1	SUELLEN WAGNER	Dear Mr. Covalt, In order to begin to assess the Draft EA, we require 1)clear and legible maps with major streets, highways and other landmarks that are of high quality and can be magnified up to 1000% for all three options, that demonstrate flight paths and flight concentrations 2) FAA's form Runway Transition Data for Alternatives A and B. This will demonstrate flight headings, altitudes, and GPS coordinates for any waypoints, lengths of the flight legs, etc. These items are absolutely essential to begin review. Thank you and please advise as soon as possible. Studio City For Quiet Skies
2	lrittenberg@sbcglobal.net	To Whom It May Concern: I request a 2-month extension of the comment period for the draft Environmental Assessment (EA) for the proposed amendments to the Bob Hope “Hollywood Burbank” Airport southern departures. The draft EA is 529 pages long. The FAA released the draft EA in the midst of Hanukkah and the winter holiday period. More time is needed for the public to review the draft EA and prepare substantive comments. Please extend the comment period by 2 months, through March 24, 2024. Thank you. Sent from my iPhone

235	Dan Scheinkman	To Whom It May Concern: I know that the FAA doesn't give a shit about the people of the San Fernando Valley, where I used to live for nearly 40 years. After spending my life's savings to own a home in Sherman Oaks, as of 2017 it fell under a low-flying super highway of commercial airliners, allowing no peace in my home from the noise and shaking between 7am and 10pm due to the Metroplex flight plan changes affecting Burbank and Van Nuys airports. The City of Los Angeles has sued, you've received millions of complaints, yet you do nothing.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		I've been forced to abandon living in the entire eastern portion of the San Fernando Valley because of this issue. Congratulations. You have evicted me from my home because I can't take the noise anymore. Ironically enough, I now live in Westlake Village, which is 35 miles from Burbank airport, yet I'm still in the concentrated flight path and still get noise at all hours. Additionally, I request a 2-month extension of the comment period for the draft Environmental Assessment (EA) for the proposed amendments to the Bob Hope “Hollywood Burbank” Airport southern departures. The draft EA is 529 pages long. The FAA released the draft EA in the midst of Hanukkah and the winter holiday period. The FAA has been working on this draft EA for almost 5 years. More time is needed for the public to review the draft EA and prepare substantive comments. Please extend the comment period by 2 months, through March 24, 2024. - Dan Scheinkman

THE VALLEY IS GETTING DESTROYED! Thank you.
237	Lydia Antonini	I am sure you are receiving a ton of emails - primarily that's because so far there has been a steadfast refusal on the part of the FAA to address the real world impact of these changes, its simply grotesque to ignore the needs, health and lives of American citizens with such brazen disregard. I request a 2-month extension of the comment period for the draft Environmental Assessment (EA) for the proposed amendments to the Bob Hope “Hollywood Burbank” Airport southern departures.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		The draft EA is 529 pages long. The FAA released the draft EA in the midst of Hanukkah and the winter holiday period. The FAA has been working on this draft EA for almost 5 years. 238	Michael Rome	I write to request a 3-month extension of the comment period for the draft Environmental Assessment for the proposed amendments to the Bob Hope "Hollywood Burbank" Airport Southern Departures. An extension is warranted for the following reasons: • The EA is 529 pages long. • The EA was released in the middle of the holiday season. • The EA took the FAA nearly five years to complete; it is borderline absurd to ask the public to comment in such a short time and prepare substantive comments. Please extend the comment period by 3 months, through April 24, 2024.
239	R D	To Whom It May Concern: I request a 2-month extension of the comment period for the draft Environmental Assessment (EA) for the proposed amendments to the Bob Hope “Hollywood Burbank” Airport southern departures. The draft EA is extensive at 529 pages long which requires considerable time to comprehensively evaluate and respond to. The FAA released the draft EA in the midst of the winter holiday season when access to resources and community and govt. contacts for consultation is limited. The FAA has been working on this draft EA for almost 5 years. More time is needed for the public to review the draft EA and prepare substantive comments. Please extend the comment period by 2 months, through March 24, 2024. Thank you.
240	Teri Hatcher	To Whom It May Concern: This is a very important request! Please take it seriously.

