List of Acronyms

Acronym	Definition
~	approximately
AGL	above ground level
AOA	at or above
AOB	at or below
CATEX	Categorical Exclusion
CFR	Code of Federal Regulations
CO ₂	carbon dioxide
dB	decibels
DNL	day-night average sound level
DOT	Department of Transportation
FAA	Federal Aviation Administration
FL	flight level
ft	feet
GPS	global positioning system
ID #	identification number
ILS	instrument landing system
KLAX	Los Angeles International Airport
L	left
LEED	Leadership in Energy and Environmental Design
LOC	localizer
MagVar	magnetic variation
MEA	minimum en route altitude
MSL	mean sea level
NEPA	National Environmental Policy Act
NHPA	National Historic Preservation Act
NM	nautical mile
NRHP	National Register of Historic Places
PDARS	Performance Data Analysis Reporting System
R	right
RNAV	area navigation
RWY	runway
SHPO	State Historic Preservation Officer
SoCal Metroplex	Southern California Metroplex
STAR	Standard Terminal Arrival
TARGETS	Terminal Area Route Generation Evaluation and Traffic Simulation
TWY	taxiway
U.S.	United States of America
United States Code	U.S.C.
USEPA	United States Environmental Protection Agency
USFWS	United States Fish & Wildlife Service
WP	waypoint

Appendix A - Tables

Table 1. KLAX Itinerant Operations Data 2017 - 2022

Year	Operation Type [1]	Air Carrier	Air Taxi	General Aviation	Military
2017	IFR Itinerant	645,391	34,931	17,547	329
	VFR Itinerant	14	40	1,910	200
2018	IFR Itinerant	649,082	40,246	16,539	323
	VFR Itinerant	10	64	1,401	168
2019	IFR Itinerant	634,503	38,478	16,258	188
	VFR Itinerant	12	27	1,595	196
2020	IFR Itinerant	346,029	22,618	9,170	120
	VFR Itinerant	7	29	1,178	213
2021	IFR Itinerant	464,793	27,581	13,052	225
	VFR Itinerant	10	42	896	170
2022	IFR Itinerant	513,410	28,487	13,598	329
	VFR Itinerant	11	78	792	206

Note: Instrument Flight Rules (IFR), Visual Flight Rules (VFR)

¹ Airport Operations. The number of arrivals and departures from the airport at which the airport traffic control tower is located. There are two types of operations: local and itinerant. Local operations are those operations performed by aircraft that remain in the local traffic pattern, execute simulated instrument approaches or low passes at the airport, and the operations to or from the airport and a designated practice area within a 20-mile radius of the tower. Itinerant operations are operations performed by an aircraft, either IFR, Special VFR, or VFR, that lands at an airport, arriving from outside the airport area, or departs an airport and leaves the airport area.

Appendix A - Tables

Table 2. KLAX Total Operations by Aircraft Weight Class 2017-2022

Aircraft Weight Class	Operations at KLAX by Calendar Year					
	2017	2018	2019	2020	2021	2022
Heavy Jet	92,912	92,264	93,122	73,395	89,020	93,367
B757 Jet	36,466	36,807	35,669	16,092	26,502	22,582
Large Jet	488,860	499,305	488,354	249,016	330,113	389,382
Large Commuter	42,825	42,888	38,080	16,441	29,675	19,004
Medium Commuter	19,490	21,739	21,731	14,231	20,477	21,691
Small	12,497	12,153	11,945	9,406	10,071	9,878
No Data/Other	41	68	64	61	65	105
<i>Subtotal</i>	<i>693,091</i>	<i>705,224</i>	<i>688,965</i>	<i>378,642</i>	<i>505,923</i>	<i>556,009</i>

