RECORD OF CHANGES

DIRECTIVE NO

7210.3U

[illegible]

Facility Operation and Administration

7210.3U

Foreword

This order provides direction and guidance for the day-to-day operation of facilities and offices under the administrative jurisdiction of the Federal Aviation Administration's Air Traffic Organization. All concerned personnel shall familiarize themselves with the provisions pertaining to their responsibilities. When a situation arises that is not adequately covered, exercise good judgment.

This order consists of the following parts:

- a.** Part 1 contains information generally applicable to two or more types of facilities.
- b.** Parts 2, 3, and 4 contain instructions unique to center, terminal, or flight service facilities.
- c.** Part 5 contains information applicable to traffic management systems.
- d.** Part 6 contains regulatory information concerning waivers, authorizations, exemptions, and flight restrictions.

Michael A. Cirillo
Vice President, System Operations Services

Date:

Facility Operation and Administration

Explanation of Changes

**Direct questions through appropriate facility/service area office staff
to the Office of Primary Responsibility (OPR)**

a. 1-1-7. SAFETY MANAGEMENT SYSTEM (SMS)

This new paragraph is intended to begin the integration of Safety Management System concepts into the policies, procedures and practices utilized by the Air Traffic Organization (ATO) in the provision of air traffic services.

b. 1-1-8. REFERENCES TO FAA NON-AIR TRAFFIC ORGANIZATIONS

This new paragraph clarifies facility/regional contact for office organizations that are not part of the Air Traffic Organization.

c. 2-10-6. BROADCAST DENSITY ALTITUDE ADVISORY, 14-1-4. TELEPHONE LISTING, 14-4-1. STATION BROADCASTS, 14-4-2. COORDINATE WITH WEATHER SERVICE FORECAST OFFICE (WSFO), 14-4-3. COMMERCIAL BROADCAST STATIONS, and 14-4-4. REDUCING RECORDED WEATHER INFORMATION SERVICES

Only FSS/AFSSs in Alaska will be providing TWEB services.

d. 6-9-1. GENERAL

This change adds options available to operators of non-RVSM exception aircraft, requirements for managing non-RVSM aircraft, and adds reference to STORM flights. This change cancels and incorporates N7210.601, Domestic Reduced Vertical Separation Minimum (DRVSM).

e. 6-9-3. OPERATIONS MANAGER-IN-CHARGE RESPONSIBILITIES

This change adds a requirement for operational supervisor workstations to have access to the Department of Defense (DOD) Priority Mission website and that the appropriate training is given. This change cancels and incorporates N7210.601, Domestic Reduced Vertical Separation Minimum (DRVSM).

f. 6-9-4. OPERATIONS SUPERVISOR-IN-CHARGE/CONTROLLER-IN-CHARGE RESPONSIBILITIES

This change: Adds reference to STORM flight status; Deletes a requirement to coordinate pre-coordinated exceptions; Adds requirements for operational supervisors/controllers-in-charge (CIC) when coordinating non-RVSM exception aircraft outbound from the United States (U.S.); Adds requirements for operational supervisors/CICs when coordinating non-RVSM exception aircraft entering Canadian controlled airspace; Adds a requirement for STORM flights and DOD exception aircraft; Adds a requirement DOD STORM flights; Adds a requirement concerning coordination of STORM flights. This change cancels and incorporates N7210.601, Domestic Reduced Vertical Separation Minimum (DRVSM).

g. 6-9-5. NON-RVSM OPERATOR COORDINATION REQUIREMENTS

Changes reference to Foreign State aircraft and how they will be handled and adds TMU requirements regarding handling of non-RVSM exception aircraft inbound to the U.S. This change cancels and incorporates N7210.601, Domestic Reduced Vertical Separation Minimum (DRVSM).

h. 10-1-12. PRECISION OBSTACLE FREE ZONE (POFZ)

This new paragraph propagates a new program to the air traffic control tower management community and may reduce airport capacity due to increased taxi times from new hold lines to runway, especially during periods of low visibility weather.

i. 10-4-7. PRECISION RUNWAY MONITOR-SIMULTANEOUS OFFSET INSTRUMENT APPROACHES

This new paragraph incorporates new procedures that have been previously issued via a Notice. This change makes these procedures permanent. This cancels N7210.599 Precision Runway Monitor Simultaneous Offset Instrument Approaches, that was effective on 04/04/05.

j. CHAPTER 10. TERMINAL OPERATIONS, SERVICES, AND EQUIPMENT, SECTION 7. AIRPORT ARRIVAL RATE (AAR)

This new section provides guidance for determining optimal AARs for various airport configurations and how they are modified based on existing conditions.

k. 17-11-2. DUTIES AND RESPONSIBILITIES, and 17-12-2. DUTIES AND RESPONSIBILITIES

The headers on Route Advisory messages have been changed, to include DCC advisory number, category of route, and action. See paragraph 17-16-4, ROUTE ADVISORY MESSAGE. "Special Weather Advisory" is no longer a requirement, and thus should be removed.

l. CHAPTER 17. TRAFFIC MANAGEMENT NATIONAL, CENTER, AND TERMINAL, TABLE 17-19-1 AVIATION SYSTEM PERFORMANCE METRICS

This change incorporates additional airports into Table 17-19-1, Aviation System Performance Metrics.

m. CHAPTER 17. TRAFFIC MANAGEMENT NATIONAL, CENTER, AND TERMINAL, SECTION 20. TRAFFIC MANAGEMENT (TM) SUPPORT OF NON-REDUCED VERTICAL SEPARATION MINIMA (RVSM) AIRCRAFT

This new section explains that all requests for access to or through RVSM airspace by non-RVSM exception aircraft are treated as file-and-fly. Some Department of Defense (DOD) non-RVSM aircraft are designated as aircraft requiring special consideration. For coordination purposes they are referred to as STORM flights. The DOD Priority Mission website has been established for STORM flights.

n. Throughout this order revisions were made to reflect organizational name changes associated with the new Air Traffic Organization (ATO).

o. Editorial/format changes were made where necessary. Revision bars were not used due to the insignificant nature of these changes.

TABLE OF CONTENTS

Part 1. BASIC

Chapter 1. General

Section 1. Introduction

Paragraph	Page
1-1-1. PURPOSE	1-1-1
1-1-2. DISTRIBUTION	1-1-1
1-1-3. CANCELLATION	1-1-1
1-1-4. EXPLANATION OF CHANGES	1-1-1
1-1-5. EFFECTIVE DATE	1-1-1
1-1-6. CONSTRAINTS GOVERNING SUPPLEMENTS AND PROCEDURAL DEVIATIONS	1-1-1
1-1-7. SAFETY MANAGEMENT SYSTEM (SMS)	1-1-1
1-1-8. REFERENCES TO FAA NON-AIR TRAFFIC ORGANIZATION	1-1-2

Section 2. Order Use

1-2-1. POLICY	1-2-1
1-2-2. ANNOTATIONS	1-2-1
1-2-3. PUBLICATION AND DELIVERY DATES	1-2-1
1-2-4. WORD MEANINGS	1-2-1
1-2-5. ABBREVIATIONS	1-2-1

Chapter 2. Administration of Facilities

Section 1. General

2-1-1. INTERREGIONAL REQUIREMENTS	2-1-1
2-1-2. FACILITY STANDARD OPERATING PROCEDURES DIRECTIVE	2-1-1
2-1-3. POSITION/SECTOR BINDERS	2-1-1
2-1-4. REFERENCE FILES	2-1-1
2-1-5. RELEASE OF INFORMATION	2-1-1
2-1-6. CHECKING ACCURACY OF PUBLISHED DATA	2-1-2
2-1-7. AIR TRAFFIC SERVICE (ATS) CONTINUITY	2-1-2
2-1-8. HANDLING BOMB THREAT INCIDENTS	2-1-3
2-1-9. HANDLING MANPADS INCIDENTS	2-1-4
2-1-10. AIRPORT EMERGENCY PLANS	2-1-4
2-1-11. EXPLOSIVES DETECTION K-9 TEAMS	2-1-5
2-1-12. INTERSECTION TAKEOFFS	2-1-5
2-1-13. AIRCRAFT IDENTIFICATION PROBLEMS	2-1-5

Paragraph	Page
2-1-14. APPROACH CONTROL CEILING	2-1-6
2-1-15. AUTHORIZATION FOR SEPARATION SERVICES BY TOWERS	2-1-6
2-1-16. BIRD HAZARDS	2-1-7
2-1-17. PROHIBITED/RESTRICTED AREAS	2-1-7
2-1-18. LAND-BASED AIR DEFENSE IDENTIFICATION ZONE (ADIZ)	2-1-7
2-1-19. AIRPORT TRAFFIC PATTERNS	2-1-8
2-1-20. OBSTACLE IDENTIFICATION SURFACES, OBSTACLE FREE ZONES, RUNWAY SAFETY AREAS, AND CLEARWAYS	2-1-8
2-1-21. FACILITY IDENTIFICATION	2-1-8
2-1-22. DISPOSITION OF OBSOLETE CHARTS	2-1-8
2-1-23. OUTDOOR LASER DEMONSTRATIONS	2-1-9
2-1-24. COMBINE/RECOMBINE AN ATCT/TRACON	2-1-9
2-1-25. SUBMISSION OF AIR TRAFFIC CONTROL ASSIGNED AIRSPACE (ATCAA) DATA	2-1-9
2-1-26. SUBMISSION OF SUA AND PAJA FREQUENCY INFORMATION	2-1-9

Section 2. Responsibilities

2-2-1. LEGAL LIABILITIES OF PERSONNEL	2-2-1
2-2-2. JOB REQUIREMENTS	2-2-1
2-2-3. POSITION RESPONSIBILITY	2-2-1
2-2-4. DUTY FAMILIARIZATION AND THE TRANSFER OF POSITION RESPONSIBILITY	2-2-1
2-2-5. OPERATING INITIALS	2-2-3
2-2-6. SIGN ON/OFF PROCEDURES	2-2-3
2-2-7. CIRNOT HANDLING	2-2-3
2-2-8. GENOT HANDLING	2-2-3
2-2-9. PERSONNEL BRIEFINGS REGARDING AIR TRAFFIC BULLETIN ITEMS	2-2-3
2-2-10. LAW ENFORCEMENT INFORMATION	2-2-4
2-2-11. PERSONNEL BRIEFINGS REGARDING ORDER CHANGES	2-2-4
2-2-12. SYSTEMS MANAGEMENT OF VSCS EQUIPMENT	2-2-4
2-2-13. REPORTING EQUIPMENT TROUBLE	2-2-4

Section 3. Air Traffic Familiarization/Currency Requirements for En Route/Terminal/Flight Service Facilities

2-3-1. GENERAL	2-3-1
2-3-2. APPLICATION	2-3-1
2-3-3. REQUIREMENTS	2-3-1
2-3-4. DIFFERENTIAL	2-3-1

Section 4. Hours of Duty

2-4-1. SERVICE HOURS	2-4-1
2-4-2. TIME STANDARDS	2-4-1

Paragraph	Page
2-4-3. TIME CHECKS	2-4-1
2-4-4. STATUS OF SERVICE	2-4-1

Section 5. Watch Coverage–Flight Service Stations

2-5-1. BASIC WATCH SCHEDULES	2-5-1
2-5-2. DESIGNATING WATCH SUPERVISION COVERAGE	2-5-1
2-5-3. AREA SUPERVISION	2-5-1
2-5-4. RELIEF PERIODS	2-5-1
2-5-5. OVERTIME DUTY	2-5-2
2-5-6. HOLIDAY STAFFING	2-5-2
2-5-7. CONSOLIDATING POSITIONS	2-5-2
2-5-8. SUPERVISORS HOURS OF DUTY	2-5-2
2-5-9. FACILITY COMPLEMENTS	2-5-2
2-5-10. CONTROLLER-IN-CHARGE (CIC) TRAINING	2-5-2

Section 6. Watch Supervision–Terminal/En Route

2-6-1. WATCH SUPERVISION	2-6-1
2-6-2. WATCH SUPERVISION ASSIGNMENTS	2-6-1
2-6-3. CONTROLLER-IN-CHARGE (CIC) DESIGNATION	2-6-2
2-6-4. CONTROLLER-IN-CHARGE (CIC) SELECTION PROCESS	2-6-2
2-6-5. CONSOLIDATING POSITIONS	2-6-2
2-6-6. RELIEF PERIODS	2-6-3
2-6-7. BASIC WATCH SCHEDULE	2-6-3
2-6-8. OVERTIME DUTY	2-6-3
2-6-9. HOLIDAY STAFFING	2-6-3
2-6-10. ADMINISTRATIVE HOURS OF DUTY	2-6-3
2-6-11. FACILITY COMPLEMENTS	2-6-4

Section 7. Appearance and Security

2-7-1. PERSONNEL APPEARANCE	2-7-1
2-7-2. QUARTERS APPEARANCE	2-7-1
2-7-3. BULLETIN BOARDS	2-7-1
2-7-4. FOOD AND BEVERAGES	2-7-1
2-7-5. FACILITY SECURITY	2-7-1
2-7-6. SUSPICIOUS ACTIVITIES	2-7-1
2-7-7. COOPERATION WITH LAW ENFORCEMENT AGENCIES	2-7-1
2-7-8. FACILITY VISITORS	2-7-1
2-7-9. SECURITY OF JOINT-USE RADAR DATA	2-7-2

Section 8. Medical

Paragraph	Page
2-8-1. GENERAL	2-8-1
2-8-2. MEDICAL CLEARANCE REQUIREMENTS	2-8-1
2-8-3. SPECIAL MEDICAL EVALUATIONS	2-8-1
2-8-4. SPECIAL CONSIDERATION	2-8-1
2-8-5. USE OF DRUGS AND SEDATIVES	2-8-1
2-8-6. RESTRICTED DRUGS	2-8-2
2-8-7. BLOOD DONORS	2-8-2
2-8-8. USE OF ALCOHOL AND OTHER DRUGS	2-8-2
2-8-9. MEDICAL STATUS DETERMINATIONS ON FG-2154s	2-8-2

Section 9. Weather/Visibility

2-9-1. BACKUP/AUGMENTATION OF WEATHER OBSERVATIONS	2-9-1
2-9-2. RECEIPT AND DISSEMINATION OF WEATHER OBSERVATIONS	2-9-1
2-9-3. LIMITED AVIATION WEATHER REPORTING STATION (LAWRS) HOURS OF OPERATION	2-9-1
2-9-4. NONAVIATION WEATHER SERVICE	2-9-2
2-9-5. NATIONAL WEATHER RECORDS CENTER	2-9-2
2-9-6. VISIBILITY CHARTS	2-9-2
2-9-7. SITING CRITERIA FOR VISUAL WEATHER OBSERVATIONS	2-9-2
2-9-8. RUNWAY VISUAL VALUE (RVV) AND RUNWAY VISUAL RANGE (RVR) EQUIPMENT	2-9-2

Section 10. Wind/Altimeter Information

2-10-1. WIND INSTRUMENT SENSORS	2-10-1
2-10-2. WIND INDICATOR CROSS CHECK	2-10-1
2-10-3. ALTIMETER REQUIREMENTS	2-10-1
2-10-4. COMPARISON CHECKS	2-10-1
2-10-5. DELIVERY OF ALTIMETER SETTING TO ARTCC	2-10-2
2-10-6. BROADCAST DENSITY ALTITUDE ADVISORY	2-10-2

Chapter 3. Facility Equipment

Section 1. General

3-1-1. BASIC EQUIPMENT	3-1-1
3-1-2. PERIODIC MAINTENANCE	3-1-1
3-1-3. NATIONAL AIRSPACE SYSTEM (NAS) CHANGES	3-1-1
3-1-4. TRAFFIC LIGHTS, GATES, AND SIGNALS	3-1-1
3-1-5. CLEANING INSTRUMENT COVERS	3-1-2
3-1-6. ENGINE GENERATOR TRANSFER PROCEDURES FOR ANTICIPATED POWER FAILURE	3-1-2

Section 2. Use of Communications

Paragraph	Page
3-2-1. RESPONSIBILITY	3-2-1
3-2-2. AUTHORIZED MESSAGES NOT DIRECTLY ASSOCIATED WITH AIR TRAFFIC SERVICES	3-2-1
3-2-3. USE OF OTHER THAN FAA COMMUNICATIONS CIRCUITS	3-2-1
3-2-4. FBI USE OF FAA FREQUENCIES	3-2-1
3-2-5. AERONAUTICAL ADVISORY STATIONS (UNICOM/MULTICOM)	3-2-2

Section 3. Communications Procedures

3-3-1. SERVICE "F" COMMUNICATIONS	3-3-1
3-3-2. TELEPHONE COMMUNICATIONS	3-3-1
3-3-3. MONITORING FREQUENCIES	3-3-1
3-3-4. EMERGENCY FREQUENCIES 121.5 AND 243.0 MHz	3-3-1
3-3-5. BATTERY-POWERED TRANSCEIVERS	3-3-2
3-3-6. FACILITY STATUS REPORT	3-3-2
3-3-7. TESTING EMERGENCY LOCATOR TRANSMITTERS	3-3-2
3-3-8. VSCS FREQUENCY BACKUP	3-3-2
3-3-9. VSCS RECONFIGURATIONS	3-3-3
3-3-10. VTABS (VSCS TRAINING AND BACKUP SYSTEM)	3-3-3

Section 4. Recorders

3-4-1. USE OF RECORDERS	3-4-1
3-4-2. ASSIGNMENT OF RECORDER CHANNELS	3-4-1
3-4-3. CHECKING AND CHANGING RECORDER TAPES	3-4-2
3-4-4. HANDLING RECORDER TAPES OR DATs	3-4-2
3-4-5. VSCS DATA RETENTION	3-4-3

Section 5. Navigational Aids

3-5-1. NAVAID MONITORING	3-5-1
3-5-2. SYSTEM COMPONENT MALFUNCTIONS	3-5-2
3-5-3. PROCESSING GPS ANOMALY REPORTS	3-5-2
3-5-4. ORIGINATING NOTAMs CONCERNING NAVAIDs	3-5-2

Section 6. Direction Finders

3-6-1. DF ANTENNA SITE	3-6-1
3-6-2. STROBE LINE INDICATION	3-6-1
3-6-3. EQUIPMENT LIMITATIONS	3-6-1
3-6-4. INACCURATE BEARING INDICATION	3-6-1
3-6-5. COMMISSIONING DF EQUIPMENT	3-6-1
3-6-6. OPERATING PROCEDURES	3-6-1

Paragraph	Page
3-6-7. ASR-ASSOCIATED DF	3-6-2
3-6-8. ASSIGNING HEADING USING DF/ASR	3-6-2
3-6-9. CANCELING DF APPROACH PROCEDURES	3-6-2

Section 7. Radar Use

3-7-1. COMMISSIONING RADAR FACILITIES	3-7-1
3-7-2. RADAR USE	3-7-2
3-7-3. ATC RADAR BEACON SYSTEM DECODER CONTROL BOX CHECKS	3-7-2
3-7-4. MONITORING OF MODE 3/A RADAR BEACON CODES	3-7-2
3-7-5. RADAR TARGET SIZING	3-7-3
3-7-6. TERMINAL DIGITAL RADAR SYSTEM AND DISPLAY SETTINGS	3-7-3
3-7-7. PREARRANGED COORDINATION	3-7-3

Section 8. Video Maps

3-8-1. TOLERANCE FOR RADAR FIX ACCURACY	3-8-1
3-8-2. RADAR MAPPING STANDARDS	3-8-1
3-8-3. DISPLAY MAP DATA	3-8-1
3-8-4. INTENSITY	3-8-1
3-8-5. COMMON REFERENCE POINTS	3-8-2

Section 9. Other Displays

3-9-1. VECTORING ALTITUDE CHARTS FOR TERMINAL FACILITIES	3-9-1
3-9-2. MVA CHART PREPARATION (TERMINAL/MEARTS)	3-9-1
3-9-3. ALTITUDE ASSIGNMENTS TO S/VFR AND VFR AIRCRAFT	3-9-2
3-9-4. EMERGENCY OBSTRUCTION VIDEO MAP (EOVM)	3-9-2
3-9-5. ESTABLISHING DIVERSE VECTOR AREA/S (DVA)	3-9-3

Section 10. Color Displays-Terminal

3-10-1. GUIDELINES FOR USE OF COLOR ON ATC DISPLAYS	3-10-1
---	--------

Chapter 4. Correspondence, Conferences, Records, and Reports

Section 1. General

4-1-1. CORRESPONDENCE STANDARDS	4-1-1
4-1-2. SIGNATURE	4-1-1
4-1-3. SERVICE AREA REVIEW	4-1-1
4-1-4. CORRESPONDENCE REGARDING POLICY/PROCEDURES	4-1-1
4-1-5. IRREGULAR OPERATION	4-1-1
4-1-6. PRELIMINARY ENVIRONMENTAL REVIEW	4-1-1

Section 2. User Coordination/Conferences/Publicity

Paragraph	Page
4-2-1. LOCAL CONFERENCES	4-2-1
4-2-2. PILOT EDUCATION	4-2-1
4-2-3. PUBLISHED ITEMS	4-2-1
4-2-4. COORDINATION OF ATC PROCEDURES	4-2-1

Section 3. Letters of Agreement (LOA)

4-3-1. LETTERS OF AGREEMENT	4-3-1
4-3-2. APPROPRIATE SUBJECTS	4-3-2
4-3-3. DEVELOPING LOA	4-3-2
4-3-4. REVIEW BY SERVICE AREA OFFICE	4-3-3
4-3-5. APPROVAL	4-3-3
4-3-6. REVISIONS	4-3-3
4-3-7. CANCELLATION	4-3-3
4-3-8. AUTOMATED INFORMATION TRANSFER (AIT)	4-3-5

Section 4. Application

4-4-1. OPERATIONS UNDER EXEMPTIONS FROM SECTION 3 OF APPENDIX D TO PART 91 SURFACE AREAS OF CLASS B AND CLASS C AIRSPACE WITHIN WHICH SPECIAL VFR WEATHER MINIMUMS ARE NOT AUTHORIZED FOR FIXED-WING AIRCRAFT	4-4-1
4-4-2. USE OF AIRCRAFT CALL SIGNS	4-4-1
4-4-3. RUNWAY SUPERVISORY UNITS (RSU)	4-4-1

Section 5. Other Correspondence

4-5-1. LETTERS OF PROCEDURES	4-5-1
4-5-2. LETTERS TO AIRMEN	4-5-1
4-5-3. DISPOSITION OF VOLCANIC ACTIVITY REPORTING (VAR) FORMS	4-5-2

Section 6. Records

4-6-1. FACILITY RECORDS MANAGEMENT	4-6-1
4-6-2. COLLECTION OF OPERATIONAL DATA	4-6-1
4-6-3. FORMS PREPARATION	4-6-1
4-6-4. FAA FORM 7230-4, DAILY RECORD OF FACILITY OPERATION	4-6-1
4-6-5. PREPARATION OF FAA FORM 7230-4	4-6-1
4-6-6. FAA FORM 7230-10, POSITION LOG	4-6-3
4-6-7. AUTOMATED POSITION SIGN ON/OFF	4-6-5
4-6-8. TIME AND ATTENDANCE (T&A) RECORDING	4-6-6

Section 7. Reports

Paragraph	Page
4-7-1. MONTHLY REPORTS	4-7-1
4-7-2. DELAY REPORTING	4-7-1
4-7-3. SYSTEM IMPACT REPORTS	4-7-1
4-7-4. UNIDENTIFIED FLYING OBJECT (UFO) REPORTS	4-7-1

Section 8. Freedom of Information Act (FOIA)

4-8-1. ACCIDENT/INCIDENT RECORDINGS	4-8-1
4-8-2. REQUESTS TO PRESERVE TAPE OR DAT UNDER FOIA	4-8-1
4-8-3. COMPUTER DATA	4-8-1
4-8-4. FEES	4-8-1

Chapter 5. Special Flight Handling

Section 1. Presidential Aircraft

5-1-1. ADVANCE COORDINATION	5-1-1
5-1-2. MONITORING THE PRESIDENTIAL AIRCRAFT FLIGHT	5-1-2
5-1-3. USE OF FAA COMMUNICATIONS CIRCUITS	5-1-2
5-1-4. SECURITY OF INFORMATION	5-1-2
5-1-5. MOVEMENT INFORMATION	5-1-3
5-1-6. COORDINATION	5-1-3
5-1-7. RESCUE SUPPORT AIRCRAFT	5-1-3

Section 2. FAA Aircraft

5-2-1. IDENTIFYING DEPARTMENT OF TRANSPORTATION (DOT) AND FAA FLIGHTS	5-2-1
5-2-2. FLIGHT INSPECTION AIRCRAFT	5-2-1
5-2-3. HIGH ALTITUDE INSPECTIONS	5-2-1
5-2-4. RESEARCH AND DEVELOPMENT FLIGHTS	5-2-1

Section 3. DOE and Other Aircraft

5-3-1. DEPARTMENT OF ENERGY (DOE) FLIGHTS	5-3-1
5-3-2. IDENTIFICATION OF SPECIAL DOE FLIGHTS	5-3-1
5-3-3. NOTIFICATION OF DOE REPORTED ACCIDENT/UNREPORTED AIRCRAFT ...	5-3-1
5-3-4. ATMOSPHERE SAMPLING FOR NUCLEAR CONTAMINATION	5-3-1
5-3-5. DUE REGARD OPERATIONS	5-3-1
5-3-6. WEATHER RECONNAISSANCE FLIGHTS	5-3-2
5-3-7. OPEN SKIES TREATY AIRCRAFT	5-3-3

Section 4. Other Flight Requests

Paragraph	Page
5-4-1. REQUESTS FOR DEVIATION FROM TRANSPONDER REQUIREMENTS	5-4-1
5-4-2. CROP DUSTER/ANTIQUE AIRCRAFT	5-4-2
5-4-3. FLIGHT TEST OPERATIONS	5-4-2
5-4-4. SANCTIONED SPEED RECORDS	5-4-2
5-4-5. CERTIFYING RECORD ATTEMPTS	5-4-2
5-4-6. PHOTOGRAMMETRIC FLIGHTS	5-4-3
5-4-7. AEROBATIC PRACTICE AREAS	5-4-3

Part 2. AIR ROUTE TRAFFIC CONTROL CENTERS

Chapter 6. En Route Operations and Services

Section 1. General

6-1-1. AREAS OF OPERATION	6-1-1
6-1-2. SECTORS	6-1-1
6-1-3. SECTOR CONFIGURATION	6-1-1
6-1-4. AREAS OF SPECIALIZATION	6-1-1
6-1-5. OPERATING POSITION DESIGNATORS	6-1-1
6-1-6. FLIGHT PROGRESS STRIP USAGE	6-1-2

Section 2. Sector Information Binders

6-2-1. EN ROUTE CONTROLLER TEAM CONCEPT	6-2-1
6-2-2. EN ROUTE SECTOR INFORMATION BINDER	6-2-1

Section 3. Operations

6-3-1. HANDLING OF SIGMETs, CWAs, AND PIREPs	6-3-1
6-3-2. RECEIPT OF NOTAM DATA	6-3-1
6-3-3. DF NET CONTROL POSITION OPERATION	6-3-1
6-3-4. REVIEW AIRSPACE STRUCTURE	6-3-2
6-3-5. DATA COMMUNICATION	6-3-2
6-3-6. MTR (IR) AND CHANGES TO PUBLISHED MOA ACTIVITY SCHEDULES	6-3-2

Section 4. Services

6-4-1. ADVANCE APPROACH INFORMATION	6-4-1
6-4-2. MINIMUM IFR ALTITUDES (MIA)	6-4-1
6-4-3. SPECIAL USE FREQUENCIES	6-4-1
6-4-4. PRACTICE INSTRUMENT APPROACHES	6-4-1

Section 5. Stored Flight Plan Program

Paragraph	Page
6-5-1. CRITERIA	6-5-1
6-5-2. IMPLEMENTATION AND COORDINATION	6-5-2
6-5-3. PREPARATION AND MAINTENANCE OF BULK STORE FILE	6-5-2
6-5-4. REMARKS DATA	6-5-2

Section 6. Air Carrier Computer Interface Program

6-6-1. GENERAL	6-6-1
6-6-2. FACILITY RESPONSIBILITIES	6-6-1
6-6-3. CRITERIA FOR PARTICIPATION	6-6-1
6-6-4. FORMAT CONVENTIONS	6-6-1
6-6-5. MESSAGE CONTENT	6-6-1

Section 7. User Request Evaluation Tool (URET)

6-7-1. GENERAL	6-7-1
6-7-2. OPERATIONAL SUPERVISOR-IN-CHARGE RESPONSIBILITIES	6-7-1
6-7-3. OPERATIONAL MANAGER-IN-CHARGE RESPONSIBILITIES	6-7-1
6-7-4. FACILITY MANAGER RESPONSIBILITIES	6-7-1
6-7-5. URET AIRSPACE CONFIGURATION ELEMENTS	6-7-2
6-7-6. STANDARD USE OF AUTOMATED FLIGHT DATA MANAGEMENT	6-7-2
6-7-7. URET OUTAGES	6-7-2
6-7-8. TRANSITION AND TRAINING PLANNING	6-7-3
6-7-9. RESTRICTIONS INVENTORY AND EVALUATION	6-7-3
6-7-10. TRAFFIC COUNTS AND DELAY REPORTING	6-7-3
6-7-11. COMPUTER DATA RETENTION	6-7-3
6-7-12. WAIVER TO INTERIM ALTITUDE REQUIREMENTS	6-7-4
6-7-13. TRANSFER OF POSITION RESPONSIBILITY	6-7-4

