SAFETY ALERT

Date: September 17, 2020
To: Users of the Aeronautical Data Delivery Service (ADDS) Website
From: Aeronautical Information Services
Subject: Update to Designated Points Dataset (Effective 9/10/2020)

Aeronautical Data Delivery Service – Designated Points Data

This notice serves to alert users of the ADDS (Aeronautical Data Delivery Service) website that the Designated Points dataset for the effective date 9/10/2020 has been republished to correct a data discrepancy that was found after the initial publication.

For the initial publication, a number of points referenced as a start or end point for ATS route features were missing from the Designated Points dataset for the 9/10/2020 effective date. These missing points could cause integrity checks between the two feature types to error. The missing features have been added to the Designated Points layer and were republished on 9/16/2020. This issue did not impact the ATS Route dataset.

ACTION: Users who downloaded this data set prior to 9/16/2020 should re-download the data. There would be no action for users who access this dataset via API services.
