

**Federal Aviation  
Administration**

# **Teminal Area Forecast Summary**

**Fiscal Years 2014 - 2040**

OK 15-0814

## Preface

This publication provides aviation data users with summary historical and forecast statistics on passenger demand and aviation activity at U.S. airports. The summary level forecasts are based on individual airport projections.

The Terminal Area Forecast (TAF) includes forecasts for active airports in the National Plan of Integrated Airport Systems (NPIAS). The Federal Aviation Administration's (FAA) Forecast and Performance Analysis Division, Office of Aviation Policy and Plans, develops the TAF. As its primary input, the TAF initially used the national forecasts of aviation activity contained in FAA Aerospace Forecasts, Fiscal Years 2014-2034. The final TAF considers the forecasts and assumptions contained in FAA Aerospace Forecasts, Fiscal Years 2015-2035. Beginning March, 2015 the tables for the national forecasts can be found at:

*[http://www.faa.gov/about/office\\_org/headquarters\\_offices/apl/aviation\\_forecasts/aerospace\\_forecasts/2015-2035/](http://www.faa.gov/about/office_org/headquarters_offices/apl/aviation_forecasts/aerospace_forecasts/2015-2035/)*.

The TAF is available on the Internet. The TAF model and TAF database can be accessed at:

*[http://www.faa.gov/about/office\\_org/headquarters\\_offices/apl/aviation\\_forecasts/](http://www.faa.gov/about/office_org/headquarters_offices/apl/aviation_forecasts/)*.

The TAF model allows users to create their own forecast scenarios. It contains a query data application that allows the public to access and print historical (1990 to 2013) and forecast (2014 to 2040) aviation activity data by individual airport, state, or FAA region.

The FAA welcomes public comment on the forecasts, as well as suggestions for improving the usefulness of the TAF.

Roger Schaufele, Jr.  
Manager  
Forecast and Performance Analysis Division  
Office of Aviation Policy and Plans

## Acknowledgements

This document was prepared by the Forecast and Performance Analysis Division of the FAA Office of Aviation Policy and Plans under the direction of Roger Schaufele, Manager, Forecast and Performance Analysis Division. Peter LeBoff, Dipasis Bhadra, Anna Barlett, and Katherine Lizotte were responsible for the development of the forecasts.

The software support was provided under contract by IT WORKS! Software. We extend a special thanks to Alice Dobrin and Damien Agostinelli whose invaluable programming support for the TAF software made accessing and analyzing this airport data so much more efficient.

Special acknowledgments are made to FAA Airports staff in the Regional and Airport District Offices for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Forecast and Performance Analysis Division in making adjustments to the preliminary version of the forecasts. Their efforts have enhanced the accuracy and credibility of the final product.

## Summary Historical and Forecast Highlights

- A total of 734.0 million passengers were enplaned at U.S. airports in 2013; FAA and Federal contract towered airports accounted for 729.7 million enplanements.
- The top 100 air carrier airports accounted for 691.0 million enplanements in 2013, or 94 percent of total U.S. enplanements.
- FAA towers handled 35.7 million operations (takeoffs and landings) in 2013, including 19.8 million commercial aircraft operations.
- FAA contract towers handled 14.4 million operations in 2013, including 1.8 million commercial operations.
- The Core airports<sup>1</sup> enplaned 524.6 million passengers in 2013. These airports are projected to enplane 913.2 million passengers in 2040, a 74.1 percent increase over the forecast period (or 2.1 percent annually).
- The 30 large hub airports<sup>2</sup> enplaned 529.4 million passengers in 2013. These airports are projected to enplane 923.0 million passengers in 2040, a 74.3 percent increase over the 27-year period (or 2.1 percent annually).
- The 33 medium hub airports<sup>3</sup> recorded 118.0 million enplanements in 2013. These airports are projected to enplane 200.4 million passengers in 2040, a 69.8 percent increase over the 27-year period (or 2.0 percent annually).
- Atlanta (45.4 million enplanements), Los Angeles (32.0 million), Chicago O'Hare (31.9 million), Dallas/Ft. Worth (28.9 million), and Denver (25.5 million) led U.S. commercial airports in passenger enplanements, accounting for 22.3 percent of enplanements at U.S. airports.
- Atlanta is projected to remain the country's busiest airport, as measured by passenger enplanements, through the forecast period with a projected 77.2 million enplaned passengers in 2040. Los Angeles is projected to enplane the second most passengers (57.1 million) in 2040, followed by Chicago O'Hare with 53.6 million enplanements.
- Enplanements at San Diego, Miami, and Seattle airports are projected to grow fastest among the Core airports. The annual growth rates at these airports are