Section 8. Ocean21

6-8-1. GENERAL	6-8-1
6-8-2. OPERATIONAL SUPERVISOR-IN-CHARGE RESPONSIBILITIES	6-8-1
6-8-3. ERROR REPAIR POSITION RESPONSIBILITIES	6-8-1
6-8-4. FACILITY MANAGER RESPONSIBILITIES	6-8-1
6-8-5. TRANSFER OF POSITION	6-8-2
6-8-6. OCEAN21 CHANNEL CHANGEOVERS	6-8-2
6-8-7. OUTAGES	6-8-2
6-8-8. CONTROLLER PILOT DATA LINK COMMUNICATIONS	6-8-2

Section 9. Reduced Vertical Separation Minimum (RVSM)

Paragraph	Page
6-9-1. GENERAL	6-9-1
6-9-2. FACILITY MANAGER RESPONSIBILITIES	6-9-1
6-9-3. OPERATIONS MANAGER-IN-CHARGE RESPONSIBILITIES	6-9-1
6-9-4. OPERATIONS SUPERVISOR-IN-CHARGE/CONTROLLER-IN-CHARGE RESPONSIBILITIES	6-9-2
6-9-5. NON-RVSM REQUIREMENTS	6-9-2
6-9-6. EQUIPMENT SUFFIX AND DISPLAY MANAGEMENT	6-9-2
6-9-7. MOUNTAIN WAVE ACTIVITY (MWA)	6-9-3
6-9-8. WAKE TURBULENCE AND WEATHER RELATED TURBULENCE	6-9-3
6-9-9. SUSPENSION OF RVSM	6-9-3

Chapter 7. En Route Data

Section 1. Performance Checks

7-1-1. RADAR PERFORMANCE CHECKS	7-1-1
7-1-2. CONTROLLER PERFORMANCE CHECKS	7-1-1
7-1-3. SPECIAL RADAR ACCURACY CHECKS	7-1-2

Section 2. Deficiencies

7-2-1. DEFICIENCIES IN SYSTEM	7-2-1
7-2-2. AMPLITRON OR PARAMETRIC AMPLIFIER FAILURE	7-2-1
7-2-3. ELECTRONIC ATTACK (EA)	7-2-1

Chapter 8. NAS En Route Automation

Section 1. General

8-1-1. TRANSITION PROCEDURES	8-1-1
8-1-2. ALTRV FLIGHT DATA PROCESSING	8-1-1
8-1-3. COMPUTER DATA RETENTION	8-1-2

Section 2. Procedures

8-2-1. SINGLE SITE COVERAGE STAGE A OPERATIONS	8-2-1
8-2-2. ADAPTED ALTIMETER SETTINGS	8-2-1
8-2-3. ADAPTATION OF EXTERNAL ALTIMETER SETTINGS	8-2-1
8-2-4. CONFLICT ALERT FUNCTION PARAMETERS	8-2-1
8-2-5. MODE C INTRUDER (MCI) ALERT PARAMETERS	8-2-1
8-2-6. E-MSAW ADAPTATION	8-2-1
8-2-7. WAIVER TO INTERIM ALTITUDE REQUIREMENTS	8-2-2

Section 3. Displays

Paragraph	Page
8-3-1. DIGITAL MAP VERIFICATION	8-3-1
8-3-2. DATA DISPLAY FOR BLOCK ALTITUDE FLIGHTS	8-3-1
8-3-3. SELECTED ALTITUDE LIMITS	8-3-1
8-3-4. AUTOMATED WEATHER DISPLAY STATUS	8-3-1

Chapter 9. Facility Statistical Data, Reports, and Forms

Section 1. Operational Count Data

9-1-1. IFR AIRCRAFT HANDLED	9-1-1
9-1-2. CATEGORIES OF OPERATIONS	9-1-1
9-1-3. CRITERIA FOR IFR AIRCRAFT HANDLED COUNT	9-1-1
9-1-4. MILITARY AIRCRAFT MOVEMENTS	9-1-3
9-1-5. USE OF AUTOMATED COUNTS	9-1-3
9-1-6. FAA FORM 7230-14, ARTCC OPERATIONS DAILY SUMMARY	9-1-3
9-1-7. INSTRUCTIONS FOR COMPLETING FAA FORM 7230-14	9-1-3
9-1-8. DISTRIBUTION AND AMENDMENT	9-1-4
9-1-9. FAA FORM 7230-25, RECORD OF MILITARY TRAINING ROUTE (MTR) OPERATIONS	9-1-4

Section 2. Instrument Approach Data

9-2-1. GENERAL	9-2-1
9-2-2. INSTRUMENT APPROACHES	9-2-1
9-2-3. AIRPORTS REPORTED	9-2-1
9-2-4. FAA FORM 7230-16, APPROACH DATA WORKSHEET	9-2-1
9-2-5. FAA FORM 7230-12, INSTRUMENT APPROACHES MONTHLY SUMMARY ...	9-2-1
9-2-6. DISTRIBUTION AND AMENDMENT	9-2-2
9-2-7. FORWARD COPY TO ADJACENT SERVICE AREA	9-2-2

Section 3. Other Reports and Forms

9-3-1. FAA FORM 7210-8, ELT INCIDENT	9-3-1
--	-------

Part 3. TERMINAL AIR TRAFFIC CONTROL FACILITIES

Chapter 10. Terminal Operations, Services, and Equipment

Section 1. General

10-1-1. OPERATING POSITION DESIGNATORS	10-1-1
10-1-2. TOWER/RADAR TEAM CONCEPTS	10-1-1
10-1-3. MILITARY ATC BOARDS	10-1-1

Paragraph	Page
10-1-4. SECTIONAL AERONAUTICAL AND TERMINAL AREA CHARTS	10-1-1
10-1-5. AREAS OF NONVISIBILITY	10-1-2
10-1-6. SELECTING ACTIVE RUNWAYS	10-1-2
10-1-7. USE OF ACTIVE RUNWAYS	10-1-2
10-1-8. FLIGHT PROGRESS STRIP USAGE	10-1-3
10-1-9. LOW VISIBILITY OPERATIONS	10-1-4
10-1-10. MOBILE CONTROL TOWERS	10-1-4
10-1-11. PARTICIPATION IN LOCAL AIRPORT DEICING PLAN (LADP)	10-1-4
10-1-12. PRECISION OBSTACLE FREE ZONE (POFZ)	10-1-6

Section 2. Position Binders

10-2-1. POSITION DUTIES AND RESPONSIBILITIES	10-2-1
10-2-2. TOWER/RADAR TEAM POSITION BINDERS	10-2-1

Section 3. Operations

10-3-1. SIGMET AND PIREP HANDLING	10-3-1
10-3-2. WIND INSTRUMENTS AT APPROACH CONTROL FACILITIES	10-3-1
10-3-3. LOW LEVEL WIND SHEAR/MICROBURST DETECTION SYSTEMS	10-3-1
10-3-4. RELAY OF RVV/RVR VALUES	10-3-2
10-3-5. ADVANCE APPROACH INFORMATION	10-3-2
10-3-6. ILS/MLS HEIGHT/DISTANCE LIMITATIONS	10-3-2
10-3-7. LAND AND HOLD SHORT OPERATIONS (LAHSO)	10-3-2

Section 4. Services

10-4-1. AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)	10-4-1
10-4-2. PRETAXI CLEARANCE PROCEDURES	10-4-1
10-4-3. GATE HOLD PROCEDURES	10-4-2
10-4-4. ADVISORY SERVICE TO ARRIVING VFR FLIGHTS	10-4-2
10-4-5. PRACTICE INSTRUMENT APPROACHES	10-4-2
10-4-6. SIMULTANEOUS ILS/MLS APPROACHES	10-4-3
10-4-7. PRECISION RUNWAY MONITOR-SIMULTANEOUS OFFSET INSTRUMENT APPROACHES	10-4-4
10-4-8. REDUCED SEPARATION ON FINAL	10-4-5
10-4-9. MINIMUM IFR ALTITUDES (MIA)	10-4-6

Section 5. Terminal Radar

10-5-1. SHUTDOWN OF PAR ANTENNAS	10-5-1
10-5-2. RADAR DISPLAY INDICATORS	10-5-1
10-5-3. FUNCTIONAL USE OF CERTIFIED TOWER RADAR DISPLAYS	10-5-1
10-5-4. ASR PERFORMANCE CHECKS	10-5-2
10-5-5. DEFICIENCIES IN SYSTEM	10-5-2

Paragraph	Page
10-5-6. RADAR TOLERANCES	10-5-3
10-5-7. RECOMMENDED ALTITUDES FOR SURVEILLANCE APPROACHES	10-5-3
10-5-8. ASDE PERFORMANCE CHECKS	10-5-3

Section 6. Airport Lighting

10-6-1. GENERAL	10-6-1
10-6-2. OPERATION OF LIGHTS WHEN TOWER IS CLOSED	10-6-1
10-6-3. INCOMPATIBLE LIGHT SYSTEM OPERATION	10-6-1
10-6-4. APPROACH LIGHT SYSTEMS	10-6-1
10-6-5. VISUAL APPROACH SLOPE INDICATOR (VASI) SYSTEMS	10-6-3
10-6-6. PRECISION APPROACH PATH INDICATOR (PAPI) SYSTEMS	10-6-3
10-6-7. RUNWAY AND TAXIWAY LIGHTS	10-6-3
10-6-8. RUNWAY FLOODLIGHTS	10-6-4
10-6-9. RUNWAY EDGE LIGHTS ASSOCIATED WITH MEDIUM APPROACH LIGHT SYSTEM/RUNWAY ALIGNMENT INDICATOR LIGHTS	10-6-4

Section 7. Airport Arrival Rate (AAR)

10-7-1. PURPOSE	10-7-1
10-7-2. POLICY	10-7-1
10-7-3. DEFINITIONS	10-7-1
10-7-4. RESPONSIBILITIES	10-7-1
10-7-5. CALCULATING AARs	10-7-1
10-7-6. OPERATIONAL AARs	10-7-2

Chapter 11. National Programs

Section 1. Terminal VFR Radar Services

11-1-1. PROGRAM INTENT	11-1-1
11-1-2. IMPLEMENTATION	11-1-1
11-1-3. TRSA	11-1-2
11-1-4. CLASS C AIRSPACE	11-1-2
11-1-5. CLASS B AIRSPACE	11-1-3

Section 2. Automated Terminal Tracking Systems (ATTS)

11-2-1. OPERATIONAL USE	11-2-1
11-2-2. DATA ENTRIES	11-2-1
11-2-3. DISPLAY DATA	11-2-1
11-2-4. USE OF MODIFY AND QUICK LOOK FUNCTIONS	11-2-1
11-2-5. AUTOMATION PROGRAM CHANGES	11-2-2
11-2-6. AUTOMATIC ACQUISITION/TERMINATION AREAS	11-2-2
11-2-7. MINIMUM SAFE ALTITUDE WARNING (MSAW), CONFLICT ALERT (CA) AND MODE C INTRUDER (MCI)	11-2-2

Paragraph	Page
11-2-8. MAGNETIC VARIATION OF VIDEO MAPS/GEO MAPS AT ARTS FACILITIES .	11-2-3
11-2-9. MSAW DTM CARTOGRAPHIC CERTIFICATION, UPDATES, AND RECOMPILATION	11-2-3
11-2-10. DIGITAL MAP VERIFICATION	11-2-4

Section 3. Data Recording and Retention

11-3-1. DATA RECORDING	11-3-1
11-3-2. DATA RETENTION	11-3-1
11-3-3. FAULT LOG	11-3-2

Section 4. TPX-42

11-4-1. OPERATIONAL USE	11-4-1
11-4-2. LOW ALTITUDE ALERT SYSTEM (LAAS)	11-4-1

Section 5. Charted VFR Flyway Planning Chart Program

11-5-1. DEFINITION	11-5-1
11-5-2. CRITERIA	11-5-1
11-5-3. RESPONSIBILITIES	11-5-1

Section 6. Helicopter Route Chart Program

11-6-1. POLICY	11-6-1
11-6-2. DEFINITION	11-6-1
11-6-3. CRITERIA	11-6-1
11-6-4. RESPONSIBILITIES	11-6-2

Section 7. Terminal Area VFR Route Program

11-7-1. POLICY	11-7-1
11-7-2. DEFINITION	11-7-1
11-7-3. CRITERIA	11-7-1
11-7-4. RESPONSIBILITIES	11-7-1

Section 8. Standard Terminal Automation Replacement System (STARS)

11-8-1. OPERATIONAL USE	11-8-1
11-8-2. DATA ENTRIES	11-8-1
11-8-3. DISPLAY DATA	11-8-1
11-8-4. USE OF STARS QUICK LOOK FUNCTIONS	11-8-1
11-8-5. AUTOMATION PROGRAM CHANGES	11-8-1
11-8-6. AUTOMATIC ACQUISITION/ TERMINATION AREAS	11-8-2
11-8-7. MINIMUM SAFE ALTITUDE WARNING (MSAW) AND CONFLICT ALERT (CA)	11-8-2
11-8-8. MAGNETIC VARIATION OF VIDEO MAPS/GEO MAPS AT STARS FACILITIES	11-8-3
11-8-9. MSAW DTM CARTOGRAPHIC CERTIFICATION, UPDATES, AND RECOMPILATION	11-8-3

Paragraph	Page
11-8-10. DIGITAL MAP VERIFICATION	11-8-3
11-8-11. MODE C INTRUDER (MCI) ALERT PARAMETERS	11-8-3
11-8-12. OPERATIONAL MODE TRANSITION PROCEDURES	11-8-4
11-8-13. RADAR SELECTION PROCEDURES	11-8-4
11-8-14. MULTI-SENSOR RADAR OPERATIONS	11-8-4
11-8-15. SINGLE SITE COVERAGE ATTS OPERATIONS	11-8-5

Section 9. Airport Movement Area Safety System (AMASS) Supervisory/Controller-in-Charge (CIC) Procedures

11-9-1. ENSURE STATUS	11-9-1
11-9-2. TAKING AMASS OFFLINE	11-9-1
11-9-3. MONITOR ALERTS AND ENSURE CORRECTIVE ACTION	11-9-1
11-9-4. SETTING RUNWAY CONFIGURATION	11-9-1
11-9-5. LIMITED CONFIGURATION	11-9-1
11-9-6. CHANGING RUNWAY CONFIGURATION (DELAY)	11-9-2
11-9-7. AMASS MAINTENANCE MODE	11-9-2
11-9-8. WATCH CHECKLIST	11-9-2

Section 10. VFR Waypoint Chart Program

11-10-1. POLICY	11-10-1
11-10-2. DEFINITION	11-10-1
11-10-3. CRITERIA	11-10-1
11-10-4. RESPONSIBILITIES	11-10-2

Chapter 12. Facility Statistical Data, Reports, and Forms

Section 1. General Information

12-1-1. GENERAL	12-1-1
12-1-2. USE OF AUTOMATED COUNTS	12-1-1
12-1-3. QUESTIONS OR CHANGES	12-1-1
12-1-4. SUMMARY OF STATISTICAL REPORTS AND FORMS	12-1-1

Section 2. Airport Operations Data

12-2-1. AIRPORT OPERATIONS COUNT	12-2-1
12-2-2. CATEGORIES OF OPERATIONS	12-2-1
12-2-3. FORMATION FLIGHT OPERATIONS COUNT	12-2-1
12-2-4. FAA FORM 7230-1, AIRPORT TRAFFIC RECORD	12-2-1
12-2-5. INSTRUCTIONS FOR COMPLETING FAA FORM 7230-1	12-2-1
12-2-6. DISTRIBUTION AND AMENDMENT	12-2-2
12-2-7. CRITERIA FOR INSTRUMENT OPERATIONS COUNT, NONAPPROACH CONTROL FACILITIES	12-2-2

Section 3. Instrument Operations Data

Paragraph	Page
12-3-1. INSTRUMENT OPERATIONS COUNT	12-3-1
12-3-2. CATEGORIES OF OPERATIONS	12-3-1
12-3-3. FORMATION FLIGHT OPERATIONS COUNT	12-3-1
12-3-4. CRITERIA FOR INSTRUMENT OPERATIONS COUNT, APPROACH CONTROL FACILITIES	12-3-1
12-3-5. TABULATION	12-3-1
12-3-6. CRITERIA FOR CLASS B OR C SERVICE AND TRSA OPERATIONS COUNT ..	12-3-2
12-3-7. TABULATION OF CLASS B OR C SERVICE AND TRSA OPERATIONS	12-3-2
12-3-8. FAA FORM 7230-26, INSTRUMENT OPERATIONS	12-3-2
12-3-9. INSTRUCTIONS FOR COMPLETING FAA FORM 7230-26	12-3-3
12-3-10. DISTRIBUTION AND AMENDMENT	12-3-3

Section 4. Instrument Approach Data

12-4-1. GENERAL INTRODUCTION	12-4-1
12-4-2. AIRCRAFT NOT INCLUDED IN INSTRUMENT APPROACH CATEGORY	12-4-1
12-4-3. FAA FORM 7230-16, APPROACH DATA WORKSHEET	12-4-1
12-4-4. INTRAFACILITY SYSTEM	12-4-1
12-4-5. AIRPORTS REPORTED	12-4-1
12-4-6. PART-TIME FACILITIES	12-4-1
12-4-7. MILITARY STAFFED APPROACH CONTROLS	12-4-2
12-4-8. FAA FORM 7230-12 INSTRUMENT APPROACHES MONTHLY SUMMARY ...	12-4-2
12-4-9. DISTRIBUTION AND AMENDMENT	12-4-2
12-4-10. FORWARD COPY TO ADJACENT REGION	12-4-2

Part 4. FLIGHT SERVICE STATIONS

Chapter 13. Flight Service Operations and Services

Section 1. General

13-1-1. OPERATING POSITION DESIGNATORS	13-1-1
13-1-2. TEMPORARY FSS	13-1-1
13-1-3. FLIGHT PLAN AREA	13-1-1
13-1-4. ICSS INTRODUCTORY ANNOUNCEMENT	13-1-1

Section 2. Position/Service Information Binders

13-2-1. RESPONSIBILITY	13-2-1
13-2-2. BOUNDARIES	13-2-1
13-2-3. POSITIONS/SERVICES	13-2-1

Section 3. Operations

Paragraph	Page
13-3-1. AIRPORT CONDITION FILE	13-3-1
13-3-2. LANDING AREA STATUS CHECKS	13-3-1
13-3-3. AIRPORT SEARCH ARRANGEMENTS	13-3-1
13-3-4. LIAISON VISITS	13-3-1
13-3-5. DUTIES	13-3-1
13-3-6. TIE-IN NOTAM RESPONSIBILITY	13-3-1

Section 4. Services

13-4-1. PREFILED FLIGHT PLANS	13-4-1
13-4-2. PRACTICE INSTRUMENT APPROACHES	13-4-1
13-4-3. OPERATION OF AIRPORT LIGHTS	13-4-1
13-4-4. RUNWAY EDGE LIGHTS ASSOCIATED WITH MEDIUM APPROACH LIGHT SYSTEM/RUNWAY ALIGNMENT INDICATOR LIGHTS	13-4-1
13-4-5. LOCAL AIRPORT ADVISORY (LAA)/ REMOTE AIRPORT ADVISORY (RAA)/ REMOTE AIRPORT INFORMATION SERVICE (RAIS)	13-4-1
13-4-6. TRANSMISSION OF MESSAGES FROM AIRPORT INSPECTORS	13-4-2

Chapter 14. Aviation Meteorological Services and Equipment

Section 1. General

14-1-1. FAA-NWS AGREEMENT	14-1-1
14-1-2. CERTIFICATES OF AUTHORITY	14-1-1
14-1-3. LIAISON WITH AVIATION INTERESTS	14-1-1
14-1-4. TELEPHONE LISTINGS	14-1-1
14-1-5. MINIMUM WEATHER EQUIPMENT	14-1-1
14-1-6. SUPPLY-SUPPORT	14-1-2
14-1-7. NWS OPERATIONS MANUAL	14-1-2

Section 2. Pilot Weather Briefing

14-2-1. BRIEFING RESPONSIBILITY	14-2-1
14-2-2. WEATHER CHART DISPLAY	14-2-1
14-2-3. TELEVISION EQUIPMENT	14-2-1
14-2-4. AFSS/FSS-WSO/WSFO ADJOINING	14-2-1
14-2-5. AFSS/FSS-WSO/WSFO NOT ADJOINING	14-2-1
14-2-6. FLIGHT PLANNING DISPLAY	14-2-1
14-2-7. FLIGHT PLANNING FORMS	14-2-1
14-2-8. MILITARY TRAINING ACTIVITY	14-2-2
14-2-9. TRANSFER OF BRIEFERS	14-2-2

Section 3. En Route Flight Advisory Service (EFAS)

Paragraph	Page
14-3-1. GENERAL	14-3-1
14-3-2. FLIGHT WATCH AREA (FWA)	14-3-1
14-3-3. SYSTEM CONFIGURATION	14-3-1
14-3-4. HOURS OF OPERATION	14-3-1
14-3-5. STAFFING	14-3-1
14-3-6. NATIONAL WEATHER SERVICE (NWS) SUPPORT	14-3-1
14-3-7. EQUIPMENT	14-3-2
14-3-8. TRAINING	14-3-2
14-3-9. CERTIFICATION	14-3-2
14-3-10. RECERTIFICATION REQUIREMENTS	14-3-2
14-3-11. QUALIFICATION AND SELECTION	14-3-2

Section 4. Broadcasts

14-4-1. STATION BROADCASTS	14-4-1
14-4-2. COORDINATE WITH WEATHER SERVICE FORECAST OFFICE (WSFO) (ALASKA ONLY)	14-4-1
14-4-3. COMMERCIAL BROADCAST STATIONS	14-4-1
14-4-4. REDUCING RECORDED WEATHER INFORMATION SERVICES	14-4-1

Chapter 15. Equipment

Section 1. General

15-1-1. RESPONSIBILITY	15-1-1
15-1-2. AIRCRAFT ORIENTATION PLOTTING BOARD	15-1-1
15-1-3. ADDITIONAL TELEPHONE SERVICE	15-1-1
15-1-4. ORDERING OVERLAYS	15-1-1
15-1-5. LEASED EQUIPMENT SUPPLIES	15-1-1

Section 2. Frequencies

15-2-1. VOR AND VORTAC VOICE CHANNELS	15-2-1
15-2-2. UHF EN ROUTE CHANNEL	15-2-1

Chapter 16. Facility Statistical Data, Reports, and Forms

Section 1. General Information

16-1-1. FORM USAGE	16-1-1
16-1-2. TOTAL FLIGHT SERVICES FORMULA	16-1-1

Section 2. Aircraft Contacted

Paragraph	Page
16-2-1. AIRCRAFT CONTACTED	16-2-1
16-2-2. LOCAL AIRPORT ADVISORY (LAA)/ REMOTE AIRPORT ADVISORY (RAA)/ REMOTE AIRPORT INFORMATION SERVICE (RAIS)	16-2-1
16-2-3. RADIO CONTACTS	16-2-1

Section 3. Flight Plan Count

16-3-1. FLIGHT PLAN COUNT	16-3-1
16-3-2. ADDITIONAL ITEMS	16-3-1
16-3-3. FLIGHT PLAN CHANGE EN ROUTE	16-3-1
16-3-4. FLIGHT PLAN FORMS	16-3-1

Section 4. Pilot Briefing Count

16-4-1. PILOT BRIEFING COUNT	16-4-1
16-4-2. RETENTION OF FORMS CONTAINING PILOT BRIEFING ("PB") DATA	16-4-1

Section 5. Other Reports and Information

16-5-1. COMPLETION OF MONTHLY ACTIVITY RECORD	16-5-1
16-5-2. EFAS MONTHLY REPORT	16-5-1
16-5-3. DISTRIBUTION AND AMENDMENT	16-5-1
16-5-4. MESSAGE TRAFFIC NUMBER RECORD	16-5-2
16-5-5. UNANNOUNCED MILITARY AIRCRAFT ARRIVALS	16-5-2

Section 6. AFSS Printing of Lists and Tallies

16-6-1. PRINTING OF LISTS	16-6-1
16-6-2. PRINTING OF TRANSACTIONS INVOLVING LIST UPDATES	16-6-1
16-6-3. FLIGHT PLAN LOG PRINTING	16-6-1
16-6-4. PREFLIGHT BRIEFING LOG PRINTING	16-6-1
16-6-5. IN-FLIGHT CONTACT LOG PRINTING	16-6-2
16-6-6. TALLIES PRINTING	16-6-2
16-6-7. FLIGHT PLAN PRINTING	16-6-2
16-6-8. DISABLED SYSTEM COMPONENT PRINTING	16-6-2

Part 5. TRAFFIC MANAGEMENT SYSTEM

Chapter 17. Traffic Management National, Center, and Terminal

Section 1. Organizational Missions

17-1-1. TRAFFIC MANAGEMENT SYSTEM MISSION	17-1-1
17-1-2. DAVID J. HURLEY AIR TRAFFIC CONTROL SYSTEM COMMAND CENTER (ATCSCC)	17-1-1
17-1-3. TRAFFIC MANAGEMENT UNIT (TMU) MISSION	17-1-1

Section 2. Organizational Responsibilities

Paragraph	Page
17-2-1. AIR TRAFFIC TACTICAL OPERATIONS PROGRAM	17-2-1
17-2-2. SERVICE OPERATIONS AREA OFFICES	17-2-1
17-2-3. ATCSCC	17-2-1
17-2-4. FIELD FACILITIES	17-2-2

Section 3. Line of Authority

17-3-1. ATCSCC	17-3-1
17-3-2. ARTCC	17-3-1
17-3-3. TERMINAL	17-3-1

Section 4. Supplemental Duties

17-4-1. TELEPHONE CONFERENCES	17-4-1
17-4-2. SPECIAL INTEREST FLIGHTS	17-4-1
17-4-3. ANALYSIS	17-4-1
17-4-4. OPERATIONS MANAGER (OM) SUPPORT	17-4-1
17-4-5. DIVERSION RECOVERY	17-4-2

Section 5. Coordination

17-5-1. COORDINATION	17-5-1
17-5-2. COMMUNICATION	17-5-1
17-5-3. DOCUMENTATION	17-5-1
17-5-4. RESPONSIBILITIES	17-5-1
17-5-5. EN ROUTE INTRA-FACILITY COORDINATION	17-5-1
17-5-6. TERMINAL INTER-FACILITY COORDINATION	17-5-2
17-5-7. NATIONAL TRAFFIC MANAGEMENT LOG (NTML)	17-5-2
17-5-8. NTML FACILITY CONFIGURATION REQUIREMENTS	17-5-2
17-5-9. NTML DATA ENTRIES	17-5-2
17-5-10. NTML PROCEDURES	17-5-3
17-5-11. PROCESSING RESTRICTIONS FOR FACILITIES WITH NTML	17-5-3
17-5-12. DELAY REPORTING	17-5-3

Section 6. Traffic Management Initiatives

17-6-1. GENERAL	17-6-1
17-6-2. BACKGROUND	17-6-1
17-6-3. POLICY	17-6-1
17-6-4. TYPES OF TMIs	17-6-1
17-6-5. EXCEPTION	17-6-2
17-6-6. TMI DATA	17-6-2
17-6-7. TMI APPROVAL AUTHORITY	17-6-2

Paragraph	Page
17-6-8. PROCESSING TMI	17-6-2
17-6-9. FIELD FACILITY RESPONSIBILITIES FOR TMI	17-6-2
17-6-10. ATCSCC RESPONSIBILITIES FOR TMI	17-6-3
17-6-11. TMI WITHIN A CENTER'S AREA OF JURISDICTION	17-6-3
17-6-12. MIT TMI OF 10 OR LESS	17-6-3
17-6-13. ENROUTING SEQUENCING PROGRAM (ESP) IMPLEMENTATION	17-6-3

Section 7. Monitor Alert Parameter

17-7-1. PURPOSE	17-7-1
17-7-2. IMPLEMENTATION PROCEDURES	17-7-1
17-7-3. RESPONSIBILITIES	17-7-1
17-7-4. ANALYSIS REQUIREMENTS	17-7-2
17-7-5. RESOLVING RECURRING SECTOR LOADING ISSUES	17-7-2

Section 8. Ground Delay Programs

17-8-1. POLICY	17-8-1
17-8-2. GENERAL	17-8-1
17-8-3. BACKGROUND	17-8-1
17-8-4. DEFINITIONS	17-8-1
17-8-5. VARIABLES IN GDPs	17-8-1
17-8-6. ATCSCC PROCEDURES	17-8-1
17-8-7. ARTCC PROCEDURES	17-8-2
17-8-8. TERMINAL PROCEDURES	17-8-3
17-8-9. AMENDING EDCTs	17-8-3
17-8-10. CANCELLATION PROCEDURES	17-8-3
17-8-11. DOCUMENTATION	17-8-3
17-8-12. USER OPTIONS	17-8-4
17-8-13. VFR FLIGHTS	17-8-4

Section 9. Ground Stop(s)

17-9-1. POLICY	17-9-1
17-9-2. GENERAL	17-9-1
17-9-3. LOCAL GROUND STOP(S)	17-9-1
17-9-4. NATIONAL GROUND STOP(S)	17-9-1
17-9-5. CANCELLATION PROCEDURES	17-9-2
17-9-6. DOCUMENTATION	17-9-2

Section 10. Special Traffic Management Programs

17-10-1. SPECIAL EVENT PROGRAMS	17-10-1
17-10-2. COORDINATION	17-10-1
17-10-3. IMPLEMENTATION	17-10-1
17-10-4. AIRPORT RESERVATION OFFICE	17-10-1

Section 11. Severe Weather Management

Paragraph	Page
17-11-1. GENERAL	17-11-1

INDEX	I-1

Part 1. BASIC

Chapter 1. General

Section 1. Introduction

1-1-1. PURPOSE

This order provides instructions, standards, and guidance for operating and managing air traffic facilities.

a. Part 1 contains information generally applicable to two or more options.

b. Part 2, Part 3, and Part 4 prescribe instructions unique to each discipline:

1. Air Route Traffic Control Centers (ARTCC).
2. Terminal Traffic Control Facilities.

3. Automated Flight Service Stations/Flight Service Stations.

c. Part 5 prescribes the instructions for traffic management applicable to the David J. Hurley Air Traffic Control System Command Center (ATCSCC), center, and terminal facilities.

d. Part 6 is regulatory information concerning waivers, authorizations, exemptions, and flight restrictions.

