

Appendix 13. AIRPLANES ARRANGED BY AIRPLANE MANUFACTURER, AND AIRPORT REFERENCE CODE

Section 1. Alphabetical Listing (U.S. customary units)

Aircraft	Airport Reference Code	Appch Speed Knots	Wingspan Feet	Length Feet	Tail Height Feet	Maximum Takeoff Lbs
Aeritalia G-222	B-III	109	93.8	74.4	32.0	61,700
Aerocom Skyliner	A-II	88	54.0	54.3	16.5	12,500
Aerospatiale C 160 Trans.	C-IV	124	131.3	106.3	38.7	108,596
Aerospatiale NORD-262	B-II	96	71.9	63.3	20.4	23,480
Aerospatiale SE 210 Carav.	C-III	127	112.5	105.0	28.6	114,640
Aerospatiale SN 601 Corv.	B-I	118	42.2	45.4	13.9	14,550
Ahrens AR 404	B-II	98	66.0	52.7	19.0	18,500
AIDC/CAF XC-2	A-III	86	81.7	65.9	25.3	27,500
Airbus A-300-600	C-IV	135	147.1	177.5	54.7	363,763
Airbus A-300-B4	C-IV	132	147.1	175.5	55.5	330,700
Airbus A-310-300	C-IV	125	144.1	153.2	52.3	330,693
Airbus A-320-100	C-III	138	111.3	123.3	39.1	145,505
Air-Metal AM-C 111	B-II	96	63.0	55.2	21.0	18,629
AJI Hustler 400	B-I	98	28.0	34.8	9.8	6,000
Antonov AN-10	C-IV	126	124.8	121.4	32.2	121,500
Antonov AN-12	C-IV	127	124.8	109.0	34.6	121,500
Antonov AN-124	C-VI	124	232.0	223.0	66.2	800,000
Antonov AN-14	A-II	52	72.1	37.2	15.2	7,607
Antonov AN-22	C-V	140	*	211.0	41.2	500,000
Antonov AN-24	B-III	119	95.8	77.2	27.3	46,305
Antonov AN-26	C-III	121	95.8	78.1	28.1	52,920
Antonov AN-28	A-II	88	72.1	42.6	16.1	12,350
Antonov AN-30	B-III	112	96.4	80.1	27.3	51,040
Antonov AN-72	A-III	89	*	84.7	27.0	66,000
AW.650 Argosy 220	C-III	123	115.0	86.8	27.0	93,000
AW.660 Argosy C.Mk.1	B-III	113	115.0	89.1	27.0	97,000
BAC 111-200	C-III	129	88.5	93.5	24.5	79,000

* Approach speeds estimated.

Appendix 14. Declared Distances

1. APPLICATION. The purpose of declared distances in airport design is to provide an equivalent runway safety area (RSA), runway object free area (ROFA), or runway protection zone (RPZ) in accordance with the design standards in Chapters 2 and 3 at existing constrained airports where it is otherwise impracticable to meet standards by other means. Declared distances are also employed when there are obstructions in the runway approaches and/or departure surface that are beyond the ability of the airport owner to remove and result in a displaced runway threshold or change in the departure end of the runway (DER).

a. This appendix, by treating the airplane's runway performance distances independently, provides an alternative airport design methodology by declaring distances to satisfy the airplane's takeoff run, takeoff distance, accelerate-stop distance, and landing distance requirements. The declared distances are takeoff run available (TORA), takeoff distance available (TODA), accelerate-stop distance available (ASDA), and landing distance available (LDA), which when treated independently may include clearway and stopway and may limit runway use. This alternative design methodology may affect the beginning and ending of the RSA, ROFA, RPZ, and primary surface.

b. Where declared distances differ, the primary surface extends 200 feet (60 m) beyond each end of the runway or the far end of each TODA, whichever is further, to protect departures to the extent of the 14 CFR Part 77 approach surface for that runway end, i.e. 20:1, 34:1, and 50:1 originating at or beyond the end of TODA.