---

<sup>1</sup> The large hub airports (except Portland) plus Memphis.

<sup>2</sup> Airports enplaning one percent or more of total enplanements.

<sup>3</sup> Airports enplaning 0.25 to 0.99 percent of total enplanements.

forecast to increase by 2.7, 2.7, and 2.6 percent per year, respectively, over the forecast period.

- In terms of total operations, Atlanta was the busiest U.S. airport in 2013 with 914,000 aircraft operations. Chicago O'Hare and Dallas/Ft. Worth were the second and third busiest airports with 878,000 and 677,000 operations, respectively.
- In 2040, Atlanta is expected to remain the busiest airport in the nation, as measured by total operations, with a projected 1.38 million operations. Chicago O'Hare (1.16 million operations) is projected to stay in second place and Los Angeles (1.02 million operations) is projected to move into third place. Dallas/Ft. Worth (973.9 thousand operations) is projected to drop into fourth place.
- The FAA's Southern region airports enplaned more passengers than any other region with 170.8 million passengers in 2013, or 23 percent of U.S. enplanements. The Western Pacific region was second with 150.3 million enplanements, or 20 percent of the total.
- The Southern region is expected to lead in passenger enplanements in 2040, reaching 296.3 million. The Western Pacific region is projected to stay in second place with 265.9 million enplanements.
- The Southern region led all FAA regions in the number of airport operations with 22.3 million in 2013. The Southern region is expected to remain first in 2040 with 26.0 million operations. The Western Pacific and Great Lakes regions ran second and third in airport operations in 2013 with 16.4 and 15.3 million, respectively. In 2040, the Western Pacific region is projected to remain in second place with 19.7 million operations and the Great Lakes region is projected to remain in third place with 17.3 million operations.

# Forecast Process

## ***Introduction***

The Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations, tracon operations, and based aircraft. The data cover 264 FAA towered airports, 252 Federal contract tower airports, 31 terminal radar approach control facilities, and 2,818 non FAA airports. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is available on the Internet. The TAF model and TAF database can be accessed at:

*[http://www.faa.gov/about/office\\_org/headquarters\\_offices/apl/aviation\\_forecasts/](http://www.faa.gov/about/office_org/headquarters_offices/apl/aviation_forecasts/)*.

The TAF model allows users to create their own forecast scenarios. The TAF database allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region. In addition, links to the TAF from previous years are available via the address noted above.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning airport improvements.

This document presents a set of summary tables on airport activity statistics. The airport activity data contained in the TAF consist of the following:

- **enplanements** (sum of originating and connecting passengers) for air carriers and regionals;
- **itinerant operations** for air carriers, commuters and air taxis, general aviation (GA), and military aircraft;
- **local operations** for civil and military aircraft; and
- **tracon operations** for aircraft operations under radar control.

Data on operations presented in the TAF show historical information from 1990 through 2013 and forecasts for 2014 to 2040.<sup>4</sup> The historical enplanement information in the TAF model is from 1976 through 2013 and the 2014 figures represent estimates. The enplanement forecasts are from 2015 to 2040. Appendix A provides a detailed description of the activity data elements in the TAF. Appendix B provides a list of FAA airports by hub size and a list of FAA contract towers.

---

<sup>4</sup> Operations data for FAA towers and Federal contract towers for 2014 are actual.

