FR 1292]), AMEs will no longer be able to issue the combined FAA Medical Certificate and Student Pilot Certificate. See [Student Pilot Rule Change](#).

**b. Language Requirements**

There is no language requirement for medical certification.

10. Classes of Medical Certificates

An applicant may apply and be granted any class of airman medical certificate as long as the applicant meets the required medical standards for that class of medical certificate. However, an applicant must have the appropriate class of medical certificate for the flying duties the airman intends to exercise. For example, an applicant who exercises the privileges of an airline transport pilot (ATP) certificate must hold a first-class medical certificate. That same pilot when holding only a third-class medical certificate may only exercise privileges of a private pilot certificate. Finally, an applicant need not hold an ATP airman certificate to be eligible for a first-class medical certificate.

Listed below are the three classes of airman medical certificates, identifying the categories of airmen (i.e., pilot) certificates applicable to each class.

**First-Class** - Airline Transport Pilot

**Second-Class** - Commercial Pilot; Flight Engineer; Flight Navigator; or Air Traffic Control Tower Operator. (Note: This category of air traffic controller does not include FAA employee air traffic control specialists)

**Third-Class** - Private Pilot or Recreational Pilot

An airman medical certificate is valid only with the original signature of the AME who performed the examination or with the digital signature of an authorized FAA physician (e.g., Regional Flight Surgeon, manager of the Aerospace Medical Certification Division, Federal Air Surgeon). Note:

- Copies are NOT valid.
- An AME may only issue ONE originally signed certificate to an airman. A [replacement for a lost or destroyed certificate](#) must be issued by the FAA.

11. Operations Not Requiring a Medical Certificate

Glider and Free Balloon Pilots are not required to hold a medical certificate of any class. To be issued Glider or Free Balloon Airman Certificates, applicants must certify that they do not know, or have reason to know, of any medical condition that would make
them unable to operate a glider or free balloon in a safe manner. This certification is made at the local FAA FSDO.

“Sport” pilots are required to hold either a valid airman medical certificate or a current and valid U.S. driver’s license. When using a current and valid U.S. driver’s license to qualify, sport pilots must comply with each restriction and limitation on their U.S. driver’s license and any judicial or administrative order applying to the operation of a motor vehicle.

To exercise sport pilot privileges using a current and valid U.S. driver’s license as evidence of qualification, sport pilots must:

- Not have been denied the issuance of at least a third-class airman medical certificate (if they have applied for an airman medical certificate)
- Not have had their most recent airman medical certificate revoked or suspended (if they have held an airman medical certificate); and
- Not have had an Authorization withdrawn (if they have ever been granted an Authorization).

Sport pilots may not use a current and valid U.S. driver’s license in lieu of a valid airman medical certificate if they know or have reason to know of any medical condition that would make them unable to operate a light-sport aircraft in a safe manner.

Sport pilot medical provisions are found under 14 CFR §§ 61.3, 61.23, 61.53, and 61.303).

For more information about the sport pilot final rule, see the Certification of Aircraft and Airmen for the Operation of Light-Sport Aircraft; Final Rule.

12. Medical Certificates – AME Completion
(Updated 07-26-2017)

- Date the medical certificate to reflect the date the medical examination was performed, NOT the date of import, issuance, or transmission.
- Limitations must be selected from the list in the Aerospace Medical Certification System (AMCS). Additional limitations may NOT be typed/written in.
- Signatures: Each medical certificate must be fully completed prior to being signed.
  - Both the AME and applicant must sign the medical certificate in ink.
  - The applicant must sign before leaving the AME’s office.

- Give only ONE certificate to the airman
- Use AMCS generated certificates only.
- Transmit the exam electronically to the FAA using AMCS within 14 days.
- The following are NOT valid:
  - Copies of medical Certificates;
o Typewriter or handwritten certificates;
o Obviously corrected certificates;
o Paper 8500-8 certificates (any remaining paper forms should be destroyed by the AME).

- replacement medical certificates must be issued by the FAA.

13. Validity of Medical Certificates

An airman medical certificate is valid only with the original signature of the AME who performed the examination or with the digital signature of an authorized FAA physician (e.g., Regional Flight Surgeon, manager of the Aerospace Medical Certification Division, Federal Air Surgeon).

- Copies are NOT valid.
- An AME may only issue ONE originally signed certificate to an airman. A replacement for a lost or destroyed certificate must be issued by the FAA.

A. First-Class Medical Certificate: A first-class medical certificate is valid for the remainder of the month of issue; plus

   6-calendar months for operations requiring a first-class medical certificate if the airman is age 40 or over on or before the date of the examination, or plus

   12-calendar months for operations requiring a first-class medical certificate if the airman has not reached age 40 on or before the date of examination

   12-calendar months for operations requiring a second-class medical certificate, or plus

   24-calendar months for operations requiring a third-class medical certificate, or plus

   60-calendar months for operations requiring a third-class medical certificate if the airman has not reached age 40 on or before the date of examination.

B. Second-Class Medical Certificate: A second-class medical certificate is valid for the remainder of the month of issue; plus

   12-calendar months for operations requiring a second-class medical certificate, or plus

   24-calendar months for operations requiring a third-class medical certificate, or plus

   60-calendar months for operations requiring a third-class medical certificate if the airman has not reached age 40 on or before the date of examination.

C. Third-Class Medical Certificate: A third-class medical certificate is valid for the remainder of the month of issue; plus
24-calendar months for operations requiring a third-class medical certificate, or plus
60-calendar months for operations requiring a third-class medical certificate if the airman has not reached age 40 on or before the date of examination.

14. Title 14 CFR § 61.53, Prohibition on Operations During Medical Deficiency

NOTE: 14 CFR § 61.53 was revised on July 27, 2004 by adding subparagraph (c)

(a) Operations that require a medical certificate. Except as provided in paragraph (b) of this section, a person who holds a current medical certificate issued under part 67 of this chapter shall not act as pilot in command, or in any other capacity as a required pilot flight crewmember, while that person:

(1) Knows or has reason to know of any medical condition that would make the person unable to meet the requirements for the medical certificate necessary for the pilot operation; and/or

(2) Is taking medication or receiving other treatment for a medical condition that results in the person being unable to meet the requirements for the medical certificate necessary for the pilot operation.

(b) Operations that do not require a medical certificate. For operations provided for in § 61.23(b) of this part, a person shall not act as pilot in command, or in any other capacity as a required pilot flight crewmember, while that person knows or has reason to know of any medical condition that would make the person unable to operate the aircraft in a safe manner.

(c) Operations requiring a medical certificate or a U.S. driver's license. For operations provided for in Sec. 61.23(c), a person must meet the provisions of—

(1) Paragraph (a) of this section if that person holds a valid medical certificate issued under part 67 of this chapter and does not hold a current and valid U.S. driver's license

(2) Paragraph (b) of this section if that person holds a current and valid U.S. driver’s license

15. Reexamination of an Airman

A medical certificate holder may be required to undergo a reexamination at any time if, in the opinion of the Federal Air Surgeon or authorized representative within the FAA, there is a reasonable basis to question the airman’s ability to meet the medical standards. An Examiner may NOT order such reexamination.
16. Examination Fees

The FAA does not establish fees to be charged by Examiners for the medical examination of persons applying for airman medical certification. It is recommended that the fee be the usual and customary fee established by other physicians in the same general locality for similar services.

17. Replacement of Medical Certificates

(Updated 08/30/2017)

Medical certificates that are lost or accidentally destroyed may be replaced upon proper application provided such certificates have not expired. The request should be sent to:

FOIA DESK
Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-331
PO Box 25082
Oklahoma City, OK 73125-9867

The airman’s request for replacement must be accompanied by a remittance of two dollars ($2) (check or money order) made payable to the FAA. This request must include:

- Airman’s full name and date of birth;
- Class of certificate;
- Place and date of examination;
- Name of the Examiner; and
- Circumstances of the loss or destruction of the original certificate.

The replacement certificate will be prepared in the same manner as the missing certificate and will bear the same date of examination regardless of when it is issued.

In an emergency, contact your RFS or the Manager, AMCD, AAM-300, at the above address or by facsimile at 405-954-4300 for certification verification only.

18. Disposition of Applications and Medical Examinations

All completed applications and medical examinations, unless otherwise directed by the FAA, must be transmitted electronically via AMCS within 14 days after completion to the AMCD. These requirements also apply to submissions by International AMEs.
A record of the examination is stored in AMCS, however, Examiners are encouraged to print a copy for their own files. While not required, the Examiner may also print a summary sheet for the applicant.

19. Protection and Destruction of Forms

Forms are available electronically in AMCS. Examiners are accountable for all blank FAA forms they may have printed and are cautioned to provide adequate security for such forms or certificates to ensure that they do not become available for illegal use. Examiners are responsible for destroying any existing paper forms they may still have.

NOTE: Forms should not be shared with other Examiners.

20. Questions or Requests for Assistance

(Updated 08/30/2017)

When an Examiner has a question or needs assistance in carrying out responsibilities, the Examiner should contact one of the following individuals:

A. Regional Flight Surgeon (RFS)

- Questions pertaining to problem medical certification cases in which the RFS has initiated action;
- Telephone interpretation of medical standards or policies involving an individual airman whom the Examiner is examining;
- Matters regarding designation and re-designation of Examiners and the Aviation Medical Examiner Program; or
- Attendance at Aviation Medical Examiner Seminars.

B. Manager, AMCD, AAM-300

- Inquiries concerning guidance on problem medical certification cases;
- Information concerning the overall airman medical certification program;
- Matters involving FAA medical certification of military personnel; or
- Information concerning medical certification of applicants in foreign countries

These inquiries should be made to:
C. Manager, Aeromedical Education Division, AAM-400

- Matters regarding designation and re-designation of Examiners;
- Requests for medical forms and stationery; or
- Requests for airman medical educational material

These inquiries should be made to:

MANAGER
Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-300
PO Box 25082
Oklahoma City, OK 73125-9867

21. Airman Appeals
(Updated 08/30/2017)

A. Request for Reconsideration

An Examiner’s denial of a medical certificate is not a final FAA denial. An applicant may ask for reconsideration of an Examiner’s denial by submitting a request in writing to:

MANAGER
Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13, Room 308
Aerospace Medical Certification Division, AAM-300
PO Box 25082
Oklahoma City, OK 73125-9867

The AMCD will provide initial reconsideration. Some cases may be referred to the appropriate RFS for action. If the AMCD or a RFS finds that the applicant is not qualified, the applicant is denied and advised of further reconsideration and appeal procedures. These may include reconsideration by the Federal Air Surgeon and/or petition for NTSB review.
B. Statement of Demonstrated Ability (SODA)

At the discretion of the Federal Air Surgeon, a Statement of Demonstrated Ability (SODA) may be granted, instead of an Authorization, to a person whose disqualifying condition is static or non-progressive and who has been found capable of performing airman duties without endangering public safety. A SODA does not expire and authorizes a designated Examiner to issue a medical certificate of a specified class if the Examiner finds that the condition described on the SODA has not adversely changed.

In granting a SODA, the Federal Air Surgeon may consider the person’s operational experience and any medical facts that may affect the ability of the person to perform airman duties including:

- The combined effect on the person of failure to meet more than one requirement of part 67; and

- The prognosis derived from professional consideration of all available information regarding the person.

In granting a SODA under the special issuance section of part 67 (14 CFR 67.401), the Federal Air Surgeon specifies the class of medical certificate authorized to be issued and may do any of the following:

- State on the SODA, and on any medical certificate based upon it, any operational limitation needed for safety; or

- Condition the continued effect of a SODA, and any second- or third-class medical certificate based upon it, on compliance with a statement of functional limitations issued to the person in coordination with the Director of Flight Standards or the Director's designee.

- In determining whether a SODA should be granted to an applicant for a third-class medical certificate, the Federal Air Surgeon considers the freedom of an airman, exercising the privileges of a private pilot certificate, to accept reasonable risks to his or her person and property that are not acceptable in the exercise of commercial or airline transport pilot privileges, and, at the same time, considers the need to protect the safety of persons and property in other aircraft and on the ground.

A SODA granted to a person who does not meet the applicable standards of part 67 may be withdrawn, at the discretion of the Federal Air Surgeon, at any time if:

- There is adverse change in the holder's medical condition;

- The holder fails to comply with a statement of functional limitations or operational limitations issued under the special issuance section of part 67 (14 CFR 67.401);
Guide for Aviation Medical Examiners

- Public safety would be endangered by the holder’s exercise of airman privileges;

- The holder fails to provide medical information reasonably needed by the Federal Air Surgeon for certification under the special issuance section of part 67 (14 CFR 67.401);

- The holder makes or causes to be made a statement or entry that is the basis for withdrawal of a SODA under the falsification section of part 67 (14 CFR 67.403); or

- A person who has been granted a SODA under the special issuance section of part 67 (14 CFR 67.401), based on a special medical flight or practical test need not take the test again during later medical examinations unless the Federal Air Surgeon determines or has reason to believe that the physical deficiency has or may have degraded to a degree to require another special medical flight test or practical test.

The authority of the Federal Air Surgeon under the special issuance section of part 67 (14 CFR 67.401) is also exercised by the Manager, AMCD, and each RFS.

If a SODA is withdrawn at any time, the following procedures apply:

- The holder of the SODA will be served a letter of withdrawal stating the reason for the action;

- By not later than 60 days after the service of the letter of withdrawal, the holder of the SODA may request, in writing, that the Federal Air Surgeon provide for review of the decision to withdraw. The request for review may be accompanied by supporting medical evidence;

- Within 60 days of receipt of a request for review, a written final decision either affirming or reversing the decision to withdraw will be issued; and

- A medical certificate rendered invalid pursuant to a withdrawal, in accordance with the special issuance section of part 67 (14 CFR 67.401 (a)) shall be surrendered to the Administrator upon request.

C. National Transportation Safety Board (NTSB)

Within 60 days after a final FAA denial of an unrestricted airman medical certificate, an airman may petition the NTSB for a review of that denial. The NTSB does not have jurisdiction to review the denial of a SODA or special issuance airman medical certificate.
A petition for NTSB review must be submitted in writing to:

NATIONAL TRANSPORTATION SAFETY BOARD
490 L'ENFANT PLAZA, EAST SW
WASHINGTON, DC 20594-0001

The NTSB is an independent agency of the Federal Government that has the authority to review on appeal the suspension, amendment, modification, revocation, or denial of any certificate or license issued by the FAA Administrator.

An Administrative Law Judge for the NTSB may hold a formal hearing at which the FAA will present documentary evidence and testimony by medical specialists supporting the denial decision. The petitioner will also be given an opportunity to present evidence and testimony at the hearing. The Administrative Law Judge’s decision is subject to review by the full NTSB.

22. Medical Certificates Requested for any Situation or Job Other than a Pilot or Air Traffic Controller.
(Updated 07/29/2020)

The FAA’s authority to issue airman medical certificates is limited to civil aviation safety considerations by statute (Title 49, United States Code, Chapter 447) and regulation (Title 14, Code of Federal Regulations (CFR), Parts 61 and 67). The Federal Air Surgeon’s authority is therefore limited to considering whether an individual applying for medical certification is physically and mentally qualified to safely perform pilot or air traffic control duties requiring any class of airman medical certificate. This includes contract air traffic control tower operators who are required by regulation to have a class II airman medical certificate.

The Federal Air Surgeon may not give consideration to non-pilot occupational, employment, recreational, or other reasons an individual may have for seeking an airman medical certificate. This would be an abrogation of the Federal Air Surgeon’s safety responsibilities.

Historically, several industries have required certain employees to obtain medical certification by completing an FAA airman medical examination, usually related to accident or health insurance liability issues, e.g. parachute jump instructors, speedboat drivers, and Armed Security Officers (per TSA/DHS requirements).

Those requirements are set by the employer, not by the FAA. The FAA may not put limitations on an airman’s medical certificate, such as “valid for speedboat racing only.” Similarly, the FAA may not issue airman medical certificates with a limitation of “not valid for flying.”
The medical application may not be tailored to specific industries or non-aviation uses. The applicant either meets all of the medical requirements for a specific class, with or without a Special Issuance or SODA, or they do not. The FAA may not issue a medical certificate, for example, if the applicant passed everything except the vision requirement or the hearing requirement for that class because they are not a pilot or ATC. The fact that an employer requires an airman medical certificate for employment is an issue that the individual should address with their employer. It is outside the purview of the FAA.

Once issued an FAA airman medical certificate, the individual may legally use that certificate to become a pilot or perform pilot (or air traffic control) duties, even if the individual specifically denied intent to do so at the time of the application. Therefore, if the FAA issues an airman medical certificate with the intent that the person not use it to fly, yet they decided to do so, that would be an abrogation of the FAA’s safety duties.
APPLICATION FOR MEDICAL CERTIFICATION

Items 1-20 of FAA Form 8500-8
ITEMS 1-20 of FAA Form 8500-8

This section contains guidance for items on the Medical History and General Information page of FAA Form 8500-8, Application for Airman Medical Certificate.

I. AME Guidance for Positive Identification of Airmen and Application Procedures

All applicants must show proof of age and identity under 14 CFR §67.4. On occasion, individuals have attempted to be examined under a false name. If the applicant is unknown to the Examiner, the Examiner should request evidence of positive identification. A Government-issued photo identification (e.g., driver’s license, identification card issued by a driver’s license authority, military identification, or passport) provides age and identity and is preferred. Applicants may use other government-issued identification for age (e.g., certified copy of a birth certificate); however, the Examiner must request separate photo identification for identity (such as a work badge). Verify that the address provided is the same as that given under Item 5. Record the type of identification(s) provided and identifying number(s) under Item 60. Make a copy of the identification and keep it on file for 3 years with the AME work copy.

An applicant who does not have government-issued photo identification may use non-photo government-issued identification (e.g. pilot certificate, birth certificate, voter registration card) in conjunction with a photo identification (e.g. work identification card, student identification card).

If an airman fails to provide identification, the Examiner must report this immediately to the AMCD, or the appropriate RFS for guidance.

II. Prior to the Examination

(Updated 02/28/2018)

- Once the applicant successfully completes Items 1-20 of FAA Form 8500-8 through the FAA MedXPress system, he/she will receive a confirmation number and instructions to print a summary sheet. This data entered through the MedXPress system will remain valid for 60 days.

- Applicants must bring their MedXPress confirmation number and valid photo identification to the Exam. If the applicant does not bring their confirmation number to the exam, the applicant can retrieve it from MedXPress or their email account. Examiners should call AMCS Support if the confirmation number cannot be retrieved.

- Examiners must not begin the exam until they have imported the MedXPress application into AMCS and have verified the identity of the applicant.
III. After the Applicant Completes the Medical History of the FAA Form 8500-8

The Examiner must review all Items 1 through 20 for accuracy. The applicant must answer all questions. The date for Item 16 may be estimated if the applicant does not recall the actual date of the last examination. However, for the sake of electronic transmission, it must be placed in the mm/dd/yyyy format.

Verify that the name on the applicant's identification media matches the name on the FAA Form 8500-8. If it does not, question the applicant for an explanation. If the explanation is not reasonable (legal name change, subsequent marriage, etc.), do not continue the medical examination or issue a medical certificate. Contact your RFS for guidance.

The applicant's Social Security Number (SSN) is not mandatory. Failure to provide is not grounds for refusal to issue a medical certificate. (See Item 4). All other items on the form must be completed.

Applicants must provide their home address on the FAA Form 8500-8. Applicants may use a private mailing address (e.g., a P.O. Box number or a mail drop) if that is their preferred mailing address; however, under Item 18 (in the "Explanations" box) of the FAA Form 8500-8, they must provide their home address.

An applicant cannot make updates to their application once they have certified and submitted it. If the examiner discovers the need for corrections to the application during the review, the Examiner is required to discuss these changes with the applicant and obtain their approval. The examiner must make any changes to the application in AMCS.

Strict compliance with this procedure is essential in case it becomes necessary for the FAA to take legal action for falsification of the application.
ITEMS 1-2. Application for; Class of Medical Certificate Applied For

The applicant indicates the class of medical certificate desired. The class of medical certificate sought by the applicant is needed so that the appropriate medical standards may be applied. The class of certificate issued must correspond with that for which the applicant has applied.

The applicant may ask for a medical certificate of a higher class than needed for the type of flying or duties currently performed. For example, an aviation student may ask for a first-class medical certificate to see if he or she qualifies medically before entry into an aviation career. A recreational pilot may ask for a first- or second-class medical certificate if they desire.

The Examiner applies the standards appropriate to the class sought, not to the airman’s duties - either performed or anticipated. The Examiner should never issue more than one certificate based on the same examination.

ITEMS 3-10. Identification

Items 3-10 on the FAA Form 8500-8 must be entered as identification. While most of the items are self-explanatory (as indicated in the MedXPress drop-down menu next to individual items) specific instructions include:

- **Item 3. Last Name; First Name; Middle Name**
  The applicant’s legal last, first, and middle name* (or initial if appropriate) must be provided.

  *If an applicant has no middle name, leave the middle name box blank. Do not use nomenclature which indicates no middle name (i.e. NMN, NMI, etc.). If the applicant has used such a nomenclature on their MedXPress application, delete it and leave the middle name box blank.

  **Note:** If the applicant’s name changed for any reason, the current name is listed on the application and any former name(s) in the EXPLANATIONS box of Item 18 on the application.

- **Item 4. Social Security Number (SSN)**
  The applicant must provide their SSN. If they decline to provide one or are an international applicant, they must check the appropriate box and a number will be generated for them. The FAA requests a SSN for identification purposes, record control, and to prevent mistakes in identification.

- **Item 6. Date of Birth**
  The applicant must enter the numbers for the month, day, and year of birth in order. Name, date of birth, and SSN are the basic identifiers of airmen. When an Examiner communicates with the FAA concerning an applicant, the Examiner
must give the applicant's full name, date of birth, and SSN if at all possible. The applicant should indicate citizenship; e.g., U.S.A.

Although nonmedical regulations allow an airman to solo a glider or balloon at age 14, a medical certificate is not required for glider or balloon operations. These airmen are required to certify to the FAA that they have no known physical defects that make them unable to pilot a glider or balloon. This certification is made at the FAA FSDO’s.

There is a maximum age requirement for certain air carrier pilots. Because this is not a medical requirement but an operational one, the Examiner may issue medical certificates without regard to age to any applicant who meets the medical standards.

**ITEMS 11-12. Occupation; Employer**

Occupational data are principally used for statistical purposes. This information, along with information obtained from **Items 10, 14 and 15** may be important in determining whether a SODA may be issued, if applicable.

**11. Occupation**

This should reflect the applicant's major employment. "Pilot" should only be reported when the applicant earns a livelihood from flying.

**12. Employer**

The employer's name should be entered by the applicant.

**ITEM 13. Has Your FAA Airman Medical Certificate Ever Been Denied, Suspended, or Revoked?**

The applicant shall check "yes" or "no." If "yes" is checked, the applicant should enter the date of action and should report details in the EXPLANATIONS box of **Item 18**.

The Examiner may not issue a medical certificate to an applicant who has checked "yes." The only exceptions to this prohibition are:

- The applicant presents written evidence from the FAA that he or she was subsequently medically certificated and that an Examiner is authorized to issue a renewal medical certificate to the person if medically qualified; or

- The Examiner obtains oral or written authorization to issue a medical certificate from an FAA medical office
ITEMS 14-15. Total Pilot Time

14. Total Pilot Time to Date

The applicant should indicate the total number of civilian flight hours and whether those hours are logged (LOG) or estimated (EST).

15. Total Pilot Time Past 6 Months

The applicant should provide the number of civilian flight hours in the 6-month period immediately preceding the date of this application. The applicant should indicate whether those hours are logged (LOG) or estimated (EST).

ITEM 16. Date of Last FAA Medical Application

If a prior application was made, the applicant should indicate the date of the last application, even if it is only an estimate of the year. This item should be completed even if the application was made many years ago or the previous application did not result in the issuance of a medical certificate. If no prior application was made, the applicant should check the appropriate block in Item 16.

ITEM 17.a. Do You Currently Use Any Medication (Prescription or NON prescription)?

If the applicant checks yes, give name of medication(s) and indicate if the medication was listed in a previous FAA medical examination.

This includes both prescription and nonprescription medication. (Additional guidelines for the certification of airmen who use medication may be found throughout the Guide).

For example, any airman who is undergoing continuous treatment with anticoagulants, antiviral agents, anxiolytics, barbiturates, chemotherapeutic agents, experimental hypoglycemic, investigational, mood-ameliorating, motion sickness, narcotic, sedating antihistaminic, sedative, steroid drugs, or tranquilizers must be deferred certification unless the treatment has previously been cleared by FAA medical authority. In such an instance, the applicant should provide the Examiner with a copy of any FAA correspondence that supports the clearance.

During periods in which the foregoing medications are being used for treatment of acute illnesses, the airman is under obligation to refrain from exercising the privileges of his/her airman medical certificate unless cleared by the FAA.
Further information concerning an applicant’s use of medication may be found under the items pertaining to specific medical condition(s) for which the medication is used, or you may contact your RFS.

ITEM 17.b. Do You Ever Use Near Vision Contact Lens(es) While Flying?

The applicant should indicate whether near vision contact lens(es) is/are used while flying. If the applicant answers "yes," the Examiner must counsel the applicant that **use of contact lens(es) for monovision correction is not allowed.** The Examiner must note in Item 60 that this counseling has been given. **Examples of unacceptable use include:**

- The use of a contact lens in one eye for near vision and in the other eye for distant vision (for example: pilots with myopia plus presbyopia).

- The use of a contact lens in one eye for near vision and the use of no contact lens in the other eye (for example: pilots with presbyopia but no myopia).

If the applicant checks "yes" and no further comment is noted on FAA Form 8500-8 by either the applicant or the Examiner, a letter will automatically be sent to the applicant informing him or her that such use is inappropriate for flying.

Please note: the use of binocular contact lenses for distance-correction-only is acceptable. In this instance, no special evaluation or SODA is routinely required for a distance-vision-only contact lens wearer who meets the standard and has no complications. Binocular bifocal or binocular multifocal contact lenses are also acceptable under the [Protocol for Binocular Multifocal and Accommodating Devices](#). If the applicant checks "yes" in Item 17.b but actually is using binocular bifocal or binocular multifocal contact lenses then the Examiner should note this in **Item 60.**

ITEM 18. Medical History

Each item under this heading must be checked either "yes" or "no." For all items checked "yes," a description and approximate date of every condition the applicant has ever been diagnosed with, had, or presently has, must be given in the EXPLANATIONS box. If information has been reported on a previous application for airman medical certification and there has been no change in the condition, the applicant may note "PREVIOUSLY REPORTED, NO CHANGE" in the EXPLANATIONS box, but the applicant must still check "yes" to the condition.

Of particular importance are conditions that have developed since the last FAA medical examination. The Examiner must take the time to review the applicant's responses on FAA Form 8500-8 before starting the applicant's medical examination.
The Examiner should ensure that the applicant has checked all of the boxes in Item 18
as either "yes" or "no." The Examiner should use information obtained from this review
in asking the applicant pertinent questions during the course of the examination.

Certain aspects of the individual's history may need to be elaborated upon. The
Examiner should provide in Item 60 an explanation of the nature of items checked "yes"
in items 18.a. through 18.y. Please be aware there is a character count limit in Item 60.
If all comments cannot fit in Item 60, the Examiner may submit additional information on
a plain sheet of paper and include the applicant's full name, date of birth, signature, any
appropriate identifying numbers (PI, MID or SSN), and the date of the exam.

Supplementary reports from the applicant's physician(s) should be obtained and
forwarded to the AMCD, when necessary, to clarify the significance of an item of history.
The responsibility for providing such supplementary reports rests with the applicant. A
discussion with the Examiner's RFS may clarify and expedite the certification process at
that time.

Affirmative answers alone in Item 18 do not constitute a basis for denial of a medical
certificate. A decision concerning issuance or denial should be made by applying the
medical standards pertinent to the conditions uncovered by the history.

Experience has shown that, when asked direct questions by a physician, applicants are
likely to be candid and willing to discuss medical problems.

The Examiner should attempt to establish rapport with the applicant and to develop a
complete medical history. Further, the Examiner should be familiar with the FAA
certification policies and procedures in order to provide the applicant with sound advice.

18.a. Frequent or severe headaches. The applicant should report frequency,
duration, characteristics, severity of symptoms, neurologic manifestations, whether they
have been incapacitating, treatment, and side effects, if any. (See Item 46)

18.b. Dizziness or fainting spells. The applicant should describe characteristics of
the episode; e.g., spinning or lightheadedness, frequency, factors leading up to and
surrounding the episode, associated neurologic symptoms; e.g., headache, nausea,
LOC, or paresthesias. Include diagnostic workup and treatment if any.
(See Items 25-30 and Item 46)

18.c. Unconsciousness for any reason. The applicant should describe the event(s)
to determine the primary organ system responsible for the episode, witness statements,
initial treatment, and evidence of recurrence or prior episode. Although the regulation
states, "an unexplained disturbance of consciousness is disqualifying," it does not mean
to imply that the applicant can be certificated if the etiology is identified, because the
etiology may also be disqualifying in and of itself. (See Item 46).

18.d. Eye or vision trouble except glasses. The Examiner should personally explore
the applicant's history by asking questions, concerning any changes in vision, unusual
visual experiences (halos, scintillations, etc.), sensitivity to light, injuries, surgery, or current use of medication. Does the applicant report inordinate difficulties with eye fatigue or strain? Is there a history of serious eye disease such as glaucoma or other disease commonly associated with secondary eye changes, such as diabetes? For glaucoma or ocular hypertension, obtain a FAA Form 8500-14, Report of Eye Evaluation for Glaucoma. For any other medical condition, obtain a FAA Form 8500-7, Report of Eye Evaluation. Under all circumstances, please advise the examining eye specialist to explain why the airman is unable to correct to Snellen visual acuity of 20/20. (See Items 31-34, Item 53, and Item 54)

18.e. Hay fever or allergy. The applicant should report frequency and duration of symptoms, any incapacitation by the condition, treatment, and side effects. The Examiner should inquire whether the applicant has ever experienced any barotitis (“ear block”), barosinusitis, alternobaric vertigo, or any other symptoms that could interfere with aviation safety. (See Item 26)

18.f. Asthma or lung disease. The applicant should provide frequency and severity of asthma attacks, medications, and number of visits to the hospital and/or emergency room. For other lung conditions, a detailed description of symptoms/diagnosis, surgical intervention, and medications should be provided. (See Item 35)

18.g. Heart or vascular trouble. The applicant should describe the condition to include, dates, symptoms, and treatment, and provide medical reports to assist in the certification decision-making process. These reports should include: operative reports of coronary intervention to include the original cardiac catheterization report, stress tests, worksheets, and original tracings (or a legible copy). When stress tests are provided, forward the reports, worksheets and original tracings (or a legible copy) to the FAA. Part 67 provides that, for all classes of medical certificates, an established medical history or clinical diagnosis of myocardial infarction, angina pectoris, cardiac valve replacement, permanent cardiac pacemaker implantation, heart replacement, or coronary heart disease that has required treatment or, if untreated, that has been symptomatic or clinically significant, is cause for denial. (See Item 36)

18.h. High or low blood pressure. The applicant should provide history and treatment. Issuance of a medical certificate to an applicant with high blood pressure may depend on the current blood pressure levels and whether the applicant is taking anti-hypertensive medication. The Examiner should also determine if the applicant has a history of complications, adverse reactions to therapy, hospitalization, etc. (Details are given in Item 36 and Item 55)

18.i. Stomach, liver, or intestinal trouble. The applicant should provide history and treatment, pertinent medical records, current status report, and medication. If a surgical procedure was done, the applicant must provide operative and pathology reports. (See Item 38)

18.j. Kidney stone or blood in urine. The applicant should provide history and treatment, pertinent medical records, current status report and medication. If a
procedure was done, the applicant must provide the report and pathology reports. (See Item 41)

18.k. Diabetes. The applicant should describe the condition to include symptoms and treatment. Comment on the presence or absence of hyperglycemic and/or hypoglycemic episodes. A medical history or clinical diagnosis of diabetes mellitus requiring insulin or other hypoglycemic drugs for control are disqualifying. The Examiner can help expedite the FAA review by assisting the applicant in gathering medical records and submitting a current specialty report. (See Item 48)

18.l. Neurological disorders; epilepsy, seizures, stroke, paralysis, etc. The applicant should provide history and treatment, pertinent medical records, current status report and medication. The Examiner should obtain details about such a history and report the results. An established diagnosis of epilepsy, a transient loss of control of nervous system function(s), or a disturbance of consciousness is a basis for denial no matter how remote the history. Like all other conditions of aeromedical concern, the history surrounding the event is crucial. Certification is possible if a satisfactory explanation can be established. (See Item 46)

18.m. Mental disorders of any sort; depression, anxiety, etc. An affirmative answer to Item 18.m. requires investigation through supplemental history taking. Dispositions will vary according to the details obtained. An applicant with an established history of a personality disorder that is severe enough to have repeatedly manifested itself by overt acts, a psychosis disorder, or a bipolar disorder must be denied or deferred by the Examiner. (See Item 47)

18.n. Substance dependence; or failed a drug test ever; or substance abuse or use of illegal substance in the last 2 years. "Substance" includes alcohol and other drugs (e.g., PCP, sedatives and hypnotics, anxiolytics, marijuana, cocaine, opioids, amphetamines, hallucinogens, and other psychoactive drugs or chemicals). For a "yes" answer to Item 18.n., the Examiner should obtain a detailed description of the history. See disposition tables. A history of substance dependence or abuse is disqualifying. The Examiner must defer issuance of a certificate if there is doubt concerning an applicant's substance use. See: Pharmaceuticals and Substances of Dependence/Abuse.

18.o. Alcohol dependence or abuse. See DUI/DWI/Alcohol Incidents Disposition Table.

18.p. Suicide attempt. A history of suicidal attempts or suicidal gestures requires further evaluation. The ultimate decision of whether an applicant with such a history is eligible for medical certification rests with the FAA. The Examiner should take a supplemental history as indicated, assist in the gathering of medical records related to the incident(s), and, if the applicant agrees, assist in obtaining psychiatric and/or psychological examinations. (See Item 47)
18.q. **Motion sickness requiring medication.** A careful history concerning the nature of the sickness, frequency and need for medication is indicated when the applicant responds affirmatively to this item. Because motion sickness varies with the nature of the stimulus, it is most helpful to know if the problem has occurred in flight or under similar circumstances. (See Item 29)

18.r. **Military medical discharge.** If the person has received a military medical discharge, the Examiner should take additional history and record it in Item 60. It is helpful to know the circumstances surrounding the discharge, including dates, and whether the individual is receiving disability compensation. If the applicant is receiving veteran’s disability benefits, the claim number and service number are helpful in obtaining copies of pertinent medical records. The fact that the applicant is receiving disability benefits does not necessarily mean that the application should be denied.

18.s. **Medical rejection by military service.** The Examiner should inquire about the place, cause, and date of rejection and enter the information in Item 60. It is helpful if the Examiner can assist the applicant with obtaining relevant military documents. If a delay of more than 14-calendar days is expected, the Examiner should transmit FAA Form 8500-8 to the FAA with a note specifying what documents will be forwarded later.

Disposition will depend upon whether the medical condition still exists or whether a history of such a condition requires denial or deferral under the FAA medical standards.

18.t. **Rejection for life or health insurance.** The Examiner should inquire regarding the circumstances of rejection. The supplemental history should be recorded in Item 60. Disposition will depend upon whether the medical condition still exists or whether a history of such a condition requires denial or deferral under the FAA medical standards.

18.u. **Admission to hospital.** For each admission, the applicant should list the dates, diagnoses, duration, treatment, name of the attending physician, and complete address of the hospital or clinic. If previously reported, the applicant may enter "PREVIOUSLY REPORTED, NO CHANGE." A history of hospitalization does not disqualify an applicant, although the medical condition that resulted in hospitalization may.

18.v. **History of Arrest(s), Conviction(s), and/or Administrative Action(s).**

(Updated 06/24/2020)

Arrest(s), conviction(s), and/or administrative action(s) affecting driving privileges may raise questions about the applicant's qualifications for airman medical certification. All incidents must be reported (even if reported on a previous application), to include even a single driving while intoxicated (DWI) arrest, conviction and/or administrative action. Incidents reported under 18.v. are just part of many factors considered in the overall process of medical certification. See **Substances of Dependence/Abuse**.

**NOTE:** Remind your airman that once he/she has checked yes to any item in #18, especially items 18 n., 18 o. or 18 v., they must **ALWAYS mark yes** to these numbers, even if the condition has been reviewed and granted an eligibility letter from the FAA.
18.w. History of nontraffic convictions. The applicant must report any other (nontraffic) convictions (e.g., assault, battery, public intoxication, robbery, etc.). The applicant must name the charge for which convicted and the date of the conviction(s), and copies of court documents (if available). (See Item 47)

18.x. Other illness, disability, or surgery. The applicant should describe the nature of these illnesses in the EXPLANATIONS box. If additional records, tests, or specialty reports are necessary in order to make a certification decision, the applicant should so be advised. If the applicant does not wish to provide the information requested by the Examiner, the Examiner should defer issuance.

If the applicant wishes to have the FAA review the application and decide what ancillary documentation is needed, the Examiner should defer issuance of the medical certificate and forward the completed FAA Form 8500-8 to the AMCD. If the Examiner proceeds to obtain documentation, but all data will not be received with the 2 weeks, FAA Form 8500-8 should be transmitted immediately to the AMCD with a note that additional documents will be forwarded later under separate cover.

18.y. Medical Disability Benefits. The applicant must report any disability benefits received, regardless of source or amount. If the applicant checks “yes” on this item, the FAA may verify with other Federal Agencies (i.e. Social Security Administration, Veteran’s Affairs) whether the applicant is receiving a disability benefit that may present a conflict in issuing an FAA medical certificate. The Examiner must document the specifics and nature of the disability in findings in Item 60.

ITEM 19. Visits to Health Professional Within Last 3 Years

The applicant should list all visits in the last 3 years to a physician, physician assistant, nurse practitioner, psychologist, clinical social worker, or substance abuse specialist for treatment, examination, or medical/mental evaluation. The applicant should list visits for counseling only if related to a personal substance abuse or psychiatric condition. The applicant should give the name, date, address, and type of health professional consulted and briefly state the reason for the consultation. Multiple visits to one health professional for the same condition may be aggregated on one line.

Routine dental, eye, and FAA periodic medical examinations and consultations with an employer-sponsored employee assistance program (EAP) may be excluded unless the consultations were for the applicant’s substance abuse or unless the consultations resulted in referral for psychiatric evaluation or treatment.

When an applicant does provide history in Item 19, the Examiner should review the matter with the applicant. The Examiner will record in Item 60 only that information needed to document the review and provide the basis for a certification decision. If the Examiner finds the information to be of a personal or sensitive nature with no relevancy to flying safety, it should be recorded in Item 60 as follows:
"Item 19. Reviewed with applicant. History not significant or relevant to application."

If the applicant is otherwise qualified, a medical certificate may be issued by the Examiner.

FAA medical authorities, upon review of the application, will ask for further information regarding visits to health care providers only where the physical findings, report of examination, applicant disclosure, or other evidence suggests the possible presence of a disqualifying medical history or condition.

If an explanation has been given on a previous report(s) and there has been no change in the condition, the applicant may enter "PREVIOUSLY REPORTED, NO CHANGE."

Of particular importance is the reporting of conditions that have developed since the applicant's last FAA medical examination. The Examiner is asked to comment on all entries, including those "PREVIOUSLY REPORTED, NO CHANGE." These comments may be entered under Item 60.

ITEM 20. Applicant's National Driver Register and Certifying Declaration

In addition to making a declaration of the completeness and truthfulness of the applicant's responses on the medical application, the applicant's declaration authorizes the National Driver Register to release the applicant's adverse driving history information, if any, to the FAA. The FAA uses such information to verify information provided in the application. Applicant must certify the declaration outlined in Item 20. If the applicant does not certify the declaration for any reason, Examiner shall not issue a medical certificate but forward the incomplete application to the AMCD.
EXAMINATION TECHNIQUES

Items 21-58 of FAA Form 8500-8
ITEMS 21-58 of FAA Form 8500-8

The Examiner must personally conduct the physical examination. This section provides guidance for completion of Items 21-58 of the Application for Airman Medical Certificate, FAA Form 8500-8.

The Examiner must carefully read the applicant's history page of FAA Form 8500-8 (Items 1-20) before conducting the physical examination and completing the Report of Medical Examination. This alerts the Examiner to possible pathological findings.

The Examiner must note in Item 60 of the FAA Form 8500-8 any condition found in the course of the examination. The Examiner must list the facts, such as dates, frequency, and severity of occurrence.

When a question arises, the Federal Air Surgeon encourages Examiners first to check this Guide for Aviation Medical Examiners and other FAA informational documents. If the question remains unresolved, the Examiner should seek advice from a RFS or AMCD.

ITEMS 21-22. Height and Weight

| 21. Height (inches) | 22. Weight (pounds) |

ITEM 21. Height

Measure and record the applicant's height in inches. Although there are no medical standards for height, exceptionally short individuals may not be able to effectively reach all flight controls and must fly specially modified aircraft. If required, the FAA will place operational limitations on the pilot certificate.

ITEM 22. Weight

Measure and record the applicant's weight in pounds.
## BMI Chart and Formula Table

<table>
<thead>
<tr>
<th>Measurement Units</th>
<th>BMI Formula and Calculation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pounds and inches</td>
<td>Formula: weight (lb) / ([\text{height (in)}]^2) x 703</td>
</tr>
<tr>
<td></td>
<td>Calculate BMI by dividing weight in pounds (lbs) by height in inches (in) squared and multiplying by a conversion factor of 703.</td>
</tr>
<tr>
<td></td>
<td>Example: Weight = 150 lbs, Height = 5'5&quot; (65&quot;)</td>
</tr>
<tr>
<td></td>
<td>Calculation: ([150 \div (65)^2]) x 703 = 24.96</td>
</tr>
<tr>
<td>Kilograms and meters (or centimeters)</td>
<td>Formula: weight (kg) / ([\text{height (m)}]^2)</td>
</tr>
<tr>
<td></td>
<td>With the metric system, the formula for BMI is weight in kilograms divided by height in meters squared. Since height is commonly measured in centimeters, divide height in centimeters by 100 to obtain height in meters.</td>
</tr>
<tr>
<td></td>
<td>Example: Weight = 68 kg, Height = 165 cm (1.65 m)</td>
</tr>
<tr>
<td></td>
<td>Calculation: (68 \div (1.65)^2) = 24.98</td>
</tr>
</tbody>
</table>

ITEMS 23-24. Statement of Demonstrated Ability (SODA); SODA Serial Number

<table>
<thead>
<tr>
<th>23. Statement of Demonstrated Ability (SODA)</th>
<th>Yes</th>
<th>No</th>
<th>Defect Noted:</th>
</tr>
</thead>
</table>

ITEM 23. Has a SODA ever been issued?

Ask the applicant if a SODA has ever been issued. If the answer is "yes," ask the applicant to show you the document. Then check the "yes" block and record the nature and degree of the defect.

SODA's are valid for an indefinite period or until an adverse change occurs that results in a level of defect worse than that stated on the face of the document.

The FAA issues SODA's for certain static defects, but not for disqualifying conditions or conditions that may be progressive. The extent of the functional loss that has been cleared by the FAA is stated on the face of the SODA. If the Examiner finds the condition has become worse, a medical certificate should not be issued even if the applicant is otherwise qualified. The Examiner should also defer issuance if it is unclear whether the applicant's present status represents an adverse change.

The Examiner must take special care not to issue a medical certificate of a higher class than that specified on the face of the SODA even if the applicant appears to be otherwise medically qualified. The Examiner may note in Item 60 the applicant's desire for a higher class.

ITEM 24. SODA Serial Number

<table>
<thead>
<tr>
<th>24. SODA Serial Number</th>

</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.105(b)(c), 67.205(b)(c), and 67.305(b)(c)

(b) No disease or condition of the middle or internal ear, nose, oral cavity, pharynx, or larynx that -

(1) Interferes with, or is aggravated by, flying or may reasonably be expected to do so; or

(2) Interferes with, or may reasonably be expected to interfere with, clear and effective speech communication.

(c) No disease or condition manifested by, or that may reasonably be expected to be manifested by, vertigo or a disturbance of equilibrium.

II. Examination Techniques

1. The **head and neck** should be examined to determine the presence of any significant defects such as:

   a. Bony defects of the skull
   b. Gross deformities
   c. Fistulas
   d. Evidence of recent blows or trauma to the head
   e. Limited motion of the head and neck
   f. Surgical scars

2. The **external ear** is seldom a major problem in the medical certification of applicants. Otitis externa or a furuncle may call for temporary disqualification. Obstruction of the canal by impacted cerumen or cellular debris may indicate a need for referral to an ENT specialist for examination.
The tympanic membranes should be examined for scars or perforations. Discharge or granulation tissue may be the only observable indication of perforation. Middle ear disease may be revealed by retraction, fluid levels, or discoloration. The normal tympanic membrane is movable and pearly gray in color. Mobility should be demonstrated by watching the drum through the otoscope during a valsalva maneuver.

3. Pathology of the middle ear may be demonstrated by changes in the appearance and mobility of the tympanic membrane. The applicant may only complain of stuffiness of the ears and/or loss of hearing. An upper respiratory infection greatly increases the risk of aerotitis media with pain, deafness, tinnitus, and vertigo due to lessened aeration of the middle ear from eustachian tube dysfunction. When the applicant is taking medication for an ENT condition, it is important that the Examiner become fully aware of the underlying pathology, present status, and the length of time the medication has been used. If the condition is not a threat to aviation safety, the treatment consists solely of antibiotics, and the antibiotics have been taken over a sufficient period to rule out the likelihood of adverse side effects, the Examiner may make the certification decision.

The same approach should be taken when considering the significance of prior surgery such as myringotomy, mastoidectomy, or tympanoplasty. Simple perforation without associated symptoms or pathology is not disqualifying. When in doubt, the Examiner should not hesitate to defer issuance and refer the matter to the AMCD. The services of consultant ENT specialists are available to the FAA to help in determining the safety implications of complicated conditions.

4. **Unilateral Deafness.** An applicant with unilateral congenital or acquired deafness should not be denied medical certification if able to pass any of the tests of hearing acuity.

5. **Bilateral Deafness.** It is possible for a totally deaf person to qualify for a private pilot certificate. When the applicant initially applies for medical certification, the AME should defer the exam with notes in Block 60 explaining this and include which FSDO the airman wants to use to take a Medical Flight Test.

The student may practice with an instructor before undergoing a pilot check ride for the private pilot’s license. When the applicant is ready to take the check ride, he/she must have an authorization to take a medical flight test (MFT) from either RFS/AMCD. Upon successful completion of the MFT, the applicant will be issued a SODA and an operational restriction will be placed on his/her pilot’s license that restricts the pilot from flying into airspace requiring radio communication.

6. **Hearing Aids.** Under some circumstances, the use of hearing aids may be acceptable. If the applicant is unable to pass any of the above tests without the use of hearing aids, he or she may be tested using hearing aids.
7. The **nose** should be examined for the presence of polyps, blood, or signs of infection, allergy, or substance abuse. The Examiner should determine if there is a history of epistaxis with exposure to high altitudes and if there is any indication of loss of sense of smell (anosmia). Polyps may cause airway obstruction or sinus blockage. Infection or allergy may be cause for obtaining additional history. Anosmia is at least noteworthy in that the airman should be made fully aware of the significance of the handicap in flying (inability to receive early warning of gas spills, oil leaks, or smoke). Further evaluation may be warranted.

8. Evidence of **sinus** disease must be carefully evaluated by a specialist because of the risk of sudden and severe incapacitation from barotrauma.

9. The **mouth and throat** should be examined to determine the presence of active disease that is progressive or may interfere with voice communications. Gross abnormalities that could interfere with the use of personal equipment such as oxygen equipment should be identified. Also see [Protocol for Obstructive Sleep Apnea](#).

10. The **larynx** should be visualized if the applicant's voice is rough or husky. Acute laryngitis is temporarily disqualifying. Chronic laryngitis requires further diagnostic workup. Any applicant seeking certification for the first time with a functioning tracheostomy, following laryngectomy, or who uses an artificial voice-producing device should be denied or deferred and carefully assessed.

### III. Aerospace Medical Disposition

The [Aerospace Medical Disposition Tables](#) list the most common conditions of aeromedical significance and course of action that should be taken by the examiner as defined by the protocol and disposition in the table.

Conditions AMEs Can Issue (CACI) Certification Worksheets are also found within the Dispositions tables. These are a series of conditions which allow AMEs to regular issue if the applicant meets the parameters of the CACI Condition Worksheets. The worksheets provide detailed instructions to the examiner and outline condition-specific requirements for the applicant. If the requirements are met, and the applicant is otherwise qualified, the AME may issue without contacting AMCD first. If the requirements are not met, the AME must defer the exam and send the supporting documents to the FAA.

Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

For hay fever requiring antihistamines:

- The nonsedating antihistamines loratadine, desloratadine, and fexofenadine may be used while flying if, after an adequate initial "trial period," symptoms are controlled without adverse side effects.

- Applicants with seasonal allergies requiring any other antihistamine (oral and/or nasal) may be certified by the examiner with the stipulation that they do not exercise the privileges of airman certificate until they have stopped the medication and wait after the last dose until:
  - At least five maximal dosing intervals have passed. For example, if the medication is taken every 4-6 hours, wait 30 hours (5x6) after the last dose to fly.
  - At least five times the maximum terminal elimination half-life has passed. For example, if the medication half-life is 6-8 hours, wait 40 hours (5x8) after the last dose to fly.

- Examiners are encouraged to look up the dosing intervals and half-life.

- Airmen who are exhibiting symptoms, regardless of the treatment used, must not fly.

- In all situations, the examiner must notate the evaluation data in Block 60.

*AME must warn airman to not operate aircraft until four hours after any allergy desensitization treatment (injection or SLIT). See Pharmaceutical section.

### Otologic Surgery

A history of otologic surgery is not necessarily disqualifying for medical certification. The FAA evaluates each case on an individual basis following review of the otologist’s report of surgery. The type of prosthesis used, the person’s adaptability and progress following surgery, and the extent of hearing acuity attained are all major factors to be considered. Examiners should defer issuance to an applicant presenting a history of otologic surgery for the first time, sending the completed report of medical examination, with all available supplementary information, to the AMCD.

Some conditions may have several possible causes or exhibit multiple symptomatology. Episodic disorders of dizziness or disequilibrium require careful evaluation and consideration by the FAA. Transient processes, such as those associated with acute labyrinthitis or benign positional vertigo may not disqualify an applicant when fully recovered. (Also see Item 46., Neurologic for a discussion of syncope and vertigo).

I. Code of Federal Regulations

All Classes: 14 CFR 67.103(e), 67.203(e), and 67.303(d)

(e) No acute or chronic pathological condition of either the eye or adnexa that interferes with the proper function of the eye, that may reasonably be expected to progress to that degree, or that may reasonably be expected to be aggravated by flying.

II. Examination Techniques

For guidance regarding the conduction of visual acuity, field of vision, heterophoria, and color vision tests, please see Items 50-54.

The examination of the eyes should be directed toward the discovery of diseases or defects that may cause a failure in visual function while flying or discomfort sufficient to interfere with safely performing airman duties.

The Examiner should personally explore the applicant’s history by asking questions concerning any changes in vision, unusual visual experiences (halos, scintillations, etc.), sensitivity to light, injuries, surgery, or current use of medication. Does the applicant report inordinate difficulties with eye fatigue or strain? Is there a history of serious eye disease such as glaucoma or other disease commonly associated with secondary eye changes, such as diabetes? (See Item 53., Field of Vision and Item 54., Heterophoria)

1. It is recommended that the Examiner consider the following signs during the course of the eye examination:

   1. Color — redness or suffusion of allergy, drug use, glaucoma, infection, trauma, jaundice, ciliary flush of Iritis, and the green or brown Kayser-Fleischer Ring of Wilson’s disease.

   2. Swelling — abscess, allergy, cyst, exophthalmos, myxedema, or tumor.

   3. Other — clarity, discharge, dryness, ptosis, protosis, spasm (tic), tropion, or ulcer.
2. Ophthalmoscopic examination. It is suggested that a routine be established for ophthalmoscopic examinations to aid in the conduct of a comprehensive eye assessment.

   a. Cornea — observe for abrasions, calcium deposits, contact lenses, dystrophy, keratoconus, pterygium, scars, or ulceration. Contact lenses should be removed several hours before examination of the eye. (See Item 50, Distant Vision)

   b. Pupils and Iris — check for the presence of synechiae and uveitis. Size, shape, and reaction to light should be evaluated during the ophthalmoscopic examination. Observe for coloboma, reaction to light, or disparity in size.

   c. Aqueous — hyphema or iridocyclitis.

   d. Lens — observe for aphakia, discoloration, dislocation, cataract, or an implanted lens.

   e. Vitreous — note discoloration, hyaloid artery, floaters, or strands.

   f. Optic nerve — observe for atrophy, hemorrhage, cupping, or papilledema.

   g. Retina and choroid — examine for evidence of coloboma, choroiditis, detachment of the retina, diabetic retinopathy, retinitis, retinitis pigmentosa, retinal tumor, macular or other degeneration, toxoplasmosis, etc.

3. Ocular Motility. Motility may be assessed by having the applicant follow a point light source with both eyes, the Examiner moving the light into right and left upper and lower quadrants while observing the individual and the conjugate motions of each eye. The Examiner then brings the light to center front and advances it toward the nose observing for convergence. End point nystagmus is a physiologic nystagmus and is not considered to be significant. It need not be reported. (For further consideration of nystagmus, see Item 50., Distant Vision.)

4. Monocular Vision. An applicant will be considered monocular when there is only one eye or when the best corrected distant visual acuity in the poorer eye is no better than 20/200. An individual with one eye, or effective visual acuity equivalent to monocular, may be considered for medical certification, any class, through the special issuance section of part 67 (14 CFR 67.401).

In amblyopia ex anopsia, the visual acuity loss is simply recorded in Item 50 of FAA Form 8500-8, and visual standards are applied as usual. If the standards
are not met, a Report of Eye Evaluation, FAA Form 8500-7, should be submitted for consideration.

Although it has been repeatedly demonstrated that binocular vision is not a prerequisite for flying, some aspects of depth perception, either by stereopsis or by monocular cues, are necessary. It takes time for the monocular airman to develop the techniques to interpret the monocular cues that substitute for stereopsis; such as, the interposition of objects, convergence, geometrical perspective, distribution of light and shade, size of known objects, aerial perspective, and motion parallax.

In addition, it takes time for the monocular airman to compensate for his or her decrease in effective visual field. A monocular airman’s effective visual field is reduced by as much as 30% by monocularity. This is especially important because of speed smear; i.e., the effect of speed diminishes the effective visual field such that normal visual field is decreased from 180 degrees to as narrow as 42 degrees or less as speed increases. A monocular airman’s reduced effective visual field would be reduced even further than 42 degrees by speed smear.

For the above reasons, a waiting period of 6 months is recommended to permit an adequate adjustment period for learning techniques to interpret monocular cues and accommodation to the reduction in the effective visual field.

Applicants who have had monovision secondary to refractive surgery may be certificated, providing they have corrective vision available that would provide binocular vision in accordance with the vision standards, while exercising the privileges of the certificate. The certificate issued must have the appropriate vision limitations statement.

5. Contact Lenses. The use of contact lens(es) for monovision correction is not allowed:

- The use of a contact lens in one eye for near vision and in the other eye for distant vision is not acceptable (for example: pilots with myopia plus presbyopia).

- The use of a contact lens in one eye for near vision and the use of no contact lens in the other eye is not acceptable (for example: pilots with presbyopia but no myopia).

Additionally, designer contact lenses that introduce color (tinted lenses), restrict the field of vision, or significantly diminish transmitted light are not allowed.

Please note: the use of binocular contact lenses for distance-correction-only is acceptable. In this instance, no special evaluation or SODA is routinely required for a distance-vision-only contact lens wearer who meets the standard and has no complications. Binocular bifocal or binocular multifocal contact lenses are
accept under the Protocol for Binocular Multifocal and Accommodating Devices.

6. Intraocular Devices. Binocular airman using multifocal or accommodating ophthalmic devices may be issued an airman medical certificate in accordance with the Protocol for Binocular Multifocal and Accommodating Devices.

7. Orthokeratology (Ortho-K) is the use of rigid gas-permeable contact lenses, normally worn only during sleep, to improve vision through reshaping of the cornea. It is used as an alternative to eyeglasses, refractive surgery, or for those who prefer not to wear contact lenses while awake. The correction is not permanent and visual acuity can regress while not wearing the Ortho-K lenses. There is no reasonable or reliable way to determine standards for the entire period the lenses are removed. Therefore, to be found qualified, applicants who use Ortho-K lenses must meet the applicable vision standard while wearing the Ortho-K lenses AND must wear the Ortho-K lenses while piloting aircraft. The limitation "must use Ortho-K lenses while performing pilot duties" must be placed on the medical certificate.

8. Glaucoma. The Examiner should deny or defer issuance of a medical certificate to an applicant if there is a loss of visual fields or a significant change in visual acuity.

The FAA may grant an Authorization under the special issuance section of Part 67 (14 CFR 67.401) on an individual basis. The Examiner must obtain a report of Ophthalmological Evaluation for Glaucoma (FAA Form 8500-14) from an ophthalmologist. See Glaucoma Worksheet. Because secondary glaucoma is caused by known pathology such as; uveitis or trauma, eligibility must largely depend upon that pathology. Secondary glaucoma is often unilateral, and if the cause or disease process is no longer active and the other eye remains normal, certification is likely.

Applicants with primary or secondary narrow angle glaucoma are usually denied because of the risk of an attack of angle closure, because of incapacitating symptoms of severe pain, nausea, transitory loss of accommodative power, blurred vision, halos, epiphora, or iridoparesis. Central venous occlusion can occur with catastrophic loss of vision. However, when surgery such as iridectomy or iridocleisis has been performed satisfactorily more than 3 months before the application, the likelihood of difficulties is considerably more remote, and applicants in that situation may be favorably considered.

An applicant with unilateral or bilateral open angle glaucoma may be certified by the FAA (with follow-up required) when a current ophthalmological report substantiates that pressures are under adequate control, there is little or no visual field loss or other complications, and the person tolerates small to moderate doses of allowable medications. Individuals who have had filter surgery for their glaucoma, or combined glaucoma/cataract surgery, can be
considered when stable and without complications. Applicants using miotic or mydriatic eye drops or taking an oral medication for glaucoma may be considered for Special Issuance certification following their demonstration of adequate control. These medications DO NOT qualify for the CACI program. Miotics such as pilocarpine cause pupillary constriction and could conceivably interfere with night vision. Although the FAA no longer routinely prohibits pilots who use such medications from flying at night, it may be worthwhile for the Examiner to discuss this aspect of the use of miotics with applicants. If considerable disturbance in night vision is documented, the FAA may limit the medical certificate: NOT VALID FOR NIGHT FLYING.