2. BACKGROUND. In applying declared distances in airport design, it is helpful to understand the relationship between airplane certification, aircraft operating rules, airport data, and airport design.

a. **Airplane certification** provides the airplane's performance distances. The performance speeds, e.g., V_1 , takeoff decision speed, V_{LOF} , lift-off speed, V_2 , takeoff safety speed, V_{SO} , stalling speed or the minimum steady flight speed in the landing configuration, and the following distances to achieve or decelerate from these speeds are established by the manufacturer and confirmed during certification testing for varying climatological conditions, operating weights, etc.

(1) **Takeoff run** - the distance to accelerate from brake release to lift-off, plus safety factors.

(2) **Takeoff distance** - the distance to accelerate from brake release past lift-off to start of takeoff climb, plus safety factors.

(3) **Accelerate-stop distance** - the distance to accelerate from brake release to V_1 and then decelerate to a stop, plus safety factors.

(4) **Landing distance** - the distance from the threshold to complete the approach, touchdown, and decelerate to a stop, plus safety factors.

b. **Aircraft operating rules** provide a minimum acceptable level of safety by controlling the airplane maximum operating weights by limiting the airplane's performance distances as follows:

(1) **Takeoff run** shall not exceed the length of runway.

(2) **Takeoff distance** shall not exceed the length of runway plus clearway.

(3) **Accelerate-stop distance** shall not exceed the length of runway plus stopway.

(4) **Landing distance** shall not exceed the length of runway.

c. **Airport data** provides the runway length and/or the following declared distance information for calculating maximum operating weights and/or operating capability.

(1) **Takeoff run available (TORA)** - the length of runway declared available and suitable for satisfying takeoff run requirements.

(2) **Takeoff distance available (TODA)** - the TORA plus the length of any remaining runway or clearway beyond the far end of the TORA available for satisfying takeoff distance requirements. The usable TODA length is controlled by obstacles present in the departure area vis-a-vis aircraft performance. As such, the usable TODA length is determined by the aircraft operator before each takeoff and requires knowledge of the location of each controlling obstacle in the departure area. Extending the usable TODA lengths requires the removal of existing objects limiting the usable TODA lengths.

(3) **Accelerate-stop distance available (ASDA)** - the length of runway plus stopway declared available and suitable for satisfying accelerate-stop distance requirements.

(4) **Landing distance available (LDA)** - the length of runway declared available and suitable for satisfying landing distance requirements.

3. FAA APPROVAL FOR APPLYING DECLARED DISTANCES IN AIRPORT DESIGN. The application of declared distances at a specific location requires prior FAA approval on a case-by-case basis. Approval is reflected on the FAA-approved Airport Layout Plan.

4. RUNWAY SAFETY AREA (RSA) AND RUNWAY OBJECT FREE AREA (ROFA) LENGTHS. The standard RSA length P in the following paragraphs is the length specified in tables 3-1, 3-2, and 3-3 for the RSA length beyond the runway ends. The standard ROFA length R in the following paragraphs is the length specified in tables 3-1, 3-2, and 3-3 for the ROFA length beyond the runway ends. The RSA and the ROFA shall extend for the full length of the runway plus the greater of the following lengths beyond the runway ends for takeoff and landing in both directions.

a. For takeoff.

(1) **At the start of takeoff end of runway.** The RSA and the ROFA need to extend behind the start of takeoff to continue the entrance taxiway safety area and taxiway object free area and/or provide an area for jet blast protection. The portion of runway behind the start of takeoff is unavailable and/or unsuitable for takeoff run, takeoff distance, and accelerate-stop distance computations.

(2) **At the far end of runway with stopway.** The RSA shall extend P and the ROFA shall extend R beyond the far end of stopway.

(3) **At the far end of runway without stopway.** The RSA shall extend P and the ROFA shall extend R beyond the far end of ASDA. The portion of runway beyond the ASDA is unavailable and/or unsuitable for accelerate-stop distance computations.

b. For landing.

(1) **At the approach end of runway.** The RSA shall extend P and the ROFA shall extend R before the threshold. The portion of runway behind the threshold is unavailable and/or unsuitable for landing distance computations.

