

General Comments and Assumptions:

This following list of SSD regulations that require direct 14 CFR Part 25 compliance is based on the 14 CFR Part 25/CS25 Amendment pair noted here:

Amendment Pair:

14 CFR Part 25 Amdt. 25-142, effective 04/18/2016

CS25 Amendment 18, effective 06/23/2016.

Note: List updated 11/27/2023 – reference 25.1093, 25.1093 (b)(1), 25.1103 (a), 25.1333 (b), and 25.1529.

This following list of SSD regulations that require direct 14 CFR Part 25 compliance is based on the 14 CFR Part 25/CS25 Amendment pair noted above.

1. This SSD list includes only regulations where compliance with the CS minimum standard would not be accepted by the FAA. (NOTE: The SSD list is identified as the “FAA-SSD” list to clarify that it is only intended for FAA validations of EASA products).
2. According to the “Type Validation Principles”, only regulations that have a regulatory difference will be included in the SSD list. Identical regulations that have differences in guidance/interpretive material will be addressed, if required, as separate Validation Items (VI).
3. The definition of SSD from the “Technical Implementation Procedures for Airworthiness and Environmental Certification between the Federal Aviation Administration of the United States of America and the European Aviation Safety Agency of the European Union,” Revision 3, dated April 23, 2013, is shown below: “Significant standards difference (SSD)” refers to a Validating Authority (VA) airworthiness standard that has no Certification Authority (CA) equivalent, which results in a difference that may require type design changes, approved manual changes, additional or different demonstration of compliance, or the imposition of operational limitations to meet the VA standards. The type design or operation approved by the VA could then differ from the design and/or operation approved by the CA. In addition, non-SSDs were removed at Revision 3 and only SSD's will be considered going forward.
4. CS25 does not provide standards for reciprocating-powered airplanes, skiplanes, amphibians, flying boats, or airplanes with standby rocket engines. Differences concerning standards for those airplanes are not reflected in this list.

FAA Significant Standards Differences (SSD)

Subpart A		
25.2		CS does not specify any retroactive requirements
25.3		14 CFR 25.3 requires compliance with Appendix K for ETOPS type design approval. Neither 14 CFR 25.3 nor Appendix K have a corresponding CS.
Subpart B		
25.21(g)(1)		New requirement added for appendix O to part 25 icing conditions without equivalent in CS25 at Amendment 15. FAA requires evaluation for appendix O to part 25.
25.21(g)(2)		New requirement added for appendix O to part 25 icing conditions without equivalent in CS25 at Amendment 15. FAA requires evaluation for appendix O to part 25.
25.21(g)(3)		New requirement added for appendix O to part 25 icing conditions without equivalent in CS25 at Amendment 15. FAA requires evaluation for appendix O to part 25.
25.21(g)(4)		New requirement added for appendix O to part 25 icing conditions without equivalent in CS25 at Amendment 15. FAA requires evaluation for appendix O to part 25.
25.143(i)(1)		New requirement added for appendix O to part 25 icing conditions without equivalent in CS25 at Amendment 15. FAA requires evaluation for appendix O to part 25.
25.143(j)		New requirement added for appendix O to part 25 icing conditions without equivalent in CS25 at Amendment 15. FAA requires evaluation for appendix O to part 25.
Subpart C		
25.365		14 CFR25.365 includes structural design considerations for operation above 45,000 feet.
25.562(b)		14 CFR 25.562(b) applies to all seats; CS excludes flight deck crew seats
25.571(a)(3)		FAA includes requirements for certain inspection thresholds and a limit of validity (LOV) to be included in instructions for continued
25.571(b)		14 CFR 25.571(b) requires special consideration of widespread fatigue damage (WFD) and establishment of a Limit of Validity (LOV) based
25.571(e)	AC 25.571-1D, AC 20-128, and Policy PS-ANM100-1993-00041	14 CFR 25.571(e) requires consideration of uncontained rotor and fan damage to structure not limited to pressurized compartments
Subpart D		
25.619		Additional CS reservation to seek “other appropriate measures” may result in 14 CFR 25.619 non-compliance.
25.629(d)(8)		The FAA includes requirements to show airplanes to be free of aeroelastic instabilities within the envelope specified in 14 CFR 25.629(b) (2) for failures, malfunctions, and adverse conditions of 14 CFR 25.629(d). This includes the uncontained rotor and fan damage conditions of 14 CFR 25.571(e).

