## Airport Certification Information Bulletin 2009-08

During periodic safety inspections, your FAA Airport Certification Safety Inspector (ACSI) or State Aeronautical Inspector will be updating and verifying information on the Airport Master Record (5010). If your airport is a Primary NPIAS airport there will be no change, however the non-primary NPIAS airports will be required to submit an N-Number in [www.basedaircraft.com](http://www.basedaircraft.com) for every single engine, multi-engine, jet or helicopter based aircraft being claimed at the airport. If any of these counts need to be updated then the Airport Manager (or designated representative) should log into [www.basedaircraft.com](http://www.basedaircraft.com) website and edit as needed. To that end, single engine, multi-engine, jet and helicopter based aircraft fields can no longer be changed by your ACSI or State Aviation Inspector. It is important to note that BasedAircraft.com is not directly connected to the main FAA airports database and therefore a change in this database does not automatically get sent to the FAA. As soon as the airport has updated this information, please contact your respective FAA or State Aviation inspector to finalize submittal of the changes. An aircraft entered in BasedAircraft.com is only verified and counted as based aircraft if it is found in the FAA Aircraft Registration Database, and not duplicated at any airport. If your airport has not received a user name and password and/or have any questions or technical difficulties, please contact [BasedAircraftSupport@BasedAircraft.com](mailto:BasedAircraftSupport@BasedAircraft.com) or (504) 304-0749.

National Based Aircraft Inventory Program

The Federal Aviation Administration (FAA) is requesting a validation on Based Aircraft counts (FAA Form 5010-1, Items 90 – 96) for selected airports. The collection of this data will become a component of all annual inspections in the future. Your cooperation in providing the correct information is crucial to the FAA’s data collection efforts.

In this phase of the project, airports can view and edit the aircraft information for their facility. To protect the information, logging in is now required. Initial usernames and passwords were sent to airport owners by the ADO offices.

If you have any questions, please send them to [basedaircraftsupport@basedaircraft.com](mailto:basedaircraftsupport@basedaircraft.com).