(2) **At the rollout end of runway.** The RSA shall extend P and the ROFA shall extend R beyond the rollout end of LDA. The portion of runway beyond the LOA is unavailable and/or unsuitable for landing distance computations.

5. RUNWAY PROTECTION ZONE (RPZ) LOCATION AND SIZE. The RPZ function may be fulfilled by the RPZ beginning at a location other than 200 feet (60 m) beyond the end of the runway. When an RPZ begins at a location other than 200 feet (60 m) beyond the end of runway, two RPZs are required, i.e., a departure RPZ and an approach RPZ. The two RPZs normally overlap.

a. **Approach RPZ.** The approach RPZ shall begin 200 feet (60 m) before the threshold. Table 2-4 contains standard dimensions for approach RPZs. The portion of runway behind the threshold is unavailable and/or unsuitable for landing distance computations.

b. **Departure RPZ.** The departure RPZ shall begin 200 feet (60 m) beyond the far end of TORA. The portion of runway beyond the TORA is unavailable and/or unsuitable for takeoff run computations. The standard dimensions for departure RPZs are:

(1) Starting 200 feet (60 m) beyond the far end of TORA, 1,000 feet (300 m) long, 250 feet (75 m) wide, and at the far end of RPZ 450 feet (135 m) wide—for runways serving only small airplanes in Aircraft Approach Categories A and B.

(2) Starting 200 feet (60 m) beyond the far end of TORA, 1,000 feet (300 m) long, 500 feet (150 m) wide, and at the far end of RPZ 700 feet (210 m) wide—for runways serving large airplanes in Aircraft Approach Categories A and B.

(3) Starting 200 feet (60 m) beyond the far end of TORA, 1,700 feet (510 m) long, 500 feet (150 m) wide, and at the far end of RPZ 1,010 feet (303 m) wide—for runways serving Aircraft Approach Categories C and D.

6. CLEARWAY LOCATION. The clearway is located at the far end of TORA. The portion of runway extending into the clearway is unavailable and/or unsuitable for takeoff run and takeoff distance computations.

7. NOTIFICATION. The clearway and stopway lengths, if provided, and declared distances (TORA, TODA, ASDA, and LDA) will be provided by the airport owner for inclusion in the Airport/Facility Directory (and in the Aeronautical Information Publication (AIP), for international airports) for each operational runway direction:

a. **The TORA** - the length of the runway less any length of runway unavailable and/or unsuitable for takeoff run computations. See figure A14-1.

b. **The TODA** - the TORA plus the length of any remaining runway and/or clearway beyond the far end of the TORA. See figure A14-2.

c. **The ASDA** - the length of the runway plus the length of any stopway beyond the far end of the runway less any length of runway and/or stopway unavailable and/or unsuitable for accelerate-stop distance computations. See figure A14-3.

d. **The LDA** - the length of the runway less any length of runway unavailable and/or unsuitable for landing distance computations. See figure A14-4. Note: When the threshold is sited for small airplanes (see appendix 2, paragraphs 5a and 5b), report LDA as "LDA for airplanes of 12,500 pounds (5 700 kg) or less maximum certificated takeoff weight."

Appendix 15. TRANSFER OF ELECTRONIC DATA

This appendix was cancelled.

This page intentionally left blank.

Appendix 16. NEW INSTRUMENT APPROACH PROCEDURES

1. **BACKGROUND.** This appendix applies to the establishment of new or existing (under revision) instrument approach procedures (IAP).

a. This appendix identifies airport landing surface requirements to assist airport sponsors in their evaluation and preparation of the airport landing surface to support new instrument approach procedures. It also lists the airport data provided by the procedure sponsor that the FAA needs to conduct the airport airspace analysis specified in FAA Order 7400.2, *Procedures for Handling Airspace Matters*. The airport must be acceptable for IFR operations based on an Airport Airspace Analysis (AAA), under FAA Order 7400.2.