## ***Forecast Method***

The TAF assumes a demand driven forecast for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand. However, if the airport historically functions under constrained conditions, the FAA forecast may reflect those constraints since they are embedded in historical data. In statistical terms, the relationships between economic growth data and data representing growth in aviation activity reflect those constraints.

The forecasts of passenger enplanements and commercial operations at large, medium, and small hubs are based on a bottoms-up approach. The domestic enplanements are forecast by generating origin and destination (O&D) market demand forecasts using the DB1B (quarterly 10% sample) data to model passenger flow on a quarterly basis. The O&D passenger demand forecasts are based on regression analysis using fares, regional demographics, and regional economic factors as the independent variables. The O&D forecasts are then combined with DOT T-100 segment data to generate passenger forecasts by airport pair and segment pair. The segment pair passenger forecasts are assigned to aircraft equipment in order to produce segment pair operation forecasts. The quarterly segment pair forecasts are aggregated to produce annual airport forecasts.

Separate models are used to forecast international passenger enplanements and operations and cargo operations. The international passenger enplanements are forecast on a quarterly basis using time series analysis and T-100 segment data. The segment pair passenger enplanement forecasts are used to generate segment pair operation forecasts. The cargo operation forecasts are also generated on a quarterly basis using time series analysis and T-100 segment data. The segment pair forecasts for international passenger enplanements and operations and cargo operations are aggregated to the market pair and airport level on an annual basis.

The short run (2 year) forecasts of passenger enplanements and operations for the hub airports are produced using models at the airport level. These models incorporate the use of future airline schedules.

The forecasts of passenger enplanements at non-hub FAA facilities are based on analysis of historic trends. The commercial operations forecasts are based on the enplanement forecasts, trend analysis, and enplanements per operation. In addition the commercial forecasts for these airports may be prorated in comparison to national forecast trends by category.

Forecasts of itinerant general aviation operations and local civil operations at FAA facilities are based primarily on time series analysis. Because military operations forecasts have national security implications, the Department of Defense (DOD) provides only limited information on future aviation activity. Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For non-FAA facilities, historic operations in the TAF are from the Form 5010 data. These operations levels are held constant for the forecast unless otherwise specified by a local or regional FAA official.

### ***Forecast Review Process***

Initially, FAA headquarters staff and management review forecasts for the hub airports and non-hub FAA facilities. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made by the FAA regional staff are reviewed and, if determined reasonable by APO staff economists, are incorporated into the TAF. Significant increases in commercial activity forecasts are normally incorporated into the TAF only where APO receives verifiable evidence of a firm commitment by an air carrier or regional airline to initiate new service.

Summary statistics presented in the TAF differ from the national totals contained in FAA Aerospace Forecasts, Fiscal Years 2015-2035. Reasons for the differences are threefold. First, the TAF forecast methods consider airport and market specific trends. Second, the TAF and national forecast measurements vary. For example, the TAF includes facilities not serviced by the FAA in its totals. These facilities make up a large share of total general aviation operations. In addition, the TAF includes enplanements at U.S. airports only, whereas the national forecast includes enplanements on U.S. airlines at both U.S. and foreign airports. Finally, individual forecasts are not scaled to force aggregates to equal national totals.

### ***Data Sources***

The development of the TAF begins with an update of the latest historical enplanement, operation, and based aircraft statistics, using information derived from several sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and tracon (radar assisted) operations data for airports with FAA and Federal contract air traffic control services are reported by FAA air traffic and Federal contract tower staff. Operations at non FAA airports are taken from FAA Form 5010 reports on aviation activity at the airport as estimated by FAA inspectors or information provided by airport managers, state aviation activity surveys, and other sources.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's (DOT's) T-100 database. Regional carrier enplanements are derived from DOT T-100 and 298-C data.<sup>5</sup>

The origin and destination (O&D) data are based on the Airline Origin and Destination Survey (DB1B). This is a 10 percent sample of airline tickets from carriers reporting to the Office of Airline Information at the Bureau of Transportation Statistics.

Based aircraft data are collected by FAA inspectors, airport managers, and state aviation officials and reported on FAA Form 5010. These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

---

<sup>5</sup> In October 2002, DOT began collecting data for all airlines using the T-100 format. This change provides more detail on regional airlines, who previously reported on Form 298-C.

