

56-Day VFR Charts

MEETING 20-02

Katie Murphy, FAA/AJV-A214, provided an update on a [briefing document](#) that was sent to the ACM mailing list last April after the cancellation of ACM 20-01. She said that Visual Charting is working toward the goal of printing all VFR Charts, with the exception of the Wall Planning Chart, every 56 days. This change aligns the VFR chart publication schedule with the other charting products. It will also reduce the number of NOTAMs and eliminate the need for Chart Bulletins because the charts will be updated more often. She stated that this project is on track for completion on February 25, 2021. The audience expressed appreciation for this effort.