b. FAA Order 8260, *TERPS*, reflects the contents of this appendix as the minimum airport landing surface requirements that must be met prior to the establishment of instrument approach procedures at a public use airport. This order also references other FAA requirements, such as a safety analysis to determine the need for approach lighting and other visual enhancements to mitigate the effects of a difficult approach environment. This is a consideration regardless of whether or not a reduction in approach minimums is desired. Airport sponsors are always encouraged to consider an approach lighting system to enhance the safety of an instrument procedure. In the absence of any identified benefits or safety enhancement from an approach light system, sponsors should at least consider installing lower cost visual guidance aids such as REIL or PAPI.

c. The tables provided in this appendix are for planning purposes only and should be used in conjunction with the rest of the document. All pertinent requirements within this AC and other FAA documents, as well as local siting conditions, ultimately will determine the lowest minimums obtainable.

2. **INTRODUCTION.** To be authorized a new instrument approach procedure, the runway must have an instrument runway designation. Instrument runways are runway end specific. The runway end designation is based on the findings of an AAA study (Refer to Order 7400.2). In addition, the instrument runway designation for the desired minimums must be depicted on the FAA-approved ALP. If not depicted, a change to the ALP is required. As part of the ALP approval process, the FAA will conduct an AAA study to determine the runway's acceptability for the desired minimums.

3. **ACTION.** The airport landing surface must meet the standards specified in tables A16-1 A through C for each specified runway direction and have adequate airspace to support the instrument approach procedure. When requesting an instrument procedure, the sponsor must specify the runway direction, the desired approach minimums, whether circling approach procedures are desired, and the survey needed to support the procedure. For all obligated National Plan of Integrated Airport Systems (NPIAS) airports, the sponsor must also provide a copy of the FAA-approved ALP showing the instrument procedure(s) requested. An ALP is also recommended for all other airports.

4. DEFINITIONS.

a. **Precision Approach.** An instrument approach procedure providing course and vertical path guidance conforming to ILS, or MLS, precision system performance standards contained in ICAO annex 10. Table A16-1A defines the requirements for ILS, LAAS, WAAS, MLS, and other precision systems.

b. **Approach Procedure with Vertical Guidance (APV).** An instrument approach procedure providing course and vertical path guidance that does not conform to ILS or MLS system performance standards contained in ICAO annex 10, or a precision approach system that does not meet TERPS alignment criteria. Table A16-1B defines the requirements for WAAS and authorized barometric VNAV.

c. **Nonprecision Approach.** An instrument approach procedure providing course guidance without vertical path guidance. Table A16-1C defines the requirements for VOR, NDB, LDA, GPS (TS0-129) or other authorized RNAV system.

5. AIRPORT AIRSPACE ANALYSIS SURVEYS.

a. Use the standards identified in ACs 150/5300-16, 150/5300-17, and 150/5300-18 to survey and compile the appropriate data to support the development of instrument procedures.

b. When the runway has or is planned to have an approach that has vertical guidance (ILS, MLS or PAR, APV, LPV, RNP, TLS, LNAV/VNAV, etc.), use the Vertically Guided Airport Airspace Analysis Survey criteria in AC 150/5300-18.

c. When the runway has or is planned to have an approach without vertical guidance (VOR, VOR/DME, TACAN, NDB, LNAV, LP, etc.), use the Non-Vertically Guided Airport Airspace Analysis Survey criteria in AC 150/5300-18.

Table A16-1A. ILS and LPV Approach Requirements.

Visibility Minimums ¹	< 3/4 statute mile	< 1-statute mile
Height Above Threshold (HATh) ²	200	
TERPS Glidepath Qualification Surface (GQS) ³	Appendix 2, Table A2-1, Row 9 Clear	
TERPS precision "W" surfaces ⁴	Clear	See Note 5
TERPS Chapter 3, Section 3	34:1 Clear	20:1 Clear
Precision Obstacle Free Zone (POFZ) 200 x 800	Required	Not Required
Airport Layout Plan ⁷	Required	
Minimum Runway Length	4,200 ft (1,280 m) (Paved)	
Runway Markings (See AC 150/5340-1)	Precision	Nonprecision
Holding Position Signs & Markings (See AC 150/5340-1 and AC 150/5340-18)	Precision	Nonprecision
Runway Edge Lights ⁸	HIRL / MIRL	
Parallel Taxiway ⁹	Required	
Approach Lights ¹⁰	MALSR, SSALR, or ALSF	Recommended
Runway Design Standards; e.g., Obstacle Free Zone (OFZ) ¹¹	< 3/4-statute mile approach visibility minimums	≥ 3/4-statute mile approach visibility minimums
Threshold Siting Criteria To Be Met ¹²	Table A2-1, Row 7 & 9	Table A2-1, Row 6 & 9
Survey Required for Lowest Minima	Vertically Guided Airport Airspace Analysis Survey criteria in AC 150/5300-18	