Table 3. Summary of Action

Procedure	Description of Change	Explanation of Change
HUULL TWO	Amend the minimum en route altitude (MEA) between TOKIO WP/MANZZ WP (over water), MANZZ WP/RBOTO WP (over water), and RBOTO WP/LLEVI WP (over Vandenberg Space Force Base to Mission Hills) from 14,000 ft MSL to FL250	This amendment increased the minimum allowable altitude for aircraft on these segments by approximately 11,000 ft. An MEA of FL250 corresponds to minimum aircraft altitudes ranging from approximately (~) 25,000 ft AGL for segments over water, to ~23,400 ft AGL by the part of the procedure that overflies the hills northwest of Vandenberg Space Force Base.
	Add BRUKY WP (west of Las Cruces)—between LLEVI WP/HUULL WP (over Mission Hills and water)—with an altitude restriction of at or above (AOA) FL250.	BRUKY WP is located along the existing procedure path from the HUULL ONE procedure, and FL250 corresponds to a minimum altitude of ~24,200 ft AGL at BRUKY WP. Minimum altitudes along the segment between LLEVI WP and BRUKY WP did not change because the minimum altitude restriction of FL250 at LLEVI WP is unchanged, and so aircraft will already be flying at this altitude upon reaching new BRUKY WP.
	Amend the MEA between BRUKY WP/HUULL WP (west of Las Cruces and over water) from 14,000 ft MSL to 13,000 ft MSL.	This amendment is over water and lowered the minimum aircraft altitude between BRUKY WP and HUULL WP from ~14,000 ft AGL to ~13,000 ft AGL.
	Amend the altitude restriction at HUULL WP (over water) from at or below (AOB) FL250 to AOB FL230.	This amendment is over water and lowered the maximum allowable aircraft altitude at HUULL WP from ~25,000 ft AGL to ~23,000 ft AGL.
	Amend the altitude restriction at GNZZO WP (over water) from between 14,000 ft MSL and 16,000 ft MSL to between 13,000 ft MSL and 14,000 ft MSL.	This amendment is over water and lowered the minimum allowable altitude at GNZZO WP to ~13,000 ft AGL, and lowered the maximum allowable altitude at GNZZO WP ~14,000 ft AGL.
	Add a 250 knot (K) speed restriction at RYDRR WP (over Camarillo).	The speed restriction was established at RYDRR WP to improve separation of aircraft, but would not change aircraft altitudes.
	Remove the speed restriction at KEVVI WP (over Malibu Bowl).	The speed restriction was removed from KEVVI WP, but would not change aircraft altitudes.
	Add “at 6,000 ft MSL” altitude restriction at GADDO WP (over Los Angeles).	This amendment was made for all three procedures because FAA design criteria requires flight procedures to include an altitude restriction on the last waypoint at the end of the procedure. Adding the altitude restriction at GADDO WP did not affect altitudes of aircraft flying the procedure because the previous versions of the procedures included an altitude restriction at DAHJR WP of “at 6,000 ft MSL.” DAHJR WP is the second to last fix on the procedure just before GADDO WP, meaning aircraft flying the procedure are already at 6,000 ft MSL by the point they reach GADDO WP. Therefore, although the altitude restriction was coded into GADDO WP to comply with design criteria, it did not change minimum aircraft altitudes at GADDO WP. 6,000 ft MSL corresponds to a minimum altitude of ~5,800 ft AGL at GADDO WP.

Appendix A - Tables

Table 3. Summary of Action

Procedure	Description of Change	Explanation of Change
HUULL TWO	Amend the fix to manual termination (FM) leg heading at GADDO WP (over Los Angeles) from 071.00° to 071.01°.	This amendment was made for all three procedures and is an administrative correction for instrument precision. The correction of 0.01° would not result in a discernable or material change in where aircraft are flying.
IRNMN TWO	Amend the MEA between RUNNN WP/IRNMN WP (near Moorpark) and FRASR WP/IRNMN WP (over Los Padres National Forest to Fillmore to Moorpark) from 11,000 ft MSL to 12,000 ft MSL.	This amendment increased the minimum allowable altitude by 1,000 ft for the segments between RUNNN WP and IRNMN WP and between FRASR WP and IRNMN WP.
	Amend the altitude restriction at IRNMN WP (near Moorpark) from AOB 16,000 ft MSL to between 12,000 ft MSL and 16,000 ft MSL.	This amendment added a minimum allowable altitude of ~11,000 ft AGL for IRNMN WP.
	Amend the altitude restriction at SYMON WP (near Westlake Village) from between 11,000 ft MSL and 13,000 ft MSL to between 12,000 ft MSL and 13,000 ft MSL.	This amendment increased the minimum allowable altitude at SYMON WP by 1,000 ft.
	Add “at 6,000 ft MSL” altitude restriction at GADDO WP (over Los Angeles).	This amendment was made for all three procedures because FAA design criteria requires flight procedures to include an altitude restriction on the last waypoint at the end of the procedure. Adding the altitude restriction at GADDO WP did not affect altitudes of aircraft flying the procedure because the previous versions of the procedures included an altitude restriction at DAHJR WP of “at 6,000 ft MSL.” DAHJR WP is the second to last fix on the procedure just before GADDO WP, meaning aircraft flying the procedure are already at 6,000 ft MSL by the point they reach GADDO WP. Therefore, although the altitude restriction was coded into GADDO WP to comply with design criteria, it did not change minimum aircraft altitudes at GADDO WP. 6,000 ft MSL corresponds to a minimum altitude of ~5,800 ft AGL at GADDO WP.
	Amend the FM leg heading at GADDO WP from 071.00° to 071.01° (over Los Angeles).	This amendment was made for all three procedures and is an administrative correction for instrument precision. The correction of 0.01° would not result in a discernable or material change in where aircraft are flying.
RYDRR TWO	Amend the MEA between CERNL WP/GAASR WP (over water), GAASR WP/SERCO WP (over water), and SNAXX WP/SERCO WP (over water) from FL250 to FL190.	This amendment lowered the minimum allowable altitude by 6,000 ft for the segments between CERNL WP and GAASR WP, GAASR WP and SERCO WP, and SNAXX WP and SERCO WP. These segments are over water, so FL190 corresponds to ~19,000 ft AGL.
	Amend the altitude restriction at SERCO WP (over water) from AOA FL250 to between FL190 and FL210, and remove the 280K speed restriction.	This amendment changed the altitude restrictions at SERCO WP by lowering the minimum allowable altitude by 6,000 ft and lowering the maximum allowable altitude by 4,000 ft. SERCO WP is over water so FL190 to FL210 corresponds to ~19,000 ft AGL to ~21,000 ft AGL. The removal of the speed restriction would not change where aircraft are flying.