1-1-2. DISTRIBUTION

This order is distributed to selected offices in Washington headquarters, Service Area offices, regional offices, the William J. Hughes Technical Center, the Mike Monroney Aeronautical Center, all air traffic field facilities, international aviation field offices, and interested aviation public.

1-1-3. CANCELLATION

FAA Order 7210.3T, Facility Operation and Administration, dated February 19, 2004, and all changes to it are canceled.

1-1-4. EXPLANATION OF CHANGES

The significant changes to this order are identified in the Explanation of Changes page(s). It is advisable to retain this/these page(s) until the next basic order is published.

1-1-5. EFFECTIVE DATE

This order is effective **February 16, 2006**.

1-1-6. CONSTRAINTS GOVERNING SUPPLEMENTS AND PROCEDURAL DEVIATIONS

a. Exceptional or unusual requirements may dictate procedural deviations or supplementary procedures to this order. The written approval of the Vice President of System Operations Services shall be obtained prior to issuing a supplemental or procedural deviation to this order which decreases the level, quality, or degree of service required by this order.

b. Prior approval by the following appropriate military headquarters is required for subsequent interface with the Federal Aviation Administration (FAA) if military operations or facilities are involved. (See TBL 1-1-1.)

TBL 1-1-1

Military Headquarters

<i>Branch</i>	<i>Address</i>
U.S. Air Force	HQ AFFSA/XVO 1535 Command Drive Suite D302 Andrews AFB MD 20331-7002
U.S. Army	Director USAASA (MOAS-AS) 9325 Gunston Road Suite N-319 Ft. Belvoir, VA 22060-5582
U.S. Navy	CNO (OP-554)

1-1-7. SAFETY MANAGEMENT SYSTEM (SMS)

Every employee is responsible to ensure the safety of equipment and procedures used in the provision of services within the National Airspace System (NAS). Risk assessment techniques and mitigations, as appropriate, are intended for implementation of any planned safety significant changes within the NAS, as directed by FAA Order 1100.161, Air Traffic Safety Oversight. Direction regarding the Safety

Management System (SMS) and its application can be found in the FAA Safety Management System Manual and FAA Order 1100.161. The Safety Management System will be implemented through a period of transitional activities. (Additional information pertaining to these requirements and processes can be obtained by contacting the service area offices.)

1-1-8. REFERENCES TO FAA NON-AIR TRAFFIC ORGANIZATION

When references are made to regional office organizations that are not part of the ATO (i.e., Communications Center, Flight Standards, Airport offices, etc.), the facility should contact the FAA region where the facility is physically located – not the region where the facility's Service Area office is located.

Section 2. Order Use

1-2-1. POLICY

This order prescribes information necessary to effectively operate and administer air traffic service facilities. When a conflict arises between its provisions and those in other agency issuances, supervisors shall request clarification from their respective En Route and Oceanic Operations Area, Terminal Operations Area or Flight Services Operations Area Office. In the event a conflict arises between instructions in this order and the terms of a labor union contract, supervisors shall abide by the contract.

1-2-2. ANNOTATIONS

Revised, new, or reprinted pages will be marked as follows:

- a. The change number and the effective date are printed on each revised or additional page.
- b. A reprinted page not requiring a change is reprinted in its original form.
- c. Bold vertical lines in the margin of the text mark the location of substantive procedural, operational, or policy changes; e.g., when material affecting the performance of duty is added, revised, or deleted.
- d. Statements of fact of a prefatory or explanatory nature relating to directive material are set forth as notes.

1-2-3. PUBLICATION AND DELIVERY DATES

- a. This order and its changes are scheduled to be published to coincide with AIRAC dates. The effective dates will be:

Publication Schedule		
Basic or Change	Cutoff Date for Submission	Effective Date of Publication
7210.3U Basic	8/4/05	2/16/06
Change 1	2/16/06	8/3/06
Change 2	8/3/06	3/15/07
Change 3	3/15/07	8/30/07
7210.3V Basic	8/30/07	2/14/08

- b. If a facility has not received the order/changes at least 30 days before the above effective dates, the facility shall notify its service area office distribution officer.

1-2-4. WORD MEANINGS

As used in this order:

- a. *Shall*, or an action verb in the imperative sense, means a procedure is mandatory.
- b. *Should* means a procedure is recommended.
- c. *May* and *need not* mean a procedure is optional.
- d. *Will* indicates futurity, not a requirement for the application of a procedure.
- e. Singular words include the plural, and plural words include the singular.

1-2-5. ABBREVIATIONS

As used in this order, the following abbreviations have the meanings indicated: (See TBL 1-2-1.)

TBL 1-2-1
ABBREVIATIONS

Abbreviation	Meaning
AAR	Airport arrival rate
ACD	ARTS Color Displays
ACDO	Air Carrier District Office
ACE-IDS	ASOS Controller Equipment–Information Display System
ACID	Aircraft identification
ADC	Aerospace Defense Command
ADIZ	Air defense identification zone
ADL	Aggregate demand list
ADR	Airport departure rate
ADS-A	Automatic Dependant Surveillance–Addressable
ADS-B	Automatic Dependent Surveillance–Broadcast
A/FD	Airport/Facility Directory
AFRES	Air Force reserve
AFSS	Automated flight service station
AFTN	Aeronautical fixed telecommunications network
AIDC	ATS Interfacility Data Communications
AIM	Aeronautical Information Manual
AIRAC	Aeronautical Information Regulation and Control

Abbreviation	Meaning
AIT	Automated information transfer
ALD	Available landing distance
ALS	Approach light system
ALTRV	Altitude reservation
AMASS	Airport Movement Area Safety System
APREQ	Approval request
ARFF	Airport rescue and fire fighting
ARINC	Aeronautical Radio, Inc.
ARO	Airport Reservations Office
ARP	Airport reference point
ARSR	Air route surveillance radar
ARTCC	Air route traffic control center
ARTS	Automated radar terminal system
ASDE	Airport surface detection equipment
ASDE-X	Airport Surface Detection Equipment System – Model X
ASI	Altimeter setting indicator
ASF	Arrival stream filters
ASOS	Automated Surface Observing System
ASP	Arrival sequencing program
ASPM	Aviation System Performance Metrics
ASR	Airport surveillance radar
AT	Air Traffic
ATA	Air traffic assistant
ATC	Air traffic control
ATCAA	Air traffic control assigned airspace
ATCRBS	Air traffic control radar beacon system
ATCS	Air traffic control specialist
ATCSCC	David J. Hurley Air Traffic Control System Command Center
ATCT	Airport traffic control tower
ATIS	Automatic terminal information service
ATM	Air Traffic Manager
ATO	Air Traffic Organization
ATOP	Advanced Technologies and Oceanic Procedures
ATREP	Air Traffic representative
ATTS	Automated Terminal Tracking Systems
AWC	Aviation Weather Center
AWIS	Automated weather information service
AWOS	Automated Weather Observing System
CA	Conflict alert
CAP	Civil Air Patrol
CARF	Central Altitude Reservation Function
CARTS	Common ARTS
CAS	Civil Aviation Security
CCFP	Collaborative Convective Forecast Product
CD	Clearance delivery
CDM	Collaborative decision making

Abbreviation	Meaning
CDR	Coded Departure Route(s)
CDR	Continuous Data Recording
CERAP	Combined center/RAPCON
CFR	Code of Federal Regulations
CIC	Controller-in-charge
CIRNOT	Circuit Notice
COB	Close of business
CONUS	Continental/Contiguous/Conterminous United States
COO	Chief Operating Officer
COTC	Computer operator terminal console
CPDLC	Controller Pilot Data Link Communications
CTRD	Certified Tower Radar Display
CTA	Controlled times of arrival
CWA	Center weather advisory
CWSU	ARTCC Weather Service Unit
DARC	Direct access radar channel
DAS	Delay assignment
DASI	Digital altimeter setting indicator
DCCWU	ATCSCC Weather Unit
DEDS	Data entry display system
DF	Direction finder
DME	Distance measuring equipment
DOD	Department of Defense
DOE	Department of Energy
DOT	Department of Transportation
DP	Display processor
DRT	Diversion Recovery Tool
DSP	Departure sequencing program
DTM	Digital terrain maps
DVA	Diverse vector area
DVRSN	Diversion
E-MSAW	En Route Minimum Safe Altitude Warning
EASL	Existing automation service level
EDCT	Expect departure clearance time
EFAS	En route flight advisory service
ELT	Emergency locator transmitter
EOVM	Emergency obstruction video map
EPIC	El Paso Intelligence Center
ERIDS	En Route Information Display System
ESL	Emergency service level
ESP	En Route sequencing program
ETMS	Enhanced Traffic Management System
FAA	Federal Aviation Administration
FDEP	Flight data entry and printout
FDIO	Flight data input/output
FIAO	Flight inspection area office
FOIA	Freedom of information act

Abbreviation	Meaning
FOUO	For Official Use Only
FP	Flight plan
FPL	Full performance level
FSA	Flight schedule analyzer
FSDO	Flight Standards district office
FSL	Full service level
FSM	Flight Schedule Monitor
FSS	Flight service station
FW	Flight watch
FWA	Flight watch area
FWCS	Flight watch control station
GA	General aviation
GC	Ground control
GDP	Ground delay program(s)
GENOT	General notice
GI	General information message
GS	Ground stop(s)
HIRL	High intensity runway lights
HRPM	Human Resource Policy Manual
ICAO	International Civil Aviation Organization
ICSS	Integrated communication center
IDS	Information Display System
IFR	Instrument flight rules
IFSS	International flight service station
ILS	Instrument landing system
INS	Immigration and Naturalization Service
IR	IFR MTR
ITWS	Integrated Terminal Weather System
LAA	Local airport advisory
LAAS	Low altitude alert system
LADP	Local Airport Deicing Plan
LAHSO	Land and hold short operations
LAWRS	Limited aviation weather reporting station
LC	Local control
LCP	Legislative council for photogrammetry
LLWAS	Low level wind shear alert system
LLWAS NE	Low Level Wind Shear Alert System Network Expansion
LLWAS-RS	Low Level Wind Shear Alert System Relocation/Sustainment
LLWS	Low Level Wind Shear
LOA	Letter of agreement
LOGT	Log/tally print time
MA	Monitor alert
MALS/RAIL	Medium approach light system and runway alignment indicator lights
MCI	Mode C intruder
MDM	Main display monitor

Abbreviation	Meaning
MEA	Minimum en route IFR altitude
MEARTS	Micro En Route Automated Radar Tracking System
METAR	Aviation Routine Weather Report
MIA	Minimum IFR altitude
MIAWS	Medium Intensity Airport Weather System
MIT	Miles-in-trail
MLS	Microwave landing system
MOA	Military operations area
MOCA	Minimum obstruction clearance altitude
MOU	Memorandum of understanding
MSL	Mean sea level
MTI	Moving target indicator
MTR	Military training route
MVA	Minimum vectoring altitude
NAA	National aeronautical association
NADIN	National airspace data interchange network
NAR	National Automation Request
NAS	National Airspace System
NASA	National Aeronautics and Space Administration
NAVAID	Navigational aid
NCIC	National crime information center
NFDC	National Flight Data Center
NFDD	National Flight Data Digest
NHOP	National hurricane operations plan
NIDS	National Institute of Discovery Sciences
NM	Nautical mile
NNCC	National Network Control Center
NOAA	National Oceanic and Atmospheric Administration
NOM	National Operations Manager
NORAD	North American Aerospace Defense Command
NOS	National Ocean Service
NOTAM	Notice to Airmen
NRP	North American Route Program
NTML	National Traffic Management Log
NTMO	National Traffic Management Officer
NTSB	National Transportation Safety Board
NWS	National Weather Service
NWSOP	National winter storm operations plan
OM	Operations Manager
OPR	Office of primary responsibility
OS	Operations Supervisor
OSIC	Operations Supervisor-in-Charge
P-ACP	Prearranged coordination procedures
PAR	Precision approach radar
PB	Pilot briefing

Abbreviation	Meaning
PCS	Power Conditioning System
PDC	Pre-Departure Clearance
PIC	Pilot-in-command
PIREPS	Pilot reports
POC	Point of Contact
PVD	Planned view display
QAR	Quality assurance review
QATS	Quality assurance and training specialist
RA	Radar Associate
RAA	Remote Airport Advisory
RADLO	Regional air defense liaison officer
RAIL	Runway alignment indicator lights
RAIS	Remote Airport Information Service
RAPCON	Radar approach control facility (USAF)
RATCF	Radar Air Traffic Control Facility associated with the United States Navy
RCAG	Remote communications air ground facility
RCC	Rescue coordination center
ROC	Regional operations center
ROT	Runway occupancy time
RSU	Runway supervisory unit
RVR	Runway visual range
RVV	Runway visibility value
SAA	Special activity airspace
SAMS	Special Use Airspace Management System
SATCOM	Satellite Communication(s)
SAWS	Stand Alone Weather System
SE	Systems engineer
SIA	Status information area
SIGMET	Significant meteorological information
SMGCS	Surface movement guidance and control system
SMO	System Management Office
SOP	Standard operating procedure
SPECI	Nonroutine (Special) Aviation Weather Report
STARS	Standard terminal automation replacement system
STMC	Supervisor Traffic Management Coordinator
STMCIC	Supervisory Traffic Management Coordinator-in-Charge
STMP	Special traffic management program
SUA	Special use airspace
SVFR	Special visual flight rules
SWAP	Severe weather avoidance plan
T&A	Time and attendance
TAC	Terminal area chart

Abbreviation	Meaning
TACAN	Tactical air navigation aid
TCAS	Traffic alert collision and avoidance system
TCDD	Tower cab digital display
TDLS	Terminal Data Link System
TDW	Terminal display workstation
TDWR	Terminal Doppler weather radar
TEC	Tower en route control
TELCON	Telephone Conference
TEL-TWEB	Telephone-transcribed weather broadcast
TERPS	Terminal instrument procedures
TFR	Temporary flight restriction
TIBS	Terminal information broadcast system
TM	Traffic management
TMC	Traffic management coordinator
TMI	Traffic management initiatives
TMU	Traffic management unit
TRACAB	Terminal radar approach control in tower cab
TRACON	Terminal radar approach control
TRSA	Terminal Radar Service Area
TSD	Traffic situation display
TWEB	Transcribed weather broadcast
UFO	Unidentified flying object
UHF	Ultrahigh frequency
URET	User Request Evaluation Tool
USAF	United States Air Force
USN	United States Navy
UTC	Coordinated universal time
VAR	Volcanic activity report
VASI	Visual approach slope indicator
VCE	VSCS/Console Equipment
VEARS	VSCS Emergency Access Radio System
VFR	Visual flight rules
VHF	Very high frequency
VMC	Visual meteorological conditions
VOR	Omnidirectional VHF navigational aid
VORTAC	Collocated VOR and TACAN navigational aid
VR	VFR MTR
VSCS	Voice Switching and Control System
VTABS	Voice switching and control system training and backup system
WARP	Weather and Radar Processing
WC	Weather coordinator
WMSCR	Weather Message Switching Center Replacement
WSFO	Weather Service Forecast Office
WSO	Weather Service Office
WSP	Weather System Processor

Chapter 2. Administration of Facilities

Section 1. General

2-1-1. INTERREGIONAL REQUIREMENTS

a. An air route traffic control center (ARTCC) is responsible to an En Route and Oceanic Operations Area Office. Terminal and Flight Services facilities located within an ARTCC operational area shall comply with the En Route and Oceanic Operations Area Office directives governing interfacility operational requirements. Although these facilities are not under its administrative jurisdiction, the En Route and Oceanic Operations Area Office responsible for the administration of the ARTCC shall provide these directives to the appropriate facilities in ARTCC operational areas. These facilities shall coordinate directly on mutual procedural or operational requirements.

b. When resolution of procedural or operational problems is not possible or when the En Route and Oceanic Operations Area Office directives are incompatible with those published by the administratively responsible area office, the facility shall notify its own Terminal Operations Area or Flight Services Operations Area Office for resolution.

2-1-2. FACILITY STANDARD OPERATING PROCEDURES DIRECTIVE

The air traffic manager shall issue a Standard Operating Procedures Directive. The directive shall specify, as a minimum, the required procedures for maintaining a safe and efficient operation and the jurisdictional boundaries for each operational position/sector.

REFERENCE-

Para 4-1-1, Correspondence Standards.

2-1-3. POSITION/SECTOR BINDERS

Air traffic managers shall develop and maintain binders for each position/sector within the facility. In addition to the above, this shall include a supervisor position binder. The supervisor position binder should address procedures which will enhance controller performance in areas such as scanning, coordination, use of proper phraseology, and proficiency/remedial training. The binders shall contain as

a minimum, but not be limited to, the information listed in the En Route, Terminal, Automated Flight Service/Flight Service Option Specific Guidelines. The binder shall contain information that is necessary for the safe and efficient operation of each position/sector, including examples and formats where appropriate. A copy of each binder shall be in a location easily accessible by each position/sector. Data may be stored and displayed via electronic means on Information Display Systems (IDS) where available. Air traffic managers in terminal facilities may determine the need for individual binders for associated/coordinator positions.

2-1-4. REFERENCE FILES

Air traffic managers shall maintain current sets of orders, facility directives, Letters of Agreement (LOA), aeronautical charts, pertinent International Civil Aviation Organization (ICAO) documents and related publications so that they may be readily available for operational use and study by facility personnel. Also, the air traffic manager shall maintain reference materials at appropriate work areas. These materials shall consist of pertinent directives, agreements, emergency and overdue aircraft procedures, and a location listing of airports within the area of responsibility including runway alignment, lighting, surface, and length as a minimum. Current telephone numbers of user companies/organizations identifying the source who has the capability of contacting no radio (NORDO) aircraft may also be listed. Air traffic managers shall determine the applicability of other materials to be included.

NOTE-

The air traffic manager will ensure that the user list is kept current.

2-1-5. RELEASE OF INFORMATION

a. It is FAA policy to make factual information available to persons, properly and directly concerned, except information held confidential for good cause.

b. Except as provided in this and other FAA orders, or when specifically authorized to do so by the Secretary of Transportation or the Administrator, no

agency employee shall release information from any National Airspace System (NAS) database regarding the position, altitude, heading, flight plan, origination or destination of a single aircraft ("Flight Track Data") upon the oral request of an individual outside of the FAA.

1. No request for Flight Track Data shall be granted unless it is first determined that the request is being made in the interest of aviation safety or efficiency, or for an official purpose by a United States Government agency or law enforcement organization with respect to an ongoing investigation.

2. No Flight Track Data on aircraft conducting military, law enforcement, presidential, or other sensitive flights shall be released except as operationally required to assist such flights.

3. Each request shall be handled in the following manner:

(a) The agency employee shall positively identify the requestor by name, organization or affiliation, and point-of-contact (including a telephone call-back number).

(b) The agency employee shall inquire about the purpose of the request so as to determine whether the request is being made in the interest of aviation safety or efficiency, or for an official purpose.

(c) Except for requests received from any United States Government agency or law enforcement organization, the agency employee shall enter into the facility Daily Record of Facility Operation, FAA Form 7230-4, a record of the request, including:

(1) The information obtained under subparas b3(a) and b3(b) above; and

(2) A summary of any information provided to the requestor, including the flight number or registration number of the aircraft in question.

(d) For requests received from any United States Government agency or law enforcement organization, the only information entered into the local facility log shall be that called for by subpara b3(a) above, with a brief notation as to whether the request was granted or not.

4. If the request is from an individual and it is determined that the request, if granted, would not further aviation safety or efficiency, the employee shall deny the request and may inform the requester that information may be sought under the Freedom of Information Act (FOIA). A FOIA request should be filed in writing with the FOIA Officer, ARC-40, 800 Independence Avenue, S.W., Washington, DC 20591, or by email to 7-AWA-ARC-FOIA@faa.gov.

5. If it cannot be ascertained whether the purpose of the request, if from an individual, is in furtherance of aviation safety or efficiency, or if from a United States Government agency or law enforcement organization, is for an official purpose, the agency employee shall contact facility management for guidance. If local management is unable to determine whether or not a request should be granted, the official should contact the Quality Assurance Investigator on-call in Washington headquarters. En Route and Oceanic Operations, Terminal Operations, and Flight Services Operations Area Offices may elect to process after-hour requests through the appropriate Service Area office Quality Assurance on-call specialist.

2-1-6. CHECKING ACCURACY OF PUBLISHED DATA

Air traffic managers and air traffic representatives (ATREPs) shall, upon receipt of official publications, review data pertaining to their facilities and areas of concern to ensure accuracy and completeness. They shall also initiate corrections as required.

2-1-7. AIR TRAFFIC SERVICE (ATS) CONTINUITY

When a control tower must be shut down for any reason, if at all possible, make a new ATIS broadcast indicating that the tower is closed.

a. Facilities shall develop and maintain current operational plans and procedures to provide continuity of required services during emergency conditions; e.g., power failures, fire, flood, storm damage and similar acts-of-God, civil disturbances, personnel absenteeism due to epidemics, transportation stoppages, etc. The plans shall include provisions for the continuity of services during breakdown or maintenance shutdown of critical system components. Emergency plans should consider or provide for:

1. The safest and fastest transition of air traffic service responsibility to an operating facility.

2. Alternate means of providing radar service; e.g., terminal controllers using an ARTCC radar system in the center during a terminal radar outage.

3. LOA between contiguous centers, terminals, and flight service stations providing a specific area to be controlled and duties to be performed should a facility be rendered inoperative or partially handicapped due to a critical system component breakdown or shutdown.

4. LOA between facilities concerning emergency plans and military services.

5. Alternate means for notifying the appropriate facilities when the plan is to be implemented.

6. A priority list for the restoration of the telephone circuits at all ARTCCs and certain large terminal facilities designated by the Service Area offices. Provide the telephone office serving these facilities with a duplicate of this priority restoration list. Advise the telephone company that the list is applicable only when widespread outages of FAA circuits occur and when restoration would not be in competition with other users. Also, advise the telephone company that priority of restoration is subject to change by the supervisory traffic management coordinator-in-charge (STMCI) due to changing or unusual circumstances.

b. Contingency plans shall be:

1. Posted in the facility operations quarters.
2. Reviewed annually and updated as required.
3. Included in facility training programs.

c. A copy of current ARTCCs operational plans and revisions shall be forwarded to System Operations Security, Military Operations Security and the ATCSCC.

2-1-8. HANDLING BOMB THREAT INCIDENTS

Air Traffic facilities shall establish procedures to carry out their functions in accordance with FAAO 1600.6, Physical Security Management Program. The following provisions shall be incorporated into facility plans:

a. All air traffic facilities shall notify the respective regional operations center and other appropriate Service Area office element when a bomb threat occurs.

b. All personnel in the facility will be advised when a bomb threat has been received and of pertinent information regarding the bomb threat.

c. The decision to evacuate a facility will be made by the air traffic manager or his/her designee.

d. If the decision is made to evacuate and air safety is not a factor, immediately release nonessential personnel, instruct aircraft to contact the appropriate facility designated in the facility contingency plan, advise adjacent facilities as appropriate (ARTCCs should advise the ATCSCC of pending evacuation), broadcast that the facility is being evacuated, and evacuate the building.

e. If the decision is made to evacuate and air safety is a factor, immediately release nonessential personnel, resolve traffic conflicts (aircraft on radar vectors should be cleared to resume normal navigation), instruct aircraft to contact the appropriate facility designated in the facility contingency plan, advise adjacent facilities (ARTCCs should advise the ATCSCC), broadcast that the facility is being evacuated, and evacuate the building as rapidly as personnel can be released. The appropriate actions should be accomplished quickly to minimize personnel exposure. Further, the air traffic manager or his/her designee will determine which personnel will remain on duty until the traffic situation is resolved. Personnel designated to perform this function normally will be selected from the supervisory ranks or persons volunteering temporary services. To be effective this action should be planned in advance. There are various ways in which this can be accomplished. One simple method is that at the beginning of each watch, supervisors will plan their watch coverage should the need to evacuate arise.

f. The evacuation plans will also include recall procedures.

g. Consideration should be given to establishing an alternate site to provide limited flight service or airport air traffic and approach control services.

h. During bomb threat situations, facility air traffic managers or their designees should exercise discretion regarding admittance of visitors to their facilities.

i. Facilities will take action to increase the security whenever such action is feasible. Measures to protect administrative and operational areas and equipment rooms should be taken. FAAO 1600.6, Physical Security Management Program, provides additional guidance for the protection of agency facilities, installations, equipment, etc. Examples are:

1. Increase security forces and measures.

2. Ensure that facilities are kept tidy so that out-of-place articles can be easily detected. This concept should be emphasized to all personnel including contractors and their employees.

3. Room or area monitors can be assigned to “look over” the area at frequent intervals for suspicious objects. In this regard, air traffic personnel assigned temporary administrative duties would be given building warden responsibilities.

REFERENCE—

Para 2–8–2, Medical Clearance Requirements.

4. Outside areas should be kept as neat as possible. Landscaping should, if possible, be done in a manner that will not enhance clandestine activities.

j. Although it is envisioned that the foregoing will be accomplished within existing resources, planning (including budgeting) should be initiated to establish a secure environment.

k. Release information on bomb threat incidents in accordance with the procedures established in current directives. Where no applicable procedures have been established, all information shall be treated as “For Official Use Only.”

2–1–9. HANDLING MANPADS INCIDENTS

a. Air traffic managers shall coordinate with federal, local, and other law enforcement agencies, as needed, to develop notification and contingency plans during a threat or attack from Man-Portable Air Defense Systems (MANPADS).

b. Air traffic managers shall establish procedures to ensure the dissemination of level 2 or 3 MANPADS alerts via ATIS and/or controller-to-pilot transmissions. Report MANPADS threat/attack/post-event activity until notified otherwise by FAA national headquarters.

REFERENCE—

FAAO 7110.65, Para 2–9–3, Content.

FAAO 7110.65, Para 10–2–13, MANPADS Alert.

2–1–10. AIRPORT EMERGENCY PLANS

a. Operational instructions covering airport emergency service at airports served by an ATCT and/or AFSS/FSS shall be issued by the air traffic manager (the ATCT manager at airports with both facilities) in the form of a LOA. Procedures and/or LOAs for alerting airport emergency equipment at other public-use airports served by the ATCT and/or AFSS/FSS shall also be developed, if deemed appropriate.

NOTE—

Facility managers or their designee should meet with Airport Rescue and Fire Fighting (ARFF) personnel on an annual basis to review the local airport emergency service LOA and the effectiveness of local procedures.

REFERENCE—

FAA Advisory Circular AC 150/5210–7C, Aircraft Rescue and Fire Fighting Communications.

b. Responsibility for the prompt dispatch of equipment upon alert notice by the FAA ATCT or the AFSSs /FSSs is the joint responsibility of the airport management and the emergency equipment operator. The amount of equipment and number of personnel responding to the emergency will be determined by the equipment operator and should be kept to the minimum required. After receiving the alert and the route to be taken, the personnel operating the equipment are responsible for handling the emergency.

c. Procedures for alerting airport emergency equipment, including additional equipment which may be located off the airport, shall consist only of:

1. Stating the nature and the location of the emergency by means of a signalling system; e.g., a siren and/or telephone. When required, the tower must indicate the route to be taken by the emergency equipment. AFSSs/FSSs shall not specify such routes.

2. Specifying, when required, the category of alert applicable to the emergency.

3. Initiating the alert when, in the opinion of any of the following, a potential or actual emergency exists:

(a) The FAA specialists on duty.

(b) The pilot of the aircraft concerned.

(c) The operator of the aircraft or his/her representative.

(d) A representative of the airport management.

d. Alert Phases: Operations personnel may categorize local alerts if the category or phase designations have been coordinated locally and agreed to. It may be desirable for emergency equipment to be alerted on a standby or ready basis by use of a two-phase or three-phase alert system, but keep these actions as inconspicuous as possible without impairing efficiency. A three-phase alert may be set up as follows:

1. Alert I: Indicating an aircraft approaching the airport is in minor difficulty; e.g., feathered propeller, oil leak, etc. The emergency equipment and crews would standby at the equipment house for further instructions.

2. Alert II: Indicating an aircraft approaching the airport is in major difficulty; e.g., engine on fire, faulty landing gear, no hydraulic pressure, etc. This could mean emergency equipment would proceed to a predetermined location (end of runway, etc.) to await development of the potential emergency.