1. Visibility minimums are subject to application of FAA Order 8260.3 (TERPS) and associated orders or this table, whichever are higher.
2. The HATh indicated is for planning purposes only. Actual obtainable HATh is determined by TERPS.
3. The GQS is applicable to approach procedures providing vertical path guidance. It limits the magnitude of penetration of the obstruction clearance surfaces overlying the final approach course. The intent is to provide a descent path from DA to landing free of obstructions that could destabilize the established glidepath angle. The GQS is centered on a course from the DA point to the runway threshold. Its width is equal to the precision "W" surface at DA, and tapers uniformly to a width 100 feet from the runway edges. If the GQS is penetrated, vertical guidance instrument approach procedures (ILS/MLS/WAAS/LAAS/Baro-VNAV) are not authorized
4. The "W" surface is applicable to precision approach procedures. It is a sloping obstruction clearance surface (OCS) overlying the final approach course centerline. The surface slope varies with glidepath angle. The "W" surface must be clear to achieve lowest precision minimums. Surface slope varies with glide path angle, 102/angle; e.g., for optimum 3 glide path 34:1 surface must be clear.
5. If the W surface is penetrated, HAT and visibility will be increased as required by TERPS.
7. An ALP is only required for airports in the NPIAS; it is recommended for all others.
8. Runway edge lighting is required for night minimums. High intensity lights are required for RVR-based minimums.
9. A full-length parallel taxiway meeting separation requirements - Tables 2-1 and 2-2.
10. To achieve lower visibility minimums based on credit for lighting, an approach light system is required.
11. Indicates which table in Chapter 3 should be followed in the related chapters of this document.
12. Circling procedures to a secondary runway from the primary approach will not be authorized when the secondary runway does not meet threshold siting (reference Appendix 2) OFZ (reference paragraph 306) criteria, and TERPS Chapter 3, Section 3.

Table A16-1B. Approach Procedure With Vertical Guidance

Visibility Minimums ¹	< 3/4-statute mile	< 1-statute mile	1-statute mile	>1-statute mile ¹⁴
Height Above Threshold (HATh) ²	250	300	350	400
TERPS Glidepath Qualification Surface (GQS)	Table A2-1, Row 9, Criteria, and Appendix 2, par. 5a Clear			
TERPS Chapter 3, Section 3	34:1 clear	20:1 clear	20:1 clear, or penetrations lighted for night minimums (See AC 70/7460-1)	
Precision Obstacle Free Zone (POFZ) 200 x 800	Required	Required		
Airport Layout Plan ⁵	Required			
Minimum Runway Length	4,200 ft (1,280 m) (Paved)	3,200 ft (975 m) ⁶ (Paved)	3,200 ft (975 m) ^{6,7}	
Runway Markings (See AC150/5340-1)	Precision	Nonprecision (precision recommended)	Nonprecision ⁷	
Holding Position Signs & Markings (See AC 150/5340-1 and AC 150/5340-18)	Precision	Nonprecision (precision recommended)	Nonprecision ⁷	
Runway Edge Lights ⁸	HIRL/MIRL			MIRL/LIRL
Parallel Taxiway ⁹	Required			Recommended
Approach Lights ¹⁰	MALSR, SSALR, ALSF	Recommended	Recommended	
Runway Design Standards; e.g., Obstacle Free Zone (OFZ) ¹²	<3/4-statute mile approach visibility minimums	≥ 3/4-statute mile approach visibility minimums		
Threshold Siting Criteria To Be Met ¹³	Table A2-1, Row 7 and 9	Table A2-1 Row 6 and 9	Appendix 2, Table A2-1, Row 5 and 9	
Survey Required for Lowest Minima	Vertically Guided Airport Airspace Analysis Survey criteria in AC 150/5300-18		Non-Vertically Guided Airport Airspace Analysis Survey AC 150/5300-18	