Table 3. Summary of Action

Procedure	Description of Change	Explanation of Change
RYDRR TWO	Amend the MEA between SERCO WP/HUULL WP (over water) and HUULL WP/GNZZO WP (over water) from 14,000 ft MSL to 13,000 ft MSL.	This amendment lowered the minimum allowable altitude by 1,000 ft for the segments between SERCO WP and HUULL WP and HUULL WP and GNZZO WP. These segments are over water so 13,000 ft MSL corresponds to ~13,000 ft AGL.
	Amend the altitude restriction at HUULL WP (over water) from AOB FL250 to between 17,000 ft MSL and FL200.	This amendment changed the altitude restrictions at HUULL WP by establishing a minimum allowable altitude of 17,000 ft MSL and lowering the maximum allowable altitude by 5,000 ft. HUULL WP is over water, so this corresponds to a minimum allowable altitude of ~17,000 ft AGL and a maximum allowable altitude of ~20,000 ft AGL.
	Amend the altitude restriction at GNZZO WP (over water) from between 14,000 ft MSL and 16,000 ft MSL to between 13,000 ft MSL and 14,000 ft MSL.	This amendment changed the altitude restrictions at GNZZO WP by lowering the minimum allowable altitude by 1,000 ft and lowering the maximum allowable altitude by 2,000 ft. GNZZO WP is over water, so this corresponds to a minimum allowable altitude of ~13,000 ft AGL and a maximum allowable altitude of ~14,000 ft AGL.
	Amend the MEA between GNZZO WP/RDRTT WP (over water to Oxnard) from 9,000 ft MSL to 11,000 ft MSL.	This amendment increased the minimum allowable altitude for the segment from GNZZO WP to RDRTT WP by 2,000 ft.
	Amend the MEA between ELKEY WP/EESSA WP (over water) from 14,000 ft MSL to 17,000 ft MSL.	This amendment increased the minimum allowable altitude for the segment from ELKEY WP to EESSA WP by 3,000 ft.
	Amend the altitude restriction at EESSA WP (over water) from AOB FL200 to between 17,000 ft MSL and FL200.	This amendment changed the altitude restrictions at EESSA WP by establishing a minimum allowable altitude of 17,000 ft MSL. The maximum allowable altitude did not change from FL200. EESSA WP is over water so this corresponds to a minimum allowable altitude of ~17,000 ft AGL and a maximum allowable altitude of ~20,000 ft AGL.
	Amend the MEA between EESSA WP/GKNEE WP (over water and Anacapa Island) from 9,000 ft MSL to 12,000 ft MSL.	This amendment increased the minimum allowable altitude for the segment between EESSA WP and GKNEE WP by 3,000 ft.
	Amend the altitude restriction at GKNEE WP (over water) from between 14,000 ft MSL and 16,000 ft MSL to between 12,000 ft MSL and 13,000 ft MSL.	This amendment changed the altitude restrictions at GKNEE WP by lowering the minimum allowable altitude by 2,000 ft, and lowering the maximum allowable altitude by 3,000 ft. GKNEE WP is over water so this corresponds to a minimum allowable altitude of ~12,000 ft AGL and a maximum allowable altitude of ~13,000 ft AGL.

Appendix A - Tables

Table 3. Summary of Action

Procedure	Description of Change	Explanation of Change
RYDRR TWO	Amend the MEA between GKNEE WP/RYDRR WP (over water, Port Hueneme, Naval Air Station Point Mugu, and Camarillo) from 9,000 ft MSL to 11,000 ft MSL.	This amendment increased the minimum allowable altitude for the segment between GKNEE WP and RYDRR WP by 2,000 ft.
	Add “at 250K” speed restriction at RYDRR WP (over Camarillo).	The speed restriction was established at RYDRR WP to improve separation of aircraft, but would not change aircraft altitudes.
	Add a holding pattern note at RYDRR WP (over Camarillo): "CHART HOLDING AT RYDRR: HOLD West, Left Turns, 079.09 INBOUND, 10 nautical mile (NM) LEGS."	This amendment was an administrative update to the procedure to ensure continuity between the RYDRR, HUULL, and BAYST arrival procedures.
	Remove the speed restriction at KEVVI WP (over Malibu Bowl).	The speed restriction was removed from KEVVI WP, but would not change aircraft altitudes.
	Add an altitude restriction of “at 6,000 ft MSL” at GADDO WP (over Los Angeles).	This amendment was made for all three procedures because FAA design criteria requires flight procedures to include an altitude restriction on the last waypoint at the end of the procedure. Adding the altitude restriction at GADDO WP did not affect altitudes of aircraft flying the procedure because the previous versions of the procedures included an altitude restriction at DAHJR WP of “at 6,000 ft MSL.” DAHJR WP is the second to last fix on the procedure just before GADDO WP, meaning aircraft flying the procedure are already at 6,000 ft MSL by the point they reach GADDO WP. Therefore, although the altitude restriction was coded into GADDO WP to comply with design criteria, it did not change minimum aircraft altitudes at GADDO WP. 6,000 ft MSL corresponds to a minimum altitude of ~5,800 ft AGL at GADDO WP.
	Amend the FM leg heading at GADDO WP (over Los Angeles) from 071.00° to 071.01°.	This amendment was made for all three procedures and is an administrative correction for instrument precision. The correction of 0.01° would not result in a discernable or material change in where aircraft are flying.