241	Howard Deutch & Lea Thompson	To Whom It May Concern: The Bob Hope Burbank Airport air traffic has become relentless, disruptive to our sleep and our animals. We have horses and they are upset by the flights flying fairly low through Studio City, but we can’t explain to them what is happening. We are sure all the wildlife is also stressed by the air traffic and noise generated by the flight patterns and constant activity, as are our human neighbors. To fully digest what is happening, we need more time to assess our complaints/comments. We request a 2-month extension of the comment period for the draft Environmental Assessment (EA) for the proposed amendments to the Bob Hope “Hollywood Burbank” Airport southern departures. The draft EA is 529 pages long. The FAA released the draft EA in the midst of Hanukkah and the winter holiday period. The FAA has been working on this draft EA for almost 5 years. More time is needed for the public to review the draft EA and prepare substantive comments. Please extend the comment period by 2 months, through March 24, 2024. Thank you, Howard Deutch & Lea Thompson Studio City, CA Residents for over a quarter of a century

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
242	Nate	Dear FAA, Have you granted an extension of the comment period for the BUR environmental assessment? Thank you, Nate Sent from my iPhone
243	Nathaniel H. Hunt on behalf of the City of Los Angeles	Dear FAA, I am outside legal counsel for the City of Los Angeles. Los Angeles’ City Attorney’s Office is strongly interested in submitting comments on the Draft Environmental Assessment (EA) for proposed departure procedure amendments at Bob Hope “Hollywood Burbank” Airport. In 2019 to 2021, the Los Angeles and FAA were involved in litigation at the Court of Appeals for the Ninth Circuit regarding the flight procedures that are evaluated in the Draft EA: SLAPP and OROSZ departure procedures. The City Attorney’s Office remains interested in those procedures and the potential environmental impacts on Los Angeles residents from the proposed flight procedure changes. To meaningfully evaluate and participate in the public review process, the City Attorney’s Office request the comment deadline be extended by thirty (30) days to February 23, 2024. An extension of the deadline is justified. The public has been waiting five (5) years for FAA to publish the Draft EA, which involves 529 pages of environmental and highly technical analyses. The comment period that began in December has included various holidays when City staff were on vacation. The City Attorney’s Office requires additional time to coordinate its internal process for submitting comments, consult with the City’s technical staff, evaluate the proposed flight procedures and the potential environmental impacts, and prepare and submit comments. Extending the comment period is reasonable given the extensive Draft EA and the significant time required by FAA to complete its environmental review. Granting an extension also furthers the “twin aims” of the National Environmental Policy Act, 42 U.S.C. § 4321 et seq.—that (1) FAA is fully informed of the environmental impacts of the proposed flight procedure changes, and (2) that the public is fully informed of the environmental impacts and afforded an opportunity to participate in the environmental review process. See <i>Baltimore Gas and Electric Co. v. Natural Resources Defense Council</i>, 462 U.S. 87 (1983). We respectfully request a response from FAA regarding this request for an extension as soon as possible. Thank you,

244	Benito Mueller	Dear FAA, We recently moved into the Studio City area and appreciate the very walkable neighborhood and the green hills, but the airport noise is a real downside. On some days planes come literally thundering over the ridge of the nearby hill, at very low altitude, making any conversation outside impossible. Also, there are repeated flights in the middle of the night - we recently noticed one at 3am and another at 5am. For the livability of the neighborhood we strongly encourage a mandatory curfew and a restriction on number of daily flights for both the Burbank and Van Nuys Airports. Best Regards, Benito Mueller BARRY FILMS 3720 Buena Park Dr Studio City, CA 91604