3. Alert III: Indicating an aircraft involved in an accident on or near the airport and emergency equipment should proceed immediately to the scene.

e. After alerting the emergency equipment, notify only the local aircraft operator or his/her representative and the airport management.

NOTE—

Airport management is responsible for notifying other agencies or personnel.

REFERENCE—

Advisory Circular AC 150/5210-7C, Airport Rescue and Fire Fighting Communications.

2-1-11. EXPLOSIVES DETECTION K-9 TEAMS

At many of our major airports a program has been established by the FAA and the Law Enforcement Assistance Administration to make available an explosives detection K-9 team. ATC facilities shall take the following actions should they receive an aircraft request for the location of the nearest explosives detection K-9 team:

a. The facility will relay the pilot's request to the FAA Washington Operations Center, AEO-100, telephone: commercial (202) 267-3333; ETN 521-0111; or DSN 851-3750 providing the aircraft's identification and position.

b. AEO-100 will provide the facility with the nearest location. The facility will have AEO-100 standby while the information is relayed to the pilot.

c. After it has been determined that the aircraft wishes to divert to the airport location provided, the air traffic facility will ascertain estimated arrival time and advise AEO-100. AEO-100 will then notify the appropriate airport authority at the diversion airport. In the event the K-9 team is not available at this airport, AEO-100 will relay this information to the air traffic facility providing them with the secondary location. ATC will then relay this to the pilot concerned for appropriate action.

2-1-12. INTERSECTION TAKEOFFS

Air traffic managers at ATCTs and at AFSS/FSS facilities that provide LAA will prepare an airport diagram showing intersection takeoff information as follows:

a. Indicate the actual remaining runway length from each intersection; round all actual measurements "down" to the nearest 50-feet. Obtain measurements from an authentic source and record them on the diagram.

b. If the airport authority requests that certain intersection takeoffs be denied, so indicate on the diagram.

EXAMPLE—

/NO TKOFF/

c. Indicate any access points to a runway from which an intersection takeoff may be made.

2-1-13. AIRCRAFT IDENTIFICATION PROBLEMS

To alleviate any potential misunderstandings of aircraft identifications caused by duplicate, phonetically similar-sounding, or hard to distinguish registration numbers or call signs operating in the same area, facility managers shall ensure that operations supervisors report those occurrences to a facility officer and that the following actions be taken.

a. Scheduled air carrier aircraft: When two or more air carriers with duplicate flight numbers or phonetically similar-sounding call signs operate within 30 minutes of each other at the same airport or within the same sector and cause an identification problem on a recurring basis, request that the flight identification numbers be changed by:

NOTE—

Recurrent situations would be aircraft proceeding primarily the same direction through the same sectors three or more times a week, at least two weeks out of four consecutive weeks.

1. In the case of carriers listed in Appendix 2, Air Carrier Points of Contact for Aircraft Identification Problems, contact the appropriate airline office or officer.

2. If other than one of the carriers listed in Appendix 2, contact the operator or the chief pilot of the carrier concerned.

b. *Military aircraft:* Contact base operations of the departure airport and request that action be taken to have the flight identifications changed when duplicate, phonetically similar, or hard to distinguish call signs are causing a flight identification problem. If additional assistance is required, immediately advise the appropriate FAA liaison officer (HQ ACC/DOF, HQ AMC/DOF, NORAD/ADC, HQ AETC/XOS, HQ AFMC/DOF, HQ AFSPC/DOGH) or the military representative assigned to the Service Area office.

c. Civil aircraft other than air carrier: Advise System Operations Airspace and Aeronautical Information Management, when two or more designated call signs are found to be phonetically similar or difficult to pronounce and are causing a flight identification problem.

d. The designated facility officer shall maintain a record of actions taken and provide feedback to operations supervisors. That record should include:

1. Date/time of occurrence.
2. Location (e.g., RUS VORTAC, sector 90, Shannon Airport).
3. Call signs involved in the occurrence.
4. Date occurrence is reported by facility.
5. Office/person that facility contacted.

2-1-14. APPROACH CONTROL CEILING

The airspace ceiling of areas within which approach control service is provided should not exceed 10,000 feet AGL. Exceptions require a staff study and specific approval of the Vice President of System Operations Services.

NOTE—

Although en route ATS is a center function, terminal facilities may be expected to provide some en route service. There are some areas in which a center may not have adequate radar coverage or resources, and in these areas it may be necessary to expand the terminal airspace to provide service. Conversely, at locations with nonradar approach control facilities, centers may have radar coverage, and better service would be provided if some approach control airspace is recalled to the center. At certain locations, the center may be able to absorb all the airspace of a nonradar approach control. The Area Directors of En Route and Oceanic Operations and Terminal Operations shall weigh all factors and provide optimum resolutions.

2-1-15. AUTHORIZATION FOR SEPARATION SERVICES BY TOWERS

a. Nonapproach control towers, not equipped with a tower radar display, may be authorized to provide appropriate separation between consecutive departures based upon time or diverging courses, and between arrivals and departures, provided:

1. A LOA exists with the IFR facility having control jurisdiction which authorizes the separation responsibilities and prescribes the procedures to be used;
2. The agreement has been approved by the Area Director of Terminal Operations; and
3. There is no delegation of airspace to the tower.

b. Towers equipped with certified tower radar displays (CTRD) may be authorized to provide separation services in accordance with para 10-5-3, Functional Use of Certified Tower Radar Displays.

c. An authorization for towers to provide separation services other than those prescribed in subparas a and b shall be supported by a staff study prepared by the authorizing facility or the Terminal Operations Service Area office which addresses at least:

1. The proposed procedures.
2. Operational benefits.
3. Operational impact.
4. Why the IFR facility is unable to provide an equal or superior level of service without the delegation.
5. Improved services to users.
6. Additional radar training.

7. The measures taken to ensure that the local controller's ability to satisfy the FAA's air traffic responsibilities regarding aircraft operating on the runways or within the surface area is not impaired.

8. On-site spares, maintenance support/restoration requirements.

9. Savings and/or additional costs.

10. The number of additional people required.

d. The staff study shall, following the Terminal Operations Service Area review and concurrence, be forwarded to Terminal Services through System Operations Planning, and System Safety and Procedures for approval. System Operations Planning will coordinate with all affected Technical Operations Services Area Service Directors prior to finalizing their comments and recommendations.

2-1-16. BIRD HAZARDS

The air traffic manager of the ATCT shall establish procedures to:

a. Ensure that any reported bird strikes or trend toward an increase in bird activity on or around the airport served by the ATCT are reported to airport management.

b. Ensure that coordination will be accomplished with airport management for the possible issuance of NOTAMs when flocks of birds roost on the runways.

NOTE-

It is the responsibility of airport management to issue any such NOTAMs.

c. Participate in local bird hazard programs when established by airport management.

2-1-17. PROHIBITED/RESTRICTED AREAS

FAAO 7110.65, Air Traffic Control, prescribes separation requirements from special use and ATC assigned airspace. In recognition of the fact that several prohibited/restricted areas are established for security reasons or to contain hazardous activities not directly involving aircraft operations, provision is made for exempting these areas from vertical and radar separation minima if the areas have been identified by facility management. The intent in prescribing separation requirements from special use and ATC assigned airspace is to establish a buffer be-

tween nonparticipating aircraft and aircraft operations inside special use or ATC assigned airspace. As such, the buffer serves as an extra safety margin in consideration of possible operational, procedural, or equipment variances. Application of the separation prescribed in FAAO 7110.65 is not considered necessary whenever the prohibited/restricted airspace does not contain aircraft operations because these areas typically provide an internal buffer based upon the exact type of activity taking place. In making a determination to exempt specific areas, air traffic facility managers shall be guided by the following:

a. Determine the exact nature of prohibited/restricted area utilization through direct liaison with the using agency.

b. Coordinate with the Service Area office during the analysis of area utilization.

c. The following types of activity are examples of restricted area utilization which often will not require application of separation minima:

1. Explosives detonation.

2. Ground firing of various types.

3. Drone and other unmanned aircraft flight operations.

4. Aircraft operations associated with the above in a safety, observer, or command and control capacity only; i.e., the aircraft is not directly engaging in activity for which the airspace was designated and is operating visual flight rules (VFR).

d. If area utilization varies between aircraft operations and other types of activity as described above, do not exempt the area from separation requirements unless a significant operational advantage can be obtained.

e. Restricted airspace with the same number but different letter suffixes are considered to be separate restricted areas. However, treat these types as one restricted area for the purpose of identifying areas for exemption from separation requirements in order to simplify application of separation minima unless a significant operational advantage can be obtained.

2-1-18. LAND-BASED AIR DEFENSE IDENTIFICATION ZONE (ADIZ)

Terminal and en route facility management shall establish procedures for the following:

a. Record, on the flight progress strip, where an aircraft enters the ADIZ, using cardinal direction (e.g., north, northeast, east), the time the aircraft entered, and the aircraft's destination or transit path.

b. If a flight progress strip does not exist for the aircraft, record the call sign, transponder code, entry point (e.g., north, northeast, east), and time of entry into the ADIZ.

c. Notify the Domestic Events Network, through the appropriate lines of communication, of any aircraft approaching, overflying, and within the lateral limit of the ADIZ that appears as a primary radar target or is operating without automatic altitude reporting capability. Relay all known information regarding the aircraft.

2-1-19. AIRPORT TRAFFIC PATTERNS

a. The Area Directors of Terminal Operations are the focal point to review traffic patterns. Traffic patterns at airports without an operating control tower should be established in accordance with Advisory Circular, AC 90-66, Recommended Standard Traffic Patterns and Practices for Aeronautical Operations at Airports without Operating Control Towers.

b. FAAO 7400.2, Procedures for Handling Airspace Matters, will be the source for handling technical matters pertaining to the establishment or the revision of traffic patterns.

2-1-20. OBSTACLE IDENTIFICATION SURFACES, OBSTACLE FREE ZONES, RUNWAY SAFETY AREAS, AND CLEARWAYS

a. Facility air traffic managers shall monitor planned airport construction projects, work with the regional airports office and the airport manager in determining the need to modify any taxi routes normally used, and request notification from the airport manager when adequate signage and marking are completed on the new/different taxi routes, while ensuring that local procedures provide protected airspace from adjacent, nonintersecting runways and taxiways where simultaneous use could create hazards for arriving and departing aircraft. These procedures shall be reviewed whenever new runways or taxiways are programmed or whenever new/differ-

ent aircraft are scheduled to provide service to the airport.

b. Ensure that aircraft on the ground do not penetrate marked Obstacle Identification Surfaces, Obstacle Free Zones, Runway Safety Areas, or Clearways, or other airspace designed to provide protection for departures and arrivals.

c. At locations where potential for conflict exists, take action to rectify the situation by developing guidelines to ensure that this airspace is not penetrated by aircraft utilizing other runways or taxiways. Proposed solutions should be developed in conjunction with local airport authorities and coordinated with appropriate FAA offices to confirm their validity; e.g., Flight Standards and Airports.

2-1-21. FACILITY IDENTIFICATION

a. Service Area Directors are the focal point to review/approve requests for waivers for facility identification changes in FAAO 7110.65, Air Traffic Control, para 2-4-19, Facility Identification, subparas a, b, and c, and FAAO 7110.10, Flight Services, para 14-1-14, Facility Identification, subparas a, b, and c. If the waiver request is approved, the Service Area Director shall ensure that all aeronautical publications are changed to reflect the new identification, and that a Letter to Airmen is published notifying the users of the change.

b. Service Area Directors shall forward a copy of the approval to System Operations Services.

2-1-22. DISPOSITION OF OBSOLETE CHARTS

a. Obsolete charts may only be disposed of by destroying, including recycling, or by giving to flight schools and other training institutions where the charts are to be used only for training in the classroom. Under no circumstances should obsolete charts be given to pilots or the general public, regardless if they are marked obsolete or not.

b. There are hundreds of changes that appear on each new edition of a chart. When pilots are given obsolete charts they are not aware of critical changes that have occurred. Further, the use of such a chart could result in a Code of Federal Regulations (CFR) violation or an accident which would have serious legal implications for the agency.

2-1-23. OUTDOOR LASER DEMONSTRATIONS

a. The Area Directors of Terminal Operations Services are the focal point for reviewing/approving requests for outdoor laser demonstrations.

b. FAAO 7400.2, Procedures for Handling Airspace Matters, is the source for processing outdoor laser demonstration requests.

2-1-24. COMBINE/RECOMBINE AN ATCT/TRACON

Prior to consideration for any ATCT/TRACON to combine or recombine, a detailed staff study will be required from the facility explaining the benefit to the agency and the customer. After the Terminal Operations Service Area office review, the staff study shall be forwarded to the Director of Terminal Planning. A decision to combine or recombine an ATCT/TRACON will require coordination with the ATO Chief Operating Officer.

2-1-25. SUBMISSION OF AIR TRAFFIC CONTROL ASSIGNED AIRSPACE (ATCAA) DATA

Submit data on all ATCAAs used on a continuing/constant basis, and any subsequent changes to the ATCAA database to System Operations Security; and System Operations Airspace and Aeronautical Information Management for the purpose of updating the Special Use Airspace Management System (SAMS) and Aeronautical Information System. Include the following as applicable:

a. An En Route and Oceanic Operations Area Office transmittal memorandum containing a brief overview of the ATCAA, and/or changes to, FAA headquarters, System Operations Security; and System Operations Airspace and Aeronautical Information Management. Summarize the ATCAAs or any

amendments made to ATCAAs including additional changes, etc.

b. A separate attachment that contains a description of the area to include latitude/longitude points, boundaries, altitudes, times, controlling agency, using agency, and any other relative information.

NOTE-

If only part of the description of an existing area is being amended, the attachment should show just the changed information rather than the full legal description.

c. A sectional aeronautical chart depicting the final boundaries of the proposed area, including any subdivisions.

d. Any other information that should be considered by FAA headquarters.

NOTE-

ATCAA descriptive data will normally be submitted 9 weeks prior to the requested/required airspace effective date.

2-1-26. SUBMISSION OF SUA AND PAJA FREQUENCY INFORMATION

The Aeronautical Information Services maintain a national database of Special Use Airspace (SUA) and Parachute Jump Area (PAJA) controlling sector contact information. The database is used to publish frequencies for pilots to obtain status information for SUAs and PAJAs. Facility managers should ensure that the following information is forwarded to Aeronautical Information Services:

a. Contact frequencies for existing SUAs and PAJAs within your area of jurisdiction.

b. Any changes to contact frequencies for existing SUAs and PAJAs within your area of jurisdiction.

c. Contact frequencies for any new SUAs or PAJAs within your area of jurisdiction.

Section 2. Responsibilities

2-2-1. LEGAL LIABILITIES OF PERSONNEL

a. Guidelines for representing Federal employees named in tort claims are promulgated by the Department of Justice (28 CFR Part 50).

b. When warranted, disciplinary action shall be taken without regard to possible adverse effects on the FAA position in subsequent lawsuits, enforcement proceedings, or similar actions.

c. In the case of an accident or incident resulting in a National Transportation Safety Board (NTSB) or a military investigation or hearing, it may be necessary to delay disciplinary action until the determination of the investigation or hearing. This is done only to ensure that all facts are known before final action is taken. The determination in such investigations shall not be used as a basis for initiating disciplinary action.

2-2-2. JOB REQUIREMENTS

Each person shall be familiar with the duties and responsibilities of his/her own position, those of his/her subordinates, if applicable, and to a limited extent, with those of his/her immediate supervisor. Each specialist, when designated, shall supervise and assist in training other specialists as appropriate.

2-2-3. POSITION RESPONSIBILITY

Air traffic managers shall ensure that only one certified air traffic controller is signed on and responsible for each open position, to include consolidated positions, at any given time.

NOTE—

When a developmental and an instructor are both signed on at a position, the instructor is responsible for all activity at that position.

2-2-4. DUTY FAMILIARIZATION AND THE TRANSFER OF POSITION RESPONSIBILITY

a. Air traffic managers shall determine which sectors or positions require “duty familiarization” for each shift and shall provide a facility directive which specifies all sources of operational information which must be read and/or discussed as a part of the

familiarization. Familiarizations should be scheduled within an 8-hour shift to the extent possible.

b. Air traffic managers shall determine which sectors or positions must maintain operational continuity through a transfer of position responsibility and shall:

1. Review each sector or position and provide a tailored checklist which lists the equipment and the operational conditions which are likely to be a factor at that position.

(a) Items which should be included on the checklist, if relevant, are:

(1) STATUS INFORMATION AREA/S.

(2) EQUIPMENT: NAVAIDs, Radar(s), Radios, Automated Weather Observing Systems, etc.

(3) AIRPORT CONDITIONS/STATUS.

(4) AIRPORT ACTIVITIES; e.g., snow removal, vehicles on runway, etc.

(5) ALTIMETER/TRENDS.

(6) WEATHER/TRENDS.

(7) FLOW CONTROL.

(8) SPECIAL ACTIVITIES; e.g., restricted/warning areas in use, airshows, flight checks, new procedures, etc.

(9) SPECIAL INSTRUCTIONS/RESTRICTIONS; e.g., due to adjacent position training, nonstandard staffing/configuration, etc.

(10) STAFFING.

(11) TRAINING IN PROGRESS.

(12) VERBALLY STATE RUNWAY STATUS; unavailable, closed, occupied.

(13) PERTINENT OPERATIONAL NOTAMs, UNLESS PREVIOUSLY COVERED.

NOTE—

Air traffic managers at facilities equipped with automated NOTAM systems shall designate those systems as the primary source of NOTAM information. (This does not include AFSS legacy systems.)

(14) Non-RVSM aircraft operations.

(15) TRAFFIC.

(b) The checklist for a specific position need not include those items which are incorporated into the Status Information Area/s used by that position.

(c) Status Information Area/s (SIA), when available, shall be the first item listed on the position checklist.

(d) When traffic is included on the position checklist, it shall be the last item listed. When relevant to the position, include the following sub-items under the traffic heading so that they will not be inadvertently overlooked:

(1) Special Activity Aircraft; e.g., aircraft operating in a special use area/airspace, helicopters on prescribed routes, etc.

(2) Point out aircraft.

(3) Holding aircraft.

(4) Primary targets with no associated alphanumerics.

(5) Aircraft handed off but still in the airspace.

(6) Aircraft released but not yet airborne.

(7) Nonradar operations.

(8) VFR advisory aircraft.

(9) Aircraft standing by for service.

(10) Coordination agreements with other positions.

(11) Special problems, requests, or instructions.

(e) Air traffic managers may *increase* the number of items and/or the level of detail of the position relief checklists as they deem necessary.

2. To the extent possible, provide a SIA/s from which specialists may obtain the operational information relevant to the position being worked. The SIA/s may consist of a single or any combination of informational sources where status information can be recorded and displayed. These areas may include, but not be limited to, facility/area/position status boards, weather status boards, "hot item" binders, clip board information sheets, and designated areas for written notes.

3. Designate, through a facility directive, the position/s having responsibility for the accuracy of

the various items contained on the SIA/s. The designated position/s should be the focal point for the type of status information for which they are responsible and, except for the accuracy of written notes located at the position, should not be a specialist having primary and direct responsibility for the provision of service or separation to aircraft.

c. To the maximum extent practicable the position relief briefing shall be recorded.

d. Specialists manning the positions identified under subpara 2-2-4b, requiring the maintenance of operational continuity, shall conduct a position relief briefing in accordance with FAAO 7110.65, Air Traffic Control, Appendix D, Standard Operating Practice (SOP) for the Transfer of Position Responsibility, or FAAO 7110.10, Flight Services, para 1-3-3, Duty Familiarization and Transfer of Position Responsibility.

e. Responsibilities:

1. The specialist being relieved shall be responsible for ensuring that any pertinent status information of which he/she is aware is relayed to the relieving specialist and is either:

(a) Accurately displayed on the SIA/s for which he/she has responsibility, or

(b) Relayed to the position having the responsibility for accurately displaying that status information.

2. The relieving specialist shall be responsible for ensuring that any unresolved questions pertaining to the operation of the position are resolved prior to accepting responsibility for the position.

3. The relieving specialist and the specialist being relieved shall share equal responsibility for the completeness and the accuracy of the position relief briefing.

NOTE-

The sharing of this responsibility means that the specialist being relieved is obligated to provide a complete, accurate briefing, and the relieving specialist is obligated to ensure that a briefing takes place and is to his/her total satisfaction.

4. The specialists engaged in a position relief shall conduct the relief process at the position being relieved unless other procedures have been established and authorized by the facility air traffic manager.

2-2-5. OPERATING INITIALS

a. Specialists shall be assigned two-letter operating initials to identify the employee for record purposes. When all combinations of letters are depleted, duplicate initials may be assigned to personnel working in different areas of specialization.

b. Unless signatures are specifically requested, use assigned operating initials for all operating forms, interphone contacts, marking of recorder tapes, and other records.

c. A current file of assigned initials shall be maintained.

2-2-6. SIGN ON/OFF PROCEDURES

a. Supervisory traffic management coordinators/operations supervisors are responsible for ensuring that specialists accurately complete the personnel log when signing on and off duty for time and attendance recording. FAA Form 7230-4, or a locally produced equivalent form is the primary document used for time and attendance purposes.

b. FAA Form 7230-10, "Position Log," shall be used to indicate position responsibility unless automated position sign on/off procedures are used. FAA Form 7230-4, "Daily Record of Facility Operation Log," may be used in lieu of the Position Log to indicate position responsibility only at the supervisory traffic management coordinator-in-charge (STMCIC), operations supervisor-in-charge (OSIC), traffic management coordinator-in-charge (TMCIC), and controller-in-charge (CIC) positions.

2-2-7. CIRNOT HANDLING

A CIRNOT initiated by WMSCR/NNCC shall be transmitted to all circuit users.

a. WMSCR/NNCC shall maintain a record of all CIRNOTs and forward a hard copy to FAA Headquarters, Terminal Safety and Operations Support by the most expeditious means available.

b. AFSS/FSS air traffic managers shall provide CIRNOTs to the Terminal Operations Service Area office and/or other field facilities upon request.

c. CIRNOTs should be retained at the receiving facility for 120 days.

NOTE-

The most expeditious means is transmitting the CIRNOT via facsimile, telephone, mail, electronic mail, etc.

2-2-8. GENOT HANDLING

A GENOT initiated by headquarters ATO organizations, requiring distribution to air traffic facilities, shall be transmitted to all Service Area offices, Flight Service Stations (FSS), Automated Flight Service Stations (AFSS), and ARTCC.

a. Terminal Operations Service Area office shall distribute GENOTs to the following using the most expeditious means available:

1. FAA contract and non-Federal towers.

2. FAA military ATREPS assigned to the service area.

NOTE-

The most expeditious means is transmitting the GENOT via facsimile, telephone, mail, electronic mail, etc.

b. The AFSS/FSS shall distribute the GENOT to all FAA field facilities addressed, except ARTCCs, within their designated areas as determined by the respective Service Area office using the most expeditious means available.

REFERENCE-

Para 2-2-8a2 Note.

c. Terminal Hub facilities distribute all GENOTs in plain language format to all non-Federal and contract ATCTs which are located within their Hub Area. The GENOT shall be distributed in the most expeditious means available.

REFERENCE-

Para 2-2-8a2 Note.

d. Air traffic managers at all facilities shall:

1. Disseminate GENOT information to concerned facility personnel. The content of the message will dictate the priority of the distribution.

2. Ensure that all employees with a need to know are thoroughly briefed on the change prior to performing their duties.

3. Ensure that the appropriate entry is made in the employee's Training and Proficiency Record, Form 3120-1.

2-2-9. PERSONNEL BRIEFINGS REGARDING AIR TRAFFIC BULLETIN ITEMS

The Air Traffic Bulletin is a means of communication between headquarters and field facilities. It is rou-

tinely published and distributed quarterly. In addition, special issues are published and distributed as necessary. It is not a directive, nor is it to implement new procedures. Its intent is to transmit “reminders” concerning proper application of procedures and other instructions. To provide continuity of communication, facility air traffic managers shall:

a. Ensure that the facility is on the distribution list for the Air Traffic Bulletin. Any corrections/additions/deletions should be directed thru the regional distribution officer.

b. Ensure that Air Traffic Bulletin items with operational/procedural impacts are verbally discussed/briefed with facility personnel. These briefings shall take place within 30 days after receipt of the bulletin. Once the briefings are given, a notation shall be inserted in each individual’s FAA Form 3120–1, including the certification signature provided by the staff specialist/supervisor and the employee’s initials.

1. The option/s for which a briefing is required will be indicated by an asterisk followed by one or more letter designators; i.e.:

(a) *T – Tower, combined tower/approach control;

(b) *R – TRACON;

(c) *F – AFSS/FSS;

(d) *E – ARTCC (En Route);

(e) *EF – ARTCC and FSS; etc.

2. The option/s for which briefings are recommended but not required will follow the option/s for which briefings are required, separated by a slash; i.e., /*T/E, indicates that for the en route option the briefing is recommended.

c. Solicit suggested Air Traffic Bulletin items, having operational/procedural impact from facility personnel at regular personnel or crew briefings; evaluate and forward those considered appropriate for Service Area office review. Service area offices shall evaluate and forward to System Safety Procedures those proposals considered significant and national in scope.

2–2–10. LAW ENFORCEMENT INFORMATION

Law enforcement information; e.g., aircraft identification, flight schedules, flight operations, procedures, aircraft lookouts, etc., is of great value to drug traffickers and others attempting to circumvent the law. Although law enforcement information is normally unclassified, it is considered to be inherently sensitive, of a confidential nature, and is to be handled on a “For Official Use Only” (FOUO) basis. Facility air traffic managers shall ensure that such information is safeguarded from disclosure in accordance with FAAO 1600.2, Safeguarding Controls and Procedures for Classified National Security Information and Sensitive Information, whether the information is physically marked with the FOUO term or not. “Safeguarded from disclosure” includes precaution against oral disclosure, prevention of visual access, and precaution against unauthorized release, gratuitously or in response to a specific request.

2–2–11. PERSONNEL BRIEFINGS REGARDING ORDER CHANGES

Air traffic managers shall ensure that facility air traffic personnel are verbally briefed on changes to FAAO 7110.65, Air Traffic Control, FAAO 7210.3, Facility Operation and Administration, and FAAO 7110.10, Flight Services, and other appropriate directives, that have operational/procedural significance.

2–2–12. SYSTEMS MANAGEMENT OF VSCS EQUIPMENT

Air traffic facility managers shall determine which VSCS console equipment (VCE) positions require tailored checklists. The checklist shall include as a minimum, the configuration map in use and the specific position eligibility/capability (classmark) adapted to maintain operational continuity.

2–2–13. REPORTING EQUIPMENT TROUBLE

Equipment trouble reports are normally delivered by air traffic personnel to Technical Operations personnel in person or by telephone. Locally developed procedures that are agreed to jointly by the air traffic and Technical Operations managers may be used for trouble reporting. In the absence of locally developed procedures, the following shall apply: Trouble reports shall specify the facility, sector and position

affected and include a brief description of the problem. In addition:

a. For air/ground communications problems, the frequency or frequencies affected shall be specified.

EXAMPLE–

“Atlanta Sector 66R side 123.4 no transmit.”

b. For air/ground communications problems, the calling and the called locations shall be specified.

EXAMPLE–

“Seattle Sector 46D side hot line to Salt Lake City is not working.”

Section 3. Air Traffic Familiarization/Currency Requirements for En Route/Terminal/Flight Service Facilities

2-3-1. GENERAL

It shall be the responsibility of the employees identified in para 2-3-2, Application, to adhere to the requirements of this section.

2-3-2. APPLICATION

a. Air traffic managers, assistant managers, operations support managers, and support specialists, who as a condition of employment are not required to maintain currency, shall maintain familiarity with operating positions to perform their required duties in an efficient manner.

b. First-level supervisors (including facility managers who also serve as first-level supervisors), ATCSs, developmental specialists, and air traffic assistants are required to maintain currency in order to perform their duties.

2-3-3. REQUIREMENTS

a. Familiarization. As a minimum, non-operational personnel (see application a) shall observe control room operations within their facility for 2 hours each week.

b. Currency. To maintain currency, personnel shall rotate through all positions on which they are certified each calendar month. Additionally, they shall meet the following minimum time requirements on control positions or operational positions, as appropriate, each calendar month:

1. First-level supervisors (including facility managers who also serve as first-level supervisors), and support specialists who are required to maintain currency by their air traffic managers:

(a) Radar/tower control/operational positions (excluding the operational supervisor in charge (OSIC) position): Four hours tower and four hours radar. If certified in only one area of operation (tower or radar), then a total of eight hours in that area.

(b) All other facilities: Eight hours in control/operational positions (excluding the OSIC position).

NOTE-

Although the OSIC position is an operational position, time working as an OSIC is not counted toward currency time.

2. Supervisory traffic management coordinators not covered in subpara b3 and traffic management coordinators are required to maintain currency and shall rotate through all positions on which they are certified each calendar month. Additionally, they shall work a minimum of eight hours per calendar month on control positions.

3. Supervisory traffic management coordinators at all ARTCCs and at A80, N90, PCT, NCT, and SCT are required to maintain currency and shall rotate through all positions within the Traffic Management Unit (TMU) only. Additionally, they shall work a minimum of eight hours per calendar month on these positions.

4. All other employees who are required to maintain currency:

(a) Radar/tower control/operational positions: Eight hours tower and eight hours radar. If certified in only one area of operation (tower or radar), a total of sixteen hours in that area.

(b) All other facilities: sixteen hours in control/operational positions.