1. Visibility minimums are subject to the application of FAA Order 8260.3 (TERPS) and associated orders or this table, whichever is higher.
2. The HATh indicated is for planning purposes only. Actual obtainable HATh is determined by TERPS.
3. The GQS is applicable to approach procedures providing vertical path guidance. It limits the magnitude of penetration of the obstruction clearance surfaces overlying the final approach course. The intent is to provide a descent path from DA to landing free of obstructions that could destabilize the established glidepath angle. The GQS is centered on a course from the DA point to the runway threshold. Its width is equal to the precision "W" surface at DA, and tapers uniformly to a width 100 feet from the runway edges. If the GQS is penetrated, vertical guidance instrument approach procedures (ILS/MLS/WAAS/LAAS/Baro-VNAV) are not authorized.
5. An ALP is only required for obligated airports in the NPIAS; it is recommended for all others.
6. Runways less than 3,200 feet are protected by 14 CFR Part 77 to a lesser extent. However, runways as short as 2400 feet could support an instrument approach provided the lowest HAT is based on clearing any 200-foot obstacle within the final approach segment.
7. Unpaved runways require case-by-case evaluation by the RAPT.
8. Runway edge lighting is required for night minimums. High intensity lights are required for RVR-based minimums.
9. A full -length parallel taxiway must lead to the threshold and meet standards in Tables 2-1 and 2-2.
10. To achieve lower visibility minimums based on credit for lighting, a TERPS specified approach light system is required.
12. Indicates what table should be followed in the related chapters in this document.
13. Circling procedures to a secondary runway from the primary approach will not be authorized when the secondary runway does not meet threshold siting (reference Appendix 2), OFZ (reference paragraph 306) and TERPS Chapter 3, Section 3.
14. For circling requirements, see Table A16-1C.

Table A16-1C. Nonprecision Approach Requirements
Approach Procedures without Vertical Guidance

Visibility Minimums ¹	< 3/4-statute mile	< 1-statute mile	1-statute mile	>1-statute mile	Circling
Height Above Threshold (HATh) ²	300	340	400	450	Varies
TERPS Chapter 3, Section 3	34:1 clear	20:1 clear	20:1 clear or penetrations lighted for night minimums (See AC 70/7460-1)		
Airport Layout Plan ³	Required				Recommended
Minimum Runway Length	4,200 ft (1,280 m) (Paved)	3,200 ft (975 m) ⁴ (Paved)	3,200 ft (975 m) ^{4,5}		
Runway Markings (See AC 150/5340-1)	Precision	Nonprecision ⁵			Visual (Basic) ⁵
Holding Position Signs & Markings (See AC 150/5340-1 and AC 150/5340-18)	Precision	Nonprecision			Visual (Basic) ⁵
Runway Edge Lights ⁶	HIRL / MIRL		MIRL / LIRL		MIRL / LIRL (Required only for night minima)
Parallel Taxiway ⁷	Required		Recommended		
Approach Lights ⁸	MALSR, SSALR, or ALSF Required	Required ⁹	Recommended ⁹		Not Required
Runway Design Standards, e.g. Obstacle Free Zone (OFZ) ¹⁰	<3/4-statute mile approach visibility minimums	≥ 3/4-statute mile approach visibility minimums			Not Required
Threshold Siting Criteria To Be Met ¹¹	Table A2-1, Row 7	Table A2-1, Row 6	Table A2-1, Row 1-5		Table A2-1, Row 1-4
Survey Required for Lowest Minima	Vertically Guided Airport Airspace Analysis Survey AC 150/5300-18	Non-Vertically Guided Airport Airspace Analysis Survey AC 150/5300-18			