9. Sunglasses. Sunglasses are not acceptable as the only means of correction to meet visual standards, but may be used for backup purposes if they provide the necessary correction. Airmen should be encouraged to use sunglasses in bright daylight but must be cautioned that, under conditions of low illumination, they may compromise vision. Mention should be made that sunglasses do not protect the eyes from the effects of ultra violet radiation without special glass or coatings and that photosensitive lenses are unsuitable for aviation purposes because they respond to changes in light intensity too slowly. The so-called "blue blockers" may not be suitable since they block the blue light used in many current panel displays. Polarized sunglasses are unacceptable if the windscreen is also polarized.

10. Refractive Procedures. The FAA accepts the following Food and Drug Administration approved refractive procedures for visual acuity correction:

- Radial Keratotomy (RK)
- Epikeratophakia
- Laser-Assisted In Situ Keratomileusis (LASIK), including Wavefront-guided LASIK
- Photorefractive Keratectomy (PRK)
- Conductive Keratoplasty (CK)

Please be advised that these procedures have potential adverse effects that could be incompatible with flying duties, including: corneal scarring or opacities; worsening or variability of vision; and night-glare.

The FAA expects that airmen will not resume airman duties until their treating health care professional determines that their post-operative vision has stabilized, there are no significant adverse effects or complications (such as halos, rings, haze, impaired night vision and glare), the appropriate vision standards are met, and they have been reviewed by an Examiner or AMCD. When this determination is made, the airman should have the treating health care professional document this in the health care record, a copy of which should be forwarded to the AMCD before resumption of airman duties. If the health care professional's determination is favorable and after consultation and review by an
Examiner, the applicant may resume airman duties, unless informed otherwise by the FAA.

An applicant treated with a refractive procedure may be issued a medical certificate by the Examiner if the applicant meets the visual acuity standards and the Report of Eye Evaluation (FAA Form 8500-7) indicates that healing is complete; visual acuity remains stable; and the applicant does not suffer sequela such as; glare intolerance, halos, rings, impaired night vision, or any other complications. There should be no other pathology of the affected eye(s).

If the procedure was done 2 years ago or longer, the FAA may accept the Examiner's eye evaluation and an airman statement regarding the absence of adverse sequela.

If the procedure was performed within the last 2 years, the airman must provide a report to the AMCD from the treating health care professional to document the date of procedure, any adverse effects or complications, and when the airman returned to flying duties. If the report is favorable and the airman meets the appropriate vision standards, the applicant may resume airman duties, unless informed otherwise by the FAA.

A. Conductive Keratoplasty (CK): CK is used for correction of farsightedness. As this procedure is not considered permanent and there is expected regression of visual acuity in time, the FAA may grant an Authorization for special issuance of a medical certificate under 14 CFR 67.401 to an applicant who has had CK.

The FAA evaluates CK procedures on an individual basis following a waiting period of 6 months. The waiting period is required to permit adequate adjustment period for fluctuating visual acuity. The Examiner can facilitate FAA review by obtaining all pre- and post-operative medical records, a Report of Eye Evaluation (FAA Form 8500-7) from a treating or evaluating eye specialist with comment regarding any adverse effects or complications related to the procedure.

III. Aerospace Medical Disposition

Applicants with many visual conditions may be found qualified for FAA certification following the receipt and review of specialty evaluations and pertinent medical records. Examples include retinal detachment with surgical correction, open angle glaucoma under adequate control with medication, and narrow angle glaucoma following surgical correction.

The Examiner may not issue a certificate under such circumstances for the initial application, except in the case of applicants following cataract surgery. The Examiner may issue a certificate after cataract surgery for applicants who have undergone cataract surgery with or without lens(es) implant. If pertinent medical records and a current ophthalmologic evaluation (using FAA Form 8500-7 or FAA Form 8500-14)
indicate that the applicant meets the standards, the FAA may delegate authority to the Examiner to issue subsequent certificates.

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.
ITEM 31. Eyes, General

<table>
<thead>
<tr>
<th>DISEASE/CONDITION</th>
<th>CLASS</th>
<th>EVALUATION DATA</th>
<th>DISPOSITION</th>
</tr>
</thead>
</table>
| Amblyopia*        | All   | Provide completed FAA Form 8500-7  
Note: applicant should be at best corrected visual acuity before evaluation | If applicant does not correct to standards, DEFER.  
Note in Block 60 along with which FSDO the airman wants to use to take a MFT |
| Congenital or acquired conditions (whether acute or chronic) of either eye or adnexa, that may interfere with visual functions, may progress to that degree, or may be aggravated by flying (tumors and ptosis obscuring the pupil, acute inflammatory disease of the eyes and lids, cataracts, or keratoconus.) | All | Provide completed FAA Form 8500-7  
Submit all pertinent medical information and current status report  
For keratoconus, include if available results of imaging studies such as keratometry, videokeratography, etc., with clinical correlation  
Note: applicant should be at best corrected visual acuity before evaluation | Requires FAA Decision |
| Any ophthalmic pathology reflecting a serious systemic disease (e.g., diabetic and hypertensive retinopathy) | All | Submit all pertinent medical information and current status report.  
(If applicable, see Diabetes and Hypertensive Protocols) | Requires FAA Decision |
| Diplopia          | All   | If applicant provides written evidence that the FAA has previously considered and determined that this condition is not adverse to flight safety. A MFT may be requested. | Contact RFS for approval to Issue  
Otherwise - Requires FAA Decision |
| Pterygium         | All   | Document findings in Item 60 | If less than 50% of the cornea and not affecting central vision  
- Issue  
Otherwise - Requires FAA Decision |

*In amblyopia ex anopsia, the visual acuity of one eye is decreased without presence of organic eye disease, usually because of strabismus or anisometropia in childhood.

\(^1\) Nystagmus of recent onset is cause to deny or defer certificate issuance. Any recent neurological or other evaluations available to the Examiner should be submitted to the AMCD. If nystagmus has been present for a number of years and has not recently worsened, it is usually necessary to consider only the impact that the nystagmus has upon visual acuity. The Examiner should be aware of how nystagmus may be aggravated by the forces of acceleration commonly encountered in aviation and by poor illumination.

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b)(c), 67.213(b)(c), and 67.313(b)(c)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds -

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges;

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

Breast examination: The breast examination is performed only at the applicant's option or if indicated by specific history or physical findings. If a breast examination is performed, the results are to be recorded in Item 60 of FAA Form 8500-8. The applicant should be advised of any abnormality that is detected, then deferred for further evaluation.

III. Aerospace Medical Dispositions

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle
incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

<tr>
<td>Hay fever controlled solely by desensitization* without antihistamines or other medications</td>
<td>All</td>
<td>Submit all pertinent medical information and current status report, include duration of symptoms, name and dosage of drugs and side effects</td>
<td>If responds to treatment and without side effects - Issue Otherwise - Requires FAA Decision</td>
</tr>
</tbody>
</table>

**For hay fever requiring antihistamines:**

The nonsedating antihistamines loratadine, desloratadine, and fexofenadine may be used while flying if, after an adequate initial trial period, symptoms are controlled without adverse side effects.

Applicants with seasonal allergies requiring any other antihistamine (oral and/or nasal) may be certified by the examiner with the stipulation that they do not exercise the privileges of airman certificate until they have stopped the medication and wait after the last dose until:

At least five maximal dosing intervals have passed. For example, if the medication is taken every 4-6 hours, wait 30 hours (5x6) after the last dose to fly.

At least five times the maximum terminal elimination half-life has passed. For example, if the medication half-life is 6-8 hours, wait 40 hours (5x8) after the last dose to fly.

Examiners are encouraged to look up the dosing intervals and half-life.

Airmen who are exhibiting symptoms, regardless of the treatment used, must not fly.

In all situations, the examiner must notate the evaluation data in Block 60.

*AME must warn airman to not operate aircraft until four hours after any allergy desensitization treatment (injection or SLIT). See Pharmaceutical section.

6 A history of a single episode of spontaneous pneumothorax is considered disqualifying for airman medical certification until there is x-ray evidence of resolution and until it can be determined that no condition that would be likely to cause recurrence is present (i.e., residual blebs). On the other hand, an individual who has sustained a repeat pneumothorax normally is not eligible for certification until surgical interventions are carried out to correct the underlying problem. A person who has such a history is usually able to resume airmen duties 3 months after the surgery. No special limitations on flying at altitude are applied.

</tr>
</tbody>
</table>

I. Code of Federal Regulations:

**First-Class: 14 CFR 67.111(a)(b)(c)**

Cardiovascular standards for first-class airman medical certificate are:

(a) No established medical history or clinical diagnosis of any of the following:

1. Myocardial infarction
2. Angina pectoris
3. Coronary heart disease that has required treatment or, if untreated, that has been symptomatic or clinically significant
4. Cardiac valve replacement
5. Permanent cardiac pacemaker implantation; or
6. Heart replacement

(b) A person applying for first-class airman medical certification must demonstrate an absence of myocardial infarction and other clinically significant abnormality on electrocardiographic examination:

1. At the first application after reaching the 35th birthday; and
2. On an annual basis after reaching the 40th birthday

(c) An electrocardiogram will satisfy a requirement of paragraph (b) of this section if it is dated no earlier than 60 days before the date of the application it is to accompany and was performed and transmitted according to acceptable standards and techniques.

Cardiovascular standards for a second- and third-class airman medical certificate are no established medical history or clinical diagnosis of any of the following:

(a) Myocardial infarction

(b) Angina pectoris

(c) Coronary heart disease that has required treatment or, if untreated, that has been symptomatic or clinically significant

(d) Cardiac valve replacement

(e) Permanent cardiac pacemaker implantation; or

(f) Heart replacement

II. Examination Techniques

A. General Physical Examination.

1. A brief description of any comment-worthy personal characteristics as well as height, weight, representative blood pressure readings in both arms, funduscopic examination, condition of peripheral arteries, carotid artery auscultation, heart size, heart rate, heart rhythm, description of murmurs (location, intensity, timing, and opinion as to significance), and other findings of consequence must be provided.

2. The Examiner should keep in mind some of the special cardiopulmonary demands of flight, such as changes in heart rates at takeoff and landing. High G-forces of aerobatics or agricultural flying may stress both systems considerably. Degenerative changes are often insidious and may produce subtle performance decrements that may require special investigative techniques.

   a. Inspection. Observe and report any thoracic deformity (e.g., pectus excavatum), signs of surgery or other trauma, and clues to ventricular hypertrophy. Check the hematopoietic and vascular system by observing for pallor, edema, varicosities, stasis ulcers, and venous distention. Check the nail beds for capillary pulsation and color.

   b. Palpation. Check for thrills and the vascular system for arteriosclerotic changes, shunts, or AV anastomoses. The pulses should be examined to determine their character, to note if they are diminished or absent, and to observe for synchronicity. The medical standards do not specify pulse rates that, per se, are disqualifying for medical certification. These tests are used, however, to determine
the status and responsiveness of the cardiovascular system. Abnormal pulse rates may be reason to conduct additional cardiovascular system evaluations.

i. Bradycardia of less than 50 beats per minute, any episode of tachycardia during the course of the examination, and any other irregularities of pulse other than an occasional ectopic beat or sinus arrhythmia must be noted and reported. If there is bradycardia, tachycardia, or arrhythmia further evaluation may be warranted and deferral may be indicated.

ii. A cardiac evaluation may be needed to determine the applicant’s qualifications. Temporary stresses or fever may, at times, result in abnormal results from these tests. If the Examiner believes this to be the case, the applicant should be given a few days to recover and then be retested. If this is not possible, the Examiner should defer issuance, pending further evaluation.

c. Percussion. Determine heart size, diaphragmatic elevation/excursion, abnormal densities in the pulmonary fields, and mediastinal shift.

d. Auscultation. Check for resonance, asthmatic wheezing, ronchi, rales, cavernous breathing of emphysema, pulmonary or pericardial friction rubs, quality of the heart sounds, murmurs, heart rate, and rhythm. If a murmur is discovered during the course of conducting a routine FAA examination, report its character, loudness, timing, transmission, and change with respiration. It should be noted whether it is functional or organic and if a special examination is needed. If the latter is indicated, the Examiner should defer issuance of the medical certificate and transmit the completed FAA Form 8500-8 to the FAA for further consideration. Examiner must defer to the AMCD or Region if the treating physician or Examiner reports the murmur is moderate to severe (Grade III or IV). Listen to the neck for bruits.

It is recommended that the Examiner conduct the auscultation of the heart with the applicant both in a sitting and in a recumbent position.

Aside from murmur, irregular rhythm, and enlargement, the Examiner should be careful to observe for specific signs that are pathognomonic for specific disease entities or for serious generalized heart disease. Examples of such evidence are: (1) the opening snap at the apex or fourth left intercostal space signifying mitral stenosis; (2) gallop rhythm indicating serious impairment of cardiac function; and (3) the middiastolic rumble of mitral stenosis.

B. When General Examinations Reveal Heart Problems.

These specifications have been developed by the FAA to determine an applicant’s eligibility for airman medical certification. Standardization of examination methods and reporting is essential to provide sufficient basis for making determinations and the prompt processing of applications.
1. This cardiovascular evaluation (CVE), therefore, must be reported in sufficient detail to permit a clear and objective evaluation of the cardiovascular disorder(s) with emphasis on the degree of functional recovery and prognosis. It should be forwarded to the FAA immediately upon completion. Inadequate evaluation, reporting, or failure to promptly submit the report to the FAA may delay the certification decision.

   a. Medical History. Particular reference should be given to cardiovascular abnormalities cerebral, visceral, and/or peripheral. A statement must be included as to whether medications are currently or have been recently used, and if so, the type, purpose, dosage, duration of use, and other pertinent details must be provided. A specific history of any anticoagulant drug therapy is required. In addition, any history of hypertension must be fully developed to also include all medications used, dosages, and comments on side effects.

   b. Family, Personal, and Social History. A statement of the ages and health status of parents and siblings is required; if deceased, cause and age at death should be included. Also, any indication of whether any near blood relative has had a “heart attack,” hypertension, diabetes, or known disorder of lipid metabolism must be provided. Smoking, drinking, and recreational habits of the applicant are pertinent as well as whether a program of physical fitness is being maintained. Comments on the level of physical activities, functional limitations, occupational, and avocational pursuits are essential.

   c. Records of Previous Medical Care. If not previously furnished to the FAA, a copy of pertinent hospital records as well as out-patient treatment records with clinical data, x-ray, laboratory observations, and originals or copies of all electrocardiographic (ECG) tracings should be provided. Detailed reports of surgical procedures as well as cerebral and coronary arteriography and other major diagnostic studies are of prime importance.

   d. Surgery. The presence of an aneurysm or obstruction of a major vessel of the body is disqualifying for medical certification of any class. Following successful surgical intervention and correction, the applicant may ask for FAA consideration. The FAA recommends that the applicant recover for at least 3 months for ATCS’s and 6 months for airmen.

A history of coronary artery bypass surgery is disqualifying for certification. Such surgery does not negate a past history of coronary heart disease. The presence of permanent cardiac pacemakers and artificial heart valves is also disqualifying for certification.

The FAA will consider an Authorization for a Special Issuance of a Medical Certificate (Authorization) for most cardiac conditions. Applicants seeking further FAA consideration should be prepared to submit all past records and a report of a complete current cardiovascular evaluation (CVE) in accordance with FAA specifications.

C. Medication.

   - Medications acceptable to the FAA for treatment of hypertension in airmen include all Food and Drug Administration (FDA) approved diuretics, alpha-adrenergic blocking
agents, beta-adrenergic blocking agents, calcium channel blocking agents, angiotension converting enzyme (ACE inhibitors) agents, and direct vasodilators.

- The following are **NOT ACCEPTABLE** to the FAA:
  - Centrally acting agents (such as reserpine, guanethidine, guanadrel, guanabenz, and methyldopa).
  - The use of flecainide when there is evidence of left ventricular dysfunction or recent myocardial infarction.
  - The use of nitrates for the treatment of coronary artery disease or to modify hemodynamics.

- The Examiner must defer issuance of a medical certificate to any applicant whose hypertension has not been evaluated, who uses unacceptable medications, whose medical status is unclear, whose hypertension is uncontrolled, who manifests significant adverse effects of medication, or whose certification has previously been specifically reserved to the FAA.

### III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

1. Describe history in detail: when and how diagnosed; historical characteristics/type displayed; all intervention, management, and treatment history:

   __________________________________________________________
   __________________________________________________________
   __________________________________________________________

2. Were notable findings present on a cardiac echo, EST, TSH, and sleep study etiology work-up?
   ☐ No ☐ Yes ☐ N/A (Explain if Yes or N/A):

   __________________________________________________________
   __________________________________________________________

3. Is there a definitive or suspicious history for stroke, TIA, or other thromboembolic event?
   ☐ No ☐ Yes/Explain:

   __________________________________________________________
   __________________________________________________________

4. Does a current ≥ 24hr cardiac monitor show good rate control and is your patient functionally asymptomatic? (Address any concerns if average heart rate is > 100, maximum (non-exercise) is > 120, or a single pause is > 3 seconds. You must submit the 1-page computerized summary and the representative full-scale multi-lead ECG tracings, even if findings are normal.)
   ☐ Yes ☐ No/Explain:

   __________________________________________________________
   __________________________________________________________

5. Is treatment for AFib/A-Flutter currently indicated?
   ☐ No ☐ Yes (If yes, see 5a.)
   5a. If treatment is indicated, is patient currently on such treatment? ☐ No/Explain ☐ Yes/Explain:

   (If indicated but not treated, explain. If treated, describe exact methodology, including medication and dosage, and reasons for treatment, e.g. symptom, rate and/or rhythm control.)

   __________________________________________________________
   __________________________________________________________

   81
6. Were any treatment changes made or recommended in the last year?
☐ No ☐ Yes/Explain:
______________________________________________________________________________

7. What is your patient’s current CHA2DS2-VASc score? ______________________________

8. Is emboli mitigation strategy indicated/applicable?
   (Include medication, dosages, and copy of the last 6 monthly INR values if warfarin/Coumadin is used. CHAD2DS2-VASc score of 2 or more should be emboli mitigated with warfarin/Coumadin, NOAC/DOAC, or LAA closure. Warfarin/Coumadin requires 6 weeks of stabilization with 80% of INRs between 2.0 and 3.0. If otherwise, explain.)
☐ No ☐ Yes/Explain

9. Are other stroke risk factors (e.g. hypertension and hyperlipidemia) well controlled?
☐ Yes ☐ No/Explain:
______________________________________________________________________________

10. Is your patient tolerating AFib/A-Flutter treatment and/or emboli mitigation medication, if indicated, without complication or side effect?
☐ N/A ☐ Yes ☐ No/Explain:

<td></td>
</tr>
<tr>
<td></td>
<td>□ List of medications, dates started and stopped, and any side effects.</td>
<td></td>
</tr>
</tbody>
</table>

Notes: *Number of medications counts each component. (Example: lisinopril/HCTZ is 2 medications.)

If this airman is new to you or you are not certain of their HTN control, you may request a current status report from the treating physician for your review.

If the airman did not meet standards on exam, See Item 55. Blood Pressure.
The Examiner should review a current status report by the treating physician and any supporting documents to determine the applicant’s eligibility for certification. HOWEVER, the AME is not required to review a current status report from the treating physician IF the AME can otherwise determine that the applicant has had stable clinical blood pressure control on the current antihypertensive medication for at least 7 days, without symptoms from the hypertension or adverse medication side-effects, and no treatment changes are recommended. If the applicant meets ALL the acceptable certification criteria listed below, the Examiner can issue. Applicants for first- or second- class must provide this information annually; applicants for third-class must provide the information with each required exam.

<table>
<thead>
<tr>
<th>AME MUST REVIEW</th>

</tbody>
</table>

**AME MUST NOTE in Block 60 one of the following:**

- [ ] CACI qualified hypertension. (Documents do not need to be submitted to the FAA.)
- [ ] Not CACI qualified hypertension. Issued per valid SI/AASI. (Submit supporting documents.)
- [ ] NOT CACI qualified hypertension. I have deferred. (Submit supporting documents.)
We continue to see deferrals when an airman has HTN and is on medications. Please review the following FAQs before making a determination.

**GENERAL:**

1. **What is the FAA specified limit for blood pressure during an exam?**
   The maximum systolic during exam is 155mmHg and the maximum diastolic is 95mmHg during the exam. (See Item 55, Blood Pressure.)

2. **If during the exam the airman’s blood pressure is higher than 155/95, do I have to defer?**
   Not necessarily. If the airman’s blood pressure is elevated in clinic, you have any of the following options:
   - Recheck the blood pressure. If the airman meets FAA specified limits on the second attempt, note this in Block 60 along with both readings. If the airman is still elevated, follow B:
     - Have the airman return to clinic 3 separate days over a 7-day period. If the airman meets FAA specified limits during these re-checks, note this and the readings in Block 60. Also note if there was a reason for the blood pressure elevation. If the airman does not demonstrate good control on re-checks, follow C:
       - Send the airman back to his/her treating physician for re-evaluation. If medication adjustment is needed, a 7-day no-fly period applies to verify no problems with the medication. If this can be done within the 14 day exam transmission period, you could then follow the Hypertension Disposition Table.

3. **Can I hold an exam longer than 14 days to allow the airman time to provide the necessary information?**
   No.

**MEDICATION(S):**

4. **Can an airman fly while on HTN medication?**
   Yes, the majority of common blood pressure medications can be approved for flight. If the airman’s blood pressure is controlled with 3 or fewer medications and there are no adverse medication side effects, the AME can often issue an unrestricted medical certificate (if otherwise qualified). See Hypertension Disposition Table.
5. What HTN medications are acceptable/not acceptable by the FAA?
   See **Pharmaceuticals – Antihypertensive**.

6. The airman had medication(s) adjusted and now meets the standards, but it took longer than 14 days and the exam was deferred. What can the airman do now?
   - If the airman is now well controlled and is on 3 or fewer medications, direct them to the **CACI - Hypertension Worksheet**. They should obtain the required information from their treating physician and submit it to the FAA.
   - If the airman is on 4 or more medications (combination medications count as the sum of their parts), direct them to the **Hypertension Disposition Table**. They should obtain the required information from their treating physician and submit it to the FAA.

7. What if the treating physician stopped the medications less than 30 days ago?
   See **Section B of the Hypertensive Disposition Table** and follow the **CACI - Hypertension Worksheet**.

8. What if the airman stopped the medication on his/her own so they could fly?
   Educate your airman (and their treating physician, if needed) that most HTN medications are acceptable and almost no one is denied for HTN.

9. What if the airman has multiple conditions, e.g. HTN, Obstructive Sleep Apnea, and/or prior heart attack?
   The airman must provide the required information for **each condition**.

10. What if the airman is on a HTN medication that is not allowed by the FAA?
    The treating physician can evaluate if the airman can safely be changed to an acceptable HTN medication.
    - If the medication(s) can be changed and the airman meets the required criteria, they should submit the items as detailed in **Section C of the Hypertensive Disposition Table** for FAA review. The treating physician note should describe the clinical rationale as to why the unacceptable medication was previously chosen and why it is ok for the airmen to be on a different medication now.
    - If the airman cannot safely be changed to an acceptable HTN medication, defer the exam and send in the documents listed in **Section C of the Hypertensive Disposition Table** for FAA review.

</tbody>
</table>

Notes:
*Co-morbid conditions for FAA purposes include:
- Cardiac disease (disease of other valves, ischemia, CHF, Left Ventricular Systolic Dysfunction (LVSD), Secondary or Functional mitral valve disease, arrhythmia, etc.);
- Connective tissue disorder (such as Marfan’s or Ehlers-Danlos, etc.);
- Coumadin or other anticoagulation (other than ASA) due to a cardiac condition;
- Lung disease such as COPD (considered moderate to severe; any FEV1 or FVC less than 70%) or Pulmonary Hypertension; or
- Residual Mitral valve regurgitation listed as moderate or higher on cardiac echo.
The Examiner must review a current status report by the treating physician and any supporting documents to determine the applicant’s eligibility for certification. If the applicant meets all the acceptable certification criteria listed below, the Examiner can issue. Applicants for first- or second-class must provide this information annually; applicants for third-class must provide the information with each required exam.

### AME MUST REVIEW

<table>
<thead>
<tr>
<th>Acceptable Certification Criteria</th>
<th>AME MUST NOTE in Block 60 one of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>The airman had Mitral Valve Repair surgery <strong>5 or more years ago</strong> for primary mitral valve disease (not secondary MR or functional MR due to coronary heart disease, MI, ischemic disease, or cardiomyopathy).</td>
<td></td>
</tr>
<tr>
<td>Yes</td>
<td>[ ] CACI qualified Mitral Valve Repair.</td>
</tr>
</tbody>
</table>
| A current status report from the treating cardiologist verifies the airman:  
  - Is **asymptomatic** and stable;  
  - Has no other current cardiac conditions;  
  - Has not developed any new conditions, arrhythmias, or complications that would affect cardiac function;  
  - Requires no more than a routine annual follow-up; and  
  - No additional surgery is anticipated or recommended. |
| Yes | [ ] Not CACI qualified Mitral Valve Repair. Issued per valid SI/AASI. (Submit supporting documents.) |
| The airman has NO history of:  
  - Connective tissue disorder (Marfan’s or Ehlers-Danlos, etc.);  
  - Lung disease: COPD (moderate or higher), or pulmonary HTN; or  
  - Other cardiac disease (e.g. Congestive Heart Failure, ischemia, other valve disease, etc.) |
| Yes | [ ] NOT CACI qualified Mitral Valve Repair. I have deferred. (Submit supporting documents.) |
| The most recent echo was performed **within the last 24 months** shows:  
  - Mitral valve regurgitation (if present) is classified as mild;  
  - No other abnormalities on echo such as:  
    - Dilated aorta greater than 4 cm;  
    - Hypertrophic cardiomyopathy or other cardiomyopathy;  
    - Left Atrial Enlargement;  
    - Regurgitation of any valve moderate or higher; or  
    - Structural abnormalities (dilated ventricle, atria, etc.) |
| Yes | [ ] |
Other Cardiac Conditions
(Updated 10/25/2017)

The following conditions **must be deferred:**

1. Cardiac Transplant – see Disease Protocols.
2. Cardiac decompensation
3. Congenital heart disease
4. Hypertrophy or dilatation of the heart as evidenced by clinical examination and supported by diagnostic studies. (Concentric LVH with no dilatation can be issued by the AME if no symptoms.)
5. Pericarditis, endocarditis, or myocarditis
6. Cardiac enlargement or other evidence of cardiovascular abnormality. If the applicant wishes further consideration, a consultation is required, preferably from the applicant’s treating physician. It must include a narrative report of evaluation and be accompanied by an ECG with report and appropriate laboratory test results which may include, as appropriate, 24-hour Holter monitoring, thyroid function studies, ECHO, and an assessment of coronary artery status.
7. Anti-tachycardia devices
8. Implantable defibrillators (ICDs)
9. Anticoagulants *may be* allowed, if the condition is allowed.
10. Cardioversion (electrical or pharmacologic), *may be allowed.* A current, complete cardiovascular evaluation (CVE) and follow up Holter monitoring test is required. A **1-month observation period** must elapse after the procedure before consideration for certification.
11. Any other cardiac disorder not otherwise covered in this section.
12. Hypotension. A history of low blood pressure requires elaboration. If the Examiner is in doubt, it is usually better to defer issuance rather than to deny certification for such a history.

For all classes, certification decisions will be based on the applicant's medical history and current clinical findings. Evidence of extensive multi-vessel disease, impaired cardiac functioning, precarious coronary circulation, etc., will preclude certification. Before an applicant undergoes coronary angiography, it is recommended that all records and the report of a current cardiovascular evaluation (CVE), including a maximal electrocardiographic exercise stress test, be submitted to the FAA for preliminary review. Based upon this information, it may be possible to advise an applicant of the likelihood of favorable consideration.
ITEM 37. Vascular System

<table>
<thead>
<tr>
<th>37. Vascular System</th>
<th>Normal</th>
<th>Abnormal</th>
</tr>
</thead>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b)(c), 67.213(b)(c), and 67.313(b)(c)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds –

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges;

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

1. Inspection. Observe and report any thoracic deformity (e.g., pectus excavatum), signs of surgery or other trauma, and clues to ventricular hypertrophy. Check the hematopoietic and vascular system by observing for pallor, edema, varicosities, stasis ulcers, venous distention, nail beds for capillary pulsation, and color.

2. Palpation. Check for thrills and the vascular system for arteriosclerotic changes, shunts or AV anastomoses. The pulses should be examined to determine their character, to note if they are diminished or absent, and to observe for synchronicity.

3. Percussion. N/A.

III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

<td>38. Abdomen and viscera (including hernia)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b)(c), 67.213(b)(c), and 67.313(b)(c)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

1. Observation: The Examiner should note any unusual shape or contour, skin color, moisture, temperature, and presence of scars. Hernias, hemorrhoids, and fissure should be noted and recorded.

A history of acute gastrointestinal disorders is usually not disqualifying once recovery is achieved, e.g., acute appendicitis.

Many chronic gastrointestinal diseases may preclude issuance of a medical certificate (e.g., cirrhosis, chronic hepatitis, malignancy, ulcerative colitis). Colostomy following surgery for cancer may be allowed by the FAA with special followup reports.

The Examiner should not issue a medical certificate if the applicant has a recent history of bleeding ulcers or hemorrhagic colitis. Otherwise, ulcers must not have been active
within the past 3 months.

In the case of a history of bowel obstruction, a report on the cause and present status of the condition must be obtained from the treating physician.

2. Palpation: The Examiner should check for and note enlargement of organs, unexplained masses, tenderness, guarding, and rigidity.

III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

| **A. Gallstone pancreatitis**  
Single episode resolved | **1 month** recovery period after release from treating physician.  
Must have specific documentation from General Surgery (GS) or Gastroenterology (GI) verifying definitive treatment:  
- Alcohol must be ruled out as a contributing factor (via hospital records or treating physician determination. If not available, AME should screen).  
- Common Bile Duct (CBD) was cleared of stones/debris;  
- Cholecystectomy; and  
- Off all pain medications | **ISSUE**  
Summarize this history in Block 60. |

| **B. Any others such as:**  
- Alcohol induced or contributing factor  
- CBD stricture/stenosis  
- Chronic pancreatitis  
- Recurrent pancreatitis  
- Retained stones  
- Secondary to elevated triglycerides  
- Etiology unknown  
- Other causes | **3 month** recovery period then  
Submit the following for FAA review:  
- Current status report from treating Gastroenterologist (GI) describing:  
  - **Cause of the condition**, how long the condition has been stable, and prognosis;  
  - If CBD stricture/stenosis or obstruction verify it has resolved;  
  - If there is any evidence of alcohol involvement; and  
  - Verify off all pain medication  
- Current Medication list  
- Lab (minimum amylase and lipase, from hospital admission, discharge, and current evaluation;  
- Operative notes, admission H&P and discharge summary, if applicable; and  
- Results of MRI/CT or other imaging, if performed. | **DEFER**  
Submit the information to the FAA for review.  
**Follow up Issuance**  
Will be per the airman’s authorization letter |

### Notes:
1. This applies to CLINICAL PANCREATITIS ONLY, not isolated elevations in amylase/lipase due to a concurrent illness.
2. Gallstone pancreatitis with retained stones should NOT be certified by AME as the risk of recurrent pancreatitis with incapacitation remains. (Applicant may have had an endoscopic retrograde cholangio-pancreatography (ERCP) with ampulotomy and opened the CBD but etiology of pancreatitis (residual stone/microlith/sludge) likely not resolved without cholecystectomy).
# Malignancies

## Colon Cancer

**All Classes**  
**Updated 02/22/2017**

<td><strong>ISSUE</strong> Summarize this history in Block 60.</td>
</tr>
</tbody>
</table>
| **B.** Pedunculated cancerous polyp (Adenocarcinoma) removed by colonoscopy Less than 5 years ago | Review a status report. If it shows:  
- Local lesion only (TNM stage 0 or I);  
- Complete resection with no additional treatment needed;  
- Follow up is annual or less frequent colonoscopy;  
- No clinical concerns. | **ISSUE** Summarize this history in Block 60. |
| **C.** Non metastatic and no High Risk features* Treatment completed Less than 5 years ago | Follow CACI worksheet. | Follow the [CACI-Colon Cancer Worksheet](#)  
Note in Block 60 |

*Notes: High Risk features for FAA purposes include the following.*

These **DO NOT CACI** qualify:

- CEA increase or CEA did not decrease with colectomy;
- Chemotherapy ever (including neoadjuvant);
- Familial Adenomatous Polyposis (FAP);
- High risk pathology per the treating oncologist;
- Incomplete resection or positive margins;
- Lynch syndrome;
- Metastatic disease (Refers to distant metastatic disease such as: lung, liver, lymph nodes, peritoneum, brain)
- Pathology of any type other than adenoma (ex: lymphoma, GIST, carcinoid)
- Radiation therapy;
- Recurrence; and or
- Sessile polyp with invasive cancer surgically treated only, no additional chemo/radiation.
<table>
<thead>
<tr>
<th><strong>D. HIGH RISK features</strong>*</th>
<th><strong>Submit the following to the FAA for review:</strong></th>
<th><strong>DEFER</strong></th>

</thead>
</table>
| **Or** Metastatic disease | □ Status report or treatment records from treating oncologist that provide the following information:  
  ○ Initial staging,  
  ○ Disease course including recurrence(s),  
  ○ Location(s) of metastatic disease (if any),  
  ○ Treatments used,  
  ○ How long the condition has been stable,  
  ○ If any upcoming treatment change is planned or expected and prognosis;  
  □ Medication list. Dates started and stopped. Description of side effects.  
  □ Treatment records including clinic notes;  
  □ Operative notes and discharge summary, if applicable;  
  □ Colonoscopy reports;  
  □ Pathology reports;  
  □ Results of MRI/CT or PET scan reports that have already been performed (In some cases, the actual CDs will be required in DICOM format for FAA review.); and  
  □ Lab reports.  
    ○ CBC and CEA performed within the last 90 days;  
    ○ Previous tumor marker lab results (such as CEA).  
| **Other Malignancies** | Submit all pertinent medical records, operative/pathology reports, current oncological status report, including tumor markers, and any other testing deemed necessary | **Followup Special Issuance –**  
  Will be per the airman’s authorization letter  
  Requires FAA Decision |

An applicant with an ileostomy or colostomy may also receive FAA consideration. A report is necessary to confirm that the applicant has fully recovered from the surgery and is completely asymptomatic.

In the case of a history of bowel obstruction, a report on the cause and present status of the condition must be obtained from the treating physician.
The Examiner must review a current status report by the treating physician and any supporting documents to determine the applicant’s eligibility for certification. If the applicant meets **ALL the acceptable certification criteria** listed below, the Examiner can issue. Applicants for first- or second-class must provide this information annually; applicants for third-class must provide the information with each required exam.

I. Code of Federal Regulations

**All Classes: 14 CFR 67.113(a), 67.213(b)(c), and 67.313(b)(c)**

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

1. Digital Rectal Examination: This examination is performed only at the applicant's option unless indicated by specific history or physical findings. When performed, the following should be noted and recorded in Item 59 of FAA Form 8500-8.

2. If the digital rectal examination is not performed, the response to Item 39 may be based on direct observation or history.

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

A careful examination of the skin may reveal underlying systemic disorders of clinical importance. For example, thyroid disease may produce changes in the skin and fingernails. Cushing's disease may produce abdominal striae, and abnormal pigmentation of the skin occurs with Addison's disease.

Needle marks that suggest drug abuse should be noted and body marks and scars should be described and correlated with known history. Further history should be obtained as needed to explain findings.

The use of isotretinoin (Accutane) can be associated with vision and psychiatric side effects of aeromedical concern – specifically decreased night vision/night blindness and depression. These side-effects can occur even after the cessation of isotretinoin. See Aeromedical Decision Considerations.
III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

<table>
<thead>

<td>Submit all pertinent medical information and current status report. See HIV Protocol</td>
<td>Requires FAA Decision</td>
</tr>
<tr>
<td>Use of isotretinoin (Accutane)</td>
<td>For applicants using isotretinoin, there is a mandatory 2-week waiting period after starting isotretinoin prior to consideration. This medication can be associated with vision and psychiatric side effects of aeromedical concern - specifically decreased night vision/night blindness and depression. These side-effects can occur even after cessation of isotretinoin. A report must be provided with detailed, specific comment on presence or absence of psychiatric and vision side-effects. The AME must document these findings in Item 60., Comments on History and Findings. Any history of psychiatric side-effect requires FAA Decision. If there is no vision, psychiatric, or other aeromedically unacceptable side-effects – <strong>Issue with restriction: “NOT VALID FOR NIGHT FLYING.”</strong> To remove restriction: *See note</td>
<td></td>
</tr>
</tbody>
</table>

*Note:
- Use of isotretinoin must be permanently discontinued for at least 2 weeks prior to consideration date (confirmed by the prescribing physician);
- An eye evaluation in accordance with specifications in 8500-7; and
- Airman must provide a statement of discontinuation
  - Confirming the absence of any visual disturbances and psychiatric symptoms, and
  - Acknowledging requirement to notify the FAA and obtain clearance prior to performing any aviation safety-related duties if use of isotretinoin is resumed.

ITEM 41. G-U System

<table>
<thead>
<tr>
<th>CHECK EACH ITEM IN APPROPRIATE COLUMN</th>
<th>NORMAL</th>
<th>ABNORMAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>41. G-U system (Not including pelvic examination)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: The pelvic examination is performed only at the applicant's option or if indicated by specific history or physical findings. If a pelvic examination is performed, the results are to be recorded in Item 60 of FAA Form 8500-8.

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b)(c), 67.213(b)(c), and 67.313(b)(c)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

The Examiner should observe for discharge, inflammation, skin lesions, scars, strictures, tumors, and secondary sexual characteristics. Palpation for masses and areas of tenderness should be performed. The pelvic examination is performed only at the applicant's option or if indicated by specific history or physical findings. If a pelvic examination is performed, the results are to be recorded in Item 60 of FAA Form 8500-8. Disorders such as sterility and menstrual irregularity are not usually of importance in qualification for medical certification.
Specialty evaluations may be indicated by history or by physical findings on the routine examination. A personal history of urinary symptoms is important; such as:

1. Pain or burning upon urination
2. Dribbling or Incontinence
3. Polyuria, frequency, or nocturia
4. Hematuria, pyuria, or glycosuria

Special procedures for evaluation of the G-U system should best be left to the discretion of an urologist, nephrologist, or gynecologist.

**III. Aerospace Medical Disposition**

(See *Item 48., General Systemic*, for details concerning diabetes and *Item 57., Urine Test*, for other information related to the examination of urine).

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

</tr>
</thead>
<tbody>
<tr>
<td><strong>A. Non metastatic</strong> &lt;br&gt; and treatment completed <strong>5 or more years ago</strong></td>
<td>No recurrence or ongoing treatment:</td>
<td><strong>ISSUE</strong> &lt;br&gt; Summarize this history in Block 60.</td>
</tr>
<tr>
<td><strong>B. Non metastatic</strong> &lt;br&gt; and treatment completed <strong>less than 5 years ago</strong></td>
<td>See CACI worksheet. &lt;br&gt; Local recurrence within the bladder only: Follow CACI – Bladder Cancer Worksheet.</td>
<td>Follow the <a href="#">CACI - Bladder Cancer Worksheet</a>. &lt;br&gt; Note in Block 60.</td>
</tr>
<tr>
<td><strong>C. Metastatic disease,</strong> &lt;br&gt; <strong>muscle invasion,</strong> &lt;br&gt; or &lt;br&gt; <strong>Recurrent disease that has spread outside the bladder</strong></td>
<td>Information that needs to be submitted to the FAA for review: &lt;br&gt; □ Current status report from oncologist describing treatment plan and prognosis; &lt;br&gt; □ List of medications with attention to any chemotherapy agents and dates used; &lt;br&gt; □ Treatment records including clinic notes or summary letter describing initial staging and treatment course; &lt;br&gt; □ Operative notes and discharge summary (if applicable); &lt;br&gt; □ Pathology report(s) (if applicable); and &lt;br&gt; □ MRI/CT or PET scan reports (In some cases, the actual CDs will be required in DICOM format for FAA review.)</td>
<td><strong>DEFER</strong> &lt;br&gt; <strong>Initial Issuance</strong> - Submit the information to the FAA &lt;br&gt; <strong>Follow up Issuance</strong> - Will be per the airman’s authorization letter</td>
</tr>
</tbody>
</table>

**Notes:** If the airman is currently on radiation or chemotherapy, the treatment course must be completed before medical certification can be considered.
The Examiner must review a current status report by the treating physician and any supporting documents to determine the applicant’s eligibility for certification. If the applicant meets ALL the acceptable certification criteria listed below, the Examiner can issue. Applicants for first- or second-class must provide this information annually; applicants for third-class must provide the information with each required exam.

**AME MUST REVIEW**

A current status report from the treating physician. If it reveals:
- Condition is stable;
- If recurrence, there has been NO spread outside the bladder;
- There is no current or historic evidence of any metastatic disease or muscle invasion;
- Active treatment is completed (chemotherapy/radiation, etc.) and no new treatment is recommended at this time; and/or
- If surgery has been performed, the airman is off pain medication(s), has made a full recovery, and has been released by the surgeon.

**ACCEPTABLE CERTIFICATION CRITERIA**

[ ] Yes

Symptoms

[ ] None

Current treatment

Notes: If it has been 5 or more years since the airman has had any treatment for this condition, with no history of metastatic disease and no reoccurrence, CACI is not required. Note this in Block 60. (See disposition table.)

If the airman is currently on chemotherapy or radiation treatment, defer the exam. (See disposition table.)

[ ] None or maintenance intravesical BCG or mitomycin. (If these medications are used, the airman should not fly until 24 hours post treatment and asymptomatic.)

**AME MUST NOTE in Block 60 one of the following:**

[ ] CACI qualified Bladder cancer. (Documents do not need to be submitted to the FAA.)

[ ] Not CACI qualified Bladder cancer. Issued per valid SI/AASI. (Submit supporting documents.)

[ ] NOT CACI qualified Bladder cancer. I have deferred. (Submit supporting documents.)
### Prostate Conditions

<tr>
<td>42. Upper and lower extremities (Strength and range of motion)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>43. Spine, other musculoskeletal</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113 (b)(c), 67.213 (b)(c), and 67.313 (b)(c)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

Standard examination procedures should be used to make a gross evaluation of the integrity of the applicant's musculoskeletal system. The Examiner should note:

1. Pain - neuralgia, myalgia, paresthesia, and related circulatory and neurological findings
2. Weakness - local or generalized; degree and amount of functional loss
3. Paralysis - atrophy, contractures, and related dysfunctions
4. Motion coordination, tremors, loss or restriction of joint motions, and performance degradation
5. Deformity - extent and cause

6. Amputation - level, stump healing, and phantom pain

7. Prostheses - comfort and ability to use effectively

III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.
ITEM 42. Upper and Lower Extremities

<td>Requires FAA Decision</td>
</tr>
</tbody>
</table>

For all the above conditions: If the applicant is otherwise qualified, the FAA may issue a limited certificate. This certificate will permit the applicant to proceed with flight training until ready for a MFT. At that time, at the applicant's request, the FAA (usually the AMCD) will authorize the student pilot to take a MFT in conjunction with the regular flight test. The MFT and regular private pilot flight test are conducted by an FAA inspector. This affords the student an opportunity to demonstrate the ability to control the aircraft despite the handicap. The FAA inspector prepares a written report and indicates whether there is a safety problem. If the airman successfully completes the MFT, a medical certificate and SODA will be sent to the airman from AMCD.

When prostheses are used or additional control devices are installed in an aircraft to assist the amputee, those found qualified by special certification procedures will have their certificates limited to require that the devices (and, if necessary, even the specific aircraft) must always be used when exercising the privileges of the airman certificate.

¹ Essential tremor is not disqualifying unless it is disabling.
## Item 43. Spine, Other Musculoskeletal

<td>Requires FAA Decision</td>
</tr>
</tbody>
</table>

A history of intervertebral disc surgery is not disqualifying. If the applicant is asymptomatic, has completely recovered from surgery, is taking no medication, and has suffered no neurological deficit, the Examiner should confirm these facts in a brief statement in Item 60. The Examiner may then issue any class of medical certificate, providing that the individual meets all the medical standards for that class.

The paraplegic whose paralysis is not the result of a progressive disease process is considered in much the same manner as an amputee. The Examiner should defer issuance and may advise the applicant to request a Medical Flight Test.

Other neuromuscular conditions are covered in more detail in Item 46.

<th>ABNORMAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>44. Identifying body marks, scars, tattoos (Size and location)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b), 67.213(b), and 67.313(b)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition finds-

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges

II. Examination Techniques

A careful examination for surgical and other scars should be made, and those that are significant (the result of surgery or that could be useful as identifying marks) should be described. Tattoos should be recorded because they may be useful for identification.
III. Aerospace Medical Disposition

The Examiner should question the applicant about any surgical scars that have not been previously addressed, and document the findings in Item 60 of FAA Form 8500-8. Medical certificates must not be issued to applicants with medical conditions that require deferral without consulting the AMCD or RFS. Medical documentation must be submitted for any condition in order to support an issuance of a medical certificate.

Disqualifying Condition: Scar tissue that involves the loss of function, which may interfere with the safe performance of airman duties.

ITEM 45. Lymphatics

<table>
<thead>
<tr>
<th>CHECK EACH ITEM IN APPROPRIATE COLUMN</th>
<th>NORMAL</th>
<th>ABNORMAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>45. Lymphatics</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b)(c), 67.213(b)(c), and 67.313(b)(c)

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds -

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.
II. Examination Techniques

A careful examination of the lymphatic system may reveal underlying systemic disorders of clinical importance. Further history should be obtained as needed to explain findings.

III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

<th>NORMAL</th>
<th>ABNORMAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>46. NEUROLOGIC</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**I. Code of Federal Regulations**

*All Classes: 14 CFR 67.109 (a)(b), 67.209 (a)(b), and 67.309 (a)(b)*

(a) No established medical history or clinical diagnosis of any of the following:

(1) Epilepsy

(2) A disturbance of consciousness without satisfactory medical explanation of the cause; or

(3) A transient loss of control of nervous system function(s) without satisfactory medical explanation of the cause;

(b) No other seizure disorder, disturbance of consciousness, or neurologic condition that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds-

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or
(2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

A neurologic evaluation should consist of a thorough review of the applicant’s history prior to the neurological examination. The Examiner should specifically inquire concerning a history of weakness or paralysis, disturbance of sensation, loss of coordination, or loss of bowel or bladder control. Certain laboratory studies, such as scans and imaging procedures of the head or spine, electroencephalograms, or spinal paracentesis may suggest significant medical history. The Examiner should note conditions identified in Item 60 on the application with facts, such as dates, frequency, and severity of occurrence.

A history of simple headaches without sequela is not disqualifying. Some require only temporary disqualification during periods when the headaches are likely to occur or require treatment. Other types of headaches may preclude certification by the Examiner and require special evaluation and consideration (e.g., migraine and cluster headaches).

One or two episodes of dizziness or even fainting may not be disqualifying. For example, dizziness upon suddenly arising when ill is not a true dysfunction. Likewise, the orthostatic faint associated with moderate anemia is no threat to aviation safety as long as the individual is temporarily disqualified until the anemia is corrected.

An unexplained disturbance of consciousness is disqualifying under the medical standards. Because a disturbance of consciousness may be expected to be totally incapacitating, individuals with such histories pose a high risk to safety and must be denied or deferred by the Examiner. If the cause of the disturbance is explained and a loss of consciousness is not likely to recur, then medical certification may be possible.

The basic neurological examination consists of an examination of the 12 cranial nerves, motor strength, superficial reflexes, deep tendon reflexes, sensation, coordination, mental status, and includes the Babinski reflex and Romberg sign. The Examiner should be aware of any asymmetry in responses because this may be evidence of mild or early abnormalities. The Examiner should evaluate the visual field by direct confrontation or, preferably, by one of the perimetry procedures, especially if there is a suggestion of neurological deficiency.
III. Aerospace Medical Disposition

A history or the presence of any neurological condition or disease that potentially may incapacitate an individual should be regarded as initially disqualifying. Issuance of a medical certificate to an applicant in such cases should be denied or defer, pending further evaluation. A convalescence period following illness or injury may be advisable to permit adequate stabilization of an individual's condition and to reduce the risk of an adverse event. Applications from individuals with potentially disqualifying conditions should be forwarded to the AMCD. Processing such applications can be expedited by including hospital records, consultation reports, and appropriate laboratory and imaging studies, if available. Symptoms or disturbances that are secondary to the underlying condition and that may be acutely incapacitating include pain, weakness, vertigo or in coordination, seizures or a disturbance of consciousness, visual disturbance, or mental confusion. Chronic conditions may be incompatible with safety in aircraft operation because of long-term unpredictability, severe neurologic deficit, or psychological impairment.

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

<tr>
<td>Pseudotumor Cerebri (benign intracranial hypertension)</td>
<td>All</td>
<td>Submit all pertinent medical records, current neurologic report, name and dosage of medication(s) and side effects</td>
<td>Requires FAA Decision</td>
</tr>
</tbody>
</table>

<sup>2</sup> A variety of intracranial tumors, both malignant and benign, are capable of causing incapacitation directly by neurologic deficit or indirectly through recurrent symptomatology. Potential neurologic deficits include weakness, loss of sensation, ataxia, visual deficit, or mental impairment. Recurrent symptomatology may interfere with flight performance through mechanisms such as seizure, headaches, vertigo, visual disturbances, or confusion. A history or diagnosis of an intracranial tumor necessitates a complete neurological evaluation with appropriate laboratory and imaging studies before a determination of eligibility for medical certification can be established. An applicant with a History of benign supratentorial tumors may be considered favorably for medical certification by the FAA and returned to flying status after a minimum satisfactory convalescence of 1 year.
<table>

</tr>
<tr>
<td>Post-traumatic Headache</td>
<td>All</td>
<td>Submit all pertinent medical records, current neurologic report, name and dosage of medication(s) and side effects</td>
<td>Requires FAA Decision</td>
</tr>
</tbody>
</table>

---

5 Pain, in some conditions, may be acutely incapacitating. Chronic recurring headaches or pain syndromes often require medication for relief or prophylaxis, and, in most instances, the use of such medications are disqualifying because they may interfere with a pilot's alertness and functioning. The Examiner may issue a medical certificate to an applicant with a long-standing history of headaches if mild, seldom requiring more than simple analgesics, occur infrequently, are not incapacitating, and are not associated with neurological stigmata.
CACI - Migraine and Chronic Headache Worksheet (Updated 04/29/2015)

The Examiner must review a current status report by the treating physician and any supporting documents to determine the applicant’s eligibility for certification. If the applicant meets ALL the acceptable certification criteria listed below, the Examiner can issue. Applicants for first- or second-class must provide this information annually; applicants for third-class must provide the information with each required exam.

<table>
<thead>

</tbody>
</table>

\(^7\) Infrequently, the FAA has granted an Authorization under the special issuance section of part 67 (14 CFR 67.401) when a seizure disorder was present in childhood but the individual has been seizure-free for a number of years. Factors that would be considered in determining eligibility in such cases would be age at onset, nature and frequency of seizures, precipitating causes, and duration of stability without medication. Followup evaluations are usually necessary to confirm continued stability of an individual’s condition if an Authorization is granted under the special issuance section of part 67 (14 CFR 67.401).
**FAA Airman Seizure Questionnaire** (Updated 06/29/2016)

The following questions should be answered by the AIRMAN who should read through the entire questionnaire and complete all sections as appropriate. If the seizures occurred when the airman was a child, a parent or guardian familiar with the episodes should complete this form.

## Section 1 - Big Seizures

**Have you ever had a grand mal seizure or a big seizure where you lost consciousness or your whole body shook and stiffened?**

<table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.107(a)(b)(c), 67.207(a)(b)(c), and 67.307(a)(b)(c)

(a) No established medical history or clinical diagnosis of any of the following:

(1) A personality disorder that is severe enough to have repeatedly manifested itself by overt acts.

(2) A psychosis. As used in this section, "psychosis" refers to a mental disorder in which:

   (i) The individual has manifested delusions, hallucinations, grossly bizarre or disorganized behavior, or other commonly accepted symptoms of this condition; or

   (ii) The individual may reasonably be expected to manifest delusions, hallucinations, grossly bizarre or disorganized behavior, or other commonly accepted symptoms of this condition.

(3) A bipolar disorder.

(4) Substance dependence, except where there is established clinical evidence, satisfactory to the Federal Air Surgeon, of recovery, including sustained total abstinence from the substance(s) for not less than the preceding 2 years. As used in this section -

   (i) "Substance" includes: alcohol; other sedatives and hypnotics; anxiolytics; opioids; central nervous system stimulants such as cocaine, amphetamines, and similarly acting sympathomimetics; hallucinogens; phencyclidine or similarly acting arylcyclohexylamines; cannabis; inhalants; and other psychoactive drugs and chemicals; and

   (ii) "Substance dependence" means a condition in which a person is dependent on a substance, other than tobacco or ordinary xanthine-containing (e.g., caffeine) beverages, as evidenced by-

      (A) Increased tolerance
      (B) Manifestation of withdrawal symptoms;
      (C) Impaired control of use; or
      (D) Continued use despite damage to physical health or impairment of social, personal, or occupational functioning.

(b) No substance abuse within the preceding 2 years defined as:
(1) Use of a substance in a situation in which that use was physically hazardous, if there has been at any other time an instance of the use of a substance also in a situation in which that use was physically hazardous;

(2) A verified positive drug test result, an alcohol test result of 0.04 or greater alcohol concentration, or a refusal to submit to a drug or alcohol test required by the U.S. Department of Transportation or an agency of the U.S. Department of Transportation; or

(3) Misuse of a substance that the Federal Air Surgeon, based on case history and appropriate, qualified medical judgment relating to the substance involved, finds-

(i) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(ii) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No other personality disorder, neurosis, or other mental condition that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds-

(1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2) May reasonably be expected, for the maximum duration of the airman Medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(Also see Items 18.m., 18.n., and 18.p.)

II. Examination Techniques

The FAA does not expect the Examiner to perform a formal psychiatric examination. However, the Examiner should form a general impression of the emotional stability and mental state of the applicant. There is a need for discretion in the Examiner/applicant relationship consonant with the FAA's aviation safety mission and the concerns of all applicants regarding disclosure to a public agency of sensitive information that may not be pertinent to aviation safety. Examiners must be sensitive to this need while, at the same time, collect what is necessary for a certification decision. When a question arises, the Federal Air Surgeon encourages Examiners first to check this Guide for Aviation Medical Examiners and other FAA informational documents. If the question remains unresolved, the Examiner should seek advice from a RFS or the Manager of the AMCD.

Review of the applicant's history as provided on the application form may alert the Examiner to gather further important factual information. Information about the applicant may be found in
items related to age, pilot time, and class of certificate for which applied. Information about the present occupation and employer also may be helpful. If any psychotropic drugs are or have been used, followup questions are appropriate. Previous medical denials or aircraft accidents may be related to psychiatric problems.

Psychiatric information can be derived from the individual items in medical history (Item 18). Any affirmative answers to Item 18.m., "Mental disorders of any sort; depression, anxiety, etc.," or Item 18.p., "Suicide attempt," are significant. Any disclosure of current or previous drug or alcohol problems requires further clarification. A record of traffic violations may reflect certain personality problems or indicate an alcohol problem. Affirmative answers related to rejection by military service or a military medical discharge require elaboration. Reporting symptoms such as headaches or dizziness, or even heart or stomach trouble, may reflect a history of anxiety rather than a primary medical problem in these areas. Sometimes, the information applicants give about their previous diagnoses is incorrect, either because the applicant is unsure of the correct information or because the applicant chooses to minimize past difficulties. If there was a hospital admission for any emotionally related problem, it will be necessary to obtain the entire record.

Valuable information can be derived from the casual conversation that occurs during the physical examination. Some of this conversation will reveal information about the family, the job, and special interests. Even some personal troubles may be revealed at this time. The Examiner’s questions should not be stilted or follow a regular pattern; instead, they should be a natural extension of the Examiner’s curiosity about the person being examined. Information about the motivation for medical certification and interest in flying may be revealing. A formal Mental Status Examination is unnecessary. For example, it is not necessary to ask about time, place, or person to discover whether the applicant is oriented. Information about the flow of associations, mood, and memory, is generally available from the usual interactions during the examination. Indication of cognitive problems may become apparent during the examination. Such problems with concentration, attention, or confusion during the examination or slower, vague responses should be noted and may be cause for deferral.

The Examiner should make observations about the following specific elements and should note on the form any gross or notable deviations from normal:

1. Appearance (abnormal if dirty, disheveled, odoriferous, or unkempt);
2. Behavior (abnormal if uncooperative, bizarre, or inexplicable);
3. Mood (abnormal if excessively angry, sad, euphoric, or labile);
4. Communication (abnormal if incomprehensible, does not answer questions directly);
5. Memory (abnormal if unable to recall recent events); and
6. Cognition (abnormal if unable to engage in abstract thought, or if delusional or hallucinating).

Significant observations during this part of the medical examination should be recorded in Item 60 of the application form. The Examiner, upon identifying any significant problems, should defer issuance of the medical certificate and report findings to the FAA. This could be accomplished by contacting a RFS or the Manager of the AMCD.
III. Aerospace Medical Disposition

Drug and alcohol conditions are found in Substances of Dependence/Abuse.

A. General Considerations. It must be pointed out that considerations for safety, which in the "mental" area are related to a compromise of judgment and emotional control or to diminished mental capacity with loss of behavioral control, are not the same as concerns for emotional health in everyday life. Some problems may have only a slight impact on an individual's overall capacities and the quality of life but may nevertheless have a great impact on safety. Conversely, many emotional problems that are of therapeutic and clinical concern have no impact on safety.

B. Denials. The FAA has concluded that certain psychiatric conditions are such that their presence or a past history of their presence is sufficient to suggest a significant potential threat to aviation safety. It is, therefore, incumbent upon the Examiner to be aware of any indications of these conditions currently or in the past, and to deny or defer issuance of the medical certificate to an applicant who has a history of these conditions. An applicant who has a current diagnosis or history of these conditions may request the FAA to grant an Authorization under the special issuance section of part 67 (14 CFR 67.401) and, based upon individual considerations, the FAA may grant such an issuance.

All applicants with any of the following conditions must be denied or deferred:
Attention deficit/hyperactivity, bipolar disorder, personality disorder, psychosis, substance abuse, substance dependence, suicide attempt.

In some instances, the following conditions may also warrant denial or deferral:
Adjustment disorder; bereavement; dysthymic; or minor depression; use of psychotropic medications for smoking cessation

NOTE: The use of a psychotropic drug is disqualifying for aeromedical certification purposes. This includes all sedatives, tranquilizers, antipsychotic drugs, antidepressant drugs (including SSRI’s - see exceptions below), analeptics, anxiolytics, and hallucinogens. The Examiner should defer issuance and forward the medical records to the AMCD.

C. Use of Antidepressant Medications. The FAA has determined that airmen requesting first, second, or third class medical certificates while being treated with one of four specific selective serotonin reuptake inhibitors (SSRIs) may be considered. The Authorization decision is made on a case-by-case basis. The Examiner may not issue.