Thank you, Cathy Moretti
247	Fred Marcus	Please be advised that we have reviewed the Environmental Assessment provided by the FAA for comment regarding departing flights out of Burbank Airport. We support Alternative A outlined in Chapter 2 of the Environmental Assessment. We live near the Mulholland corridor and are directly impacted by the current flight pattern of these flights. Thank you, Fred Marcus
248	Lindsey Imber on behalf of the Sherman Oaks Neighborhood Council	To whom it may concern, On January 8, 2024, the Sherman Oaks Neighborhood Council (SONC) adopted the following motion pertaining to the Burbank Airport Environmental Assessment seeking an extension of the public comment period.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		Whereas the Sherman Oaks community has been confronted with a change in Burbank airport flight paths that moved the departing flight over a substantial portion of Sherman Oaks's families dumping harmful chemicals, toxic pollution and unhealthy noise. This has been called the Southerly Shift. After confronting the FAA, the Task Force was convened and recommendations were made to unwind this harm. Early on the FAA said they needed to do an Environmental Assessment EA report; Whereas the FAA dragged this process out over 5 years, this long overdue EA was held until the beginning of the holiday season on December 11th when it was released with no announcements to the affected communities and families; Whereas the FAA stated that the Sherman Oaks community and others would only have until January 24th to make comments on this 529 page report that the FAA took over 5 years to write. This is unfair and very rude to the communities to only allow such a short period of time especially over this the busiest time of the year; Therefore, the Sherman Oaks Neighborhood Council "SONC" is requesting at a minimum an additional 60 days to study and comment on this huge report and its impact on the community. SONC's position is that flight paths should follow the historic paths and be as dispersed as possible and that the FAA needs to incorporate that dispersion in their final Action. Thank you for your attention, Lindsay Imber lindsay.imber.sonc@gmail.com President Sherman Oaks Neighborhood Council
249	Lisa Platt	Dear FAA, Please be advised that we have reviewed the Environmental Assessment provided by the FAA for comment regarding departing flights out of Burbank Airport. They are extremely noisy, intrusive, and sometimes unnerving for children and adults. Thank you, Ellen and Gary Michel 3056 Greentree Ct Los Angeles, CA 90077 ewmichel@yahoo.com
255	72 Rust	Our lives have been absolutely destroyed since the FAA implemented the new flight path out of the Burbank airport going more south than it ever went we live in the Toluca lake area. The planes always turned by time they got to Oxnard Street and never came as far as Magnolia and Riverside, we moved into a peaceful neighborhood, which is very difficult to find a city like Los Angeles and for years had a wonderful life and then woke up one day, essentially living on an aircraft carrier. The torture that we have endured cannot be described in words at 7 o'clock in the morning, seven days a week 365 days a year we have not slept in past 7 o'clock , it doesn't matter if we had insomnia it doesn't matter if we were sick it doesn't matter if there was a late night because it's 7 o'clock in the morning we are going to be put on full blast in addition to the fact that the flight path was never this far south, the fact that you have allowed and demanded the aircraft to fly at a lower altitude if you go to LAX or other airports and watch an airplane takeoff they're going up at approximately 45° angle they're going out at a 15 degree angle and continue to fly flat across thousands of homes. There is no possible explanation that you can say that this is for safety to not pick the altitude up is a disgrace and should be criminal. Why would you intentionally make an aircraft not build altitude up and get up in the air as quick as possible away from peoples homes, we need you to put back the original flight path or at the very least Plan B with the addition of making the right hand turn immediately out of the airport. We can look into our skies every day them turning their planes earlier and building up altitude does not interfere with any other aircraft , if we wanted to buy a house under a flight path we would have we can't have a window open we can't sit outside.

		9-AJO-BUR-Community-Involvement@faa.gov Re: Draft Environmental Assessment for Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (FAA 693KA9-18-D00005) Dear Mr. Covalt: I write on behalf of the Burbank-Glendale-Pasadena Airport Authority ("Authority"), owner/operator of the Bob Hope Airport, commonly known as the Hollywood Burbank Airport ("Airport"). This letter provides the Authority's comments to the Federal Aviation Administration ("FAA") on the abovereferenced Draft Environmental Assessment ("EA"). The Authority considers the Draft EA to be thorough and compelling in its analysis of environmental effects associated with the potential implementation of two proposed alternative procedures for Runway 15 departures at the Airport. My fellow Commissioners and I particularly support Alternative B (a modification of existing departure procedures to require a higher climb gradient) with consideration for early turns and dispersal, which was a recommendation made by the Southern San Fernando Valley Airplane Noise Task Force that the Authority jointly formed with Los Angeles World Airports. Ultimately, as has been expressed in prior correspondence, to the extent possible consistent with public safety the Authority encourages the FAA to reinstate the historical flight procedures and dispersal flight patterns that were utilized at the Airport prior to the 2017 NextGen for aircraft operators. The Authority is aware that under federal law, the United States Government has exclusive sovereignty over airspace of the United States. The Authority also understands that, under the Airport Noise and Capacity Act of 1990 ("ANCA"), it cannot restrict access to the Airport to address local noise impacts without the FAA's approval. Your consideration of this comment letter is greatly appreciated. Sincerely, Felicia Williams President, Burbank-Glendale-Pasadena Airport Authority cc: Commissioners, Burbank-Glendale-Pasadena Airport Authority Frank Miller, Burbank-Glendale-Pasadena Airport Authority

