The ATM Information Reference Model (AIRM)

The AIRM is the Air Traffic Management (ATM) **reference vocabulary**.

Air Navigation Services

Information Management

3.2 SEMANTIC INTEROPERABILITY

3.2.1 Semantic interoperability of the information service payload is achieved by aligning the meaning of the information exchanged with a common reference. The definitions of the information exchanged in an information service payload should be aligned with the Air Traffic Management Information Reference Model (AIRM).

Note – The AIRM is available at the following location: www.airm.aero.

3.2.3 Alignment with the AIRM may be achieved by defining the information exchanged in an information service payload according to an information exchange model that is already aligned with the AIRM.

Note – Guidance on the alignment of the information in an information service payload with the AIRM is provided in Doc 10039 Volume II.

Semantic alignment exercises

Requirements to establish semantic correspondences to the AIRM

<input type="checkbox"/> Type	Name
	AIXM 5.1.1 - DRAFT Report
	AMXM 2.0.0 - DRAFT Report
	FIXM 4.1 - DRAFT Report
	IWXXM 1.1 - DRAFT Report

ICAO METP has taken ownership of the IWXXM 3.0 mapping to AIRM.

FIXM Property	Class/Type	FIXM Property Definition	AIRM URI
UomFrequency.KHZ	Enum value	Indicates this radio frequency is measured in kHz.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:DataTypesOfMeasure:CodeUomFrequencyType@KHZ
UomFrequency.MHZ	Enum value	Indicates this radio frequency is measured in MHz.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:DataTypesOfMeasure:CodeUomFrequencyType@MHZ
LastContact.lastContactTime	Time	The time of the last two-way contact between the aircraft and an ATS unit. The time is given in UTC.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@timeOfLastTwoWayContact
LastContact.lastContactUnit	AtcUnitName	The last ATS unit which had two-way contact with the aircraft.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@lastContactUnit
LastPositionReport.position	SignificantPoint	The position of the aircraft last known to ATS.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@lastReportedPosition
LastPositionReport.timeAtPosition	Time	Timestamp corresponding to the last known position.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@timeAtLastReportedPosition
FlightEmergency.otherInformation	CharacterString	Other pertinent information not captured elsewhere needed to notify appropriate organizations regarding aircraft in need of search and rescue.	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@annotation
FlightEmergency.phase	EmergencyPhase	A generic term meaning, as the case may be, uncertainty phase, alert phase or distress phase. [ICAO Annex 11] This is the stage of emergency the flight is currently under or an indication the emergency has been cancelled, as designated by an ATS unit. [FIXM]	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@type
EmergencyPhase.ALERFA	Enum value	The code word used to designate an alert phase. [ICAO Annex 11]	urn:x-ses:sesarju:airm:v410:ConsolidatedLogicalDataModel:EmergencyOperations:EmergencyPhase@type

FAQ

DEVELOPERS

AIRM Viewer

The AIRM Viewer provides a simplified HTML view of the ATM Information Reference Model (AIRM).

Terms

This lists the terms and definitions from the source documents that were used to build the AIRM. For example, it includes terms from ICAO annexes and docs, the WMO and European Regulations.

Abbreviations

This lists the abbreviations used in the AIRM.

Conceptual Model

This provides a reference of information entities and relationships relevant to the ATM operational discourse. It is intended for use by operational experts. It can be used, for example, in disambiguating terms used in operational documents and developing information exchange requirements.

Logical Model

This provides a reference model of data concepts for service architects and system implementers. It contains the entities necessary to model the shared information of ATM. It can be used in order to construct "derived" logical data models and, indeed, exchange models or physical data models. As such, it can be used to create a model that can be used to build services and operations.

What is the AIRM?

The AIRM is the Air Traffic Management reference vocabulary. It constitutes the knowledge on information and data that is exchanged within the ATM community.

Using the AIRM promotes [semantic interoperability](#) - the ability to exchange information with unambiguous, shared *meaning*. The AIRM therefore serves a role in the overall interoperability improvements achieved by [SWIM](#).

[More about the AIRM](#)

I can't find my concepts in the AIRM. Will that impact my ability to exchange information?

Who is behind the AIRM?

How much the AIRM cost?