If the applicant opts to discontinue use of the SSRI, the Examiner must notate in Block 60, Comments on History and Findings, on FAA Form 8500-8 and defer issuance. To reapply for regular issuance, the applicant must be off the SSRI for a minimum of 60 days with a favorable report from the treating physician indicating stable mood and no aeromedically significant side effects. See SSRI Decision Path I
USE OF ANTIDEPRESSANT MEDICATIONS
(Updated 02/28/2018)

If you are an AIRMAN taking an SSRI – see Airman Information - SSRI INITIAL Certification

If you are an ATCS taking an SSRI – see FAA ATCS How to Guide

The FAA has determined that airmen or FAA Air Traffic Control Specialists (FAA ATCS) requesting medical certificates while being treated with one of four specific selective serotonin reuptake inhibitors (SSRIs) may be considered. The Authorization decision is made on a case-by-case basis. **The Examiner may not issue.**

If the airman/FAA ATCS opts to discontinue use of the SSRI, the Examiner must notate in Block 60, Comments on History and Findings, on FAA Form 8500-8 and defer issuance. To reapply for regular issuance, the applicant must be off the SSRI for a minimum of 60 days with a favorable report from the treating physician indicating stable mood and no aeromedically significant side effects. See **SSRI Decision Path I**

An individual may be considered for an FAA Authorization of a Special Issuance (SI) or Special Consideration (SC) of a Medical Certificate (Authorization) if:

1.) **The applicant has one of the following diagnoses:**
   - Major depressive disorder (mild to moderate) either single episode or recurrent episode;
   - Dysthymic disorder;
   - Adjustment disorder with depressed mood; or
   - Any non-depression related condition for which the SSRI is used

2.) For a minimum of 6 continuous months prior, the applicant has been clinically stable as well as on a stable dose of medication without any aeromedically significant side effects and/or an increase in symptoms. If the applicant has been on the medication under 6 months, the Examiner must advise that 6 months of continuous use is required before SI/SC consideration.

3.) **The SSRI used is one the following (single use only):**
   - Fluoxetine (Prozac)
   - Sertraline (Zoloft)
   - Citalopram (Celexa)
   - Escitalopram (Lexapro)

   If the applicant is on a SSRI that is not listed above, the Examiner must advise that the medication is not acceptable for SI/SC consideration.

4.) **The applicant DOES NOT have symptoms or history of:**
   - Psychosis
   - Suicidal ideation
   - Electro convulsive therapy
   - Treatment with multiple SSRIs concurrently
- Multi-agent drug protocol use (prior use of other psychiatric drugs in conjunction with SSRIs.)

If applicant meets the all of the above criteria and wishes to continue use of the SSRI, advise the applicant that he/she must be further evaluated by a Human Intervention Motivation Study (HIMS) AME.

**Off Medication for 60 Days:**

**SSRI Decision Path I**

**Initial Certification/Clearance:**

- SSRI Decision Path II (HIMS AME - Initial Certification/Clearance)

- FAA ATCS SSRI Follow Up Path for the HIMS AME
- HIMS AME Checklist - SSRI Recertification/ Follow Up Clearance
- FAA Certification Aid - SSRI Recertification/ Follow Up Clearance
- HIMS AME Change Request
- Specifications for Neuropsychological Evaluations for Treatment with SSRI Medications
SSRI Decision Path - I
(Updated on 03/29/2017)

Airman/FAA ATCS is on SSRI

Elects to discontinue use of SSRI

AMC notes in Block 60 and defers issuance

After 60 days off SSRI with favorable report from treating physician of stable mood, Airman/FAA ATCS may apply for regular issuance

Is SSRI Fluoxetine (Prozac) or Escitalopram (Lexapro) or Sertraline (Zoloft) or Citalopram (Celexa)?

Yes

See SSRI Decision Path - II

No

Advise NOT Acceptable

See:

Airman Information - SSRI INITIAL Certification

FAA ATCS How to Guide – SSRI

FAA Certification Aid - SSRI Initial Certification/Clearance
SSRI Decision Path – II (HIMS AME – INITIAL Certification/Clearance) 
(Updated 03/29/2017)

Airman/ FAA ATCS is on: 
• Fluoxetine (Prozac) or 
• Escitalopram (Lexapro) or 
• Sertraline (Zoloft) or 
• Citalopram (Celexa)

Airman/FAA ATCS must contact HIMS AME

On SSRI more than 6 months? 
Yes

No
• Advise must be on SSRI at least 6 months, with a stable dosage, before consideration.
• If airman/FAA ATCS elects to discontinue use of SSRI at this point, See SSRI Decision Path I.

History of or currently on multiple psychiatric medications and/or history of unacceptable diagnosis or symptoms

Advise NOT Acceptable and DEFER Requires FAA decision:
• Send airman material and exam to AAM-240 Washington, DC (address listed on the checklist).
• Send FAA ATCS material and exam to the referring RFS office.

Nature of underlying diagnosis and the treatment

Acceptable diagnosis and treatment

• Airman MUST follow all the steps of the Airman Information – SSRI Initial Certification sheet.
• FAA ATCS MUST follow all the steps of the FAA ATCS HOW TO GUIDE – SSRI.

HIMS AME should Review all material, conduct detailed evaluation, and follow the HIMS AME Checklist – SSRI INITIAL Certification sheet.

Send all documents for INITIAL review to the FAA:
• Send airman information to AAM-240 Washington, DC (address listed on the checklist).
• Send FAA ATCS Information to the referring RFS office.

8500-8 Exam: For airmen, the AME must defer, not issue. For FAA ATCS, the HIMS AME does not perform the exam.

FAA Decision
If you are an AIRMAN:

1. See your treating physician/therapist and/or psychiatrist and get healthy.

2. Do not fly in accordance with 14 CFR 61.53 until you have an Authorization from the FAA.

3. Select and contact a Human Intervention Motivation Study Aviation Medical Examiner (HIMS AME) to work with you through the FAA process.
   a. Provide the HIMS AME with a copy of ALL of your treatment records (no matter how many years have passed) from the time you:
      1. Sought treatment for any condition that required an SSRI or psychiatric medication or
      2. Had symptoms but were NOT on an SSRI
   b. Have a copy of your complete FAA file sent to the HIMS AME AND to a board certified psychiatrist if your treating physician is not a board certified psychiatrist. See Release of Information on how to request a copy of your file.
   c. At this time, make sure you also tell your HIMS AME about any other medical conditions you may have. They should be able to help you identify and collect the information that will be needed for a CACI/Special Issuance for these other conditions.

4. Print a copy of the FAA CERTIFICATION AID – SSRI INITIAL Certification/Clearance
   a. Review what reports, providers, or testing will be required.
   b. Take the correct CERTIFICATION AID page to each of the required physicians or providers so they understand what their report must include for FAA purposes. (This should save time and decrease the letters asking for more information.)
   c. Make sure the providers specifically address in their report the “FAA SSRI “Rule-Outs.”

5. When you have been stable with no symptoms or side effects and on the same dose of medication for 6 months (this must be documented), you should meet with your HIMS AME to determine if it is appropriate to submit an INITIAL SSRI Special Issuance packet for FAA review.
   ***Remember to bring all documents to this evaluation, including information on any other condition you may have that requires a CACI or Special Issuance. ***

6. When your HIMS AME determines you are ready to submit a Special Issuance package they will:
   a. Review and complete the HIMS AME checklist;
   b. Complete a new 8500-8 exam;
   c. Place notes in Block 60 stating that the SSRI evaluation is complete;
   d. Place notes in Block 60 regarding any other conditions the airman may have (Special Issuance/CACI);
   e. Submit the SSRI information and information on any other condition that may require a Special Issuance to the FAA.

7. When submitting information:
   - The AME must submit your exam as DEFERRED.
   - Coordinate with your AME to make sure that ALL ITEMS LISTED on the AME Checklist and a COMPLETE package is sent to the FAA at the address below WITHIN 14 DAYS.
   - Partial or incomplete packages WILL NOT BE REVIEWED and will cause a DELAY IN CERTIFICATION.

AIRMAN - Initial Certification  
Federal Aviation Administration 
Medical Appeals Branch - AAM-240  
800 Independence Ave SW, Building 10A, Room 8W-100  
Washington DC 20591 

For RECERTIFICATION, see the HIMS AME Checklist – SSRI Recertification/ Follow up Clearance.
1. Notify Regional Flight Surgeon (RFS) of your diagnosis and treatment with a Selective Serotonin Reuptake Inhibitor (SSRI).
   - In conjunction with the Regional Flight Surgeon’s office (RFS), select a Human Intervention Motivation Study Aviation Medical Examiner (HIMS AME).
   - Sign a release to send a copy of your FAA ATCS medical file the HIMS AME.
   - You will be placed in an Incapacitated Status.
   - Any fees involved in obtaining medical tests and/or documentation to support a Special Consideration are the responsibility of the employee/applicant.

2. Contact the HIMS AME who will assist you in locating an acceptable psychiatrist and neuropsychologist for the required evaluations.
   - You must be on a stable dose with of one of the approved SSRIs for six months with no symptoms or side effects.
   - Your condition must be well controlled before review for a Special Consideration.
   - Provide your HIMS AME with all the items listed on the FAA Certification Aid – SSRI INITIAL Certification/Clearance.

3. When the above criteria have been met, you should meet with your HIMS AME for a face-to-face, in-office evaluation. The HIMS AME will prepare a report, recommendation, and submit an INITIAL SSRI Special Consideration packet to the RFS for determination.

4. RFS will process packet within the Office of Aerospace Medicine.

5. If Special Consideration is granted, the RFS will issue a time-limited clearance with Special Consideration for six (6) months.

For follow up Clearance, you must provide all items listed on the FAA Certification Aid – SSRI Recertification/ Follow Up Clearance.
HIMS AME Checklist - SSRI INITIAL Certification/Clearance (Updated 08/28/2019)

Name: ____________________________________ Airman MID or PI#: ____________________

Submit this checklist ALL supporting information for INITIAL SSRI consideration within 14 days of deferred exam to:

<table>
<thead>
<tr>
<th>AIRMAN</th>
<th>FAA ATCS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Federal Aviation Administration</td>
<td>Regional Flight Surgeon (RFS) office</td>
</tr>
<tr>
<td>Medical Appeals Branch - AAM-240</td>

</table>

All numbered (#) items below refer to the corresponding section of the FAA CERTIFICATION AID - SSRI INITIAL Certification/Clearance.

1. Airman/FAA ATCS statement and records
   - Addresses/describes ALL items in FAA Certification Aid .................................................................
   - Is signed and dated .................................................................................................................................
   - Provides all medical/treatment records related to mental health history..............................................

2. HIMS AME FACE-TO-FACE, IN-OFFICE EVALUATION:
   - Describes ALL items in #1-7 of “HIMS AME” checklist .......................................................................
   - Verifies the airman/ FAA ATCS has been on the same medication at the same dose for a minimum of 6 months ........................................................
   - Is signed and dated .................................................................................................................................
   - Copies of all reports have been submitted to the FAA or are enclosed with this checklist .........
   - Any other condition(s) that would require Special Issuance (SI)/Special Consideration (SC). Do not include CACI qualified condition(s) .......................................................

3. TREATING PHYSICIAN (non-psychiatrist) REPORT (If the treating physician is a Board Certified Psychiatrist, check N/A and skip to #4.):
   - Verifies the airman/FAA ATCS has been on the same medication at the same dose for a minimum of 6 months ........................................................
   - Is signed and dated .................................................................................................................................

4. Board Certified PSYCHIATRIST REPORT:
   - Describes ALL items in #1-8 of PSYCHIATRIST requirements (including FAA SSRI “Rule-Outs.”)
   - Verifies the airman/FAA ATCS has been on the same medication at the same dose for a minimum of 6 months ........................................................
   - Is signed and dated .................................................................................................................................

5. NEUROPSYCHOLOGIST REPORT:
   - Describes ALL items in #1-8 of the NEUROPSYCHOLOGIST requirements ..................................
   - CogScreen-AE computerized report is attached ..................................................................................
   - Additional neuropsychological testing (if performed or required) score summary sheet is attached.
   - Is signed and dated .................................................................................................................................

6. ADDITIONAL REPORTS
   - Chief Pilot Report (for Commercial pilots requesting 1st or 2nd-class certificates; 3rd class N/A) or Air Traffic Manager (ATM) for FAA ATCS ........................................................
   - SSRI related (drug testing, therapy reports, etc.) ................................................................................
   - Reports from other providers or for non-SSRI conditions that may require SI or SC ..........................

__________________________________________________________________________________________
HIMS AME Signature Date of Evaluation

**IF ANY ITEMS ARE MISSING OR ARE INCOMPLETE, CERTIFICATION WILL BE DELAYED.**
FAA CERTIFICATION AID – SSRI INITIAL Certification  
(Page 1 of 5)  
(Updated 03/29/2017)

The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification/clearance requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on a medical certificate for airmen or clearance for FAA ATCS. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider, there may be a delay in the processing of your medical certification or clearance until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

<table>
<thead>
<tr>
<th>REPORT FROM</th>
<th>MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING (SSRI INITIAL Certification/Clearance Evaluation)</th>
</tr>
</thead>
</table>
| AIRMAN or FAA ATCS | 1. A typed statement, in your own words, describing your mental health history, antidepressant use, and any other treatment. At a minimum, you must include the following information:  
   b. List all providers you have seen for any mental health condition(s) and dates.  
   c. List all medications you have taken, dates they were started and stopped, whether they helped or not.  
   d. List any other treatment(s) you have utilized, dates they were started and stopped, if they helped or not.  
   e. List dates and locations of any hospitalizations due to any mental health condition. If you have not had any, that must be stated.  
   f. Describe your current status: current medication dose, how long you have been on it, and how you function both on and off the medication.  
  
  2. Sign and date your statement.  
  3. Provide copies of all of your medical/treatment records related to your mental health history (to include any treatment records for past related symptoms where you were NOT on SSRI as well as from the date you began treatment to the present) and sign two release forms* for the FAA to release a complete copy of your FAA medical file to your HIMS AME and to a board certified psychiatrist (if your treating physician is not a psychiatrist).  

*For ATCS release form information, contact your RFS office. |
| HIMS AME | 1. Evaluation MUST be a face-to-face, in person, and this must be noted in your report.  
  2. Record review verification: Verify that you have reviewed (a) complete copy of the airman/FAA ATCS’s Agency medical file, (b) the treating physician and/or psychiatrist reports (as required), and (c) neuropsychologist report (see below). If you reviewed additional clinical and/or mental health records provided by the airman/FAA ATCS, the reports should be noted as reviewed and submitted to the FAA.  
  3. Medication verification  
   a. Verify the current medication name, dose, and how long has the airman/ FAA ATCS been on this medication at this dosage.  
   b. When was the most recent change in medication (discontinuation, dose, or change in medication type)?  
   c. Are additional changes in dose or medication recommended or anticipated?  
  4. Summarize your aeromedical impression and evaluation as a HIMS AME based on the face-to-face evaluation AND review of the supporting documents.  
   a. If you do not agree with the supporting documents, or if you have additional concerns not noted in the documentation, please discuss your observations or concerns.  
   b. Review and specifically comment on whether or not the airman/FAA ATCS has any of the FAA SSRI “Rule-Outs” (e.g., suicide attempt, etc. See the table on page 3 of this document).  
  5. Special Issuance/ Consideration Recommendation  
   a. Do you recommend Special Issuance (SI)/Special Consideration (SC) for this airman/FAA ATCS?  
   b. Do you have any clinical concerns or recommend a change in the treatment plan?  
   c. Will you agree to continue to follow the airman/FAA ATCS as his/her HIMS AME per FAA policy? If so, at what interval?  
  6. Agreement to immediately notify the FAA (for Airmen: 405-954-4821; for FAA ATCS contact the RFS office)  
   If there is:  
   a. Change in condition;  
   b. Deterioration in psychiatric status or stability;  
   c. Change in the medication dosage; or  
   d. Plan to reduce or discontinue any medication.  
  7. Additional conditions  
   a. Does this airman/FAA ATCS have ANY other medical conditions that are potentially disqualifying or required a special issuance/consideration?  
   b. Is all documentation present for those other conditions? |
The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification/clearance requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on a medical certificate for airman or clearance for FAA ATCS. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider, there may be a delay in the processing of your medical certification or clearance until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

### REPORT FROM TREATING PHYSICIAN

<table>
<thead>
<tr>
<th>MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING (SSRI INITIAL Certification/Clearance Evaluation)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A</strong> Current detailed evaluation report that summarizes clinical findings and status of how the airman/FAA ATCS is doing. At a minimum, it must include the following:</td>
</tr>
<tr>
<td>1. <strong>Qualifications:</strong> State your board certifications and specialty.</td>
</tr>
</tbody>
</table>
| 2. **History:**  
|   a. Review the overall symptom and treatment history, with a timeline of evaluations and treatments (including start and stop dates).  
|   b. Discuss the severity of the condition and any relapse/recurrence. |
| 3. **Medication**  
|   a. **Current name and dose of medication.**  
|   b. How long has the airman/FAA ATCS been on this medication at this dosage?  
|   c. Any side effects from the current medications? (If none, that should be stated.)  
|   d. When was the most recent change in medication? (Dose, medication type, or discontinuation of medication)  
|   e. Previous medications that have been tried. List name, dosage, dates of use, and presence or absence of any side effects and outcomes.  
|   f. Are additional changes in dose or medication recommended or anticipated? |
| 4. **Diagnosis:**  
|   a. Specify the current diagnosis(es).  
|   b. Discuss the severity of the condition |
| 5. **Summary, Treatment and follow-up recommendations:**  
|   a. Discuss the airman/FAA ATCS’s overall psychiatric and behavioral status and risk of recurrence.  
|   b. How will this airman/FAA ATCS be followed? At what interval?  
|   c. Do you have any clinical concerns or recommend a change in treatment plan? |
| 6. **Agreement to immediately notify the FAA** (for airman: 405-954-4821; for FAA ATCS, contact the RFS office) if there are any: changes in the airman/FAA ATCS’s condition, dosage, change in medication or if the medication is stopped. |

(You will also have to submit an evaluation from a board certified psychiatrist - see next section.)

**IF** the physician prescribing your medication IS a BOARD CERTIFIED PSYCHIATRIST, you do not need to submit this “Treating Physician” section. Go to “Psychiatrist” section below.
The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification/medical clearance requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on a medical certificate for airmen or medical clearance for FAA ATCS. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider, there may be a delay in the processing of your medical certification or clearance until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

### REPORT FROM

**PSYCHIATRIST**

Must be a board certified psychiatrist

(If your treating physician IS a board certified psychiatrist, you should submit this section.)

**MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING**

(SSRi INITIAL Certification/Clearance Evaluation)

A Current detailed evaluation report that summarizes clinical findings and status of how the airman/FAA ATCS is doing. At a minimum, it must include the following:

1. **Qualifications**: State your board certifications, specialty, and any other pertinent qualifications.
2. **Records review**: What documents were reviewed?
   a. Specify if using your own clinic notes and/or notes from other providers or hospitals.
   b. Verify if you were provided with and reviewed a complete copy of the airman/FAA ATCS’s FAA medical file.
3. **History**:
   a. Review the overall symptom and treatment history, with a timeline of evaluations and treatments (including start and stop dates).
   b. Discuss the severity of the condition and any relapse/recurrence.
   c. Each of the FAA SSRi “Rule-Outs” below MUST be individually addressed. The report must specifically detail if there have been any symptoms or any history of the following:

<table>
<thead>
<tr>
<th>FAA SSRi “RULE-OUTS”</th>
<th>Any prior SYMPTOMS?</th>
<th>Any prior HISTORY?</th>
</tr>
</thead>
<tbody>
<tr>
<td>I Affective instability</td>
<td></td>
<td></td>
</tr>
<tr>
<td>II Bipolar spectrum disorders</td>
<td></td>
<td></td>
</tr>
<tr>
<td>III Electroconvulsive therapy (ECT)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>IV Psychiatric hospitalization</td>
<td></td>
<td></td>
</tr>
<tr>
<td>V Psychosis</td>
<td></td>
<td></td>
</tr>
<tr>
<td>VI Suicidal ideation or attempts</td>
<td></td>
<td></td>
</tr>
<tr>
<td>VII Treatment with multiple antidepressants concurrently</td>
<td></td>
<td></td>
</tr>
<tr>
<td>VIII Treatment with multi-agent drug protocol use (prior use of other psychiatric drugs in conjunction with antidepressant medications)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>IX Any additional symptoms not listed above</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. **Medication**
   a. Current name and dose of medication.
   b. How long has the airman/FAA ATCS been on this medication at this dosage?
   c. Any side effects from the current medications? (If none, that should be stated.)
   d. When was the most recent change in medication? (Dose, medication type, or discontinuation of medication.)
   e. Previous medications that have been tried. List name, dosage, dates of use, and presence or absence of any side effects and outcomes.
   f. Are additional changes in dose or medication recommended or anticipated?

5. **Diagnosis**:
   a. Specify the current diagnosis (es).
   b. Discuss any prior diagnostic questions or issues and explain why/how these are no longer under consideration or have been ruled-out.
   c. Discuss the severity of the condition, both current and historically.

6. **Summary, Treatment and follow-up recommendations**:
   d. Discuss the airman/FAA ATCS’s overall psychiatric and behavioral status and risk of recurrence.
   e. How will this airman/FAA ATCS be followed? At what interval?
   f. Do you have any clinical concerns or recommend a change in treatment plan?

7. **Agreement to immediately notify the FAA if there is any changes in the airman/FAA ATCS’s condition, dosage, change in medication or if the medication is stopped.** (For airmen: 405-954-4821; for FAA ATCS: contact the RFS office)

8. **Submit** copies of all treatment records such as clinic or hospital notes for any period of time which the airman/FAA ATCS has sought treatment or taken medication. (You do not need to submit any records received from the FAA.)
The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification/medical clearance requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on a medical certificate for airmen or medical clearance for FAA ATCS. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider, there may be a delay in the processing of your medical certification or clearance until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

**REPORT FROM NEUROPSYCHOLOGIST**

**CogScreen Results AND** Neurocognitive evaluation

<table>
<thead>
<tr>
<th>MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING (SSRI INITIAL Certification/Clearance Evaluation)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The neuropsychologist report MUST address:</td>
</tr>
<tr>
<td>1. <strong>Qualifications:</strong> State your certifications and pertinent qualifications.</td>
</tr>
<tr>
<td>2. <strong>Records review:</strong> What documents were reviewed, if any?</td>
</tr>
<tr>
<td>a. Specify clinic notes and/or notes from other providers or hospitals.</td>
</tr>
<tr>
<td>b. Verify if you were provided with and reviewed a complete copy of the airman/FAA ATCS’s FAA medical file.</td>
</tr>
<tr>
<td>3. <strong>History:</strong> Items from the clinical, educational, training, social, family, legal, medical, or other history pertinent to the context of the neuropsychological testing and interpretation.</td>
</tr>
<tr>
<td>4. <strong>Testing results:</strong></td>
</tr>
<tr>
<td>a. <strong>CogScreen-AE information:</strong></td>
</tr>
<tr>
<td>i. Date(s) of evaluation</td>
</tr>
<tr>
<td>ii. CogScreen-AE Session number. (Note: Session 1 should be for initial test only; retests should be Session 2 or incrementally higher.)</td>
</tr>
<tr>
<td>iii. Normative group used for comparison:</td>
</tr>
<tr>
<td>• Major Carrier (age-corrected); or</td>
</tr>
<tr>
<td>• Regional Carrier (NOT age-corrected) [also acceptable for GA pilots]; or</td>
</tr>
<tr>
<td>• General Aviation Pilot Norms (age-corrected)</td>
</tr>
<tr>
<td>b. <strong>CogScreen-AE results with specific review of and discussion when any threshold values exceeded:</strong></td>
</tr>
<tr>
<td>i. LRPV (threshold: if score &gt; 0.80)</td>
</tr>
<tr>
<td>ii. Base Rate for scores at-or below the 5th percentile (threshold: if any T-scores &lt; 40) [age corrected acceptable]</td>
</tr>
<tr>
<td>iii. Base Rate for scores at-or below the 15th percentile (threshold: if any T-scores &lt; 40) [age corrected acceptable]</td>
</tr>
<tr>
<td>iv. Taylor Aviation Factors (threshold: if any T-scores &lt; 40)</td>
</tr>
<tr>
<td>c. Results of any additional focused testing or a comprehensive test battery</td>
</tr>
<tr>
<td>5. <strong>Interpretation:</strong></td>
</tr>
<tr>
<td>a. The overall neurocognitive status of the airman/FAA ATCS</td>
</tr>
<tr>
<td>b. Clinical diagnosis (es) suggested or established base on testing (if any).</td>
</tr>
<tr>
<td>c. Discuss any weaknesses or concerning deficiencies that may potentially affect safe performance of pilot or aviation safety-related duties (if any).</td>
</tr>
<tr>
<td>d. Discuss rationale and interpretation of any additional focused testing or comprehensive test battery that was performed.</td>
</tr>
<tr>
<td>e. Any other concerns.</td>
</tr>
<tr>
<td>6. <strong>Recommendations:</strong></td>
</tr>
<tr>
<td>a. additional testing, follow-up testing, referral for medical evaluation (e.g., neurology evaluation and/or imaging), rehabilitation, etc.</td>
</tr>
<tr>
<td>7. <strong>Agreement to immediately notify the FAA</strong> (for airmen: 405-954-4821; for FAA ATCS contact the RFS office)</td>
</tr>
<tr>
<td>if there are any changes or deterioration in the airman/FAA ATCS’s psychological status or stability.</td>
</tr>
<tr>
<td>8. <strong>Submit</strong> the CogScreen computerized summary report (approximately 13 pages) and summary score sheet for any additional testing (if performed).</td>
</tr>
</tbody>
</table>
The following information is to assist your treating physician/ provider who may be unfamiliar with FAA medical certification/medical clearance requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on a medical certificate for airmen or medical clearance for FAA ATCS. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider, there may be a delay in the processing of your medical certification or clearance until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

| REPORT FROM | MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING |
|-------------|--------------------------------------------------|---|
| CHIEF PILOT | (SSRI INITIAL Certification/Clearance Evaluation) |
| AIRLINE MANAGEMENT DESIGNEE OR AIR TRAFFIC MANAGER (ATM) | Report should address: |
| 1st and 2nd class pilots who have been employed by an air carrier within the last 2 years or FAA ATCS employees 3rd class pilots or FAA ATCS Applicant for Hire – Not applicable | For Airman: |
| 1. The airman’s performance and competence. 2. Crew interaction. 3. Mood and behavioral changes. 4. Any other concerns. | For FAA ATCS: |
| 1. Issues related to safety and safe operations. 2. Interaction with other FAA ATCSs. 3. Mood and behavioral changes. 4. Any other concerns. |
| REPORTS FROM ADDITIONAL PROVIDERS OR REPORTS REGARDING OTHER CONDITIONS | Supplemental reports (if any) that may be related to the condition for which the SSRI is prescribed: |
| 1. Any drug testing results 2. Psychotherapist records and reports 3. Social worker reports |
| Special Issuance/ Special Consideration conditions: The airman/FAA ATCS should bring reports and documentation for any other conditions that may require Special Issuance/Special Consideration to the HIMS AME for review. |
| CACI conditions (airman only): The airman should bring reports or other documentation listed on the CACI worksheet to the HIMS AME for review. |
Airman SSRI Follow Up Path for the HIMS AME
(Updated 03/29/2017)

HIMS AME must see the airman in person every 6 months and review ALL the documents required on the HIMS AME Checklist – SSRI Recertification/ Follow Up Clearance

Review by HIMS AME

- Treating Psychiatrist report or HIMS psychiatrist report plus prescribing physician report
  - All classes: Every 6 months
- Neuropsychologist report and neurocognitive testing (CogScreen AE)
  - 1st and 2nd class: Every 12 months
  - 3rd class: Every 24 months
- Chief Pilot Report
  - 1st and 2nd class: Every 3 months (for those flying under FAR Part 121 or 135)
  - 3rd class: Not applicable
- Additional Reports
  - Required by the Authorization Letter (e.g., other SSRI reports, CACI conditions, or any St/AASl conditions)

Write Summary Report (due every 6 months)
Must contain ALL elements listed in the HIMS AME section of the FAA Certification AID – SSRI Recertification/ Follow Up Clearance

If ALL sections fall in the clear column of the HIMS AME Checklist – SSRI Recertification/ Follow Up Clearance, HIMS AME may re-issue a 6-month, time-limited certificate. Mail all documentation within 14 days to the FAA.

If ANY SINGLE ITEM falls into the shaded column of the HIMS AME Checklist – SSRI Recertification/ Follow Up Clearance, DEFER and submit the documents to the FAA for review.

FAA ATCS SSRI Follow Up Path for the HIMS AME
(Updated 03/29/2017)

HIMS AME must see the FAA ATCS in person every 6 months and review ALL the documents required on the HIMS AME Checklist – SSRI Recertification/ Follow Up Clearance

Review by HIMS AME

- Treating psychiatrist report or HIMS psychiatrist report plus prescribing physician report
  - Every 6 months
- Neuropsychologist report and neurocognitive testing (CogScreen AE)
  - Every 12 months
- Air Traffic Manager Report
  - Every 3 months
  - If favorable send only to the HIMS AME
  - If unfavorable at any time, immediately notify the Regional Flight Surgeon (RFS) as well as the HIMS AME
- Additional Reports
  - Required by the Special Consideration Letter (e.g., other SSRI reports, current status reports, etc.)

Write Summary Report (due every 6 months)
Must contain ALL elements listed in the HIMS AME section of the FAA Certification AID – SSRI Recertification/ Follow Up Clearance

When checklist is complete, immediately contact the RFS office with result and submit All documents within 14 days to the RFS.
# HIMS AME Checklist - SSRI Recertification /Follow Up Clearance

(Updated 08/28/2019)

### Instructions to the HIMS AME:
- Address the following items based on your in-office exam and documentation review;
- Submit this Checklist (signed and dated by the HIMS AME); AND include supporting documentation reviewed to complete this Checklist (including your HIMS AME report) within 14 days to:

<table>
<thead>
<tr>
<th>AIRMAN</th>
<th>FAA ATCS: Regional Flight Surgeon (RFS) office</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAA, Civil Aerospace Medical Institute, Bldg. 13</td>
<td>Aerospace Medical Certification Division, Room 308 - AAM-300</td>
</tr>
<tr>
<td>Oklahoma City, OK 73125-9867</td>
<td>PO Box 25082</td>
</tr>
</tbody>
</table>

I reviewed the airman’s SSRI Authorization or the FAA ATCS’s Special Consideration Letter dated: ______________ (Date of Letter)

1. **HIMS AME FACE-TO-FACE, IN OFFICE EVALUATION:** Required EVERY 6 months for ALL CLASSES
   - Interval visit summaries (if any) are unfavorable or reflect concerns………………………………………………………………………………………………………………………………………………
   - Any concerns about the airman/FAA ATCS’s current psychiatric status based on your clinical interview, evaluation, and review of reports? ………………………………………………………………………………………………………………………………………………………
   - Any new psychiatric conditions identified or change in medication or dose during this period? …………………………………………………………………………………………………………………………………………………
   - Any abnormal physical exam or mental exam findings? ………………………………………………………………………………………………………………………………………………………
   - Any NEW condition(s) that would require Special Issuance/Consideration? (Do not include any new CAC qualified condition.) ………………………………………………………………………………………………………………………………………

2. **TREATING PSYCHIATRIST REPORT:** Required EVERY 6 months for ALL CLASSES
   - Report(s) is/are favorable with no anticipated or interim treatment changes …………………………………………………………………………………………………………………………………
   - The airman/FAA ATCS is on the same medication at the same dose stated in the Authorization letter or Special Consideration Letter………………………………………………………………………………………………………………………………………………

3. **NEUROPSYCHOLOGIST REPORT:** Required EVERY 12 months for 1st and 2nd class and FAA ATCS and every 24 months for 3rd class (unless otherwise specified on the Authorization Letter/Special Consideration Letter).
   - Concludes NO aeromedically significant cognitive deficits or adverse changes? …………………...
   - CogScreen is attached? ………………………………………………………………………………………………………………………………………………………
   - Additional neuropsych testing (if performed or required) is attached? …………………………………………………………………………………………………………………………………………………

4. **CHIEF PILOT or AIR TRAFFIC MANAGER (ATM) REPORT(S):** Required EVERY 3 months
   - Chief Pilot Reports required only for Commercial pilots holding 1st or 2nd class certificates. ATM reports required for FAA ATCS.
   - Reports are favorable? ………………………………………………………………………………………………………………………………………………………
   - If any report is unfavorable immediately contact the FAA: For Airmen: call 405-954-4821; for FAA ATCS contact the RFS office.

5. **ADDITIONAL REPORTS required by Authorization letter**
   - SSRI-related (drug testing, therapy reports, etc.) reports are favorable………………………………
   - Reports required for other non-SSRI conditions meet Authorization requirements………………………………

6. I have no other concerns about this airman/FAA ATCS and I recommend re-certification for Special Issuance/Consideration……………………………………………………………………………………………………………………………………………………

---

**For Airman:** If ALL items fall into the clear column, the AME may issue with the time limitation specified in the Authorization Letter or Special Consideration Letter. If Any Single Item falls into the shaded column, the AME MUST DEFER or contact the FAA and Explain in the HIMS report.

**For FAA ATCS:** When Checklist is complete, immediately contact RFS with results and submit all documents within 14 days.
The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on a medical certificate for airmen or medical clearance for FAA ATCS. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider there may be a delay in the processing of your medical certification until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

<table>
<thead>
<tr>
<th>REPORT FROM</th>
<th>REQUIRED INTERVAL</th>
<th>MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING (SSRI Recertification/ Follow Up Clearance)</th>
</tr>
</thead>
</table>
| **HIMS AME**         | Every 6 months or as stated in the airman Authorization letter or FAA ATCS Special Consideration Letter | 1. Must be a face-to-face, in person evaluation every 6 months.  
2. Summarize findings from additional interim evaluations that were performed by any other venue (phone/ video/ email), either at the AME’s discretion or as required by the Authorization or Special Consideration Letter (every 1-3 months).  
3. Summarize your aeromedical impression and evaluation as a HIMS AME based on the face-to-face evaluation AND review of the supporting documents.  
4. If you do not agree with the supporting documents, or if you have additional concerns not noted in the documentation, please discuss your observations or concerns.  
5. State if the airman/FAA ATCS meets all the requirements of the Authorization Letter/Special Consideration Letter or describe why they do not.  
6. Review and comment if there has been any change in the **dose, type, or discontinuation of medication** stated in the Authorization Letter/ Special Consideration Letter.  
7. Do you recommendation continued Special Issuance/Special Consideration in this airman/FAA ATCS?  
8. Agreement to continue to serve as the airman/FAA ATCS’s HIMS AME and follow this airman/FAA ATCS per FAA policy.  
9. Agreement to immediately notify the FAA (for airmen: 405-954-4821; for FAA ATCS contact the RFS office) if **there is any change** in condition, deterioration in psychiatric status or stability, if the medication dosage has changed, or there is a plan to reduce or discontinue any medication.  
10. Using the HIMS AME Checklist – SSRI Recertification/ Follow Up Clearance, comment on any items that fall into the shaded category.  
11. Submit the SSRI check list, your HIMS AME written report, and all required supporting documentation that you reviewed with your package. |
| **PSYCHIATRIST INTERIM HISTORY REPORT** | Every 6 months or per Authorization Letter or FAA ATCS Special Consideration Letter | 1. Summarize clinical findings and status of how the airman/FAA ATCS is doing.  
2. Have there been any new symptoms or hospitalizations?  
3. Did a change in dose or medication occur or is one recommended or anticipated?  
4. Have there been any clinical concerns or changes in treatment plan?  
5. Has the clinical diagnosis changed?  
6. Agreement to immediately notify the FAA (for Airmen: 405-954-4821; for FAA ATCS: contact the RFS office) if **there is any change** in the airman/FAA ATCS’s condition, dosage, change in medication or if the medication is stopped.  
7. Interval treatment records such as clinic or hospital notes should also be submitted. |

</table>
HIMS AME Change Request
(Updated 07/25/2018)

The Authorization for Special Issuance requires that airmen **DO NOT change his/her HIMS AME without prior FAA approval.**

In **rare** cases in which the HIMS AME listed on the Authorization Letter is no longer available to the airman (ex: HIMS AME retires, is no longer a HIMS AME, is deceased, or the airman or HIMS AME relocates to a new state, etc.), a change request is required.

The FAA requires the following to consider any request:

1. **CURRENT HIMS AME** - must write a closeout, current status report describing why the change is requested and agree to release monitoring/sponsorship to the new HIMS AME (list the name of new HIMS AME). The closeout report must note if there are any concerns regarding the airman’s compliance.

   If the HIMS AME is deceased, his/her office staff should contact AAM-200 Manager, Medical Specialties in Washington, DC at 202-267-8035.

2. **NEW HIMS AME** - must review the airman’s records and, in writing, agree to sponsor/monitor the airman in accordance with the terms of the FAA SI Authorization Letter

3. The **AIRMAN** must send a written request that describes why the change to a new HIMS AME is needed.

The FAA will review the submitted information, and **IF** the change is approved*, will send an updated Authorization Letter with the new HIMS AME information to the airman.

Submit requests to:

Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-313
PO Box 25082, Oklahoma City, OK 73125-9867

*NOTE: Submission of a HIMS AME Change Request does not automatically guarantee approval of the request.
The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

NOTE – See Disease Protocols for specifications for Neurocognitive, Psychiatric, and/or Psychiatric and Psychological Evaluations.

1. The category of personality disorders severe enough to have repeatedly manifested itself by overt acts refers to diagnosed personality disorders that involve what is called "acting out" behavior. These personality problems relate to poor social judgment, impulsivity, and disregard or antagonism toward authority, especially rules and regulations. A history of long-standing behavioral problems, whether major (criminal) or relatively minor (truancy, military misbehavior, petty criminal and civil indiscretions, and social instability), usually occurs with these disorders. Driving infractions and previous failures to follow aviation regulations are critical examples of these acts.

Certain personality disorders and other mental disorders that include conditions of limited duration and/or widely varying severity may be disqualifying. Under this category, the FAA is especially concerned with significant depressive episodes requiring treatment, even outpatient therapy. If these episodes have been severe enough to cause some disruption of vocational or educational activity, or if they have required medication or involved suicidal ideation, the application should be deferred or denied issuance.

Some personality disorders and situational dysphorias may be considered disqualifying for a limited time. These include such conditions as gross immaturity and some personality disorders not involving or manifested by overt acts.

2. Psychotic Disorders are characterized by a loss of reality testing in the form of delusions, hallucinations, or disorganized thoughts. They may be chronic, intermittent, or occur in a single episode. They may also occur as accompanying symptoms in other psychiatric conditions including but not limited to bipolar disorder (e.g. bipolar disorder with psychotic...
features), major depression (e.g. major depression with psychotic features), borderline personality disorder, etc. All applicants with such a diagnosis must be denied or deferred.

3. Bipolar Disorders are considered on a continuum as part of a spectrum of disorders where there are significant alternations in mood. Generally, only one episode of manic or hypomanic behavior is necessary to make the diagnosis. Please note that cyclothymic disorder is part of this spectrum. Even if the bipolar disorder does not have accompanying symptoms that reach the level of psychosis, the disorder can be so disruptive of judgment and functioning (especially mania) as to pose a significant risk to aviation safety. Impaired judgment does occur even in the milder form of the disease. All applicants with a diagnosis of Bipolar Disorder must be denied or deferred.

4. Although they may be rare in occurrence, severe anxiety problems, especially anxiety and phobias associated with some aspect of flying, are considered significant. Organic mental disorders that cause a cognitive defect, even if the applicant is not psychotic, are considered disqualifying whether they are due to trauma, toxic exposure, or arteriosclerotic or other degenerative changes. (See Item 18.m.).
ITEM 48. General Systemic

<th>NORMAL</th>
<th>ABNORMAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>48. General Systemic</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(a)(b)(c), 67.213(a)(b)(c), and 67.313(a)(b)(c)

(a) No established medical history or clinical diagnosis of diabetes mellitus that requires insulin or any other hypoglycemic drug for control.

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c) No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved, finds -

1. Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2. May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Examination Techniques

A protocol for examinations applicable to Item 48 is not provided because the necessary history-taking, observation, and other examination techniques used in examining other systems have already revealed much of what can be known about the status of the applicant's endocrine and other systems. For example, the examination of the skin alone can reveal important signs of thyroid dysfunction, Addison's disease, Cushing's disease, and several other endocrine disorders. The eye may reflect a thyroid disorder (exophthalmos) or diabetes (retinopathy).

When the Examiner reaches Item 48 in the course of the examination of an applicant, it is recommended that the Examiner take a moment to review and determine if key procedures have
been performed in conjunction with examinations made under other items, and to determine the relevance of any positive or abnormal findings.

### III. Aerospace Medical Disposition

The following is a table that lists the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

| A. Completed gender reassignment surgery **5 or more years ago**  
OR  
Treated with hormone therapy **for 5 or more years** | If there is no evidence of a mental health diagnosis and the airman is doing well on current treatment: | ISSUE  
Annotate Block 60 |
| B. Treated with Hormone therapy* for **less than 5 years**  
OR  
Gender reassignment surgery **less than 5 years ago**  
OR  
History of a coexisting mental health concern  
OR  
History of mental health treatment such as psychotherapy or medications for any condition other than Gender Dysphoria (Information is required if the airman has ever had a mental health diagnosis [including substance use disorder] or has received treatment for a mental health condition at any time. If treatment was short-term counseling for Gender Dysphoria only, note in Block 60.) | Submit the following to the FAA for review:  
- A completed [FAA Gender Dysphoria Mental Health Status Report](#) or an evaluation from the treating physician, using World Professional Association for Transgender Health guidelines (WPATH), which addresses items listed in the Mental Health Status Report.  
- Updated evaluations AFTER:  
  - **Hormone therapy:**  
    If on hormones, a current status report describing the length of time on the medication and side effects, if any.  
  - **Surgery:**  
    If surgery has been performed within the last one year, a status report from the surgeon or current treating physician showing full release, off any sedation or pain medication, and any surgical complications (e.g. DVT/PE/cardiac, etc.). | DEFER  
Submit the information to the FAA for review.  
Follow up **Issuance**  
Will be per the airman’s authorization letter |

### Notes:
The AME may ISSUE (no further information is needed), **if the airman:**  
- Was evaluated for or diagnosed with Gender Dysphoria and has never undergone treatment (counseling or support group for GD does not require information);  
- Has no history of other mental health diagnoses or treatment; and  
- Is otherwise qualified

*Side effects from hormone therapy can be aeromedically significant. The airman should be warned not to fly per Title 14 CFR 61.53 if they experience medication side effects.*

FAA Gender Dysphoria Mental Health Status Report
(Updated 06/24/2020)

Name ________________________________  Birthdate __________________________
Applicant ID# ____________________________  PI# _______________________________

The following information must be addressed in the treating provider’s evaluation. Evaluation should be performed in accordance with a comprehensive mental health assessment following the World Professional Association for Transgender Health (WPATH) guidelines (Note: Link must be opened in Google Chrome.)
Submit either this status report sheet* or supporting documentation addressing each item to your AME or to the FAA at:

Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-300
PO Box 25082
Oklahoma City, OK 73125-9867

1. I am a board certified psychiatrist or licensed psychologist AND I meet the criteria for a qualified mental health professional* per WPATH (current version) guidelines.  
   [ ] Yes  [ ] No-explain

2. This airman meets the DSM-5 diagnostic criteria for Gender Dysphoria and the condition is not secondary to, or better accounted for, by other diagnoses.
   [ ] Yes  [ ] No-explain

3. PSYCHIATRIC HISTORY:
   Current mental health diagnosis or coexisting mental health concerns  
   Previous mental health diagnosis or coexisting mental health concerns
   ER visit or hospitalization for any psychiatric illness or condition ever
   Any suicide attempt(s) ever
   Substance Use disorder per DSM-5
   (e.g. alcohol, cannabis, stimulants, hallucinogens, opioids)
   [ ] None  [ ] Yes-explain

4. PSYCHIATRIC TREATMENT: (List start and end dates on each. For medications, also note name, dose, and side effects, if any.)
   Current use
   Previous use
   Psychotherapy for any condition other than GD (e.g. depression, anxiety)
   Other treatments (e.g. cognitive therapy, talk therapy, electroconvulsive therapy)
   [ ] None  [ ] Yes-explain

5. CURRENT STATUS: Airman is doing well. There are no mental health concerns. Psychotherapy (if any) is for gender dysphoria only. No other treatment is needed (do not include support group or support group counseling).
   [ ] Yes  [ ] No-explain

6. Any evidence of cognitive dysfunction or is a formal neuropsychological evaluation indicated?
   [ ] None  [ ] Yes-explain

7. Do you have ANY concerns regarding this airman?
   [ ] None  [ ] Yes-explain

Treating Provider Signature ________________________________  Date of Evaluation __________________________
Name or Office Stamp ________________________________  Phone Number __________________________

*For any response which requires further explanation, submit supporting documentation. In some cases, actual records will be required.
### Human Immunodeficiency Virus (HIV)

Pregnancy

Pregnancy under normal circumstances is not disqualifying. It is recommended that the applicant's obstetrician be made aware of all aviation activities so that the obstetrician can properly advise the applicant. The Examiner may wish to counsel applicants concerning piloting aircraft during the third trimester. The proper use of lap belt and shoulder harness warrants discussion.
AME OFFICE-REQUIRED ANCILLARY TESTING

Items 49-580 of FAA Form 8500-8
ITEM 49. Hearing

<table>
<thead>
<tr>
<th>Conversational Voice Test at 6 Feet</th>
<th>Record Audiometric Speech Discrimination Score Below</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pass</td>
<td>Fail</td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

**All Classes: 14 CFR 67.105(a)(b)(c), 67.205(a)(b)(c), and 67.305(a)(b)(c)**

(a) The person shall demonstrate acceptable hearing by at least one of the following tests:

1. Demonstrate an ability to hear an average conversational voice in a quiet room, using both ears, at a distance of 6 feet from the examiner, with the back turned to the examiner.

2. Demonstrate an acceptable understanding of speech as determined by audiometric speech discrimination testing to a score of at least 70 percent obtained in one ear or in a sound field environment.

3. Provide acceptable results of pure tone audiometric testing of unaided hearing acuity according to the following table of worst acceptable thresholds, using the calibration standards of the American National Standards Institute, 1969 (11 West 42nd Street, New York, NY 10036):

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
<th>500 Hz</th>
<th>1000 Hz</th>
<th>2000 Hz</th>
<th>3000 Hz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Better ear (Db)</td>
<td>35</td>
<td>30</td>
<td>30</td>
<td>40</td>
</tr>
<tr>
<td>Poorer ear (Db)</td>
<td>35</td>
<td>50</td>
<td>50</td>
<td>60</td>
</tr>
</tbody>
</table>

(b) No disease or condition of the middle or internal ear, nose, oral cavity, pharynx, or larynx that-

1. Interferes with, or is aggravated by, flying or may reasonably be expected to do so; or

2. Interferes with, or may reasonably be expected to interfere with, clear and effective speech communication.

(c) No disease or condition manifested by, or that may reasonably be expected to be manifested by, vertigo or a disturbance of equilibrium.
II. Examination Equipment and Techniques

A. Order of Examinations

1. The applicant must demonstrate an ability to hear an average conversational voice in a quiet room, using both ears, at a distance of 6 feet from the Examiner, with the back turned to the Examiner.

2. If an applicant fails the conversational voice test, the Examiner may administer pure tone audiometric testing of unaided hearing acuity according to the following table of worst acceptable thresholds, using the calibration standards of the American National Standards Institute, 1969:

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
<th>500</th>
<th>1000</th>
<th>2000</th>
<th>3000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Better ear (Db)</td>
<td>35</td>
<td>30</td>
<td>30</td>
<td>40</td>
</tr>
<tr>
<td>Poorer ear (Db)</td>
<td>35</td>
<td>50</td>
<td>50</td>
<td>60</td>
</tr>
</tbody>
</table>

If the applicant fails an audiometric test and the conversational voice test had not been administered, the conversational voice test should be performed to determine if the standard applicable to that test can be met.

3. If an applicant is unable to pass either the conversational voice test or the pure tone audiometric test, then an audiometric speech discrimination test should be administered. A passing score is at least 70 percent obtained in one ear at an intensity of no greater than 65 Db.

B. Discussion

1. Conversational voice test. For all classes of certification, the applicant must demonstrate hearing of an average conversational voice in a quiet room, using both ears, at 6 feet, with the back turned to the Examiner. The Examiner should not use only sibilants (S-sounding test materials). If the applicant is able to repeat correctly the test numbers or words, "pass" should be noted and recorded on FAA Form 8500-8, Item 49. If the applicant is unable to hear a normal conversational voice then "fail" should be marked and one of the following tests may be administered.

2. Standard. For all classes of certification, the applicant may be examined by pure tone audiometry as an alternative to conversational voice testing or upon failing the conversational voice test. If the applicant fails the pure tone audiometric test and has not been tested by conversational voice, that test may be administered. The requirements expressed as audiometric standards according to a table of acceptable thresholds (American National Standards Institute [ANSI], 1969, calibration) are as follows:
3. Audiometric Speech Discrimination. Upon failing both conversational voice and pure tone audiometric test, an audiometric speech discrimination test should be administered (usually by an otologist or audiologist). The applicant must score at least 70 percent at intensity no greater than 65 Db in either ear.

C. Equipment

1. Approval. The FAA does not approve or designate specific audiometric equipment for use in medical certification. Equipment used for FAA testing must accurately and reliably cover the required frequencies and have adequate threshold step features. Because every audiometer manufactured in the United States for screening and diagnostic purposes is built to meet appropriate standards, most audiometers should be acceptable if they are maintained in proper calibration and are used in an adequately quiet place.

2. Calibration. It is critical that any audiometer be periodically calibrated to ensure its continued accuracy. Annual calibration is recommended. Also recommended is the further safeguard of obtaining an occasional audiogram on a "known" subject or staff member between calibrations, especially at any time that a test result unexpectedly varies significantly from the hearing levels clinically expected. This testing provides an approximate "at threshold" calibration. The Examiner should ensure that the audiometer is calibrated to ANSI standards or if calibrated to the older ASA/USASI standards, the appropriate correction is applied (see paragraph 3 below).

3. ASA/ANSI. Older audiometers were often calibrated to meet the standards specified by the USA Standards Institute (USASI), formerly the American Standards Association (ASA). These standards were based upon a U.S. Public Health Service survey. Newer audiometers are calibrated so that the zero hearing threshold level is now based on laboratory measurements rather than on the survey. In 1969, the American National Standards Institute (ANSI) incorporated these new measurements. Audiometers built to this standard have instruments or dials that read in ANSI values. For these reasons, it is very important that every audiogram submitted (for values reported in Item 49 on FAA Form 8500-8) include a note indicating whether it is ASA or ANSI. Only then can the FAA standards be appropriately applied. ASA or USASI values can be converted to ANSI by adding corrections as follows:

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
<th>500 Hz</th>
<th>1,000 Hz</th>
<th>2,000 Hz</th>
<th>3,000 Hz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decibels Added*</td>
<td>14</td>
<td>10</td>
<td>8.5</td>
<td>8.5</td>
</tr>
</tbody>
</table>

* The decibels added figure is the amount added to ASA or USASI at each specific frequency to convert to ANSI or older equivalent ISO values.
III. **Aerospace Medical Disposition**

1. **Special Issuance of Medical Certificates.** Applicants who do not meet the auditory standards may be found eligible for a SODA. An applicant seeking a SODA must make the request in writing to the Aerospace Medicine Certification Division, AAM-300. A determination of qualifications will be made on the basis of a special medical examination by an ENT consultant, a MFT, or operational experience.

2. **Bilateral Deafness.** See Items 25-30. If otherwise qualified, when the student pilot's instructor confirms the student's eligibility for a private pilot checkride, the applicant should submit a written request to the AMCD for an authorization for a MFT. This test will be given by an FAA inspector in conjunction with the checkride. If the applicant successfully completes the test, the FAA will issue a third-class medical certificate and SODA. Pilot activities will be restricted to areas in which radio communication is not required.

3. **Hearing Aids.** If the applicant requires the use of hearing aids to meet the standard, issue the certificate with the following restriction:

   **VALID ONLY WITH USE OF HEARING AMPLIFICATION**

Some pilots who normally wear hearing aids to assist in communicating while on the ground report that they elect not to wear them while flying. They prefer to use the volume amplification of the radio headphone. Some use the headphone on one ear for radio communication and the hearing aid in the other for cockpit communications.
ITEMS 50-54. Vision Testing (Updated 05/29/2019)

Visual Acuity Standards:

- As listed below or better;
- Each eye separately;
- Snellen equivalent; and
- With or without correction. If correction is used, it should be noted and the correct limitation applied.

<table>
<thead>
<tr>
<th></th>

</tbody>
</table>

ITEM 50. Distant Vision (Updated 06/28/2017)

I. Code of Federal Regulations

First- and Second-Classes: 14 CFR 67.103(a) and 67.203(a)

(a) Distant visual acuity of 20/20 or better in each eye separately, with or without corrective lenses. If corrective lenses (spectacles or contact lenses) are necessary for 20/20 vision, the person may be eligible only on the condition that corrective lenses are worn while exercising the privileges of an airman certificate.

Third-Class: 14 CFR 67.303(a)

(a) Distant visual acuity of 20/40 or better in each eye separately, with or without corrective lenses. If corrective lenses (spectacles or contact lenses) are necessary for 20/40 vision, the person may be eligible only on the condition that corrective lenses are worn while exercising the privileges of an airman certificate.

II. Examination Equipment and Techniques

Note: If correction is required to meet standards, only corrected visual acuity needs to be tested and recorded.
Guide for Aviation Medical Examiners

Equipment:

1. Snellen 20-foot eye chart may be used as follows:
   a. The Snellen chart should be illuminated by a 100-watt incandescent lamp placed 4 feet in front of and slightly above the chart.
   b. The chart or screen should be placed 20 feet from the applicant's eyes and the 20/20 line should be placed 5 feet 4 inches above the floor.
   c. A metal, opaque plastic, or cardboard occluder should be used to cover the eye not being examined.
   d. The examining room should be darkened with the exception of the illuminated chart or screen.
   e. If the applicant wears corrective lenses, only the corrected acuity needs to be checked and recorded. If the applicant wears contact lenses, see the recommendations in Chapter 3. Items 31-34, Section II, #5.
   f. Common errors:
      1. Failure to shield the applicant's eyes from extraneous light.
      2. Permitting the applicant to view the chart with both eyes.
      3. Failure to observe the applicant's face to detect squinting.
      4. Incorrect sizing of projected chart letters for a 20-foot distance.
      5. Failure to focus the projector sharply.
      6. Failure to obtain the corrected acuity when the applicant wears glasses.

   There are specific approved substitute testers for color vision, which may not include some commercially available vision testing machines. For an approved list, see Item 52. Color Vision.

3. Directions furnished by the manufacturer or distributor should be followed when using the acceptable substitute devices for the above testing.

Examination Techniques:

1. Each eye will be tested separately, and both eyes together.
III. Aerospace Medical Disposition

A. When corrective lenses are required to meet the standards, an appropriate limitation will be placed on the medical certificate. For example, when lenses are needed for distant vision only:

HOLDER SHALL WEAR CORRECTIVE LENSES

For multiple vision defects involving distant and/or intermediate and/or near vision when one set of multifocal lenses corrects for all, the limitation is:

HOLDER SHALL WEAR CORRECTIVE LENSES

For combined defective distant and near visual acuity where multifocal lenses are required, the appropriate limitation is:

HOLDER SHALL WEAR LENSES THAT CORRECT FOR DISTANT VISION AND POSSESS GLASSES THAT CORRECT FOR NEAR VISION

For multiple vision defects involving distant, near, and intermediate visual acuity when more than one set of lenses is required to correct for all vision defects, the appropriate limitation is:

HOLDER SHALL WEAR LENSES THAT CORRECT FOR DISTANT VISION AND POSSESS GLASSES THAT CORRECT FOR NEAR AND INTERMEDIATE VISION

B. An applicant who fails to meet vision standards and has no SODA that covers the extent of the visual acuity defect found on examination may obtain further FAA consideration for grant of an Authorization under the special issuance section of part 67 (14 CFR 67.401) for medical certification by submitting a report of an eye evaluation. The Examiner can help to expedite the review procedure by forwarding a copy of FAA Form 8500-7, Report of Eye Evaluation that has been completed by an eye specialist (optometrist or ophthalmologist) ¹.

C. Applicants who do not meet the visual standards should be referred to a specialist for evaluation. Applicants with visual acuity or ocular muscle balance problems may be referred to an eye specialist of the applicant's choice. The FAA Form 8500-7, Report of Eye Evaluation, should be provided to the specialist by the Examiner.

¹ In obtaining special eye evaluations in respect to the airman medical certification program, reports from an eye specialist are acceptable when the condition being evaluated relates to a determination of visual acuity, refractive error, or mechanical function of the eye. The FAA Form 8500-7, Report of Eye Evaluation, is a form that is designed for use by either optometrists or ophthalmologists.
D. Any applicant eligible for a medical certificate through special issuance under these guidelines shall pass a MFT, which may be arranged through the appropriate agency medical authority.

E. Amblyopia. In amblyopia ex anopsia, the visual acuity of one eye is decreased without presence of organic eye disease, usually because of strabismus or anisometropia in childhood. In amblyopia ex anopsia, the visual acuity loss is simply recorded in Item 50 of FAA form 8500-8, and visual standards are applied as usual. If the standards are not met, a report of eye evaluation, FAA Form 8500-7, should be submitted for consideration.

ITEM 51.a. Near Vision

ITEM 51.b. Intermediate Vision

Visual Acuity Standards:
- As listed below or better;
- Each eye separately;
- Snellen equivalent; and
- With or without correction. If correction is used, it should be noted and the correct limitation applied.

<table>
<thead>
<tr>
<th></th>
<th>First or Second Class</th>
<th>Third Class</th>

<td></td>
<td></td>
</tr>
<tr>
<td>Measured at 32 inches; Age 50 and over only</td>
<td>20/40</td>
<td>No requirement</td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

First- and Second-Classes: 14 CFR 67.103(b) and 67.203(b)

(b) Near vision of 20/40 or better, Snellen equivalent, at 16 inches in each eye separately, with or without corrective lenses. If age 50 or older, near vision of 20/40 or better, Snellen equivalent, at both 16 inches and 32 inches in each eye separately, with or without corrective lenses.
Third-Class: 14 CFR 67.303(b)

(b) Near vision of 20/40 or better, Snellen equivalent, at 16 inches in each eye separately, with or without corrective lenses.

II. Equipment and Examination Techniques

Note: If correction is required to meet standards, only corrected visual acuity needs to be tested and recorded.

Equipment:

1. FAA Form 8500-1, Near Vision Acuity Test Chart, dated April 1993.

2. For testing near at 16 inches and intermediate at 32 inches, acceptable substitutes: any commercially available visual acuities and heterophoria testing devices. For testing of intermediate vision, some equipment may require additional apparatus.

There are specific approved substitute testers for color vision, which may not include some commercially available vision testing machines. For an approved list, see Item, 52. Color Vision.

Examination Techniques:

1. Near visual acuity and intermediate visual acuity, if the latter is required, are determined for each eye separately and for both eyes together. If the applicant needs glasses to meet visual acuity standards, the findings are recorded, and the certificate appropriately limited. If an applicant has no lenses that bring intermediate and/or near visual acuity to the required standards, or better, in each eye, no certificate may be issued, and the applicant is referred to an eye specialist for appropriate visual evaluation and correction.