5. ASR approach (where published): Three each calendar quarter; one of which must be a no-gyro. Radar simulation may be used to satisfy these requirements.

2-3-4. DIFFERENTIAL

To qualify for currency differential as outlined in the Air Traffic Control Revitalization Act, personnel shall be certified and maintain currency on at least two positions excluding clearance delivery and flight data positions.

Section 4. Hours of Duty

2-4-1. SERVICE HOURS

ATC shall be exercised and EFAS provided during published hours of operation. Early opening or late closing may be occasionally necessary to accommodate traffic which may otherwise divert or cancel its operation because air traffic control is not available at the airport. Good judgment, based on known or observed traffic, must be exercised when deciding to extend operating hours.

2-4-2. TIME STANDARDS

Use Coordinated Universal Time (UTC) in all operational activities. The word “local” or the time zone equivalent shall be used to denote local when local time is given during radio and telephone communications. When written, a time zone designator is used to indicate local time, e.g., “0205M” (Mountain). The local time may be based on the 24-hour clock system. The day begins 0000 and ends 2359. The term “ZULU” may be used to denote UTC. In general, operational forms will be recorded in UTC and administrative forms recorded in local time.

2-4-3. TIME CHECKS

a. Facilities without a direct coded time source shall, at 8-hour intervals, obtain an accurate time check from ARTCC/s equipped with coded time source or from any one of the following standard frequency and time radio stations:

1. WWV, Fort Collins, Colorado, on 2.5, 5, 10, 20, and 25 MHz, which broadcasts continuously except 45 to 49 minutes after each hour. The telephone number for WWV is (303) 499-7111.

2. WWVH, Kekaha, Kauai, Hawaii, on 2.5, 5, 10, 15 and 20 MHz, which broadcasts continuously except 15 to 19 minutes after each hour.

3. CHU, Ottawa, Canada, on 3.33, 7.34, and 14.670 MHz, which broadcasts continuously on all frequencies.

4. U.S. Naval Observatory, Washington, D.C., telephone number (202) 762-1401.

b. Facilities are exempt from performing time checks if they meet the following requirements:

1. The facility clocks are digital.

2. The clocks are tied to the direct coded time source on the multi-channel recorder, any one of the listed standard frequency and time radio stations or other time generating device.

*REFERENCE—
FAAO 6670.4D, Chapter 4.*

2-4-4. STATUS OF SERVICE

Part-time facilities shall establish procedures for opening and closing. The procedures shall be coordinated with the facility having IFR jurisdiction and shall include, as a minimum, the following:

a. Broadcast an announcement upon resuming/terminating service on appropriate frequencies. This broadcast shall include, as a minimum, the service being resumed or terminated.

b. At locations where neither a tower nor AFSS/FSS continues service or the AFSS/FSS does not have lighting controls/approach aid monitoring capability, do the following as appropriate:

1. Include, in the termination broadcast, the status of the airport and essential components; e.g., Navigational Aids (NAVAIDs), airport and approach lighting, weather, NOTAMs concerning NAS, and field conditions.

2. If there is an approach procedure for the airport, inform the facility having IFR jurisdiction of the information determined appropriate in subpara b1. This information need not be forwarded when the sector controller advises no arriving traffic.

c. At the time of closure, the facility having IFR jurisdiction shall inform all inbound flights with which it has communications and which will use any of the components associated with the airport of the information received from the part-time facility.

d. If a collocated AFSS/FSS operates when the tower is closed, pertinent flight data shall be exchanged before the tower opens/closes.

Section 5. Watch Coverage–Flight Service Stations

2–5–1. BASIC WATCH SCHEDULES

a. Facility air traffic managers are responsible for preparing watch schedules for their facilities. These schedules shall take into account normal traffic flow thereby permitting the posting of a continuing rotational schedule for an indefinite period of time. Facility management is responsible for appropriate consultation with local unions.

b. Facility air traffic managers shall, to the maximum extent possible, establish overlapping shifts thereby providing an opportunity for personnel to accomplish a majority of briefings without need for overtime assignment.

c. Facility air traffic managers shall ensure that air traffic control specialists (ATCS) assigned to a position of operation:

1. Do not work more than 6 consecutive days.
2. Do not work more than a 10-hour day.
3. Have an off-duty period of at least 8 hours between watches.

2–5–2. DESIGNATING WATCH SUPERVISION COVERAGE

a. Efficient air traffic services require supervision of each watch regardless of the number of people assigned.

b. At facilities where a specialist stands a watch alone, responsibility for the overall operation of the facility during the watch becomes a part of his/her duties.

c. When two or more specialists are on duty and no supervisory personnel are available (see Note), one specialist who is fully qualified and rated in the assigned operational area shall be designated by the facility air traffic manager as CIC for that watch. Specialists so designated may be required to perform specialist duties in addition to those associated with watch supervision. The CIC designation shall be rotated among qualified specialists. Persons so designated perform the full range of duties associated with watch supervision. Watch supervision by itself

does not justify a higher grade; i.e., the CIC does not perform supervisory duties, such as:

1. Evaluating employee performance.
2. Recommending selections, promotions, awards, disciplinary actions, and separations.
3. Explaining and gaining support of employees for management policies and goals.
4. Counseling employees on their performance ratings.
5. Monitoring presidential aircraft movement.

NOTE–

A supervisor is considered available for watch supervision when he/she is physically present in the operational area and is able to perform the primary duties of the supervisory function. If the supervisor leaves the operational area, or is engaged in an activity which may interfere with or preclude the performance of watch supervision duties, then a CIC must be designated.

2–5–3. AREA SUPERVISION

OSs primary function is the supervision of their area and assistance to specialists. It is particularly important that supervisors carefully monitor current and anticipated sector activity to ensure that available controller staffing is deployed at optimal efficiency. Managers/supervisors shall be responsible for managing the operational environment with a goal toward eliminating distractions in the operational environment. Managers shall, to the extent practicable, avoid scheduling supervisors for nonoperational duties during periods of known heavy traffic.

2–5–4. RELIEF PERIODS

a. Facility air traffic managers shall use all available qualified personnel to provide relief periods. First priority should be given to providing a reasonable amount of time away from the position of operation for meals. Additionally, time for such things as briefings and training should be made by rotating work assignments among qualified employees.

b. Supervisors in charge are responsible for knowing the whereabouts of employees to ensure their operational availability. Supervisors are also responsible for ensuring that relief periods are applied in such a manner as to maximize the usage of personnel and to promote the efficiency of the agency.

c. Relief period, i.e., break, is defined by the Comptroller General as being a “brief” rest period that may be assigned by the agency. While no specific timeframe is placed on the duration of relief periods, supervisors and managers will be held accountable to ensure that breaks are of a reasonable duration.

d. Supervisors shall not condone or permit individuals to sleep while on duty. Any such instance shall be handled in accordance with Human Resource Policy Manual (HRPM), Standards of Conduct.

2-5-5. OVERTIME DUTY

Facility air traffic managers shall ensure that overtime duty is equitably distributed among all eligible employees who desire it. Retain overtime duty records for 12 months.

2-5-6. HOLIDAY STAFFING

a. Facility air traffic managers shall ensure that the scheduled staffing is adjusted on holidays to a level consistent with the anticipated workload. Application of this policy is not intended to result in a standardized holiday staffing schedule for all holidays. Holiday staffing schedules may vary for individual holidays since the traffic in a particular area cannot always be expected to be the same for each holiday.

b. Prior to establishing work schedules for a Federal holiday, facility air traffic managers shall:

1. Consider the previous year’s traffic statistics for each holiday.

2. Check, as appropriate, with local sources (Air National Guard, USN, USAF Reserves, local flying schools, fixed base operators, etc.) for information concerning anticipated activity.

2-5-7. CONSOLIDATING POSITIONS

Assign personnel to positions as required by activity, equipment, and facility function. Positions may be

consolidated in consideration of activity and the qualifications of the personnel involved.

2-5-8. SUPERVISORS HOURS OF DUTY

Hours of duty of facility air traffic managers and administrative staffs should conform with the duty hours of their respective Service Area office.

2-5-9. FACILITY COMPLEMENTS

Facility air traffic managers will be currently informed by the Service Area office of their authorized facility personnel complements. The authorized complement will always be the end-of-year employment ceiling authorization. Circumstances may result in the establishment of a complement different from that provided in workload formulas.

2-5-10. CONTROLLER-IN-CHARGE (CIC) TRAINING

a. Prior to being designated as CIC, specialists shall have been facility/area rated/certified for 6 months. The specialist shall also have completed an agency approved and established CIC training course for the assigned option (i.e., En Route CIC, Course 55072, National Flight Service CIC, Course 55025, or Terminal CIC, Course 55073). The Director of Flight Services Operations may issue a facility waiver for the 6 months criteria where a more immediate assignment is indicated. Upon receipt of a waiver from the Director of Flight Services Operations the facility manager can then issue individual waivers to the 6 months requirement on a case-by-case basis. Waivers to facilities will be for 1 year with renewals based on the result of a yearly evaluation by the region.

b. Specialists that have completed the CIC course, who have performed CIC duties, and who subsequently transfer to another facility shall be required to complete those portions of the course that are specific to the new facility before assuming CIC duties. They shall not be required to fulfill the 6 months experience requirement at the new facility.

c. Upon completion of the CIC course, record an entry noting this in the specialist’s Training and Proficiency Record, FAA Form 3120-1, section 3, or TRAX, Automated Training Record.

Section 6. Watch Supervision–Terminal/En Route

2–6–1. WATCH SUPERVISION

a. Watch supervision requires maintaining situational awareness (defined below) of traffic activity and operational conditions in order to provide timely assistance to specialists and that ensure available resources are deployed for optimal efficiency. Watch supervision may be performed by a manager, supervisor, or controller-in-charge (CIC). The objectives and tasks of watch supervision shall be specified in a facility directive, which is focused on operational requirements. The directive shall specify, as a minimum, the required tasks for maintaining a safe and efficient operation. These tasks shall include, but are not limited to:

1. The requirement to provide guidance and goals for the shift.
2. Monitoring/managing traffic volume/flow.
3. Position assignments.
4. Position relief.
5. Training assignments.
6. Processing leave requests (e.g., leave approval).
7. Configuring/monitoring/reporting equipment status.
8. Data collection and reporting.
9. Monitoring presidential aircraft movement.
10. Situational awareness is defined as a continuous extraction of environmental information, integration of this information with previous knowledge to form a coherent mental picture, and the use of that picture in directing further perception and anticipating future events. Simply put, situational awareness means knowing what is going on around you.
11. Management of the operational environment with a goal toward eliminating distractions.

NOTE–

Individuals medically disqualified or taking medically disqualifying substances shall not be assigned watch supervision duties, in accordance with para 2–8–6, Restricted Drugs.

b. In the role of watch supervision, a CIC shall have the same authority, responsibility, and accountability as a supervisor, whether the authority and responsibilities were assigned by written directive, verbal direction, or local practice, with the following exceptions:

1. Evaluating and counseling employees on their performance.
2. Recommending selections, promotions, awards, disciplinary actions, and separations.
3. Site Coordinator for drug or alcohol testing.

NOTE–

On-the-spot corrections are not considered an evaluation of performance and are required as part of CIC duties.

2–6–2. WATCH SUPERVISION ASSIGNMENTS

a. Efficient air traffic services require watch supervision regardless of the number of people assigned. Facilities shall establish local procedures for watch supervision assignments.

b. When two or more supervisory traffic management coordinators (STMC) are on duty, one shall be assigned as supervisory traffic management coordinator-in-charge (STMCIIC).

c. When two or more operations supervisors (OS) are on duty, one shall be assigned as operations supervisor-in-charge (OSIC).

d. When two or more specialists are on duty and no supervisory personnel are available, one specialist who is fully qualified and rated in the assigned operational area shall be designated as CIC to perform the watch supervision duties.

NOTE–

In combined radar/tower facilities, when there's a tower CIC and TRACON CIC, one shall be designated as the overall controller-in-charge (OCIC).

e. At facilities where a specialist stands a watch alone, the responsibility for watch supervision becomes part of his/her duties.

f. Personnel performing watch supervision duties may be required to perform operational duties in addition to watch supervision duties. The performance of operational duties should be done on a limited basis such as during periods of low activity.

g. An individual is considered available for watch supervision when he/she is physically present in the operational area and is able to perform the primary duties of the function. If the supervisor/CIC leaves the operational area or is engaged in an activity which will interfere with or preclude the performance of watch supervision duties, then another qualified individual must be designated to supervise the watch.

2-6-3. CONTROLLER-IN-CHARGE (CIC) DESIGNATION

a. Prior to being designated as a CIC, specialists shall meet the following prerequisites:

1. Have been certified for 6 months in the area/facility CIC duties to be performed. (The Director of En Route and Oceanic Operations Area Office or Terminal Operations Service Area Office may issue a facility waiver for the 6 month requirement where a more immediate assignment is needed. Waivers to facilities will be for 1 year, with renewals based on the result of a yearly evaluation by the area office director.)

2. Be operationally current.

3. Receive a recommendation by CIC recommendation panel.

4. Be selected by the air traffic manager or his/her designee.

5. Successfully complete CIC training.

b. Specialists who have been designated as a CIC and subsequently transfer to another facility are not required to fulfill the requirement of subpara 2-6-3a1 at the new facility; however, they must meet all other prerequisites.

NOTE-

In combined radar/tower facilities, specialists who are certified in the tower cab may be designated as CIC in the tower, provided all of the above prerequisites are met.

2-6-4. CONTROLLER-IN-CHARGE (CIC) SELECTION PROCESS

a. All eligible employees who meet the prerequisites of subparas 2-6-3a1 and 2 shall be considered for selection as CIC. Air traffic managers, when determining facility requirements for CICs, shall consider the following:

1. Facility operational needs.

2. Scheduling concerns.

3. Staffing concerns.

4. Special events.

5. Other issues.

b. When facility requirements are established, air traffic managers shall, by written directive, designate a panel to forward recommendations for CIC candidates to the designated selecting official. A facility may have one recommendation panel for each area of specialization.

c. The recommendation panel shall consist of at least a first level supervisor and a union representative.

d. The recommendation panel shall consider the following knowledge, skills, and abilities (KSA) in reviewing each candidate. These KSAs shall include but are not limited to:

1. Problem solving and analytical ability.

2. Planning and organizing.

3. Decisiveness.

4. Judgement.

5. Communication skill.

6. Interpersonal skill.

e. The recommendation panel shall forward its recommendations to the air traffic manager or his/her designee. Written feedback shall be provided to the selecting official for all candidates not recommended including dissenting opinions.

f. Candidates who are not selected to be a CIC, upon request, shall be advised of the reasons for non-selection. If applicable, specific areas the employee needs to improve shall be identified. Employees may request assistance from their immediate supervisor in developing options to improve the identified areas.

2-6-5. CONSOLIDATING POSITIONS

a. Assign personnel to positions as required by activity, equipment, and facility function. Positions may be consolidated in consideration of activity and the qualifications of the personnel involved.

b. To the extent staffing resources permit, and where the position is established, the tower associate (local assist) position shall be staffed. This position is considered essential to the operational integrity and

safety levels required to minimize the potential for surface errors and land-over incidents. Nonlocal control functions shall not be consolidated/combined at the local control position except during periods of significantly reduced traffic levels.

2-6-6. RELIEF PERIODS

a. Personnel performing watch supervision duties are responsible for ensuring that breaks are administered in an equitable manner and applied so as to promote the efficiency of the agency. They are also responsible for ensuring that breaks are of a reasonable duration.

b. Personnel performing watch supervision duties are responsible for knowing the whereabouts of employees to ensure their availability for position assignments.

c. Personnel performing watch supervision duties shall not condone or permit individuals to sleep while on duty. Any such instance shall be handled in accordance with FAPM 2635, Conduct and Discipline.

2-6-7. BASIC WATCH SCHEDULE

a. Facility watch schedules shall take into account normal traffic flow, thereby permitting the posting of a continuing schedule for an indefinite period of time. Facility management is responsible for ensuring watch schedules are in accordance with collective bargaining agreements.

b. Air traffic control specialists whose primary duties are those directly related to the control and separation of aircraft must meet the following criteria:

1. Do not work more than 10 operational hours in a shift.

2. Hours worked before a shift, whether operational or not, will count as operational hours.

3. All work beyond 10 hours must be nonoperational. For holdover overtime situations, including when an employee has worked a credit hour at the start of a shift or is working an alternative work schedule which does not allow him/her to work 2 hours operationally at the end of the shift, the col-

lective bargaining agreement applies and the employee shall be guaranteed 2 hours of work.

4. Have at least an 8-hour break from the time work ends to the start of any subsequent shift.

5. Have an off-duty period of at least 12 hours following a midnight shift. (A midnight shift is defined as a shift in which the majority of hours are worked between 10 p.m. and 8 a.m.)

6. Do not work more than six shifts without taking a regular day off.

7. Authorized leave, compensatory time used, and credit hours used are considered hours of work.

8. These criteria apply to shift adjustments, including the exchange of shifts and/or days off and the change of shifts and/or days off.

2-6-8. OVERTIME DUTY

Facility air traffic managers shall ensure that overtime duty is equitably distributed among all eligible employees who desire it. Retain overtime duty records for 12 months.

2-6-9. HOLIDAY STAFFING

a. Facility Air Traffic Managers shall ensure that the scheduled staffing is adjusted on holidays to a level consistent with the anticipated workload. Application of this policy is not intended to result in a standardized holiday staffing schedule for all holidays. Holiday staffing schedules may vary for individual holidays since the traffic in a particular area cannot always be expected to be the same for each holiday.

b. Prior to establishing work schedules for a Federal holiday, facility air traffic managers shall:

1. Consider the previous year's traffic statistics for each holiday.

2. Check, as appropriate, with local sources (Air National Guard, USN, USAF Reserves, local flying schools, fixed base operators, etc.), for information concerning anticipated activity.

2-6-10. ADMINISTRATIVE HOURS OF DUTY

Hours of duty of facility air traffic managers and administrative staffs should conform with the duty hours of their respective service area office.

2-6-11. FACILITY COMPLEMENTS

Facility air traffic managers will be currently informed by the service area office of their authorized facility personnel complements. The authorized complement will always be the end-of-year employment ceiling authorization. Circumstances may result in the establishment of a complement different from that provided in workload formulas.

Section 7. Appearance and Security

2-7-1. PERSONNEL APPEARANCE

Personnel shall maintain a neat, clean, businesslike appearance during working hours. Personal grooming and clothing must be appropriate to the conduct of Government business.

2-7-2. QUARTERS APPEARANCE

The appearance of each air traffic facility shall reflect the high standards of the agency at all times. Facility air traffic managers shall ensure that adequate janitorial services are provided.

2-7-3. BULLETIN BOARDS

Air traffic bulletin boards should only display material authorized by the facility air traffic manager or his/her designee.

2-7-4. FOOD AND BEVERAGES

Food and beverages may be permitted in the operating quarters at the discretion of the facility air traffic manager.

2-7-5. FACILITY SECURITY

a. Facility air traffic managers are responsible for the security of operating quarters and shall use appropriate agency directives for guidance in maintaining this security. This is not applicable to pilot briefing areas in flight service stations except when the AFSS/FSS is collocated with an ARTCC.

b. When an ARTCC and an AFSS/FSS are collocated, a LOA shall be implemented to define the respective areas of security responsibility assigned to each facility.

REFERENCE—
Subpara 4-3-2e, Appropriate Subjects.

c. Facility air traffic managers shall determine that adequate locks or other suitable devices are installed and operated so as to ensure security control over access to operating quarters.

d. In no case shall ARTCC buildings be used as public fallout shelters.

2-7-6. SUSPICIOUS ACTIVITIES

FAA personnel shall report suspicious activities to the nearest law enforcement agency, FBI, airport manager, aircraft operator, or any combination thereof as appropriate. These activities include, but are not limited to, unauthorized use of aircraft, tampering with aircraft or other property around airports or FAA facilities, placing packages or other objects in unusual locations, and performing in a manner that is suspect of malice. Do not attempt to delay, detain, or question suspects, but do attempt to keep the person or persons under surveillance until law enforcement representatives arrive.

2-7-7. COOPERATION WITH LAW ENFORCEMENT AGENCIES

a. FAA personnel shall cooperate in every reasonable way with law enforcement agencies. Theft of aircraft and use of aircraft for illegal purposes have complicated the task of the Federal law enforcement agencies. The FBI, the U.S. Customs Service, and the INS have requested the FAA to assist them by furnishing information of suspicious activities regarding use of aircraft.

b. Any inquiries from airport managers, aircraft owners or others to initiate an alert message shall be directed to the El Paso Intelligence Center (EPIC). EPIC is interfaced with the National Crime Information Center (NCIC), which gives them access to any stolen aircraft report entered by law enforcement agencies. FAA facilities shall not volunteer to relay this information to EPIC. Assistance shall be limited to providing EPIC phone number(s) COMM (915) 564-2220, or advising the inquiring party to go through normal law enforcement channels.

2-7-8. FACILITY VISITORS

a. Persons interested in the services and facilities provided by air traffic should be encouraged to visit facilities for familiarization. The facility air traffic manager or a designated representative may authorize these visits if:

1. The presence of visitors does not interfere with the operation of the facility.
2. There is no breach of security directives.

3. Personnel are or will be available to conduct an escorted tour.

b. Foreign national visits shall be handled in accordance with current directives.

2-7-9. SECURITY OF JOINT-USE RADAR DATA

Personnel involved in a joint-use radar environment shall be familiar with the provisions of directives concerning the security of joint-use radar.

Section 8. Medical

2-8-1. GENERAL

The following explains methods and procedures for ensuring that employees engaged in the actual control of air traffic meet the medical requirements of the Office of Personnel and Management Qualification Standards as outlined by FAAO 3930.3, Air Traffic Control Specialist Health Program, and Title 14 CFR Part 65 and Part 67. The Regional Flight Surgeon/Assistant Regional Flight Surgeon (hereinafter referred to as Flight Surgeon) will perform required examinations or review reports of medical examinations and ancillary tests to make a determination as to whether medical requirements are met. Supervisors should obtain the medical opinion of the Flight Surgeon concerning any employee whose medical condition appears questionable; details of the problem should be presented to the Flight Surgeon for an evaluation and determination in accordance with FAAO 3930.3.

2-8-2. MEDICAL CLEARANCE REQUIREMENTS

a. Personnel actively engaged in the separation and control of air traffic must possess a current medical clearance. ATCSs assigned to AFSSs/FSSs also are required to be evaluated under and meet the requirements of FAAO 3930.3.

b. To be assigned to a Quality Assurance and Training Specialist (QATS) position, an employee must possess a current medical clearance. If a QATS subsequently becomes permanently medically disqualified, he or she may remain in the position, but not engage in traffic control.

c. If the service area office or the facility air traffic manager determines that the permanent QATS shall be operationally qualified, then the employee must possess a current medical clearance.

d. Employees in supervisory or staff air traffic positions who do not engage in ATC need not be medically cleared; however, if any of these employees are required to infrequently operate a control position, they must possess a current medical clearance.

e. The Flight Surgeon in consultation with facility officials may make a determination that although medical requirements are met, an ATCS should be

temporarily restricted from actual ATC duties. An employee temporarily prohibited from ATC duties because of required medication or other questionable medical status may be assigned to temporary administrative duties dependent upon availability of productive work and the capability of the employee to do the work.

f. Employees who possess a current medical clearance are responsible to comply with all restrictions, limitations, or cancellations of the certificate applicable to the performance of ATC duties.

2-8-3. SPECIAL MEDICAL EVALUATIONS

In some cases, the Flight Surgeon may require additional medical information to determine if the medical requirements are met and will provide information to facility officials to arrange appointments for special medical evaluations. Results of these evaluations will be forwarded to the Flight Surgeon by the consultant physician.

2-8-4. SPECIAL CONSIDERATION

a. Personnel required to possess a current medical clearance may be granted special consideration if at any time it is determined that medical requirements are not met. Each case shall be considered on an individual basis. The Flight Surgeon in coordination with the Service Area Director will make a determination on which management officials may base administrative action.

b. The Service Area Director shall document all special consideration determinations and forward copies to System Operations and Safety, System Safety and Procedures.

2-8-5. USE OF DRUGS AND SEDATIVES

The following policy shall apply in regard to the use of drugs and sedatives:

a. Personnel may be assigned to their regular positions of operation within ARTCCs, terminal facilities, AFSSs/FSSs, even though they are taking innocuous medication, such as aspirin derivatives, vitamin preparations, nose drops, skin ointments, and routine immunizations.

b. Personnel taking either regular or prolonged antihistamines may be assigned to positions of

operation provided individual special considerations are obtained. These special considerations may be granted on a permanent basis after it has been determined by the Flight Surgeon that there are no deleterious effects of the antihistamine or the condition for which it is being used.

2-8-6. RESTRICTED DRUGS

a. Personnel ordinarily assigned to an operating position, including those who have direct supervision of the specialists within the facility, shall not use the types of drugs listed below within a 24-hour period before assumption of duty:

1. Sedative type drugs.
2. Tranquilizers.

3. Any drugs, such as but not limited to antihypertensive agents or duodenal ulcer medications, which have an effect on the central or autonomic nervous system.

4. Any other drug and/or medication likely to affect the alertness, judgment, vision, equilibrium, or state of consciousness.

b. When the employee is advised by a physician that adequate treatment of an ailment will require use of the types of drugs or medication referred to above, the employee shall not perform control duties. If the period of required treatment by these types of drugs or medication is anticipated by the physician to exceed 2 weeks (especially if prolonged or permanent treatment is indicated), the supervisor should promptly obtain the opinion of the Flight Surgeon concerning the continued utilization of the employee.

The medical determination as to continued operational duty by an ATCS on medication will be made by the Flight Surgeon after consultation with the supervisor on a case-by-case basis.

2-8-7. BLOOD DONORS

Personnel shall not be assigned to traffic control duties until at least 12 hours have elapsed after blood donation.

2-8-8. USE OF ALCOHOL AND OTHER DRUGS

Standards of conduct for FAA employees regarding the use of intoxicants are contained in Human Resource Policy Manual (HRPM), Standards of Conduct. In addition to conforming to those standards, FG-2152s and FG-2154s shall not perform ATC functions (including FG-2154 duties) or directly supervise personnel performing these functions within 8 hours after partaking in intoxicants.

2-8-9. MEDICAL STATUS DETERMINATIONS ON FG-2154s

FG-2154s, Air Traffic Assistants (ATAs), are not subject to FAAO 3930.3, Air Traffic Control Specialist Health Program, and 14 CFR Part 65 and Part 67; however, FG-2154s, because of the importance of their duties, will have a medical opinion rendered on their abilities to perform the job. This opinion would be requested when the employee's medical condition appears questionable or when the individual is taking certain medication. For the purpose of securing these opinions, para 2-8-5 through para 2-8-8 apply to FG-2154s.

Section 9. Weather/Visibility

2-9-1. BACKUP/AUGMENTATION OF WEATHER OBSERVATIONS

a. Facilities where air traffic personnel provide backup/augmentation of automated weather observations, or take manual observations, shall use FAAO 7900.5, Surface Weather Observing-METAR, as the basic source of guidance for completion of observations.

b. In an automated weather environment, elements of automated weather observations may be used for operational purposes (i.e., wind and altimeter).

c. Specialists responsible for providing backup/augmentation of automated weather observations, or manual observations, must be certified by the National Weather Service (NWS).

REFERENCE-

Para 14-1-2, Certificates of Authority.

2-9-2. RECEIPT AND DISSEMINATION OF WEATHER OBSERVATIONS

a. Facility air traffic managers shall establish a means by which the receipt of weather observations are immediately known to facility personnel responsible for dissemination to other facility functions and that these functions are made aware of changes as they are posted. In addition, facility managers shall establish procedures through the facility SOP that will ensure all positions of operation receive and acknowledge any change in reportable visibility value when the tower has the responsibility for visibility reporting. This may be accomplished by means of an alerting device, location of weather receiving equipment at positions so that any change of data is recognized, or any other means which may be best suited to the facility work environment.

b. To the extent possible, facility air traffic managers shall establish procedures to acknowledge receipt of weather observations. Where possible, establish an agreement with the appropriate weather source to share the responsibility for ensuring the receipt of the observation. Automated Surface Observing System(s) (ASOS), Automated Weather

Observing System(s) (AWOS), and Automatic Weather Information System (AWIS) locations are not required to acknowledge receipt of observations.

c. The addition or deletion of a weather reporting location shall be coordinated through the appropriate Service Area office, for forwarding to System Safety and Procedures. System Safety and Procedures shall initiate the required actions for additions and/or deletions to the national data base. When adding new weather reporting locations, include a statement that:

1. An aviation requirement exists.
2. The observers are/have been certified by the NWS.
3. No other observation exists in the surface area, if applicable.

4. Identifies the hours that the data will be available if less than 24 hours, i.e., 0800Z-2300Z.

5. Identify what facility will be responsible for observation entry into the system.

d. AWOS towers with LAWRS certified controllers shall only use AWOS operator interface device (OID) information to generate a manual hourly METAR/SPECI observation. If necessary, the observer shall convert the weather sequence from SAO to METAR/SPECI format and disseminate it through the appropriate manual system.

e. AWOS towers with non-LAWRS certified controllers shall turn off the AWOS OID and obtain the current METAR/SPECI weather report from their associated AFSS/FSS until the AWOS software is upgraded to report weather in METAR/SPECI format.