**Table 10. Summary of City of Los Angeles SurveyLA
Historic Cultural Resource Categories**

Resource Category	Resource Name
Individual historic cultural resources	The SurveyLA data layers include an inventory of over 21,000 individual resources within the City of Los Angeles's jurisdiction. All of the individual resources listed in SurveyLA are considered to be historically significant or potentially significant to the City of Los Angeles.
Historic cultural district contributors	The SurveyLA data layers include an inventory of properties evaluated for their historic contribution to historic districts within its jurisdiction.
Historic cultural districts	The SurveyLA data layers include an inventory of historic districts within its jurisdiction.
Non-parcel historic cultural resources	The SurveyLA data layers include an inventory of historic resources that are not specific to property parcels. These are primarily infrastructure resources, such as, but not limited to, historic street lights.

Appendix A - Tables

Table 11. Summary of City of Los Angeles SurveyLA Historic Districts in the Study Area

Object ID	Name	Recorded Date	Historic Name	Significance
568	Prospect Park	12/23/2014	Prospect Park	Prospect Park is an excellent example of an early municipal park in Boyle Heights, associated with the area's earliest pattern of residential development and suburbanization. The period of significance has been identified as 1889-1891, representing the
569	Brooklyn Heights Residential Planning District	11/6/2014	Brooklyn Heights	The Brooklyn Heights Residential Planning District is a significant example of early streetcar suburbanization in Boyle Heights. SECTION 106 & SECTION 4(F) RESOURCES REVIEW - POTENTIAL RESOURCES WITH QUIET AS AN ATTRIBUTE OR SETTING

Tier 2 Findings

The Tier 2 evaluation findings are provided below. This list focuses on those historic and cultural resources whose setting and feeling are considered significant factors in their historical significance and which are considered noise sensitive areas where the land use compatibility guidelines in 14 CFR Part 150 may not be relevant to the value, significance, and enjoyment of the area in question. The information on the resources in the study area is presented in a similar layout and in the same order as the referenced tables in Appendix A. Resource counts are provided in the headers for each of the referenced tables.

Resources Count: 201

Resources from Table 4. Section 4(f) Resources Identified in the Study Area		Count: 18
ID #	Resource Name	Address
1	Los Padros National Forest	6750 Navigator Dr., Goleta, CA 93117
12	Hopper Mountain National Wildlife Refuge & Sespe Condor Sanctuary	7400 Pine Grove Rd., Santa Paula, CA 93060
17	Malibu Creek State Park	1925 Las Virgenes Rd., Calabasas, CA 91302
24	Joel McCrea Wildlife Preserve	4500 N Moorpark Rd., Thousand Oaks, CA 91360

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Terminal 1 (2021) – Los Angeles World Airports	<p>Two separate projects totaling nearly \$980 million, including the complete modernization of Terminal 1 and an extension of the building that will provide future connection to the Automated People Mover train system and Terminal 2 behind security, have completely revamped Terminal 1. Now home to Allegiant, Southwest, Sun Country and Viva Aerobus, Terminal 1 gives visitors the first view of a fully transformed Central Terminal Area.</p> <p>Terminal 1 Extension (2021) - Most recently, the \$477.5 extension of Terminal 1 was opened to operations in May 2021. This facility includes the first of seven terminal vertical cores, which will connect the Automated People Mover system to the terminal via an elevated pedestrian bridge, to open at KLAX. The Terminal 1 core will connect travelers to the Center Central Terminal Area station in the future and provides for vertical circulation of passengers via elevators and escalators.</p> <p>The building also includes two new baggage carousels on the Lower/Arrivals Level, additional ticket counters on the Upper/Departures Level and a six-lane Transportation Security Administration checkpoint with Automated Screening Lane technology on the Concourse Level. The new portion of the ticketing lobby includes self-service check-in kiosks with biometric and touch-free capabilities from Materna Intelligent Passenger Solutions.</p> <p>The 283,000-square-foot extension of Terminal 1 also connects to Terminal 2 behind security via a bridge that allows passengers to move between the two buildings without having to be re-screened, while providing another access point for greater flexibility.</p> <p>Southwest Airlines gained a third baggage carousel and three additional ticket counters in the new portion of the building, as well as space on the fourth floor for offices. The airline's crew base is also housed in the new facility. The building also includes additional restrooms on all three levels and an indoor service-animal relief area on the Lower/Arrivals Level near baggage claim.</p>
West Gates (2021) – Los Angeles World Airports	<p>The \$1.7 billion West Gates at Tom Bradley International Terminal, a 15-gate concourse, is among the most modern in the world. Having opened to the public in May 2021, it features cutting-edge technology, stunning architecture, a checked-bag storage system, biometric boarding gates and the latest amenities for travelers to experience.</p> <p>This five-level, 750,000-square-foot facility serves both international and domestic flights. At nearly 1,700 feet in length, the West Gates at Tom Bradley International Terminal is located just west of the world-famous international terminal and was completed over the course of four-and-a-half years.</p>