2. FAA Form 8500-1, Near Vision Acuity Test Chart, dated April 1993, should be used as follows:

   f. The examination is conducted in a well-lighted room with the source of light behind the applicant.

   g. The applicant holds the chart 16 inches (near) and 32 inches (intermediate) from the eyes in a position that will provide uniform illumination. To ensure that the chart is held at exactly 16 inches or 32 inches from the eyes, a string of that length may be attached to the chart.

   h. Each eye is tested separately, with the other eye covered. Both eyes are then tested together.
Guide for Aviation Medical Examiners

i. The smallest type correctly read with each eye separately and both eyes together is recorded in linear value. In performing the test using FAA Form 8500-1, the level of visual acuity will be recorded as the line of smallest type the applicant reads accurately. The applicant should be allowed no more than two misread letters on any line.

j. Common errors:
   1. Inadequate illumination of the test chart.
   2. Failure to hold the chart the specified distance from the eye.
   3. Failure to ensure that the untested eye is covered.

k. Practical Test. At the bottom of FAA Form 8500-1 is a section for Aeronautical Chart Reading. Letter types and charts are reproduced from aeronautical charts in their actual size.

   This may be used when a borderline condition exists at the certifiable limits of an applicant's vision. If successfully completed, a favorable certification action may be taken.

3. Acceptable substitute equipment may be used. Directions furnished by the manufacturer or distributor should be followed when using the acceptable substitute devices for the above testing.

III. Aerospace Medical Disposition

When correcting glasses are required to meet the near and intermediate vision standards, an appropriate limitation will be placed on the medical certificate. Contact lenses that correct only for near or intermediate visual acuity are not considered acceptable for aviation duties.

If the applicant meets the uncorrected near or intermediate vision standard of 20/40, but already uses spectacles that correct the vision better than 20/40, it is recommended that the Examiner enter the limitation for near or intermediate vision corrective glasses on the certificate.

For all classes, the appropriate wording for the near vision limitation is:

   HOLDER SHALL POSSESS GLASSES THAT CORRECT FOR NEAR VISION

Possession only is required, because it may be hazardous to have distant vision obscured by the continuous wearing of reading glasses.

For first- and second-class, the appropriate wording for combined near and intermediate vision limitation is:
HOLDER SHALL POSSESS GLASSES THAT CORRECT FOR NEAR AND INTERMEDIATE VISION

For multiple defective distant, near, and intermediate visual acuity when unifocal glasses or contact lenses are used and correct all, the appropriate limitation is:

HOLDER SHALL WEAR CORRECTIVE LENSES

For multiple vision defects involving distance and/or near and/or intermediate visual acuity when more than one set of lenses is required to correct for all vision defects, the appropriate limitation is:

HOLDER SHALL WEAR LENSES THAT CORRECT FOR DISTANT VISION AND POSSESS GLASSES THAT CORRECT FOR NEAR AND INTERMEDIATE VISION

</tbody>
</table>

Acceptable Substitutes: (May be used following the directions accompanying the instruments) Farnsworth Lantern; OPTEC 900 Color Vision Test; Keystone Orthoscope; Keystone Telebinocular; OPTEC 2000 Vision Tester (Model Nos. 2000 PM, 2000 PAME, and 2000 PI) - Tester MUST contain 2000-010 FAR color perception PIP plate to be approved; OPTEC 2500; Titmus Vision Tester; Titmus i400.

### III. Aerospace Medical Disposition

**TESTS APPROVED FOR AIRMEN ARE NOT ALL ACCEPTABLE FOR AIR TRAFFIC CONTROLLERS** (ATCS - FAA employee 2152 series and contract tower air traffic controllers). For ATCS color vision criteria, see Acceptable Test Instruments for Color Vision Screening of ATCS chart at the end of this section or contact a Regional Flight Surgeon.

The following criteria apply **TO AIRMEN ONLY**:

An applicant meets the color vision standard if he/she passes any of the color vision tests listed in Examination Techniques, Item 52. Color Vision. If an applicant fails any of these tests, inform the applicant of the option of taking any of the other acceptable color vision tests listed in Item 52. Color Vision Examination Equipment and Techniques before requesting the Specialized Operational Medical Tests in Section D below.

Inform the applicant that if he/she takes and fails any component of the Specialized Operational Medical Tests in Section D, then he/she will not be permitted to take any of the remaining listed office-based color vision tests in Examination Techniques, Item 52. Color Vision as an attempt to remove any color vision limits or restrictions on their airman medical certificate. That pathway is no longer an option to the airman, and no new result will be considered.

An applicant does not meet the color vision standard if testing reveals:

**A. All Classes**
1. AOC (1965 edition) pseudoisochromatic plates: seven or more errors on plates 1-15.
2. AOC-HRR (second edition): Any error in test plates 7-11. Because the first 4 plates in the test book are for demonstration only, test plate 7 is actually the eleventh plate in the book. (See instruction booklet.)
4. Ishihara pseudoisochromatic plates: Concise 14-plate edition: six or more errors on plates 1-11; the 24-plate edition: seven or more errors on plates 1-15; the 38-plate edition: nine or more errors on plates 1-21.
6. OPTEC 900 Vision Tester and Farnsworth Lantern test: an average of more than one error per series of nine color pairs in series 2 and 3. (See instruction booklet.)
8. Richmond-HRR, 4th edition: two or more errors on plates 5-24. Plates 1-4 are for demonstration only; plates 5-10 are screening plates; and plates 11-24 are diagnostic plates.

B. Certificate Limitation. If an applicant fails to meet the color vision standard as interpreted above, but is otherwise qualified, the Examiner must issue a medical certificate bearing the limitation:

NOT VALID FOR NIGHT FLYING OR BY COLOR SIGNAL CONTROL

C. The color vision screening tests above (Section A) are not to be used for the purpose of removing color vision limits/restrictions from medical certificates of airmen who have failed the Specialized Operational Medical Tests below (Section D). See bold paragraph in the introduction of this section (above).

D. Specialized Operational Medical Tests for Applicants Who Do Not Meet the Standard. Applicants who fail the color vision screening test as listed, but desire an airman medical certificate without the color vision limitation, may be given, upon request, an opportunity to take and pass additional operational color perception tests. If the airman passes the operational color vision perception test(s), then he/she will be issued a Letter of Evidence (LOE).

- The operational tests are determined by the class of medical certificate requested. The request should be in writing and directed to AMCD or RFS. See NOTE for description of the operational color perception tests.
- Applicants for a third-class medical certificate need only take the Operational Color Vision Test (OCVT).
- The applicant is permitted to take the OVCT only once during the day. If the applicant fails, he/she may request to take the OVCT at night. If the applicant elects to take the
OCVT at night, he/she may take it only once.

- For an upgrade to first- or second-class medical certificate, the applicant must first pass the OCVT during daylight and then pass the color vision Medical Flight Test (MFT). If the applicant fails the OCVT during the day, he/she will not be allowed to apply for an upgrade to First- or Second-Class certificate. If the applicant fails the color vision MFT, he/she is not permitted to upgrade to a first- or second-class certificate.

E. An LOE may restrict an applicant to a third-class medical certificate. Airmen shall not be issued a medical certificate of higher class than indicated on the LOE. Exercise care in reviewing an LOE before issuing a medical certificate to an airman.

F. Color Vision Correcting Lens (e.g. X-Chrom). Such lenses are unacceptable to the FAA as a means for correcting a pilot's color vision deficiencies.

G. Any tests not specifically listed above are unacceptable methods of testing for FAA medical certificate. Examples of unacceptable tests include, but are not limited to, the OPTEC 5000 Vision Tester (color vision portion), “Farnsworth Lantern Flashlight,” “yarn tests,” and AME-administered aviation Signal Light Gun test (AME office use is prohibited). **Web-based color vision applications, downloaded, or printed versions of color vision tests are also prohibited.** Examiners must use actual and specific color vision plates and testing machinery for applicant evaluations.

**NOTE:** An applicant for a third-class airman medical certificate who has defective color vision and desires an airman medical certificate without the color vision limitation must demonstrate the ability to pass an Operational Color Vision Test (OCVT) during the day. The OCVT consists of the following:

1. A Signal Light Test (SLT): Identify in a timely manner aviation red, green, and white
2. Aeronautical chart reading: Read and correctly interpret in a timely manner aeronautical charts, including print in various sizes, colors, and typefaces; conventional markings in several colors; and, terrain colors

An applicant for a first- or second-class airman medical certificate who has defective color vision and desires an airman medical certificate without the color vision limitation must first demonstrate the ability to pass the OCVT during the day (as above) and then must pass a color vision Medical Flight Test (MFT). The color vision MFT is performed in the aircraft, including in-flight testing. It consists of the following:

1. Read and correctly interpret in a timely manner aviation instruments or displays
2. Recognize terrain and obstructions in a timely manner
3. Visually identify in a timely manner the location, color, and significance of aeronautical lights such as, but not limited to, lights of other aircraft in the vicinity, runway lighting systems, etc.

Applicants who take and pass both the OCVT during the day and the color vision MFT will be given a letter of evidence (LOE) valid for all classes of medical certificates and will have no limitation or comment made on the certificate regarding color vision as they meet the standard for all classes.
Applicants who take and pass only the OCVT during the day will be given an LOE valid only for third-class medical certificate.

An applicant who fails the SLT portion of the OCVT during daylight hours may repeat the test at night. Should the airman pass the SLT at night, the restriction:

**NOT VALID FOR FLIGHT DURING DAYLIGHT HOURS BY COLOR SIGNAL CONTROL**

will be placed on the replacement medical certificate. The airman must have taken the daylight hours test first and failed prior to taking the night test.
Failed Color Vision Screening Test

Medical certificate limitation: “Not valid for night flying or by color signal controls.”

Airman opts to take Operational Color Vision Test (OCVT) DAY

Pass ?

YES

Airman opts to take Color Vision Medical Flight Test

Pass ?

YES

Letter of Evidence (LOE); Class 3 only. (Must pass Color Vision Medical Flight Test for upgrade.)

Airman opts to take OCVT NIGHT

No upgrade. LOE and certificate remain Class 3

Medical certificate limitation remains: “Not valid for night flying or by color signal controls.”

Medical certificate limitation remains: “Not valid for flight during daylight hours by color signal controls.”

## Special Instructions

**Test Administration**
The Examiner must document the color vision test instrument used, version, answer sheet with the actual subject responses and the score. If MEDExpress is used the examiner may fax or mail the results to the Flight Surgeon or may document the findings in block 60.

**AME Office Inspection**
AME office inspections: The inspector must visually inspect the condition of the color vision test instrument, for fading, finger prints, pen or pencil smudges; and lights used. Only a Macbeth Easel or a Verilux True Daylight Illuminator (F15T8VLX) are acceptable. Room lights must be off.

**False Negatives**
Any test device with a restricted test set, like the Titmus testers, generally have a high false alarm test. If a disproportionally high number of subjects are failing, it may be necessary to review the acceptability of that test instrument. Regional Medical Offices are expected to monitor this situation.

ITEM 53. Field of Vision

<table>
<thead>
<tr>
<th>53. Field of Vision</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐ Normal</td>
</tr>
<tr>
<td>☐ Abnormal</td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

First- and Second-Classes: 14 CFR 67.103(d) and 67.203(d)

(d) Field of Vision: Normal

Third-Class: 14 CFR 67.303(d)

(d) Field of Vision: No acute or chronic pathological condition of either eye or adnexa that interferes with the proper function of an eye, that may reasonably be expected to progress to that degree, or that may reasonably be expected to be aggravated by flying.

II. Examination Equipment and Techniques

1. Fifty-inch square black matte surface wall target with center white fixation point; 2 millimeter white test object on black-handled holder:
   1. The applicant should be seated 40 inches from the target.
   2. An occluder should be placed over the applicant's right eye.
   3. The applicant should be instructed to keep the left eye focused on the fixation point.
   4. The white test object should be moved from the outside border of the wall target toward the point of fixation on each of the eight 4-degree radials.
   5. The result should be recorded on a worksheet as the number of inches from the fixation point at which the applicant first identifies the white target on each radial.
   6. The test should be repeated with the applicant's left eye occluded and the right eye focusing on the fixation point.

2. Alternative Techniques:
   a. A standard perimeter may be used in place of the above procedure. With this method, any significant deviation from normal field configuration will require
evaluation by an eye specialist.

b. Direct confrontation. This is the least acceptable alternative since this tests for peripheral vision and only grossly for field size and visual defects. The Examiner, standing in front of the applicant, has the applicant look at the Examiner's nose while advancing two moving fingers from slightly behind and to the side of the applicant in each of the four quadrants. Any significant deviation from normal requires ophthalmological evaluation.

III. Aerospace Medical Disposition

A. Ophthalmological Consultations.

If an applicant fails to identify the target in any presentation at a distance of less than 23 inches from the fixation point, an eye specialist's evaluation must be requested. This is a requirement for all classes of certification. The Examiner should provide FAA Form 8500-14, Ophthalmological Evaluation for Glaucoma, for use by the ophthalmologist if glaucoma is suspected.

B. Glaucoma.

The FAA may grant an Authorization under the special issuance section of part 67 (14 CFR 67.401) on an individual basis. The Examiner can facilitate FAA review by obtaining a report of Ophthalmological Evaluation for Glaucoma (FAA Form 8500-14) from a treating or evaluating ophthalmologist.

NOTE: See AASI for History of Glaucoma

If considerable disturbance in night vision is documented, the FAA may limit the medical certificate: NOT VALID FOR NIGHT FLYING

C. Other Pathological Conditions.

See Items 31-34.

ITEM 54. Heterophoria

<table>
<thead>
<tr>
<th>54. Heterophoria 20' (in prism diopters)</th>
<th>Esophoria</th>
<th>Exophoria</th>
<th>Right Hyperphoria</th>
<th>Left Hyperphoria</th>
</tr>
</thead>
</table>

I. Code of Federal Regulations

First- and Second-Classes: 14 CFR 67.103(f) and 67.203(f)

(f) Bifoveal fixation and vergence-phoria relationship sufficient to prevent a break in
fusion under conditions that may reasonably be expected to occur in performing airmen duties. Tests for the factors named in this paragraph are not required except for persons found to have more than 1 prism diopter of hyperphoria, 6 prism dipters of esophoria, or 6 prism dipters of exophoria. If any of these values are exceeded, the Federal Air Surgeon may require the person to be examined by a qualified eye specialist to determine if there is bifoveal fixation and an adequate vergence-phoria relationship. However, if otherwise eligible, the person is issued a medical certificate pending the results of the examination.

**Third-Class: No Standards**

**II. Examination Equipment and Techniques**

**Equipment:**

1. Red Maddox rod with handle.
2. Horizontal prism bar with graduated prisms beginning with one prism diopter and increasing in power to at least eight prism dipters.
3. Acceptable substitutes: any commercially available visual acuities and heterophoria testing devices.

There are specific approved substitute testers for color vision, which may not include some commercially available vision testing machines. For an approved list, see Item, 52. Color Vision.

**Examination Techniques:**

Test procedures to be used accompany the instruments. If the Examiner needs specific instructions for use of the horizontal prism bar and red Maddox rod, these may be obtained from a RFS.

**III. Aerospace Medical Disposition**

1. First- and second-class: If an applicant exceeds the heterophoria standards (1 prism diopter of hyperphoria, 6 prism dipters of esophoria, or 6 prism dipters of exophoria), but shows no evidence of diplopia or serious eye pathology and all other aspects of the examination are favorable, the Examiner should not withhold or deny the medical certificate. The applicant should be advised that the FAA may require further examination by a qualified eye specialist.

2. Third-class: Applicants for a third-class certificate are not required to undergo heterophoria testing. However, if an applicant has strabismus or a history of diplopia, the Examiner should defer issuance of a certificate and forward the application to the AMCD. If the applicant wishes further consideration, the Examiner can help expedite FAA review by providing the applicant with a copy of FAA Form 8500-7, Report of Eye Evaluation.
ITEM 55. Blood Pressure

(Updated 10/28/2015)

<table>
<thead>
<tr>
<th>55. Blood Pressure</th>
<th>Systolic</th>
<th>Diastolic</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Sitting mm of Mercury)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(b)(c), 67.213(b)(c), and 67.313(b)(c)

(b). No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds -

(1). Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2). May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

(c). No medication or other treatment that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the medication or other treatment involved finds -

(1). Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

(2). May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

Measurement of blood pressure is an essential part of the FAA medical certification examination. The average blood pressure while sitting should not exceed 155 mm mercury systolic and 95 mm mercury diastolic maximum pressure for all classes. A medical assessment is specified for all applicants who need or use antihypertensive medication to control blood pressure. (See Section III. B. below.)

II. Examination Techniques

In accordance with accepted clinical procedures, routine blood pressure should be taken with the applicant in the seated position. An applicant should not be denied or deferred first-, second-, or third-class certification unless subsequent recumbent blood pressure readings exceed those contained in this Guide. Any conditions that may adversely affect the validity of the blood pressure reading should be noted.
III. Aerospace Medical Disposition

A. Examining Options

1. An applicant whose pressure does not exceed 155 mm mercury systolic and 95 mm mercury diastolic maximum pressure, who has not used antihypertensive medication for 30 days, and who is otherwise qualified should be issued a medical certificate by the Examiner.

2. If the airman’s blood pressure is elevated in clinic, you have any of the following options:

   - Recheck the blood pressure. If the airman meets FAA specified limits on the second attempt, note this in Block 60 along with both readings.

   - Have the airman return to clinic 3 separate days over a 7-day period. If the airman meets FAA specified limits during these re-checks, note this and the readings in Block 60. Also note if there was a reason for the blood pressure elevation.

   - Send the airman back to his/her treating physician for re-evaluation. If medication adjustment is needed, a 7-day no-fly period applies to verify no problems with the medication. If this can be done within the 14 day exam transmission period, you could then follow the Hypertension Disposition Table.

The Examiner must defer issuance of a medical certificate to any applicant whose hypertension has not been evaluated, who uses unacceptable medications, whose medical status is unclear, whose hypertension is uncontrolled, who manifests significant adverse effects of medication, or whose certification has previously been specifically reserved to the FAA. See Hypertension FAQs, Hypertension Disposition Table, and CACI – Hypertension Worksheet.

ITEM 56. Pulse

56. Pulse (Resting)

The medical standards do not specify pulse rates that, per se, are disqualifying for medical certification. These tests are used, however, to determine the status and responsiveness of the cardiovascular system. Abnormal pulse rates may be reason to conduct additional cardiovascular system evaluations.

II. Examination Techniques

The pulse rate is determined with the individual relaxed in a sitting position.

III. Aerospace Medical Disposition

If there is bradycardia, tachycardia, or arrhythmia, further evaluation is warranted and deferral may be indicated (see Item 36., Heart). A cardiac evaluation may be needed to determine the applicant’s qualifications. Temporary stresses or fever may, at times, result in abnormal pulse readings. If the Examiner believes this to be the case, the applicant should be given a few days to recover and then be retested. If this is not possible, the Examiner should defer issuance, pending further evaluation.

ITEM 57. Urine Test/Urinalysis

57. Urine Test (if abnormal, give results)

<table>
<thead>
<tr>
<th></th>
<th>Albumin</th>
<th>Sugar</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Abnormal</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.113(a)(b), 67.213(a)(b), and 67.313(a)(b)

(a) No established medical history or clinical diagnosis of diabetes mellitus that requires insulin or any other hypoglycemic drug for control.

(b) No other organic, functional, or structural disease, defect, or limitation that the Federal Air Surgeon, based on the case history and appropriate, qualified medical judgment relating to the condition involved, finds:

1) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or

2) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.
II. Examination Techniques

Any standard laboratory procedures are acceptable for these tests.

III. Aerospace Medical Disposition

Glycosuria or proteinuria is cause for deferral of medical certificate issuance until additional studies determine the status of the endocrine and/or urinary systems. If the glycosuria has been determined not to be due to carbohydrate intolerance, the Examiner may issue the certificate. Trace or 1+ proteinuria in the absence of a history of renal disease is not cause for denial.

The Examiner may request additional urinary tests when they are indicated by history or examination. These should be reported on FAA Form 8500-8 or attached to the form as an addendum.

See Item 48., General Systemic.

ITEM 58. ECG

(Updated 11/30/2016)

<table>
<thead>
<tr>
<th>58. ECG (Date)</th>
</tr>
</thead>
<tbody>
<tr>
<td>MM</td>
</tr>
</tbody>
</table>

I. Code of Federal Regulations

**First-Class: 14 CFR 67.111(b)(c)**

(a) A person applying for first-class medical certification must demonstrate an absence of myocardial infarction and other clinically significant abnormality on electrocardiographic examination:

(1) At the first application after reaching the 35th birthday; and

(2) On an annual basis after reaching the 40th birthday.

(b) An electrocardiogram will satisfy a requirement of paragraph (b) of this section if it is dated no earlier than 60 days before the date of the application it is to accompany and was performed and transmitted according to acceptable standards and techniques.

**Note:** Any applicant for certification may be required to provide ECGs when indicated by history or physical examination.
II. Examination Techniques

A. When an ECG/EKG is required:

<table>
<thead>
<tr>
<th>Class</th>
<th>Applicant age on day of exam</th>
<th>EGG is required at the following intervals</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st</td>
<td>34 or younger</td>
<td>not required</td>
</tr>
<tr>
<td></td>
<td>35 to 39</td>
<td>A single baseline ECG is required at the first exam performed after reaching the 35th birthday.</td>
</tr>
<tr>
<td></td>
<td>40 or older</td>
<td>Annually</td>
</tr>
<tr>
<td>2nd or 3rd</td>
<td>Any</td>
<td>Not required*</td>
</tr>
</tbody>
</table>

*If the AME performed an EKG, it should be submitted along with notes in Block 60 describing why it was performed.

Other times an ECG/EKG can be requested by an AME (for All classes):

Any time the airman has a history or physical examination finding that suggests a clinically significant abnormality.

Substitution for an ECG/EKG:

If a first-class airman does not have a current resting ECG on file, but the FAA has the tracings of any type of stress test (pharmaceutical stress, Bruce stress, nuclear stress, or stress echocardiogram) which was done within the last 60 days, the information may be accepted on a case by case basis. The image must be of good quality. Stress test or ECG images that have been faxed do not have enough clarity/definition for adequate review. In most cases, they will not be acceptable. A cardiac catheterization and/or a Holter monitor test are NOT acceptable in place of a resting 12-lead ECG.

Additional Work-Up/Evaluation (All classes):

If additional work up was performed based on history or ECG findings, copies of the work up (cardiovascular evaluation, clinic notes, stress testing, etc.) should also be submitted to the FAA with notes in Block 60 describing the findings. If any pathology was identified, refer to the appropriate, individual section.
AMCS notification regarding ECG will appear as:

1. **ECG is Required:**
   A Red X will precede the words ECG Date. No date will be in the box.

   ![ECG Date](image)

2. **ECG is Not Required:**
   The AMCS screen will show the word “Ok” along with a date in the box.

   ![Ok ECG Date](image)

*(Figure 1)*

Can I submit an ECG performed on a day other than the date of exam?

Yes, but it must be considered current.

**B. Currency of ECG/What is considered a current ECG:**

- Only an ECG performed up to 60 days prior to the exam is considered current.

- There is no provision for issuance of a first-class medical certificate based upon a promise that an ECG will be obtained at a future date.

- As of the August 2014 changes in AMCS, an AME cannot transmit the exam until the required ECG is attached.

**C. ECG equipment/technical requirements:**

The FAA does not require a specific type of machine, however the ECG machine used must give a clear picture AND meet the following technical requirements:

- Must generate an image that can be converted to a PDF;

- Must be recorded at 25mm/sec. (This is standard in the US).

- Recordings at 50mm/sec will NOT be accepted. Many international programs are set at 50mm/sec as a baseline; the examiner must change this to 25mm/sec for the FAA to accept the tracing; and

- 300 dpi color resolution (or better)

**D. AME Review and Interpretation of the ECG:**

The AME must review the ECG for the following PRIOR to transmitting:
• **Quality** - It is not uncommon for the FAA to receive an ECG that has leads missing or even an asystole picture. If the quality is poor and the ECG cannot be interpreted, the airman will receive a letter requiring a new ECG.

• **Correct airman/Correct exam** - Verify you attach the correct ECG to the correct airman file. Also verify NO OTHER documents are attached.

• **Abnormalities/pathology** - Review the ECG for any abnormalities which may cause you to defer or inform the airmen that a work up is required. See [Item 36. Heart – Arrhythmias](#).

• **Normal Variants** - The following common ECG findings are considered normal variants and are not cause for deferment unless the airman is symptomatic or there are other concerns. Airmen who have these findings may be certified, if otherwise qualified:
  
  - Early repolarization
  - Ectopic atrial rhythm
  - First-degree AV (atrioventricular) block with PR interval less than 0.21 in age < 51
  - Incomplete Right Bundle Branch Block (IRBBB)
  - Indeterminate axis
  - Intraventricular conduction delay (IVCD)
  - Left atrial abnormality
  - Left axis deviation, less than or equal to -30 degrees
  - Left ventricular hypertrophy by voltage criteria only
  - Low atrial rhythm
  - Low voltage in limb leads (May be a sign of obesity or hypothyroidism.)
  - Premature Atrial Contraction (PAC) – multiple, asymptomatic
  - Premature Ventricular Contraction (PVC) - single only; 2 or more on ECG require evaluation.
  - Short QT – if no history of arrhythmia
  - Sinus arrhythmia
  - Sinus bradycardia. Up to age 49 if heart rate is >44; Age 50 and older if heart rate is >48
  - Sinus tachycardia – heart rate < 110
  - Wandering atrial pacemaker

E. **Transmitting/uploading the ECG:**

Complete instructions can be found on the [AMCS User Guide](#). As of October 2014, all Senior Examiners in the United States and International AMEs are required to upload a PDF version of an ECG into the correct section on the 8500-8. Clicking on the icon will launch an ECG Import window, where the applicant’s current ECG can be uploaded as a PDF attachment and eventually transmitted to the FAA with the exam.
• **Date** - The AME no longer fills in the date. The date entered in the ECG import window will populate this field (Item 58).

• **One ECG** - You may attach only one ECG to the exam:
  
  o Only the last ECG attached will be saved and transmitted with the exam. Ex: If you attach ECG #1 and then attach ECG #2, ECG #1 will be replaced and not sent to the FAA.

  o If an incorrect ECG is uploaded, a new one may be attached. You will receive a warning at the top of the window if an ECG has already been attached.

• **AME Comments** - The AME can comment on findings when uploading the ECG.

• **Non-AME transmissions**:
  
  o ECGs must be electronically attached to an 8500-8 by the AME.

  o It is not possible for a medical department or any other physician to transmit a current ECG directly to the FAA 8500-8 exam.

  o If an ECG was done outside the AME’s office, the AME must verify that the ECG belongs to the airman, it is less than 60 days old, and is of suitable quality before it is attached to the 8500-8.

  o The image must be of good quality. Stress test or ECG images that have been faxed do not have enough clarity/definition for adequate review. In most cases, they will not be acceptable.

• **Applicant refuses ECG** - If an ECG is due and the airman refuses, the examiner will be unable to transmit the exam. The AME should call the AMCS Support Desk at (405) 954-3238 AND note in Block 60 that the airman refused the required ECG.

• **No ECG submitted** - When an ECG is due but is not submitted, the FAA will not affirm the applicant’s eligibility for medical certification until the requested ECG has been received and interpreted as being within normal limits. Failure to respond to FAA requests for a required current ECG will result in denial of certification.

F. **After the ECG is transmitted to the FAA:**

All first class ECGs are reviewed by AMCD’s ECG department, staff physicians, or consultant cardiologists. If abnormalities are identified, additional work up or information may be requested. For additional help transmitting the exam or attaching the ECG contact:

**AMCS SUPPORT DESK AT**

(405) 954-3238
APPLICATION REVIEW

Items 59-64 of FAA Form 8500-8
ITEMS 59-64 of FAA Form 8500-8

This section provides guidance for the completion of Items 59-64 of the FAA Form 8500-8. The Examiner is responsible for conducting the examination. However, he or she may delegate to a qualified physician's assistant, nurse, aide, or laboratory assistant the testing required for Items 49-58. Regardless of who performs the tests, the Examiner is responsible for the accuracy of the findings, and this responsibility may not be delegated.

The medical history page of FAA Form 8500-8 must be completed and certified by the applicant or it will not appear in AMCS. After all routine evaluations and tests are completed, the Examiner should review FAA Form 8500-8. If the form is complete and accurate, the Examiner should add final comments, make qualification decision statements, and certify the examination.

ITEM 59. Other Tests Given

<table>
<thead>
<tr>
<th>59. Other Tests Given</th>
</tr>
</thead>
</table>

I. Code of Federal Regulations

All Classes: 14 CFR 67.413(a)(b)

(a) Whenever the Administrator finds that additional medical information or history is necessary to determine whether an applicant for or the holder of a medical certificate meets the medical standards for it, the Administrator requests that person to furnish that information or to authorize any clinic, hospital, physician, or other person to release to the Administrator all available information or records concerning that history. If the applicant or holder fails to provide the requested medical information or history or to authorize the release so requested, the Administrator may suspend, modify, or revoke all medical certificates the airman holds or may, in the case of an applicant, deny the application for an airman medical certificate.

(b) If an airman medical certificate is suspended or modified under paragraph (a) of this section, that suspension or modification remains in effect until the requested information, history, or authorization is provided to the FAA and until the Federal Air Surgeon determines whether the person meets the medical standards under this part.
II. Examination Techniques

Additional medical information may be furnished through additional history taking, further clinical examination procedures, and supplemental laboratory procedures.

On rare occasions, even surgical procedures such as biopsies may be indicated. As a designee of the FAA Administrator, the Examiner has limited authority to apply 14 CFR 67.413 in processing applications for medical certification. When an Examiner determines that there is a need for additional medical information, based upon history and findings, the Examiner is authorized to request prior hospital and outpatient records and to request supplementary examinations including laboratory testing and examinations by appropriate medical specialists. The Examiner should discuss the need with the applicant. The applicant should be advised of the types of additional examinations required and the type of medical specialist to be consulted. Responsibility for ensuring that these examinations are forwarded and that any charges or fees are paid will rest with the applicant. All reports should be forwarded to the AMCD, unless otherwise directed (such as by a RFS).

Whenever, in the Examiner's opinion, medical records are necessary to evaluate an applicant's medical fitness, the Examiner should request that the applicant sign an authorization for the Release of Medical Information. The Examiner should forward this authorization to the custodian of the applicant's records so that the information contained in the record may be obtained for attachment to the report of medical examination.

ITEM 60. Comments on History and Findings

Comments on all positive history or medical examination findings must be reported by Item Number. Item 60 provides the Examiner an opportunity to report observations and/or findings that are not asked for on the application form. Concern about the applicant's behavior, abnormal situations arising during the examination, unusual findings, unreported history, and other information thought germane to aviation safety should be reported in Item 60. The Examiner should record name, dosage, frequency, and purpose for all currently used medications.

If possible, all ancillary reports such as consultations, ECGs, x-ray release forms, and hospital or other treatment records should be attached. If the delay for those items would exceed 14 days, the Examiner should forward all available data to the AMCD, with a note specifying what additional information is being prepared for submission at a later date.

If there are no significant medical history items or abnormal physical findings, the Examiner should indicate this by checking the appropriate block.
ITEM 61. Applicant’s Name

The legal name applicant’s name should be entered.

ITEM 62. Has Been Issued

The Examiner must check the proper box to indicate if the Medical Certificate has been issued. The Examiner must indicate denial or deferral by checking one of the two lower boxes. If denied, a copy of the Examiner's Letter of Denial, should be forwarded to the AMCD.

A. Applicant’s Refusal. When advised by an Examiner that further examination and/or medical records are needed, the applicant may elect not to proceed. The Examiner should note this in Block 60. No certificate should be issued and the Examiner should forward the application form to the AMCD, even if the application is incomplete.

B. Anticipated Delay. When the Examiner anticipates a delay of more than 14 days in obtaining records or reports concerning additional examinations, the exam should be transmitted to AMCD with a note in Block 60 stating that additional information is still needed. The exam should be transmitted deferred. No medical certificate should be issued.

C. Issuance. When the Examiner receives all the supplemental information requested and finds that the applicant meets all the FAA medical standards for the class sought, the Examiner should issue a medical certificate.

D. Deferral. If upon receipt of the information the Examiner finds there is a need for even more information or there is uncertainty about the significance of the findings, certification should be deferred. The Examiner’s concerns should be noted in Block 60 and the application transmitted as deferred to the AMCD for further consideration.

E. Denial. When the Examiner concludes that the applicant is clearly ineligible for certification, the applicant should be denied, using the AME Letter of Denial. Use of this form will provide the applicant with the reason for the denial and with appeal rights and procedures. (See General Information 4. Medical Certification Decision Making)
ITEM 63. Disqualifying Defects

The Examiner must check the “Disq” box on the Comments Page beside any disqualifying defect. Comments or discussion of specific observations or findings may be reported in Item 60. If all comments cannot fit in Item 60, the Examiner may submit additional information on a plain sheet of paper and include the applicant’s full name, date of birth, signature, any appropriate identifying numbers (PI, MID or SSN), and the date of the exam.

If the Examiner denies the applicant, the Examiner must issue a Letter of Denial, to the applicant, and report the issuance of the denial in Item 60.

ITEM 64. Medical Examiner’s Declaration

- The FAA designates specific individuals as Examiners and this status may not be delegated to staff or to a physician who may be covering the designee’s practice.

- Before transmitting to AMCD, the Examiner must certify the exam and enter all appropriate information including his or her AME serial number.
Conditions AMEs Can Issue (CACI) is a series of conditions which allow AMEs to regular issue if the applicant meets the parameters of the CACI Condition Worksheet. The worksheets provide detailed instructions to the examiner and outline condition-specific requirements for the applicant.

1. Review the disposition table BEFORE the CACI worksheet to verify a CACI is required.
2. **If all the CACI criteria are met and the applicant is otherwise qualified**, the AME may issue on the first exam or the first time the condition is reported to the AME without contacting AMCD/RFS. Document the appropriate notes in Block 60 and keep the supporting documents in your files; they do not need to be submitted to the FAA at this time.
3. If the requirements are not met, the AME must defer the exam and send the supporting documents to the FAA.

CACIs with Certification Worksheets:

- ARTHRITIS
- ASTHMA
- BLADDER CANCER
- BREAST CANCER
- (C-ITP) CHRONIC IMMUNE THROMBOCYTOPENIA
- CHRONIC KIDNEY DISEASE
- COLITIS
- COLON CANCER
- GLAUCOMA
- HEPATITIS C – CHRONIC
- HYPERTENSION
- HYPOTHYROIDISM
- RETAINED KIDNEY STONE(S)
- MIGRAINE AND CHRONIC HEADACHE
- MITRAL VALVE REPAIR
- PRE-DIABETES
- PROSTATE CANCER
- RENAL CANCER
- TESTICULAR CANCER
DISEASE PROTOCOLS
PROTOCOLS

The following lists the Guide for Aviation Medical Examiners Disease Protocols, and course of action that should be taken by the Examiner as defined by aeromedical decision considerations. (Also see condition-specific CACI Certification Worksheets, which can be found in the Dispositions Section.)

- ALLERGIES, SEVERE
- ATTENTION DEFICIT/HYPERACTIVITY DISORDER
- BINOCULAR MULTIFOCAL AND ACCOMMODATING DEVICES
- CARDIAC TRANSPLANT
- CARDIAC VALVE REPLACEMENT
- CARDIOVASCULAR EVALUATION (CVE)
- CONDUCTIVE KERATOPLASTY
- CORONARY HEART DISEASE (CHD PROTOCOL)
- DEPRESSION TREATED WITH SSRI MEDICATIONS
- DIABETES MELLITUS - DIET CONTROLLED
- DIABETES MELLITUS Type II - MEDICATION CONTROLLED (Non Insulin)
- DIABETES MELLITUS Type I or Type II – INSULIN TREATED - CGM OPTION
- DIABETES MELLITUS Type I or Type II - INSULIN TREATED - THIRD CLASS OPTION
- GRADED EXERCISE STRESS TEST REQUIREMENTS (Maximal)
- GRADED EXERCISE STRESS TEST REQUIREMENTS (Bundle Branch Block)
- HUMAN IMMUNODEFICIENCY VIRUS (HIV)
- IMPLANTED PACEMAKER
- LIVER TRANSPLANT (RECIPIENT)
- METABOLIC SYNDROME – MEDICATION CONTROLLED
- MUSCULOSKELETAL EVALUATION
- NEUROCOGNITIVE IMPAIRMENT
- OBSTRUCTIVE SLEEP APNEA (OSA)*
- PEPTIC ULCER
- PSYCHIATRIC EVALUATION
- PSYCHIATRIC AND PSYCHOLOGICAL EVALUATIONS
- RENAL TRANSPLANT
- SUBSTANCES of DEPENDENCE/ABUSE (Drugs and Alcohol)
- THROMBOEMBOLIC DISEASE

* OSA Reference Materials are located at the end of the Protocols below
PROTOCOL FOR ALLERGIES, SEVERE

In the case of severe allergies, the Examiner should deny or defer certification and provide a report to the Aerospace Medical Certification Division, AAM-300, that details the period and duration of symptoms and the nature and dosage of drugs used for treatment and/or prevention.
SPECIFICATIONS FOR NEUROPSYCHOLOGICAL EVALUATIONS FOR ADHD/ADD
(Updated 01/27/2021)

Why is a neuropsychological evaluation required?
Attention-Deficit/Hyperactivity Disorder (ADHD), formerly called Attention Deficit Disorder (ADD), and medications used for treatment may result in cognitive deficits that would make an airman unsafe to perform pilot duties.

What testing is required?
There are two test batteries:
   a. INITIAL BATTERY - performed on everyone; and
   b. SUPPLEMENTAL BATTERY - performed when the Initial Battery indicates a potential problem.

Who may perform a neuropsychological evaluation? Neuropsychological evaluations should be conducted by a qualified neuropsychologist with additional training in aviation-specific topics. The following link contains a list of neuropsychologists who meet all FAA quality criteria: FAA Neuropsychologist List.

Information for the AIRMAN – ADHD/ADD Evaluation
(Updated 12/13/2018)

1. Work with your AME to obtain any necessary evaluations and documentation.
   If you have stopped taking ADHD/ADD medication(s), you must be off the medication(s) for 90 days before testing and evaluation.

2. Arrange for required testing and evaluation by a neuropsychologist.
   The neuropsychologist must have experience with aeromedical neuropsychology (not all neuropsychologists have this training). See the FAA HIMS Neuropsychologist List to find one in your area.

3. PRIOR to your appointment: Before going for testing, please ensure the following:
   - Verify with the neuropsychologist’s office that they have the ability to obtain a urinalysis for ADHD medication the day of the exam or within 24 hours after the exam.
     a. If they do not, then you will need to have your AME or primary care physician write an order for the lab or arrange urinalysis testing.
     b. The urine drug screening must test for ADHD medications, including psychostimulant medications. It should include testing for amphetamine and methylphenidate. *The sample must be collected at the conclusion of the neurocognitive testing or within 24 hours afterward.
c. The results must be documented in the neuropsychologist’s report.

d. If this testing is not performed, the FAA may not accept the neuropsychologist’s findings and you will have to repeat neurocognitive testing.

- **Have a copy of your medical records sent to the neuropsychologist for review.**
  - The neuropsychologist will need to obtain a complete history. To do so, you should provide the information in the checklist below. If the information is not available/applicable, a statement must be provided as to why is not available/applicable.

    | Submit this information to the neuropsychologist PRIOR to your appointment |
    |----------------------------------------------------------------------------|
    | All medical records documenting prior diagnosis or treatment for ADHD/ADD, including dates of treatment or evaluation AND name, dosage, and dates the medications were started and stopped. |
    | If diagnosed as a child: Academic records (including transcripts), Section 504 plans, IEPs, any academic accommodations, etc., from times both on and off medication. |
    | Adults with a history of ADHD and no recent school information: Submit a copy of your drivers’ record from each state in which you have had a license in the past 10 years. |
    | ALL previous psychological or neuropsychological evaluation reports. |
    | Copies of all records regarding prior psychiatric or substance-related hospitalizations, observations, or treatment. |
    | A complete copy of your FAA medical records. |
    | To have a copy of your FAA records sent directly to the neuropsychologist, submit a Request for Airman Medical Records (FAA Form 8065-2). |

4. Day of testing: Urine drug screen is required after neurocognitive testing.*

5. Submit an 8500-8 exam via MedXPress:
   - The AME will submit your exam as **DEFERRED**.
   - Coordinate with your AME to make sure that **ALL ITEMS LISTED** are sent to the FAA **WITHIN 14 DAYS** of the AME exam.
   - Partial or incomplete packages **WILL CAUSE A DELAY IN CERTIFICATION**.
Information for the NEUROPSYCHOLOGIST:

TESTING REQUIREMENTS – ADHD/ADD
(Updated 01/29/2020)

The following evaluation is the minimum recommended evaluation for the presence of aeromedically significant ADHD/ADD by a neuropsychologist. Results of each of these sections must be included in the final report. If the neuropsychologist believes there are any concerns* with the evaluation results, a Supplemental Battery must also be conducted.

If the airman stopped taking ADHD/ADD medication(s), they must be off the medication(s) for 90 days before testing and evaluation.

INITIAL BATTERY:

1. Comprehensive background review.

2. Possible interview of collateral sources of information such as parent, school counselor/teacher, employer, flight instructor, etc.

3. Administration of the Administration of the tests as described in the FAA Neuropsychology Testing Specifications site. To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to this secure site. Authorized professionals should use the secure portal. For access, email a request to 9-amc-aam-NPTesting@faa.gov.

4. Urine drug screening test for ADHD medications, including psychostimulant medications. It should include testing for amphetamine and methylphenidate. The sample must be collected at the conclusion of the neurocognitive testing or within 24 hours after testing.

If the results of the above testing indicate:

NO CONCERNS: If the neuropsychologist interprets the clinical interview and/or screening battery results as exhibiting functioning that is completely within normal limits and lacking any suspicion of aeromedically significant neurocognitive deficit, then the initial evaluation can be considered complete and a report generated. See Report Requirements for items that must be covered as well as additional items that must be submitted.

ANY CONCERNS: If after interpreting the INITIAL BATTERY evaluation results, the neuropsychologist has any concerns regarding impairment, deficiencies, or comorbid disorders that could pose a threat to aviation safety, the neuropsychologist must perform a full battery of testing as described in the SUPPLEMENTAL BATTERY section below. The purpose of this additional testing is to explore and
clarify the findings or rule out ADHD/ADD as well as any neurocognitive deficits previously misidentified as ADHD/ADD and/or any comorbid disorders.

SUPPLEMENTAL BATTERY:
(Updated 01/29/2020)

- Complete the INITIAL BATTERY testing;
- At minimum, complete and add the Supplemental Testing as described in the FAA Neuropsychology Testing Specifications site. To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to this secure site. Authorized professionals should use the secure portal. For access, email a request to 9-amc-aam-NPTesting@faa.gov.
- See Report Requirements below for items that must be covered in the neuropsychologist report as well as additional items that must be submitted.

Information for the NEUROPSYCHOLOGIST:

REPORT REQUIREMENTS – ADHD/ADD
(Updated 01/29/2020)

Report based on INITIAL BATTERY ONLY:

At minimum, the report must include:
1. Listing of all documents reviewed. Verify that you were provided with and reviewed a complete copy of the airman’s FAA medical file sent to you by the FAA.
2. Summary of all available record findings. This includes diagnosis and treatment. If records were not clear or did not provide sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders, that should be stated.
3. Results of a thorough clinical interview that includes detailed history regarding psychosocial or developmental problems:
   a. Educational history and academic performance (special education and/or Section 504, IEPs, school-based psychoeducational evaluations, tutoring, discipline, high school transcript, discipline, repeating of grade, special accommodations, etc.);
   b. Current substance use and substance use/abuse history including treatment and quality of recovery, if applicable;
   c. Driving record, accidents, etc.;
   d. Legal issues and arrest history;
   e. Career difficulties/challenges or employment performance;
   f. Aviation background and experience;
   g. Medical conditions;
   h. All medication use history;
i. Behavioral observations during the interview and testing; and
j. Results from interview of collateral sources of information such as parent, school counselor/teacher, employer, flight instructor, etc.

4. A mental status examination/behavioral observations;
5. Interpretation of the battery of neuropsychological and psychological tests administered;
6. An integrated summary of findings;
7. An explicit diagnostic statement (consistent with the FAA Regulations):
   a. Your final clinical diagnosis or findings:
      i. Do not simply list if ADHD/ADD is present or not. You should report if there are other conditions or a learning disorder present; and
      ii. If there is no DSM diagnosis, are there any noted areas of neurocognitive impairment or deficiencies? If so, describe their nature and severity;
   b. Any evidence of a comorbid disorder that could pose a hazard to aviation safety? If none, then that should be noted;
   c. Does your diagnosis or findings agree with the diagnosis noted on other supporting or historical documents you reviewed? If it does not, then you should explain your rationale as to your diagnosis or findings; and
8. Documentation of urine drug screen results (what testing was performed and the results or a copy of the final results should be attached).

SUBMIT to the FAA all of the following:

☐ Report containing a MINIMUM of all the above elements;
☐ Copies of all computer score reports; and
☐ An appended score summary sheet that includes all scores for all tests administered. When available, pilot norms must be used. If pilot norms are not available for a particular test or inappropriate for a specific applicant, then the normative data/comparison group relied upon for interpretation (e.g., general population, age/education-corrected) must be specified. A summary of test scores including raw scores, percentile scores, and/or standard scores must be included.

Report based on INITIAL BATTERY plus SUPPLEMENTAL BATTERY:

The report must include ALL items in the INITIAL BATTERY evaluation, the SUPPLEMENTAL BATTERY, AND the applicable item below:

1. NO CONCERNS/ABNORMALITIES:
   If the neuropsychologist interprets the clinical interview and INITIAL BATTERY PLUS SUPPLEMENTAL BATTERY results as exhibiting functioning that is completely within normal limits and lacking any suspicion of neurocognitive deficit, then the final report should also document abnormalities found in the SCREENING and what additional testing dismissed the abnormalities as a diagnostic concern.
2. CONCERNS OR ABNORMALITIES FOUND:
If the neuropsychologist interprets the clinical interview and INITIAL BATTERY PLUS SUPPLEMENTAL BATTERY results as raising concerns or showing neuropsychological impairment, then include the following in the report:

- Describe the nature and severity of any noted neurocognitive deficit(s);
- Describe the potential impact to flight performance/flight safety of the noted deficit(s); and
- Describe any applicable diagnosis, as well as any applicable comorbid condition(s)

Additional information for the neuropsychologist:

- The FAA will not proceed with a review of the test findings without all of the required data.
- Safeguard of data and clinical findings will be in accordance with the APA Ethical Principles of Psychologists and Code of Conduct (2002) as well as applicable federal law.
- Raw neurocognitive testing data may be required at a future date for expert review by one of the FAA’s consulting clinical neuropsychologists. In that event, authorization for release of the data (by the airman to the expert reviewer) is required.
- Recommendations should be strictly limited to the neuropsychologist’s area of expertise.
- Periodic re-evaluations may be required in certain cases. The airman’s FAA Special Issuance letter will outline required follow up testing. This may be limited to specific tests or expanded to include a comprehensive battery. For questions about testing or requirements, email 9-amc-aam-NPTesting@faa.gov.
Reference Information for the Neuropsychologist:
(Updated 04/25/2018)

The responsibility of the neuropsychologist is to identify any neurocognitive deficit/impairment that has aeromedical significance. Attention-Deficit/Hyperactivity Disorder (ADHD), formerly called Attention Deficit Disorder (ADD), is a condition that may be aeromedically disqualifying. For reference information and comments on specific tests, authorized professionals should use the portal at FAA Neuropsychology Testing Specifications. For access to the portal, email a request to 9-amc-aam-NPTesting@faa.gov.
PROTOCOL FOR BINOCULAR MULTIFOCAL AND ACCOMMODATING DEVICES
(Updated 05/29/2019)

This Protocol establishes the authority for the Examiner to issue an airman medical certificate to binocular applicants using multifocal or accommodating ophthalmic devices.

Devices acceptable for aviation-related duties must be FDA approved and include:

- Intraocular Lenses (multifocal or accommodating intraocular lens implants)
- Bifocal/Multifocal contact lenses

Examiners may issue as outlined below:

- Adaptation period before certification:
  - Surgical lens implantation – minimum 3 months post-operative
  - Contact lenses (bifocal or multifocal) – minimum one month of use

- Must provide a report to include the FAA Form 8500-7, Report of Eye Evaluation, from the operating surgeon or the treating eye specialist. This report must attest to stable visual acuity and refractive error, absence of significant side effects/complications, need of medications, and freedom from any glare, flares or other visual phenomena that could affect visual performance and impact aviation safety

- Visual Acuity Standards:
  - As listed below or better;
  - Each eye separately;
  - Snellen equivalent; and
  - With or without correction. If correction is used, it should be noted and the correct limitation applied.

PROTOCOL FOR CARDIAC TRANSPLANT (Updated 08/30/2017)

The Examiner must defer issuance. Issuance is considered for Third-class applicants only. FAA Cardiology Panel will review. Applicants found qualified will be required to provide annual followup evaluations. All studies must be performed within 30 days of application.

Requirements for consideration:

- A current report from the treating transplant cardiologist regarding the status of the cardiac transplant, including all pre- and post-operative reports. A statement regarding functional capacity, modifiable cardiovascular risk factors, and prognosis for incapacitation
- Current blood chemistries (fasting blood sugar, hemoglobin A1C concentration, and blood lipid profile to include total cholesterol, HDL, LDL, and triglycerides), within 30 days
- Any tests performed or deemed necessary by all treating physicians (e.g., myocardial biopsy)
- Coronary Angiogram
- Graded Exercise Stress Test (see disease protocol) and stress echocardiogram
- A current 24-hour Holter monitor evaluation to include selective representative tracings
- Complete documentation of all rejection history, whether treated or not; include hospital records and reports of any tests done
- A complete history regarding any infectious process
- All complete history regarding any malignancy
- List of all present medications and dosages, including side effects.

It is the responsibility of each applicant to provide the medical information required to determine his/her eligibility for airman medical certification. A medical release form may help in obtaining the necessary information. Please ensure full name appears on any reports or correspondence.

All information shall be forwarded in one mailing to either:

PROTOCOL FOR CARDIAC VALVE REPLACEMENT
(Updated 01/27/2021)

For applicants with tissue or mechanical valve replacement(s):

INITIAL CONSIDERATION:

- **First- or Second-Class Applicants**: Applicants are reviewed by the Federal Air Surgeon’s (FAS) Cardiology Panel or FAS Cardiology Consultant and must have a **6-month recovery period** after procedure to ensure stabilization.

- **Multiple heart valve replacement(s)**: Applicants who have received multiple heart valve replacements may be considered.

- **Ross Procedure**: The FAA may consider certification of all classes of applicants who have undergone a **Ross Procedure** (pulmonic valve transplanted to the aortic position and pulmonic valve replaced by a bioprosthesis).

- **Transcatheter Aortic Valve Replacement (TAVR) Procedure**: TAVR may also be considered for any class. In addition to the requirements listed below, a note from the cardiologist specifically explaining why the TAVR procedure was chosen (risk factors, conditions making open procedure not acceptable, etc.) must be provided.

- The following information must be submitted for **all classes**:
  1. **Copies of all hospital/medical records** pertaining to the valve replacement:
     - Admission History & Physical (H&P);
     - Discharge summary;
     - Operative report with valve information (make, model, serial number and size); and
     - Pathology report
  2. **A current report from the treating cardiologist** regarding the status of the cardiac valve replacement. It should address your general cardiovascular condition, any symptoms of valve or heart failure, any related abnormal physical findings, and must substantiate satisfactory recovery and cardiac function without evidence of embolic phenomena, significant arrhythmia, structural abnormality, or ischemic disease.
  3. **If on warfarin (Coumadin)**, the attending physician must confirm stability without complications. Report must include warfarin (Coumadin) dose history, schedule, and International Normalized Ratio (INR) values (monthly for the past 6-month period of observation; must be within acceptable range).
  4. **Current 24-hour Holter monitor** evaluation to include select representative tracings.
5. **Current** M-mode, 2-dimensional, and M-Mode Doppler **echocardiogram**, specifically including chamber dimensions and valvular gradients. Submit the video resulting from this study on CD-ROM in DICOM compatible format.

6. **Current maximal GXT** (stress test) – See **GXT Protocol**.

7. If cardiac catheterization and coronary angiography have been performed, all reports AND films must be submitted, including a copy of the cineangiogram on CD-ROM in DICOM compatible format.

### FOLLOW-UP CERTIFICATION:

After initial certification, all classes are usually followed at 12-month intervals with the following requirements:

- Current clinical status report from your treating cardiologist;
- Standard resting ECG; (actual LEGIBLE tracing);
- Doppler echocardiogram report; and
- If used, a warfarin (Coumadin) status report: Include dose; monthly INRs; any complications from treatment and subsequent actions taken.

**Note:**

- Holter and GXT may be required periodically, if clinically indicated.
- All classes may be eligible for an [AASI Cardiac Valve Replacement](#).
- If any new valve replacement since their Special Issuance, the AME must defer.

### SUBMITTING INFORMATION TO THE FAA:

- The applicant is responsible for providing all medical information required by the FAA to determine eligibility for medical certification. A **medical release form** may help in obtaining the necessary information. Authorization cannot be considered until all the required data has been received.
- Use full name and applicant ID on any reports or correspondence. This will assist in locating the file.
- Keep a copy of all documents and media submitted as a safeguard against loss.
- Send all information in one mailing to either:

PROTOCOL FOR CARDIOVASCULAR EVALUATION (CVE)

A current cardiovascular evaluation (CVE) must include:

- A personal and family medical history assessment
- Clinical cardiac and general physical examination
- An assessment and statement regarding the applicant’s medications, functional capacity, and modifiable cardiovascular risk factors
- Prognosis for incapacitation
- Blood chemistries (fasting blood sugar, current blood lipid profile to include total cholesterol, HDL, LDL, and triglycerides) performed within the last 90 days
PROTOCOL FOR CONDUCTIVE KERATOPLASTY

Conductive Keratoplasty (CK) is a refractive surgery procedure. It is acceptable for aeromedical certification, with Special Issuance, after review by the FAA.

The following criteria are necessary for initial certification:

- The airman is not qualified for six months post procedure
- The airman must provide all medical records related to the procedure
- A current status report by the surgical eye specialist with special note regarding complications of the procedure or the acquired monocularity, or vision complaints by the airman
- A current FAA Form 8500-7, Report of Eye Evaluation
- A medical flight test may be necessary (consult with the FAA)
- Annual followups by the surgical eye specialist
PROTOCOL FOR EVALUATION OF CORONARY HEART DISEASE (CHD PROTOCOL)

(Updated 12/30/2020)

For the purpose of airman certification coronary heart disease (CHD) is divided into 4 broad categories, with or without myocardial infarction (MI):

- **Open revascularization of any coronary artery(s) and left main coronary artery stenting** (with or without MI). Open revascularization includes coronary artery bypass grafting (CABG; on- or off-pump), minimally invasive procedures by incision, and robot operations. Left main coronary artery stenting carries the same risk of future cardiac events as CABG, thus it is treated the same for certification or qualification purposes.

- **Percutaneous intervention** (with or without MI). This includes angioplasty (PTCA) and bare metal or drug-eluting stents.

- **MI without any open or percutaneous intervention**

- **MI from non-coronary artery disease causes**. Examples include epinephrine injection, cardiac trauma, complications of catheterization, blood clotting disorders (e.g. PT/PTT, Protein S and C, Factor V Leiden), etc.

Recovery time before consideration and required tests will vary by the airman medical certificate applied for and the categories above.

A. Required recovery times for first and second-class:
   a. 6 months: Open revascularization of any coronary artery(s) or left main coronary artery stenting
   b. 3 months:
      - Percutaneous intervention **excluding** left main coronary artery interventions
      - Myocardial infarction (MI), uncomplicated, without any open or percutaneous intervention procedures
      - MI from non-coronary artery disease

B. Required documentation for all pilots with MI due to non-coronary artery disease:
   a. Current status report from the treating physician
   b. Copies of all medical records (inpatient and outpatient) pertaining to the event, including all labs, tests, or study results and reports.

C. Required documentation for all pilots with any of the remaining conditions above:
   a. The required documentation, including GXT and cardiac catheterization, must be accomplished no sooner than either 6 months or 3 months post-event, depending on the underlying condition as listed in Paragraph A. above
   b. Copies of all medical records (inpatient and outpatient) pertaining to the event, including all labs, tests, or study results and reports.
   c. Current status report from the treating cardiologist (cardiovascular evaluation (CVE)) including:
      - Personal and family medical history assessment; clinical cardiac and general physical examination; assessment and statement
regarding the applicant’s functional capacity and prognosis for incapacitation

- Documentation of counselling on modifiable cardiovascular risk factors
- All medications and side-effects, if any
- Labs (lipids, blood glucose)

d. Current Bruce Protocol Stress Test (GXT):
   - Third-class airmen - maximal plain GXT
   - First and unlimited second-class airmen require maximal radionuclide GXT.
   - For specific GXT requirements see Guidelines for GXT

D. Additional required documentation for first and unlimited* second - class airmen
   a. For conditions requiring 6-month recovery:
      - 6-month post event cardiac catheterization
      - 6-month post event maximal radionuclide GXT (see above)
   b. For conditions requiring 3-month recovery:
      - 3-month post event cardiac catheterization
      - 3-month post event maximal radionuclide GXT (see above)
   c. The applicant should indicate if a lower class medical certificate is acceptable (if they are found ineligible for the class sought)

E. Additional required documentation for percutaneous coronary intervention:
   The applicant must provide the operative or post procedure report. If a STENT was placed, the report must include make of STENT, implant location(s), and the length and diameter of each STENT.

A SPECT myocardial perfusion exercise stress test using technetium agents and/or thallium may be required for consideration for any class if clinically indicated or if the exercise stress test is abnormal by any of the usual parameters. The interpretive report and all SPECT images, preferably in black and white, must be submitted.

Note: If cardiac catheterization and/or coronary angiography have been performed, all reports and actual films (if films are requested) must be submitted for review. Copies should be made of all films to safeguard against loss. Films should be labeled with the applicant’s name and return address.

* Limited second-class medical certificate refers to a second-class certificate with a functional limitation such as “Not Valid for Carrying Passengers for Compensation or Hire,” "Not Valid for Pilot in Command, Valid Only When Serving as a Pilot Member of a Fully Qualified Two-Pilot Crew,” etc.
Depressive disorders and medications used to treat depression are medically disqualifying for pilots and FAA Air Traffic Control Specialists. However, the Federal Air Surgeon has established a policy for Authorizations for Special Issuance (SI) of medical certificates for pilots and Special Consideration (SC) clearance for FAA ATCS treated with selective serotonin reuptake inhibitor (SSRI) medications who meet specific criteria.

- **Where can I find the policy?** The policy is published in the Guide for Aviation Medical Examiners at Item 47. Psychiatric Conditions - Use of Antidepressant Medications.