1. Visibility minimums are subject to the application of FAA Order 8260.3 (TERPS) and associated orders or this table, whichever is higher.
2. The Height Above Threshold (HATh) indicated is for planning purposes only. Actual obtainable HATh is determined by TERPS.
3. An ALP is only required for obligated airports in the NPIAS; it is recommended for all others.
4. Runways less than 3,200 feet are protected by 14 CFR Part 77 to a lesser extent, however runways as short as 2400 feet could support an instrument approach provided the lowest HAT is based on clearing any 200-foot obstacle within the final approach segment.
5. Unpaved runways require case-by-case evaluation by the RAPT.
6. Runway edge lighting is required for night minimums. High intensity lights are required for RVR-based minimums.
7. A full-length parallel taxiway must lead to the threshold.
8. To achieve lower visibility minimums based on credit for lighting, an approach lighting system is required.
9. ODALS, MALS, SSALS, SALS are acceptable.
10. Indicates what table should be followed in the related chapters in this document.
11. Circling procedures to a secondary runway from the primary approach will not be authorized when the secondary runway does not meet threshold siting (reference Appendix 2), OFZ (reference paragraph 306), and TERPS Chapter 3, Section 3.

Appendix 17. MINIMUM DISTANCES BETWEEN CERTAIN AIRPORT FEATURES AND ANY ON-AIRPORT AGRICULTURE CROPS

Table A17-1. Minimum Distances Between Certain Airport Features and Any On-Airport Agriculture Crops

Aircraft Approach Category and Design Group ¹	Distance in Feet From Runway Centerline to Crop		Distance in Feet From Runway End to Crop		Distance in Feet from Centerline of Taxiway to Crop	Distance in Feet from Edge of Apron to Crop
	Visual & ≥ ¾ mile	< ¾ mile	Visual & ≥ ¾ mile	< ¾ mile		
Category A & B Aircraft						
Group I	200 ²	400	300 ³	600	45	40
Group II	250	400	400 ³	600	66	58
Group III	400	400	600	800	93	81
Group IV	400	400	1,000	1,000	130	113
Category C, D, & E Aircraft						
Group I	530 ³	575 ³	1,000	1,000	45	40
Group II	530 ³	575 ³	1,000	1,000	66	58
Group III	530 ³	575 ³	1,000	1,000	93	81
Group IV	530 ³	575 ³	1,000	1,000	130	113
Group V	530 ³	575 ³	1,000	1,000	160	138
Group VI	530 ³	575 ³	1,000	1,000	193	167

1. Design Groups are based on wing span or tail height, and Category depends on approach speed of the aircraft as shown below:

Design Group	Category
Group I: Wing span up to 49 ft.	Category A: Speed less than 91 knots
Group II: Wing span 49 ft. up to 73 ft.	Category B: Speed 91 knots up to 120 knots
Group III: Wing span 79 ft. up to 117 ft.	Category C: Speed 121 knots up to 140 knots
Group IV: Wing span 113 ft. up to 170 ft.	Category D: Speed 141 knots up to 165 knots
Group V: Wing span 171 ft. up to 213 ft.	Category E: Speed 166 knots or more
Group VI: Wing span 214 ft. up to 261 ft.	

2. If the runway will only serve small airplanes (12,500 lb. and under) in Design Group I, this dimension may be reduced to 125 feet; however, this dimension should be increased where necessary to accommodate visual navigational aids that may be installed. For example, farming operations should not be allowed within 25 feet of a Precision Approach Path Indicator (PAPI) light box.
3. These dimensions reflect the Threshold Siting Surface (TSS) as defined in AC 150/5300-13, Appendix 2. The TSS cannot be penetrated by any object. Under these conditions, the TSS is more restrictive than the OFA, and the dimensions shown here are to prevent penetration of the TSS by crops and farm machinery.

Appendix 18. ACRONYMS

The acronyms presented herein are intended for use with this publication only.

