Subject: ORD NADP 1 & DP

Good morning Christina. We had an airport commission meeting last night, and, as has occurred during recent meetings, a discussion of noise took place. During the discussion, the issue of departure procedures came up. Among the issues discussed were noise abatement procedures (NADP 1). Is it used and if so how frequently? Could it be used as part of a permanent departure procedure? In addition, discussion took place about the O'Hare Two Departure. Are RNAV departures used in addition to radar vectors to the first enroute/navaid fix? Again, if so, how frequently, and could it added as part of a permanent DP? We'd appreciate your input on these questions. Also, this might be an opportunity for the FAA to present at our next commission meeting on September 20, 2017.

Thanks,

Ernie