- **What will be required if special issuance/ special Consideration is authorized?** Airmen found eligible for SI and FAA ATCS found eligible for SC will be required to undergo periodic re-evaluations. Requirements for re-evaluation testing will be specified in the letter authorizing SI/SC, and may be limited to the CogScreen-AE or expanded to include additional tests.

**Why is a neuropsychological evaluation required?** Depression and other conditions treated with selective serotonin reuptake inhibitor (SSRI) medications, as well as the SSRIs themselves, may produce cognitive deficits that would make an airman unsafe to perform pilot duties. This guideline outlines the requirements for a neuropsychological evaluation.

**Who may perform a neuropsychological evaluation?** Neuropsychological evaluations should be conducted by a qualified neuropsychologist with additional training in aviation-specific topics. The following link contains a list of neuropsychologists who meet all FAA quality criteria: FAA Neuropsychologist List.

**Will I need to provide any of my medical records?** You should make records available to the neuropsychologist prior to the evaluation, to include:

- Copies of all records regarding prior psychiatric/substance-related hospitalizations, observations or treatment not previously submitted to the FAA.
- Have a copy of your complete FAA file sent to the HIMS AME AND to a board certified psychiatrist if your treating physician is not a board certified psychiatrist.
  - For airmen, see Release of Information on how to request a copy of your file by submitting a Request for Airman Medical Records (Form 8065-2).
  - For FAA ATCS information on this process, contact your Regional Flight Surgeon’s office.

**What must the neuropsychological evaluation report include?** At a minimum:

- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, or pediatric neuropsychiatrist treatment notes).
Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.

- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview and testing.
- A mental status examination.
- Interpretation of testing including, but not limited to, the tests as specified below.

- An integrated summary of findings with an explicit diagnostic statement, and the neuropsychologist’s opinion(s) and recommendation(s) regarding clinically or aeromedically significant findings and the potential impact on aviation safety consistent with the Federal Aviation Regulations.

**What is required for testing?**

To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to a secure site. Authorized professionals should use the portal at FAA Neuropsychology Testing Specifications. For access, email a request to 9-amc-aam-NPTesting@faa.gov.

**What must be submitted?** The neuropsychologist’s report as specified in the portal, plus:

- Copies of all computer score reports; and
- An appended score summary sheet that includes all scores for all tests administered. When available, pilot norms must be used. If pilot norms are not available for a particular test, then the normative comparison group (e.g., general population, age/education-corrected) must be specified. Also, when available, percentile scores must be included.

Recommendations should be strictly limited to the psychologist’s area of expertise. For questions about testing or requirements, email 9-amc-aam-NPTesting@faa.gov.

**What else does the neuropsychologist need to know?**

- The FAA will not proceed with a review of the test findings without the above data.
- The data and clinical findings will be carefully safeguarded in accordance with the APA Ethical Principles of Psychologists and Code of Conduct (2002) as well as applicable federal law.
- Raw psychological testing data may be required at a future date for expert review by one of the FAA’s consulting clinical psychologists. In that event, the airman/FAA ATCS will need to provide an authorization for release of the data to the expert reviewer. Contact your RFS office for more information.

**Useful references for the neuropsychologist:**

PROTOCOL FOR DIABETES MELLITUS - DIET CONTROLLED

A medical history or clinical diagnosis of diabetes mellitus may be considered previously established when the diagnosis has been or clearly could be made because of supporting laboratory findings and/or clinical signs and symptoms. When an applicant with a history of diabetes is examined for the first time, the Examiner should explain the procedures involved and assist in obtaining prior records and current special testing.

Applicants with a diagnosis of diabetes mellitus controlled by diet alone are considered eligible for all classes of medical certificates under the medical standards, provided they have no evidence of associated disqualifying cardiovascular, neurological, renal, or ophthalmological disease. Specialized examinations need not be performed unless indicated by history or clinical findings. The Examiner must document these determinations on FAA Form 8500-8.
PROTOCOL FOR HISTORY OF DIABETES MELLITUS TYPE II MEDICATION-CONTROLLED (NON INSULIN)

This protocol is used for all diabetic applicants treated with oral agents or incretin mimetic medications (such as exenatide), herein referred to as medication(s).

An applicant with a diagnosis of diabetes mellitus controlled by medication may be considered by the FAA for an Authorization of a Special Issuance of a Medical Certificate (Authorization). For medications currently allowed, see chart of Acceptable Combinations of Diabetes Medications.

When medication is started the following time periods must elapse prior to certification to assure stabilization, adequate control, and the absence of side effects or complications from the medication.

- Metformin only. A 14 day period must elapse.
- Any other single diabetes medication requires a 60-day period.

The initial Authorization decision is made by the AMCD and may not be made by the Examiner. An Examiner may re-issue a subsequent airman medical certificate under the provisions of the Authorization.

The initial Authorization determination will be made on the basis of a DIABETES or HYPERGLYCEMIA ON ORAL MEDICATIONS STATUS REPORT signed and completed by the airman’s treating provider or a report from the treating physician. The report must contain a statement regarding the medication used, dosage, the absence or presence of side effects and clinically significant hypoglycemic episodes, and an indication of satisfactory control of the diabetes. The results of an A1C hemoglobin determination within the past 30 days must be included. Note must also be made of the presence of cardiovascular, neurological, renal, and/or ophthalmological disease. The presence of one or more of these associated diseases will not be, per se, disqualifying but the disease(s) must be carefully evaluated to determine any added risk to aviation safety.

Re-issuance of a medical certificate under the provisions of an Authorization will also be made on the basis of reports from the treating physician. The contents of the report must contain the same information required for initial issuance and specifically reference the presence or absence of satisfactory control, any change in the dosage or type of medication, and the presence or absence of complications or side effects from the medication. In the event of an adverse change in the applicant's diabetic status (poor control or complications or side effects from the medication), or the appearance of an associated systemic disease, an Examiner must defer the case with all documentation to the AMCD for consideration.

If, upon further review of the deferred case, AMCD decides that re-issuance is appropriate, the Examiner may again be given the authority to re-issue the medical certificate under the provisions of the Authorization based on data provided by the treating physician, including
such information as may be required to assess the status of associated medical condition(s).

At a minimum, followup evaluation by the treating physician of the applicant’s diabetes status is required annually for all classes of medical certificates.

An applicant with diabetes mellitus - Type II should be counseled by his or her Examiner regarding the significance of the disease and its possible complications.

The applicant should be informed of the potential for hypoglycemic reactions and cautioned to remain under close medical surveillance by his or her treating physician.

The applicant should also be advised that should their medication be changed or the dosage modified, the applicant should not perform airman duties until the applicant and treating physician has concluded that the condition is:

- Under control;
- Stable;
- Presents no risk to aviation safety; and
- Treating physician has consulted with the Examiner who issued the certificate, AMCD, or RFS.
Name ___________________________ Birthdate __________________________

Applicant ID# ___________________________ PI# __________________________

Please have the provider who treats your diabetes enter the information in the space below. Return the completed form to your AME or to the FAA at:

PROTOCOL FOR DIABETES MELLITUS TYPE I OR TYPE II INSULIN TREATED - CGM OPTION
(Updated 02/26/2020)

Consideration will be given to those individuals who have been clinically stable on their current treatment regimen for a period of 6-months or more. The FAA has an established policy that permits the special issuance medical certification to some insulin treated applicants. Individuals certificated under this policy will be required to provide medical documentation regarding their history of treatment, accidents, and current medical status. If certificated, they will be required to adhere to monitoring requirements. There are no restrictions regarding flight outside of the United States air space. Airmen with a current 3rd class certificate will have the limitation removed with their next certificate. If they need the limitation removed sooner, they should contact AMCD for an updated certificate without the limitation.

CONTINUOUS GLUCOSE MONITORING (CGM PROTOCOL) - ALL CLASSES:

For consideration for first- or second-class airman certification, the airman must submit Continuous Glucose Monitoring (CGM) data and ALL the certification requirements as outlined below:

For details of what specific information must be included for each requirement/report, see the links below (or the following pages in this document) for:

A. AIRMAN INFORMATION
B. INITIAL CERTIFICATE CONSIDERATION REQUIREMENTS
C. RENEWAL CERTIFICATE REQUIREMENTS
D. INSULIN TREATED DIABETES INFORMATION SUBMISSION REQUIREMENTS
E. BLOOD GLUCOSE WORKSHEET FOR CONTINUOUS GLUCOSE MONITORING (CGM) USE
F. OVERLAY REPORT AND ALERT SAMPLE
G. FREQUENTLY ASKED QUESTIONS (FAQs)

NON-CGM PROTOCOL - THIRD CLASS OPTION:

Third class airmen may elect to use either the CGM protocol or the non-CGM protocol. See the links below (or the following pages in this document) for details of what specific information must be included for each requirement/report for third-class certification.

A. INITIAL CERTIFICATION
B. MONITORING AND ACTIONS REQUIRED DURING FLIGHT OPERATIONS
C. RE-CERTIFICATION
D. DIABETES ON INSULIN RE-CERTIFICATION STATUS REPORT
CGM PROTOCOL
INITIAL CERTIFICATION - AIRMAN INFORMATION (Updated 09/30/2020)

If you are an AIRMAN:
1. See your treating physician and get healthy.
2. Do not fly, in accordance with 14 CFR 61.53, until you have an Authorization from the FAA.
3. Find an Aviation Medical Examiner (AME) to work with you through the FAA process:

   - Establish care with a board-certified endocrinologist.

   - Select, in conjunction with your board-certified endocrinologist, an appropriate Continuous Glucose Monitor (CGM) device that meets all FAA monitoring criteria. (See “Item # 4 - Continuous Glucose Monitor Data” of the ITDM Initial Certificate Consideration Requirements).

   - Collect a minimum of 6 months of CGM data.

   - Verify your CGM report identifies the percentage of time spent with glucose less than 80 mg/dL, between 80 and 180 mg/dL, and above 180 mg/dL.

   - For airmen with flight hours: Note on an Excel spreadsheet any flights, glucose levels during flight, and any actions needed to correct glucose. (If you do not have flight hours, skip to the next item below.)

   - Obtain initial lab battery and submit copies of A1C from at least past 12 months.

   - Obtain an eye evaluation from a board-certified ophthalmologist (M.D. or D.O.) Exam by an optometrist (OD) is NOT acceptable.

   - Obtain a cardiac evaluation from a board-certified cardiologist.

   - Obtain an ECG.

   - Undergo a Stress Test Bruce Protocol (if age 40 or older).

4. When you have accomplished all of the above:

   - See your AME and complete a new 8500-8 exam;

   - Submit the above information and information on any other condition that may require a Special Issuance.

5. When submitting information:

   - The AME must submit your exam as DEFERRED.

   - Coordinate with your AME to make sure that A COMPLETE package is sent to the FAA at the address below WITHIN 14 DAYS. Partial or incomplete packages will NOT be reviewed and will cause a DELAY in certification.

DIABETES MELLITUS TYPE I OR TYPE II INSULIN TREATED - CGM OPTION
(Updated 09/30/2020)

A. INITIAL CERTIFICATE CONSIDERATION REQUIREMENTS:

For consideration for first or second class airman certification, the airman must submit ContinuousGlucose Monitoring (CGM) data. Below is a list of requirements. For details of what specific information must be included for each requirement/report (Items #1-7), see the following pages.

The airman must demonstrate stability and adequate control, verified by CGM data, for a minimum of 6 months.

Airman with a new diagnosis of Insulin-treated Diabetes Mellitus (ITDM) or any concerns regarding their control may require a longer stability period.

Submit the following performed within the past 90 days:

Item # 1 Initial Comprehensive report from your treating board-certified endocrinologist. Note: for initial evaluations, the former DIABETES ON INSULIN Re-Certification STATUS REPORT (Now called “Diabetes on Insulin Re-Certification Status Report NON CGM – Third Class Option”) will NOT be accepted.

The Initial Comprehensive report contains significant additional information.

Item # 2 Lab – Initial/Annual comprehensive panel;

Item # 3 Finger Stick Blood Sugar (FSBS) glucose monitoring data (only for gaps in CGM data for more than 7 days or if required by treating endocrinologist);

Item # 4 CGM data with a device that meets FAA requirements for the preceding 12 months (when available) listed by month in overlay view. It should show trends per day of actual readings, not only averages.

If recently started on CGM, a minimum of 6 months of CGM data is required for consideration. CGM data should demonstrate consistent, effective ongoing use, time-in-range (80–180 mg/dL), and excursions below 70 or above 250 mg/dL.

Item # 5 (Optional) For airmen with flight hours: Notation of flight activity and actions taken on an Excel spreadsheet, CGM download or similar that shows readings listed by week in overlay view. It should be marked with times/dates of flights and any actions taken for glucose correction during flight activities.

Item # 6 Eye evaluation from a board-certified ophthalmologist (M.D. or D.O). Exam by an optometrist (O.D.) is NOT acceptable; AND

Item # 7 Cardiac Risk Evaluation from a board-certified cardiologist

Additional information may be required on a case-by-case basis.

When your AME performs your exam (8500-8), they must DEFER. Work with your Aviation Medical Examiner (AME) to coordinate submission of all of the above documents to the FAA for consideration.
B. RENEWAL CERTIFICATE REQUIREMENTS:

Once an airman has obtained an Authorization for Special Issuance, they should submit the requirements specified in their personal Authorization Letter. In general, the information required is as follows:

EVERY 3 MONTHS:

Item # 1 Follow-up report from board-certified endocrinologist;
Item # 2 Lab - A1c (glycated hemoglobin) within the last 90 days;
Item # 3 FSBS data;
Item # 4 CGM data for the preceding 3 months (minimum) and ongoing use with a CGM device that meets FAA requirements; AND
Item # 5 For airmen with flight hours: Notation of flight activity and actions taken on an Excel spreadsheet, CGM download or similar that shows readings listed by week in overlay view. It should be marked with times/dates of flights and any actions taken for glucose correction during flight activities.

EVERY 6 MONTHS:

The airman in consultation with their AME should aggregate above information and forward to the FAA.

EVERY 12 MONTHS:

All items listed in the EVERY 3 MONTHS section PLUS:

Item # 2 Lab – Initial/Annual comprehensive panel;
Item # 6 Eye evaluation from a board-certified ophthalmologist (M.D. or D.O). Exam by an optometrist is NOT acceptable; AND
Item # 7 Cardiac Risk Evaluation from a board-certified cardiologist

Additional information may be required on a case-by-case basis. Submit all to:

6500 S. MacArthur Boulevard
CAMI Building 13, Room 308
Oklahoma City, OK 73169
ITEM #1: INITIAL COMPREHENSIVE REPORT (Updated 09/30/2020)

INITIAL COMPREHENSIVE REPORT performed within the past 90 days from the treating board-certified endocrinologist must detail and comment on ALL of the following:

A. DIABETES HISTORY:
   1. Characteristics at onset (age, symptoms, etc.):
      a) Review previous treatment and response
      b) Frequency/cause/severity of past hospitalizations
      c) Complications and common comorbidities:
         - Any end organ damage (macrovascular or microvascular);
         - Presence of hemoglobinopathies or anemias;
         - High blood pressure or abnormal lipids and treatment; and
         - Visits to specialist - type and why
      d) Lifestyle and behavior patterns:
         - Eating patterns and weight history;
         - Sleep behavior and physical activity;
         - Familiarity with carbohydrate counting, if applicable;
         - Tobacco, alcohol, and substance use; and
         - Any motor vehicle accidents or incidents pertinent to their history of diabetes

   2. Medication and Reporting:
      a) Medication compliance;
      b) Medication intolerance or side effects;
      c) Complementary or alternative medicine use;
      d) Glucose monitoring (meter/CGM): results and data use; and
      e) Review insulin pump settings

   3. Screening for Psychosocial conditions:
      a) Screen for depression, anxiety, disordered eating (ex: Patient Health Questionnaire 9 or 2 [PHQ-9 or PHQ-2] or similar);
      b) Cognitive impairment assessment (and formal testing, if clinically indicated); and
      c) Diabetes self-management education and support:
         - History of dietician/diabetes educator visits; and
         - Screen for barriers to diabetes self-management

   4. Glucose control:
      a) Hypoglycemia:
         - Any symptomatic episodes in the past 12 months requiring treatment or assistance by another individual, with comment on timing, awareness, frequency, causes, and treatment.
         - Sustained episodes, e.g. CGM/FSBG values below 70 mg/dL for over 30 minutes or below 54 mg/dL for over 15 minutes, with comment on symptoms and treatment.
      b) Hyperglycemia:
         - Any symptomatic episodes in the past 12 months with comment on timing, awareness, frequency, causes, and treatment.
         - Sustained episodes, e.g. CGM/FSBG values above 250 mg/dL for over 60 minutes or above 300 mg/dL for over 30 minutes, with comment on symptoms and treatment.

B. PHYSICAL EXAM (Must narrate what is examined and any findings):
   1. Height, Weight, Body Mass Index (BMI);
   2. Pulse and blood pressure including orthostatic blood pressure, when indicated;
   3. Thyroid palpation and skin exam (acanthosis nigricans, insulin injection or insertion sites, lipodystrophy); and
   4. Comprehensive foot exam:
      a) Visual inspection; screen for PAD (check pedal pulses; refer for ABI if diminished); and
b) Determination of temperature, vibration or pinprick sensation, and 10-g monofilament exam

C. ASSESSMENT AND PLAN:
   1. Current status of diabetes including an assessment of the airman’s compliance, glucose control, and stability as well as their ability to monitor and respond accordingly to HYPO and HYPER glycemic events and administer insulin doses;
   2. Prognosis for progression over the next 12 months; and
   3. Recommendations for treatment changes

D. DATE OF NEXT CLINICAL FOLLOW-UP (Required every 3 months for FAA.)

*1 Modified from American Diabetes Association (ADA) Standards of Medical Care 2020

ITEM #2: LAB

LAB - Initial/Annual comprehensive panel performed within the past 90 days:

A. A1C (within last 90 days AND all prior values from the preceding 12 months)
B. CBC (complete blood count)
C. Lipids (total, LDL (low density lipoprotein), HDL (high density lipoprotein) cholesterol, and triglycerides)
C. LFT’s (Liver function tests)
D. Micro albumin (or spot urinary albumin-to-creatinine ratio)
E. Renal function (Serum creatinine, BUN (blood urea nitrogen), eGFR (estimated glomerular filtration)
F. TSH (Thyroid-stimulating hormone)
G. Vitamin B12 (when clinically indicated)
H. Potassium (serum level, when clinically indicated or when taking ACE-I (angiotensin Converting enzyme inhibitors), ARBs (angiotensin II receptor blockers), or diuretics)

ITEM # 3: FSBS GLUCOSE MONITORING DIARY (Updated 09/30/2020)

FSBS GLUCOSE MONITORING DIARY (optional) – provide printed or scanned report for the time prior to starting CGM or during gaps in CGM usage of over 7 days. Not required if using CGM for the preceding 12 months.

A. INITIAL CERTIFICATION:
   1. Submit readings from the preceding 12 months (when appropriate).
   2. Analyze to identify the percentage time in the following ranges:
      a.) Less than 80 mg/dL
      b.) Between 80 and 180 mg/dL
      c.) Above 180 mg/dL

B. RENEWAL CERTIFICATION:
   1. Submit readings from previous 6 months (when appropriate).

ITEM # 4: CONTINUOUS GLUCOSE MONITOR (CGM) DATA (Updated 09/30/2020)

A. CONTINUOUS GLUCOSE MONITOR (CGM) DATA on a device that meets the FAA’s minimum CGM device feature requirements.
   1. Readings from (at a minimum) the preceding 6 months for initial certification and thereafter
      3 months.
   2. Analyze to identify percentage time in the following ranges:
a.) Less than 80 mg/dL
b.) Between 80 and 180 mg/dL
c.) Above 180 mg/dL

B. CGM DEVICE FEATURES: The FAA does not endorse any particular manufacturer, however, the CGM device must have the following features:

1. Must be FDA-approved and appropriate for airman’s age;
2. Have automatic alarms for notification for high or low glucose readings with at least two of the following: audio, visual, or tactile;
3. Have “predictive arrow trends” that provide warnings of potentially dangerous glucose levels (high or low) before they occur;
4. Able to customize low and high glucose levels;
5. Must be a real-time CGM (automatically transmits glucose data to the user) without need to manually scan the sensor (e.g. intermittently scanned CGM);
6. Have a high-accuracy rating with an overall Mean Absolute Relative Difference (MARD) of 10% or less. (e.g. If the MARD is 10% and the glucose reading is 70mg/dL, the actual blood glucose could be as low as 63 mg/dL or as high as 77mg/dL);
7. Printout reports must include monthly summary showing: Time-In-Range (TIR) Values for 80-180 mg/dL; Average Glucose Levels; Standard Deviation (SD); and (when provided by the reporting software) Coefficient of Variability [CoV] values. Reports must include weekly glucose value data graphics. All data must be legible. Failure to provide these values could result in a delay in processing your application;
8. Calibrated to at least at the minimum frequency required by the manufacturer or endocrinologist;
9. Ability to self-insert sensor at home; and
10. Must be airman’s own, unblinded CGM that cannot be shared with anyone else. Airman cannot use anyone else’s CGM (e.g. blinded CGM device, which is professional use only).

C. INSULIN PUMP REQUIREMENTS:

1. If using an insulin pump, it must have the ability to suspend insulin for a predictive low glucose or predicted pressure changes;
2. Insulin used in the pumps must be FDA approved for that use; and
3. Insulin pumps must also be FDA approved as compatible with the airman’s CGM device. (Not all CGM devices are compatible with all insulin pumps.)

ITEM #5: NOTATION OF FLIGHT ACTIVITY and ACTIONS TAKEN

A. NOTATION ON CGM DATA (for airmen with flight hours):
   1. Identify all flights for the past 6 months; and
   2. Notate any actions taken to address low or high glucose levels.

ITEM #6: EYE EVALUATION

EYE EVALUATION performed within the past 90 days from a board-certified ophthalmologist (M.D. or D.O.). Exam by optometrist (O.D.) is NOT acceptable. Evaluation must include:

B. VISUAL ACUITY (with and without correction) each eye separately and together for:
   1. Near;
   2. Intermediate; and
   3. Distance vision
C. EVALUATION FOR OTHER RETINAL OR CLINICALLY SIGNIFICANT EYE DISEASE:
   1. Cataracts, any evidence;
   2. Color vision deficiency: test used, method used;
   3. Contrast sensitivity: test used, method used;
   4. Depth perception abnormality;
   5. Intra Ocular Pressure (IOP) reading (and treatment if required): test used, method used; and
   6. Visual field defects: type of test, method used (confrontation fields are acceptable).

D. DILATED FUNDUS EXAM with documentation of absence of retinopathy or degree of retinopathy, if present, and any treatment indicated or recommended.

E. DIAGNOSIS, PROGNOSIS, AND RECOMMENDATIONS FOR TREATMENT OR FOLLOW UP.

<table>
<thead>
<tr>
<th>ITEM # 7: CARDIAC RISK EVALUATION</th>
<th>(Updated 09/30/2020)</th>
</tr>
</thead>
</table>

CARDIAC RISK EVALUATION performed within the past 90 days from a board-certified cardiologist:

A. INITIAL EVALUATION AND ANNUALLY:
   1. Evaluation from a board-certified cardiologist assessing cardiac risk factors; and
   2. Baseline ECG (regardless of age).

B. EVERY 5 YEARS AND AS CLINICALLY INDICATED:
   1. Maximal exercise treadmill stress testing (Bruce): beginning at age 40 and every 5 years thereafter and at any age when clinically indicated. See Graded Exercise Stress Test Protocol.

C. IF THERE ARE ANY ABNORMALITIES on the ECG, stress test, or identification of any cardiac conditions, the cardiologist must provide a report that details:
   1. Any confirmed or suspected diagnosis
   2. Clinical status including any symptoms
   3. Control of cardiac risk factors (HTN, smoking, hyperlipidemia, exercise, weight)
   4. Treatment or monitoring required or recommended and any side effects
   5. Were other investigations conducted or recommended (attach reports)
   6. Risk of any acutely disabling cardiovascular event (annualized percentage risk)

DIABETES MELLITUS TYPE I OR TYPE II INSULIN TREATED - CGM OPTION

INFORMATION SUBMISSION REQUIREMENTS

AIRMAN’S NAME__________________________
PI# or MID#______________________________
**DIABETES MELLITUS TYPE I OR TYPE II INSULIN TREATED - CGM OPTION**

**BLOOD GLUCOSE WORKSHEET FOR CGM USE** (Updated 09/30/2020)

**AIRMAN’S NAME_________________________**  **PI# or MID#____________________________________**

Please provide the requested information in the space provided. Complete additional worksheet pages as needed. Attach the printout data from your devices along with this worksheet.

**Requirements for printouts:**
1. Device and all data must be from the airman him/herself.
2. Customize low glucose to 80 mg/dL and high glucose to 180 mg/dL for device time-in-range reports.
3. Limit date ranges for the whole month, from the first day to the last day.
4. For initial consideration:
   - Requires a total of **12 months data**. (Must be from the preceding 12 months);
   - A combination of CGM and finger stick values are permitted, however a **minimum of 6 months of CGM data is still required**.
   - If started on insulin **less than 12 months ago**, provide all the data available, however a **minimum of 6 months of CGM data** is still required.
5. For renewal consideration: Requires CGM data for **6 preceding months**.

**CONTINUOUS GLUCOSE MONITORING (CGM) INFORMATION – (REQUIRED):**

- In the past 6 months, has the CGM functioned normally with no significant abnormality? **Yes**  **No**
- To your knowledge, any recalls to the device(s) or parts (CGM and/or FSBLG)? **Yes**  **No**
- Is the insulin pump FDA approved in combination with the CGM? **Yes**  **No**  **N/A**
- Is the insulin used by the pump authorized by the FDA for use in this insulin pump? **Yes**  **No**  **N/A**
DIABETES MELLITUS TYPE I OR TYPE II INSULIN TREATED - CGM OPTION

FINGERSTICK BLOOD GLUCOSE (FSBLG) INFORMATION – (OPTIONAL)
(Updated 09/30/2020)

AIRMAN’S NAME__________________________________ PI# or MID#__________________________________

1. For initial consideration:
   - Requires a total of **12 months data.** (Must be from the preceding 12 months);
   - A combination of CGM and finger stick values are allowed, however a **minimum of 6 months of CGM data is still required.**
   - Provide sufficient data needed (e.g. If providing 8 months of CGM data, only 4 months preceding of finger sticks are needed.
   - If started on insulin **less than 12 months ago**, provide all the data available, however a **minimum of 6 months of CGM data** is still required.

2. Required for periods of > 7 days without available CGM data.

3. FSBLG not required for renewal.

POLICY FAQs

1. Why has it taken the FAA so long to develop an insulin-use policy for Class I/II airmen especially when other countries have allowed it for years?

Various flight safety considerations for this serious health condition could not be safely mitigated for commercial operations until recently. Advances in technology and diabetes management now provide the FAA better parameters to consider Class I and II medical certification for some insulin-dependent airmen.

Currently, only Canada and the United Kingdom allow the use of insulin in their pilots with an equivalent Class I or II medical. Unlike the FAA, those aviation authorities can impose specific operational limitations on the medical certificate (e.g. “valid only for two pilot operations” or requiring the other pilot to be both aware of the diabetic condition and able to provide emergency treatment.)

2. Why is the FAA so restrictive and why is there so much testing?

Testing ensures both good control and demonstrates the absence of end-organ damage. If the latter is present, the potential risk of cognitive impairment is increased, which could be magnified in a hypoxic or high-stress environment, affecting safety.

3. My doctor says my diabetes is well controlled and that I have no limitations. Why doesn't FAA accept that?

While your physician understands how to keep your blood sugar stable while on the ground, he/she may not understand the additional challenges of the demanding aviation environment and may not consider them when determining clinical limitations. FAA guidance addresses these aviation-specific concerns.

4. Are there additional risks when flying with diabetes?

Yes. As already noted, both hypoglycemia and hypoxia can lead to cognitive impairment. Unfortunately, many other conditions can as well. These include some medications, substance abuse, depression, sleep disorders, + HIV status, hypothyroidism, Parkinson’s disease, head injuries, hypothyroidism, infections, etc. Many physicians are not aware of the demands of aviation. Be sure to discuss with your physician the fact that you operate in an environment that can be both hypoxic and place high demands on your ability to think clearly and rapidly. It is in your best interest to inform them to ensure that you receive the appropriate evaluations and care.

BLOOD SUGAR FAQs

5. Why is the blood sugar range so narrow?

The recommended blood glucose range is not intended to be “narrow,” but to provide realistic guidance reflecting generally accepted treatment guidelines, accuracy of testing, the potential
effect of workload demands, and the needs of safety. The FAA considered these values carefully and consulted with nationally recognized experts in diabetes care. Low blood sugar symptoms can occur when blood sugar falls below 70 mg/dL and high blood sugar can cause cognitive impairment and other symptoms at levels above 250 mg/dL. The American Diabetes Association 2020 guidelines recommends target fasting blood sugar levels of 80 – 130 mg/dL and after-meal levels of less than 180 mg/dL. For flight safety, our experts concur with these recommendations for all airmen with diabetes. Airmen using Continuous Glucose Monitors (CGM) should use 80-180 mg/dL as the values for calculating time-in-range. The recommendations also take into account that testing methods are only an estimate of actual blood sugar. Current generation CGMs are accurate within 10% of the actual level, while finger sticks, considered a back-up if the CGM fails, are less accurate at within 20%. Additionally, the “acceptable” range for blood sugars provides a safety cushion should workload demands render blood sugar testing, insulin injection, or intake of glucose difficult or even impossible. In addition, the more time spent in a low blood sugar or hypoglycemic condition, the more likely that the individual is unaware of it, and it can take up to several hours for full functional recovery from hypoglycemia. The best way to ensure good blood sugar control in flight is for airmen with diabetes to maintain their blood sugars in the acceptable range whether in the cockpit or on the ground.

6. I fly a fixed schedule and am home every night. I am well controlled with finger sticks and injections. Why do I need to follow these new rules?

The FAA is not able to issue a medical certificate restricted to specific types of flying such as short segments and regular schedule, but must assume that the pilot will engage in any flight activity for which he or she is certified.

7. I am currently on a Special Issuance (SI) for another condition. How will ITDM affect that?

Your existing SI will be invalid due to the additional diagnosis. You will need a new authorization letter.

8. What do I do if my blood sugar is out of limits while I am on a trip?

- You must disqualify yourself from flight activities as required by both the SI and 14 CFR61.53;
- Contact your treating endocrinologist to determine if there is a need to change your insulin treatment; and
- Contact your AME with details surrounding the event.
  o Your AME should contact the FAA to discuss your case.

CONTINUOUS GLUCOSE MONITOR (CGM) AND INSULIN PUMP FAQs

9. Which CGMs does the FAA allow?

The FAA lists the required functions* of CGMs in the Guide for Aviation Medical Examiners (AME Guide). The FAA updates this information periodically, as medical technology improves. We do not recommend specific brands. (*See “Item # 4 - Continuous Glucose Monitor Data” of the ITDM Initial Certificate Consideration Requirements).
10. Why is a CGM required instead of finger stick blood sugar?

The CGM is more accurate, measuring within 10% of the actual blood sugar. It is also independent of the pilot's action. Turbulence can make it impossible for pilots to perform finger sticks, even with an autopilot and/or second pilot. The CGMs can enable notifications and alerts for specific blood glucose values and show predictive trends, both of which are required. The CGM can also communicate with an insulin pump.

11. How do I know if my CGM and/or insulin pump is legal for flight as an “authorized personal electronic device?”

Most current medical devices should be approved; however, the pilot needs to verify this with the aircraft operator for the aircraft that they fly. It is not feasible for the FAA to maintain a list of approved devices due to the rapidly changing technology and to the large number of airframe and avionics combinations seen in the Part 91, 91k, 121, and 135 fleets. See AC 20-164A for guidance.

12. I know I have to submit CGM data to the FAA. How do I get this information?

Most devices have the ability to print out customized data reports to your computer, via the USB port. Check your device’s user guide for instructions as well as computer and software requirements as these may differ between manufacturers. (Note: Some devices will not allow the export of data onto your phone or tablet.)

13. What do I do if my device fails?

You should have a backup correction pen and basal insulin available if using an insulin pump. You should also carry an infusion kit. For the CGM device, you should have a backup sensor and glucose meter available. In most cases, if the CGM stops working, you will have no readings and therefore no warnings/alerts during the 2-hour warm-up period after inserting a new sensor. In this case, go to a back-up plan for the remainder of the flight and measure your finger stick blood sugar every 30 minutes. If you are unable to correct your blood sugar, treat this as any in flight emergency and land as soon as practicable.

14. Do I have to get an insulin pump?

No. However, if you choose to get an insulin pump, both the pump and CGM need to be FDA approved, both separately and in combination. Self-built systems are NOT acceptable for flying.

15. Are there any concerns with the insulin pumps?

Yes, they can sometimes fail, delivering too much or too little insulin. This risk is present each time there is a change in pressure altitude, however, airmen can mitigate the risk by limiting the amount of insulin available for injection and by clearing bubbles at the top of ascent. (Note: This does not prevent the risk of an insulin bolus associated with a rapid decompression.) Some pumps have a reservoir that is not directly inline between the pump and injection site. These pumps are relatively resistant to the effects of pressure changes and provide obvious advantages to pilots who operate aircraft in the flight levels.
16. Are there any features that make some insulin pumps better for flying?

The ability to suspend insulin delivery for a low reading is a good safety feature. In addition, as previously noted, a pump in which the insulin reservoir is not in direct line for delivery is preferred.

17. I do not use an insulin pump. Do I need to make any changes from my normal routine on the days that I fly?

The goal is to avoid hypoglycemia while flying. Talk with your board-certified endocrinologist about whether or not adjustments should be made on days when you are flying.

18. What do I do if my machine breaks while traveling or I run out of supplies?

Replace the machine as soon as possible. If you cannot do this, finish the scheduled trip with your back-up system (finger sticks and injections) and remain compliant with the SI. Once the trip concludes, do not start a new trip until the system authorized in the SI is back in place and functional. While you may complete at trip once on the road, you are NOT authorized to add additional legs to the trip.

If neither the primary nor the backup system is functional, you must terminate flight activity. **This is an absolute flight safety requirement.**
PROTOCOL FOR INSULIN-TREATED DIABETES MELLITUS - TYPE I & TYPE II
NON CGM - THIRD-CLASS OPTION
(Updated 11/07/2019)

Consideration will be given only to those individuals who have been clinically stable on their current treatment regimen for a period of 6 months or more. The FAA has an established policy that permits the special issuance medical certification to some insulin treated applicants. Individuals certificated under this policy will be required to provide medical documentation regarding their history of treatment, accidents, and current medical status. If certificated, they will be required to adhere to monitoring requirements. There are no restrictions regarding flight outside of the United States air space. Airmen with a current 3rd class certificate will have the limitation removed with their next certificate. If they need the limitation removed sooner, they should contact AMCD for an updated certificate without the limitation.

The following is a summary of the evaluation protocol and an outline of the conditions that the FAA will apply for third class applicants. First and second class applicants will be evaluated on a case-by-case basis by the Federal Air Surgeon’s Office.

A. Initial Certification

1. The applicant must have had no recurrent (two or more) episodes of hypoglycemia in the past 5 years and none in the preceding 1 year which resulted in loss of consciousness, seizure, impaired cognitive function or requiring intervention by another party, or occurring without warning (hypoglycemia unawareness).

2. The applicant will be required to provide copies of all medical records as well as accident and incident records pertinent to their history of diabetes.

3. A report of a complete medical examination preferably by a physician who specializes in the treatment of diabetes will be required. The report must include, as a minimum:
   a. Two measurements of glycosylated hemoglobin (total $A_1$ or $A_{1c}$ concentration and the laboratory reference range), separated by at least 90 days. The most recent measurement must be no more than 90 days old.
   b. Specific reference to the applicant’s insulin dosages and diet.
   c. Specific reference to the presence or absence of cerebrovascular, cardiovascular, or peripheral vascular disease or neuropathy.
   d. Confirmation by an eye specialist of the absence of clinically significant eye disease.
   e. Verification that the applicant has been educated in diabetes and its control and understands the actions that should be taken if complications, especially hypoglycemia, should arise. The examining physician must also verify that the applicant has the ability and willingness to properly monitor and manage his or her diabetes.
f. If the applicant is age 40 or older, a report, with ECG tracings, of a maximal graded exercise stress test.

g. The applicant shall submit a statement from his/her treating physician, Examiner, or other knowledgeable person attesting to the applicant's dexterity and ability to determine blood glucose levels using a recording glucometer.

NOTE: Student pilots may wish to ensure they are eligible for medical certification prior to beginning or resuming flight instruction or training. In order to serve as a pilot in command, you must have a valid medical certificate for the type of operation performed.

B. Subsequent Medical Certification

1. For documentation of diabetes management, the applicant will be required to carry and use a whole blood glucose measuring device with memory and must report to the FAA immediately any hypoglycemic incidents, any involvement in accidents that result in serious injury (whether or not related to hypoglycemia); and any evidence of loss of control of diabetes, change in treatment regimen, or significant diabetic complications. With any of these occurrences, the individual must cease flying until cleared by the FAA.

2. At 3-month intervals, the airman must be evaluated by the treating physician. This evaluation must include a general physical examination, review of the interval medical history, and the results of a test for glycosylated hemoglobin concentration. The physician must review the record of the airman's daily blood glucose measurements and comment on the results. The results of these quarterly evaluations must be accumulated and submitted annually unless there has been a change. (See No. 1 above - If there has been a change the individual must report the change(s) to the FAA and wait for an eligibility letter before resuming flight duties).

3. On an annual basis, the reports from the examining physician must include confirmation by an eye specialist of the absence of significant eye disease.

4. At the first examination after age 40 and at 5-year intervals, the report, with ECG tracings, of a maximal graded exercise stress test must be included in consideration of continued medical certification.

C. Monitoring and Actions Required During Flight Operations

To ensure safe flight, the insulin using diabetic airman must carry during flight a recording glucometer; adequate supplies to obtain blood samples; and an amount of rapidly absorbable glucose, in 10 gm portions, appropriate to the planned duration of the flight. The following actions shall be taken in connection with flight operations:

1. One-half hour prior to flight, the airman must measure the blood glucose concentration. If it is less than 100 mg/dl the individual must ingest an appropriate (not less than 10 gm) glucose snack and measure the glucose concentration one-half hour later. If the concentration is within 100 -- 300 mg/dl, flight operations may be undertaken. If less than 100, the process must be repeated; if over 300, the flight must be canceled.

2. One hour into the flight, at each successive hour of flight, and within one half hour prior to landing, the airman must measure their blood glucose concentration. If the
concentration is less than 100 mg/dl, a 20 gm glucose snack shall be ingested. If the concentration is 100 -- 300 mg/dl, no action is required. If the concentration is greater than 300 mg/dl, the airman must land at the nearest suitable airport and may not resume flight until the glucose concentration can be maintained in the 100 -- 300 mg/dl range. In respect to determining blood glucose concentrations during flight, the airman must use judgment in deciding whether measuring concentrations or operational demands of the environment (e.g., adverse weather, etc.) should take priority. In cases where it is decided that operational demands take priority, the airman must ingest a 10 gm glucose snack and measure his or her blood glucose level 1 hour later. If measurement is not practical at that time, the airman must ingest a 20 gm glucose snack and land at the nearest suitable airport so that a determination of the blood glucose concentration may be made.

(Note: Insulin pumps are acceptable)
Guide for Aviation Medical Examiners

DIABETES ON INSULIN Re-Certification STATUS REPORT
NON CGM – THIRD CLASS OPTION
(Updated 11/07/2019)

Name __________________________________  Birthdate ________________________
Applicant ID# __________________________  PI# ____________________________
Class Applied ___________________  Circle one: INITIAL / Re-Certification

Please have the provider who treats your diabetes enter the information in the space below. Return the completed form to your AME or to the FAA at:

Using regular mail (US postal service)
Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-313
PO Box 25082
Oklahoma City, OK 73125-9914

Using special mail (FedEx, UPS, etc.)
Federal Aviation Administration
Medical Appeals Section, AAM-313
Aerospace Medical Certification Division
6700 S MacArthur Blvd., Room B-13
Oklahoma City, OK 73169

☐ 1. Provider printed name________________________________ phone ________________

☐ 2. Date of last clinical encounter for Diabetes ________________________________

☐ 3. Date of most recent DIABETES MEDICATION CHANGE ____________________
And describe what was changed:

☐ 4. Quarterly hemoglobin A1c
(A1c’s must be done ≥ 30 days after meds change and ≤ 90 days of recertification.)

<table>
<thead>
<tr>
<th>Quarterly A1Cs</th>
<th>Value</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>#2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>#3</td>
<td></td>
<td></td>
</tr>
<tr>
<td>#4</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

☐ 5. Review the blood glucose self-monitoring log book, recording device download, or continuous glucose monitoring (CGM) data, if used. Comment on stability, variance (highs and lows), and any other concerns you have. If control is good and there are no concerns, state that also.

DIABETES ON INSULIN Re-Certification STATUS REPORT
NON-CGM – THIRD CLASS OPTION
(Updated 11/07/2019)

Name __________________________________  Birthdate __________________________
Applicant ID# ___________________________ PI# ___________________________

In lieu of #6 and #7, the physician’s office may attach a current medication list. The list should note for what condition the medications are used.

☐ 6. List Insulin treatment schedule:

_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________

☐ 7. List ALL other current medications* (for any condition) and why they are used/diagnosis treated. Dosage is not required.

_________________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________

IF YES on any of the questions below, please attach narrative, tests, etc.

☐ 8. Any side effects from medications.................................................................Yes  No

☐ 9. ANY episode of hypoglycemia in the past year REQUIRING ASSISTANCE from another person..............................................Yes  No

☐ 10. Any evidence of progressive diabetes induced end organ disease:

Cardiac..............................................................................................................Yes  No
Neurological.................................................................................................Yes  No
Ophthalmological.........................................................................................Yes  No
Neuropathy....................................................................................................Yes  No
Renal disease ...............................................................................................Yes  No

☐ 11. Any clinical concerns or other comments? ......................................................Yes  No

Treating Provider Signature ____________________ Date ____________________

For more information, see:

- Acceptable Combinations of Diabetes Medications
- Pharmaceuticals (Therapeutic Medications) - Diabetes Mellitus - Insulin Treated
Protocol for Maximal Graded Exercise Stress Test Requirements
(Updated 01/27/2021)

- If a plain GXT is required and is uninterpretable for any reason, a radionuclide GXT will then be required before further consideration.
  - In patients with bundle branch blocks (BBB), LVH, or diffuse ST/T wave changes at rest, a stress echo or nuclear stress test will be required.
- GXT requirements:
  - 100% of predicted maximal heart rate (PMHR), unless medically contraindicated or prevented either by symptoms or medications;
  - Complete Stage 3 (equivalent to at least 9 minutes);
  - Studies of less than 85% of maximum predicted heart rate and less than 9 minutes of exercise (6 minutes for age 70 or greater) may serve a basis for denial; and
  - Beta blockers and calcium channel blockers (specifically diltiazem and verapamil) or digitalis preparations should be discontinued for 24-48 hours prior to testing (if not contraindicated and only with the consent of the treating physician) in order to obtain maximum heart rate.
    - If the GXT is done on beta blockers, calcium blockers, or digitalis medications, the applicant must provide explanation from the treating cardiologist as to why the medication(s) cannot be held.
- The worksheet with blood pressure/pulse recordings at various stages, interpretive report, and actual ECG tracings* must be submitted.
  - Tracings must include a rhythm strip;
  - A full 12-lead ECG recorded at rest (supine and standing); and
  - One or more times during each stage of exercise, at the end of each stage, at peak exercise, and every minute during recovery for at least 5 minutes or until the tracings return to baseline level.
  - *Computer generated, sample-cycle ECG tracings are unacceptable in lieu of the standard tracings. If submitted alone, this may result in deferment until this requirement is met.

Remember, a phone call to either AMCD or RFS may avoid unnecessary deferral.

Reasons for not renewing an AASI [based on GXT]: The applicant reports any other disqualifying medical condition or undergoes therapy not previously reported OR:

<table>
<thead>
<tr>
<th>TEST</th>
<th>IF ANY OF THE FOLLOWING ARE NOTED, THE AME MAY NOT ISSUE,</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exercise stress test (EST)</td>
<td>PMHR less than 85%; (predicted maximal heart rate)</td>

</tbody>
</table>

NOTE: AASI CHD or single valve replacement for all classes: If ANY of the items from the regular Bruce EST are not acceptable, the AME MUST DEFER. An AME is NOT authorized to recertify a CHD or single valve replacement for any class AASI if a nuclear stress test or stress echo is required.
Protocol for Graded Exercise Stress Test
Bundle Branch Block Requirements

If the Bundle Branch Block (BBB) has been previously documented and evaluated, no further evaluation is required. A medical certificate should not be issued to any class if the applicant has a new onset of a BBB. A right BBB in an otherwise healthy person 30 years of age or younger should not require a CVE. All other individuals who do have a right BBB require a CVE but a radionuclide study should not be required unless the standard exercise stress test cannot be interpreted. A stress echocardiogram may be sufficient in most cases. A left BBB in a person of any age should have a CVE and should include a radionuclide perfusion study. Those individuals who have a negative work-up may be issued the appropriate class of medical certificate. No followup is required. If any future changes occur, a new current CVE will be required.

If areas of ischemia are noted, a coronary angiogram may be indicated for definitive diagnosis. According to the current literature, approximately 40% of individuals with LBBB will demonstrate a false positive thallium reperfusion defect in the septal area. If significant CAD is diagnosed, refer to Special Issuance guidelines. Some cases may be forwarded to a FAA-selected cardiology consultant specialist for review and recommendation for medical certification.
PROTOCOL FOR HISTORY OF HUMAN IMMUNODEFICIENCY VIRUS (HIV) RELATED CONDITIONS

Persons on antiretroviral medication will be considered only if the medication is approved by the U.S. Food and Drug Administration and is used in accordance with an acceptable drug therapy protocol. Acceptable protocols are cited in Guidelines for the Use of Antiretroviral Agents in HIV-Infected Adults and Adolescents developed by the Department of Health and Human Services Panel on Clinical Practices for Treatment of HIV Infection.

For persons taking HIV medication for long-term prevention or Pre-Exposure Prophylaxis (PrEP), see Item 48. General Systemic - Human Immunodeficiency Virus (HIV).

Application for special issuance must include reports of examination by a physician knowledgeable in the treatment of HIV-infected persons and a medical history emphasizing symptoms and treatment referable to the immune and neurologic system. In addition, these reports must include a "viral load" determination by polymerase chain reaction (PCR), CD4+ lymphocyte count, a complete blood count, and the results of liver function tests. An assessment of cognitive function (preferably by Cogscreen or other test battery acceptable to the Federal Air Surgeon) must be submitted. Additional cognitive function tests may be required as indicated by results of the cognitive tests. At the time of initial application, viral load must not exceed 1,000 copies per milliliter of plasma, and cognitive testing must show no significant deficit(s) that would preclude the safe performance of airman duties.

Application for special issuance must include reports of examination by a physician knowledgeable in the treatment of HIV-infected persons and a medical history emphasizing symptoms and treatment referable to the immune and neurologic system. For initial consideration, see the following Human Immunodeficiency Virus (HIV) Specification Sheet for the required clinical reports and documentation (including cognitive testing).

If granted Authorization for Special Issuance, follow-up requirements will be specified in the Authorization letter. However, the usual requirements will be:

- First 2 years of surveillance: see the Under 2 Year Surveillance HIV Specification Sheet
- After the first 2 years of surveillance: see the After 2 Years Surveillance HIV Specification Sheet
Persons who are infected with the HIV and who do not have a diagnosis of Acquired Immunodeficiency Syndrome (AIDS) may be considered for any class medical certificate, if otherwise qualified. Persons on an antiretroviral medication will be considered only if the medication is approved by the U.S. Food and Drug Administration and is used in accordance with an acceptable drug therapy protocol. Current studies should be submitted no later than 30-days from test date. In order to be considered for a medical certificate the following data must be provided:

1. A current report from a physician knowledgeable in the treatment of HIV-infected persons and a medical history emphasizing symptoms and treatment referable to the immune system;*
2. Current viral load determination by polymerase chain reaction (PCR) – for persons who have had an AIDS defining illness 2 determinations, 1 month apart);
3. Current CD4 (for persons who have had an AIDS defining illness, 2 determinations, 1 month apart) and lymphocyte count;
4. Current complete blood count (CBC) with differential;
5. Results of current liver function tests;
6. BUN and creatinine;
7. a. A current assessment of cognitive function (preferably by CogScreen-AE [Aeromedical Edition] or other test battery) must be provided with the Initial application. Follow-up neurological-psychological evaluations are required annually for first and second-class pilots and every other year for third-class.

b. If CogScreen-AE is not available, follow the testing specifications as described in the FAA Neuropsychology Testing Specifications site. To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to this secure site. Authorized professionals should use the secure portal. For access, email a request to 9-amc-aam-NPTesting@faa.gov.

All of the above should be submitted together in one mailing to:

Using US Postal Service:  
Federal Aviation Administration  
Aeromedical Certification Branch-AAM-300  
Mike Monroney Aeronautical Center  
PO Box 25082  
Oklahoma City, OK 73125

or

Using special mail (UPS, FedEx, etc.):  
Federal Aviation Administration  
Aeromedical Certification Branch-AAM-300  
Mike Monroney Aeronautical Center  
6700 S. MacArthur Blvd, Room B-59  
Oklahoma City, OK 73169

*For applicants with a history of cytomegalovirus (CMV) retinitis, a current ophthalmological evaluation with visual fields must be provided with the initial application and at 6 month-intervals thereafter.
UNDER 2 YEAR SURVEILLANCE HIV SPECIFICATION

Please provide our office with a current status report from a treating physician knowledgeable and experienced in the treatment of HIV-infected persons. This report should include the information outlined below, along with any separate additional testing.

The results should be sent to the Aerospace Medical Certification Division (AMCD) After review, if the airman is determined qualified, AMCD/Regional Flight Surgeon (RFS) will send a letter to the airman authorizing the Aviation Medical Examiner (AME) to issue a new time-limited medical certificate, as applicable.

Both the initial and subsequent medical determinations may only be made by the RFS or AMCD.

The current status report should include:

- Every 3 months: determinations of viral load, CD4 cell count, a clinical assessment of cognitive function, and any other laboratory and clinical tests deemed necessary by the treating physician. These results may be aggregated and included in the written current status report every 6 months unless there is an adverse change;

- Every 6 months a written current status report from the treating physician knowledgeable and experienced in the treatment of HIV-infected persons. To include the following: a medical history emphasizing symptoms and treatment referable to the immune system, any signs or symptoms of atherosclerotic cardiovascular disease, and diabetes mellitus or insulin resistance and a clinical assessment of cognitive function;

- Formal cognitive/neuropsychiatric testing, preferably with CogScreen-AE [Note: initial and periodic testing should be done with the same test instruments each time in order to allow valid comparisons over time]. Formal cognitive function testing if due; and

- Any other tests advised by the treating physician.
AFTER 2 YEARS SURVEILLANCE HIV SPECIFICATION

Please provide our office with a current status report from a treating physician knowledgeable and experienced in the treatment of HIV-infected persons. This report should include the information outlined below, along with any separate additional testing.

The results should be sent to the Aerospace Medical Certification Division (AMCD) After review, if the airman is determined qualified, AMCD/Regional Flight Surgeon (RFS) will send a letter to the airman authorizing the Aviation Medical Examiner (AME) to issue a new time-limited medical certificate, as applicable. Both the initial and subsequent medical determinations may only be made by the RFS or AMCD.

The current status report should include:

- Every 6 months: determinations of viral load, CD4 cell count, a clinical assessment of cognitive function and any other laboratory and clinical tests deemed necessary by the treating physician. These results may be aggregated and included in a written current status report every 12 months unless there is an adverse change;

- Every 12 months a written current status report from the treating physician knowledgeable and experienced in the treatment of HIV-infected persons. To include the following: a medical history emphasizing symptoms and treatment referable to the immune system, any signs or symptoms of atherosclerotic cardiovascular disease, and diabetes mellitus or insulin resistance and a clinical assessment of cognitive function;

- Formal cognitive/neuropsychiatric testing, preferably with CogScreen-AE [Note: initial and periodic testing should be done with the same test instruments each time in order to allow valid comparisons over time]. Formal cognitive function testing if due; and

- Any other tests advised by the treating physician.
A 2-month recovery period must elapse after the pacemaker implantation to allow for recovery and stabilization. Submit the following:

1. Copies of hospital/medical records pertaining to the requirement for the pacemaker, make of the generator and leads, model and serial number, admission/discharge summaries, operative report, and all ECG tracings.

2. Evaluation of pacemaker function to include description and documentation of underlying rate and rhythm with the pacer turned "off" or at its lowest setting (pacemaker dependency), programmed pacemaker parameters, surveillance record, and exclusion of myopotential inhibition and pacemaker induced hypotension (pacemaker syndrome), Powerpack data including beginning of life (BOL) and elective replacement indicator/end of life (ERI/EOL).

3. Readable samples of all electronic pacemaker surveillance records post surgery or over the past 6 months, or whichever is longer. It must include a sample strip with pacemaker in free running mode and unless contraindicated, a sample strip with the pacemaker in magnetic mode.

4. An assessment and statement from a physician regarding general physical and cardiac examination to include symptoms or treatment referable to the cardiovascular system; the airman's interim and current cardiac condition, functional capacity, medical history, and medications.

5. A report of current fasting blood sugar and a current blood lipid profile to include: total cholesterol, HDL, LDL, and triglycerides.

6. A current Holter monitor evaluation for at least 24-consecutive hours, to include select representative tracings.

7. A current M-mode, 2-dimensional echocardiogram with Doppler.

8. A current Maximal Graded Exercise Stress Test Requirements

9. It is the responsibility of each applicant to provide the medical information required to determine his/her eligibility for airman medical certification. A medical release form may help in obtaining the necessary information.
All information shall be forwarded in **one mailing** to:

No consideration can be given for special issuance until all the required data has been received.

The use of the airman's full name and date of birth on all correspondence and reports will aid the agency in locating the proper file.
PROTOCOL FOR LIVER TRANSPLANT (RECIPIENT)
(Updated 07/29/2015)

The Examiner must defer initial issuance. An applicant with a history of liver transplant must submit the following for consideration of a medical certificate. Applicants found qualified will be required to provide annual follow up evaluations per their authorization letter.

Requirements for initial consideration:

1. A six (6) month post-transplant recovery period with documented stability for the last three (3) months;

2. Pre-transplant treatment notes that identify the diagnosis, indication for transplant, and any sequelae prior to transplant. If alcohol was a contributing factor (abuse or dependence), submit evidence of treatment and recovery;

3. Hospital reports to include admission note, operative note, and hospital discharge summary;

4. A current status report from the treating physician that describes:
   - The status of the transplant, functional capacity, modifiable risk factors, and prognosis for incapacitation; and
   - Any recent or expected change in treatment plan

5. Complication history such as:
   - Rejection or graft versus host disease/GVHD;
   - Infection Hepatitis C (HCV) or CMV; and/or
   - Malignancy due to hepatocellular carcinoma (HCC) or following transplant and initiation of immune-suppressants

6. Current medication list to include names and dosage of immunosuppressive medications, the presence or absence of any side effects, and how long the airman has been on these medications.

7. Lab and images to include copies of most recent lab performed by the treating physician (CBC, CMP with LFTs) and any other tests deemed necessary by the treating physician such as imaging or liver biopsy

Recertification: Applicants found qualified will be required to provide follow up evaluations. This includes updated items 4-7 above, plus any additional information specifically requested in the airman’s Authorization letter.
PROTOCOL FOR MEDICATION CONTROLLED METABOLIC SYNDROME
(Glucose Intolerance, Impaired Glucose tolerance, Impaired Fasting Glucose, Insulin Resistance, and Pre-Diabetes)

This protocol is used for all applicants with Glucose Intolerance, Impaired Glucose tolerance, Impaired Fasting Glucose, Insulin Resistance, and/or Pre-Diabetes treated with oral agents or incretin mimetic medications (exenatide), herein referred to as medication(s).

An applicant with a diagnosis of diabetes mellitus controlled by medication may be considered by the FAA for an Authorization of a Special Issuance of a Medical Certificate (Authorization). For medications currently allowed, see chart of Acceptable Combinations of Diabetes Medications.

When medication is started the following time periods must elapse prior to certification to assure stabilization, adequate control, and the absence of side effects or complications from the medication.
- Metformin only. A 14 day period must elapse.
- Any other single diabetes medication requires a 60-day period.

The initial Authorization decision is made by the AMCD and may not be made by the Examiner. An Examiner may re-issue a subsequent airman medical certificate under the provisions of the Authorization.

The initial Authorization determination will be made on the basis of a report from the treating physician. There must be sufficient information to rule out diabetes mellitus. For favorable consideration, the report must contain a statement regarding the medication used, dosage, the absence or presence of side effects and clinically significant hypoglycemic episodes, and an indication of satisfactory control of the metabolic syndrome. The results of an A1C hemoglobin determination within the past 30 days must be included. Note must also be made of the presence of cardiovascular, neurological, renal, and/or ophthalmological disease. The presence of one or more of these associated diseases will not be, per se, disqualifying but the disease(s) must be carefully evaluated to determine any added risk to aviation safety.

Re-issuance of a medical certificate under the provisions of an Authorization will also be made on the basis of reports from the treating physician. The contents of the report must contain the same information required for initial issuance and specifically reference the presence or absence of satisfactory control, any change in the dosage or type of medication, and the presence or absence of complications or side effects from the medication. In the event of an adverse change in the applicant's status (development of diabetes mellitus, poor control or complications or side effects from the medication), or the appearance of an associated systemic disease, an Examiner must defer the case with all documentation to the AMCD for consideration.
If, upon further review of the deferred case, AMCD decides that re-issuance is appropriate, the Examiner may again be given the authority to re-issue the medical certificate under the provisions of the Authorization based on data provided by the treating physician, including such information as may be required to assess the status of associated medical condition(s).

At a minimum, followup evaluation by the treating physician of the applicant's metabolic syndrome status is required annually for all classes of medical certificates.

An applicant with metabolic syndrome should be counseled by his or her Examiner regarding the significance of the disease and its possible complications, including the possibility of developing diabetes mellitus.

The applicant should be informed of the potential for hypoglycemic reactions and cautioned to remain under close medical surveillance by his or her treating physician.

The applicant should also be advised that should their medication be changed or the dosage modified, the applicant should not perform airman duties until the applicant and treating physician has concluded that the condition is:

- Under control;
- Stable;
- Presents no risk to aviation safety; and
- Consults with the Examiner who issued the certificate, AMCD or RFS.
PROTOCOL FOR MUSCULOSKELETAL EVALUATION

The Examiner should defer issuance.

An applicant with a history of musculoskeletal conditions must submit the following if consideration for medical certification is desired:

- Current status report
- Functional status report
- Degree of impairment as measured by strength, range of motion, pain

**NOTE:** If the applicant is otherwise qualified, the FAA may issue a limited certificate. This certificate will permit the applicant to proceed with flight training until ready for a medical flight test. At that time, and at the applicant’s request, the FAA (usually the AMCD) will authorize the student pilot to take a medical flight test in conjunction with the regular flight test. The medical flight test and regular private pilot flight test are conducted by an FAA inspector. This affords the student an opportunity to demonstrate the ability to control the aircraft despite the handicap. The FAA inspector prepares a written report and indicates whether there is a safety problem. A medical certificate and statement of demonstrated ability (SODA) may be provided to the airman from AMCD/RFS office if the MFT is successful and the airman is otherwise qualified.

