Metroplex Project Goals

WHAT DOES THIS PROJECT HOPE TO ACHIEVE?

Take advantage of Performance Based Navigation by implementing procedures that will help enhance the safety and efficiency of the airspace.

Provide deconfliction of arrivals and departures for airports in close proximity to one another, allowing for independent operations at each airport.

Reduce conflicts in routes between Florida airports, and in routes connecting Florida to other national and international destinations.

Improve air traffic flow and efficiency, in order to keep pace with the growth in aviation and tourism in Florida.

WHY ARE WE DOING THIS PROJECT?

The existing departure and arrival procedures do not take full advantage of modern technology. The project will replace outdated systems with satellite-based technology.

Improve the predictability of air traffic flows to enhance safety and efficiency while reducing the workload for air traffic controllers and pilots.

Reduce airspace constraints associated with restricted military airspace, general aviation operations, space vehicle launches, and drones.

Provide environmental benefits by reducing carbon emissions and aircraft fuel consumption.