2-9-3. LIMITED AVIATION WEATHER REPORTING STATION (LAWRS) HOURS OF OPERATION

Facility air traffic managers shall submit to System Operations Airspace and Aeronautical Information Management office the hours of operation with the date that the facility commences participation in the LAWRS program and any changes thereafter in the hours of participation.

2-9-4. NONAVIATION WEATHER SERVICE

Facilities shall not enter into agreements with any person or office, including fixed-base operators, to provide weather data for property protection purposes. The FAA shall not be responsible for providing weather information unless it is directly related to the actual or intended operation of aircraft. Personnel shall not encourage nor solicit non-aviation weather activity. Refer requests for this type of weather information to the nearest WSO.

2-9-5. NATIONAL WEATHER RECORDS CENTER

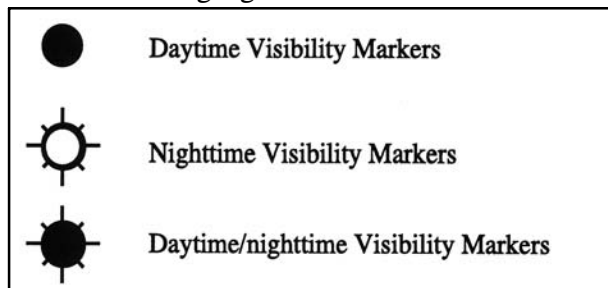

Refer requests for surface weather observations from non-aviation sources; e.g., requests from insurance companies for weather data relative to storm damage, to the National Weather Records Center, Environmental Data Service, Federal Building, Asheville, N.C., 28801.

2-9-6. VISIBILITY CHARTS

Where facilities provide backup/augmentation of automated weather observations, or manual observations, the facility air traffic manager, in conjunction with NWS personnel, shall prepare and maintain visibility charts in accordance with the following:

a. Prepare a chart(s) or list(s) for daytime and nighttime visibility markers. At local discretion, visibility markers may be depicted on separate daytime and nighttime charts or on a daytime/nighttime combination chart. Panoramic photographs marked with distances and cardinal compass points may also be used.

b. Daytime/Nighttime combination charts shall use the following legend for each marker:

c. Each marker used shall be identified and its distance from the observation point noted. Include the height of the marker if it is for estimating heights of clouds and obscuring phenomena.

2-9-7. SITING CRITERIA FOR VISUAL WEATHER OBSERVATIONS

To give a proper indication of weather conditions in the areas of aircraft approaches, landings, and takeoffs, the site from which visual weather observations are made should ideally be the Airport Reference Point (ARP). If this is not practical, the site shall be as close to the ARP as practical. Except in unusual circumstances, it should be no more than 2 miles from that point. The site shall also have an essentially unobstructed view of:

- a. The most frequently used instrument runway and its final approach area; and
- b. At least half of each quadrant of the natural horizon.

2-9-8. RUNWAY VISUAL VALUE (RVV) AND RUNWAY VISUAL RANGE (RVR) EQUIPMENT

a. FAA is responsible for checking and determining the operational status of RVV/RVR systems. Air traffic personnel shall report all actual or suspect RVV/RVR malfunctions to Technical Operations personnel who are responsible for:

1. All checks and adjustments to the RVV/RVR systems.
2. Determining the operational usability of all portions of the systems in accordance with applicable performance criteria in FAAO 6560.8, Maintenance of Runway Visual Range (RVR) Equipment, or other appropriate RVR equipment instruction books.

3. Reporting immediately to authorized visibility observing personnel obvious error between information derived from the system and actual observed visibility conditions at the transmissometer site.

NOTE-

Technical Operations personnel are not visibility observers. However, obvious errors or differences which are easily apparent to them will be reported to the visibility observer and the instrument-derived information should not be used.

b. Air traffic personnel shall also:

1. Verify accuracy with other displays in the facility when any meter and/or readout malfunction is suspected. Upon determining that at least one display is operating properly, accomplish internal coordination to disseminate the current correct reading to all operating positions needing the information.

2. Notify the local weather observing facility immediately when malfunctioning of all airport traffic control tower (ATCT) and terminal radar approach control (TRACON) displays for the runway of concern is indicated or suspected. Upon verification of malfunction, request the weather observing facility to furnish RVV or RVR values for that runway. During such conditions, weather observing personnel will relay RVV or RVR information to tower personnel as long as equipment at the weather observing facility is known to be operating correctly and, in the case of RVR, when the high intensity runway lights (HIRL) are on setting 3 or higher. RVR

values provided during the malfunction will be based on a setting of 5 unless the control tower has specifically requested data for a lower light setting. The weather observing facility will provide the RVR or RVV at the time of notification that the traffic control facility readouts are inoperative. It will also provide notification as soon as possible when the values decrease to become equal to or less than, or increase to equal or exceed:

(a) RVV $\frac{1}{2}$ mile or RVR 2,400 feet.

(b) The lowest authorized landing minimum for the runway of concern.

Section 10. Wind/Altimeter Information

2-10-1. WIND INSTRUMENT SENSORS

■ Air traffic managers shall designate in a facility directive which wind sources shall be used for operational purposes.

a. Towers equipped with LLWAS may use direct dial or LLWAS wind information for weather observations, except where automated wind information is available.

b. Approach control facilities may use direct dial, LLWAS, or automated display wind information for operational purposes.

c. AFSSs/FSSs shall use direct dial or automated display wind information for operational purposes.

■ d. Other exceptions shall be referred to the Manager of System Safety and Procedures for approval.

2-10-2. WIND INDICATOR CROSS CHECK

All FAA facilities having an associated NWS office or military weather station using the same sensing equipment shall compare wind direction and speed indicator readings at the beginning of each work day with those of the NWS or military weather station, keeping in mind that the NWS wind direction equipment are oriented to true north. Apply the magnetic variation to ensure a correct reading. Coordinate the time of the cross-check and the associated procedures with the meteorologist-in-charge or other appropriate officer. Wind instrument errors shall be handled as follows:

a. If an FAA wind direction indicator is out of tolerance with other indicators on the same sensor by 5 degrees, or if the wind speed indicator reveals a disparity of plus or minus 5 knots, notify the appropriate maintenance personnel immediately for corrective action.

b. If the indicators show an error of over 10 degrees or 10 knots, the equipment shall be considered inoperative. In this case, obtain further wind information from other properly functioning wind instruments in the tower, local AFSS/FSS, the NWS, or military weather office. Notify the appropriate maintenance personnel of all outages.

2-10-3. ALTIMETER REQUIREMENTS

a. At least two aneroid altimeter setting indicators (ASI) or one ASI and a traceable pressure standard are required in a TRACON, radar approach control (RAPCON), terminal radar approach control in tower cab (TRACAB), combined center/RAPCON (CERAP), radar ATC facility (USN) (RATCF), tower cab, and a FSS/AFSS that takes weather observations and/or provides LAA. When two or more facilities (or a NWS commissioned/certified automated weather observing system) are located on the same airport, the requirement may be reduced to one aneroid ASI per facility. Aircraft altimeters shall not be used in reporting altimeter settings.

NOTE-

1. *Stand alone RADAR approach control facilities (TRACON, RAPCON, RATCF, CERAP) not associated with a control tower are only required to maintain altimeter settings for those airports under their jurisdiction.*

2. *A digital ASI (DASI) system is considered as one aneroid ASI instrument for the purpose of this paragraph.*

b. At locations with commissioned ASOS or commissioned dual transducer AWOS units, the ASOS/AWOS becomes the pressure standard. If the ASOS/AWOS is inoperative, a Stand Alone Weather System (SAWS) or DASI may be considered as the pressure standard.

2-10-4. COMPARISON CHECKS

a. Facilities equipped only with aneroid instruments:

1. Compare the reading of each aneroid instrument (ASI) daily and each nonpressure standard digital instrument (DASI) monthly with the altimeter setting issued by an associated facility having a traceable pressure standard located either on the airport or within the distances set forth in subparagraphs d and e.

2. When the differences between the two altimeter settings exceeds 0.05 in. Hg. at nonprecision approach locations or 0.02 in. Hg. at precision approach locations, remove the instrument from service and notify Technical Operations personnel. ■ When all ASI instruments in the facility are found to

exceed the tolerances, report the altimeter setting as *missing*.

3. When the difference is less than the tolerances specified in subpara 2 above, the value (+ or –) is applied as the correction factor to determine the operational altimeter setting.

(a) On dial-type display ASIs, post the correction factor directly on the face of the instrument. Use the same comparison procedures and determine the correction factor for each instrument in the facility.

(b) On digital ASI (DASI) systems, post the correction factor on or near the display/s. Local facility procedures may be developed in coordination with the associated airway facilities office to adjust the DASI to display the corrected altimeter setting.

b. Facilities equipped with aneroid instruments and a traceable pressure standard:

1. Make two comparisons at least 6 hours apart, but not more than 8 hours, on the same day of the week. Enter all comparison data on the appropriate form. Every week, determine the mean of the 10 last comparisons, and use this figure as the posted correction to apply to the reading of the ASI.

2. Additional comparison procedures are described in handbooks applicable to the facility.

c. At locations with commissioned ASOS or commissioned dual transducer AWOS units, the ASOS/AWOS becomes the pressure standard. Compare the reading of each aneroid ASI to the pressure standard daily and each digital ASI (SAWS/DASI) monthly. In the event of a failure of the pressure standard instruments, a comparison must be made within 36 hours. Tolerances and posting procedures are contained in subparas a2 and a3.

d. At locations not served by a weather reporting station, make a comparison against an adjacent weather service office, commissioned dual transducer AWOS or ASOS systems, an AFSS/FSS or a LAWRS facility having a traceable pressure standard.

1. At locations where precision approaches are conducted, the weather reporting station is not more than 10 NM away, and at both locations the wind speed is 12 knots or less with no gusts above 15 knots.

2. At all other locations the distance must not exceed 25 NM, and at both locations the wind speed must be 15 knots or less with no gusts above 20 knots.

3. The difference in elevation does not exceed 100 feet at precision approach locations and 200 feet at all other locations.

4. The station's temperature at both locations must be within 30 degrees Fahrenheit of the standard atmosphere temperature for the station's elevation.

NOTE–

The following formula may be used to determine the standard atmosphere temperature for station elevation:

$$T = 60^{\circ}\text{F} - 0.0036H$$

Where

T = Standard Atmosphere Temperature, and

H = Field Elevation.

5. Do not use altimeter setting values from aneroid instruments when the difference exceeds ± 0.02 in. Hg. at precision approach locations or ± 0.05 in. Hg. at all other locations.

e. A traceable pressure standard is required for routine altimeter setting comparison checks at all facilities that exceed the requirements of subpara d.

2-10-5. DELIVERY OF ALTIMETER SETTING TO ARTCC

ARTCCs having a requirement for interphone delivery of altimeter settings, or changes of report, shall make arrangements with AFSS/FSS/terminals for delivery to associated sector/s.

2-10-6. BROADCAST DENSITY ALTITUDE ADVISORY

Terminal and AFSS/FSS facilities at airports with field elevations of 2,000 feet MSL or higher shall broadcast a density altitude advisory to departing general aviation (GA) aircraft whenever the temperature reaches a certain level. These broadcasts shall be made on ground control (GC), clearance delivery (CD), airport advisory, transcribed weather broadcast (TWEB, Alaska only), or automatic terminal information service (ATIS) as appropriate. Use the following table to determine broadcast applicability: (See TBL 2-10-1.)

TBL 2-10-1
BROADCAST APPLICABILITY

<i>Field Elevations (MSL)</i>	<i>Broadcast Advisory When Temperature is</i>
2,000 to 2,999	85°F and higher
3,000 to 3,999	80°F and higher
4,000 to 4,999	75°F and higher
5,000 to 5,999	70°F and higher
6,000 to 6,999	65°F and higher
7,000 and higher	60°F and higher

Chapter 3. Facility Equipment

Section 1. General

3-1-1. BASIC EQUIPMENT

a. The basic operating equipment for ARTCCs consist of flight progress boards, radar displays, communications, automation, and, where applicable, URET equipment. At facilities utilizing Ocean21, additional equipment consists of Air Traffic Situation Displays and Auxiliary Displays. This equipment is arranged in individual units called sectors and laid out in accordance with master plans maintained in the En Route and Oceanic Service Area offices. Air traffic managers may recommend changes to these plans.

b. The basic operating equipment for terminals consists of a control desk, frequency control panel, weather instruments, recorders and, as required, "data communication," radar, and automation equipment arranged in many different configurations according to the type of facility and generally conforming to master plans maintained in Terminal Service Area offices. Air traffic managers may recommend changes to these plans.

c. The basic operating equipment for AFSSs/FSSs consist of radio and landline communications equipment, flight progress boards, pilot briefing equipment, recorders, "data communication" equipment, displays of aeronautical and meteorological information, direction-finding equipment, aircraft orientation plotting boards, "orientation, direction-finding equipment and aircraft orientation" arranged according to master plans maintained in Flight Service Area offices. Air traffic managers may recommend changes to these plans.

3-1-2. PERIODIC MAINTENANCE

a. Requests from Technical Operations personnel for approval to shut down air traffic system components for periodic maintenance are forwarded to the air traffic facility having approval authority.

b. If conditions prevent approval of the shutdown at the time requested, the STMCIC should cooperate fully and work with Technical Operations personnel

in arranging an alternative time. Ordinarily, shutdowns of air traffic system components should be planned to occur during the hours of least traffic activity regardless of the time of day.

c. When a NAVAID shutdown will affect another facility's operation, the facility having approval authority shall coordinate with other facilities concerned. This includes coordination of VHF/DF shutdown with the appropriate DF Net Control facility.

d. Upon facility acceptance of any URET system, that system becomes a component of the air traffic system for the purposes of requests from Technical Operations personnel for approval to shut down that system for periodic maintenance.

e. Notification of any planned or unplanned outage of URET shall be coordinated following the guidelines in Chapter 8, NAS En Route Automation, and guidelines developed and maintained by URET facilities.

3-1-3. NATIONAL AIRSPACE SYSTEM (NAS) CHANGES

When programs are initiated which will result in inauguration, commissioning, alteration, or decommissioning of NAS components (NAVAIDs, facilities, services, etc.), supervisors shall ensure, to the extent practicable, that effective dates coincide with the U.S. 56-day cycle effective dates for charting publications.

3-1-4. TRAFFIC LIGHTS, GATES, AND SIGNALS

Air traffic personnel shall not operate traffic lights, gates, signals, or similar devices for restricting or preventing transit of persons or vehicles between airport movement areas and other on/off airport areas, or to control vehicular traffic on streets, highways, rail, or other similar areas when traffic thereon may be incompatible with aircraft operations. The control of such traffic is the responsibility of airport management or other appropriate authorities.

3-1-5. CLEANING INSTRUMENT COVERS

■ Air traffic managers shall ensure that personnel use a moist cloth when cleaning glass or plastic instrument covers to preclude the creation of static charges.

3-1-6. ENGINE GENERATOR TRANSFER PROCEDURES FOR ANTICIPATED POWER FAILURE

■ a. STMCIC or OSIC at terminal facilities and ARTCCs shall inform the Systems Engineer (SE) or other appropriate Technical Operations supervisor of any severe storm activity approaching the facility.

■ b. At facilities without an operational power conditioning system (PCS), STMCIC or OSIC shall coordinate with the SE or other appropriate Technical Operations supervisor to determine a mutually acceptable time to change to/from generator power.

NOTE-

■ 1. *Air traffic and Technical Operations personnel are required to monitor weather reports and radar to determine when severe storm activity is approaching a facility. At least 30 minutes prior to the estimated arrival of a severe storm in the area of a facility, maintenance personnel will start engine generators at facilities as indicated in appropriate agency directives. (These include the Facilities Master File; FAAO 6030.31, Restoration of Operational Facilities; FAAO 6980.5, Engine*

Generator Transfer Procedures for Anticipated Power Failure; local contingency/emergency plans, or any other directives pertaining to restoration of services.) This 30-minute start-up requirement does not apply at facilities where at least one of the following conditions exists:

a. *The facility has an operational PCS.*

b. *Maintenance personnel are not on duty at the time action is required.*

c. *Air traffic has remote control of the engine generators.* ■

2. *After coordinating with air traffic, Technical Operations shall (depending on the type of auxiliary power system) either place the facility on generator power or place the generator on the loadbank until the storm activity has left the area. (The change back to commercial power will be made at the coordinated time.)* ■

3. *It is important to note that at facilities with an operational PCS, no action other than the initial storm notification is required since the transfer to generator power occurs automatically with no power interruption when commercial power fails.*

REFERENCE-

FAAO 6030.31, Restoration of Operational Facilities;
FAAO 6980.5, Engine Generator Transfer Procedures for Anticipated Power Failure.

Section 2. Use of Communications

3-2-1. RESPONSIBILITY

The air traffic manager is responsible for taking action to detect, prevent, and report:

a. Obscene, indecent, or profane language used on any means of communications (e.g., voice frequencies, Satellite Communication(s) (SATCOM), Controller Pilot Data Link Communications (CPDLC)).

b. False, deceptive, or phantom controller communications to an aircraft or controller. The following shall be accomplished when false or deceptive communications occur:

1. Collect pertinent information regarding the incident.

2. Notify the Regional Operations Center (ROC) of the phantom controller situation and request a conference call with the Technical Operations, System Management Office (SMO) manager, the Spectrum Management Officer, the Service Area Director and the Security and Hazardous Materials Division Manager.

3. Report all relevant information pertaining to the incident on the telephone conference.

4. Remove the voice tape from service at the normal tape change interval and record the pertinent information on a cassette in accordance with FAAO 8020.11, subpara 76c, Retention of Original Voice Recordings.

c. Identification used on frequencies not assigned or authorized by the FAA.

d. Willful or malicious interference with other communications.

e. Remarks of a personal nature on any means of communications (e.g., voice frequencies, SATCOM, CPDLC).

3-2-2. AUTHORIZED MESSAGES NOT DIRECTLY ASSOCIATED WITH AIR TRAFFIC SERVICES

Occasions may arise when messages by a third party pertaining to the safety of aircraft operation or the preservation of life and/or property are necessary.

Such messages may be authorized on FAA radio communications channels. They may be handled by air traffic specialists or the individuals making the request. The latter may be given access to facilities to personally issue such messages provided (See FAAO 6050.32, Spectrum Management Regulations and Procedures):

a. Control instructions shall not be issued.

b. Transmission can be interrupted when required to continue ATC services.

REFERENCE—

Advisory Circular AC 150/5210-7C, Airport Rescue and Fire Fighting Communications.

3-2-3. USE OF OTHER THAN FAA COMMUNICATIONS CIRCUITS

FAA personnel shall be responsive to any State or local governmental agency offering to use their communications facilities for the relay of flight plan information and to cooperate with such agencies in developing procedures for relaying flight plan information to FAA facilities.

3-2-4. FBI USE OF FAA FREQUENCIES

Local FBI offices have been authorized to contact AFSSs/FSSs and ATCT to consummate local agreements for emergency use of specific frequencies using FBI transceiver equipment in hijacking situations. To facilitate the handling of these requests, the guidelines set forth below shall be followed (See para 3-2-2, Authorized Messages Not Directly Associated with Air Traffic Services):

a. Selection of AFSS, FSS, and ATCT radio frequencies is flexible, but it shall be from existing local assignments and approved by the air traffic manager after coordination with the regional frequency management office.

b. Selection of tower radio frequencies is flexible, but it shall be from existing local assignments and approved by the air traffic manager after coordination with the regional frequency management office. Requests for frequency between 121.60 and 121.90 MHz can be expected.

**3-2-5. AERONAUTICAL ADVISORY STATIONS
(UNICOM/MULTICOM)**

Pursuant to FCC Rules and Regulations, Part 87, Subpart C, UNICOM stations are not authorized for ATC purposes other than the relay of certain ATC information between the pilot and the controller. Relay of ATC information is limited to:

- a.** Takeoff, arrival, or flight plan cancellation times.
- b.** ATC clearances, provided there is a LOA between the licensee of the advisory station and the FAA facility.

Section 3. Communications Procedures

3-3-1. SERVICE “F” COMMUNICATIONS

Facility air traffic managers shall establish procedures to provide interim communications in the event that local or long-line standard Service “F” fail. These shall include the use of telephone conference circuits and the use of airline or other facilities.

3-3-2. TELEPHONE COMMUNICATIONS

a. Answer public access telephones by stating the facility’s name and type. The employee may state his/her name at his/her discretion. If, for any reason, a caller specifically requests identification, the employee should provide his/her assigned operating initials in lieu of the actual name.

EXAMPLE—

ARTCC: (The facility’s name) Center; e.g., Washington Center.

AFSS/FSS: (The facility’s name) Flight Service; e.g., Prescott Flight Service.

ATCT: (The facility’s name) Tower; e.g., Atlanta Tower.

Approach Control: (The facility’s name) Approach Control; e.g., Dulles Approach Control.

b. Answer local airport, private exchange (PX), or interdepartmental system type telephones as outlined above, except omit the location name; e.g., Center, Tower, Flight Service, etc.

c. Where the public access telephone is recorded, a beeper tone is not required. In place of the “beep” tone, the FCC has substituted a mandatory requirement that persons to be recorded must be given notice that they are to be recorded and give consent. This notice is given to the public through an entry in the Aeronautical Information Manual (AIM). Consent to the record is assumed by the individual when placing the call to an operational facility.

d. When equipment capabilities exist, every effort should be made to conduct conversations with flight-crews or other appropriate persons regarding any aircraft accident, incident, and/or ATC services on a recorded line.

3-3-3. MONITORING FREQUENCIES

a. Frequencies allocated to a facility shall be continuously monitored except:

1. ARTCCs need not monitor 121.5 and 243.0 MHz if other ATC facilities monitor those frequencies in a given area.

2. AFSSs/FSSs equipped with ICSS equipment may reconfigure the ICSS to allow the temporary selection, muting, or rerouting of 121.5 and 243.0 MHz during the period of an interfering signal; e.g., continuous emergency locator transmitter (ELT), stuck mike, etc.

b. Facilities shall establish procedures to ensure that frequencies used on a shared basis; e.g., single frequency approach operations, are continuously monitored by one of the positions of operation.

3-3-4. EMERGENCY FREQUENCIES 121.5 AND 243.0 MHz

a. Air traffic facilities shall have transmit and receive capability on emergency frequencies 121.5 and 243.0 MHz as necessary to meet emergency frequency network requirements.

b. Normally, ARTCC emergency frequency capability shall be limited to the transmitter/receiver site nearest the ARTCC.

c. At locations having more than one type of facility, such as an AFSS/FSS and a tower, or an AFSS/FSS, a tower, and an ARTCC, a common transmitter and receiver may be shared where practicable. Where this is done, the transmitter shall be equipped with a lockout device to avoid inadvertent interference between facilities.

d. When facilities are in proximity and no derogation of services will result, transmit/receive capability should not be provided for each facility. The following requirements shall be maintained:

1. Geographical area coverage shall not be derogated.

2. DF-equipped facilities shall have transmit/receive capability on 121.5 MHz.

3. Facilities without emergency frequency capability shall have appropriate landlines for rapid relay of emergency information.

e. The two emergency channels shall not be terminated on the same key in the transmitter-receiver

selector panels. Neither emergency frequency shall be terminated with any other frequency.

f. To preclude inadvertent use of these frequencies, a mechanical or other appropriate device shall be provided which will require deliberate removal or bypass before any emergency frequency transmit key can be moved to the locked–operate position.

g. UHF emergency frequency 243.0 MHz is installed in military aircraft using an override arrangement. As a result, transmissions on this frequency are received by all military aircraft within the transmitter’s area of coverage. Unnecessary emissions on this frequency derogate communications on ATC frequencies and may interfere with valid emergency communications. Reduce transmissions on 243.0 MHz to the absolute minimum consistent with safety.

h. As a minimum, conduct two–way, ground–to–air checks during low activity periods:

1. Once a week.
2. Following equipment repairs.
3. Following Technical Operations maintenance checks.

i. Control facilities should limit broadcasts on 243.0 MHz to the facility in the area of desired coverage and shall insure that broadcasts are not continued unnecessarily.

3–3–5. BATTERY–POWERED TRANSCEIVERS

Facilities equipped with battery–powered transceivers shall ensure that they are maintained in a state of readiness. Transceivers shall be checked at least once a week.

3–3–6. FACILITY STATUS REPORT

Facility air traffic managers shall notify System Operations and Safety by message, attention Manager of System Safety and Procedures, with an information copy to the appropriate Service Area office, of changes in the operational status of communication facilities not covered by FAAO 7900.2, Reporting of Electronic Navigation Aids and Communication Facilities Data to the NFDC. The following data shall be reported (include the RIS AT 7230–12 in the text):

a. The date and time FAA assumes operation of or decommissions an operations center, message center,

data switching center, domestic or international aeronautical fixed telecommunication network (AFTN) “data communication circuit”, or international voice circuit.

b. Change in the hours of operation of any of the above and the effective date.

c. Changes required in weather schedule publications and communications systems drawings.

3–3–7. TESTING EMERGENCY LOCATOR TRANSMITTERS

a. The frequencies 121.6, 121.65, 121.7, 121.75, 121.8, 121.85, and 121.9 MHz are authorized to ELT test stations and for use in ELT exercises by the Air Force, Coast Guard, and other search and rescue organizations. Coordination with regional frequency management offices must be effected prior to activating the transmitter. Non–Federal assignments must be obtained through the FCC.

b. Airborne ELT tests shall not be authorized.

c. Aircraft operational testing of an ELT is authorized on 121.5 MHz and 243.0 MHz as follows:

1. Tests should be no longer than three audio sweeps.

2. If the antenna is removable, a dummy load should be substituted during test procedures.

3. Tests shall only be conducted the first 5 minutes of any hour.

d. Normally, there will be no interference on 121.5 MHz or 243.0 MHz as testing will be conducted in a screened or shielded room or test enclosure that will hold the self–contained ELT unit with the antenna fully extended. If interference is noted, it shall be brought to the attention of the repair station operator for corrective action. If the repair station operator does not correct the fault and the interference continues, make a verbal report to the appropriate FSDO.

3–3–8. VSCS FREQUENCY BACKUP

a. Assign each “Radar Associate” position the identical frequencies as the “Radar” position except where precluded by system hardware/software limitations or facility needs.

b. If the conditions of paragraph a cannot be met, the frequencies needed to control each sector shall be

available at another position. This level of redundancy assures all A/G frequencies can readily be covered in the case of VCE outage.

3-3-9. VSCS RECONFIGURATIONS

a. Air traffic VSCS positions listed as “released to maintenance” shall not be reconfigured unless prior approval has been received from Technical Operations.

b. When approval has been obtained and the reconfiguration action has been completed, return the previously released position to Technical Operations and continue to list the position as “released to maintenance,” or as directed by Technical Operations.

NOTE—

During the period that the VSCS position is listed as “released to maintenance,” this procedure shall be utilized whenever a reconfiguration to the position is required.

3-3-10. VTABS (VSCS TRAINING AND BACKUP SYSTEM)

a. Facility air traffic managers shall ensure that local procedures are developed which will accommodate switching from VSCS to a VTABS operation. These procedures shall include, but not be limited to:

1. Controllers shall, in the event that VSCS air/ground communications capabilities are lost, notify the operational supervisor and attempt to access all air/ground resources through the VSCS via Main, Standby, and BUEC.

2. The operational supervisor shall notify the supervisor traffic management coordinator (STMC) and consider combining sectors within the area before going to a VTABS operation. The VTABS system is designed wherein the entire facility must be switched over to VTABS. Consider all alternatives before making the transition to VTABS. If these resources are unsuccessful, the STMC shall coordinate with the NOM to transition to VTABS.

3. Operational supervisors shall ensure the VTABS sector map configurations are appropriate for the operation.

4. Controllers shall verify the appropriate VTABS frequency mode; i.e., main, standby, or BUEC, for their operating position, since the VTABS frequency selection will be in the same mode as when it was last used.

b. When a catastrophic loss of VSCS occurs and transfer to a VTABS configuration becomes necessary, the STMC shall assure that the procedures established in para 2-1-7, Air Traffic Service (ATS) Continuity, are adhered to.

Section 4. Recorders

3-4-1. USE OF RECORDERS

a. Air traffic facilities shall record operational communications to the maximum extent practicable.

b. Record at each operating position to include all data transmitted and/or received via radio, telephone, VSCS, or automated means such as Mode S, Data Link, and satellite. Facility management shall advise operating positions when the recording equipment associated with these positions is not operating or otherwise unavailable for recording. Facility management shall then ensure that a written record, or equivalent, to the extent possible, is made for all IFR clearances.

c. If combined positions are periodically split into individual positions, record them on separate channels when so used.

d. Supervisors shall ensure that the proper FAA/telephone company (TELCO) “jacks” are used to obtain the required recording at facilities with dual capability.

e. Use a separate channel on each recorder to record time at facilities with time–announce systems. Where these systems have not been installed, a spare receiver tuned to a time transmitting station may be used.

f. Operational voice recorders shall be provided a time source.

g. Except as noted in para 3-4-2, Assignment of Recorder Channels, record with regard to the position in lieu of the function. All headset audio on a position shall be recorded on a single channel. In facilities so equipped, all FAA–speaker audio shall be recorded on the “radio only” jack channel. If a “radio only” jack is not available, another channel may be used.

h. Reserve one channel of each recorder for recording time; except two channels shall be reserved on the FA5394, 30–channel recorder. If a coded time source and a time code reader are available, record the coded time source in preference to voice time announcements. Recording more than one time source on any recorder is prohibited.

i. Each FSS collocated with an ARTCC will use the center’s voice recorder system resources to

minimize requirements for spare parts, test equipment, and routine maintenance.

j. Recorders may be used to monitor any position for evaluation, training, or quality control purposes.

k. Air traffic managers should develop procedures to ensure that frequencies are not recorded when facilities are officially closed.