When prostheses are used or additional control devices are installed in an aircraft to assist the amputee, those found qualified by special certification procedures will have their certificates limited to require that the device(s) (and, if necessary, even the specific aircraft) must always be used when exercising the privileges of the airman certificate.
SPECIFICATIONS FOR NEUROPSYCHOLOGICAL EVALUATIONS FOR POTENTIAL NEUROCOGNITIVE IMPAIRMENT  
(Updated 01/29/2020)

Why is a neuropsychological evaluation required? Head trauma, stroke, encephalitis, multiple sclerosis, other suspected acquired or developmental conditions, and medications used for treatment, may produce cognitive deficits that would make an airman unsafe to perform pilot duties. This guideline outlines the requirements for a neuropsychological evaluation.

Who may perform a neuropsychological evaluation? Neuropsychological evaluations should be conducted by a qualified neuropsychologist with additional training in aviation-specific topics. The following link contains a list of neuropsychologists who meet all FAA quality criteria: FAA Neuropsychologist List.

Will I need to provide any of my medical records? You should make records available to the neuropsychologist prior to the evaluation, to include:
- Copies of all records regarding prior psychiatric/substance-related hospitalizations, observations or treatment not previously submitted to the FAA.
- A complete copy of your agency medical records. You should request a copy of your agency records be sent directly to the psychiatrist and psychologist by submitting a Request for Airman Medical Records (FAA Form 8065-2).

What must the neuropsychological evaluation report include? At a minimum:
- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, or pediatric neuropsychiatric treatment notes). Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.
- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview and testing.
- A mental status examination.
- Interpretation of a full battery of neuropsychological and psychological tests including, but not limited to, the “core test battery” (specified below).
- An integrated summary of findings with an explicit diagnostic statement, and the neuropsychologist’s opinion(s) and recommendation(s) regarding clinically or aeromedically significant findings and the potential impact on aviation safety consistent with the Federal Aviation Regulations.
**What is required in the “core test battery?”**
To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to a secure site. Authorized professionals should use the portal at FAA Neuropsychology Testing Specifications. For access, email a request to 9-amc-aam-NPTesting@faa.gov.

**What must be submitted?** The neuropsychologist’s report as specified in the portal, plus:
- Copies of all computer score reports; and
- An appended score summary sheet that includes all scores for all tests administered. When available, **pilot norms must be used**. If pilot norms are not available for a particular test, then the normative comparison group (e.g., general population, age/education-corrected) must be specified. Also, when available, percentile scores must be included.

Recommendations should be strictly limited to the psychologist’s area of expertise. **For questions about testing or requirements, email 9-amc-aam-NPTesting@faa.gov.**

**What else does the neuropsychologist need to know?**
- The FAA will not proceed with a review of the test findings without the above data.
- The data and clinical findings will be carefully safeguarded in accordance with the APA Ethical Principles of Psychologists and Code of Conduct (2002) as well as applicable federal law.
- The raw neurocognitive testing data may be required at a future date for expert review by one of the FAA’s consulting clinical neuropsychologists. In that event, authorization for release of the data **by the airman** to the expert reviewer will need to be provided.

**Additional Helpful Information**

1. Will additional testing be required in the future? If eligible for unrestricted medical certification, no additional testing would be required. However, pilots found eligible for Special Issuance will be required to undergo periodic re-evaluations. The letter authorizing special issuance will outline required testing, which may be limited to specific tests or expanded to include a comprehensive test battery.

2. Useful references for the neuropsychologist:
PROTOCOL FOR OBSTRUCTIVE SLEEP APNEA

Quick Start for AMES

Sleep apnea has significant safety implications due to cognitive impairment secondary to the lack of restorative sleep and is disqualifying for airman medical certification. The condition is part of a group of sleep disorders with varied etiologies. Specifically, sleep apneas are characterized by abnormal respiration during sleep. The etiology may be obstructive, central or complex in nature. However, no matter the cause, the manifestations of this disordered breathing present safety risks that include, but are not limited to, excessive daytime sleepiness (daytime hypersomnolence), cardiac dysrhythmia, sudden cardiac death, personality disturbances, refractory hypertension and, as mentioned above, cognitive impairment. Certification may be considered once effective treatment is shown.

This protocol is designed to evaluate airmen who may be presently at risk for Obstructive Sleep Apnea (OSA) and to outline the certification requirements for airmen diagnosed with OSA. While this protocol focuses on OSA, the AME must also be mindful of other sleep-related disorders such as insomnia, parasomnias, sleep-related movement disorders (e.g. restless leg syndrome and periodic leg movement), central sleep apnea and other hypersomnias, circadian rhythm sleep disorders, etc., that may also interfere with restorative sleep. All sleep disorders are also potentially medically disqualifying if left untreated. If one of these other sleep-related disorders is initially identified during the examination, the AME must contact their RFS or AMCD for guidance.

Risk Information

The American Academy of Sleep Medicine has established the risk criteria (utilizing Tables 2 and 3) for OSA. When applying Table 2 and 3, the AME is expected to employ their clinical judgment.

Educational information for airmen can be found in the FAA Pilot Safety Brochure on Obstructive Sleep Apnea. Supplemental information for AMEs can be found in OSA Reference Materials, which can be found at end of the Protocols section.

Persons with physical findings such as a retrograde mandible, large tongue or tonsils, neuromuscular disorders, or connective tissue anomalies are at risk of OSA requiring treatment despite a normal or low BMI. OSA is also associated with conditions such as refractory hypertension requiring more than two medications for control, diabetes mellitus, and atrial fibrillation. Over 90% of individuals with a BMI of 40 or greater have OSA requiring treatment. Up to 30% of individuals with OSA have a BMI less than 30.
**AME Actions** - On every exam, the Examiner must triage the applicant into one of 6 groups:

- If the applicant is on a Special Issuance Authorization for OSA ([Group/Box 1 of OSA flow chart](#)), select Group 1 on the AME Action Tab:
  - Follow [AASI/SI for OSA](#)
  - Notate in Block 60; and
  - Issue, if otherwise qualified

- If the applicant has had a prior sleep assessment ([Group/Box 2 of OSA flow chart](#)), select Group 2 on the AME Action Tab:
  - If the airman is under treatment, provide the requirements of the AASI and advise the airman they must get the Authorization of Special Issuance;
  - Give the applicant [Specification Sheet A](#) and advise that a letter will be sent from the Federal Air Surgeon requesting more information. The letter will state that the applicant has 90 days to provide the information to the FAA/AME;
  - Notate in Box 60;
  - Issue, if otherwise qualified

- If the applicant does not have an AASI/SI or has not had a previous assessment, the AME must:
  - Calculate BMI; and
  - Consider AASM risk criteria Table 2 & 3
  - If the AME determines the applicant is not currently at risk for OSA ([Group/Box 3 of OSA flow chart](#)), select Group 3 on the AME Action Tab:
    - Notate in Block 60; and
    - Issue, if otherwise qualified

  - If the applicant is at risk for OSA but in the opinion of the AME the applicant is at low risk for OSA, the AME must ([Group/Box 4 of OSA flow chart](#)), select Group 4 on the AME Action Tab:
    - Discuss OSA risks with applicant;
    - Provide resource and educational information, as appropriate;
    - Issue, if otherwise qualified; and
    - Notate in Block 60

- If the applicant is at high risk for OSA, the AME must ([Group/Box 5 of OSA flow chart](#)), select Group 5 on the AME Action Tab:
o Give the applicant Specification Sheet B and advise that a letter will be sent from the Federal Air Surgeon requesting more information. The letter will state that the applicant has 90 days to provide the information to the FAA/AME
  o Notate in Block 60; and
  o Issue, if otherwise qualified

- If the AME observes or the applicant reports symptoms which are severe enough to represent an immediate risk to aviation safety of the national airspace (Group/Box 6 of OSA flow chart), select Group 6 on the AME Action Tab.
  o Notate in Block 60
  o THE AME MUST DEFER
OBSTRUCTIVE SLEEP APNEA-OSA
AME ACTION TAB

1. Applicant Previously Assessed:
   1. Has OSA diagnosis and is on Special Issuance. Reports to follow.
   2. Has OSA diagnosis and is currently being treated OR has had previous OSA assessment. NOT on Special Issuance. Reports to follow.

2. Applicant Not at Risk:
   3. Determined to NOT be at risk for OSA at this examination.

3. Applicant at Risk/Severity to be Assessed:
   4. Discuss OSA risk with airman and provide educational materials.
   5. At risk for OSA. AASM sleep apnea assessment required. Reports to follow.

**GUIDE FOR AVIATION MEDICAL EXAMINERS**

**Diagnosed with OSA and is on AASI/SI**

1. Follow AASI/SI protocol

**Treated for OSA but NOT on AASI/SI OR Previously assessed for OSA**

2. Give airman FAS OSA Spec Sheet A
   - Submit all documentation
   - Airman has 90 days to comply
   - ISSUE, if otherwise qualified

**AASM * RISK FACTORS**

3. No assessment needed
   - ISSUE, if otherwise qualified

**Self-reported * Severe symptoms which represent an immediate safety risk**

4. AASM OSA * high risk
   - Discuss OSA risk
   - Provide educational material
   - Notate in Block 60 – “OSA Risk Educated”
   - ISSUE, if otherwise qualified

5. AT RISK FOR OSA
   - Give airman FAS OSA Spec Sheet B
   - Airman has 90 days to comply
   - ISSUE, if otherwise qualified

6. DEFER Immediate safety risk
   - Give airman OSA Spec Sheet B

* See AASM Tables 2 and 3. AME must use clinical judgment in applying AASM criteria. The risk of OSA is determined by an integrated assessment of history, symptoms, and physical/clinical findings. No disqualification of airman should be based on BMI alone.

** If the applicant has been previously assessed, has previously provided the information, was negative for evidence of OSA, AND has no changes in risk factors since the last exam, proceed with the flow chart as with any other applicant.
Obstructive Sleep Apnea Specification Sheet A
Information Request (Updated 08/30/2017)

Your application for airman medical certification submitted this date indicates that you have been treated or previous assessed for Obstructive Sleep Apnea (OSA).

You must provide the following information to the Aerospace Medical Certification Division (AMCD) or your Regional Flight Surgeon within 90 days:

- All reports and records regarding your assessment for OSA by your primary care physician and/or a sleep specialist.
- If you are currently being treated, also include:
  - A signed Airman Compliance with Treatment form or equivalent;
  - The results and interpretive report of your most recent sleep study; and
  - A current status report from your treating physician indicating that OSA treatment is still effective.

  - **For CPAP/ BIPAP/ APAP:**
    A copy of the cumulative annual PAP device report. Target goal should show use for at least 75% of sleep periods and an average minimum of 6 hours use per sleep period.

  - **For Dental Devices or for Positional Devices:**
    Once Dental Devices with recording / monitoring capability are available, reports must be submitted.

- To expedite the processing of your application, please submit the aforementioned information in one mailing using your reference number (PI, MID, or APP ID).

Using Regular Mail (US Postal Service) or Using Special Mail (FedEx, UPS, etc.)
Federal Aviation Administration
Aerospace Medical Certification Division
AAM-300
Civil Aerospace Medical Institute
PO Box 25082
Oklahoma City, OK  73125-9867

Federal Aviation Administration
Aerospace Medical Certification Division
AAM-300
Civil Aerospace Medical Institute, Bldg. 13
6700 S. MacArthur Blvd., Room 308
Oklahoma City, OK  73169
Due to your risk for Obstructive Sleep Apnea (OSA), and to review your eligibility to have a medical certificate, you must provide the following information to the Aerospace Medical Certification Division (AMCD) or your Regional Flight Surgeon’s Office for review within 90 days:

- A current OSA assessment in accordance with the American Academy of Sleep Medicine (AASM) by your AME, personal physician, or a sleep medicine specialist.

- If it is determined that a sleep study is necessary, it must be either a Type I laboratory polysomnography or a Type II (7 channel) unattended home sleep test (HST) that provides comparable data and standards to laboratory diagnostic testing. **It must be interpreted by a sleep medicine specialist and must include diagnosis and recommendation(s) for treatment, if any.**

- In communities where a Level II HST is unavailable, the FAA will accept a level III HST. If the HST is positive for OSA, no further testing is necessary and treatment in accordance with the AASI must be followed. However, if the HST is equivocal, a higher level test such as an in-lab sleep study will be needed unless a sleep medicine specialist determines no further study is necessary and documents the rationale.

If your sleep study is **positive for a sleep-related disorder, you may not exercise the privileges of your medical certificate until you provide:**

- A signed Airman Compliance with Treatment form or equivalent;

- The results and interpretive report of your most recent sleep study; and

- A current status report from your treating physician addressing compliance, tolerance of treatment, and resolution of OSA symptoms.

If you are **not diagnosed with a sleep-related disorder or the study was negative for a sleep-related disorder**, you may continue to exercise the privileges of your medical certificate, but the evaluation report along with the results of any study, if conducted, must be sent to the FAA at the address below. All information provided will be reviewed and is subject to further FAA action.

In order to expedite the processing of your application, please submit the aforementioned information **in one mailing** using your reference number (PI, MID, or APP ID).

PROTOCOL FOR PEPTIC ULCER

An applicant with a history of an active ulcer within the past 3-months or a bleeding ulcer within the past 6-months must provide evidence that the ulcer is healed if consideration for medical certification is desired.

Evidence of healing must be verified by a report from the attending physician that includes the following information:

- Confirmation that the applicant is free of symptoms
- Radiographic or endoscopic evidence that the ulcer has healed
- The name and dosage medication(s) used for treatment and/or prevention, along with a statement describing side effects or removal

This information should be submitted to the AMCD. Under favorable circumstances, the FAA may issue a certificate with special requirements. For example, an applicant with a history of bleeding ulcer may be required to have the physician submit followup reports every 6-months for 1 year following initial certification.

The prophylactic use of medications including simple antacids, H-2 inhibitors or blockers, proton pump inhibitors, and/or sucralfates may not be disqualifying, if free from side effects.

An applicant with a history of gastric resection for ulcer may be favorably considered if free of sequela.
SPECIFICATIONS FOR PSYCHIATRIC EVALUATIONS
(Updated 11/28/2018)

Why is a psychiatric evaluation required? Mental disorders, as well as the medications used for treatment, may produce symptoms or behavior that would make an airman unsafe to perform pilot duties. This guideline outlines the requirements for these evaluations.

Will I need to provide any of my medical records? You should make records available to the psychiatrist prior to their evaluations, to include:

- Copies of all records regarding prior psychiatric/substance-related hospitalizations, observations or treatment not previously submitted to the FAA.
- A complete copy of your agency medical records. You should request a copy of your agency records be sent directly to the psychiatrist by submitting a Request for Airman Medical Records (FAA Form 8065-2).

THE PSYCHIATRIC EVALUATION

Who may perform a psychiatric evaluation? Psychiatric evaluations must be conducted by a qualified psychiatrist who is board-certified by the American Board of Psychiatry and Neurology or the American Board of Osteopathic Neurology and Psychiatry.

- We strongly advise using a psychiatrist with experience in aerospace psychiatry and/or familiarity with aviation standards. Using a psychiatrist without this background may limit the usefulness of the report.
- If we have specified that additional qualifications in addiction psychiatry or forensic psychiatry are required, please ensure that the psychiatrist is aware of these requirements and has the qualifications and experience to conduct the evaluation.

What must the psychiatric evaluation report include? At a minimum:

- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, social worker, counselor, or neuropsychologist treatment notes). Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.
- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview.
- A mental status examination.
- An integrated summary of findings with an explicit diagnostic statement, and the psychiatrist’s opinion(s) and recommendation(s) for treatment, medication, therapy, counseling, rehabilitation, or monitoring should be explicitly stated. Opinions regarding clinically or aeromedically significant findings and the
potential impact on aviation safety must be consistent with the Federal Aviation Regulations.

**What must be submitted by the psychiatrist?** The psychiatrist’s comprehensive and detailed report, as noted above, plus copies of supporting documentation. Recommendations should be strictly limited to the psychiatrist’s area of expertise. Psychiatrists with questions are encouraged to call Charles Chesanow, D.O., FAA Chief Psychiatrist, at (202) 267-3767.
SPECIFICATIONS FOR PSYCHIATRIC AND PSYCHOLOGICAL EVALUATIONS
(Updated 01/27/2021)

Why are both a psychiatric and a psychological evaluation required? Mental disorders, as well as the medications used for treatment, may produce symptoms or behavior that would make an airman unsafe to perform pilot duties. Due to the differences in training and areas of expertise, separate evaluations and reports are required from both a qualified psychiatrist and a qualified clinical psychologist for determining an airman’s medical qualifications. This guideline outlines the requirements for these evaluations.

Will I need to provide any of my medical records? You should make records available to both the psychiatrist and clinical psychologist prior to their evaluations, to include:

- Copies of all records regarding prior psychiatric/substance-related hospitalizations, observations or treatment not previously submitted to the FAA.
- A complete copy of your agency medical records. You should request a copy of your agency records be sent directly to the psychiatrist and psychologist by submitting a Request for Airman Medical Records (FAA Form 8065-2).

THE PSYCHIATRIC EVALUATION

Who may perform a psychiatric evaluation? Psychiatric evaluations must be conducted by a qualified psychiatrist who is board-certified by the American Board of Psychiatry and Neurology or the American Board of Osteopathic Neurology and Psychiatry.

- We strongly advise using a psychiatrist with experience in aerospace psychiatry. Using a psychiatrist without this background may limit the usefulness of the report.
- If we have specified that additional qualifications in addiction psychiatry or forensic psychiatry are required, please ensure that the psychiatrist is aware of these requirements and has the qualifications and experience to conduct the evaluation.

What must the psychiatric evaluation report include? At a minimum:

- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, social worker, counselor, or neuropsychologist treatment notes). Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.

- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery);
aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview.

- A mental status examination.

- An integrated summary of findings with an explicit diagnostic statement, and the psychiatrist’s opinion(s) and recommendation(s) for treatment, medication, therapy, counseling, rehabilitation, or monitoring should be explicitly stated. Opinions regarding clinically or aeromedically significant findings and the potential impact on aviation safety must be consistent with the Federal Aviation Regulations.

**What must be submitted by the psychiatrist?** The psychiatrist’s comprehensive and detailed report, as noted above, plus copies of supporting documentation. Recommendations should be strictly limited to the psychiatrist’s area of expertise. Psychiatrists with questions are encouraged to call Charles Chesanow, D.O., FAA Chief Psychiatrist, at (202) 267-3767.

**THE PSYCHOLOGICAL EVALUATION**

**Who may perform a psychological evaluation?** Clinical psychological evaluations must be conducted by a clinical psychologist who possesses a doctoral degree (Ph.D., Psy.D., or Ed.D.), has been licensed by the state to practice independently, and has expertise in psychological assessment. We strongly advise using a psychologist with experience in aerospace psychology. Using a psychologist without this background may limit the usefulness of the report.

**What must the psychological evaluation include?** At a minimum:

- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, social worker, counselor, or neuropsychologist treatment notes). Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.

- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview.

- A mental status examination.

- Interpretation of a full battery of psychological tests including, but not limited to, the “core test battery” (specified below).

- An integrated summary of findings with an explicit diagnostic statement, and the psychologist’s opinion(s) and recommendation(s) for treatment, medication, therapy, counseling, rehabilitation, or monitoring should be explicitly stated. Opinions regarding clinically or aeromedically significant findings and the
potential impact on aviation safety must be consistent with the Federal Aviation Regulations.

**What is required in the “core test battery?”**
To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to a secure site. Authorized professionals should use the portal at [FAA Neuropsychology Testing Specifications](mailto:9-amc-aam-NPTesting@faa.gov). For access, email a request to 9-amc-aam-NPTesting@faa.gov.

**What must be submitted?**
The neuropsychologist’s report as specified in the portal, plus:
- Copies of all computer score reports; and
- An appended score summary sheet that includes all scores for all tests administered. When available, **pilot norms must be used**. If pilot norms are not available for a particular test, then the normative comparison group (e.g., general population, age/education-corrected) must be specified. Also, when available, percentile scores must be included.

Recommendations should be strictly limited to the psychologist’s area of expertise. For questions about testing or requirements, email 9-amc-aam-NPTesting@faa.gov.

**What else does the psychologist need to know?**
- The FAA will not proceed with a review of the test findings without the above data.
- The data and clinical findings will be carefully safeguarded in accordance with the APA Ethical Principles of Psychologists and Code of Conduct (2002) as well as applicable federal law.
- Raw psychological testing data may be required at a future date for expert review by one of the FAA’s consulting clinical psychologists. In that event, authorization for release of the data **by the airman** to the expert reviewer will need to be provided.

**Additional Helpful Information:**

1. Will additional evaluations or testing be required in the future? If eligible for unrestricted medical certification, no additional evaluations would be required. However, pilots found eligible for Special Issuance will be required to undergo periodic re-evaluations. The letter authorizing special issuance will outline the specific evaluations or testing required.

2. Useful references for the psychologist:
3. Miscellaneous

- Selecting the MMPI-2 vs MMPI-3

ADDENDUM – IF NEUROPSYCHOLOGICAL TESTING IS INDICATED

Who may perform a neuropsychological evaluation? Neuropsychological evaluations should be conducted by a qualified neuropsychologist with additional training in aviation-specific topics. The following link contains a list of neuropsychologists who meet all FAA quality criteria: FAA Neuropsychologist List.

Requirements for the evaluation. Requirements for providing records to the neuropsychologist, conducting the evaluation, and submitting reports are the same as noted above for the clinical psychologist.

What is required in the “core test battery?”
To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to a secure site. Authorized professionals should use the portal at FAA Neuropsychology Testing Specifications. For access, email a request to 9-amc-aam-NPTesting@faa.gov.

What must be submitted?
The neuropsychologist’s report as specified in the portal, plus:
- Copies of all computer score reports; and
- An appended score summary sheet that includes all scores for all tests administered. When available, pilot norms must be used. If pilot norms are not available for a particular test, then the normative comparison group (e.g., general population, age/education-corrected) must be specified. Also, when available, percentile scores must be included.

Recommendations should be strictly limited to the psychologist’s area of expertise. For questions about testing or requirements, email 9-amc-aam-NPTesting@faa.gov.
PROTOCOL FOR RENAL TRANSPLANT

An applicant with a history of renal transplant must submit the following if consideration for medical certification is desired:

1. Hospital admission, operative report and discharge summary

2. Current status report including:
   - The etiology of the primary renal disease
   - History of hypertension or cardiac dysfunction
   - Sequela prior to transplant
   - A comment regarding rejection or graft versus host disease (GVHD)
   - Immunosuppressive therapy and side effects, if any
   - The results of the following laboratory results: CBC, BUN, creatinine, and electrolytes
PROTOCOL FOR SUBSTANCES OF DEPENDENCE/ABUSE (DRUGS - ALCOHOL)

The Examiner must defer issuance.

Follow the guidance in the Substances of Dependence/Abuse (Drugs and Alcohol) section in this document.
PROTOCOL FOR THROMBOEMBOLIC DISEASE
(Updated 10/28/2020)

An applicant with a history of thromboembolic disease must submit the following if consideration for medical certification is desired:

1. Hospital admission and discharge summary

2. Current status report including:
   - Detailed family history of thromboembolic disease;
   - Neoplastic workup, if clinically indicated;
   - Blood clotting disorders (e.g. PT/PTT, Protein S & C, Factor V Leiden); AND
   - If still anticoagulated with warfarin (Coumadin), submit all (no less than monthly) INRs from time of hospital discharge to present

**Warfarin (Coumadin):** For applicants who are **just beginning warfarin (Coumadin)** treatment the following is required:
   - Minimum observation time of 6 weeks after initiation of warfarin therapy;
   - Must also meet any required observation time for the underlying condition; AND
   - 6 INRs, no more frequently than 1 per week

**NOAC/DOACs:** For applicants who are just beginning treatment the following is required:
   - Minimum observation time of 2 weeks after initiation of therapy; AND
   - Must also meet any required observation time for the underlying condition.

Decision Considerations
Disease Protocols – Obstructive Sleep Apnea

Quick Start for AMES

Sleep apnea has significant safety implications due to cognitive impairment secondary to the lack of restorative sleep and is disqualifying for airman medical certification. The condition is part of a group of sleep disorders with varied etiologies. Specifically, sleep apneas are characterized by abnormal respiration during sleep. The etiology may be obstructive, central or complex in nature. However, no matter the cause, the manifestations of this disordered breathing present safety risks that include, but are not limited to, excessive daytime sleepiness (daytime hypersomnolence), cardiac dysrhythmia, sudden cardiac death, personality disturbances, refractory hypertension and, as mentioned above, cognitive impairment. Certification may be considered once effective treatment is shown.

This protocol is designed to evaluate airmen who may be presently at risk for Obstructive Sleep Apnea (OSA) and to outline the certification requirements for airmen diagnosed with OSA. While this protocol focuses on OSA, the AME must also be mindful of other sleep-related disorders such as insomnia, parasomnias, sleep-related movement disorders (e.g. restless leg syndrome and periodic leg movement), central sleep apnea and other hypersomnias, circadian rhythm sleep disorders, etc., that may also interfere with restorative sleep. All sleep disorders are also potentially medically disqualifying if left untreated. If one of these other sleep-related disorders is initially identified during the examination, the AME must contact their RFS or AMCD for guidance.

Risk Information

The American Academy of Sleep Medicine has established the risk criteria (utilizing Tables 2 and 3) for OSA. When applying Table 2 and 3, the AME is expected to employ their clinical judgment.

Educational information for airmen can be found in the FAA Pilot Safety Brochure on Obstructive Sleep Apnea.

Persons with physical findings such as a retrograde mandible, large tongue or tonsils, neuromuscular disorders, or connective tissue anomalies are at risk of OSA requiring treatment despite a normal or low BMI. OSA is also associated with conditions such as refractory hypertension requiring more than two medications for control, diabetes mellitus, and atrial fibrillation. Over 90% of individuals with a BMI of 40 or greater have OSA requiring treatment. Up to 30% of individuals with OSA have a BMI less than 30.

OSA QUICK-START for AMEs

The AME while performing the triage function must conclude one of six possible determinations. The AME is not required to perform the assessment or to comment on the presence or absence of OSA. For more information, view this instructional video on the screening process.

**Step 1** - Determine into which group (1-6) the airman falls.

**Applicant Previously Assessed:**
**Group 1:** Has OSA diagnosis and is on Special Issuance. Reports to follow.
**Group 2:** Has OSA diagnosis OR has had previous OSA assessment. NOT on Special Issuance. Reports to follow.

**Applicant Not at Risk:**
**Group 3:** Determined to NOT be at risk for OSA at this examination.

**Applicant at Risk/Severity to be assessed:**
**Group 4:** Discuss OSA risk with airman and provide educational materials.
**Group 5:** At risk for OSA. AASM sleep apnea assessment required.

**Applicant Risk/Severity Extremely High:**
**Group 6:** Deferred. Immediate safety risk. AASM sleep apnea assessment required. Reports to follow.

**Step 2** – Document findings in Block 60.

**Step 3** – Check appropriate triage box in the AME Action Tab.

**Step 4** – Issue, if otherwise qualified.

In assessing airmen for groups 4 and 5, the AME is expected to use their own clinical judgment, using AASM information, when making the triage decision. Some AMEs have voiced the desire to perform the OSA assessment. While we do not recommend it, the AME may perform the OSA assessment provided that it is in accordance with the clinical practice guidelines established by the American Academy of Sleep Medicine.*

*If a sleep study is conducted, it must be interpreted by a sleep medicine specialist.
Guide for Aviation Medical Examiners

**OBSTRUCTIVE SLEEP APNEA-OSA AME ACTION TAB**

**Applicant Previously Assessed:**
1. Has OSA diagnosis and is on Special Issuance. Reports to follow.
2. Has OSA diagnosis and is currently being treated OR has had previous OSA assessment. NOT on Special Issuance. Reports to follow.

**Applicant Not at Risk:**
3. Determined to NOT be at risk for OSA at this examination.

**Applicant at Risk/Severity to be Assessed:**
4. Discuss OSA risk with airman and provide educational materials.
5. At risk for OSA. AASM sleep apnea assessment required. Reports to follow.

**Applicant Risk/Severity high**

---

**Diagnosed with OSA and is on AASI/SI**

**YES** Follow AASI/SI protocol 1

**Treated for OSA but NOT on AASI/SI OR Previously assessed for OSA**

**NO**

**YES**
- Give airman FAS OSA Spec Sheet A
- Submit all documentation
- Airman has 90 days to comply
- ISSUE, if otherwise qualified

---

**AASM * RISK FACTORS**

**YES**
- Self-reported Severe symptoms which represent an immediate safety risk

**NO**
- AASM OSA*
  **YES**
  - AASM OSA high risk
    - Discuss OSA risk
    - Provide educational material
    - Notate in Block 60 – “OSA Risk Educated”
    - ISSUE, if otherwise qualified
  **NO**
  - DEFER Immediate safety risk
    - Give airman OSA Spec Sheet B

**NO**

---

* See AASM Tables 2 and 3. AME must use clinical judgment in applying AASM criteria. The risk of OSA is determined by an integrated assessment of history, symptoms, and physical/clinical findings. No disqualification of airman should be based on BMI alone.

**If the applicant has been previously assessed, has previously provided the information, was negative for evidence of OSA, AND has no changes in risk factors since the last exam, proceed with the flow chart as with any other applicant.**
### AASM Table 2

Patients at High Risk for OSA Who Should Be Evaluated for OSA Symptoms:

- Obesity (BMI > 35)
- Congestive heart failure
- Atrial fibrillation
- Treatment refractory hypertension
- Type 2 diabetes
- Nocturnal dysrhythmias
- Stroke
- Pulmonary hypertension
- High-risk driving populations
- Preoperative for bariatric surgery

### AASM Table 3

Questions about OSA that Should Be Included in Routine Health Maintenance Evaluations:

- Is the patient obese?
- Is the patient refractory?
- Does the patient complain of daytime sleepiness?
- Does the patient snore?
- Does the patient have hypertension?
AME Actions - On every exam, the Examiner must triage the applicant into one of 6 groups:

- If the applicant is on a Special Issuance Authorization for OSA (Group/Box 1 of OSA flow chart), select Group 1 on the AME Action Tab:
  o Follow AASI/SI for OSA
  o Notate in Block 60; and
  o Issue, if otherwise qualified

- If the applicant has had a prior OSA assessment (Group/Box 2 of OSA flow chart), select Group 2 on the AME Action Tab:
  o If the airman is under treatment, provide the requirements of the AASI and advise the airman they must get the Authorization of Special Issuance;
  o Give the applicant Specification Sheet A and advise that a letter will be sent from the Federal Air Surgeon requesting more information. The letter will state that the applicant has 90 days to provide the information to the FAA/AME;
  o Notate in Box 60;
  o Issue, if otherwise qualified

- If the applicant does not have an AASI/SI or has not had a previous assessment, the AME must:
  o Calculate BMI; and
  o Consider AASM risk criteria Table 2 & 3
  o If the AME determines the applicant is not currently at risk for OSA (Group/Box 3 of OSA flow chart), select Group 3 on the AME Action Tab:
    ▪ Notate in Block 60; and
    ▪ Issue, if otherwise qualified
  
  o If the applicant is at risk for OSA but in the opinion of the AME the applicant is at low risk for OSA, the AME must (Group/Box 4 of OSA flow chart), select Group 4 on the AME Action Tab:
    ▪ Discuss OSA risks with applicant;
    ▪ Provide resource and educational information, as appropriate;
    ▪ Notate in Block 60; and
    ▪ Issue, if otherwise qualified

- If the applicant is at high risk for OSA, the AME must (Group/Box 5 of OSA flow chart), select Group 5 on the AME Action Tab:
  o Give the applicant Specification Sheet B and advise that a letter will be sent from the Federal Air Surgeon requesting more information. The letter will state that the applicant has 90 days to provide the information to the FAA/AME
  o Notate in Block 60; and
  o Issue, if otherwise qualified

- If the AME observes or the applicant reports symptoms which are severe enough to represent an immediate risk to aviation safety of the national airspace (Group/Box 6 of OSA flow chart), select Group 6 on the AME Action Tab.
  o Notate in Block 60
  o THE AME MUST DEFER
Obstructive Sleep Apnea Specification Sheet A
Information Request (Updated 08/30/2017)

Your application for airman medical certification submitted this date indicates that you have been treated or previously assessed for Obstructive Sleep Apnea (OSA).

You must provide the following information to the Aerospace Medical Certification Division (AMCD) or your Regional Flight Surgeon within 90 days:

- All reports and records regarding your assessment for OSA by your primary care physician and/or a sleep specialist.
- If you are currently being treated, also include:
  - A signed Airman Compliance with Treatment form or equivalent;
  - The results and interpretive report of your most recent sleep study; and
  - A current status report from your treating physician indicating that OSA treatment is still effective.

  ▪ For CPAP/ BIPAP/ APAP:
    A copy of the cumulative annual PAP device report. Target goal should show use for at least 75% of sleep periods and an average minimum of 6 hours use per sleep period.

  ▪ For Dental Devices or for Positional Devices:
    Once Dental Devices with recording / monitoring capability are available, reports must be submitted.

- To expedite the processing of your application, please submit the aforementioned information in one mailing using your reference number (PI, MID, or APP ID).

Using Regular Mail (US Postal Service) or Using Special Mail (FedEx, UPS, etc.)

OBSTRUCTIVE SLEEP APNEA SPECIFICATION SHEET B
ASSESSMENT REQUEST (Updated 08/30/2017)

Due to your risk for Obstructive Sleep Apnea (OSA), and to review your eligibility to have a medical certificate, you must provide the following information to the Aerospace Medical Certification Division (AMCD) or your Regional Flight Surgeon’s Office for review within 90 days:

- A current OSA assessment in accordance with the American Academy of Sleep Medicine (AASM) by your AME, personal physician, or a sleep medicine specialist.

- If it is determined that a sleep study is necessary, it must be either a Type I laboratory polysomnography or a Type II (7 channel) unattended home sleep test (HST) that provides comparable data and standards to laboratory diagnostic testing. It must be interpreted by a sleep medicine specialist and must include diagnosis and recommendation(s) for treatment, if any.

If your sleep study is positive for a sleep-related disorder, you may not exercise the privileges of your medical certificate until you provide:

- A signed Airman Compliance with Treatment form or equivalent;

- The results and interpretive report of your most recent sleep study; and

- A current status report from your treating physician addressing compliance, tolerance of treatment, and resolution of OSA symptoms.

If you are not diagnosed with a sleep-related disorder or the study was negative for a sleep-related disorder, you may continue to exercise the privileges of your medical certificate, but the evaluation report along with the results of any study, if conducted, must be sent to the FAA at the address below. All information provided will be reviewed and is subject to further FAA action.

In order to expedite the processing of your application, please submit the aforementioned information in one mailing using your reference number (PI, MID, or APP ID).

AME Assisted - All Classes – Obstructive Sleep Apnea (OSA)

Examiners may re-issue an airman medical certificate to airmen currently on an AASI for OSA if the airman provides the following:

- An Authorization granted by the FAA;
- Signed Airman Compliance with Treatment form or equivalent from the airman attesting to absence of OSA symptoms and continued daily use of prescribed therapy; and
- A current status report from the treating physician indicating that OSA treatment is still effective.

  o For CPAP/ BIPAP/ APAP:
    - A copy of the cumulative annual PAP device report which shows actual time used (rather than a report typically generated for insurance providers which only shows if use is greater or less than 4 hours). Target goal should show use for at least 75% of sleep periods and an average minimum of 6 hours use per sleep period.
    - For persons with an established diagnosis of OSA who do not have a recording CPAP, a one year exception will be allowed to provide a personal statement that they regularly use CPAP and before each shift when performing flight or safety duties.

  o For Dental Devices and/or for Positional Devices:
    No conditions known to be co-morbid with OSA (e.g., diabetes mellitus, hypertension treated with more than two medications, atrial fibrillation, etc.). Once Dental Devices with recording / monitoring capability are available, reports must be submitted.

  o For Surgery:
    For successfully treated surgical patients, a statement attesting to the continued absence of OSA symptoms is required.

Defer to the AMCD or the Region for further review if:

- Concerns about adequacy of therapy or non-compliance;
- Significant weight gain or development of conditions known to be co-morbid with OSA (e.g., diabetes mellitus, hypertension treated with more than two medications, atrial fibrillation, etc.).

Note: The Examiner may request AMCD review to discontinue the AASI if there are indications that the airman no longer has OSA (e.g., significant weight loss and a negative study or surgical intervention followed by 3 years of symptom abatement and absence of significant weight gain or co-morbid conditions). **In most cases, a follow-up sleep study will be required to remove the AASI.**
AIRMAN COMPLIANCE WITH TREATMENT
OBSTRUCTIVE SLEEP APNEA (OSA)

I __________________________ (print name) certify that (check one):

___ I have been using _________________ (CPAP/ Dental / or Positional Device) for OSA as prescribed. I am tolerating the therapy well and have no symptoms of OSA (e.g. daytime sleepiness or lack of mental attention or concentration).

___ I have been surgically treated for OSA and I have no symptoms of OSA (e.g. daytime sleepiness or lack of mental attention or concentration).

I understand and acknowledge that I will receive the new requirements for continuation of my special issuance of Obstructive Sleep Apnea and I will comply with the requirements at my next FAA medical certificate renewal or reapplication.

Applicant Name: __________________________________________________

Date of Birth: __________________________________________________

Reference Number: (PI, MID, or APP ID): __________________________

Applicant Signature __________________________________________ Date _____
GENERAL:

1. Where can I view the video explaining the process?
The instructional video for AMEs is available here or at: http://www.faa.gov/tv/?mediaId=1029

2. Where can I find the specification sheets and educational material?
All OSA reference materials can be found at: http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/aam/ame/guide/dec_cons/disease_prot/osa/ref_materials/

3. Does this process involve other sleep disorder conditions? (E.g. Period Limb Movement Disorder, narcolepsy, central sleep apnea, etc.)
No. This process is for obstructive sleep apnea only. If it is clear that the airman suffers from a different sleep disorder, DEFER and submit any supporting documentation for FAA decision.

TRIAGE:

4. I am not a sleep specialist. How am I supposed to determine if an airman is high risk enough to send for a sleep evaluation? How many risk factors must be present before additional testing is required?
The AME should triage the airman based on the FAA OSA Flow Chart, supporting clinical guidelines, and good clinical judgment to determine the appropriate category for the airman.

5. The airman was assessed 5 years ago for OSA but did not have a polysomnogram. The evaluation was negative. Is he required to have an updated sleep evaluation or a sleep study?
No. If there has been NO CHANGE in his/her risk factors, follow Group/Box 2 of the flow chart and submit a copy of the previous assessment. However, if there has been a change in risk factors (e.g. elevated BMI, new atrial fibrillation, refractory hypertension, etc.), triage using the flow chart to determine if the airman needs a repeat assessment.

6. If I mark the radio button (1-6) and have no concerns, do I still need to put notes in Block 60 regarding the OSA triage?
Yes. It is only required for Group/Box 4 to document that education was given. However, it may be useful to document the rationale for triage decisions, especially for Group/Box 2, 5, and 6.

SLEEP EVALUATION AND SLEEP STUDY:

7. Is a sleep evaluation the same as a sleep study?
No. Please reference the AASM guidelines. A sleep evaluation is needed when the triage process indicates that the airman is at high risk for OSA. The sleep evaluation is used to determine if a sleep study is warranted.
8. **Do I have to turn in the “AME Assessment Statement” for every airman?**
   No. This statement page is only used by an AME who PERFORMS the sleep evaluation (in accordance with AASM guidelines) and finds that the airman does not have evidence of OSA. This is NOT to be used for the routine triage function.

9. **Does the FAA require a specific type of sleep study if one is warranted?**
   Yes. The FAA requires that the test be either a Type I laboratory polysomnography or a Type II (7 channel) unattended home sleep test (HST) that provides comparable data and standards to laboratory diagnostic testing. It does not have to be a chain of custody study.

10. **What if the doctor or insurance provider is only willing to do a level III Home Sleep Test (HST)?**
    In communities where a Level II HST is unavailable, the FAA will accept a level III HST. If the HST is positive for OSA, no further testing is necessary and treatment in accordance with the AASI must be followed. However, if the HST is equivocal, a higher level test such as an in-lab sleep study will be needed unless a sleep medicine specialist determines no further study is necessary and documents the rationale.

11. **If I do the sleep evaluation and determine the airman needs a sleep study, as the AME, can I interpret the sleep study?**
    The AME may only interpret the sleep study if he/she is a sleep medicine specialist.

---

**CERTIFICATE, EXTENSION, AND DENIAL PROCESS:**

12. **If an airman is in Group/Box 5 (at risk for OSA) they have 90 days to comply with getting an evaluation. Does the AME issue a time-limited, 90 day certificate?**
    No. Issue a regular (not time limited) certificate, if the airman is otherwise qualified. The AME MAY NOT issue a time-limited certificate without an authorization from the FAA.

13. **I evaluated the airman and triaged him into Group/Box 5. He had a sleep study and is doing well on CPAP treatment. Does he have to wait for a time-limited certificate before he can return to flight duties?**
    No. Once the airman is compliant with and doing well on treatment, he has met the requirements for 14 CFR 61.53. The airman may return to flight status with the current certificate issued by the AME, PROVIDED that ALL the required information regarding OSA evaluation and treatment has been submitted to the FAA for review.

14. **Once the AME issues a regular certificate, who is responsible for keeping track of the 90 days?**
    The FAA will keep track of the 90 days.

15. **The airman has a prior SI/AASI for OSA that only asks for a current status report. Can I issue this year if he does not bring in any other information on the OSA?**
    Yes. The AME may issue this year based on the previous SI/AASI if those requirements were met.

16. **Can the airman continue to submit only a current status report until his current AASI expires?**
    No. An airman currently on an SI/AASI for OSA will receive a new SI/AASI letter this year. At that point, he/she will have to comply with the new documentation requirements.
17. **What if the airman cannot get a sleep evaluation in 90 days?**
   The airman may request a one-time, 30-day extension by phone by calling AMCD at (405) 954-4821 and selecting Option 1 when prompted. They may also mail a request to AMCD (see Specification Sheet B for address) or by contacting their RFS office.

18. **If I give the airman Specification Sheet A or B and he does not submit the required evaluation within 90 days and after the 30 day extension (if requested), what will happen?**
   The airman will receive a failure to provide (FTP) denial.

---

**TREATMENT AND FOLLOW UP:**

19. **How long does an airman have to be on CPAP with a new diagnosis of OSA before they can return to flying?**
   The airman may submit the completed compliance statement and required documents to the FAA for review as soon as they are tolerating the therapy without difficulty and have no symptoms of OSA.

20. **The airman has mild or moderate sleep apnea. Is he required to use CPAP?**
   In most cases an AHI of 15 or more will require CPAP.

21. **If the airman has a sleep study and is diagnosed with OSA does he/she get a new certificate?**
   Yes. Once a diagnosis of OSA is established, a Special Issuance is required. When the airman submits the required supporting documents to the FAA, he/she will be evaluated for a Special Issuance.

22. **If an airman has a previously unreported history of OSA being treated with CPAP, can the AME issue?**
   Yes. Issue a regular certificate (Group/Box 2), if the airman is otherwise qualified, and submit the required information for FAA decision.

23. **What if the airman is high risk and has had a previous sleep study that was positive, but not one of the approved tests? He is currently on CPAP and doing well. Does he have to get a new sleep study?**
   Follow Group/Box 2 and submit the required information for FAA decision.

24. **The airman had a sleep study in the past and did not have sleep apnea. It was not an approved test type. Will he have to get another sleep study?**
   The AME should follow the triage flow chart. If the airman is determined to be Group/Box 5 or 6, he/she will need a sleep evaluation. If a sleep study is warranted, it will need to be an approved test type (see FAQ #9). Submit the required information for FAA decision.

25. **The airman has OSA and was on CPAP in the past. He has now lost weight and is only on a dental device. What do I do now?**
   Follow Group/Box 2 and submit the required information for FAA decision.
### Measurement Units

#### Pounds and inches

**Formula:** weight (lb) / [height (in)]² x 703  
Calculate BMI by dividing weight in pounds (lbs) by height in inches (in) squared and multiplying by a conversion factor of 703.

**Example:** Weight = 150 lbs, Height = 5'5" (65")  
Calculation: \( \frac{150}{(65)^2} \times 703 = 24.96 \)

#### Kilograms and meters (or centimeters)

**Formula:** weight (kg) / [height (m)]²  
With the metric system, the formula for BMI is weight in kilograms divided by height in meters squared. Since height is commonly measured in centimeters, divide height in centimeters by 100 to obtain height in meters.

**Example:** Weight = 68 kg, Height = 165 cm (1.65 m)  
Calculation: \( \frac{68}{(1.65)^2} = 24.98 \)

---

Berlin Questionnaire©

Height (m) _____ Weight (kg) _____ Age

Male / Female

Please choose the correct response to each question.

**Category 1**

1. Do you snore?
   - □ a. Yes
   - □ b. No
   - □ c. Don’t know

   *If you answered ‘yes’:

2. You snoring is:
   - □ a. Slightly louder than breathing
   - □ b. As loud as talking
   - □ c. Louder than talking

3. How often do you snore?
   - □ a. Almost every day
   - □ b. 3-4 times per week
   - □ c. 1-2 times per week
   - □ d. 1-2 times per month
   - □ e. Rarely or never

4. Has your snoring ever bothered other people?
   - □ a. Yes
   - □ b. No
   - □ c. Don’t know

5. Has anyone noticed that you stop breathing during your sleep?
   - □ a. Almost every day
   - □ b. 3-4 times per week
   - □ c. 1-2 times per week
   - □ d. 1-2 times per month
   - □ e. Rarely or never

**Category 2**

6. How often do you feel tired or fatigued after your sleep?
   - □ a. Almost every day
   - □ b. 3-4 times per week
   - □ c. 1-2 times per week
   - □ d. 1-2 times per month
   - □ e. Rarely or never

7. During your waking time, do you feel tired, fatigued or not up to par?
   - □ a. Almost every day
   - □ b. 3-4 times per week
   - □ c. 1-2 times per week
   - □ d. 1-2 times per month
   - □ e. Rarely or never

8. Have you ever nodded off or fallen asleep while driving a vehicle?
   - □ a. Yes
   - □ b. No

   *If you answered ‘yes’:

9. How often does this occur?
   - □ a. Almost every day
   - □ b. 3-4 times per week
   - □ c. 1-2 times per week
   - □ d. 1-2 times per month
   - □ e. Rarely or never

**Category 3**

10. Do you have high blood pressure?
    - □ Yes
    - □ No
    - □ Don’t know
Scoring Berlin Questionnaire
The questionnaire consists of 3 categories related to the risk of having sleep apnea. Patients can be classified into High Risk or Low Risk based on their responses to the individual items and their overall scores in the symptom categories.

Categories and Scoring:
Category 1: Items 1, 2, 3, 4, and 5;
   Item 1: if ‘Yes’, assign 1 point
   Item 2: if ‘c’ or ‘d’ is the response, assign 1 point
   Item 3: if ‘a’ or ‘b’ is the response, assign 1 point
   Item 4: if ‘a’ is the response, assign 1 point
   Item 5: if ‘a’ or ‘b’ is the response, assign 2 points
   Add points. Category 1 is positive if the total score is 2 or more points.

Category 2: items 6, 7, 8 (item 9 should be noted separately).
   Item 6: if ‘a’ or ‘b’ is the response, assign 1 point
   Item 7: if ‘a’ or ‘b’ is the response, assign 1 point
   Item 8: if ‘a’ is the response, assign 1 point
   Add points. Category 2 is positive if the total score is 2 or more points.

Category 3 is positive if the answer to item 10 is ‘Yes’ or if the BMI of the patient is greater than 30kg/m².
   (BMI is defined as weight (kg) divided by height (m) squared, i.e., kg/m²).

High Risk: if there are 2 or more categories where the score is positive.
Low Risk: if there is only 1 or no categories where the score is positive.

Epworth Sleepiness Scale
The original version of the ESS was first published in 1991. However, it soon became clear that some people did not answer all the questions, for whatever reason. They may not have had much experience in some of the situations described in ESS items, and they may not have been able to provide an accurate assessment of their dozing behavior in those situations. However, if one question is not answered, the whole questionnaire is invalid. It is not possible to interpolate answers, and hence item-scores, for individual items. This meant that up to about 5 % of ESS scores were invalid in some series.
In 1997, an extra sentence of instructions was added to the ESS, as follows:
’It is important that you answer each question as best you can’.
With this exhortation, nearly everyone was able to give an estimate of their dozing behavior in all ESS situations. As a result, the frequency of invalid ESS scores because of missed item-responses was reduced to much less than 1%.

The 1997 version of the ESS is now the standard one for use in English or any other language. It is available in pdf here.
Epworth Sleepiness Scale

Name: __________________________  Today’s date: __________________

Your age (Yrs): ______________  Your sex (Male = M, Female = F): __________

How likely are you to doze off or fall asleep in the following situations, in contrast to feeling just tired?

This refers to your usual way of life in recent times.

Even if you haven’t done some of these things recently try to work out how they would have affected you.

Use the following scale to choose the most appropriate number for each situation:

- 0 = would never doze
- 1 = slight chance of dozing
- 2 = moderate chance of dozing
- 3 = high chance of dozing

It is important that you answer each question as best you can.

<table>
<thead>

STOP BANG Questionnaire

Height inches/cm:
Age:
Male/Female
BMI:
Weight lb/kg:
Collar size of shirt: S, M, L, XL, or inches/cm neck circumference:

1. Snoring
Do you snore loudly (louder than talking or loud enough to be heard through closed doors)?
Yes No

2. Tired
Do you often feel tired, fatigued, or sleepy during daytime?
Yes No

3. Observed - Has anyone observed you stop breathing during your sleep?
Yes No

4. Blood pressure
Do you have or are you being treated for high blood pressure?
Yes No

5. BMI -BMI more than 35 kg/m2?
Yes No

6. Age - Age over 50 years old?
Yes No

7. Neck circumference - Neck circumference greater than 40 cm?
Yes No

8. Gender – Male?
Yes No
* Neck circumference is measured by staff

High risk of OSA: answering yes to three or more items
Low risk of OSA: answering yes to less than three items

Adapted from:
STOP Questionnaire
A Tool to Screen Patients for Obstructive Sleep Apnea
Obstructive Sleep Apnea

Asleep at the controls

On a clear February day in 2008, a commercial aircraft with 48 passengers and 4 officers took off from the destination airport. The pilot and co-pilot turned back to the destination airport, where all engines were running smoothly. However, one of the pilots was found to be suffering from obstructive sleep apnea (OSA) and the flight crew's control was affected, which included several days of early-morning flight times.

An obscure condition tackles a pro linemen

When the shocking death of NFL lineman Reggie White, the problem of OSA was thrust onto the spotlight. Up to that time, OSA was relatively unknown in the medical community. However, OSA is recognized as a major contributor to many possible health-related ailments. In some estimates, it has been suggested that OSA affects:

- 4 - 7% of middle-aged people.
- 70% of clinically obese patients.
- 34% of all NFL linemen.

A costly problem on the ground

The National Sleep Foundation (NSF) estimates that sleep deprivation and sleep disorders cost Americans more than $100 billion annually in lost productivity, medical expenses, sick leave, and property and environmental damage. In addition, the NSF estimates that:

- About 70 million people in the U.S. have some sort of sleep problem.
- 40 million suffer from chronic sleep disorders.
- As many as 30 million are affected by intermittent, sleep-related problems.

The National Highway Traffic Safety Administration conservatively estimates that:

- 100,000 accidents are caused by drowsy drivers each year, resulting in more than 1,500 fatalities, 71,000 injuries, and $12.5 billion in diminished productivity and property loss.
- People with OSA have a 2.3 times greater risk factor for automobile accidents.

A potential problem in flight?

The implications for pilots and crewmembers are significant. It has been suggested that people with mild to moderate OSA can show performance degradation equivalent to 0.6 to 0.8% blood alcohol levels, which is the measure of legal intoxication in most states. Most pilots will not fly immunized, but OSA sleep deprivation may be causing the equivalent effects. Further exacerbating the problem are time zone changes and post-flight alcohol consumption, which can inhibit wakefulness. Normally, when you stop breathing while asleep, the brain automatically sends a wake-up call after about 10 seconds, and you wake up, gasping for air. Multiple time zone changes and alcohol consumption can inhibit normal sleep patterns, and may result in oxygen deprivation of 30 seconds or longer for 4 hours before the body wakes up.

When you add up the oxygen starvation resulting from many occurrences per night, along with the subsequent arousals, the effect is significant fatigue.

30% - 50% of patients with heart disease.
60% of patients suffering strokes.

The pathophysiology of OSA

A term in a medical term that means "being without respiration." Obstructive sleep apnea is characterized by repetitive upper airway obstruction during sleep, as a result of narrowing of the respiratory passages. Most people with this disorder are overweight and have higher deposits of adipose (fat) tissue in their respiratory passages, and the size of their soft palate and tongue are larger than average. These conditions decrease the size of the upper airway and decrease airway muscle tone, especially when sleeping in the supine (back down and horizontal) position. Gravity can pull tissues down and over the airway, further decreasing its size, impeding air flow to the lungs during inspiration.

The major impact of OSA

SLEEPING WELL is when the airway becomes partially obstructed. With further tissue obstruction of this airway, there may be complete occlusion. When the obstruction is partial (hypopnea) or total (apnea), the subject struggles to breathe and is aroused from sleep. Other, these sleep interruptions are unrecognized, even if they occur hundreds of times a night. The real danger is that the OSA sufferer may not realize the condition and are only aware that they typically awaken feeling sleepy and tired. Learning sleep is more than a simple inconvenience. Good, sound sleep is essential for good health and clear mental and emotional functioning. Additionally, OSA is associated with a reduction in blood oxygen levels, leading to the heart, which, of course, is a major health concern. Excessive decreases in blood oxygen levels associated with OSA may eventually increase:

- Blood pressure.
- Strain on the cardiovascular system.
- Risk of heart attack.
- Risk of stroke.

Recognizing OSA

TYPICALLY, a person suffering from OSA is not aware of the condition. The only way it can be detected is through a sleep study. A complaint of loud and excessive snoring may be an important clue, since that is characteristically the first sign of OSA. Other symptoms suggesting OSA include:

- Difficulty in concentrating, thinking, or remembering.
- Daytime sleepiness, fatigue, and the need to take frequent naps.
- Headaches.
- Irritability.
- Short attention span.

Treating OSA

Once recognized and identified, OSA is highly treatable, either with surgical or non-surgical approaches. Obviously, non-surgical methods should be tried first.

- REMEDIES (MAGICAL)
  - Change sleeping position (sleep on side or stomach).
  - Change sleeping environment (lights, level, temperature, etc.).
  - Lower body fat (10% weight loss will decrease the OSA index by 25%).

- DENTAL APPLIANCES
  - Dental appliances that move the lower jaw forward or otherwise open the airway are an excellent treatment for mild-to-moderate OSA and are about 75% effective.
Guide for Aviation Medical Examiners

- **Continuous Positive Airway Pressure (CPAP) Machine**
  - Probably the best, non-surgical treatment for any level of OSA.
  - Uses air pressure to hold the tissues open during sleep.
  - Decreases sleep apnea, as measured by surveys and objective tests.
  - Improves cognitive functioning on tests.

- **Medications**
  - Any medication taken for OSA must be approved by the FAA.
  - Nasal steroid sprays are effective.
  - Medications that have been studied include: medroxyprogesterone, acetazolamide, and theophylline.

- **Surgical Methods**
  - These can be very significant (painful) surgeries that don’t always succeed. They should be used only after non-surgical methods have failed.
  - **Nasal airway surgery**: Corrects for swelling of the turbinates, septal deviation, and nasal polyps.
  - **Uvulopalatopharyngoplasty**: Prevents collapse of the palate, tonsils, and pharynx.
  - **Tongue reduction surgery**: Decreases the size of the base of the tongue.
  - **Glossectomy advancement**: Pulls the tongue forward to enlarge the airway.

---

**The Bottom Line**

If you experience one or more symptoms of obstructive sleep apnea, it is recommended that you consult a physician, since OSA treatment costs a very high success rate. What about your medical certificate? If your OSA is treatable, you can maintain your airspace medical certificate and continue to enjoy your aviation career. However, flying with untreated OSA constitutes an unnecessary risk and can become a safety of flight issue.

It’s up to you! So... sleep on it!

**Physiological Training Classes for Pilots**

If you are interested in taking a one-day aviation physiological training course with altitude chamber and vestigial demonstration or a one-day survival course, learn about how to sign up for these courses that are offered at 13 locations across the U.S. by visiting the FAA Web site:

[www.faa.gov/plots/training/airman_education/aerospac physiology/index.cfm](http://www.faa.gov/plots/training/airman_education/aerospac physiology/index.cfm)
For AMEs Who Elect to Perform the OSA Assessment

Evaluating the risk of Obstructive Sleep Apnea (OSA) requires clinical judgment based on an integrated assessment of history, symptoms, AND physical/clinical findings. If an AME elects to perform the assessment for OSA, he/she must follow the American Academy of Sleep Medicine guidelines.

After completing the assessment, if the diagnosis of OSA is not made, the AME must sign and submit the AME Assessment Statement - OSA. If the AME confirms the presence of OSA, then full clinical note with test results, if performed, must be submitted.

History of findings that suggest increased risk of OSA include:
• Hypertension requiring more than 2 medications for control or refractory hypertension
• Type 2 Diabetes
• Atrial fibrillation or nocturnal dysrhythmias
• Congestive heart failure
• Stroke
• Pulmonary hypertension
• Motor vehicle accidents, especially those associated with sleepiness/drowsiness
• Under consideration for bariatric surgery

Symptoms that suggest an increased risk of OSA include:
• Snoring
• Daytime sleepiness
• Witnessed apneas
• Complaints of awakening with sensation of gasping or choking
• Non-refreshing sleep
• Frequent awakening (sleep fragmentation) or difficulty staying asleep (maintenance insomnia)
• Morning headaches
• Decreased concentration
• Problems or difficulty with memory or memory loss
• Irritability

Physical/clinical findings that suggest increased risk of OSA include:
• High score on an OSA screening questionnaire (e.g., Berlin, Epworth)
• Increased neck circumference (>17 inches in men, >16 inches in women)
• A Modified Mallampati score of 3 or 4 (assessment of the oral cavity)
• Retrognathia
• Lateral peritonsilar narrowing
• Macroglossia
• Tonsillar hypertrophy
• Elongated/enlarged uvula
• High arched/narrow hard palate
• Nasal abnormalities such as polyps, deviation and turbinate hypertrophy
• Obesity (AASM guidelines)
AME ASSESSMENT STATEMENT – OSA (Updated 08/30/2017)

AMEs who elect to perform an OSA assessment and find that the applicant does not meet the American Academy of Sleep Medicine (AASM) diagnostic criteria for OSA, must submit this statement to the FAA.

Airman/ Patient Name __________________  DOB: ____________

Reference Number (PI, MID, or App ID): ______________________

_____ (initial) I have performed an OSA assessment in accordance with AASM guidelines and have determined that there is no evidence of OSA requiring treatment at this time. (If a sleep study was performed it must be attached).