FAA Significant Standards Differences (SSD)

25.631		FAA rule is specific to empennage structure and requires consideration of 8-pound bird impact, while the CS requires consideration of 4-pound bird for all structure, including empennage.
25.671(c)(1)		The more stringent FAA requirement mandates single failures regardless of probability.
25.785(b)		14 CFR part 25 does not include this provision. Applicants must petition for exemption from 14 CFR 25.562 to apply the EASA version of the rule.
25.785(g)		14 CFR 25.785(g) includes requirement for single point release, and accessibility of controls when seated and strapped in. 14 CFR 25.785(g) also requires means to secure restraint system when not in
25.809(a)		14 CFR 25.809(a) has a requirement for each emergency exit to have means to permit viewing of the conditions outside the exit, including likely areas of evacuee ground contact, when closed.
25.809(h)		Specific to 14 CFR 25.809(h) (tail cone exit).
25.811(g)		14 CFR 25.811(g) is more stringent, it does not allow universal symbolic exit signs.
25.812(b)(1)(i), 25.812(b)(1)(ii) and 25.812(b)(2)		14 CFR 25.812(b)(1)(i), 25.812(b)(1)(ii) and 25.812(b)(2) is more stringent, it does not allow universal symbolic exit signs and has requirements for exit marking letter size and background area.
25.831(a)	AC 25-20	14 CFR 25.831(a) has different cabin ventilation requirements
25.831(g)	Policy 00-113-1034, dated 1/4/01	Unique 14 CFR 25.831(g) requirement for temperature exposure time requirements.
25.841	AC 25-20, Policy ANM- 03-112-16, dated 3/24/06	14 CFR 25.841 establishes cabin pressure altitude requirements for failure scenarios not shown to be extremely improbable.
25.851(a)(6)		EASA has authority to eliminate the use of Halon FireEx. FAA allows the use of Halon FireEx
25.855(a)		The 14 CFR 25.855(a) is more restrictive in choice of cargo classes
Subpart E		
25.901(b)		CS references only CS E20 (d) and (e) for engine installation instructions vs. 14 CFR 25.901(b) reference to 14 CFR part 33 for engines and part 35 for propellers. Compliance with CS 25 does not ensure that the powerplant installation complies
25.901(c)		The FAA requires the fail-safe concept - no failure(s) will jeopardize the safe operation of the airplane. CS requires compliance with CS 25.1309. 14 CFR 25.901(c) includes the "fail-safe" requirements as part of the rule in 25.901. Fail-safe is applied by guidance in 25.1309 and is therefore not mandatory by 25.1309.

FAA Significant Standards Differences (SSD)

25.901(d)		The FAA requires that the APU installation meet the applicable provisions of subpart E (application of engine installation requirements). EASA has clearly defined requirements in CS25 subpart J.
25.903(a)(3)		New requirement with no equivalent in CS25 at Amendment 15.
25.904		14 CFR part 25, Appendix I restricts ATTCS thrust to maximum takeoff thrust or power approved for the airplane. CS25 Appendix I permits the ATTCS to
25.905(c)		14 CFR 25.905(c) refers to additional requirements for the propeller blade pitch control system compared to CS25.905(c). The CS references only CS-P
25.907		The CS-P contains the airplane requirements vs. 14 CFR 25.907 containing the airplane requirements.
25.933(a)(1)		The 14 CFR 25.933(a)(1) does not allow demonstration that in-flight thrust reversal is extremely improbable as a compliance method, however the FAA
25.963(e)(2)	AC 25.963-1	The CS includes an exception that fuel tank access panels need not be more fire resistant than the surrounding fuel tank structural material. The 14 CFR 25.963(e) does not.
25.981	Policy ANM-112-08-002, dated 5/26/09 AC 25.981-1C	14 CFR 25.981(a)(3) requires that an ignition source cannot result from each single failure, from each single failure in combination with each latent failure condition not shown to be extremely remote, and from all combinations of failures not shown to be extremely improbable. These ignition source requirements must be met with consideration of the effects of manufacturing variability, aging, wear, corrosion, and likely damage. CS25.981(a)(3) only requires demonstrating that an ignition source does not result from each single failure and from all combinations of failures not shown to be extremely improbable using CS25.1309. 14 CFR 25.981(b) requires the flammability exposure of tanks other than a main tank meet the requirements of Appendix M if any portion is located within the fuselage contour, which may require the installation of a Flammability Reduction Means (FRM). CS
25.1091(e)		CS references CS E vs 14 CFR 25.1081(e) reference to 14 CFR part 33.77.
25.1167(b)		CS references CS E vs. 14 CFR 25.1167(b) reference to FAR Part 33.
25.1181(b)		14 CFR 25.1181(b) – Difference in regulatory cross references: compliance with CS25.1181(b) plus CS 25.865 satisfies FAR 25.1181(b)
25.1193(e)(3)		14 CFR 25.1193(e)(3) is applicable to an APU and is more restrictive than CS25.1193(e)(3). 14 CFR 25.1193 requires a fireproof nacelle skin / cowling for both ground and flight conditions.
Subpart F		
25.1301(a)(4)		14 CFR 25.1301(a)(4) requires each item of installed equipment to function properly when installed, not just those whose improper functioning would reduce safety per CS25.1309(a)(1)