## TAF and National Forecast Summary

### ***Near-Term Forecasts***

In 2014 total operations at FAA and contract towers declined 0.6 percent, commercial operations decreased 0.6 percent, and non-commercial operations decreased 0.7 percent based on OPSNET. Total enplanements at all airports were estimated to increase 1.8 percent in 2014.

In 2015 total operations at towers are forecast to increase 0.4 percent. This forecast increase in total operations at FAA and contract towers is attributable to forecast increases in air carrier (4.2 percent) and local civil operations (1.1 percent). The forecast increase in air carrier operations (aircraft with more than 60 seats) is attributable, in part, to a shift away from air taxi/commuter operations (aircraft with 60 or fewer seats) as a result of the substitution of larger aircraft for smaller regional jets. Total enplanements at all airports are forecast to increase 2.0 percent in 2015.

### ***National Forecast Trends***

Trends at individual airports reflect to varying degrees national aviation trends as well as the dynamics at individual airports. The national forecasts for FAA and contract towered airports in FAA Aerospace Forecasts, Fiscal Years 2015-2035 show aircraft operations growing at an average annual rate of 0.9 percent over the 21-year forecast period. Average annual growth rates for this period by user group are as follows: air carrier, 2.7 percent; air taxi/commuter, -1.2 percent; itinerant general aviation, 0.4 percent; and local civil, 0.5 percent. The projected average annual rate of increase for enplanements on U.S. mainline and regional carriers from the national forecast is 2.0 percent over the 21-year forecast period.

### ***Trends by Region***

There are 264 FAA towers and 252 Federal contract towers in the TAF. California had the most FAA towers with 33, followed by Texas with 19 and Florida with 18. Regions with the most FAA towers were Southern with 51, Great Lakes with 48, and Western Pacific with 46. Table S-3 presents the number of FAA and Federal contract towers by region and state.

Tables S-6 through S-11 summarize airport operations, tracon operations, enplanements, and based aircraft by region from 2010 through 2040. The Southern (22.3 million operations), Western Pacific (16.4 million), and Great Lakes (15.3 million) regions ranked as the top three FAA regions in airport operations in 2013. Operations for all TAF airports totaled 98.2 million. The Northwest Mountain and Eastern regions

are projected to be the fastest growing FAA regions from 2013 to 2040 in terms of airport operations, increasing 33 percent and 20 percent, respectively.

The Southern region led FAA regions in passengers enplaned with 170.8 million in 2013, followed by the Western Pacific region with 150.3 million passengers. Enplanements in the Southwest region are projected to increase the most in percentage terms increasing 78 percent from 2013 to 2040. The next two regions with the fastest projected increase in enplanements are Western Pacific (77 percent) and Northwest Mountain (75 percent).

In 2013, there was a national total of 167,000 based aircraft. Southern (31,200 aircraft), Western Pacific (28,400), and Great Lakes (27,300) ranked as the top three FAA regions.

### ***Large, Medium, and Small Hubs***

Table S-5 presents passenger enplanements and airport operations at FAA and contract towers by hub size. An airport qualifies as a large hub with one percent or more of total U.S. passenger enplanements. A medium hub airport enplanes from 0.25 to 0.99 percent of total U.S. passenger enplanements while small and non-hub airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively. Appendix B contains a list of hub airports classified by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

The 30 large hub airports enplaned 529.4 million passengers in 2013 while the 33 medium and 74 small hub airports enplaned 118.0 and 62.2 million passengers, respectively. The 379 non-hub airports enplaned 20.1 million passengers. Enplanements at large hubs are expected to increase at an annual rate of 2.1 percent over the 2013 to 2040 forecast period. Medium and small hub airports are forecast to increase 2.0 percent and 1.5 percent annually, respectively, during the forecast period.