PHARMACEUTICALS
As an Examiner you are required to be aware of the regulations and Agency policy and have a responsibility to inform airmen of the potential adverse effects of medications and to counsel airmen regarding their use. There are numerous conditions that require the chronic use of medications that do not compromise aviation safety and, therefore, are permissible. Airmen who develop short-term, self-limited illnesses are best advised to avoid performing aviation duties while medications are used.

Aeromedical decision-making includes an analysis of the underlying disease or condition and treatment. The underlying disease has an equal and often greater influence upon the determination of aeromedical certification. It is unlikely that a source document could be developed and understood by airmen when considering the underlying medical condition(s), drug interactions, medication dosages, and the sheer volume of medications that need to be considered.

A list may encourage or facilitate an airmen’s self-determination of the risks posed by various medical conditions especially when combination therapy is used. A list is subject to misuse if used as the sole factor to determine certification eligibility or compliance with 14 CFR part 61.53, Prohibition of Operations During Medical Deficiencies. Maintaining a published list of “acceptable” medications is labor intensive and, in the final analysis, only partially answers the certification question and does not contribute to aviation safety.

**Do Not Issue - Do Not Fly** (Updated 01/27/2021)

The information in this section is provided to advise Aviation Medical Examiners (AMEs) about two medication issues:

- Medications for which they should not issue (DNI) applicants without clearance from the Federal Aviation Administration (FAA), AND
- Medications for which they should advise airmen to not fly (DNF) and provide additional safety information to the applicant.

The lists of medications in this section are not meant to be all-inclusive or comprehensive, but rather address the most common concerns.

For any medication, the AME should ascertain for what condition the medication is being used, how long, frequency, and any side effects of the medication. The safety impact of the underlying condition should also be considered. If there are any questions, please call the Regional Flight Surgeon’s (RFS) office or the Aerospace Medicine Certification Division (AMCD).

**Do Not Issue.** AMEs should not issue airmen medical certificates to applicants who are using these classes of medications or medications:

- **Angina medications**
  - nitrates (nitroglycerin, isosorbide dinitrate, imdur),
  - ranolazine (Ranexa).
- **Anticholinergics** (oral)
  - e.g: atropine, benztropine (Cogentin)
Guide for Aviation Medical Examiners

- **Cancer treatments** including chemotherapeutics, biologics, radiation therapy, etc., whether used for induction, “maintenance,” or suppressive therapy.
- **Controlled Substances** (Schedules I – V). An open prescription for chronic or intermittent use of any drug or substance.
  - This includes medical marijuana, even if legally allowed or prescribed under state law.
  - Note: for documented temporary use of a drug solely for a medical procedure or for a medical condition, and the medication has been discontinued, see below.
- **Diabetic medications**
  - NOT listed on the [Acceptable Combinations of Diabetes Medications](#).
  - pramlintide (Symlin)
- **Dopamine agonists** used for Parkinson’s disease or other medical conditions:
  - bromocriptine (Cycloset, Parlodel)
  - pramipexole (Mirapex), ropinirole (Requip), and
  - rotigotine (NeuPro)
- **FDA (Food and Drug Administration) approved less than 12 months ago**. The FAA requires at least one-year of post-marketing experience with a new drug before considering if for aeromedical certification purposes. New antibiotics, lipid-lowering drugs, and antihypertensive medications may be considered earlier than one year. Please contact the RFS or AMCD for guidance on specific applicants.
- **Hypertensive (centrally acting)** including but not limited to
  - clonidine
  - nitrates
  - guanabenz, methyldopa, and reserpine
- **Malaria** medication - mefloquine (Lariam)
- **Over-active bladder (OAB)/Antimuscarinic** medications as these carry strong warnings about potential for sedation and impaired cognition.
  - e.g.: tolterodine (Detrol),
  - oxybutynin (Ditropan),
  - solifenacin (Vesicare).
- **Psychiatric or Psychotropic medications**, (even when used for something other than a mental health condition) including but not limited to:
  - antidepressants (certain SSRI s may be allowed - see **SSRI policy**)
  - antianxiety drugs – e.g.: alprazolam (Xanax)
  - antipsychotics
  - attention deficit disorder (ADD) or attention deficit hyperactivity disorder (ADHD) medications
  - mood stabilizers
  - sedative-hypnotics
  - stimulants
  - tranquilizers
- **Seizure** medications, even if used for non-seizure conditions such as migraines
- **Smoking cessation aid** – e.g.: varenicline (Chantix)
- **Steroids, high dose** (greater than 20 mg prednisone or prednisone-equivalent per day)
- **Weight loss medications** – ex: combinations including phentermine or naltrexone.

**Do Not Fly.** Airmen should not fly while using any of the medications in the Do Not Issue section above or while using any of the medications or classes/groups of medications listed below without an acceptable wait time after the last dose. All of these medications may cause sedation (drowsiness) and impair cognitive function, seriously degrading pilot performance. This impairment can occur.
even when the individual feels alert and is apparently functioning normally - in other words, the airman can be “unaware of impair.”

For aviation safety, airmen should not fly following the last dose of any of the medications below until a period of time has elapsed equal to:

- 5-times the maximum pharmacologic half-life of the medication; or
- 5-times the maximum hour dose interval if pharmacologic half-life information is not available. For example, there is a 30-hour wait time for a medication that is taken every 4 to 6 hours (5 times 6)

**Label warnings.** Airmen should not fly while using any medication, prescription or OTC, that carries a label precaution or warning that it *may cause drowsiness or advises the user “be careful when driving a motor vehicle or operating machinery.”* This applies even if label states “until you know how the medication affects you” and even if the airman has used the medication before with no apparent adverse effect. Such medications can cause impairment even when the airman feels alert and unimpaired (see “unaware of impair” above).

- **Allergy medications:**
  - Sedating Antihistamines. These are found in many allergy and other types of medications and may NOT be used for flight. This applies to both nasal AND oral formulations.
  - Nonsedating antihistamines. Medications such as loratadine, desloratadine, and fexofenadine may be used while flying, if symptoms are controlled without adverse side effects after an adequate initial trial period.
- **Muscle relaxants:** This includes but is not limited to *carisoprodol (Soma)* and *cyclobenzaprine (Flexeril)*.
- **Over-the-Counter active dietary supplements** such as *Kava-Kava* and *Valerian*.
- **Pain medication:**
  - Narcotic pain relievers. This includes but is not limited to *morphine, codeine, oxycodone (Percodan, Oxycontin)*, and *hydrocodone (Lortab, Vicodin, etc.)*.
  - Non-narcotic pain relievers such as *tramadol (Ultram)*.
- **“Pre-medication” or “pre-procedure” drugs.** This includes all drugs used as an aid to outpatient surgical or dental procedures.
- **Sleep aids.** All the currently available sleep aids, both prescription and OTC, can cause impairment of mental processes and reaction times, even when the individual feels fully awake.
  - See *wait times* for currently available prescription sleep aids
  - Diphenhydramine (Benadryl) - Many OTC sleep aids contain diphenhydramine as the active ingredient. The wait time after diphenhydramine is 60 hours (based on maximum pharmacologic half-life).

For airmen seeking more information, see *“Medications and Flying”* and *“What Over The Counter Medications Can I Take and Still Be Safe to Fly?”*
The list of medications referenced below provides aeromedical guidance about specific medications or classes of pharmaceutical preparations and is applied by using sound aeromedical clinical judgment. This list is not meant to be totally inclusive or comprehensive. No independent interpretation of the FAA’s position with respect to a medication included or excluded from the following should be assumed.

**ACNE MEDICATIONS**

**ALLERGY** – Antihistamines

**ALLERGY** – Immunotherapy

**ANTACIDS**

**ANTICOAGULANTS**

**ANTIDEPRESSANTS**

**ANTIHYPERTENSIVE**

ACNE MEDICATIONS

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(c)
   Second-Class Airman Medical Certificate: 67.213(c)
   Third-Class Airman Medical Certificate: 67.313(c)

II. MEDICAL HISTORY:

   Topical acne medications, such as Retin A, and oral antibiotics, such as tetracycline, used for acne are acceptable if the applicant is otherwise qualified.

   For applicants using oral isotretinoin (Accutane), there is a mandatory 2-week waiting period after starting isotretinoin prior to consideration. This medication can be associated with vision and psychiatric side effects of aeromedical concern - specifically decreased night vision/night blindness and depression. These side-effects can occur even after cessation of isotretinoin. A report must be provided with detailed, specific comment on presence or absence of psychiatric and vision side-effects. The AME must document these findings in Block 60, Comments on History and Findings. Some applicants will have to be deferred. For applicants issued, there must be a “NOT VALID FOR NIGHT FLYING” restriction on the medical certificate. A waiting period and detailed information is required to remove this restriction. The restriction cannot be removed until all the requirements are met. See Pharmaceutical Considerations below.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 40, Skin.

IV. PROTOCOL: N/A

V. PHARMACEUTICAL CONSIDERATIONS:
   - Use of oral isotretinoin must be permanently discontinued for at least 2 weeks prior to consideration date (confirmed by the prescribing physician) and;
   - Eye evaluation must be done in accordance with specifications in 8500-7 and;
   - The airman must provide a signed statement of discontinuation that:
     - Confirms the absence of any visual disturbances and psychiatric symptoms, and
     - Acknowledges requirement to notify the FAA and obtain clearance prior to performing any aviation safety-related duties if use of isotretinoin is resumed
ALLERGY – ANTIHISTAMINES

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.105(b)(c)
   Second-Class Airman Medical Certificate: 67.205(b)(c)
   Third-Class Airman Medical Certificate: 67.305(b)(c)

II. MEDICAL HISTORY: Item 18.e., Hay fever or allergy
   The applicant should report frequency and duration of symptoms, any incapacitation by the condition, treatment, and side effects. The Examiner should inquire whether the applicant has ever experienced any barotitis ("ear block"), barosinusitis, alternobaric vertigo, or any other symptoms that could interfere with aviation safety.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 26, Nose
   Also, see Aerospace Medical Disposition table and Item 35, Lungs and Chest

IV. PROTOCOL: See Disease Protocols – Allergies, Severe

V. PHARMACEUTICAL CONSIDERATIONS:
   For hay fever requiring antihistamines:
   - The nonsedating antihistamines loratadine, desloratadine, and fexofenadine may be used while flying if, after an adequate initial "trial period," symptoms are controlled without adverse side effects.
   - Applicants with seasonal allergies requiring any other antihistamine (oral and/or nasal) may be certified by the examiner only as follows:
     - With the stipulation that they do not exercise the privileges of airman certificate while taking the medication, AND
     - Wait after the last dose until either:
       o At least five maximal dosing intervals* have passed. For example, if the medication is taken every 4-6 hours, wait 30 hours (5x6) after the last dose to fly, or,
       o At least five times the maximum terminal elimination half-life has passed. For example, if the medication half-life* is 6-8 hours, wait 40 hours (5x8) after the last dose to fly.

   * Examiners are encouraged to look up the dosing intervals and half-life.

   - For hay fever controlled by Desensitization, AME must warn airman to not operate aircraft until four hours after each injection.
   - Airmen who are exhibiting symptoms, regardless of the treatment used, must not fly.
   In all situations, the examiner must notate the evaluation data in Block 60.
ALLERGY – IMMUNOTHERAPY (Updated 02/22/2017)

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.105(b)(c)
   Second-Class Airman Medical Certificate: 67.205(b)(c)
   Third-Class Airman Medical Certificate: 67.305(b)(c)

II. MEDICAL HISTORY: Item 18.e., Hay fever or allergy.
    The applicant should report frequency and duration of symptoms, any incapacitation by the
    condition, treatment, and side effects. The Examiner should inquire whether the applicant
    has ever experienced any barotitis (“ear block”), barosinusitis, alternobaric vertigo, or any
    other symptoms that could interfere with aviation safety.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 26, Nose, Aerospace
    Medical Disposition table
    Also, see Aerospace Medical Disposition table and Item 35, Lungs and Chest

IV. PROTOCOL - See Disease Protocols – Allergies, Severe

V. PHARMACEUTICAL CONSIDERATIONS

   • Allergy Shots: For conditions controlled by desensitization, AME must warn the
     airman to not operate aircraft until four hours after each injection.

   • Sublingual immunotherapy (SLIT) used for allergic rhinitis is acceptable.
     o Allowed with a 24-hour no fly after the first dose each season AND;
     o A 4-hour no fly after each subsequent dose.
     o Not allowed in airmen 65 or older who have a diagnosis of asthma which
       does not meet CACI criteria.
     o Airman should confirm with the treating physician that the airman is not
       taking any other medication(s) that would impair the effectiveness of
       epinephrine, should it be needed, or increase the risk of heart rhythm
       disturbances.
ANTACIDS

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(b)(c)
   Second-Class Airman Medical Certificate: 67.213(b)(c)
   Third-Class Airman Medical Certificate: 67.313(b)(c)

II. MEDICAL HISTORY: Item 18.i., Stomach, liver, or intestinal trouble.
The applicant should provide history and treatment, pertinent medical records, current status report, and medication. If a surgical procedure was done, the applicant must provide operative and pathology reports.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 38, Abdomen and Viscera, Aerospace Medical Disposition Table.

IV. PROTOCOL: See Peptic Ulcer

V. PHARMACEUTICAL CONSIDERATIONS
   The prophylactic use of medications including simple antacids, H-2 inhibitors or blockers, proton pump inhibitors, and/or sucralfates may not be disqualifying, if free from side effects.
ANTICOAGULANTS  (Updated 08/26/2020)

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(b)(c)
   Second-Class Airman Medical Certificate: 67.213(b)(c)
   Third-Class Airman Medical Certificate: 67.313(b)(c)

II. MEDICAL HISTORY: Item 18.g. Heart or vascular trouble.
The applicant should describe the condition to include, dates, symptoms, treatment, and provide medical reports to assist in the certification decision-making process. These reports should include, as indicated by the applicable underlying condition(s) and class applied for: 24-hour Holter monitor, operative reports of any coronary intervention (including the original cardiac catheterization report), stress tests (including worksheets and original tracings or a legible copy). For myocardial perfusion imaging, we require the interpretive report and copies of the actual images in both grey-scale and color (in digital format or hard copy.) Per Part 67, for all classes of medical certificates, there is cause for denial if there is an established medical history or clinical diagnosis of myocardial infarction, angina pectoris, cardiac valve replacement, permanent cardiac pacemaker implantation, heart replacement, or coronary heart disease (CHD) that has required treatment (or if untreated, that has been symptomatic or clinically significant).

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 36, Heart, Aerospace Medical Disposition table

IV. PROTOCOL: As per the specific underlying condition(s), see Disease Protocols

V. PHARMACEUTICAL CONSIDERATIONS

Warfarin (Coumadin):
For applicants who are just beginning warfarin (Coumadin) treatment the following is required:
- Minimum observation time of 6 weeks after initiation of warfarin therapy;
- Must also meet any required observation time for the underlying condition; AND
- 6 INRs, no more frequently than 1 per week

For applicants who are on an established use of warfarin (Coumadin), status report from the treating physician should address and include:
- Drug dose history and schedule;
- Comment regarding side effects; AND
- A minimum of monthly International Normalized Ratio (INRs) results for the immediate prior 6 months.

NOAC/DOACs: For applicants who are just beginning treatment with NOAC/DOACs, the following is required:
- Minimum observation time of 2 weeks after initiation of therapy; AND
- Must also meet any required observation time for the underlying condition

For Non-Valvular Atrial Fibrillation (AFib) – see Emboli Mitigation on the following page.
EMBOLI MITIGATION IN NON-VALVULAR
ATRIAL FIBRILLATION (AFIB)
(Updated 8/26/2020)

The CHA2DS2-VASc score is used to estimate thromboembolic risk in atrial fibrillation and inform emboli mitigation requirements. Annual stroke risk increases with increasing score. The following emboli mitigation strategies are acceptable for FAA medical certificate purposes:

<table>
<thead>
<tr>
<th>CHA2DS2-VASc Score</th>
<th>Required Emboli Mitigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 or higher</td>
<td>Coumadin/warfarin; or NOAC/DOAC or LAA closure</td>

**Warfarin (Coumadin):** For applicants who are just beginning warfarin (Coumadin) treatment the following is required:
- Minimum observation time of 6 weeks after initiation of warfarin therapy;
- Must also meet any required observation time for the underlying condition; AND
- 6 INRs, no more frequently than 1 per week
  - 80% or more of INR values should be between 2.0 and 3.0.
  - When used for heart valves, INR goal should be in accordance with standard of care for that type of valve: and
  - If INR is outside this target range, the physician should explain.

**NOAC/DOACs:** For applicants who are just beginning treatment the following is required:
- Minimum observation time of 2 weeks after initiation of therapy; AND
- Must also meet any required observation time for the underlying condition.
ANTIDEPRESSANTS

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.107
   Second-Class Airman Medical Certificate: 67.207
   Third-Class Airman Medical Certificate: 67.307

II. MEDICAL HISTORY: Item 18.m., Mental disorders of any sort; depression, anxiety, etc.

   An affirmative answer to Item 18.m. requires investigation through supplemental history taking. Dispositions will vary according to the details obtained. An applicant with an established history of a personality disorder that is severe enough to have repeatedly manifested itself by overt acts, a psychosis disorder, or a bipolar disorder must be denied or deferred by the Examiner.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 47., Psychiatric, Aerospace Medical Disposition table.

IV. PROTOCOL: See Aerospace Medical Dispositions, Item 47., Psychiatric Conditions

V. PHARMACEUTICAL CONSIDERATIONS
   The use of a psychotropic drug is disqualifying for aeromedical certification purposes – this includes all antidepressant drugs, including selective serotonin reuptake inhibitors (SSRIs). However, the FAA has determined that airmen requesting first, second, or third class medical certificates while being treated with one of four specific SSRIs may be considered (see Item 47., Psychiatric Conditions – Use of Antidepressant Medications). The Authorization decision is made on a case-by-case basis. The Examiner may not issue.
ANTIHYPERTENSIVE
(Updated 10/28/2015)

I. CODE OF FEDERAL REGULATIONS
First-Class Airman Medical Certificate: 67.113(b)(c)
Second-Class Airman Medical Certificate: 67.213(b)(c)
Third-Class Airman Medical Certificate: 67.313(b)(c)

II. MEDICAL HISTORY: Item 18.h., High or low blood pressure.

III. AEROMEDICAL DECISION CONSIDERATIONS:
See Item 36. Heart, Hypertension
Also see Item 55. Blood Pressure

IV. PROTOCOL: N/A. See Hypertension Disposition table

V. PHARMACEUTICAL CONSIDERATIONS
- Seven-day (7) no fly/ground trial is required when starting a new hypertension (HTN) medication to verify no side effects.
- AME should issue (if otherwise qualified) if the airmen is on 3 or fewer medications
- Uses of beta-adrenergic blockers ARE allowed with insulin, meglitinides, or sulfonylureas.

### ACCEPTABLE HTN Medications
(when certification criteria are met)

| ✓ Alpha adrenergic blockers | ✓ Calcium channel blockers |
| ✓ Angiotensin converting enzyme (ACE) inhibitors | ✓ Direct renin inhibitors |
| ✓ Angiotensin II receptor antagonists (ARBs) | ✓ Direct vasodilators |
| ✓ Beta-adrenergic blockers | ✓ Diuretics |

### UNACCEPTABLE HTN Medications
(as a single agent or in any combination product)

**DO NOT ISSUE**

- Clonidine (ex. Catapres/Clorpres)
- guanabenz
- guanfacine/Tenex
- methyldopa
- Nitrates (ex. nitroglycerin/isosorbide dinitrate/isosorbide mononitrate)
- reserpine
CONTRACEPTIVES AND HORMONE REPLACEMENT THERAPY

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(b)(c)
   Second-Class Airman Medical Certificate: 67.213(b)(c)
   Third-Class Airman Medical Certificate: 67.313(b)(c)

II. MEDICAL HISTORY: Use of Oral or Repository Contraceptives or Hormonal Replacement Therapy are not disqualifying for medical certification. If the applicant is experiencing no adverse symptoms or reactions to hormones and is otherwise qualified, the Examiner may issue the desired certificate.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Medical History above and Item 48., General Systemic, Gender Dysphoria

IV. PROTOCOL: N/A

V. PHARMACEUTICAL CONSIDERATIONS: See Medical History above.
DIABETES MELLITUS - INSULIN TREATED

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(a)(b)(c)
   Second-Class Airman Medical Certificate: 67.213(a)(b)(c)
   Third-Class Airman Medical Certificate: 67.313(a)(b)(c)

II. MEDICAL HISTORY: Item 18.k., Diabetes.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 48, General Systemic Aerospace Medical Disposition table.

IV. PROTOCOL: See Diabetes Mellitus Type I or Type II - Insulin-Treated Protocol

V. PHARMACEUTICAL CONSIDERATIONS
   • Insulin pumps are an acceptable form of treatment.
   • Combinations of anti-diabetes medication (s): The chart of Acceptable Combinations of Diabetes Medications (pdf) summarizes the acceptable medications for both monotherapy and combination therapy. The chart organizes medications into groups based on similarity of mechanisms of actions and/or therapeutic effects.
DIABETES MELLITUS TYPE II - MEDICATION CONTROLLED (NOT INSULIN)

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113 (a)(b)(c)
   Second-Class Airman Medical Certificate: 67.213(a)(b)(c)
   Third-Class Airman Medical Certificate: 67.313(a)(b)(c)

II. MEDICAL HISTORY:  Item 18.k. Diabetes.
   The applicant should describe the condition to include symptoms and treatment. Comment on the presence or absence of hyperglycemic and/or hypoglycemic episodes. A medical history or clinical diagnosis of diabetes mellitus requiring insulin or other hypoglycemic drugs for control is disqualifying. The Examiner can help expedite the FAA review by assisting the applicant in gathering medical records and submitting a current specialty report such as the DIABETES or HYPERGLYCEMIA ON ORAL MEDICATIONS STATUS REPORT. See Item 48, Diabetes

III. AEROMEDICAL DECISION CONSIDERATIONS:  See Item 48, Diabetes

IV. DISEASE PROTOCOL: See Diabetes Mellitus Type II - Medication Controlled

V. PHARMACEUTICAL CONSIDERATIONS: Combinations of anti-diabetes medication(s):
   The chart of Acceptable Combinations of Diabetes Medications (pdf) summarizes the acceptable medications for both monotherapy and combination therapy. The chart organizes medications into groups based on similarity of mechanisms of actions and/or therapeutic effects.
**ACCEPTABLE COMBINATIONS OF DIABETES MEDICATIONS**
(Updated 01/27/2021)

The chart on the following page outlines acceptable combinations of medications for treatment of diabetes.

Please note:

- Initial certification of all applicants with diabetes mellitus (DM) requires FAA decision;
- **Use no more than one medication from each group (A-F);**
- Fixed-dose combination medications - **count each component** as an individual medication. (e.g., Avandamet [rosiglitazone + metformin] is considered 2-drug components);
- **Up to 3 medications total** are considered acceptable for routine treatment according to generally accepted standards of care for diabetes (American Diabetes Association, American Association of Clinical Endocrinologists);
- For applicants receiving complex care (e.g., 4-drug therapy), refer the case to AMCD;
- For applicants on AASI for diabetes mellitus, follow the AASI;
- Consult with FAA for any medications not on listed on the chart;
- Observation times:

When initiating NEW diabetes therapy using monotherapy or combination medications:

<table>
<thead>
<tr>
<th>Adding Medication</th>
<th>Observation Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group A ONLY</td>
<td>14 days</td>
</tr>
<tr>
<td>Group B-D</td>
<td>30 days</td>
</tr>
<tr>
<td>Group E1</td>
<td>60 days</td>
</tr>
</tbody>
</table>

When ADDING a new medication to an ESTABLISHED TREATMENT regimen:

<table>
<thead>
<tr>
<th>Current Medication</th>
<th>Adding Medication</th>
<th>Observation Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>on Group A-D</td>
<td>+ new Group A-D</td>
<td>14 days</td>
</tr>
<tr>
<td>on Group E1</td>
<td>+ new Group A-D</td>
<td>30 days</td>
</tr>
<tr>
<td>on Group A-D</td>
<td>+ new Group E1</td>
<td>60 days</td>
</tr>
</tbody>
</table>

Note: If transitioning between injectable GLP-1 RA and oral GLP-1 RA formulation = 72 hours

When initiating NEW or ADDING therapy for any regimen (new or established therapy):

<table>
<thead>
<tr>
<th>Adding Medication</th>
<th>Observation Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group F (SGLT2 inhibitors)</td>
<td>90 days</td>
</tr>
<tr>
<td>Group E2 (insulin):</td>
<td></td>
</tr>
<tr>
<td></td>
<td>90 days</td>
</tr>
</tbody>
</table>

- For agency ATCSs (non-CGM or CGM protocol)
- For Pilots / Part 67 applicants, class 3 non-CGM protocol only:
  - For Pilots / Part 67 applicants, any class CGM protocol:
ACCEPTABLE COMBINATIONS OF DIABETES MEDICATIONS
(Updated 01/27/2021)

A. Biguanides
- metformin (e.g. Glucophage, Fortamet, Glutetza, Romet)

B. Thiazolidinediones (TZD)
- pioglitazone (Actos)
- rosiglitazone (Avandia)

C. GLP1 mimetics
- albiglutide (Tanzeum)
- dulaglutide (Trulicity)
- exenatide (Byetta)
- exenatide-ED (Bydureon)
- liraglutide (Victoza)
- lixisenatide (Adlyxin)
- semaglutide (Ozempic, Rybelsus)

D. DDP4
- alogliptin (Nesina)
- linagliptin (Tradjenta)
- saxagliptin (Onglyza)
- sitagliptin (Januvia)

E. Meglitinides
- nateglinide (Starlix)
- repaglinide (Prandin)

F. Sulfonylureas (SFU)
- chlorpropamide (Diabenase)
- glimepiride (Amaryl)
- glipizide (Glucotrol)
- glyburide (Diabeta)
- tolbutamide (Orinase)
- tolfazamide (Tolinase)
- gliclazide (Diamicron) - International

Note: Amylinomimetics e.g., pramlintide (Symlin) are NOT considered acceptable for medical certification.

Group C not allowed with Meglitinides
Meglitinides not allowed with Group C
SGLT2 inhibitors not allowed with Group E

USE NO MORE THAN 1 MEDICATION FROM ANY GROUP (A-F)

OR

Insulin
- All forms
- Initial certification requires FAA decision

SGLT2 Inhibitors
- canagliflozin (Invokana)
- dapagliflozin (Farxiga)
- empagliflozin (Jardiance)
- ertugliflozin (Steglatro)
ERECTILE DYSFUNCTION AND BENIGN PROSTATIC HYPERPLASIA MEDICATIONS
(Updated 08/30/2017)

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(c)
   Second-Class Airman Medical Certificate: 67.213(c)
   Third-Class Airman Medical Certificate: 67.313(c)

II. MEDICAL HISTORY: Use of medication for erectile dysfunction (ED) and/or benign prostatic hyperplasia (BPH) may not be disqualifying for medical certification if there are no side effects, the underlying condition is not aeromedically significant, and the applicant is otherwise qualified. If the medication is used for any other condition, do not issue – FAA approval is required.

IV. PROTOCOL: N/A

V. PHARMACEUTICAL CONSIDERATIONS: The use of medications below for G-U conditions including ED and BPH may not be disqualifying, if free from side effects. For the required minimum wait time after use, see the table below.

If the medications below are used for any other non G-U condition (e.g., pulmonary arterial hypertension [PAH]) the examiner must defer issuance of a medical certificate.

- Alpha blockers are allowed for daily use if there no side effects. No minimum wait time is required after use once the airman has successfully passed the 7-day ground trial period required for all hypertension medication.
- If alpha blockers are used in combination with PDE5 inhibitors (common examples are listed below), the airman should not fly until verification that no hypotensive episodes or other side effects are noted.
- Nitrates are not allowed.

<table>
<thead>

GLAUCOMA MEDICATIONS
(Updated 04/26/2017)

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(b)(c)
   Second-Class Airman Medical Certificate: 67.213 (b)(c)
   Third-Class Airman Medical Certificate: 67.313(b)(c)

II. MEDICAL HISTORY: Item 18.,d, Medical History, Eye or vision trouble except glasses. The applicant should provide history and treatment, pertinent medical records, current status report, and medication and dosage.

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 32, Ophthalmoscopic

IV. PROTOCOL: N/A

V. PHARMACEUTICAL CONSIDERATIONS

Applicants using miotic or mydriatic eye drops or taking an oral medication for glaucoma may be considered for Special Issuance certification following their demonstration of adequate control.

These medications do not qualify for the CACI program. Miotics such as pilocarpine cause pupillary constriction and could conceivably interfere with night vision. Although the FAA no longer routinely prohibits pilots who use such medications from flying at night, it may be worthwhile for the Examiner to discuss this aspect of the use of miotics with applicants. If considerable disturbance in night vision is documented, the FAA may limit the medical certificate: NOT VALID FOR NIGHT FLYING.

.
MALARIA MEDICATIONS
(Updated 04/27/2016)

I. CODE OF FEDERAL REGULATIONS
First-Class Airman Medical Certificate: 67.113(c)
Second-Class Airman Medical Certificate: 67.213(c)
Third-Class Airman Medical Certificate: 67.313(c)

II. MEDICAL HISTORY: This medication is absolutely disqualifying for pilots. Mefloquine (Lariam) is associated with adverse neuropsychiatric side-effects, even weeks after the drug is discontinued. Because of the association with adverse neuropsychiatric side-effects, even weeks after discontinuation, a pilot who elects to use mefloquine for malaria prophylaxis or who contracts malaria and is treated with mefloquine will be disqualified for pilot duties for the duration of use of mefloquine and for 4 weeks after the last dose. In this instance, the pilot must contact the FAA or his/her Aviation Medical Examiner prior to returning to flight duties after use.

III. AEROMEDICAL DECISION CONSIDERATIONS: For return to pilot duties there must be no history of neurologic or psychiatric symptoms during and or after mefloquine use. Examples of symptoms related to mefloquine use include: dizziness or vertigo, tinnitus, and loss of balance; anxiety, paranoia, depression, restlessness or confusion, hallucinations and psychotic behavior.

IV. PROTOCOL: N/A

V. PHARMACEUTICAL CONSIDERATIONS:
- Use of mefloquine must be discontinued for at least 4 weeks prior to consideration and:
- The airman must contact the FAA agency flight surgeon or their AME before resuming pilot duties
- For return to pilot duties there must be no history of neurologic or psychiatric symptoms during and or after mefloquine use
SEDATIVES
(Updated 06/24/2020)

I. CODE OF FEDERAL REGULATIONS
First-Class Airman Medical Certificate: 67.107
Second-Class Airman Medical Certificate: 67.207
Third-Class Airman Medical Certificate: 67.307

II. MEDICAL HISTORY and CONVICTIONS OR ADMINISTRATIVE ACTIONS.
Medical History: Item 18.n., Substance Dependence; or failed a drug test ever; or substance abuse or use of illegal substance in the last 2 years.

"Substance" includes alcohol and other drugs (e.g., PCP, sedatives and hypnotics, anxiolytics, marijuana, cocaine, opioids, amphetamines, hallucinogens, and other psychoactive drugs or chemicals). For a "yes" answer to Item 18.n., the Examiner should obtain a detailed description of the history. A history of substance dependence or abuse is disqualifying. The Examiner must defer issuance of a certificate if there is doubt concerning an applicant's substance use.

Convictions or Administrative Actions: Item 18.v. Medical History v. History of Arrest(s), Conviction(s) and/or Administrative Action(s)

Arrest(s), conviction(s), and/or administrative action(s) affecting driving privileges may raise questions about the applicant's qualifications for airman medical certification. All incidents must be reported (even if reported on a previous application), to include even a single driving while intoxicated (DWI) arrest, conviction and/or administrative action. Incidents reported under 18.v. are just part of many factors considered in the overall process of medical certification. See Substances of Dependence/Abuse

NOTE: Checking yes does not relieve the airman of responsibility to report each motor vehicle action to Security. Also, remind the airman that once he/she has checked yes to any item in #18, especially items 18 n., 18 o. or 18 v., they must ALWAYS mark yes to these numbers, even if the condition has been reviewed and granted an eligibility letter from the FAA

III. AEROMEDICAL DECISION CONSIDERATIONS: See Item 47., Psychiatric, Aerospace Medical Disposition table.

IV. PROTOCOL: See Substances of Dependence/Abuse

V. PHARMACEUTICAL CONSIDERATIONS

A. Aerospace Medical Dispositions, Item 47. Psychiatric Conditions
SLEEP AIDS
(Updated 07/29/2020)

I. CODE OF FEDERAL REGULATIONS
   First-Class Airman Medical Certificate: 67.113(c)
   Second-Class Airman Medical Certificate: 67.213(c)
   Third-Class Airman Medical Certificate: 67.313(c)

II. MEDICAL HISTORY: Use of sleep aids is a potential risk to aviation safety due to effects of the sleep aid itself or the underlying reason/condition for using the sleep aid.

All the currently available sleep aids, both prescription and over the counter, can cause impairment of mental processes and reaction times, even when the individual feels fully awake. (As examples, see the Food and Drug Administration drug safety communications on zolpidem and eszopiclone)

Medical conditions that chronically interfere with sleep are disqualifying regardless of whether a sleep aid is used or not. Examples may include primary sleep disorders (e.g., insomnia, sleep apnea) or psychological disorders (e.g., anxiety, depression). While sleep aids may be appropriate and effective for short term symptomatic relief, the primary concern should be the diagnosis, treatment, and resolution of the underlying condition before clearance for aviation duties.

Occasional or limited use of sleep aids, such as for circadian rhythm disruption in commercial air operations, is allowable for pilots. Daily/nightly use of sleep aids is not allowed regardless of the underlying cause or reason. See Pharmaceutical Considerations below.

III. AEROMEDICAL DECISION CONSIDERATIONS: N/A

IV. PROTOCOL: N/A

V. PHARMACEUTICAL CONSIDERATIONS:

Because of the potential for impairment, we require a minimum wait time between the last dose of a sleep aid and performing pilot duties. This wait time is based on the pharmacologic elimination half-life of the drug (half-life is the time it takes to clear half of the absorbed dose from the body). The minimum required wait time after the last dose of a sleep aid is 5-times the maximum elimination half-life.

The table on the following page lists several commonly prescribed sleep aids along with the required minimum wait times for each.
## SLEEP AID WAIT TIMES

<table>

SPECIAL ISSUANCES

AASIs for ALL CLASSES

AASI COVERSHEET
Authorization for Special Issuance of a Medical Certificate and AME Assisted Special Issuance (AASI)

A. Special Issuance.
At his discretion, the Federal Air Surgeon may grant an Authorization for Special Issuance of a Medical Certificate (Authorization), with a specified validity period, to an applicant who does not meet the established medical standards. The applicant must demonstrate to the satisfaction of the Federal Air Surgeon that the duties authorized by the class of medical certificate applied for can be performed without endangering public safety for the validity period of the Authorization. The Federal Air Surgeon may authorize a special medical flight test, practical test, or medical evaluation for this purpose. An airman medical certificate issued under the provisions of an Authorization expires no later than the Authorization expiration date or upon its withdrawal. An airman must again show to the satisfaction of the Federal Air Surgeon that the duties authorized by the class of medical certificate applied for can be performed without endangering public safety in order to obtain a new airman medical certificate/Authorization under Title 14 of the Code of Federal Regulations (14 CFR) §67.401.

B. AME Assisted Special Issuance (AASI).
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization to an applicant who has a medical condition that is disqualifying under 14 CFR Part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the requisite medical information required for determination. Examiners may not issue initial Authorizations. An Examiner's decision or determination is subject to review by the FAA.
AME Assisted Special Issuance (AASI)
(Updated 01/27/2021)

The following pages of the Guide for Aviation Medical Examiners introduce the AME Assisted Special Issuance (AASI) process.

The Guide refers to a number of selected medical conditions that are initially disqualifying (if the applicant does not meet the issue criteria in the Aerospace Medicine Dispositions Tables or the Certification Worksheets) and must be deferred to the AMCD or RFS. If this is a first-time application for an AASI for a disqualifying disease/condition, and the applicant has all of the requisite medical information necessary for a determination, the Examiner must defer, and submit all of the documentation to the AMCD or your RFS.

Following the granting of an Authorization for Special Issuance of a Medical Certificate (Authorization) by the AMCD or RFS, an Examiner may reissue a medical certificate to an applicant with a medical history of an initially disqualifying condition once the AASI's specialized criteria is met and the applicant is otherwise qualified.

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments which specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- The type of arthritis or psoriasis;
- A general assessment of the condition and its effect on daily activities;
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects; and
- For arthritis - comments regarding range of motion of neck, upper and lower extremities, hands, etc.

The Examiner must defer to the AMCD or Region if:

- The applicant has developed any associated systemic manifestations;
- For arthritis - new joints have become involved;
- The applicant required change in medication used for control of the disease; or
- The applicant is taking steroid doses equivalent to more than 20 mg of prednisone per day (steroid conversion calculator)
AASI FOR ASTHMA

**Note:** If the applicant has mild symptoms that are infrequent, have not required hospitalization, or use of steroid medication, and no symptoms in flight, the Examiner may issue an airman medical certificate. See Item 35., Lungs and Chest Aerospace Medical Disposition.

If the applicant does not meet the above criteria, the Examiner must follow the AASI process.

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- The applicant’s current medical status that addresses frequency of attacks and whether the attacks have resulted in emergency room visits or hospitalizations;
- The Examiner should caution the applicant to cease flying with any exacerbation as warned in § 61.53;
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects; and
- Results of pulmonary function testing, if deemed necessary, performed within the last 90 days

The Examiner must defer to the AMCD or Region if:

- The symptoms worsen;
- There has been an increase in frequency of emergency room, hospital, or outpatient visits;
- The FEV1 is less than 70% predicted value;
- The applicant requires 3 or more medications for stabilization; or
- The applicant is taking steroid doses equivalent to more than 20 mg of prednisone per day ([steroid conversion calculator](#))
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A report of a minimum 24-hour cardiac monitor performed within last 90 days. (Cardiac monitor report must be submitted, even if findings are normal, and should include 1-page computerized summary and the representative full-scale multi-lead ECG tracings);
- A completed FAA Atrial Fibrillation (AFib)/A-Flutter Recertification Status Report OR a cardiologist evaluation that addresses all items on the recertification status report; and
- The above data verifies:
  - No interval evidence or suspicion of stroke, TIA, or other thromboembolic event.
  - Heart rate is well controlled on cardiac monitor by cardiologist interpretation.
  - If symptom, rate, or rhythm control is indicated and, if so, a description of how it this is managed.
  - When CHA2DS2-VASc score ≥ 2, verify emboli mitigation is in place without side effects. See Pharmaceuticals – Anticoagulants - Emboli Mitigation.

The Examiner must defer to the AMCD or Region if:

- Applicant had left atrial appendage (LAA) occlusion (Watchman)/excision or developed a new cardiac condition;
- There has been an interval definitive or suspicious thromboembolic event;
- Cardiology interpretation indicates questionable or poor rate control. Average heart rate is > 100, maximum (non-exercise) is >120, or a single pause is > 3 seconds;
- Evidence that symptoms, rate, or rhythms are not well controlled;
- CHA2DS2-VASc is ≥ 2 and emboli not mitigated; (Acceptable emboli mitigation under AASI authorization is anti-coagulation with either NOAC/DOAC/warfarin. When using warfarin/Coumadin, if more than 20% of INR values are less than 2.0 or greater than 3.); and/or
- Interval bleeding that required medical intervention.
AASI FOR BLADDER CANCER

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA; and
- A current status report performed within 90 days that must include all the required followup items and studies as listed in the Authorization letter and that confirms absence of recurrent disease

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence of the cancer; or
- Any new treatment is initiated
AASI FOR BREAST CANCER

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA; and
- A current status report performed within the last 90 days that must include all the required followup items and studies as listed in the Authorization letter and that confirms absence of recurrent disease.

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence of the cancer; or
- Any new treatment is initiated.
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- Authorization granted by the FAA
- ECG - Required annually.
- Echo - Current 2D echo cardiogram performed within 90 days
- INRs for Mechanical Heart Values - A minimum of monthly International Normalized Ratio (INR) results for the immediate prior six months
- Status report - performed within the past 90 days in accordance with the CHD Protocol

The AME must defer medical certification if the applicant has:

- Additional valve procedure performed;
- Any other disqualifying medical conditions or therapy not previously reported;
- Any other reason for not renewing an AASI;
- Arrhythmia, new onset, such as of atrial fibrillation/flutter, ventricular bigeminy, ventricular tachycardia, Mobitz Type II or greater AV block, complete heart block, RBBB, LBBB, or LVH
- Bleeding that required medical intervention or other;
- Echo reveals:

<table>
<thead>
<tr>
<th>Condition</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any valve</td>
<td>Perivalvular leaking</td>
</tr>
<tr>
<td>Aortic Valve</td>
<td>Area post procedure is less than 1.0 cm²</td>
</tr>
<tr>

<td>Peak gradient level is 60 mmHg or more</td>
</tr>
<tr>
<td></td>
<td>Mean gradient is 40 mmHg or more</td>
</tr>
<tr>
<td>Mitral Valve</td>
<td>Any evidence of worsening of mitral valve regurgitation or stenosis in narrative</td>
</tr>
</tbody>
</table>

- Emboli or thrombosis develop
- INR - More than 20% of INR values are less than 2.5 or greater than 3.5.
  - In select cases of a Bileaflet (St. Jude) valve in the aortic position, INR values between 2.0 and 3.0 may be accepted (check with FAA)
- New Event - Has another event, develops a new condition or identification of an additional cardiac condition not previously reported
AASI FOR CHRONIC KIDNEY DISEASE (CKD)
(Updated 11/25/2015)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A current status report from the treating physician detailing:
  - How long the condition has been stable and asymptomatic;
  - If there has been any significant change in eGFR or renal function;
  - Any interval development of other complications or abnormal physical exam findings (such as diabetes, uncontrolled HTN, or clinically significant proteinuria);
  - Most recent lab results including eGFR, creatinine, hemoglobin, hematocrit and urine albumin or ACR;
  - The name and dosage of medication(s) and presence or absence of any side effects; and
  - Statement from the treating physician if there is any evidence of cardiovascular disease

The Examiner must defer to the AMCD or Region if:

- The condition is no longer stable (per the treating physician note);
- Dialysis has been started or transplant has occurred;
- The airman is taking a medication that is not acceptable (See Pharmaceuticals — Antihypertensive) or has aeromedically significant side effects from the medication;
- Anemia with hemoglobin less than 10 gm/dL or hematocrit less than 30% is present; or
- The eGFR is 29 or less; (if this occurs, the airman will need to submit additional testing to show stability [such as inulin clearance testing, creatinine clearance testing, or a 24-hour urine creatinine result] and the nephrologist’s clinical interpretation of results, prognosis, and plan for follow up).
AASI FOR CHRONIC LYMPHOCYTIC LEUKEMIA (CLL)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A clinical followup report from the treating physician that includes an update of the condition of the applicant since the last examination; and
- The results of any applicable laboratory results, including a complete blood count performed within the last 90 days.

The Examiner must defer to the AMCD or Region if:

- The condition currently requires treatment with a chemotherapeutic agent; or
- The white blood cell count has risen above 80,000; or
- Any new treatment is initiated
AASI FOR
CHRONIC OBSTRUCTIVE PULMONARY DISEASE (COPD)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A statement regarding symptomatology of the condition;
- A statement addressing any associated illnesses, such as heart failure;
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects; and
- A pulmonary specialist evaluation that includes the results of a current pulmonary function test, performed within the last 90 days

The Examiner must defer to the AMCD or Region if:

- The FEV1 or FEV1/FVC is less than 70%;
- The applicant has developed an associated cardiac condition, or
- The applicant is taking steroid doses equivalent to more than 20 mg of prednisone per day (steroid conversion calculator)
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A statement regarding the extent of disease;
- A statement regarding the frequency of exacerbation (the applicant should cease flying with any exacerbation as warned in § 61.53); and
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects.

The Examiner must defer to the AMCD or Region if:

- There is a current exacerbation of the illness;
- The applicant is taking medications such as Lomotil, steroid doses equivalent to more than 20 mg of prednisone per day (steroid conversion calculator), antispasmodics, and anticholinergics; or
- The pattern of exacerbations is increasing in frequency or severity; or applicant underwent surgical intervention.
AASI FOR COLON/COLORECTAL CANCER

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA; and
- An update of the status of the malignancy since the last FAA medical examination, to include the results of a current (performed within the last 90 days) carcinoembryonic antigen (CEA), if a baseline value is available.

The Examiner must defer to the AMCD or Region if:

- There has been any progression of the disease or an increase in CEA or
- Any new treatment is initiated
AASI FOR CORONARY HEART DISEASE (CHD)

All Classes
(Updated 01/27/2021)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to reissue an airman medical certificate to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations, (14 CFR) part 67. This AASI is for an applicant with a history of Angina Pectoris; Atherectomy; Brachytherapy; Coronary Bypass Grafting; Myocardial Infarction; Percutaneous Transluminal Angioplasty (PTCA); Rotoblitation; or Stent Insertion for any class.

The FAA physicians provide the initial certification decision and grant the Authorization for Special Issuance of a Medical Certificate (Authorization) in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the issuance determination. If this is first-time application for an AASI for the above disease/condition, and the airman has all the requisite medical information necessary for a determination, you must defer and submit all of the documentation to the AMCD or your RFS for the initial determination.

Examiners may reissue an airman medical certificate if the applicant provides the following:

- Authorization granted by the FAA;
- Status report - Performed within the past 90 days in accordance with the CHD Protocol; and
- Current maximal stress test GXT – See GXT Protocol

The AME must defer medical certification if the applicant has:

- Any other disqualifying medical conditions or therapy not previously reported;
- Any other reason for not renewing an AASI
- Bleeding that required medical intervention or other;
- Chest pain - Complains of chest pain at any time (exclude chest pain with a firm diagnosis of non-cardiac causes of chest pain);
- New Event - Has another event, develops a new condition or identification of an additional cardiac condition not previously reported (such as myocardial infarction, or restenosis requiring CABG, atherectomy, brachytherapy, PTCA, stent or other procedure);
- Nitrate - Is placed on a long acting nitrate for any reason
- Risk factors - Inadequately controlled; or
- Unacceptable exercise stress test (GXT) results include:

<table>
<thead>
<tr>
<th>TEST</th>
<th>IF ANY OF THE FOLLOWING ARE NOTED, THE AME MAY NOT ISSUE.</th>
</tr>
</thead>
<tbody>
<tr>
<td>All classes</td>
<td>Exercise stress test (EST)</td>
</tr>
<tr>
<td>PMHR (predicted maximal heart rate) less than 85%;</td>
<td></td>
</tr>
<tr>
<td>Time less than 9 minutes--under age 70;</td>
<td></td>
</tr>
<tr>
<td>Time less than 6 minutes --age 70 or greater</td>
<td></td>
</tr>
<tr>
<td>1 mm ST depression or greater at any time during stress testing - UNLESS the applicant has additional medical evidence such as a nuclear imaging study or a stress echocardiogram showing the absence of reversible ischemia or wall motion abnormalities reviewed and reported by a qualified cardiologist.</td>
<td></td>
</tr>
</tbody>
</table>

NOTE: If ANY of the items from the regular Bruce EST are not acceptable, the AME MUST DEFER.

An AME is NOT authorized to recertify a CHD AASI for any class if a nuclear stress test or stress echo is required.
AASI FOR DEEP VENOUS THROMBOSIS (DVT), PULMONARY EMBOLISM (PE), AND/OR HYPERCOAGULOPATHIES

(Updated 03/27/2019)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first time issuance of an Authorization for the above disease/condition, and the applicant has requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Aviation Medical Examiners may re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance, if the applicant provides the following:

- A valid Authorization for Special Issuance granted by the FAA;
- A summary of the applicant’s medical condition since the last FAA medical examination, including a statement regarding any further episodes of DVT, PE or other complication of hypercoagulopathy (see below*), future treatment plan, and prognosis;
- The name and dosage of all medication(s) used for treatment and/or prevention with comment regarding side effects, if any; and
- If using Coumadin (Warfarin), obtain a minimum of monthly International Normalized Ratio (INR) results for the immediate prior 6 months (see below*); and
- If using other types of anticoagulants such as NOAC/DOAC (i.e. Xarelto, Eliquis, Pradaxa, Savaysa, etc.), the airman should obtain a statement from their treating/prescribing physician with details of the underlying condition, tolerance of the medication to include the presence or absence of side effects, any bleeding episodes requiring medical attention, and any occurrence/recurrence of deep vein thrombosis or pulmonary embolism.

*The Examiner must defer to the AMCD or Region if:

- If using Coumadin (Warfarin) and more than 20% of INR values are <2.0 or >3.0; or
- If applicant experienced any side effects or bleeding episodes requiring medical attention; or
- The applicant develops emboli, thrombosis, bleeding, or any other cardiac or neurologic condition previously not diagnosed or reported.
AASI FOR DIABETES MELLITUS - TYPE II MEDICATION CONTROLLED (NOT INSULIN)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination. The information can be submitted using the DIABETES or HYPERGLYCEMIA ON ORAL MEDICATIONS STATUS REPORT.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, provided that the applicant does not require insulin, remains on an acceptable oral medication therapy according to the chart Acceptable Combinations of Diabetes Medications, and if the applicant provides the following:

- An Authorization granted by the FAA AND either
- A DIABETES or HYPERGLYCEMIA ON ORAL MEDICATIONS STATUS REPORT OR
- A current status report from the physician treating the airman’s diabetes, including:
  - A statement attesting that the airman is maintaining his or her diabetic diet;
  - A statement regarding any diabetic symptomatology; including any history of hypoglycemic events and any cardiovascular, renal, neurologic, or ophthalmologic complications; and
  - The results of a current HgA1c level performed within last 30 days.

The Examiner must defer to the AMCD or Region if, since the applicant’s last exam:

- The applicant has been placed on insulin;
- The HgA1c level is greater than 9.0 mg%
- The applicant has experienced:
  - Severe Hypoglycemia event(s) - requiring assistance of another person to actively administer carbohydrates, glucagon, or take other corrective actions (plasma glucose concentrations may not be available)*;
  - Documented Symptomatic Hypoglycemia event(s) - typical symptoms of hypoglycemia accompanied by a measured plasma glucose concentration ≤70 mg/dL (≤3.9 mmol/L)*;
  - Asymptomatic Hypoglycemia – no reported symptoms but a measured plasma glucose concentration ≤54 mg/dL (≤3.0 mmol/L)

- The applicant has developed evidence of any of the following:
  - Cardiovascular disease,
  - Neurologic disease, including any change in degree of peripheral neuropathy,
  - Ophthalmologic disease,
Renal disease (including a Creatinine over 2.0)
- The airman has been placed on any amlynomimetics, such as pramlintide (Symlin)
- The applicant is using any medication (single or in combination) that falls outside the framework of [Acceptable Combinations of Diabetes Medications](#)
- The applicant has required treatment other than routine outpatient follow-up (e.g. emergency department, inpatient admission) for diabetes (e.g. hypoglycemia, ketoacidosis, non-ketotic hyperglycemia) or diabetes-related conditions.
- The applicant has experienced any event suggesting hypoglycemia unawareness or hypoglycemia-associated autonomic failure.

* Reference: Hypoglycemia Workgroup of the ADA & The Endocrine Society
AASI FOR GLAUCOMA

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- Certification only granted for open-angle-glaucoma and ocular hypertension;
- The FAA Form 8500-14, Glaucoma Eye Evaluation Form is filled out by the treating eye specialist; and
- A set of visual fields measurements is provided.

The Examiner must defer to the AMCD or Region if:

- The FAA Form 8500-14 Glaucoma Eye Evaluation Form demonstrates visual acuity incompatible with the medical standards; or
- There is a change in visual fields or adverse change in ocular pressure.
AMS FOR HEPATITIS C

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- Any symptoms the applicant has developed;
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects; and
- A current liver function profile performed within the last 90 days.

The Examiner must defer to the AMCD or Region if:

- The applicant has developed symptoms;
- There has been a change in treatment regimen or the applicant has been placed on alpha-interferon;
- Any side effects from required medication; or
- An adverse change in liver function studies.
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A current status report from the treating physician detailing:
  - If the condition is stable and, if so, for how long;
  - Any secondary cause for the HTN;
  - Any co-morbid condition (such as diabetes, obstructive sleep apnea); and
  - Any history of end organ damage (such as heart failure, myocardial infarction, cerebrovascular accident, kidney disease, eye disease); and
  - The name and dosage of medication(s) and presence or absence of any side effects.

The Examiner must defer to the AMCD or Region if:

- The condition is not stable or has become uncontrolled (per the treating physician note);
- The airman is taking a medication that is not acceptable (See Pharmaceuticals – Antihypertensive);
- The airman has aeromedically significant side effects from the medication;
- There is a new co-morbid condition, complication, or end organ damage; or
- The end organ damage condition(s) do not meet FAA requirements. (See the applicable section for the specific condition(s) in the AME guide)
AASI FOR HYPERTHYROIDISM

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA current statement of the condition since last FAA medical examination;
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects; and
- Current thyroid function studies performed within last 90 days.

The Examiner must defer to the AMCD or Region if:

- The applicant has developed hypothyroidism; or
- The thyroid function studies are elevated, suggesting inadequate treatment; or
- The applicant developed an associated illness, such as dysrhythmia.
AASI FOR HYPOTHYROIDISM

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects;
- A statement regarding any other associated problems, such as cardiac or visual; and
- A statement regarding the current thyroid stimulating hormone (TSH) level performed within the last 90 days.

The Examiner should defer to the AMCD or Region if:

- The applicant develops a related problem in another system, such as cardiac; or
- The TSH level is elevated.
AASI FOR LYMPHOMA AND HODGKIN’S DISEASE

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA; and
- An update of the status of the disease from the last FAA medical examination and any testing deemed necessary by the treating physician.

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence or disease progression
- Any new treatment is initiated
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA, and
- A current status report performed within the last 90 days that must include all the required followup items and studies as listed in the Authorization letter and that confirms absence of recurrent disease

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence of the cancer, or
- Any new treatment is initiated

Note:

- A Special Issuance or AASI is required for any metastatic melanoma regardless of Breslow level.
- A Special Issuance or AASI is required for any melanoma which exhibits Breslow Level equal to or deeper than 0.75 mm with or without metastasis.
- A melanoma that exhibits a Breslow Level of less than 0.75 mm and no evidence of metastasis may be regular issued.
AASI FOR MIGRAINES

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A statement regarding the frequency of headaches and/or other associated symptoms since last followup report;
- A statement regarding if the characteristics of the headaches changed; and
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects.

The Examiner must defer to the AMCD or Region if:

- The frequency of headaches and/or other symptoms increase since the last followup report; or
- The applicant is placed on medication(s), such as isomethptene mucate, narcotic analgesic, tramadol, tricyclic-antidepressant medication, etc.
AASI FOR MITRAL OR AORTIC INSUFFICIENCY

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A summary of the applicant’s medical condition since the last FAA medical examination, including a statement regarding any further episodes of atrial fibrillation; and
- A current 2-D echocardiogram with Doppler performed within the last 90 days.

The Examiner must defer to the AMCD or Region if:

- The mean gradient across the valve reaches 40 mm Hg;
- New symptoms occur;
- Arrhythmia develops; or
- The treating physician or Examiner reports the murmur is now moderate to severe (Grade III or IV).
AASI FOR PAROXYSMAL ATRIAL TACHYCARDIA (PAT)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A statement regarding any recurrences since the last FAA medical examination; and
- The name and dosage of medication(s) used for treatment and/or prevention with comment regarding side effects.

The Examiner must defer to the AMCD or Region if:

- There have been one or more recurrences; or
- The applicant has received some treatment that was not reported in the past, such as radiofrequency ablation.
AASI FOR PROSTATE CANCER

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A current status of the medical condition to include any testing deemed necessary; and
- A current PSA level performed within the last 90 days.

The Examiner must defer to the AMCD or Region if:

- The PSA rises at a rate above 0.75 ng/ml per year;
- A new treatment is initiated; or
- Any metastasis has occurred.
AASI FOR RENAL CALCULI

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- A statement from your treating physician regarding the location of the retained stone(s), estimation as to size of stone, and likelihood of becoming symptomatic; and
- A current report of appropriate imaging study (IVP, KUB, Ultrasound, or Spiral CT Scan) and provide a metabolic work-up, both performed within the last 90 days.

The Examiner must defer to the AMCD or Region if:

- If the treating physician comments that the current stone has a likelihood of becoming symptomatic;
- If the retained stone(s) has moved when compared to previous evaluations; or
- If the stone(s) has become larger when compared to previous evaluations.
AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA; and
- A current status report performed within the last 90 days that must include all the required followup items and studies as listed in the Authorization letter and that confirms absence of recurrent disease.

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence of the cancer; or
- Any new treatment is initiated.
AME Assisted - All Classes – Sleep Apnea/Obstructive Sleep Apnea (OSA)

Examiners may re-issue an airman medical certificate to airmen currently on an AASI for OSA if the airman provides the following:

- An Authorization granted by the FAA;
- Signed Airman Compliance with Treatment form or equivalent from the airman attesting to absence of OSA symptoms and continued daily use of prescribed therapy; and
- A current status report from the treating physician indicating that OSA treatment is still effective.

  o **For CPAP/ BIPAP/ APAP:**
    - A copy of the cumulative annual PAP device report which shows **actual time used** (rather than a report typically generated for insurance providers which only shows if use is greater or less than 4 hours). Target goal should show use for at least 75% of sleep periods and an average minimum of 6 hours use per sleep period.
    - For persons with an established diagnosis of OSA who do not have a recording CPAP, a one-year exception will be allowed to provide a personal statement that they regularly use CPAP and before each shift when performing flight or safety duties.

  o **For Dental Devices and/or for Positional Devices:**
    No conditions known to be co-morbid with OSA (e.g., diabetes mellitus, hypertension treated with more than two medications, atrial fibrillation, etc).
    Once Dental Devices with recording / monitoring capability are available, reports must be submitted.

  o **For Surgery:**
    For successfully treated surgical patients, a statement attesting to the continued absence of OSA symptoms is required.

Defer to the AMCD or the Region for further review if:

- Concerns about adequacy of therapy or non-compliance;
- Significant weight gain or development of conditions known to be co-morbid with OSA (e.g., diabetes mellitus, hypertension treated with more than two medications, atrial fibrillation, etc).

**Note:** The Examiner may request AMCD review to discontinue the AASI if there are indications that the airman no longer has OSA (e.g., significant weight loss and a negative study or surgical intervention followed by 3 years of symptom abatement and absence of significant weight gain or co-morbid conditions). In most cases, a follow-up sleep study will be required to remove the AASI.
AASI FOR TESTICULAR CANCER
(Updated 04/25/2018)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA; and
- A current status report performed within the last 90 days that must include all the required followup items and studies as listed in the Authorization letter and that confirms absence of recurrent disease.

