## **AFFECTED PRODUCTS:**

Aircraft Engine: 1<sup>st</sup> stage hanger for CT7 engine model

## **BACKGROUND**

Unapproved Part Notification (UPN) 2014-20130520002 was issued February 26, 2014, for a quantity of five (5) P/N 6068T26G11 1st stage hangers, for CT7 engine models. The articles in question were initially believed to have been sold without being received, inspected, and accepted thru an FAA Production Approval Holder's (PAH) Quality System.

Based on new information obtained by the Vandalia-Manufacturing Inspection District Office (MIDO), it has been determined that the (5) articles referenced in the original UPN were received and properly processed by the PAH. At the time of UPN publication, the PAH was unable to provide documentation showing that the parts conformed to type design and were produced within their approved quality system. However, after further research, the PAH recently provided proper documentation to confirm the (5) articles were manufactured under an approved quality system, conformed to their approved type design, and were in a condition for safe operation at the time of shipment.

This notification serves to rescind the original UPN, 2014-20130520002 dated February 26, 2014.

## **FURTHER INFORMATION**
