CHARTING NOTICE

Date: June 29, 2023
To: Users of FAA Airport Diagrams and Chart Supplements
From: Aeronautical Information Services
Subject: Arrival Alert Notice and Airport Diagram Symbols for Wrong Surface Hot Spots

Background: In May of 2022, the FAA began a test period at 11 airports (eventually expanding to 12 airports) to evaluate the concept of using Arrival Alert Notices published in the Chart Supplement and wrong surface Hot Spot symbols on Airport Diagrams. Its purpose was to create situational awareness to help alleviate potential wrong surface alignments (see [CS 22-04 CN](#)).

Decision: In May of 2023, the FAA concluded the test, and has determined the following items will continue:

- Arrival Alert Notices will be provided in the FAA Chart Supplement
- The hot spot symbols will be standardized using circles and ellipses symbols. Those will be the only authorized Hot Spot symbols

The tentative effective date of all of these changes will be **October 5th, 2023**.