Operations at large hub airports totaled 12.6 million compared to 4.9 million and 6.7 million at medium and small hub airports, respectively. Operations at large hub airports are forecast to increase at an annual rate of 1.5 percent from 2013 to 2040, growing to 18.9 million. Operations at the medium hubs are forecast to rise at an annual rate of 1.3 percent from 2013 to 2040; aircraft operations at small hub airports are forecast to grow 0.6 percent per year.

Non-hub airports accounted for 25.9 million operations or 52 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations accounted for the majority of operations at these smaller airports.

## ***Core Airports***

Table S-1 presents enplanement forecast summaries for the Core airports. Atlanta was the busiest airport in 2013 (45.3 million enplanements), followed by Los Angeles (32.0 million), Chicago O'Hare (31.9 million), and Dallas/Ft. Worth (28.9 million). Los Angeles is forecast to have the strongest growth in enplanements among the top four airports, increasing at an annual rate of 2.2 percent over the 2013 to 2040 forecast period. Dallas/Ft. Worth, Atlanta, and Chicago O'Hare are forecast to increase 2.0, 2.0, and 1.9 percent per year, respectively, over the forecast period. Graph S-1 shows relative enplanements growth over the next 27 years. The four airports with the fastest projected increase are San Diego, Miami, Seattle, and John F. Kennedy.

San Diego is projected to make the largest upward movement in ranking of enplanements, from 28th to 22nd. Washington National is projected to make the largest drop in rankings, going from 20th to 26th.

Table S-2 presents operations forecast summaries for the Core airports. In 2013, FAA controllers at Atlanta handled 914,000 landings and takeoffs, followed by Chicago O'Hare, which totaled 878,000 operations. The next busiest airports were Dallas/Ft. Worth and Los Angeles with 677,000 and 606,000 airport operations, respectively.

In 2040, Atlanta is projected to stay in first place with 1.38 million operations. Chicago O'Hare (1.16 million operations) is projected to stay in second place. Los Angeles (1.02 million operations) is projected to move into third place and Dallas/Ft. Worth is projected to drop into fourth place with 974 thousand operations.

Graph S-2 shows that the five airports projected to grow the fastest in operations are Seattle, Miami, San Diego, Orlando, and John F. Kennedy. John F. Kennedy and Miami are expected to move into the list of the top 10 busiest airports; Phoenix and Philadelphia are expected to drop out of the top 10 ranking.

## Appendix A: Description of Activity Measures

### ***Air Carrier Enplanements***

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

### ***Regional Enplanements***

Starting in FY 2003, FAA includes in the regional category enplanements for those airlines whose primary function is to provide passenger feed to mainline carriers, regardless of aircraft size. As of October 2002, all scheduled and non-scheduled operations using aircraft with 10 or more seats to transport regional passengers must report on T-100.

Historic enplanement data includes originating passengers on scheduled commuter or regional carriers as reported on DOT Form 41 and 298-C; where possible, adjustments were made to include connecting passengers. Historically, Form 298-C included carriers operating at least five scheduled round trips per week whose entire fleet consists of aircraft having 60 seats or less.

### ***Aircraft Operations***

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count operations at FAA contract towers. At non-FAA facilities, operations counts represent an estimate.

Air carrier operations represent either takeoffs or landings of commercial aircraft with seating capacity of more than 60 seats.

Commuter/air taxi operations are one category. Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats that transport regional passengers on scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

Itinerant general aviation and local civil operations represent all civil aviation aircraft takeoffs and landings not classified as commercial. Military operations represent take-offs and landings by military aircraft. Operations are either itinerant or local flights.

### ***Local Operations***

Aircraft operating in the traffic pattern or within sight of the tower, or aircraft known to be departing or arriving from flight in local practice areas, or aircraft executing practice instrument approaches at the airport.

### ***Itinerant Operations***

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and landings of aircraft going from one airport to another.

### ***Tracon Operations***

These data include arrivals, departures, and overflights conducted by an FAA radar approach control facility for aircraft under Instrument Flight Rule (IFR) or Visual Flight Rule (VFR) plans.

### ***Overflights***

These data include operations of aircraft in transit through the approach control facility airspace.