AAA	Airport Airspace Analysis	LPV	Localizer Performance with Vertical Guidance
AC	Advisory Circular	MALS	Medium Intensity Approach Lighting System
AD	Airport Design	MALSF	Medium Intensity Approach Lighting System with Sequenced Flashers
AFD	Airport Facility Directory	MALSR	Medium Intensity Approach Lighting System with Runway Alignment Indicator Lights
ADG	Airplane Design Group	MIRL	Medium Intensity Runway Lights
AIP	Airport Improvement Program or Aeronautical Information Publication	MLS	Microwave Landing System
ALP	Airport Layout Plan	MM	Middle Marker
ALS	Approach Lighting System	MSL	Mean Sea Level
ALSF(-1, -2)	Approach Lighting System with Sequenced Flashers	NAVAID	Navigational Aid
APV	Approach Procedure with Vertical Guidance	NCDC	National Climatic Data Center
ARC	Airport Reference Code	NDB	Nondirectional Beacon
ARP	Airport Reference Point	NP	Non-Precision (Markings)
ASDA	Accelerate-Stop Distance Available	NPIAS	National Plan of Integrated Airport Systems
ASDE	Airport Surface Detection Equipment	NTIS	National Technical Information Service
ASR	Airport Surveillance Radar	OCS	Obstacle Clearance Surface
ATC	Air Traffic Control	ODALS	Omnidirectional Approach Lighting System
ATCT	Airport Traffic Control Tower	OEI	One Engine Inoperative
AWOS	Automated Weather Observing System	OFA	Object Free Area
AZ	Azimuth	OFZ	Obstacle Free Zone
BRL	Building Restriction Line	OIS	Obstacle Identification Surface
CAT	Category	OM	Outer Marker
CFR	Code of Federal Regulation	NPA	Non-Precision Approach
CFW	Center Field Wind	P	Precision (Markings)
CWY	Clearway	PA	Precision Approach
DA	Decision Altitude	PAPI	Precision Approach Path Indicator
DER	Departure End of Runway	POFA	Precision Object Free Area
DME	Distance Measuring Equipment	RAIL	Runway Alignment Indicator Lights
DXF	AutoCAD Drawing Interchange file format	REIL	Runway End Identifier Lights
EDS	Environmental Data Service	RNAV	Area Navigation
EL	Elevation	ROFA	Runway Object Free Area
FBO	Fixed Base Operator	RPZ	Runway Protection Zone
GPA	Glidepath Angle	RSA	Runway Safety Area
GPS	Global Positioning System	RVR	Runway Visual Range
QGS	Glidepath Qualification Surface	RW	Runway
GS	Glide Slope	SALS	Short Approach Lighting System
GVGI	Generic Visual Slope Indicator	SSALR	Short Simplified Approach Lighting System with Runway Alignment Indicator Lights
HAT	Height Above Touchdown	SSALS	Simplified Short Approach Lighting System
HIRL	High Intensity Runway Lights	SWY	Stopway
IFR	Instrument Flight Rules	TCH	Threshold Crossing Height
IGES	Initial Graphics Exchange Specification file format	TERPS	FAA Order 8260.3, <i>United States Standard for Terminal Instrument Procedures</i>
ILS	Instrument Landing System	TH	Threshold
IM	Inner Marker	TL	Taxilane
IMC	Instrument Meteorological Conditions	TODA	Takeoff Distance Available
LAAS	Local Area Augmentation System	TORA	Takeoff Run Available
LDA	Landing Distance Available or Localizer Type Directional Aid	TSA	Taxiway Safety Area
LDIN	Lead-In Lights	TVOR	Terminal Very High Frequency Omnidirectional Range
LIRS	Low Impact Resistant Supports	TW	Taxiway
LNAV	Lateral Navigation		
LOC	Localizer		

USGS	United States Geological Service	V _{LOF}	Lift-off speed
V	Visual (Markings)	V _{SO}	Stalling speed or the minimum steady flight speed in the landing configuration
V ₁	Takeoff decision speed	VNAV	Vertical Navigation
V ₂	Takeoff safety speed	VOR	Very High Frequency Omnidirectional Range
VFR	Visual Flight Rules	WAAS	Wide Area Augmentation System