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
West Gates (2021) – Los Angeles World Airports (Continued)	<p>The West Gates at Tom Bradley is designed around a modern, digitally-based travel experience and offer numerous comfortable seating options, with thousands of places to plug in, while accessing next-generation wireless internet, touchscreen kiosks and the most advanced baggage handling and boarding systems of any airport in the United States today.</p> <p>The roof of the West Gates at Tom Bradley emulates a swell in the ocean that is the formation of the next wave to arrive. This complements the architectural design of the Tom Bradley International Terminal roof to the east, which represents an ocean wave breaking onto the shore. The curved roofline also enhances the spaces contained within the building, with the architectural design allowing for great views and natural daylight in public spaces.</p> <p>The building is divided into several neighborhoods that each include aircraft gates, a restroom core, as well as retail and concession spaces that will open throughout 2022. The interior finishes and colors were selected to reflect the facility's location and are based on the urban fabric of Los Angeles. The main core of the building is considered the "downtown" area due to the high ceilings and elevator towers. Colorful mosaic tiles pay homage to the mid-century modern design of KLAX, with colors changing to denote the different neighborhoods from the desert to the sea.</p> <p>The West Gates at Tom Bradley features many passenger amenities, including two nursing rooms, a service-animal relief area, art exhibitions, a quiet room and three children's play areas.</p> <p>Additional features include:</p> <ul style="list-style-type: none"> Electronic self-boarding gates with biometric photo match capabilities at all 15 gates. Wi-Fi 6, which is almost three times as fast as older Wi-Fi infrastructure Improved reception for cell phones, including 5G speeds A total of 14 interactive kiosks provide access to a wide variety of airport information, including flight status, ground transportation options, wayfinding maps, and other guest amenities such as concessions Nearly 60,000 square feet of space for future airport lounges A robust arts program, with a number of new exhibitions and performance spaces to enhance the guest experience and complement the path passengers travel through the tunnel and inside the new building

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
West Gates (2021) – Los Angeles World Airports (Continued)	<p>The West Gates at Tom Bradley is accessible through a pedestrian tunnel from the Tom Bradley International Terminal. The tunnel originates at a new gateway facility connected to Tom Bradley near Gate 148 and includes moving walkways and 24 100-inch video screens along with courtesy passenger shuttles. The northern portion of the tunnel provides two-way traffic for outbound passengers as well as arriving guests on domestic flights or those who have been pre-cleared by U.S. Customs and Border Protection (CBP) at their departure point. The south half of the tunnel provides a secure route to the U.S. Customs and Border Protection's Federal Inspection Station at Tom Bradley International Terminal. The West Gates at Tom Bradley are also accessible by airfield buses, with ramp-level bus ports near the center and north end of the building.</p> <p>The West Gates at Tom Bradley International Terminal includes a ramp tower where KLAX Operations staff control aircraft surface movements in the area between Tom Bradley International Terminal and the West Gates, acting as a complement to the FAA's control tower.</p> <p>A \$261 million Baggage Optimization Project completed at the same time as the West Gates at Tom Bradley International Terminal adds capacity and new levels of service for guests. The new baggage handling system, designed and built by Vanderlande, includes approximately seven miles of conveyors, making it the largest outbound individual carrier system in the country, capable of moving up to 6,400 bags per hour.</p> <p>KLAX is the first U.S. airport with an Automated Storage and Retrieval System, using technology which is usually associated with warehousing and distribution. Every bag destined for the West Gates at Tom Bradley is automatically loaded into a special plastic tray or "carrier" at the Tom Bradley International Terminal and conveyed through an underground utility tunnel to its flight preparation area at the apron level. Bags that are checked in early for a flight, and stored for later retrieval, are directed to the Automated Storage and Retrieval System, where they are stored until the flight time is closer. This means passengers will be able to check in bags earlier than ever before, with storage possible up to 24 hours in advance of a flight.</p> <p>A total of 16 robotic cranes place and retrieve bags in more than 3,000 racking storage locations, which use radio-frequency tags to track bag locations within the system. The facility provides high-speed storage with full tracking and tracing of bags to prevent lost luggage. With this system, KLAX can house approximately 3,100 bags in early bag storage facilities, including 980 at the West Gates at Tom Bradley.</p>