FAA Significant Standards Differences (SSD)

25.1303(b)		In (b)(4), by reference to section 14 CFR 121.305(k), requires third attitude indicating system, when installed, to be independent of other attitude indicators, and operative without selection after total failure of electrical generating system.
25.1415(c)		14 CFR 25.1415(c) requires survival equipment to be attached to the life raft
25.1420(d)		CS25, includes in 25.1420(d) provisions for use of comparative analysis for demonstration of compliance to provisions of 25.1420(a)(b)(c). The CFR does not include this provision
25.1447(c)(3)		The 14 CFR 25.1447(c)(3) is more stringent requiring installation of flight crew member oxygen dispensing equipment equipped with certain design features depending on the flight level operation or exposure to cabin pressure altitudes exceeding 34,000 feet during a decompression which is not extremely improbable."
25.1457		The 14 CFR 25.1457 is more stringent, it requires in (d)(6) physical separation of the DFDR and CVR, improved CVR power supply reliability and recording of certain data link communications in (a)(6).
25.1450(b)(3)		The 14 CFR 25.1450(b)(3) is more stringent, it requires each chemical oxygen generator to meet the requirements of 25.795(d) except as provided in SFAR 109.
25.1459		The 14 CFR 25.1419 is more stringent, it requires physical separation of the DFDR and CVR, and improved DFDR power supply reliability.
Subpart G		

FAA Significant Standards Differences (SSD)

25.1529		CS does not include ICA availability requirements contained in the 14 CFR 25.1529. EASA IR 21A.61 allows deferred availability of certain ICA "dealing with overhaul or other forms of heavy maintenance" until after delivery, as long as they are made available prior to the scheduled task threshold. The 14 CFR 25.1529 requires complete ICA prior to delivery of the first airplane or issuance of a standard certificate of airworthiness, whichever occurs later. CS does not include Fuel System Limitation requirements in Appendix H25.4. Also, 14 CFR H25.4 refers back to 25.571, which is an SSD.
25.1535		14 CFR 25.1535 refers to ETOPs airworthiness requirements of Appendix K. 14 CFR Appendix K does not have a corresponding CS; however 14 CFR K25.1.1 and K25.1.2 are covered in CS25.1535.
25.1581		CS25.1591 is a specific EASA requirement that if complied with will result in a 14 CFR 25.1581 non-compliance. Such information, if provided in the FAA AFM, must be in an unapproved section.
25.1583(a)(3)		The 14 CFR 25.1583(a)(3) is more stringent, paragraph (a)(3) requires statements for compliance that rapid and large alternating control inputs, especially in combination, could result in structural failures even below the maneuvering speed.
Subpart H		
25.1729	AC 25-27A	14 CFR 25.1729 requires EWIS instructions for continued airworthiness (ICA) to be approved by the FAA whereas CS25.1729 does not require EASA approval.
Appendix H		
H25.4(a)(1)		FAA includes a requirement to include the modification time in the Limitation Section of the ICA.
H25.4(a)(4)		FAA includes requirements for a limit of validity (LOV) to be included in instructions for continued airworthiness and, until full-scale fatigue testing is completed and the LOV is approved, a limitation in the ICA to prevent operation of airplanes beyond ½ the number of cycles accumulated on the fatigue test article.
Appendix Q		
	AC 25-7C	There is no corresponding Appendix Q for 14 CFR part 25. The FAA addresses these topics in AC 25-7C which is more restrictive than the new CS25 Appendix Q