261	Aunt Diva	1. YES to Alternative A! FAA has the legal and ethical obligation to implement Alternative A.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		Benedict Hills Estates and Benedict Hills Homeowners Associations legally challenged the FAA-BUR southerly shift of flights in the time frame allowed by FAA. The Settlement Agreement was signed by all parties during February-March, 2018, including FAA, Acting Director, Maurice Hoffman, March 12, 2018 and Lane McFadden of the U.S. Department of Justice on March 16, 2018. FAA agreed to implement a new open SID procedure and create new turn points JAYTE and TEAGN, if they were proven safe and efficient. The EA has proven JAYTE-TEAGN turn points are safe and efficient. EA Section 2.2.1: “The new procedures meet the “Purpose and Need” of the project as they provide (a) additional operational flexibility needed to manage air traffic in the area, and (b) are consistent with Exhibit “A” of the Settlement Agreement regarding departures at the Airport.” 2. NO to No Action Alternative The EA states in 2.1: “The ‘No Action Alternative’ does not meet the “Purpose and Need of the Proposed Action.” Translation: The No Action Alternative is tantamount to the FAA and U.S. Justice Department breaching a legal Settlement Agreement for no reason, because the EA has proven Alternative A to be safe and efficient. The EA states, “BUR is considered a local airport for the San Fernando Valley area of Los Angeles.” BUR’s Wiki reads:”The airport serves Burbank, Hollywood, and the northern Greater Los Angeles area, which includes Glendale, Pasadena, The San Fernando Valley and the Santa Clarita Valley. West Los Angeles, south of Mulholland Drive, is not in any of the above-cited communities. It has its own airport. FAA-BUR have created low-altitude turn points more than a mile south of Mulholland Drive, far southwest of BUR, to turn jets north and east. These low altitude turns are typically at between 2,000-4,000 feet (factoring in

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		the hills’1020 feet+ altitude). They occur over dense-brush, residential canyon neighborhoods and wildlife habitats. The complexity of the hills and canyon microclimate render overflights here more perilous as evidenced by the April 29, 2023 fatality plane crash into a canyon wall during dense fog. Alternative A rightly curbs FAA-BUR’s southerly turn points. 3. NO to Alternative B Increase of Climb Gradient EA 2.2.2 reads: “FAA analysis of departure climb data at BUR indicates that Boeing 737s achieve an average climb gradient of 1019 feet per nmi while Airbus A 320s achieve an average climb gradient of 1075 feet per nmi. These two aircraft ... comprise a considerable proportion of activity at BUR and indicate that the vast majority of aircraft utilizing BUR are already achieving the higher climb gradient included in this alternative. Since most aircraft departing BUR already exceed this rate of climb, vertical and lateral profiles are not expected to materially change from current operations for most aircraft, as a result of this alternative.” Essentially, Alternative B is no change at all. 4. Environmental Consequences All of the sections in EA 4.1 indicate implementation of Alternative A would not have any significant impact on Air Quality, Climate, or Fuel Usage. 5.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		Noise Residents of West L.A. south of Mulholland live nowhere near BUR. They did not buy homes under BUR flight tracks. They do not reside in BUR communities. They have their own airport. The BUR noise problem requires a San Fernando Valley solution. 6. Conclusion FAA is legally, contractually, and ethically obligated to implement Alternative A.
262	chris Murray	Ever since the flight pathed was changed to a further south route our home has become virtually uninhabitable. We've tried for several years with the Burbank airport as well as the city of Los Angeles, who I know at one point did bring a lawsuit against the FAA concerning this now that you have completed your environmental assessment, we are begging you to put the flight path to it's original path you attempted to do this in Phoenix and were sued. You attempted to do it in Seattle and we sued. Why would anyone think that it is OK to randomly one day change the flight path over peoples homes that have been living in a neighborhood for many years and have paid millions of dollars for their homes to have their lives completely uprooted. If we attempted to move with the current interest rates our house payment would go from \$4500 a month to \$11,000 a month meaning we would never be able to afford a home here ever again , this new system that has been put in place has completely taken out all of the human factor and what kind of disruption and stress and torturous environment we have now been put in there is never been an air crash concerning commercial aircraft anywhere over the San Fernando Valley the fact that this has been changed makes zero sense it is not necessary. You are putting profits before people cause this has nothing to do with safety, if you're not gonna put it back to the original flight path, we need it to at least be a Plan B with the inclusion of a hard right turn as soon as the plane takes out of Burbank airport, not allowing it to come all the way to Magnolia we live in the 5000 block of Strohm ave Boulevard and you have literally destroyed our lives. Please put this back. The stress that this is put on us, and our relationships and sanctity of life has been destroyed beyond all recognition
263	Sandra moshi	I live near the Mulholland corridor and the airplane traffic over my home from Burbank airport has been very disturbing. The current flight patterns are truly affecting everyone in our home and neighborhood. I have reviewed the FAA's environmental assessment and I support Alternative A as outlined in chapter 2 of the assessment. Sandra moshi