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence of the cancer; or
- Any new treatment is initiated.
AASI FOR THROMBOCYTOPENIA
(Updated 9/25/2019)

AME Assisted Special Issuance (AASI) is a process that provides Examiners the ability to re-issue an airman medical certificate under the provisions of an Authorization for Special Issuance of a Medical Certificate (Authorization) to an applicant who has a medical condition that is disqualifying under Title 14 of the Code of Federal Regulations (14 CFR) part 67.

An FAA physician provides the initial certification decision and grants the Authorization in accordance with 14 CFR § 67.401. The Authorization letter is accompanied by attachments that specify the information that treating physician(s) must provide for the re-issuance determination. If this is a first-time application for an AASI for the above disease/condition, and the applicant has all the requisite medical information necessary for a determination, the Examiner must defer and submit all of the documentation to the AMCD or RFS for the initial determination.

Examiners may re-issue an airman medical certificate under the provisions of an Authorization, if the applicant provides the following:

- An Authorization granted by the FAA;
- An update of the status of the disease from the last FAA medical examination and any testing deemed necessary by the treating physician; and
- CBC within the past 90 days.

The Examiner must defer to the AMCD or Region if:

- There has been any recurrence or disease progression;
- There has been any bleeding that required treatment;
- Any new treatment is initiated such as IVIG, high dose steroids, platelet transfusion, splenectomy (as treatment, not traumatic), or others; and
- Platelet count falls below 50,000/microL.
I have reviewed the enclosed medical report(s) and have determined that the report(s) is in accordance with this applicant’s Authorization for Special Issuance of a Medical Certificate and the AASI Protocol established for certificate issuance.

I have issued a ________-class medical certificate to the airman named below with all other limitations listed on the original certificate. The certificate issued is timed limited by the restriction “NOT VALID FOR ANY CLASS AFTER ____________”

Check all that apply:
- Interim certificate issued for disease(s)/condition(s) below – No examination performed.

FAA Drug and/or Alcohol Monitoring Program and the HIMS Program:

Airmen who have a regulatory diagnosis of alcohol dependence or abuse may require evaluation and monitoring before they can obtain a medical certificate. If an airman requires monitoring they should establish with a HIMS (Human Intervention Motivation Study) trained AME (HIMS AME) to help them work through the FAA process.

DUI/DWI/Alcohol or Drug Use/Abuse (Updated 09/27/2017)

Drug and alcohol use, abuse or dependence can be of significant concern to the flying public. Arrest(s), conviction(s) and/or administrative action(s) affecting driving privileges may raise questions about the applicant's fitness for certification and may be cause for disqualification. When an airman checks yes to items 18.n, 18.o., or 18.v., or AME notes Item 47 concerns, additional history should be obtained by the AME regarding these events. The AME should then follow the instructions in the corresponding disposition table(s).

Some of the most common Substances of Dependence/Abuse are listed below. This list is not totally inclusive or comprehensive. No independent interpretation of the FAA's position with respect to a medication included or excluded from the list should be assumed.

I. All Classes: 14 CFR 67.107(a)(b), 67.207(a)(b), and 67.307(a)(b)

First-Class Airman Medical Certificate: 67.107
Second-Class Airman Medical Certificate: 67.207
Third-Class Airman Medical Certificate: 67.307

(a) No established medical history or clinical diagnosis of any of the following:

(4) Substance dependence, except where there is established clinical evidence, satisfactory to the Federal Air Surgeon, of recovery, including sustained total abstinence from the substance(s) for not less than the preceding 2 years. As used in this section -

(i) "Substance" includes: alcohol; other sedatives and hypnotics; anxiolytics; opioids; central nervous system stimulants such as cocaine, amphetamines, and similarly acting sympathomimetics; hallucinogens; phencyclidine or similarly acting arylocyclohexylamines; cannabis; inhalants; and other psychoactive drugs and chemicals; and

(ii) "Substance dependence" means a condition in which a person is
dependent on a substance, other than tobacco or ordinary xanthine-containing (e.g., caffeine) beverages, as evidenced by-

(A) Increased tolerance
(B) Manifestation of withdrawal symptoms;
(C) Impaired control of use; or
(D) Continued use despite damage to physical health or impairment of social, personal, or occupational functioning.

(b) No substance abuse within the preceding 2 years defined as:

1. Use of a substance in a situation in which that use was physically hazardous, if there has been at any other time an instance of the use of a substance also in a situation in which that use was physically hazardous;

2. A verified positive drug test result, an alcohol test result of 0.04 or greater alcohol concentration, or a refusal to submit to a drug or alcohol test required by the U.S. Department of Transportation or an agency of the U.S. Department of Transportation; or

3. Misuse of a substance that the Federal Air Surgeon, based on case history and appropriate, qualified medical judgment relating to the substance involved, finds-

(ii) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

II. Exam Techniques

The FAA has concluded that certain conditions are such that their presence or a past history of their presence is sufficient to suggest a significant potential threat to aviation safety. It is, therefore, incumbent upon the Examiner to be aware of any indications of these conditions currently or in the past, and to deny or defer issuance of the medical certificate to an applicant who has a history of these conditions. An applicant who has a current diagnosis or history of these conditions may request the FAA to grant an Authorization under the special issuance section of part 67 (14 CFR 67.401) and, based upon individual considerations, the FAA may grant such an issuance.

III. Aerospace Medical Disposition

The following items list the most common conditions of aeromedical significance, and course of action that should be taken by the examiner as defined by the protocol and disposition in the table. Medical certificates must not be issued to an applicant with medical conditions that require deferral, or for any condition not listed in the table that may result in sudden or subtle incapacitation without consulting the AMCD or the RFS. Medical documentation must be submitted for any condition in order to support an issuance of an airman medical certificate.

<tr>
<td><strong>A.</strong> History of alcohol related event(s) OR alcohol dependence</td>
<td>The airman should bring his/her letter(s) from the FAA (for this condition) for the AME to review. The AME should review the letter and <strong>obtain any additional history necessary from the airman to verify no subsequent events have occurred.</strong> If the airman is required to remain abstinent, the AME, based on their clinical assessment, should note in Block 60 if the airman is adhering to this requirement.</td>
<td><strong>ISSUE</strong> Annotate Block 60 with the mm/yyyy of the most recent event and that there have been no further events or changes in condition. If changes, consult with AMCD/RFS or Defer</td>
</tr>
<tr>
<td><strong>B.</strong> Single event 5 or more years ago with Blood Alcohol Content (BAC) less than 0.15</td>
<td>The AME should gather information regarding the incident including date, events surrounding the incident, history of other events, or any prior treatment programs (it is highly recommended that the AME obtain all items on the Airman Drugs and Alcohol Personal Statement. If AME determines, through exam and interview, there is no current or historical evidence of a substance abuse or dependence problem.</td>
<td><strong>ISSUE</strong> Summarize this history, annotate Block 60 including date (mm/yyyy) of the offense. Submit Airman Drugs and Alcohol Personal Statement and copy of BAC (if available) to the FAA for retention in the file.</td>
</tr>
<tr>
<td><strong>C.</strong> Single event less than 5 years ago OR Single event at any time with Unknown BAC, Refused BAC/breathalyzer or BAC .15 or above</td>
<td>The AME must complete the Alcohol Event Status Report for the AME OR write a summary report that includes all of the items on the Alcohol Event Status Report. If the single event was 10 or more years ago, the BAC or court records are unavailable, and the AME has no concerns, call AMCD at 405-954-4821 or the RFS to discuss.</td>
<td>Follow the instructions on the Alcohol Event Status Report for the AME. Submit the information to the FAA for review. Follow up Issuance will be per the airman’s authorization letter.</td>
</tr>
</tbody>
</table>
| **D.** Two or more events in the airman's lifetime OR History of dependence or substance use disorder | Submit the following for FAA review:  
- Airman’s personal statement  
- The Alcohol Event Status Report for the AME along with the supporting information used to review. Additional information may be required after review of this documentation. | **DEFER** Submit the information to the FAA for review. Follow up Issuance will be per the airman’s authorization letter. |
Note: If FAA letter(s) are not available or if the AME has questions, call AMCD at 405-954-4821 or their RFS and request a copy or to discuss with AMCD or their RFS.

If unable to obtain and review the required reports within 14 days of the exam; the AME must defer and should inform the airman what reports will be needed.

If the airman does not qualify based on the results from the DUI/DWI/Alcohol Event History, all of that supporting information MUST be submitted for consideration of Medical Certification. See FAA Certification Aid - Drug and Alcohol INITIAL for details. Upon review, additional information may be required.
Alcohol Event Status Report for the AME
(Updated 09/27/2017)

Name ____________________ Birthdate ____________________
Applicant ID# _________________________________________ PI# ____________________________________

Airmen - See the FAA Certification Aid - Drug and Alcohol INITIAL to identify what information you should give the AME.

AME Instructions:
• Address the following items based on your in-office exam and documentation review;
• Submit this Checklist (it must be signed and dated by the AME); and
• Submit the supporting documentation reviewed to complete this checklist within 14 days to:

Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division, AAM-313
PO Box 25082, Oklahoma City, OK 73125-9867

1. List DATE(s) of any arrest, conviction or administrative action here: ______________
2. Number of alcohol related events in the airman’s lifetime? ................................... One Two or more
3. AIRMAN’s STATEMENT Do you find any evidence of current or previous alcohol abuse, dependence or other concerning behaviors? No Yes
4. BLOOD/BREATH ALCOHOL CONTENT (BAC) from all offenses:
   Did the airman ever REFUSE TO TEST...........................................
   Missing records of test performed (per the airman)? ..................................................
   Any BAC in the records of 0.15 g/dl or HIGHER ..................................................
   List the highest BAC found on report(s) here: ____________ No Yes (.15 or higher)
5. COURT RECORD(s) AND ARREST RECORD(s): (including military records)
   Did the airman fail to provide a copy of the narrative police/investigative report from all offenses and complete copies of all court records associated with the offense(s) including court-ordered education? No Yes
6. DRIVING RECORD: AME must review a complete Department of Motor Vehicles (DMV) record. List all states the airman held a driver’s license for the past 10 years.
   1. 2. 3. 4.
   Any additional driving offenses involving alcohol or other concerns not listed in #1? No Yes
7. EVIDENCE OF TREATMENT: Did the airman attend any inpatient or outpatient rehabilitation or treatment? (Do not include court-ordered education programs.) No Yes
8. Is there any history or evidence of any DRUG (illicit, Rx, etc.) offense at any time? No Yes
9. Do you have ANY concerns regarding this airman? If yes, notate in Block 60 No Yes

AME Signature Date of evaluation

If ALL items fall into the clear column, the AME may issue with notes in Block 60 but must submit all documents to the FAA.

If ANY SINGLE ITEM falls into the SHADED COLUMN, or the actual records are not available to review, the AME MUST DEFER. The AME report should note what aspect caused the deferral and explain any answers in the shaded column.

Remind the airman to report any new event to Security.
### Drug Use

- Previously **reported to FAA** and **written proof from the FAA** that monitoring is not required

| **B.** Any event in the airman’s lifetime that has not yet been cleared by the FAA and given an eligibility letter. | **Submit the following for FAA review:** Airman statement that describes all of the following: 1. Primary drug used. 2. Any additional drugs/substances used in the airman's lifetime (This includes marijuana even if allowed in some states, illicit drugs, prescription medications, or others). 3. Describe for each: a) Frequency of use; b) Amount used; c) Setting in which used; and d) Dates use started and stopped. 4. Did you attend any treatment program(s)? If yes, provide beginning and end dates. If no, this should be stated. 5. Any economic, legal problems, or other adverse consequences from use? | **DEFER** Submit the information to the FAA for review. Followup Issuance will be per the airman’s authorization letter. |

- Note: If FAA letter(s) are not available or if the AME has questions, call AMCD at 405-954-4821 or their RFS to request a copy or to discuss with AMCD or their RFS.
- If unable to obtain and review the required reports within 14 days of the exam; the AME must defer and should inform the airman what reports will be needed.
- Upon receipt and review of the above information, additional information may be required.
- If the airman sees a substance abuse professional for alcohol use, they should also describe and comment on the drug use history in their report.
DRUG AND ALCOHOL EVENT - FAA CERTIFICATION AID - REQUIRED INFORMATION
(Page 1 of 2)
(Updated 01/27/2021)

AMEs should use this tool to help collect information needed for the Alcohol Event Status Report for the AME.

The following information is to assist you and your treating physician/provider who may be unfamiliar with FAA medical certification requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on an airman medical certificate. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If the corresponding provider does not address each item, there may be a delay in the processing of your medical certification until that information is submitted. Additional information, such as clinic notes or explanations, should also be submitted as needed.

  b. What substance(s) were involved;
  c. State or locality or jurisdiction where the incident occurred;
  d. Date of the arrest, conviction, and/or administrative action;
  e. Description of circumstances surrounding the offense; and
  f. Describe the above for each alcohol incident. If no other incidents, this should be stated. |
| **(D&A)** | 4. Your past, present, and future plans for alcohol or drug use.
  a. When did you start drinking? How much? How often?
  b. How much, how often were you drinking at the time of the incident(s);
  c. How much, how often do you drink now? If abstinent, state date abstinence started;
  d. Any negative consequences (legal complications or medical complications such as blackouts, pancreatitis, or ER visits); and
  e. Include any other alcohol or drug offenses (arrests, convictions, or administrative actions), even if they were later reduced to a lower sentence. |
| **PERSONAL STATEMENT** | 5. Treatment programs you attended ever in your life. If none attended, this should be stated
  a. Dates of treatment;
  b. Inpatient, outpatient, other; and
  c. Name of treatment facility |
| **6.** | 6. Current recovery program (if any). If AA or another program, list name of program and frequency attended.
  If not in a recovery program, this should be stated. |
| **B. BLOOD ALCOHOL CONTENT (BAC)** | 1. Blood Alcohol Concentration (BAC) from any alcohol offense. BAC may be listed in a hospital report, a police report, or investigative report.
  a. This will be either a breathalyzer test or a blood test.
  b. Attach copies of any additional drug testing performed. |
| **C. COURT RECORDS** | 1. Police/investigative report from dates of incident(s). It should describe the circumstances surrounding the offense and any field sobriety tests performed.
  2. Court records, if applicable.
  3. Military records if events occurred while the applicant was a member of the U.S. armed forces. It should include military court records, records of non-judicial punishment, and military substance abuse records. |
## DRUG AND ALCOHOL EVENT - FAA CERTIFICATION AID - REQUIRED INFORMATION  
### (Page 2 of 2)

| **D. DRIVING RECORD, DEPARTMENT OF MOTOR VEHICLES (DMV) RECORDS** | 1. List every state/principality/location and dates you have held a driver’s license in the past 10 years.  
2. Submit a complete copy of your driving records from each of these for the past 10 years. |
|---|---|
| **E. EVIDENCE OF TREATMENT** | 1. Treatment records and copy of certificate, if any.  
2. If no program was recommended or if treatment was started but not completed, that should be stated. |
| **F. SUBSTANCE ABUSE EVALUATION**  
*May not be required for all airmen.* | The report must include at a minimum:  
9. List of the items/documents reviewed:  
   a. Verify if you were provided with and reviewed a complete copy of the airman’s FAA medical file sent to you by the FAA; and  
   b. Include list of collateral contact(s) used to verify history, if any.  
10. Summary of the above records. Were the records clear and in sufficient detail to permit a satisfactory evaluation of the nature and extent of any previous mental disorders?  
Clinical interview that covers the following:  
11. Family history of drug and alcohol or mental health issues.  
12. Developmental history.  
13. Past medical history and medical problems such as blackouts; memory problems; stomach, liver, cardiovascular problems; or sexual dysfunction.  
14. Psychiatric history, if any. Include diagnosis, treatment, and hospitalizations:  
   a. Personal history of anxiety, depression, insomnia; and/or  
   b. Suicidal thoughts or attempts.  
15. Alcohol and/or drug use history:  
   a. Include any treatment or hospitalizations; and  
   b. The current status of drug or alcohol use (what used, how often, start/stop dates).  
16. Other concerns such as:  
   a. Personality changes (argumentative, combative) or loss of self-esteem or isolation;  
   b. Social family problems such as marital separation or divorce;  
   c. Irresponsibility or child/spousal abuse;  
   d. Legal problems such as alcohol-related traffic offenses or public intoxication, assault and battery, etc.;  
   e. Occupational problems such as absenteeism or tardiness at work, reduced productivity, demotions, frequent job changes, or loss of job;  
   f. Economic problems such as frequent financial crises, bankruptcy, loss of home, or lack of credit; and  
   g. Interpersonal adverse effects such as separation from family, friends, associates, etc.  
17. Any other concerns per the evaluator.  
18. Results of any testing that was performed (SASSI, etc.).  
19. Mental status examination results.  
20. Summary of your findings. Include if you agree or disagree with previous diagnosis or findings from the records you reviewed and why.  
21. DSM diagnosis for Axis I-V (if none, that should be stated).  
22. Any evidence of drug or alcohol abuse or dependence (if not mentioned above).  
23. Any additional concerns or comments.  

Note: if the above evaluation is not adequate, an additional evaluation from a psychiatrist or other provider may be required. |
Security Notification/ Reporting Events
(Updated 06/27/2018)

Security Notification for a Conviction or Administrative Action

Note: Under 14 CFR 61.15, all pilots must send a Notification Letter (MS Word) to FAA's Security and Investigations Division, within 60 calendar days of the effective date of an alcohol and/or drug related conviction or administrative action.

Federal Aviation Administration
Security and Investigations Division AXE-700;
P.O. Box 25810
Oklahoma City, OK 73125-0810

For additional information including a copy of the required Notification Letter, see: Security
Substances of Dependence/Abuse FAQs
(Updated 09/27/2017)

1. Is there a difference in a regulatory requirement vs a clinical diagnosis? Which one must an airman meet?

Yes. Airmen must meet the regulatory requirements of 14 CFR Part 67, which are not the same criteria used for a clinical (DSM) diagnosis.

2. What is the FAA regulatory definition of Substance Dependence?

“Substance dependence” means a condition in which a person is dependent on a substance other than tobacco or ordinary xanthine containing (e.g., caffeine) beverages, as evidence by:
A. Increased tolerance;
B. Manifestation of withdrawal symptoms;
C. Impaired control of use; or
D. Continued use despite damage to physical health or impairment of social, personal, or occupational functioning.

3. What is the FAA regulatory definition of Substance abuse?

1) Use of a substance in a situation in which that use was physically hazardous, if there has been at any other time an instance of the use of a substance also in a situation in which that use was physically hazardous;

2) A verified positive drug test result, an alcohol test result of 0.04 or greater alcohol concentration, or a refusal to submit to a drug or alcohol test required by the U.S. Department of Transportation or an agency of the U.S. Department of Transportation; or

3) Misuse of a substance that the Federal Air Surgeon, based on case history and appropriate, qualified medical judgment relating to the substance involved, finds:
(i) Makes the person unable to safely perform the duties or exercise the privileges of the airman certificate applied for or held; or
(ii) May reasonably be expected, for the maximum duration of the airman medical certificate applied for or held, to make the person unable to perform those duties or exercise those privileges.

4. What type of drug or alcohol related events are asked for on the 8500-8?

A. Arrests;
B. Convictions; or
C. Administrative actions - such as if the airman attended an **educational or rehabilitation program** in lieu of conviction or was given a lesser charge after being arrested (ex: an arrest for DUI that was reduced to reckless driving after court proceedings).

5. **Does an airman need to report a DUI from years ago?**

   Yes. The 8500-8 specifically asks the airman to report if they “ever in their life have been diagnosed with, had, or presently have...”

   The AME should inquire about *each event, no matter how long ago*, and follow the appropriate disposition table instructions.

6. **What should the AME do when an airman has a positive answer to 18.n. 18.o., or 18.v.?**

   The AME should obtain additional history and follow the correct **disposition table**. In some cases, additional information will be required before a medical certificate may be issued.

7. **Must the airman continue to mark “yes” on all subsequent exams?**

   Yes. If the airman has reported the event to the FAA, they must continue to report it on **ALL subsequent 8500-8 applications**. This applies even when the FAA has reviewed documentation and sent the airman a letter saying no further monitoring or information is needed for that event.

   If the applicant/airman documented the information on previous exams AND there are no new arrest(s), conviction(s), and/or administrative action(s) since the last application, the **Applicant** may enter **PREVIOUSLY REPORTED, NO CHANGE**.

   The AME should verify there have been no additional drug or alcohol events/offense(s). If none have occurred, that should be noted in Block 60 per the **disposition table**. If any additional events have occurred, the AME should refer to the instructions on the correct disposition table.

8. **How does an airman report a Drug and/or Alcohol event to the FAA?** *(Updated 06/27/2018)*

   Airmen must report alcohol and drug events under both Part 67 and Part 61. This requires **two separate actions by the airman:**

   1. Notify the FAA Medical Division (Part 67).
   2. Notify the FAA Security Division (Part 61).
1. The airman should notify the FAA Medical department regarding any new arrest, convictions or administrative actions as soon as possible after the event.

   a. If a new exam is performed, the AME should follow the disposition table.
   b. If the airman is on a Special Issuance for drug or alcohol condition(s) and they have a new event, they should not fly under 61.53 until their case is reviewed.

2. Under 14 CFR 61.15, all pilots must send a Notification Letter (MS Word) to FAA's Security and Investigations Division, within 60 calendar days of the effective date of an alcohol- and/or drug-related conviction or administrative action.

   Federal Aviation Administration
   Security and Investigations Division, AXE-700
   P.O. Box 25810
   Oklahoma City, OK 73125-0810

   For additional information see Security.

9. If the airman reports his/her DUI or any alcohol or drug offense (i.e., motor vehicle violation) to the AME or on an 8500-8/MedXPress, will that take the place of reporting it to legal/security?

   No. The airman must take a separate action to report a conviction or administrative action to security.
Drug/Alcohol Monitoring Programs and HIMS
HIMS AME - HUDDLE ELECTRONIC CASE SUBMISSION
(Updated 01/27/2021)

At this time, only HIMS AMES may submit cases electronically via Huddle. To do so, HIMS AMES must first complete initial Huddle training. If you do not have a Huddle account or have not completed training, send requests to 9-AAM-HIMS@faa.gov.

- Submit only first- and second-class HIMS cases.
- Do NOT send third-class cases via huddle.

Steps for Electronic Submission

A. Log into your Huddle account
B. Create a folder for the airman. Use PI# if available, type of case (HIMS, HIMS+SSRI). Each airman case must have a separate folder.
C. Upload all relevant files in the designated order with correct naming conventions as indicated on the HIMS AME Checklist.
D. Share completed folder with HIMS Analyst Team.
E. Follow any instructions you receive from your assigned HIMS Analyst.*

*When the HIMS Analyst determines the file is complete, they will move the folder from the Huddle workspace for FAA review.

For detailed instructions, log into your Huddle account and go to the “Huddle Training and Updates” page.

FREQUENTLY ASKED QUESTIONS (FAQs)

1. **What is the preferred format for uploaded documents?**

   Use PDF or Microsoft Word format.

2. **Is there a limit to the number of folders or limit on size of the files?**

   There is no limit on the number of folders. File size is limited to 20 GB.

3. **How do I identify different reports from the same consultant? I might have a Neuropsychologist initial report, followed by a second report or a follow up report, etc.**

   Place the naming conventions at the beginning of the document. If you have additional documents as described above, place a dash after the naming convention then add the description. (EX: Neuropsychologist Report – follow up.)
4. **Should I wait until the airman’s folder has all the required files before sharing them or should I share them as they come in?**

   Do not share the folder with the HIMS Analyst Team until ALL the required documents are present.

5. **How do I provide missing or additionally requested information after I have already shared the folder?**

   If you need to submit a document after you have already shared a folder, simply create another folder with the airman’s identifying information, label it “additional documents,” add the additional files, and then share the new folder with the HIMS Analyst Team.

6. **Once I share the files in Huddle, do I also have to mail them to the FAA?**

   **No**, once you share the file electronically, do NOT mail the same file. Duplicate copies will slow down the review process.

7. **What happens to the folders once they are shared with the HIMS Analyst Team?**

   Once an entire folder is shared, the analyst checks for any missing information. If the folder is complete, it moves into the process for FAA review.

8. **Will the Aerospace Medical Certification Division (AMCD) staff have access to the Huddle space as well?**

   Yes, they will have as-needed access to the files in your Huddle workspace.

9. **What about third-class Drug and Alcohol cases?**

   Third class cases are processed at the Aerospace Medical Certification Division in Oklahoma City and should be **mailed** to the address indicated on the HIMS Checklist.
HIMS trained AME Checklist – Drug and Alcohol MONITORING INITIAL Certification
(Updated 01/27/2021)

Airman Name ___________________________ MID or PI#__________________

Submit this MANDATORY checklist as a cover sheet and ALL supporting information outlined below within 14 days of deferred exam. Use only ONE method to submit. Sending by multiple modes (or duplicates) will delay the review process. Check one of the boxes below to indicate the method of the submission.

☐ Electronic submission: ☐ First or second class, mail to: ☐ Third class, mail to:

Use Huddle (HIMS CASES ONLY)
Federal Aviation Administration
Medical Appeals Branch
AAM 240
800 Independence Avenue, SW
Building 10A, Room 8W-100
Washington, DC 20591

Using regular mail US Postal Service:
Federal Aviation Administration
Civil Aerospace Medical Institute, Bldg. 13
Aerospace Medical Certification Division AAM-313
PO Box 25082
Oklahoma City, OK 73125-9914

Using FedEx, UPS, etc.
Federal Aviation Administration
Medical Appeals Section, AAM-313
Aerospace Medical Certification Division
6700 S. MacArthur Boulevard, Room B-13
Oklahoma City, OK 73169

The specific information required for each report type is detailed in the corresponding numbered (#) items on the FAA Certification Aid – HIMS Drug and Alcohol – INITIAL.

1. HIMS AME Report FACE-TO-FACE, IN-OFFICE EVALUATION (narrative):
   - Signed and dated…………………………………………………………………………………

2. HIMS AME Data Sheet
   (N/A for third class airmen)…………………………………………………………………………

3. Drug and /or alcohol TREATMENT RECORDS:
   - Include any applicable psychotherapy notes and pre-treatment psychiatrist reports…………

4. PSYCHIATRIST EVALUATION:
   - HIMS-trained psychiatrist for most first and second class airmen…………………………
   - Most third class will require a board-certified psychiatrist.

5. NEUROPSYCHOLOGIST EVALUATION and RAW TESTING DATA
   - CogScreen results

6. ADDITIONAL RECORDS:
   - Aftercare Report (Group)…………………………………………………………………………
   - Airline Reports: Chief Pilot Report and Peer Pilot Letter (for commercial pilots 1st or 2nd-class; 3rd class N/A)……
   - Airman’s Personal Statement………………………………………………………………………
   - Drug or Alcohol Testing……………………………………………………………………………
   - DUI Records (BAC, court records, driving/DMV records)………………………………………
   - Medical Records (List any other conditions relevant to this case)………………………………
   - SI Additional Reports (Only when specified by the Authorization Letter)……………………

HIMS-trained AME Signature ___________________________ Date ___________________________

MISSING OR INCOMPLETE ITEMS WILL CAUSE CERTIFICATION REVIEW DELAYS.

- Send all of the above information AND this Checklist in ONE PACKAGE, via electronic submission or mailed to the appropriate address listed above.

- Upon receipt and review of all of the above information, additional information or action may be requested.
The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification requirements. It lists the **ABSOLUTE MINIMUM** information required by the FAA to make a determination on an airman medical certificate. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider there may be a delay in the processing of your medical certification until that information is submitted. Additional information such as clinic notes or explanations should also be submitted, as needed.

ALL REPORTS MUST BE **CURRENT (WITHIN THE LAST 90 DAYS) FOR FAA PURPOSES.**

<table>
<thead>
<tr>
<th>REPORT FROM</th>
<th>MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HIMS AME CHECKLIST</strong></td>
<td>1. Using the <a href="#">HIMS-Trained AME Checklist – Drug and Alcohol Monitoring INITIAL Certification</a>, comment on any items that fall into the shaded category on the Checklist.</td>
</tr>
</tbody>
</table>
| #1 HIMS AME REPORT (narrative) | 1. Must be a face-to-face, in-person evaluation performed by the HIMS-trained AME.  
2. List of the items/documents reviewed:  
   a. Prior SI authorizations, if issued by the FAA;  
   b. Verify if you were provided with and reviewed a complete copy of the airman’s FAA Medical file sent to you by the FAA; and  
   c. Include list of collateral contact(s) used to verify history, if any.  
3. Describe  
   a. How the case was initially identified. Circumstances regarding the pilot’s entry into the HIMS program;  
   b. Description of the history of the addiction problem;  
   c. Participation in aftercare groups, if any;  
   d. Participation in support groups (AA, BOAF, other);  
   e. History of ER visits;  
   f. Previous psychiatric hospitalizations, treatments, or suicide attempts; and  
   g. Hospital/treatment discharge summary.  
4. Compliance History  
   a. Any evidence (such as a positive test) or concern the airman has not remained abstinent;  
   b. Any evidence or concern the airman has not been compliant with the recovery program;  
   c. If you do not agree with the supporting documents or if you have additional concerns not noted in the documentation, please discuss your observations or concerns; and  
   d. Describe how the airman is doing in the program and if he/she is engaged in recovery.  
5. Summarize your aeromedical impression and evaluation as a HIMS AME based on the face-to-face evaluation AND review of the supporting documents.  
   a. Do you recommend a Special Issuance for this airman;  
   b. Do you agree to serve as the airman’s HIMS AME and follow this airman per FAA policy; and  
   c. Do you agree to immediately notify the FAA (at 405-954-4821) of any change in condition, deterioration, or stability and/or if there is any positive drug or alcohol testing?  
6. Any NEW condition(s) that would require Special Issuance? (Do not include any new CACI qualified conditions.)  
   a. |   |   |
| If using Huddle, submit the following as **INDIVIDUAL** PDFs:  
   [ ] HIMS AME Checklist;  
   [ ] HIMS trained AME written report (narrative)  
   [ ] HIMS AME Data Sheet  
   [ ] Drug and/or Alcohol Treatment Records  
   [ ] Psychiatrist Evaluation  
   [ ] Neuropsychologist Evaluation and Raw Test Data  
   [ ] Additional Records - all other supporting documentation that you reviewed  
Submit all the information as **ONE PACKAGE** (via Huddle or mailed to the appropriate address on the HIMS-Trained AME Checklist.) Review for certification **WILL BE DELAYED** if package is incomplete.
#2 HIMS AME DATASHEET*

1. A copy of the sheet printed after entering information via www.himsdatasheet.com. (*only for first and second class airmen.)

#3 DRUG AND/OR ALCOHOL TREATMENT RECORDS

1. Include any applicable psychotherapy notes, therapist follow-up reports, social worker reports, AA sponsor contact, etc.
2. Include all the original records summarized in the HIMS AME Report above.

#4 PSYCHIATRIST EVALUATION

1st and 2nd class commercial airmen will require a HIMS trained psychiatrist* to perform this evaluation in most cases.

Most others will require a board certified psychiatrist

* To find a HIMS psychiatrist, the airman should FIRST establish with a HIMS-trained AME and should refer to their letter to determine what level of evaluation is required.

The report must include at a minimum:

1. List of the items/documents reviewed.
   a. Verify if you were provided with and reviewed a complete copy of the airman’s FAA medical file sent to you by the FAA; and
   b. Include list of collateral contact(s) used to verify history, if any.
2. Summary of the above records. Were the records clear and in sufficient detail to permit a satisfactory evaluation of the nature and extent of any previous mental disorders?
3. Clinical interview that covers the following:
   3. Family history of drug and alcohol or mental health issues.
   4. Developmental history.
   5. Past medical history and medical problems such as blackouts, memory problems; stomach, liver, cardiovascular problems, or sexual dysfunction.
   6. Psychiatric history, if any. Include diagnosis, treatment, and hospitalizations.
      a. Personal history of anxiety, depression, insomnia; and/or
      b. Suicidal thoughts or attempts.
   7. Alcohol and/or Drug use history:
      a. Include any treatment or hospitalizations; and
      b. The current status of drug or alcohol use (what used, how often, start/stop dates).
8. Other concerns such as:
   a. Personality changes (argumentative, combative) or Loss of self-esteem or Isolation;
   b. Social family problems such as marital separation or divorce;
   c. Irresponsible or child/spousal abuse;
   d. Legal problems such as alcohol-related traffic offenses or public intoxication, assault and battery, etc.;
   e. Occupational problems such as absenteeism or tardiness at work; reduced productivity, demotions, frequent job changes, or loss of job;
   f. Economic problems such as frequent financial crises, bankruptcy, loss of home, or lack of credit; and
   g. Interpersonal adverse effects such as separation from family, friends, associates, etc.
9. Any other items per the evaluator.
10. Results of any testing that was performed (SASSI, etc.).
11. Mental status examination results.
12. Summary of your findings. Include if you agree or disagree with previous diagnosis or findings from the records you reviewed and why.
13. Any evidence of drug or alcohol abuse or dependence (if not mentioned above).
   When appropriate, provide specific information about the quality of recovery, including the period of total abstinence.
15. List the DSM diagnosis, if any. (If none, that should be stated).
16. Specifically mention if any of the following regulatory components are present or not:
   a. Increased tolerance;
   b. Manifestation of withdrawal symptoms;
   c. Impaired control of use;
   d. Continued use despite damage to physical health or impairment of social, personal, or occupational functioning;
   e. Any evidence of any other personality disorder, neurosis, or mental health condition; and/or
   f. Use of a substance in a situation in which that use was physically hazardous.
17. Give recommendations for any additional treatment or monitoring, if applicable.
18. Any additional concerns or comments.
For complete details, see the Neuropsychological Evaluation section of the Specifications for Psychiatric and Neuropsychological Evaluations for Substance Dependence/Abuse.

The neuropsychologist report MUST address:

1. Qualifications: State your certifications and pertinent qualifications.
2. Records review: What documents were reviewed, if any?
   a. Specify clinic notes and/or notes from other providers or hospitals; and
   b. Verify if you were provided with and reviewed a complete copy of the airman’s FAA medical file.
3. Results of clinical interview: Detailed history regarding psychosocial or developmental problems; academic and employment performance; family or legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions and all medication use; and behavioral observations during the interview and testing. Include any other history pertinent to the context of the neuropsychological testing and interpretation.
4. Mental status examination
5. Testing results:
   a. CogScreen-Aeromedical Edition (CogScreen-AE); and
   b. Remainder of the core test battery.
6. Interpretation:
   a. The overall neurocognitive status of the airman;
   b. Clinical diagnosis(es) suggested or established based on testing, if any;
   c. Discuss any weaknesses or concerning deficiencies that may potentially affect safe performance of pilot or aviation-related duties, if any;
   d. Discuss rationale and interpretation of any additional testing that was performed; and include
   e. Any other concerns.
7. Recommendations: Additional testing, follow-up testing, referral for medical evaluation (e.g., neurology evaluation and/or imaging), rehabilitation, etc.

Submit report along with the CogScreen-AE computerized summary report (approximately 13 pages) and summary score sheet for ALL additional testing performed.

</tbody>
</table>
## DRUG OR ALCOHOL TESTING

1. Must be random, unannounced drug/alcohol testing. (Urine EtG/EtS, PEth testing or a mobile alcohol monitoring system are preferred.)

2. Must state if the testing is performed by:
   - HIMS AME;
   - Air Carrier testing program/office. Air Carrier must immediately notify the HIMS AME of any positive test HIMS AME may require additional testing to supplement the testing conducted by the Air Carrier; or
   - Other, such as return to duty testing from a substance abuse professional or a DOT/FAA Drug Abatement Program.

3. Drug and/or alcohol testing results summarized, how often tested, how many tests performed to date.
   - Positive test results – submit the actual report.
   - Negative test results should be reported in the HIMS AME Report.

## DUI RECORDS

### Court Records
1. Police/investigative report from dates of incident(s). It should describe the circumstances surrounding the offense and any field sobriety tests that were performed;

2. Court records, if applicable; and

3. Military records if event(s) occurred while the applicant was a member of the U.S. armed forces. It should include military court records, records of non-judicial punishment, and military substance abuse records.

### Driving record/Department of Motor Vehicles (DMV) Records
4. List every state/principality/location and dates you have held a driver’s license in the past 10 years;

5. Submit a complete copy of your driving records from each of these for the past 10 years; and

6. Blood Alcohol Concentration (BAC) from any alcohol offense. It may be listed in a hospital report, a police report or investigative report.
   - This will be either a breathalyzer test or a blood test.
   - Attach copies of any additional drug testing that performed.

## MEDICAL RECORDS

List any other medical records relevant to this case.

## SI ADDITIONAL REPORTS

1. Submit any reports required by a current Authorization for Special Issuance (SI); and/or

2. Any reports for a new condition that may require SI (or AME is instructed to defer).
SPECIFICATIONS FOR PSYCHIATRIC AND NEUROPSYCHOLOGICAL EVALUATIONS FOR SUBSTANCE ABUSE/DEPENDENCE
(Updated 01/29/2020)

Why are both a psychiatric and a neuropsychological evaluation required? Substance use disorders, including abuse and dependence, not in satisfactory recovery make an airman unsafe to perform pilot duties. These evaluations are required to assess the disorder, quality of recovery, and potential other psychiatric conditions or neurocognitive deficits. Due to the differences in training and areas of expertise, separate evaluations and reports are required from both a qualified psychiatrist and a qualified clinical psychologist for determining an airman’s medical qualifications. This guideline outlines the requirements for these evaluations.

Will I need to provide any of my medical records? You should make records available to both the psychiatrist and clinical neuropsychologist prior to their evaluations, to include:

- Copies of all records regarding prior psychiatric/substance-related hospitalizations, observations or treatment not previously submitted to the FAA.
- A complete copy of your agency medical records. You should request a copy of your agency records be sent directly to the psychiatrist and psychologist submitting a Request for Airman Medical Records (FAA Form 8065-2).

THE PSYCHIATRIC EVALUATION

Who may perform a psychiatric evaluation? Psychiatric evaluations must be conducted by a qualified psychiatrist who is board-certified by the American Board of Psychiatry and Neurology or the American Board of Osteopathic Neurology and Psychiatry, and must either be board certified in Addiction Psychiatry or have received training in the Human Intervention Motivation Study (HIMS) program. Preference is given for those who have completed HIMS training. Using a psychiatrist without this background may limit the usefulness of the report.

What must the psychiatric evaluation report include? At a minimum:

- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, social worker, counselor, or neuropsychologist treatment notes). Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.
- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview.
- A mental status examination.
• An integrated summary of findings with an explicit diagnostic statement, and the psychiatrist’s opinion(s) and recommendation(s) for treatment, medication, therapy, counseling, rehabilitation, or monitoring should be explicitly stated. Opinions regarding clinically or aeromedically significant findings and the potential impact on aviation safety must be consistent with the Federal Aviation Regulations.

**What must be submitted by the psychiatrist?** The psychiatrist’s comprehensive and detailed report, as noted above, plus copies of supporting documentation. Recommendations should be strictly limited to the psychiatrist’s area of expertise. Psychiatrists with questions are encouraged to call Charles Chesanow, D.O., FAA Chief Psychiatrist, at (202) 267-3767.

**THE NEUROPSYCHOLOGICAL EVALUATION**

**Who may perform a neuropsychological evaluation?** Neuropsychological evaluations must be conducted by a neuropsychologist who is included on the provider list, accessed through the following link: [FAA Neuropsychologist List](#).

**What must the neuropsychological evaluation report include?** At a minimum:

- A review of all available records, including academic records, records of prior psychiatric hospitalizations, and records of periods of observation or treatment (e.g., psychiatrist, psychologist, or pediatric neuropsychiatrist treatment notes). Records must be in sufficient detail to permit a clear evaluation of the nature and extent of any previous mental disorders.
- A thorough clinical interview to include a detailed history regarding: psychosocial or developmental problems; academic and employment performance; legal issues; substance use/abuse (including treatment and quality of recovery); aviation background and experience; medical conditions, and all medication use; and behavioral observations during the interview and testing.
- A mental status examination.
- Interpretation of a full battery of neuropsychological and psychological tests including but not limited to the “core test battery” (specified below).
- An integrated summary of findings with an explicit diagnostic statement, and the neuropsychologist’s opinion(s) and recommendation(s) regarding clinically or aeromedically significant findings and the potential impact on aviation safety consistent with the Federal Aviation Regulations.

**What is required in the “core test battery”?**
To promote test security, itemized lists of tests comprising psychological/neuropsychological test batteries have been moved to a secure site. Authorized professionals should use the portal at [FAA Neuropsychology Testing Specifications](#). For access, email a request to: 9-amc-aam-NPTesting@faa.gov.

**What must be submitted?**
The neuropsychologist’s report as specified in the portal, plus:

- Copies of all computer score reports; and
- An appended score summary sheet that includes all scores for all tests administered. When available, **pilot norms must be used**. If pilot norms are not available for a particular test, then the normative comparison group (e.g., general population, age/education-corrected) must be specified. Also, when available, percentile scores must be included.

Recommendations should be strictly limited to the psychologist's area of expertise. **For questions about testing or requirements, email** 9-amc-aam-NPTesting@faa.gov.

**What else does the psychologist need to know?**
- The FAA will not proceed with a review of the test findings without the above data.
- The data and clinical findings will be carefully safeguarded in accordance with the APA Ethical Principles of Psychologists and Code of Conduct (2002) as well as applicable federal law.
- Raw psychological testing data may be required at a future date for expert review by one of the FAA's consulting clinical psychologists. In that event, authorization for release of the data by the airman to the expert reviewer will need to be provided.

**Additional Helpful Information**

1. Will additional evaluations or testing be required in the future? If eligible for unrestricted medical certification, no additional evaluations would be required. However, pilots found eligible for Special Issuance will be required to undergo periodic re-evaluations. The letter authorizing special issuance will outline the specific evaluations or testing required.

2. Useful references for the psychologist:
DRUG AND ALCOHOL MONITORING AND HIMS RECERTIFICATION REQUIREMENTS

HIMS AMES should use the following section once the airman has a valid Special Issuance Authorization for a Drug or Alcohol condition.

In response to NTSB Safety Recommendation A-07-43, the FAA has extended follow up for airmen with a diagnosis of substance dependence on a HIMS Step Down Plan.

HIMS AMES should use the following pages to guide them in recommending testing frequency and general milestones.
HIMS AME INFORMATION – HIMS STEP DOWN PLAN (Updated 01/27/2021)

Note that the time course listed is nominal and indicates usual, uncomplicated progression of recovery but may be modified on a case-by-case basis.

- Not all airmen will progress at the same rate.
- Progression is NOT guaranteed.
- An airman’s progression is based on compliance, his or her individual evaluation by HIMS professionals, and FAA review.

Permanent abstinence from mind and mood altering substances is required for the duration of the flying career.

The testing frequencies listed are minimums and may be increased at the discretion of the HIMS AME. AMEs should recommend a change in testing/evaluations when clinically appropriate and after the minimum time has passed in each stage.

AIRMAN INFORMATION – HIMS STEP DOWN (Updated 01-27-2021)

IF YOU ARE AN AIRMAN:

(b) Continue to work with your sponsor/physician/therapist/support group and get/stay healthy.

(c) Do not fly in accordance with 14 CFR 61.53 if you relapse.

(d) Permanent abstinence from mind and mood altering substances is required for the duration of the flying career.

(e) Work with your HIMS AME to obtain any necessary evaluations and documentation.

(f) When submitting information: Coordinate with your AME to ensure ALL ITEMS are COMPLETE. Incomplete packages will cause a DELAY IN CERTIFICATION.

When you have passed the required minimum time AND your HIMS AME recommends you are ready to have a decrease in monitoring requirements, they will submit a report verifying this information. The FAA makes the determination if you meet requirements to reduce monitoring requirements.

- Examples of MINIMUM required items and testing are listed in the HIMS Step Down Plan illustration.

- You may require additional monitoring or testing based on your recovery.

- You may need to repeat a phase based on your recovery.

- Your HIMS AME is NOT Authorized to make changes.

If and when appropriate, you will receive an updated Special Issuance letter with updated Special Issuance requirements.
AME Checklist - Drug and Alcohol Monitoring Recertification
(Updated 08/30/2017)

Airman Name ______________________________  PI# ______________________________

Instructions to the HIMS AME:
- Address the following items based on your in-office exam and documentation review;
- Submit this Checklist (it must be signed and dated by the HIMS AME); AND
- Include supporting documentation reviewed to complete this checklist (including your HIMS AME report) within 14 days to:

  Federal Aviation Administration, Civil Aerospace Medical Institute, Bldg. 13
  Aerospace Medical Certification Division, AAM-313
  PO Box 25082, Oklahoma City, OK 73125-9867

I reviewed the airman’s HIMS Authorization Letter dated: (Date of Authorization letter)

1. HIMS AME FACE-TO-FACE, IN OFFICE EVALUATION: Required EVERY 6 months for ALL CLASSES

   Any concerns that the airman is not successfully engaged in a continued abstinence-based recovery program or is not working a good program based on your clinical interview/exam and review of reports? ………………………
   Interval evaluations (every 3 months or as required by Authorization Letter) were unfavorable? …………………
   Any evidence or concern the airman has not remained abstinent? ………………………………………………
   Any positive drug or alcohol tests since last HIMS evaluation? …………………………………………………
   Any evidence of noncompliance or concern the airman is not working a good recovery program? ………………
   Any NEW condition(s) that would require Special Issuance? (Do not include any new CACI qualified condition.)…

2. TREATING PSYCHIATRIST REPORT or HIMS PSYCHIATRIST REPORT: Required EVERY 12 months for ALL CLASSES unless a different interval is specifically stated in the Authorization Letter.

   Report(s) is/are favorable (no anticipated or interim treatment changes) ………………………………………
   The psychiatrist recommends no additional treatment or monitoring ………………………………………

Items 3 - 5: The AME should review. Do not submit these items (3-5) to the FAA unless concerns are noted.

3. AFTERCARE COUNSELOR REPORTS: For 1st and 2nd class: Required every 3 months; 3rd class: Per Authorization Letter.
   - Show continued participation and abstinence-based sobriety? …………………………………………………

4. CHIEF PILOT REPORT(S): Required monthly for commercial pilots holding first- or second-class certificates (N/A for third-class):
   - Report(s) is/are favorable? ………………………………………………………………………………………

5. PEER PILOT REPORTS: Required monthly for commercial pilots holding first- or second-class certificates (N/A for third-class):
   - Report(s) is/are favorable with continued total abstinence? …………………………………………………

6. ADDITIONAL REPORTS: Required ONLY when specified by the Authorization Letter
   - HIMS related (AA attendance, therapy reports, etc.) are favorable and meet authorization requirements ……………………………………………………………………………………………
   - Reports required for other non-HIMS conditions all meet Authorization requirements ………………………

7. I have no other concerns about this airman and recommend re-certification for Special Issuance. …………………

____________________________________________________________________________

HIMS AME Signature __________________________ Date of Evaluation ____________________

If ALL items fall into the clear column, the AME may issue with the time limitation specified in the Authorization letter.

If ANY SINGLE ITEM falls into the SHADeD COLUMN, the AME MUST DEFER or contact the FAA for guidance AND EXPLAIN in the HIMS evaluation report.
**FAA CERTIFICATION AID – Drug and Alcohol Monitoring Recertification** (Page 1 of 2)

(Updated 05/25/2016)

The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on an airman medical certificate. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. If each item is not addressed by the corresponding provider there may be a delay in the processing of your medical certification until that information is submitted. Additional information such as clinic notes or explanations should also be submitted as needed. All reports must be CURRENT (within the last 90 days) for FAA purposes.

<table>
<thead>
<tr>
<th>REPORT FROM</th>
<th>REQUIRED INTERVAL</th>
<th>MUST SPECIFICALLY ADDRESS OR STATE THE FOLLOWING</th>
</tr>
</thead>
</table>
| HIMS AME    | Every 6 months or per Authorization Letter for all classes | 1. Must be a face-to-face, in-person evaluation.  
2. Must be performed by the HIMS AME listed on the Authorization Letter.  
3. Summarize findings from additional interim evaluations that were performed by other venue (phone/video/email), either at the AME’s discretion or as required by the Authorization Letter (every 1-3 months).  
4. Summarize your aero medical impression and evaluation as a HIMS AME based on the face-to-face evaluation AND review of the supporting documents.  
   a. Any evidence (such as a positive test) or concern the airman has not remained abstinent?  
   b. Any evidence or concern the airman has not been compliant with the recovery program?  
   c. If you do not agree with the supporting documents or if you have additional concerns not noted in the documentation, please discuss your observations or concerns.  
5. State if the airman meets all the requirements of the Authorization Letter or describe why they do not.  
6. Do you recommend continued Special Issuance in this airman?  
7. Agreement to continue to serve as the airman's HIMS AME and follow this airman per FAA policy.  
8. Agreement to immediately notify the FAA (at 405-954-4821) of any change in condition, deterioration or stability, or if there is any positive drug or alcohol testing.  
9. Using the HIMS AME Checklist - Drug and Alcohol Monitoring Recertification, comment on any items that fall into the shaded category on the Checklist.  
10. Submit the HIMS AME Checklist, your HIMS AME written report, and all required supporting documentation that you reviewed with your package. |
| DRUG OR ALCOHOL TESTING | Every 6 months or per Authorization Letter | 1. Must be random, unannounced drug/alcohol testing. (Urine EtG/EtS, PEth testing or a mobile alcohol monitoring system are preferred.)  
2. At a minimum, frequency must be 14 tests over a 12-month period (can be more frequent at AME discretion).  
3. Must state if the testing is performed by:  
   - HIMS AME  
   - Air Carrier testing program/office. Air Carrier must immediately notify the HIMS AME of any positive test  
   - HIMS AME may require additional testing to supplement the testing conducted by the Air Carrier.  
   - Other, such as return to duty testing from a substance abuse professional or a DOT/FAA drug abatement program.  
4. HIMS AME must immediately report any positive test to the FAA. |
| PSYCHIATRIST HISTORY REPORT | Every 12 months or per Authorization Letter | 1. Summarize clinical findings and status of how the airman is doing.  
2. Note any clinical concerns or changes in treatment plan.  
3. Recommendations for any additional treatment or monitoring, if applicable.  
4. Agreement to immediately notify the FAA or AME (at 405-954-4821) if there are any changes in the airman's condition.  
5. Interval treatment records if any, such as clinic or hospital notes, should also be submitted. |
The following information is to assist your treating physician/provider who may be unfamiliar with FAA medical certification requirements. It lists the ABSOLUTE MINIMUM information required by the FAA to make a determination on an airman medical certificate. You should strongly consider taking a copy to each evaluator so they understand what specific information is needed in their report to the FAA. | GROUP AFTERCARE COUNSELOR | 1st and 2nd class: Every 3 months or per Authorization Letter  
3rd class: As required per Authorization Letter | Progress report should include:
1. If the airman is continuing to participate in abstinence-based sobriety.
2. How often the airman attends (weekly or per Authorization Letter).
3. Agreement to immediately notify the HIMS AME if there are any changes or deterioration in the airman’s condition. |
| CHIEF PILOT, FLIGHT OPERATION SUPERVISOR, OR AIRLINE MANAGEMENT DESIGNEE | 1st and 2nd class: Every month (bring cumulative reports to HIMS AME evaluation every 6 months.)  
3rd class: Not applicable | Monthly reports must address:
d. The airman’s performance and competence.
e. Crew interaction.
f. Mood (if available).
g. Presence or absence of any other concerns. |
| PEER PILOT (Ex: from employer, ALPA, etc.) | 1st and 2nd class: Every month (bring cumulative reports to HIMS AME evaluation every 6 months.)  
3rd class: Not applicable | Must attest to the best of their knowledge, the airman’s continued total abstinence from drugs or alcohol. |
| ADDITIONAL PROVIDERS | Every 6 months or per Authorization Letter | Varies. See the airman’s Authorization Letter. Include any applicable psychotherapy notes, therapist follow up reports, social worker reports, AA sponsor contact, etc. If the airman has other non-SSRI conditions that require a special issuance, those reports should also be submitted according to the Authorization Letter. |
Drug/Alcohol Monitoring Programs and HIMS FAQS  (Updated 09/27/2017)

1. What is a HIMS AME or HIMS-Trained AME?

   - An AME who has successfully completed and passed additional training in evaluating airmen for substance- or alcohol-related conditions or other conditions (such as the SSRI program).

   - HIMS AMEs can provide sponsorship and monitoring when required by the FAA for medical certification purposes. A HIMS AME can sponsor:
     - Airmen in an industry HIMS program; and
     - Airmen who do not work for an HIMS industry airline but are in an FAA-monitoring program.

2. Where do I find a HIMS AME?

   You can find an HIMS AME using the FAA AME Locator.

3. What is a HIMS psychiatrist?

   A psychiatrist who has successfully completed additional training in evaluating airmen for substance- or alcohol-related conditions or other conditions (such as the SSRI program).

4. How do I find a HIMS psychiatrist?

   Consult with a HIMS AME.

5. Is the HIMS program the same as a HIMS AME?

   No. The HIMS program in an industry program. The airmen in this program are followed for FAA purposes by a HIMS AME. For more information, see the HIMS program Website.

6. Do all commercial pilots use the HIMS program?

   No. The HIMS program is not used by all airlines. The list of current carriers with a HIMS program can be found on the HIMS program Website.

7. What if the airman flies recreationally or for an airline that does not have a HIMS program but they require monitoring for their FAA medical certificate?

   Airmen who do not work for a carrier with a HIMS program can still be monitored by a HIMS-trained AME to fulfill the requirements of their medical certificate as outlined by the FAA.

NOTE: For further information, contact your Regional Flight Surgeon.
STUDENT PILOT RULE CHANGE
Student Pilot Rule Change
(Updated 09/28/2016)

As of April 1, 2016, AMEs are no longer able to issue the combined FAA Medical Certificate and Student Pilot Certificate. Student Pilots must have a separate Student Pilot Certificate and a separate FAA Medical Certificate.

This change is due to a new Final Rule published on 01/12/16 [81 FR 1292]. It is in response to section 4012 of the Intelligence Reform and Terrorism Prevention Act and facilitates security vetting by the Transportation Security Administration (TSA) of student pilot applicants prior to certificate issuance.

The airman, student pilot airman, and non-FAA Air Traffic Control Specialist will continue to require a medical exam issued by an AME.

The student pilot will need a valid medical certificate prior to solo flight.

What has changed for the AME regarding the MEDICAL CERTIFICATE?

- **Medical Flight Test:**
  If the AME determines a MFT is needed (such as for a vision defect, amputation or orthopedic condition), the AME must DEFER the exam.

- **Age Requirement:**
  There is no age requirement for a medical certificate. The exam should be timed so that the medical certificate is valid at the time of solo flight.

- **Restrictions are no longer used by the AME:**
  “Valid for flight test only”; “Valid for student pilot purposes only”; “Not valid until (date of 16th birthday).”

- **English Proficiency:**
  There is no language requirement for medical certification.

- **Transmittal time:**
  The AME has 14 days to transmit exams. The previous requirement to transmit student exams within 7 days no longer applies.

Helpful Resources regarding the Student Pilot Certificate:

The student pilot certificate will now be issued by a Flight Standards District Office (FSDO), an FAA-designated pilot examiner, an airman certification representative associated with a part 141 flight school, or a certificated flight instructor (CFI).

The minimum age for the student pilot certificate is 16.

- See FAQs for AMEs. A description of the changes can be found in the Advisory Circular/AC 61-65F.
- Resident and US citizen student pilots follow Student Pilot’s Certificate Requirements.
- Foreign student pilots (non-resident) follow the Alien Flight Student Program.
GLOSSARY
GLOSSARY/ACRONYMS

AAM - Office of Aerospace Medicine

AASI - AME Assisted Special Issuance - Criteria under which an Examiner may reissue a medical certificate for a third-class applicant with a medical history of a disqualifying condition, who has already received a Special Issuance Authorization from the FAA, and criteria to defer issuance to AMCD or RFS for these situations.

AMCD - Aerospace Medical Certification Division - located at the Civil Aerospace Medical Institute in Oklahoma City, Oklahoma

AMCS - Airman Medical Certification System - allows the AME to electronically submit FAA Form 8500-8, Application for Airman Medical Certificate to AMCD.

AME - Aviation Medical Examiner - a physician designated by the FAA and given the authority to perform airman physical examinations for issuance of second- and third-class medical certificates. (NOTE: Senior Examiners perform first-class airman examinations).

ATCS - Air Traffic Control Specialist

AV - Atrioventricular

BUN - Blood Urea Nitrogen Test

CAD - Coronary Artery Disease

CAMI - Civil Aerospace Medical Institute

CAT - Computerized Axial Tomography Scan

CBC - Complete Blood Count

HIMS AME Checklist - SSRI Recertification/Follow Up Clearance, corrected PO Box in the mailing address.

2018 10/31/2018
1. Medical Policy

- In AASI for Deep Venous Thrombosis (DVT), Pulmonary Embolism (PE), and/or Hypercoagulopathies, guidance added for use of NOAC/DOACs.

2. Medical Policy

- In AASI for Atrial Fibrillation, guidance added for use of NOAC/DOACs.

3. Medical Policy

- In Pharmaceuticals – Anticoagulants, guidance added for use of NOAC/DOACs.

4. Medical Policy

- In Protocol for Thromboembolic Disease, guidance added for use of NOAC/DOACs.

2018 09/26/2018
1. Medical Policy

- In Disease Protocols, Specifications for Neuropsychological Evaluations for ADHD/ADD – add language to Airman Information and Testing Requirements to clarify that if the airman has stopped taking ADHD/ADD medication(s), they must be off the medication(s) for 90 days before testing and evaluation.

2018 08/29/2018
1. Administrative

- Throughout the AME Guide - revised instructions to airmen on how to request copies of their medical records. Requests should now be made by submitting FAA Form 8065-2.

2018 07/25/2018
1. Medical Policy

- In Item 47. Psychiatric Conditions - Use of Antidepressant Medications, Recertification/Follow-up Clearance, added a new page, HIMS AME Change Request.

2. Administrative

- In Specifications for Neuropsychological Evaluations for ADHD/ADD, updated the Aeromedical Neuropsychologist List.

### 2015 09/30/2015

1. **Medical Policy**  
   In Item 41. G-U Systems, add Kidney Stone(s) Dispositions Table.

2. **Medical Policy**  
   In Item 41. G-U Systems, add CACI – Kidney Stone(s) Worksheet.

3. **Medical Policy**  
   In Item 41. G-U Systems, Neoplastic Disorders, Dispositions Table, revise information for Renal Cancer.

4. **Medical Policy**  
   In Item 41. G-U Systems, Neoplastic Disorder, revise the CACI – Renal Cancer Worksheet to include “disease recurrence and stage 4 disease” as part of criteria AME must review.

5. **Medical Policy**  
   In Item 41. G-U Systems, Urinary System, revise Disposition Table to include information on Hematuria, Proteinuria, and Glycosuria. Removed information on renal calculi, which is now captured in Kidney Stone (s) Disposition Table.

6. **Administrative**  
   In Item 41. G-U Systems, revised the list of conditions to appear in the following order:  
   - General Disorders  
   - Gender Identity Disorders  
   - Inflammatory Conditions  
   - Kidney Stone(s)  
   - Neoplastic Disorders  
     - Bladder Cancer  
     - Prostate Cancer  
     - Renal Cancer  
     - Testicular Cancer
- Other G-U Cancers/Neoplastic Disorders
  - Nephritis
  - Pregnancy
  - Urinary System