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Terminal 7 and 8 (2019) – Los Angeles World Airports	<p>In early 2019, more than \$546 million in modernization work was completed in Terminals 7 and 8, home to United Airlines. This modernization included refreshment of nearly all of the public spaces and consolidation of four Transportation Security Administration screening checkpoints into one 12-lane location, featuring the first Automated Screening Lanes at KLAX. The project, which was the first upgrade at Terminals 7 and 8 since 1998, encompassed 700,000 square feet of existing space, as well as the addition of 20,000 square feet for a United Club lounge on a new fourth level of Terminal 7.</p> <p>Features include:</p> <ul style="list-style-type: none"> An expansive check-in lobby that maximizes use of incoming light and incorporates the latest self-service tools, including self-tagging baggage kiosks Remodeled boarding gate areas that feature a modern design, including a variety of comfortable seating options and numerous charging stations for guests' electronic devices All public restrooms now have environmentally efficient fixtures Existing Checked Baggage Inspection System replaced with a new efficient, high-speed system <p>Additional benefits include:</p> <ul style="list-style-type: none"> Passengers who have already checked in online are able to exit vehicles at the curb and proceed directly to security via a shorter, more efficient route The reconfigured gates can accommodate 19 narrow- and wide-body aircraft New carousels in the revamped baggage claim area make baggage pick-up more efficient United Club members enjoy the airline's new larger Terminal 7 lounge with an outdoor terrace, where they can work or relax while taking in spectacular views <p>The work was completed in 2019 by Hensel Phelps, with HNTB serving as the designer.</p>
Terminal 2 and 3 (Ongoing) – Los Angeles World Airports	<p>Terminals 2 and 3, home to Delta Air Lines, Aeromexico, and WestJet, is currently undergoing a \$2.3 billion modernization that broke ground in April 2019. The project includes a new headhouse for Terminals 2 and 3, the complete replacement of the Terminal 3 concourse and original 1961 satellite, a connection behind security between Terminal 3 and Tom Bradley International Terminal and connection to the Automated People Mover train system. The project was originally slated to complete in 2024, but has been accelerated by approximately 18 months due to the downturn in passenger traffic caused by COVID-19 and is now projected to complete in mid-2023. Terminal 3 was closed to the public in 2019 and torn down, allowing for construction of the new facility without significant impacts to passenger operations.</p> <p>The new central headhouse, which opened in April 2022, includes a consolidated check-in lobby, security checkpoint with Automated Screening Lanes, a centralized baggage claim area and the largest Delta Sky Club at any airport. The first three gates in the new Terminal 3 opened on May 25, 2022.</p>

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Terminal 2 and 3 (Ongoing) – Los Angeles World Airports (Continued)	<p>As part of the modernization, a secure connection between Terminal 3 and Tom Bradley International Terminal will be built, which will allow passengers to go between terminals without having to be re-screened. This connection will be the final piece needed to allow passengers to walk from Terminal 1 to Terminal 8 completely behind security.</p> <p>The project also includes two Terminal Vertical Cores, which create vertical passenger circulation via elevators and escalators. These cores, one at Terminal 2 and one at Terminal 3, will connect to APM stations via pedestrian walkways over World Way. Terminal 2 will connect to the Center Central Terminal Area station, while Terminal 3 will connect to the West Central Terminal Area station.</p> <p>Other project features include:</p> <ul style="list-style-type: none"> Reconstruction of Terminal 3, including the addition of new gates, more passenger seating with at-seat power charging capabilities and new options for shopping and dining The Delta Sky Club includes an indoor/outdoor double bar, a year-round outdoor Sky Deck and premium showers Upgraded restrooms Dual taxi lanes that will allow for airfield efficiency <p>The modernization project is designed to earn Leadership in Energy and Environmental Design (LEED) Silver certification from the U.S. Green Building Council.</p> <p>Prior to the start of the current project, the Terminal 2 satellite was replaced in the mid-1980s with a new concourse and a \$332 million improvement project was completed between 2013 and 2017, updating the ticketing lobby, baggage claim and concourse, and developing a new concessions program. Delta Airlines relocated its operations from Terminals 5 and 6 to Terminals 2 and 3 near completion of this project. The general contractor for the project is Hensel Phelps, with Arup the engineer of record and Gensler serving as the architect under Arup.</p>
Terminal 4 and 5 (Ongoing) – Los Angeles World Airports	<p>Terminals 4 and 5, home to American Airlines, JetBlue and Spirit Airlines, is undergoing a \$1.6 billion modernization slated to complete in 2027 that will create a centralized location for ticketing, screening and baggage claim with enhanced amenities for guests, as well as provide direct connection to the Automated People Mover train system.</p> <p>The modernization project includes a Terminal Vertical Core, which provides for vertical circulation of passengers with escalators and elevators, as well as connection to the Automated People Mover's West Central Terminal Area station via an elevated pedestrian walkway over World Way. The Terminal Vertical Core also will include new passenger check-in and baggage claim facilities, a consolidated security screening checkpoint, a new headhouse area for passenger processing and a new post-security connection between Terminals 4 and 5.</p>