I have reviewed the FAA’s environmental assessment and I support Alternative A as outlined in chapter 2 of the assessment. Sandra moshi 10125 Baywood Court Los Angeles 90077
265	Chris Murray	The flight path at the Burbank airport had been the same for many many many years we lived in a beautiful quiet neighborhood that we worked extremely hard and saved every penny to be able to live in the neighborhood we live in which is the Toluca lake area several miles south of the Burbank airport we would always have some occasional plain noise on Weather and wins but when we woke up one day six years ago, or whatever it was to the constant airplane noise going over our house, it has been nothing less than torture. The only reason we have not sold the house is that we’ve been holding out hope that this was going to be rectified , we will never be able to buy another home again as the prices have increased and now the interest rates have increased will literally have to move out of the state of California that we have lived in for the past 40 years. We cannot even carry a conversation on when flights are going over and we have tried everything. We have put new windows in our home Pain we have tried earplugs. None of it matters you cannot have plans flying that low over peoples houses. They never came this far south there’s no reason in the world that they cannot make a right hand turn immediately after leaving the airport before they get a couple of miles down south , this cannot be a safety issue. There’s never been a problem in the entire time we’ve lived here and the people that live under a flight path bought a house under the flight path we did not. We’ve been literally living in our home for 40 years it has been devastating , please put the plate back to the original flight path from years ago or at the very least adult Plan B with a hard right turn after takeoff Also, the fact that the planes are flying at such a low altitude does not make any sense whatsoever. They were never this low. You can literally throw a rock and hit one of them now I know that is an exaggeration but that’s how low they are. why are they not picking altitude upand getting into the air and away from peoples homes you cannot say that this is safety. There’s no aircraft flying above them as they takeoff from the airport please please please help the citizens of this community.
266	Nate Kamiya	I have been living in North Hollywood the last five years, the noise of planes from Burbank airport is disruptive and unending, beginning early in the morning and going late into the night. It is unfair that the burden of air

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		travel in the region should fall so disproportionately on a mostly working class neighborhood. I strongly disagree with the FAA's proposal, the last thing that's needed is more air traffic in an already overtaxed region. The FAA should instead be cutting back on its disastrous expansion of air traffic at the airport and mitigating the disruption and negative quality of life impacts. Nate Kamiya North Hollywood, CA
267	Guy Prevost	Dear FAA: I have read the Environmental Assessment by the FAA, in particular the alternatives for action listed in Chapter 2. I am strongly and unequivocally in favor of Alternative A. As a resident of a hillside area in Beverly Glen Canyon south of Mulholland Drive, I have been dramatically and negatively impacted by the recent jet overflights from Burbank Airport that cause excessive noise and pollution. I have lived in my home for over two decades. It was, until a few years ago, a relatively serene and quiet place, close to a Los Angeles City dedicated “greenspace” hospitable to wildlife. The new flight patterns, which I believe were part of the “Next Gen” protocol, have changed all that by re-directing flights south of Mulholland Drive. The Southwest jets and other aircraft fly directly over my house at all hours of day and night, creating constant noise and spewing fuel discharges. My other reasons for endorsing Alternative A are as follows: 1. It’s my understanding that the protocol of Alternative A, involving new flight paths to be guided by way points JAYTE and TEAGN, north of Mulholland, was already agreed upon by the Benedict Canyon Homeowners, the Burbank Airport, and the FAA after litigation and settlement--- all this pending the results of the EA. 2. Those results are in. The EA stipulates that Alternative A poses no safety or environmental problems, so there is no reason not to implement it.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		3. It makes sense that flights serving Burbank and its immediately adjacent municipalities should fly over those areas for take-offs and landings. I, for one, do not live in any of these areas. It's my understanding that Burbank and other neighboring cities enjoy tax and other revenues from the Burbank airport. Accordingly, those living in these municipalities should take the burden of the overflights, if any. 4. The increase of fuel usage necessitated by Alternative A is negligible, that is, less than a 1% according to the EA, and this for only a tiny portion of the flight path. 5. The negative impact of flights over hillside areas is greater due to their higher altitudes. For example, my house is at 1000 ft. above sea level. So a jet flying at 3000 ft. is only 2000ft. above me. This would not be the case, obviously for homes in the San Fernando Valley, and the negative effects of overflights there would not be as onerous. Thank you...
268	Linna Carter	I am very upset by the current and proposed Burbank airport flight plans through Studio City. I have lived at the corner of Tujunga and Moorpark in Studio City for over 11 years. Over the past several years, the frequency and loudness of the planes from Burbank airport has increased to an unsustainable level. Since 8am this morning alone, there have been more than 8 planes that have flown over my home, and it is only 8:35am. (Real flight times: 8:02a, 8:11, 8:19, 8:24, 8:26, 8:28, 8:29, 8:33) Plus, the planes actually start flying over at 7AM and continue until 11PM. I work from home. I do voiceover. And this constant and continual noise makes it nearly impossible for me to work. I have to wait until late night or early morning when the planes finally stop. The constant planes also negatively impact my mental health, my physical health, and my hearing and that of my family. The proposed new flight plans seem to direct EVERY PLANE DIRECTLY OVER MY HOME. Literally. If this was your home, how would you manage the constant noise and stress that comes from jets continually flying over your home? When can you find a few minutes for your mental health? To meditate, to read, for healing? How can you make a living, if you are now unable to work from home? How does that new burden add to your stress and negatively impact your mental health? To add insult to injury, the community was never consulted when the flight paths were originally changed, YOU JUST CHANGED THEM . When looking for a place to live more than 11 years ago, I specifically

