

Appendix H

No Action Alternative Procedures and Flight Corridors

This page intentionally left blank.

This appendix provides the Aviation Environmental Design Tool (AEDT)-modeled flight tracks and corresponding existing procedure name for each study airport. The modeled tracks were developed using the existing flight track data sample and were applied to both the Existing Conditions as well as the future No Action Alternatives for nine of the study airports. These AEDT model track exhibits are labeled as “No Action” exhibits.

Buckeye Municipal Airport (BXX) transitioned from Visual Flight Rules (VFR) to Instrument Flight Rules (IFR) operations in March 2026. Accordingly, the future No Action Alternatives for BXX include RNAV (Global Positioning System [GPS]) approaches to both runways.¹ For the No Action Alternatives, the Existing Conditions tracks for BXX were modified to include the RNAV (GPS) approach, while all other BXX tracks within the study areas remain consistent with the Existing Conditions. Therefore, for BXX, this appendix includes AEDT model tracks exhibits for both the No Action Alternative (**Appendix H.2**) and the Existing Conditions (**Appendix H.11**).

At some of the airports, aircraft are directed to follow procedures not assigned to that airport to enter or exit the airspace. In these cases, the procedure actually flown is identified in the exhibit. For example, although the DSERT STAR (Standard Terminal Arrival) does not serve Glendale Regional Airport (GEU), some arrivals to GEU follow the DSERT procedure. In addition, certain modeled tracks do not follow published procedures and instead are vectored into or out of the airspace. These tracks are labeled as vector tracks with an associated direction (e.g., *Vector North Departure* are departures vectored northbound to exit the airspace).