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Terminal 4 and 5 (Ongoing) – Los Angeles World Airports (Continued)	<p>The Terminal Vertical Core also provides office and support spaces for airlines, the Transportation Security Administration and other law enforcement agencies. The glass curtain wall, or exterior façade of the building, complements the mid-century modern design aesthetic being incorporated on all new construction at KLAX, providing a cohesive look and feel to the Central Terminal Area.</p> <p>A new south concourse will be constructed inside Terminal 4, featuring additional space for hold rooms, concessions, restrooms and a bus gate that will serve both domestic and international traffic. Two existing aircraft gates will also be rebuilt to support U.S. Customs and Border Protection Federal Inspection Station capability. Improvements will be made to the north concourse that will increase the efficiency of passenger movements.</p> <p>Additional work includes improvements to Terminal 4 power systems, including transformers and backup power, replacement of the terminal's aircraft apron and a reconfiguration of its hydrant fueling system and underground utilities.</p> <p>Highlights of the modernization include:</p> <ul style="list-style-type: none"> Unified 300,000-plus square-foot, 30-gate complex for Terminals 4 and 5 Less roadway congestion thanks to access from public transportation via the new Automated People Mover. A spacious new departure hall that allows direct, natural sunlight throughout the building to reduce energy consumption Reconfigured ticket counter and check-in areas to reduce wait times before security screening Seamless access from check-in directly to security screening areas 16 lanes for security screening with automated technology Transparent design with modern signage to guide passengers intuitively to their gates Modern, state-of-the-art finishes and restroom facilities Upgraded amenities at gate areas, including more access to power outlets and world-class dining and retail options <p>The modernization project is designed to earn LEED Silver certification from the U.S. Green Building Council.</p> <p>The Terminal 4 and 5 modernization project is being built by Hensel Phelps, with PGAL (Terminal 4) and Gensler (Terminal 4.5 Vertical Core) serving as design partners. The project is pursuing LEED Silver certification from the U.S. Green Building Council for the Terminal Vertical Core and the new portions of the Terminal 4 headhouse and concourse.</p>

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Terminal 4 and 5 (Ongoing) – Los Angeles World Airports (Continued)	<p>An earlier \$148.5 million project completed in September 2016 included the design and construction of a multi-use, multi-level facility providing a secure connection between the Tom Bradley International Terminal and Terminal 4, making it easier for passengers to catch connecting flights out of different terminals. The 104,170-square-foot Terminal 4 connector is a CAL Green Certified space that also includes a Checked Baggage Inspection System, South Matrix Interline Baggage Transfer facility, and a four-lane Passenger Security Screening Check Point. The connector also includes a bus port, and a public plaza provides outdoor seating on the upper level.</p> <p>As Los Angeles World Airports continues to build a better KLAX, work force development and inclusivity are important components of each of its projects. For the Terminals 4/5 modernization, American Airlines has committed to achieve a goal of 20 percent of the work going to local and diverse business enterprises.</p>
Terminal 6 (Ongoing) – Los Angeles World Airports	<p>Construction is underway on a \$230 million project that will greatly improve the guest experience at Terminal 6, including a complete overhaul of the gate areas and lounges, and the replacement of passenger boarding bridges. The project is expected to be completed in 2023.</p> <p>The work in Terminal 6 also includes improvements to how guests access U.S. Customs and Border Protection’s Federal Inspection Station and the modernization of the Transportation Security Administration’s Security Screening Checkpoint, which will feature five Automated Screening Lanes and three standard lanes. A drive-through bus gate, which will provide better access for guests transferring to or from other terminals, is also part of the project.</p> <p>Airside improvements include new apron paving, fuel lines and other airfield infrastructure.</p> <p>This work is in addition to the concurrent construction of a Terminal Vertical Core that will connect Terminals 5 and 6 to the future Automated People Mover train system.</p> <p>Four gate area holdrooms will be enlarged as part of the project, with renovations taking place in 11 other gate areas, creating a cohesive look throughout the space. The project is being administered by Alaska Airlines, which is the leaseholder in Terminal 6, with Rivers and Christian serving as designer and PCL the lead contractor.</p> <p>In addition to Alaska Airlines, Air Canada leases two gates and shares a common-use gate in Terminal 6. The terminal also currently serves Advanced Air and Southern Airways.</p>

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Terminal 6 (Ongoing) – Los Angeles World Airports (Continued)	The original Terminal 6 satellite was built in 1961 along with many of the current KLAX Central Terminal Area facilities. A second-level concourse with four gates was added to Terminal 6 in the mid-1980s, and two projects totaling \$318.5 million were completed between 2012 and 2016 to renovate the baggage claim area and ticketing lobby, as well as update and expand concessions space.
Midfield Satellite Concourse South (Upcoming) – Los Angeles World Airports	<p>The Midfield Satellite Concourse South is an eight-gate modular complex that will be connected to the West Gates at Tom Bradley International Terminal, and is currently in the midst of pre-construction activities including design and enabling projects.</p> <p>The Midfield Satellite Concourse South will be a two-story, pre-engineered structure with eight gates that will be capable of serving narrow-body aircraft, such as the Boeing 737 and Airbus 320 families. The pre-engineered structural system will allow for greater flexibility and the ability to build quickly without significant impact on airport operations. The facility is anticipated to replace the eight-gate regional jet terminal located east of Terminal 8.</p> <p>Currently in the design phase, this southerly extension of the West Gates at Tom Bradley International Terminal was included in the Final Environmental Impact Report previously approved by the Los Angeles Board of Airport Commissioners in July 2014. The facility will be built to achieve LEED Silver, a standard all projects at KLAX are required to achieve.</p> <p>Woods Bagot was selected to design the south concourse in 2019. Skanska is currently handling the enabling projects. A builder is expected to be selected later this year, and the facility is anticipated to be operational by 2025.</p>
Airfield and Terminal Modernization Project (Ongoing) - Los Angeles World Airports	The Airfield & Terminal Modernization Project is a multi-billion-dollar group of projects that will include airfield, terminal and landside improvements, with a targeted completion date prior to the 2028 Olympic and Paralympic Games. The Airfield & Terminal Modernization Project includes a Concourse 0, Terminal 9, airfield safety improvements and an elevated roadway system. The Final Environmental Impact Report was released in August 2021 and was certified by the Los Angeles Board of Airport Commissioners for in October 2021. The project is slated to get underway in 2022 with the start of airfield enabling work.

