

Military Unmanned Aircraft Procedures

MEETING 15-01

CW4 Mark Burrows, U.S. Army, [provided a detailed brief](#) on the testing and development work within the U.S. Department of Defense and the U.S. Army for establishment and integration of Military Unmanned Aircraft Vehicles (UAVs) flights into the NAS.

CW4 Burrows discussed the testing conducted by the military and presented several examples of UAV Instrument Approach Procedures produced by NGA for military use. After the simulator and live flight tests, they found that with standardized procedures that match manned aviation as much as possible, there was no significant impact on the NAS. In the end, the goal is for NGA to produce standardized UAV charts to be available in digital format and intended solely for military use.