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		choose Studio City over the northern San Fernando Valley, because of the continual flights I heard when visiting properties in that area. I was not afforded a choice when the flights were redirected over my home. More needs to be done by the FAA, and community concerns about the quantity of flights and noise level over this area of Studio City needs to be addressed. Linna Carter -- Sent with Tuta; enjoy secure & ad-free emails: https://tuta.com
269	Matt Labate	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While the settling parties may benefit from these changes, does that "Purpose and Need" outweigh the significant adverse impacts to the broader public? - Before this EA was released in 2023, the FAA itself admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the former paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded. - The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) to make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017 with the No Action Alternative; (2) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations; or (3) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA. Alternative B has potential to achieve "Purpose and Need" and provide relief to the community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR in its comment supported Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that was the triggering event for the Benedict Hills lawsuit and ultimately led to this EA.
270	Talia Shandler	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular:

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		- PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to

		prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
271	Dan Scheinkman	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains.

Appendix N – Compilation of Public Comments

		- USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. 		- PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to

		prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
281	Matt Labate	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that “Purpose and Need” does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the

Appendix N – Compilation of Public Comments

		"southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes.

299	Clarissa Lerchenfeld-Keller	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to

		prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
308	Darlene Yaplee	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains.

Sent from my iPhone
312	72 Rust	As a resident of North Hollywood, California, the Toluca Lake area, intersections of Magnolia and Riverside, 4852 strohm ave n hollywood as a lifelong resident for the past 30 years, we lived in a peaceful quiet, beautiful neighborhood until five years ago when you decided to change the flight path for absolutely no reason other than greed to try to save an airline a few pennies on gas that is not your fucking job do not respond with this is some sort of safety issue because it's not you can look up into the sky over the San Fernando Valley and there's never been aircraft interfering with other aircraft. The planes always came out of Burbank airport and made an immediate right turn well before Oxnard Street then you changed it and moved it farther south Before they started making their turns and it absolutely destroyed our lives. This flight path have been there for decades, and when people bought homes the ones that bought their homes in a flight path paid significantly less for their house as they knew they were buying a home in a flight path , you have not changed the landing path !! Other than in windy weather, which we've always had aircraft in the area as we do live in the vicinity of the airport which we understand but not doing perfect calm days the landing has always been the same but you decided to run to takeoff farther south into Magnolia and Riverside before they start making their turn do not respond back and do not say this is something to do with safety as it has nothing to do with it you can look up in the sky and see 50 fucking miles that there's no other major aircraft around that they would need to go this far especially with 90% of these planes go out and make a hard right turn and then go north there's no reason to send planes farther south to then have them just turn around and go north Also the fact that they are flying at such a low level you go to any other airport they're taking off at what appears to be damn near near of 45° angle. These planes are flying just several thousand feet above all these homes and literally are flying flat. They're not even attempting to gain altitude isn't that the point of a fucking aircraft on top of that starting last September you moved it again which is yet to acknowledge we have sent in complaints you've sent in photos showing as you can see nothing is changed and showed September and then six months later even though the photo so completely that you are several blocks closer than you were even six months ago we consistently get decibel, readings of 78 to 80 dB above our house, we would never be able to ever buy a new home here with the way home. Prices are, and it is inexcusable whatever change you're going to be back to the original flight path, and at the very least should be taking off and making an immediate right hand turn before Oxnard And for your department to not even reach out to people when they try to contact you is so criminal and disgusting you fucking cocksuckers I everyone you fucking Cunts get terminal, fucking cancer and die a horrible fucking death. This is what you've turned our lives into.