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Airfield and Terminal Modernization Project (Ongoing) - Los Angeles World Airports (Continued)	<p>The Airfield and Terminal Modernization Project will greatly improve the passenger experience by creating a seamless transition between international and domestic flights, reduce busing from remote gates and providing more options for seating, concessions and retail. The community will benefit from the project as it will reduce traffic congestion, promote sustainability by requiring a minimum LEED silver certification, allow for less aircraft idling thereby reducing air pollutant emissions and provide connection to the Automated People Mover train system and regional mass transit. This project will also increase safety and operational management, reduce airfield wait times, remove remote gates, improve taxiways and enhance aircraft movement. Most importantly, it will create opportunities for local businesses and local jobs during both construction and when in operation.</p> <p><u>Airfield Improvements</u></p> <p>Airfield improvements will be focused on improving runway exists to enhance safety, extending Taxiway D west to help better manage airfield operations and improvements to Taxiways C and D for access to new concourse and terminal facilities, and include:</p> <ul style="list-style-type: none"> Reconfigure taxiways/runways to meet current FAA design standards Improve runway exit configurations to enhance pilot visibility Decommission taxiways that cross the runway “high-energy zone” Westerly extension of taxiway D to enhance aircraft taxiing operations and meet FAA aircraft design group VI standards Improve east ends of Taxiways C and D for new terminal and concourse Relocate vehicle service roads <p><u>Terminal Improvements</u></p> <p>Terminal improvements includes the development of Terminal 9 (with 12-18 gates), development of Concourse 0 (with 6-9 net new gates), replacing 15 of 18 remote gates, full service international capabilities and an improved guest experience.</p> <p>Concourse 0 will feature:</p> <ul style="list-style-type: none"> 11 gates (nine net new) for narrowbody planes 2 Remain-Overnight aircraft parking positions Comprise up to 1.2 million square feet Feature four levels (ticketing, concourse, apron and arrivals) A pedestrian corridor to the East Central Terminal Area Automated People Mover station Provide for international capabilities <p>Terminal 9 will feature:</p> <ul style="list-style-type: none"> 12 gates for widebody planes Comprise up to 1.5 million square feet Feature four levels (ticketing, concourse, apron and arrivals) Provide for international capabilities

Appendix A - Tables

Table 17. Summary of Projects for Cumulative Impacts Analysis

Project Name	Project Description
Airfield and Terminal Modernization Project (Ongoing) - Los Angeles World Airports	<p>Pedestrian corridors over Sepulveda Boulevard to connect Terminals 8 and 9, as well as to a new APM station</p> <p>Accessible to and from the new roadway system</p> <p><u>Landside Improvements</u></p> <p>As part of the landside improvements, Central Terminal Area access will be reconfigured along with the creation of direct access to Terminal 9. These improvements will help reduce congestion on public thoroughfares and neighborhood streets by separating airport traffic from local traffic on an elevated roadway system. A new Automated People Mover station will be built to provide access to Terminal 9, while a pedestrian corridor over Sepulveda Boulevard between Terminals 8 and 9 will be created.</p>
Northside Development (Upcoming) - Los Angeles World Airports	<p>The Northside Development, also known as the bow tie, is an approximately 70-acre section of land located north of Westchester Parkway in which Los Angeles World Airports will be developing commercial and open space in the coming years. The commercial area includes 901,000 square feet of allowable development for a variety of commercial applications. Nearly 13 acres of land designated for recreational areas will also be built as part of the community benefits of the project.</p> <p>The project will be built to achieve a minimum LEED Silver rating. It will incorporate electrical vehicle chargers for 10% of total parking (20% future infrastructure) and will optimize energy and water efficiency during both the design/construction and operations/maintenance phases.</p> <p>LAWA plans to award the contract in the near future.</p>
KLAX Master Plan (2017) - Los Angeles World Airports	<p>The KLAX Master Plan intends to promote an arrangement of airport uses that encourages and contributes to the modernization of the airport in an orderly and flexible manner within the context of the City and region. It provides goals, objectives, policies, and programs that establish a framework for the development of facilities that promote the movement and processing of passengers and cargo within a safe and secure environment. The KLAX Master Plan is intended to allow the airport to respond to emerging new technologies, economic trends and functional needs. The KLAX Master Plan area is comprised of five general areas: the airfield, landside, supporting landside facilities, including the airport access system, KLAX Northside and the Los Angeles Airport/El Segundo Dunes area.</p>