3-4-2. ASSIGNMENT OF RECORDER CHANNELS

a. Assign position recording channels in the following order of priority:

1. ARTCCs:

- (a) Radar controller.
- (b) Sector controller.
- (c) Radar handoff controller.
- (d) Radio controller.
- (e) Coordinator.
- (f) Supervisor.
- (g) Traffic Manager.
- (h) Flight data.
- (i) Data systems coordinator.
- (j) Mission coordinator.
- (k) AMIS controller.

2. Terminals:

- (a) Arrival control.
- (b) Departure control.
- (c) Local control.
- (d) Precision approach radar.
- (e) Clearance delivery.
- (f) Ground control.
- (g) Inbound flight data.
- (h) Outbound flight data.
- (i) Direction–finding.
- (j) Supervisory.

(k) Automatic terminal information services (ATIS) – air traffic managers shall designate a channel to record ATIS when a separate channel is not available. Record the ATIS message once at the time of preparation on the designated channel. Make a written record of each ATIS and retain for 15 days if a recorded channel is not available.

3. FSSs/AFSSs:

- (a) Flight watch.
- (b) Inflight.
- (c) Preflight.
- (d) Flight data.
- (e) Supervisory.

4. ATCSCC:

- (a) National Operations Manager (NOM).
- (b) National Traffic Management Officer (NTMO).
- (c) Traffic Management Specialist (TMS) operating position.

b. You may use existing remaining spare recording channels to record the primary radio frequencies of positions using the same priority stated above.

3-4-3. CHECKING AND CHANGING RECORDER TAPES

a. At En Route facilities and the ATCSCC, Technical Operations personnel shall be responsible for checking and changing recorder tapes or digital audio tapes (DAT).

REFERENCE—

(Analog) FAAO 6670.4, *Maintenance of Multichannel Recorder Equipment*,

or

(Digital) FAAO 6670.13, *Maintenance of Digital Voice Recorder Equipment (DVR)* and FAAO 6670.15, *Maintenance of Digital Voice Recorder System Series II (DVR II)*.

b. At terminal and flight service facilities:

1. Where recorders are not convenient to operating quarters, the facility air traffic manager and the Technical Operations local manager shall develop an agreement assigning the responsibility for checking and changing recorder tapes or DATs.

2. Where recorders are convenient to operating quarters, air traffic personnel shall perform recorder checks.

c. If air traffic personnel check and change tapes or DATs, the facility air traffic manager shall ensure that personnel are trained in the proper methods to be used.

d. Recorder monitor operation checks on analog voice recorder systems shall be performed daily and shall not exceed 26 hours between checks. Procedures for monitoring operations in analog recorders are described in FAAO 6670.4, *Maintenance of Multichannel Recorder Equipment*. On a daily basis (not to exceed 26 hours), validate the Nicelog supervision window for alarms and verify normal operation of equipment on digital voice recorder systems.. Indicate accomplishments of checks on FAA Form 7230-4, *Facility Record of Operation*.

3-4-4. HANDLING RECORDER TAPES OR DATs

a. Place the following information on each reel or DAT storage case before storage:

- 1. The recorder number.
- 2. The date and the time UTC.
- 3. The initials of the person changing the reel.

b. Retain the tapes or DATs for 45 days, except:

1. En route facility utilizing system analysis recording tapes as their radar retention media (regardless of the type of voice recorder system being used) shall retain voice recordings for 15 days.

2. Those facilities utilizing an analog voice recorder system shall retain voice recordings for 15 days.

3. The David J. Hurley Air Traffic Control System Command Center shall retain voice recordings for 15 days.

4. Accidents: Retain the tapes or DATs in accordance with FAAO 8020.11, *Aircraft Accident and Incident Notification, Investigation and Reporting*.

5. Incidents: Retain the tapes or DATs in accordance with FAAO 8020.11, *Aircraft Accident and Incident Notification, Investigation, and Reporting*; and FAAO 1350.15, *Records Organization, Transfer, and Destruction Standards*.

6. Hijacking: Retain all relevant tapes or DATs of hijackings from the time communication commences with the aircraft until communication has terminated. After 3 years, contact System Safety and Procedures for the release of the tapes or DATs. In every case, a release from System Safety and Procedures is required to return hijack tapes or DATs to service.

3-4-5. VSCS DATA RETENTION

a. Retain the VSCS cassette, disc, and tape recordings and data communications/console type-writer printouts for 15 days unless they are related to an accident/incident as defined in accordance with FAAO 1350.15, Records Organization, Transfer, and Destruction Standards, Chapter 11, Section 8020.

b. If a request is received to retain the VSCS communications traffic listings and the system configuration and/or mapping data following an accident, the printout of the relative data will suffice, and the VSCS cassette, disc, and/or tape may then be returned to service through the normal rotational cycle. The printout data are considered a permanent record and shall be retained in accordance with aircraft accident/incident retention requirements.

Reduction of the VSCS cassette, disc, and tape recordings to hard-copy format shall be made at the earliest time convenient to the facility involved without derogating the ATC function and without prematurely taking the VSCS out of ATC service. Do not make these data and printouts a part of the accident/incident package.

c. If a request is received to retain a specific data recording and the data is available and contained on VSCS cassette, disc, and/or tape, the VSCS cassette, disc, and/or tape shall be retained in its entirety. If the data requested is contained on several different media (e.g., VSCS cassette, disc, and/or tape media), the facility may transfer all pertinent data to a common media and label the media a Duplicate Original. After successful transfer, the original VSCS cassette, disc, and/or tape may be returned to service through the normal rotational cycle. However, if a specific request is received to retain the original VSCS cassette, disc, and/or tape, the original VSCS cassette, disc, and/or tape shall be retained in its entirety.

d. Treat the VSCS cassette, disc, tape, duplicate originals, and data communications/console type-writer printouts related to hijack aircraft the same as voice recorder tapes. (See para 3-4-4, Handling Recorder Tapes or DATs).

Section 5. Navigational Aids

3-5-1. NAVAID MONITORING

When a facility is assigned responsibility for monitoring NAVAIDs, the air traffic manager shall issue monitoring instructions in a facility directive. Notification procedures shall be coordinated with the appropriate sector manager. In the case of an AFSSs/FSSs having monitor responsibility for a NAVAID in another AFSS/FSS facility's area, a LOA may be executed between the affected AFSSs/FSSs.

NOTE-

Monitoring assignments are made by the Flight Services Area Office.

a. VOR/VORTAC:

1. Aurally check the identification at the beginning of each watch.

NOTE-

Upon commissioning of 2nd generation (FA-9996) VORs, aural monitoring is not required.

2. Record the check in accordance with subpara 4-6-5h, Preparation of FAA Form 7230-4.

3. If a monitor Category 2 exists:

(a) Take appropriate action as indicated in FAAO 7110.65, Air Traffic Control, para 2-1-10, NAVAID Malfunctions, or FAAO 7110.10, Flight Services, para 13-1-2, Duties.

(b) Notify the ARTCC.

NOTE-

1. VORs, VORTACs, and TACANs have an automatic course alignment and signal monitor (ACM). This monitor is usually connected to a remote alarm. An automatic transfer and shutdown unit (ATU) is installed as part of the ACM. When the ACM detects a malfunction, the ATU switches the range to a standby transmitter. If the standby transmitter does not work properly, the ATU will shut down the facility.

2. Monitoring of VOR test signals (VOT) is accomplished by a light or a buzzer monitor and is of local concern only.

3. VOR and VORTAC monitor categories:

a. Category 1: Alarm feature and identification heard at the control point.

b. Category 2: Monitor equipment failure and identifi-

cation not heard at the control point, but aircraft reports indicate that the facility is operating normally.

c. Not constantly monitored by other than ACM and ATU.

b. TACAN (joint-use airports):

1. Aurally check the identification at the beginning of each watch.

2. Immediately notify the responsible military authority when an alarm is received.

3. Consider the aid inoperative when the alarm cannot be silenced and the identification cannot be heard on the aural monitor.

NOTE-

The military authority will issue NOTAMs for TACANs.

c. DME (to be monitored by the same facility that monitors the associated VOR, VORTAC, MLS, or ILS):

1. Press the VOR/DME control oscillator level to the "Facility On" position at the beginning of each watch.

2. Record the check in accordance with subpara 4-6-5h, Preparation of FAA Form 7230-4.

d. L/MF aids (to be monitored on a continuous basis):

1. Check the identification at the beginning of each watch.

2. Record the check in accordance with subpara 4-6-5h, Preparation of FAA Form 7230-4.

e. NDB (class MH, class H, and class HH):

1. Monitor continuously by automatic means the beacons used as IFR aids.

2. Check the operation at least once each hour if an automatic alarm is not available.

f. ILS/MLS:

1. Check the ILS/MLS monitor panel at the beginning of each watch and record the system status in accordance with subpara 4-6-5h, Preparation of FAA Form 7230-4.

2. Apply the procedures described in para 3-5-2, System Component Malfunctions, when there are indications that a component has failed.

3. If you suspect that the indication is caused by a control line or a control station monitor failure rather than a malfunction of the component itself, take appropriate action as indicated in FAAO 7110.65, para 2-1-10, NAVAID Malfunctions, or FAAO 7110.10, Flight Services, para 13-1-2, Duties. If malfunction is confirmed, discontinue use of the component involved.

NOTE-

Not all ILS components are provided remote monitor and control lines (on/off capability). If the failure indication is caused by a control line or a control station monitor failure, the Technical Operations technician shall advise if that component will be restored to operation and the monitor status.

g. Compass locators:

1. Monitor continuously by automatic means.
2. Check the operation at least once each hour if an automatic alarm is not available.
3. If the provisions of subparas 1 or 2 above cannot be met, the compass locator may be considered monitored if it is equipped with an automatic monitor and shutdown feature at the site. In this case responsibility for monitoring shall not be assigned to the air traffic facility.

3-5-2. SYSTEM COMPONENT MALFUNCTIONS

Take the following action when the alarm signal or a report indicates an air traffic system component malfunction:

- a. Try to restore the aid to normal operation.
- b. If unable to restore it, discontinue its use and:

1. Notify the appropriate IFR control facility/sector.

2. Notify the appropriate AFSS/FSS as necessary.

3. Notify Technical Operations personnel in accordance with FAAO 6030.31, Restoration of Operational Facilities, and locally developed procedures.

4. Issue any necessary NOTAMs, and take other NOTAM related actions as appropriate.

REFERENCE-

*Para 3-5-1, NAVAID Monitoring.
FAAO 7930.2, Para 4-2-1, NOTAM Composition.*

NOTE-

When Technical Operations personnel silence the monitoring system of any NAVAID, they will assume responsibility for the monitoring function.

3-5-3. PROCESSING GPS ANOMALY REPORTS

Forward all information gathered as per FAAO 7110.65, Air Traffic Control, subpara 2-1-10b, through the TMU to the ATCSCC and the local MCC.

NOTE-

The NMCC in Herndon, Virginia is the focal point for upward reporting and response coordination for all GPS anomalies.

3-5-4. ORIGINATING NOTAMs CONCERNING NAVAIDs

Air traffic facilities having responsibility for monitoring NAVAIDs shall originate NOTAMs regarding their status unless otherwise directed by the Service Area office.

Section 6. Direction Finders

3-6-1. DF ANTENNA SITE

The DF antenna may be located at a site other than the airport proper. If the antenna is remotized, it is important that specialists recognize that the bearing information obtained is in relation to the antenna site rather than to the airport.

3-6-2. STROBE LINE INDICATION

Each time an aircraft transmits on the designated frequency, bearing information is provided from the antenna site. This data can be presented directly on the surveillance scope by strobe line indication. It also appears on the DF mechanical azimuth indicator.

3-6-3. EQUIPMENT LIMITATIONS

Equipment specifications require a bearing accuracy of plus or minus 6 degrees on the azimuth indicator. This deviation may be increased depending on the site, terrain, or other factors. A small additional error is introduced when the strobe line indication is placed on the surveillance scope. Additionally, as in the case of any electronic equipment, the DF unit has certain limitations.

3-6-4. INACCURATE BEARING INDICATION

DF equipment is designed to furnish bearing information from any transmitting station within communications range on the frequency selected. Any signal within range affects it. Therefore, when two or more aircraft are transmitting simultaneously, an inaccurate bearing indication results.

3-6-5. COMMISSIONING DF EQUIPMENT

When DF equipment is commissioned:

- a. Notify the appropriate Technical Operations Aviation System Standards, National Flight Procedures.
- b. Coordinate with the Technical Operations Aviation System Standards, National Flight Procedures to establish minimum safe DF altitudes for a 100 mile radius. See FAAO 8260.3, United States

Standards for Terminal Instrument Procedures (TERPS).

c. Provide for the use of normal and emergency air/ground frequencies in DF radio communications (VHF, 118–156 MHz).

d. The Terminal Operations Area office shall determine requirements for establishment of DF approach procedures at airports with suitably located DF antenna sites.

NOTE—

The Technical Operations Aviation System Standards, National Flight Procedures will document and approve the procedure (restrictively identified for emergency use only) on FAA Form 8260 and supply copies to the associated AFSS/FSS/ATCT/ARTCC. Flight Standards will submit data to be published in the AIM. Approach details will be published only on FAA Form 8260.

e. Prepare a facility directive specifying the service to be provided. Include the following:

1. Instructions that:

- (a) The DF indication and the bearing of a known transmitter site be compared once each watch.
- (b) The reception of all frequencies be checked once each day if there is a suitable signal available.

2. Approved DF approach procedures.

3. Minimum safe DF altitudes.

3-6-6. OPERATING PROCEDURES

Facilities equipped with DF shall:

a. Check the equipment at least once each 8 hours, and advise any affected radar control facilities and AFSSs of a DF outage.

b. Maintain the equipment in a state of readiness that will allow for operation in the shortest time possible. (This may be “off,” “standby,” or “continuous” depending on the operational characteristics of the equipment.)

c. During periods when DF information is not required, the frequency selected shall be left to the discretion of the facility as determined by local requirements.

3-6-7. ASR-ASSOCIATED DF

VHF/DF equipment is installed at many airports equipped with ASR. The information obtained furnishes the heading needed to bring the aircraft within the ASR pattern. Specialists may use this equipment to assist in obtaining an accurate bearing to:

- a. Locate a lost aircraft or one in distress which is within communications range but outside radar coverage.
- b. Vector an aircraft directly to an airport.
- c. Coordinate cross bearings to establish a fix where the communications range of two or more installations overlap.

3-6-8. ASSIGNING HEADING USING DF/ASR

If the DF antenna and the ASR antenna are not collocated, the surveillance compass rose centers on the ASR antenna site rather than on the DF antenna site. When assigning an aircraft a heading for homing purposes using the DF equipment under these circumstances, make the required allowance for the location of the two sites.

3-6-9. CANCELING DF APPROACH PROCEDURES

DF approach procedures may be canceled if deemed appropriate by the Terminal Operations Area office and Technical Operations Aviation System Standards, National Flight Procedures.

Section 7. Radar Use

3-7-1. COMMISSIONING RADAR FACILITIES

a. Electronic Commissioning:

1. Subsequent to the initial installation of an ARSR/ASR system, the provisions of FAAO 8200.1, United States Standard Flight Inspection Manual, para 215 shall be satisfied prior to the electronic commissioning of the facility.

2. Major equipment modifications or major component changes to existing installations may necessitate a special flight check to reaffirm that the radar is continuing to meet the original commissioning criteria. When such a change is made, the new type equipment shall be electronically commissioned in accordance with subpara 1 above.

3. If ASR equipment cannot meet the surveillance approach requirement during the flight check, consider this phase of the flight check as secondary and commission the equipment for its primary purpose of providing radar traffic control service.

b. Operational Implementation:

1. When a radar facility is to be commissioned, a 60-day period of use (without the application of radar separation standards) should elapse between the electronic commissioning date and the inauguration of radar air traffic control service. This period will permit controllers to gain experience in tracking, vectoring, and identification. It will better ensure a full understanding of the equipment, procedures, and services to be provided. However, this 60-day period is not mandatory and may be reduced or eliminated provided NOTAM requirements can be satisfied and the Service Area office is assured that the intended service can be carried out in a safe and efficient manner.

2. Only one phase of service should be implemented at a time. A period of 30 to 60 days should elapse between the implementation of subsequent phases. For example, ARTCCs may initiate en route service on specific routes or within specified areas; terminals may implement either arrival or departure service 30 to 60 days prior to expanding to other areas/services. Advertised services must be implemented on an all-aircraft basis and shall be accomplished in accordance with FAAO 7110.65, Air Traffic Control. If services are initially implemented

on a “part-time” basis, the daily hours (preferably 8 hours or longer) shall be specified in the aeronautical information message and the advertised services maintained during those hours. The extent and types of service will be dependent upon operational requirements, personnel, and equipment capabilities. The schedule of radar service implementation shall be jointly determined by the facility air traffic manager and the Service Area office. Service Area office approval is required prior to the implementation of each phase of radar service.

3. A review of the existing LOA shall be accomplished to ensure that necessary changes are made or that new agreements are consummated and approved prior to implementing any phase of radar traffic control. Airspace areas for which radar terminal facilities have responsibility should include sufficient vector areas for:

(a) Positioning and spacing of arriving aircraft en route to the airport from outer fixes or radar handoff points.

NOTE—

Normally, no less than two nor more than four outer fixes are used to serve a single approach course. These fixes are normally located to permit simultaneous holding at the same altitude. When only one radar approach control position is used, two outer fixes are optimum. If two radar approach positions are available, four fixes are optimum.

(b) Spacing and control of departing aircraft and aircraft executing missed approaches.

(c) Positioning and spacing transitioning aircraft.

c. Notification Procedures:

1. Issue an aeronautical information message for each location at least 30 days prior to and again immediately following implementation of radar ATC procedures containing the following:

(a) Nature of service; e.g., departure, arrival, en route.

(b) Proposed or effective date.

(c) Specific airspace affected.

(d) Hours of service if less than 24 hours per day.

EXAMPLE—

BAKERSFIELD, CALIFORNIA, SURVEILLANCE RADAR EXPECTED TO BE COMMISSIONED ON OR ABOUT JUNE 15, 2004. RADAR AIR TRAFFIC CONTROL SERVICE USING RADAR SEPARATION STANDARDS WILL BE APPLIED AS APPROPRIATE. SERVICE WILL BE PROVIDED DAILY BETWEEN THE HOURS OF 1400–2300Z WITHIN 40-MILE RADIUS OF BAKERSFIELD.

2. When an additional service is to be implemented or a change in programmed areas of application is made, issue an aeronautical information message delineating that new service. Advance notice is desirable. However, it is not mandatory, and the aeronautical information message may be issued concurrently with the inauguration of the extended radar service.

3. When a change in ARSR/ASR equipment is made, issue an aeronautical information message if a modification to existing service will result and/or if a break in service of more than 30 minutes will occur.

4. A copy of each of the memoranda/aeronautical information message sent to System Operations Airspace and Aeronautical Information Management Office for inclusion in the Notices to Airmen publication and/or the Airport/Facility Directory shall be addressed to Manager of Publications, Manager of System Safety and Procedures, Manager of Flight Services Administration, and the appropriate Service Area offices.

3-7-2. RADAR USE

a. Approved radar systems may be used for:

1. Surveillance of aircraft to assure the effective use of airspace.

2. Vectoring aircraft to provide separation and radar navigation.

3. Vectoring aircraft to final approach.

4. Vectoring IFR aircraft to the airport of intended landing.

5. Monitoring instrument approaches.

6. Providing radar traffic, weather, chaff, and bird activity information.

7. Providing assistance to pilots of aircraft in distress.

b. Approved terminal radar systems may also be used for:

1. Conducting precision or surveillance approaches.

2. Formulation of clearances and control instructions based on runways and movement areas observable on the ASDE.

NOTE—

In accordance with FAAO 7110.65, Chapter 3, Airport Traffic Control – Terminal, Section 6, Airport Surface Detection Procedures.

3-7-3. ATC RADAR BEACON SYSTEM DECODER CONTROL BOX CHECKS**NOTE—**

Not Applicable to STARS.

Facility air traffic managers shall ensure that radar controllers perform daily performance checks of the decoder control box as follows:

a. Each controller is responsible for determining on a day-to-day basis if the operation of his/her decoder control box is satisfactory for ATC purposes. Decoder control box performance can be determined by checking all switches, thumbwheel code selectors, and selected channels to ensure that they are functioning properly. The actual operation of each channel should be checked by decoding a known target sequentially on each channel and observing it on both double and single slash. Notify the STMCIC if a malfunction is observed.

b. STMCICs shall make an entry on FAA Form 7230-4 of any malfunctions and report same to the Technical Operations personnel on duty.

c. At sites equipped with automatic beacon decoders, such as ARTS and the TPX-42, the radar beacon control decoder box need not be checked daily. The requirements of subpara a above shall be met as soon as possible after reverting to broadband beacon information.

3-7-4. MONITORING OF MODE 3/A RADAR BEACON CODES

a. Facility air traffic managers may assign Mode 3/A codes to be monitored in addition to those required by FAAO 7110.65, Air Traffic Control, Chapter 5, Section 2, Beacon Systems.

b. A facility directive shall be issued establishing facility standards for displaying required transponder replies in all available operational modes.

c. Where desirable, beacon targets may be displaced at a slightly greater range than their respective primary returns. When beacon displacement is elected, issue a facility directive specifying the standard relationship between primary returns and the beacon control slash of secondary returns. The maximum allowable beacon target displacement which may be specified by the facility air traffic manager is 1/4 mile for STARS and 1/2 mile applied in 1/4 mile increments for all other facilities.

3-7-5. RADAR TARGET SIZING

Minimum target size for terminal radar systems using terminal digital radar or full digital target symbols, except for MEARTS, shall not be less than the minimum target size shown in Technical Operations' orders concerning the maintenance of terminal digital radar. The target symbol shall be centered on the terminal digital radar/full digital system type target presentation.

NOTE-

Target size is fixed in MEARTS regardless of range or data block character size.

3-7-6. TERMINAL DIGITAL RADAR SYSTEM AND DISPLAY SETTINGS

a. The following system settings for the terminal digital radar/DVCP shall be established in a facility directive.

1. Normal weather setting positions when 2-level weather is selected on the system control panel.

2. MEARTS normal weather setting positions when 3-level weather is selected on the system control panel.

3. Normal weather setting positions when 6-level weather is selected on the system control panel.

4. Name, range/azimuth, altitude, and coordinates of prominent obstructions.

5. Azimuth and range settings of moving target indicator (MTI) reflectors used for map alignment.

6. Permanent beacon target (Parrot) used for map alignment location.

b. The following display settings shall be established in a facility directive, except for MEARTS:

1. Weather/Radar Gate normal setting.

2. Position startup weather level settings.

c. The air traffic manager and Technical Operations SMO manager shall prepare a local order defining the procedures needed to protect the antenna, shutdown the antenna, transfer power between high and low voltage, and transfer from one channel to another channel.

3-7-7. PREARRANGED COORDINATION

a. Air traffic managers at radar facilities shall determine whether or not a clear operational benefit will result by establishing prearranged coordination procedures (P-ACP). Such procedures would allow aircraft under one controller's jurisdiction to penetrate or transit another controller's airspace in a manner that assures standard separation without individual coordination for each aircraft. When reviewing existing P-ACPs, or contemplating the establishment of these procedures, consideration shall be given to airspace realignment to preclude coordination/penetration of another operational position's airspace. Prior to implementing a P-ACP, negotiations should be accomplished locally and all affected personnel shall be thoroughly trained in the application of the procedures.

b. When P-ACPs are established, a facility directive shall be published. The directive shall include, as a minimum:

1. Requirement that the NAS Stage A (en route) or ATTS (terminal) systems are fully operational.

2. Procedures to be applied in the event that prearranged coordination procedures are not practicable.

3. The position(s) authorized to penetrate the protected airspace of an adjacent position.

4. Detailed responsibilities relating to P-ACP for each position.

5. The requirement that two positions of operation cannot be authorized to penetrate each other's airspace simultaneously.

6. Controllers who penetrate another controller's airspace using P-ACP shall display data block information of that controller's aircraft which shall contain, at a minimum, the position symbol and altitude information.

7. Controllers who penetrate another controller's airspace using P-ACP shall determine whether

the lead aircraft is a heavy or B757 when separating aircraft operating directly behind, or directly behind and less than 1,000 feet.

8. Procedures to be applied for those modes of operation when the computer fails or is shut down,

the beacon fails and only primary is available, and for nonbeacon aircraft or at automated facilities aircraft without an associated full data block.

REFERENCE—

FAAO 7110.65, Para 5-4-10, Prearranged Coordination.

Section 8. Video Maps

3-8-1. TOLERANCE FOR RADAR FIX ACCURACY

Careful attention must be given during commissioning flight checks of a radar to the accuracy of digital maps, video map plates, or overlays to ensure that the plate or overlay markings meet specified requirements relative to permanent targets. In actual practice an aircraft's displayed position can be slightly in error with respect to its geographic position and still meet the requirements of FAAO 8200.1, United States Standard Flight Inspection Manual.

3-8-2. RADAR MAPPING STANDARDS

The minimum radar mapping capability required for commissioning radar services is one of the following:

- a. Dual video mapper.
- b. Adequate map overlay.
- c. Single video mapper plus a map overlay.
- d. AN/GPA-70 at USAF installations.
- e. AN/GPA-91 at Navy installations.
- f. Computer-generated displays.

NOTE-

Grease pencil markings, plastic tape, compass rose grid lines, range marks, or other innovations shall not be used in lieu of an adequate digital map, map overlay, or video map.

3-8-3. DISPLAY MAP DATA

To reduce scope clutter and increase operational efficiency, limit data on display maps to the following (except for subpara o, facility air traffic managers may delete items not required):

- a. Airports/heliports.
- b. Runway centerline extension and/or final approach course.

REFERENCE-

FAAO 7110.65, Para 5-9-1, *Vectors to Final Approach Course*.

- c. Hospital emergency landing areas.
- d. NAVAIDs and fixes.
- e. Reporting points.

- f. Airway/route centerlines.

g. Boundaries (control, special use areas, terminal buffer areas, outer fix holding pattern airspace areas, no transgression zones, etc.).

- h. Handoff points.

i. Special use tracks (scramble, recovery, DPs, etc.).

- j. Obstructions.

k. Prominent geographic features (islands, mountains, etc.).

- l. Map alignment indicators.

- m. Range accuracy marks.

n. Minimum vectoring altitudes in hundreds of feet; e.g., 23-2,300 ft., 100-10,000 ft.

o. Airports immediately outside your area of jurisdiction that are:

- 1. Within airspace used to receive radar hand-offs; and
- 2. Depicted by the facility having jurisdiction over that airspace.

p. For sites equipped with STARS, facility air traffic managers shall specify in a facility directive procedures for using optional maps.

NOTE-

The intent of subpara o is to assist controllers in making emergency airport recommendations when inflight emergencies occur near facility boundaries. There is no intent to establish criteria for airport depiction. However, insofar as facilities having jurisdiction depict airports, then those same airports shall be depicted on the adjacent facility's video map.

REFERENCE-

FAAO 7110.65, Para 10-2-13, *Emergency Airport Recommendation*.

3-8-4. INTENSITY

Set the intensity of the video map and the range marks on the CTRD equipment at the minimum intensity that will provide the controller with the necessary information. Supervisory personnel shall ensure that a usable intensity is maintained.

3-8-5. COMMON REFERENCE POINTS

- Facility air traffic managers shall ensure the adequacy of common reference points on radar maps where such points are used in providing air traffic control services; e.g., handoff points, etc., between adjacent

facilities or between sectors within the facilities using different radar systems. Whenever possible, simultaneous flight checks should be conducted of these radar systems. FAAO 8200.1, United States Standard Flight Inspection Manual, shall be used in determining the appropriate tolerances.

Section 9. Other Displays

3-9-1. VECTORING ALTITUDE CHARTS FOR TERMINAL FACILITIES

Air traffic managers shall determine the location and the method for the display of vectoring altitude charts to provide controllers with the minimum vectoring altitudes as follows:

a. Minimum vectoring altitude (MVA) charts shall be out to the maximum ASR radar range when prepared for ASR terminal systems and for facilities that utilize single site adapted ASR radar.

b. When ASR terminal systems and/or single site adapted ASR facilities utilize the ARSR as a backup radar system, MVA charts shall be out to the maximum ASR range.

c. When ARSRs are used for terminal and/or approach control services, provide one of the following:

1. An MVA chart for the facility single-site adapted terminal area, not to exceed 40 NM from the antenna, and a minimum IFR altitude (MIA) chart beyond 40 NM from the antenna to the maximum ARSR radar range; or

2. An MVA chart out to the maximum ARSR radar range; or

3. An MIA chart out to the maximum ARSR radar range.

NOTE-

Technical Operations Aviation System Standards, National Flight Procedures should be contacted if assistance is required. (See FAAO 8260.19, Flight Procedures and Airspace, Chapter 3, Section 7.)

3-9-2. MVA CHART PREPARATION (TERMINAL/MEARTS)

Prepare a vectoring chart as follows: (See FIG 3-9-1.)

a. Draw the MVA chart on two current sectional aeronautical charts.