		because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
317	Deborah Llewelyn	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the

		Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 		In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints

The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 335	Phil Erenberg	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. 		ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 		does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations.

The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations.

		Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Sent from my iPhone
353	Jennifer Saunders	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains.

FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
362	Jim Praytor	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA).

		In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No

		Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Please listen to our neighborhoods that have been so adversely affected by this southern shift. Sherri Elkaim, Studio City
371	Mark Brown	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to

This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative

		projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Wayne Williams 15423 Sutton Street Sherman Oaks, CA 91403-3809 (818)905-8097 (h) (213) 705-5008 (c) Email: wwclick@mac.com
380	Sally Daws	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the

This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations.

		Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains.

		- USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required

		modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
407	Nora Doyle	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity.

		- FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
416	msuskinpub	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and

		of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. M. Hetzner
424	Michael Fields	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise.

		- CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 433	Alan Slasor	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the

Appendix N – Compilation of Public Comments

		"southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes.

442	Donna Pennestri	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

451	Sujie Tang, MD, MS	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline.

		- LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 		concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 460	Fox Newby	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has

		conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Catherine Hayes
469	Kay Donno	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 478	Lynn McCracken	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		"southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 487	Caren Lieberman	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative

		projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

		In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
496	Chris Murray	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft

		already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Best regards, Magda Lane Studio City Resident

We now have upwards of 60-70 flights per day flying at very low altitudes. This is a constant noise and pollution issue everyday inside our home. We were given no notice of these changes or any opportunity to provide input. We have lived here for 46 years and now suddenly are living next to an airport. This is unacceptable and we will fully support all legal remedies to correct this egregious change that has negatively effected thousands of homeowners and residents of the Santa Monica Mountains. 514	Kevin Doty	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline.

Comment Number	Name of Submitter	Comment
		- LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

523	Sabrina Silver	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. May I add that growing up in this house in Valley Village, being outdoors in our garden was pleasant and you could have conversions. Something changed. It is now no longer possible to enjoy the peace of the garden, as every 10 or so minutes a large and unbelievably loud airplane ascends DIRECTLY overhead. Conversion must stop until the plane passes. Then again. And again. We never chose to live under a flight path. The routes changed and now planes fly over our house. Often. Unremittingly. It's torturous. 532	pc pier	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative

		projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.

		In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints

		concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative

Appendix N – Compilation of Public Comments

		projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 557	Laeta Kalogridis	To Whom It May Concern: I am supporting UproarLA and Studio City For Quiet Skies in opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options put out are: 1. The No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; 2. To make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or 3. To implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. (Note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes.) In conclusion, I strongly oppose the Alternatives in the EA. I demand as a homeowner and stakeholder that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA to begin with.

		departure procedures. While it may benefit the parties to the Settlement Agreement, that “Purpose and Need” does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations.

Appendix N – Compilation of Public Comments

		Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA

		must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
578	Mary Odson	To Whom It May Concern: I support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative

		projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise.

		- CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Respectfully submitted, Kim Turner Studio City
604	Susan Birnberg	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. 613	Kristin Campbell	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an

		This is totally unacceptable. Currently there are , on average, 40,50,60,70 low flying commercial jets 7 days a week flying directly over my house. Previously there had been none. The constant noise and pollution is ruining our life. We do not have a moments peace INSIDE our home. This is an out of control situation in which we were given no opportunity to comment or have any input into this change in flight paths. It makes zero sense to fly into the Santa Monica Mountains. You have lost altitude. The historical flight pattern of turning right out of Burbank before the 101 Freeway had less impact. I believe this falls under the “unlawful taking” of my right to the peaceful enjoyment of my home. You have moved me next door to an airport. This has to stop! Edson A. 		by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. There is such bitterness in the community because the Federal Government, who exists only because of taxpayers, has been deaf to any solutions that would solve the burden of people living under constant flight noise at low altitudes. Or address the protected hillsides that make the low altitudes lower still for those people, as well as wildlife, living there. Janine Milne Studio City CA. 622	Dina Levy	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to

		flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an

The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. sincerely, Tim Olson

		In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the

The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations.

		Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
640	Rachel Rovner	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used

FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but

Appendix N – Compilation of Public Comments

		only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
649	Ebet Dudley	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The

FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity.

Appendix N – Compilation of Public Comments

		- FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. Clarissa Lerchenfeld-Keller M.A. Heart-Centered Life Coaching www.clarissakeller.com (818) 943-3887
658	Mitchell Wilen	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public.

Appendix N – Compilation of Public Comments

Comment Number	Name of Submitter	Comment
		- FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. Comment Number	Name of Submitter	Comment
		historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an

		environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA.
667	Beth	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. 		historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an

Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity.

		- FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA. The options are (1) the No Action Alternative, which would make permanent the existing impacts we have been suffering under since the "southern shift" occurred in late 2016-2017; (2) make the existing impacts even worse by implementing Alternative A, which FAA presented previously in a Categorical Exclusion (CATEX) in 2018 with waypoints concentrating traffic over the heart of the community, and which received such fervent opposition across the board that an Airport Noise Task Force involving all stakeholders was formed and the FAA was forced to prepare this EA; or (3) implement Alternative B, which is functionally the same as the No Action Alternative because most aircraft already exceed the proposed increased climb gradient in current operations. Alternative B has potential to achieve "Purpose and Need" and provide relief to the impacted community, but only with required modifications for early turns directly off the runway below the Minimum Vectoring Altitude by use of BUR's Diverse Vector Areas. Please note that BUR, in its comment, supports Alternative B with these required modifications. FAA should consider modifying Alternative B to include these required changes. In conclusion, I strongly oppose all of the Alternatives in the EA and demand that the FAA prepare an environmental review of the BUR departure paths that identifies solutions to both achieve the "Purpose and Need" and to finally correct the "southern shift" that ultimately led to this EA. STUDIO CITY RESIDENT
685	Stéphanie Eisen	To Whom It May Concern: I incorporate by reference and support the comments of UproarLA and Studio City For Quiet Skies opposing all of the Alternatives presented in the Proposed Settlement Agreement Departure Procedure Amendments for Hollywood Burbank Airport (BUR) Draft Environmental Assessment (EA). In particular: - PURPOSE AND NEED: This EA fails to accurately evaluate the "Purpose and Need" for the changes to the departure procedures. While it may benefit the parties to the Settlement Agreement, that "Purpose and Need" does not outweigh the significant adverse impacts to the broader public. - FALSE BASELINE: Before this EA was released in 2023, the FAA admitted in 2019 that an inexplicable "southern shift" of the BUR paths had occurred. This EA studied flights from calendar year 2022, long after the "southern shift" of the paths in late 2016-2017, which moved departing BUR flights over 2 nautical miles south

		of the historic paths, but which has never been studied or rectified. The FAA is required to study all changes to flight paths BEFORE making the changes. FAA's comparison in the EA between the proposed path and historical path is invalid because it fails to take into account the "southern shift" of the paths that the FAA has conceded, thereby creating a false baseline. - LACK OF REQUIRED MITIGATION: The FAA found that Alternative A would generate "Significant noise impacts", but fails to provide any mitigation for those impacts. Where a significant impact exists, FAA must prepare either a full Environmental Impact Statement or a Mitigated Finding of No Significant Impact. FAA must consider "noise sensitive areas", including the protected parklands of the Santa Monica Mountains. - USE OF CNEL METRIC REQUIRED: The EA uses the wrong noise metric with DNL and should have used the CNEL metric. The use of the DNL metric to evaluate noise impacts has been questioned by the FAA itself and FAA's own regulations call for the use in California of the more comprehensive CNEL metric. The Government Accountability Office (GAO) issued a report in 2021 that found that the DNL metric can mask large swings in daily flight operations and associated noise. - CUMULATIVE IMPACTS: The DEA glosses over the cumulative impacts, ignoring the effects of low ambient noise levels in foothill and mountain areas, and failing to take into account important cumulative projects such as the Replacement Passenger Terminal project at BUR that will increase operations capacity. - FAILURE TO EVALUATE REASONABLE ALTERNATIVES: FAA is required to evaluate reasonable alternatives, but refuses to offer the community any real alternatives in the DEA.