NOTE-

Original-quality color copies of MVA charts or computer generated original-quality color MVA charts may be sub-

stituted for this requirement with National Flight Procedures approval. The accuracy and scale of the original MVA chart shall be maintained when submitting reproductions of the original chart.

b. Center the chart on the location of the radar antenna site.

c. Segment the chart into areas as required by the different minimum vectoring altitudes. Configuration of the areas and the features to be depicted will vary with local terrain and operational considerations. Use the following methods as applicable:

1. Depict the areas in relationship to the magnetic bearings from the antenna site, radials from VORs/VORTACs/TACANs, or radar display range marks.

2. To facilitate correlation between vectoring charts and radar displays, make area boundaries coincident or compatible with map overlay or video map data.

3. Make each large enough to accommodate vectoring of aircraft. In some cases it may be desirable to combine adjoining smaller areas having different altitudes into a single large area with one altitude.

4. Establish area boundaries at least 3 miles (5 miles if 40 miles or more from the antenna site) from the obstruction determining the MVA.

5. To avoid a large area with an excessively high MVA due to an isolated prominent obstruction, enclose the obstruction with a buffer of at least 3 miles (5 miles if 40 miles or more from the antenna site) from the obstruction. Do this to facilitate vectoring around the obstruction.

d. Determine the minimum IFR vectoring altitude in each area by applying FAAO 8260.19, Flight Procedures and Airspace.

NOTE-

MVAs are established irrespective of the flight-checked radar coverage in the sector concerned. They are based on obstruction clearance criteria only. It is the responsibility of the controller to determine that a target return is adequate for radar control purposes.

e. An MVA may be established within Class G airspace. When this is done, note it on the chart.

NOTE—

In this case, consider obstruction clearance only.

f. Ensure that MVAs on charts are compatible with vectoring altitudes established for associated radar instrument approach procedures.

g. Depict the MVA in each area.

h. Document the controlling obstructions on FAA Form 7210-9, En Route Minimum IFR Altitude/Minimum Vectoring Altitude Obstruction Document.

i. Affix the facility and radar name on both MVA charts and include the edition and date of the sectional chart used to prepare the MVA chart. Forward both MVA charts and two copies of FAA Form 7210-9 to National Flight Procedures through the appropriate Technical Operations Service Area Director. National Flight Procedures will review the MVA charts and indicate approval by signing and dating the charts and FAA Form 7210-9. A copy of the approved MVA chart and FAA Form 7210-9 will be returned to the originating facility by National Flight Procedures through the appropriate Technical Operations Service Area Director.

j. Air traffic managers shall assure that MVA charts are reviewed at least annually to ensure chart currency and simplicity. Charts shall be revised immediately when changes affecting minimum vectoring altitudes occur. For annual review or necessary changes, charts shall be prepared as prescribed in subparagraphs a through i. Air traffic managers shall obtain National Flight Procedures certification through the appropriate Technical Operations Service Area Director for both annual reviews and revisions.

k. FAA Form 7210-9, En Route Minimum IFR/Minimum Vectoring Altitude Obstruction Document, will be stocked at the FAA Logistics Center and additional copies may be ordered through normal supply channels (NSN: 0052-00-911-3000 U/I:SH).

**FIG 3-9-1
MVA Chart**

3-9-3. ALTITUDE ASSIGNMENTS TO S/VFR AND VFR AIRCRAFT

Where procedures require altitude assignments to S/VFR and VFR aircraft less than the established IFR altitude or MVA, facility air traffic managers shall determine the need and the method for displaying the appropriate minimum altitude information.

REFERENCE—

FAAO 7110.65, Para 7-5-4, Altitude Assignment.

FAAO 7110.65, Para 7-8-5, Altitude Assignments.

3-9-4. EMERGENCY OBSTRUCTION VIDEO MAP (EOVM)

a. An EOVM shall be established at all terminal radar facilities that have radar coverage in designated mountainous areas and an available channel in their video mappers. This map is intended to facilitate advisory service to an aircraft in an emergency situation wherein an appropriate terrain/obstacle clearance minimum altitude cannot be maintained. (See FIG 3-9-2.)

NOTE–

1. Designated mountainous areas are identified in 14 CFR Part 95, Subpart B.

2. Appropriate terrain/obstacle clearance minimum altitudes may be defined as MIA, MEA, Minimum Obstruction Clearance Altitude (MOCA), or MVA.

b. Alternatives, such as combining existing maps, eliminating a lower priority map or, as a least desirable alternative, merging the EOVM with the MVA map, shall be considered when necessary to accommodate the EOVM.

c. EOVM Use: The EOVM shall be used and the advisory service provided only when a pilot has declared an emergency or a controller determines that an emergency condition exists or is imminent because of the inability of an aircraft to maintain the appropriate terrain/obstacle clearance minimum altitude/s.

d. EOVM Design:

1. The basic design of the EOVM shall incorporate the following minimum features:

(a) Base contour lines of the mountains with the highest peak elevation of each depicted mountain plus 200 feet for natural low obstacle growth.

(b) Highest elevations of adjacent topography; e.g., valleys, canyons, plateaus, flatland, etc., plus 200 feet, or water.

(c) Prominent man-made obstacles; e.g., antennas, power plant chimneys, tall towers, etc., and their elevations.

(d) Satellite airports and other airports which could serve in an emergency.

(e) MVA if the EOVM must be merged with the MVA map for the former to be accommodated.

(f) Other information deemed essential by the facility.

NOTE–

To avoid clutter and facilitate maintenance, information depicted on the EOVM should be restricted to only that which is absolutely essential.

2. All elevations identified on the EOVM shall be rounded up to the next 100-foot increment and expressed as MSL altitudes.

NOTE–

To avoid unnecessary map clutter, the last two digits are not required.

EXAMPLE–

2=200, 57=5700, 90=9000, 132=13200

e. EOVM Production: The preparation and procurement of the EOVM shall be accomplished in accordance with FAAO 7910.1, Aeronautical Video Map Program.

f. EOVM Verification: The original EOVM procurement package and any subsequent changes shall be checked for adequacy and then coordinated with the appropriate National Flight Procedures to verify the accuracy of its information. Annually, the EOVM shall be reviewed for adequacy and re-coordinated with the National Flight Procedures office for accuracy.

3-9-5. ESTABLISHING DIVERSE VECTOR AREA/S (DVA)

A DVA area may be established at the request of the air traffic manager and developed jointly with the Technical Operations Service Area Director and the appropriate Service Area Director for any airport within the facility's area of jurisdiction. When established, reduced separation from obstacles as provided for in TERPS diverse departure criteria will be used to radar vector departing IFR aircraft below the MVA/MIA. When a DVA is established, the air traffic manager shall prepare a facility directive describing:

a. Procedures for radar vectoring IFR departures within 3 miles of obstacles including:

1. Outbound vectoring sectors involving one or more areas.

2. Where required, specific radar routes, depicted on the radar scope, along which positive course guidance is provided to aircraft below the MVA/MIA.

3. Free vectoring areas, in which random vectoring may be accomplished below the MVA/MIA, described in any manner identifiable on the radar scope.

b. No IFR aircraft climbing within a DVA shall be assigned an altitude restriction below the MVA/MIA. Obstacle avoiding vectors may be discontinued when the aircraft reaches the MVA/MIA or leaves the ROC altitude, rounded up to the next 100-foot increment.

c. Headings shall not be assigned beyond those authorized for the DVA prior to reaching the prescribed altitude.

d. If a particular sector or route within a DVA depends on the use of a climb gradient in excess of 200 feet per mile:

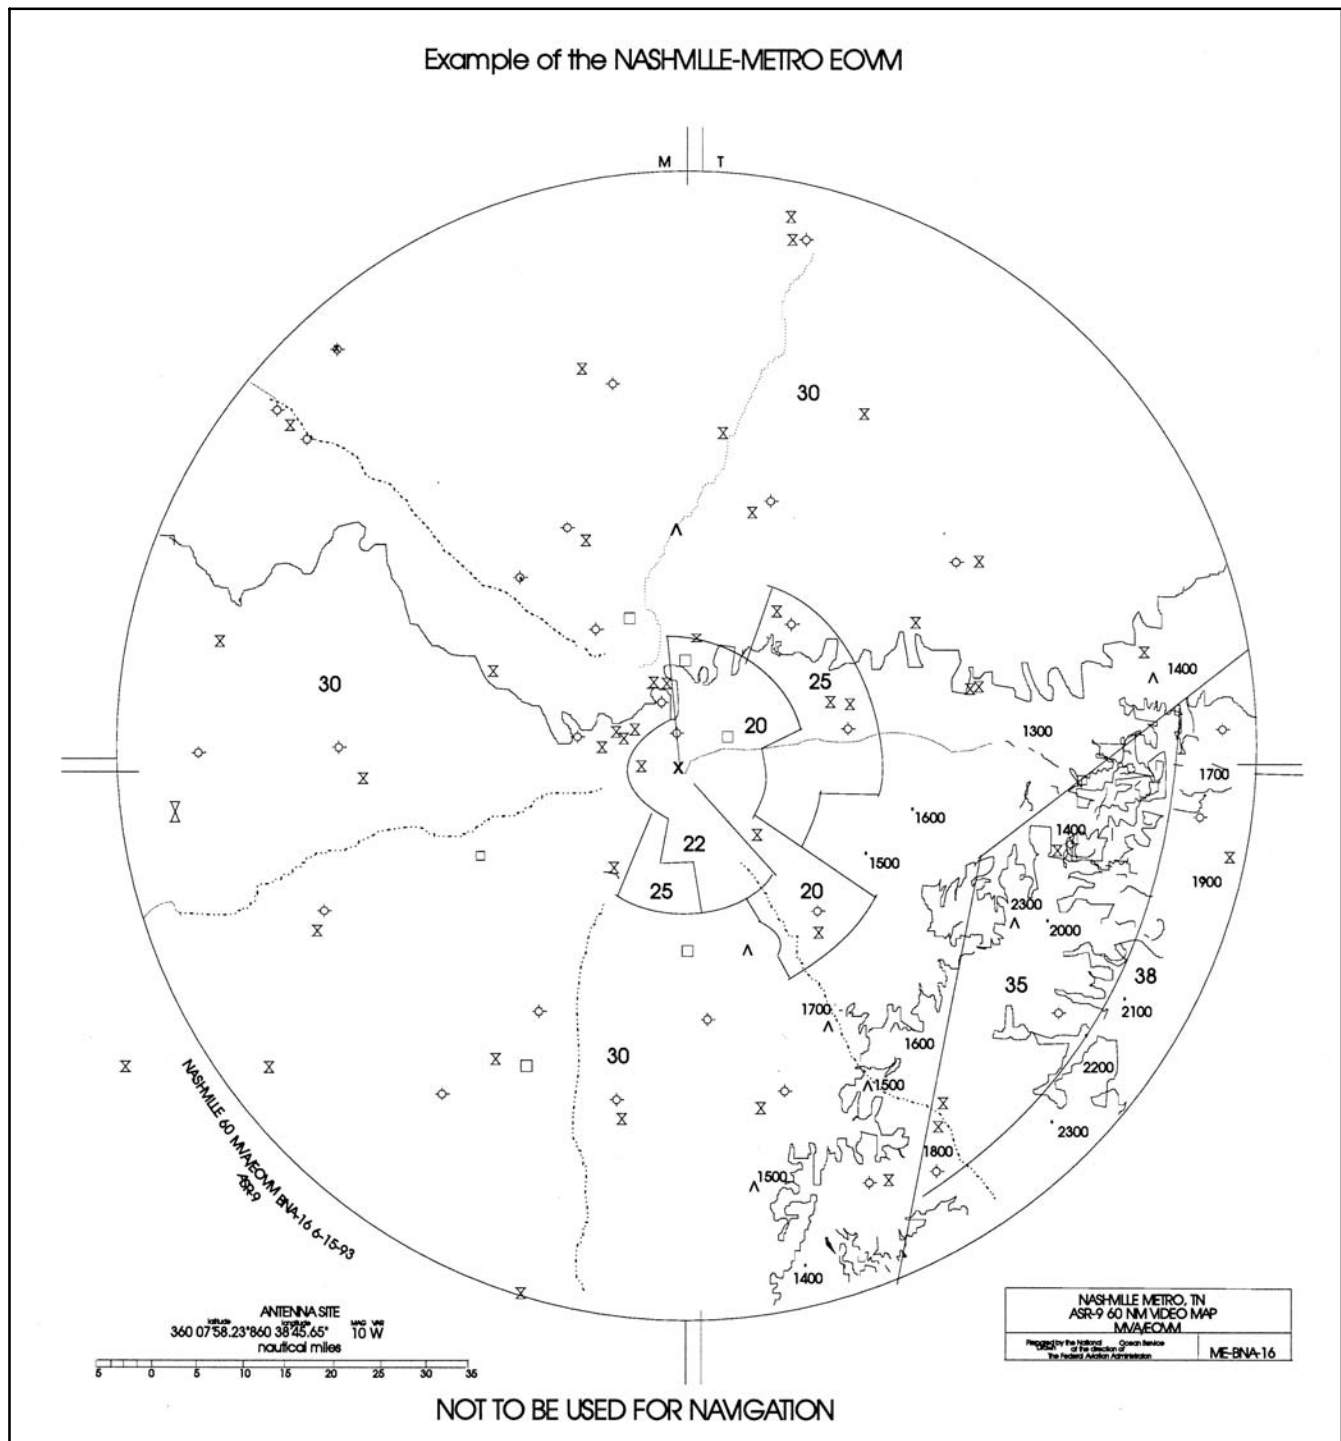

1. Unless the procedure is published, this information shall be transmitted to the pilot before departure.

2. Pilot concurrence is required.

e. DVAs should not be developed that require increased climb gradients unless there is no other suitable means to avoid obstacles except in situations where high volumes of high performance aircraft routinely make accelerated climbs.

f. Ensure that an air traffic controller is familiar with all the provisions of the facility directive before vectoring aircraft in accordance with DVA criteria.

FIG 3-9-2
EOVM

Section 10. Color Displays–Terminal

3–10–1. GUIDELINES FOR USE OF COLOR ON ATC DISPLAYS

a. Whenever color is used to code critical information it must be used along with another method of coding.

b. Cultural color conventions (such as red for danger and yellow for warning) should not be violated.

c. The color pure blue should not be used for text, small symbols, other fine details, or as a background color.

d. Color use needs to be consistent across all of the displays that a single controller will use.

e. Facility air traffic managers shall make all requests for any color changes to color baseline through the Director of Terminal Safety and Operations Support.

Chapter 4. Correspondence, Conferences, Records, and Reports

Section 1. General

4-1-1. CORRESPONDENCE STANDARDS

Prepare and issue facility correspondence in accordance with:

- a. FAAO 1360.16, FAA Correspondence Manual, which prescribes basic correspondence standards.
- b. FAAO 1320.1, FAA Directives System, which prescribes the procedures for issuing direction and work information.

4-1-2. SIGNATURE

Correspondence addressed to organizations, businesses, or individuals outside FAA shall be signed "Air Traffic Manager, Reno Automated Flight Service Station," "Air Traffic Manager, Washington Center," or "Air Traffic Manager, Denver Tower." The authorized contractions for the facility names may be used on correspondence addressed to any component of FAA; e.g., "Air Traffic Manager, Denver AFSS."

4-1-3. SERVICE AREA REVIEW

Forward copies of facility correspondence concerning facility operating procedures to the Service Area office; e.g., letter to airmen normally sent to pilots, airline companies, military commands or bases, and fixed-base operators. This correspondence shall be reviewed and approved at the discretion of the Service Area office prior to distribution. When information sent to users includes a change in operating procedures, facilities shall establish an effective date for implementing these operating procedures at least 30 days after the date of distribution unless otherwise authorized by the Service Area office.

4-1-4. CORRESPONDENCE REGARDING POLICY/PROCEDURES

Air traffic managers may handle correspondence dealing with matters involving operating policy or procedures directly with other agencies or services. If

the matter is not within the jurisdiction of the air traffic manager, acknowledge the correspondence and state that the answer will be prepared and forwarded by the Service Area office. Forward all pertinent background material to the Service Area office with recommendations for further handling.

4-1-5. IRREGULAR OPERATION

If information or correspondence is received from an aviation agency indicating an irregular operation (exclusive of policy items) by a facility, the air traffic manager shall investigate and reply to the agency within 3 administrative work days of receipt. If the air traffic manager cannot investigate and prepare a reply within 3 days, or if the matter deals with policy items outside his/her purview, he/she shall forward a letter of acknowledgment. Send copies of all correspondence, instructions issued to prevent recurrence, and any information on any disciplinary action taken to the service area office.

4-1-6. PRELIMINARY ENVIRONMENTAL REVIEW

In coordination with the Terminal Operations Area Operations Air Traffic Environmental Protection Specialist (EPS), facilities shall conduct and document a preliminary environmental review of new or revised ATC procedures in accordance with FAAO 1050.1, Environmental Impacts: Policies and Procedures, concurrent with initial airspace planning. The facility's review requires the documentation necessary to determine foreseeable noise impacts and controversies.

a. Particular attention shall be made to determine whether procedures, either new or modified, will potentially impact noise sensitive areas as defined in FAAO 1050.1, Policies and Procedures for Considering Environmental Impacts.

b. For air traffic modifications to procedures at or above 3,000 feet (above ground level), the Air Traffic Noise Screening Procedure (ATNS) should be applied.

c. Modifications to procedures below 3,000 feet (above ground level) require additional analysis. Facilities shall contact the EPS for further guidance.

d. If the preliminary environmental review indicates that an Environmental Assessment or an Environmental Impact Statement is not required, the

documentation shall be retained in the facility with copies of all documentation forwarded to the EPS. The directive resulting from the air traffic procedure shall contain a statement that a preliminary environmental review has been accomplished and that a Categorical Exclusion has been approved by the responsible official.

Section 2. User Coordination/Conferences/Publicity

4-2-1. LOCAL CONFERENCES

a. Facility air traffic managers shall call local conferences, as often as important local problems warrant, for discussing and clarifying facility operational matters. Use discretion before making any policy commitments.

1. Following these conferences, take appropriate action within your jurisdiction.

2. Send two copies of the minutes, or a summary, of each local conference to the appropriate Service Area office and one to each conference member.

b. If a general conference is needed to discuss problems and subjects of a broader nature than those suitable for a local conference, forward such recommendation to the appropriate Service Area office.

4-2-2. PILOT EDUCATION

Air traffic facilities should maintain an aggressive pilot education program whereby facility personnel provide briefings and conduct seminars for pilot groups. In addition to briefings on local airspace and procedures, information on national programs should be provided. Emphasis should be placed on operations within Class B and Class C airspace and on the FSS Modernization Program. The following are examples of the type of voluntary programs that may be offered:

a. Operation Rain Check.

REFERENCE—

FAAO 7230.16, *Pilot Education Program – Operation Rain Check.*

b. Operation Takeoff.

REFERENCE—

FAAO 7230.17, *Pilot Education Program – Operation Takeoff.*

c. Facility sponsored pilot/controller forums.

d. FSDO accident prevention safety meetings.

4-2-3. PUBLISHED ITEMS

Items of publicity, either commendable or critical of FAA facilities, should be forwarded to the Service Area office. This includes newspaper clippings, magazine articles, photographs, or copies of letters.

4-2-4. COORDINATION OF ATC PROCEDURES

a. Coordination shall be carried out with the appropriate users prior to implementing or changing procedures which may have a significant effect on them or flight information publications. *Users* means the operators of aircraft; organizations representing aircraft owners, operators, or pilots; individuals; the DOD; aviation authorities; or other government agencies concerned with the safe, efficient operation of aircraft in the NAS.

b. Procedures which will have a significant effect on the users will be coordinated with them by means of correspondence, individual contacts, or a presentation at a meeting for the purpose of soliciting individual comments. When deemed appropriate, the advice and viewpoint of individual users will be obtained prior to the development of a proposed change. When safety is not a factor, a minimum of 45 days should be afforded those responding to a request for comments.

c. No joint user meeting will be conducted for the purpose of seeking user consensus or agreement on an issue. Coordination does not mean or imply that unanimity of opinion must be reached nor does it mean that user concurrence is required.

d. Inter-facility coordination shall be carried out, as appropriate, prior to coordination with the users. In addition, all other concerned FAA facilities and offices shall be informed prior to implementing these changes.

e. The final decision on whether a change is adopted as proposed, changed in light of the individual replies received, or not adopted rests with the initiating office and will be based on an evaluation of all pertinent factors. If significant objections to a change are received, advise the Service Area office which will inform the Manager of Airspace and Rules, if deemed appropriate.

f. When a change is adopted, users will be afforded sufficient time to prepare for the change prior to its implementation. If a proposed change is not adopted, an explanation of the decision will be forwarded to the users.

Section 3. Letters of Agreement (LOA)

4-3-1. LETTERS OF AGREEMENT

a. Air traffic managers shall negotiate a LOA when operational/procedural needs require the cooperation and concurrence of other persons/facilities/organizations. A LOA shall be prepared when it is necessary to:

b. Supplement established operational/procedural instructions.

c. Define responsibilities and coordination requirements.

d. Establish or standardize operating methods.

e. Specify special operating conditions or specific air traffic control procedures.

f. Delegate responsibility for ATC service; e.g., approach control service, control boundary jurisdiction, and procedures for coordinating and controlling aircraft where two or more airports have conflicting traffic patterns or overlapping conflicting traffic patterns.

g. Establish responsibilities for:

1. Operating airport equipment.

2. Providing emergency services.

3. Exchanging braking action reports with the airport management. As a minimum, procedures shall provide for the prompt exchange of reports which indicate runway braking conditions have deteriorated to “poor” or “nil” or have improved to “good”.

4. Reporting operating limitations and hazards.

h. Describe procedures that supplement those contained in FAAO 7110.65, Air Traffic Control, or FAAO 7110.10, Flight Services, to satisfy a requirement of a military service.

REFERENCE—

FAAO 7110.65, para 1-1-9, *Constraints Governing Supplements and Procedural Deviations*.

i. Define stereotyped flight plans used for special operations, such as training flights or flight test activities.

j. Describe airspace areas required to segregate special operations.

k. Establish aircraft radiotelephony call signs to be used by the tower and the local operators.

l. Define the responsibilities of the tower and the airport management or other authority for movement and nonmovement areas by precisely delineating the loading ramps and parking areas under the jurisdiction of the airport management or other appropriate authority. Facility air traffic managers may, at their discretion, exclude from the movement area those portions of the airport surface normally designated movement areas that are not visible from the tower. Consideration shall be given to the impact this may have on the movement of ground traffic. The agreement may include the following:

1. Airport management or other appropriate authority shall require, by agreement or regulation, all ground vehicles and equipment operators and personnel to obtain tower approval prior to entry onto the airport movement area and comply with control instructions issued to them while on that area. This includes those vehicles used to conduct pushback operations and shall require approval prior to moving aircraft/vehicles out of the loading ramps or parking areas onto the movement area.

2. Airport management or other appropriate authority may also require those aircraft which will not infringe upon the movement area but will impede ingress and egress to the parking area to contact the tower for advisories prior to conducting pushback operations. State that information related to aircraft movement on the loading ramps or parking areas is advisory in nature and does not imply control responsibility.

3. At those airports where vehicles not equipped with two-way radio are permitted by the airport management or other appropriate authority to enter or cross the defined movement area at specific locations without approval from the tower, enter into an LOA with the airport management, or other appropriate authority, specifying the conditions for such operations and include the clause as follows: “The airport owner/operator covenants and expressly agrees that with regard to any liability which may arise from the operation within (area/areas), that party shall be solely and exclusively liable for the negligence of its own agents, servants, and/or employees, in accordance with applicable law, and that neither party

looks to the other to save or hold it harmless for the consequences of any negligence on the part of one of its own agents, servants, and/or employees.”

4-3-2. APPROPRIATE SUBJECTS

Examples of subjects of LOAs are:

a. Between ARTCCs:

1. Radar handoff procedures.
2. Interfacility coordination procedures.
3. Delegation of responsibility for IFR control jurisdiction.

b. Between ATCTs:

1. Tower en route control service.
2. Interfacility coordination procedures.

c. Between AFSSs/FSSs: When NAVAIDs in one AFSS/FSS facility's area are monitored by another FSS.

REFERENCE—

*Para 3-5-1, NAVAID Monitoring.
FAAO 7930.2, Para 4-2-2, NOTAM Accountability and Para 4-2-3,
NOTAM for NAVAID in Different FSS Flight Plan Area.*

d. Between an ARTCC and an ATCT:

1. Approach control service.
2. Interfacility coordination procedures.
3. Tower/center en route control service.

e. Between an ARTCC and an AFSS/FSS: Define areas of security responsibility. (See para 2-7-5, Facility Security.)

f. Between an ATCT and an AFSS/FSS: Operation of airport lighting.

g. Between an ARTCC or an approach control facility and a nonapproach control tower, an AFSS/FSS, an airport manager, or a local operator: Special VFR Operations. (See FIG 4-3-1.)

h. Between an ARTCC or an approach control facility and a nonapproach control tower:

1. Authorization for separation services.
2. Interfacility coordination procedures.

i. Between an ARTCC and another government agency:

1. Interfacility coordination for control of ADC aircraft.

2. Delegation of responsibility for approach control services.

3. MTR procedures.

j. Between a tower and another government agency:

1. Simulated flameout procedures.
2. Control of helicopter SVFR flights.
3. Operation of aircraft-arresting barriers.
4. MTR procedures.

k. Between a tower and/or AFSS/FSS and an airport manager/aircraft operator at airports upon which the tower and/or AFSS/FSS is located:

1. Airport emergency service.
2. Operation of airport lighting.
3. Reporting airport conditions.
4. Control of vehicular traffic on airport movement areas.

5. Operations under an exemption from Part 91, Appendix D, Section 3, the surface area of Class B, Class C, Class D, or Class E airspace within which Special VFR weather minimums are not authorized.

REFERENCE—

Advisory Circular AC 150/5210-7C, Airport Rescue and Fire Fighting Communications.

4-3-3. DEVELOPING LOA

Air traffic managers shall take the following action when developing a LOA: (See FIG 4-3-1 and FIG 4-3-2.)

a. Determine, through coordination, which FAA facility is principally responsible for processing the LOA.

b. Confine the material in each agreement to a single subject or purpose.

c. Describe the responsibilities and procedures applicable to each facility and organization involved.

d. Delegate responsibility for control of IFR aircraft, where necessary, by taking the following action:

1. Describe the area within which responsibility is delegated. The area may be depicted in chart form.

2. Define the conditions governing use of the area. These include altitudes, routing configuration, and limitations or exceptions to the use of the applicable airspace.

3. Specify the details of control procedures to be used. These include clearance limits, reporting points, handoff points, and release points.

4. Identify clearance limits designated as Instrument Approach Fixes when they are to be used for holding aircraft.

5. Specify communications and coordination procedures.

e. Coordinate with other FAA facilities and military or civil organizations as appropriate.

f. Attach charts or other visual presentations, when appropriate, to depict the conditions of the LOA.

g. Coordinate with the Regional Flight Standards Division, All Weather Operations Program Manager if aircraft operations or pilot procedures will be affected.

h. Prepare a single supplement, if necessary, to augment the letter at a facility and attach it to the basic LOA. Do not repeat material from the basic LOA.

i. After coordination, send two copies of the proposed LOA, including supplements, to the service area office for approval if required.

4-3-4. REVIEW BY SERVICE AREA OFFICE

a. The Service Area office shall review the proposed LOA, ensure coordination with other interested offices and affected user groups, as necessary, and approve the LOA if satisfactory.

b. The Service Area office may, in writing, delegate to air traffic managers, air traffic managers designees, ATREPs, or Region Air Defense Liaison Officer (RADLOs) the authority to develop, coordinate, approve, and implement LOAs except for:

1. Those which prescribe procedures or minima contrary to those contained in FAAO 7110.65, Air Traffic Control, unless appropriate military authority has authorized application of reduced separation between military aircraft; or

REFERENCE-

FAAO 7110.65, Para 1-1-8, *Procedural Letters of Agreement*.

2. Those between an IFR facility and a tower to authorize the separation services prescribed in para 2-1-14, Authorization for Separation Services by Towers, and para 10-5-3, Functional Use of Certified Tower Radar Displays.

4-3-5. APPROVAL

Upon receipt of Service Area office approval, the air traffic manager shall:

a. Prepare the LOA in final form incorporating the Service Area office guidance.

b. Establish an effective date, acceptable to all parties involved, that permits sufficient time for distribution and for participating facilities and user groups to familiarize personnel, revise directives, flight charts, etc., and complete other actions.

c. Sign the LOA and obtain signatures of other authorities as required.

d. Distribute copies of the signed LOA to each participating facility or organization, the Service Area office, and other interested offices. Distribution of supplements outside the facility is not required.

4-3-6. REVISIONS

a. Process revisions to LOAs and attachments or supplements thereto as page replacements. Mark the revisions as follows:

1. Place an asterisk or vertical line to the left of each new or revised paragraph or section to signify new material.

2. Identify page revisions by the "REV" number, e.g., "REV 1," and the effective date in the lower right hand corner of each revised page.

b. Coordinate revisions to a LOA in the same manner and degree as for the original LOA.

4-3-7. CANCELLATION

Review letters of agreement frequently to ensure timeliness and conformance with current policy. Cancel any agreement which is no longer applicable, and notify the affected groups. Coordinate with the signatories and the Service Area office if cancellation is necessary.

FIG 4-3-1

Format for a Control Facility/AFSS/FSS Letter of Agreement

(Name) Center/Approach Control and (Name) AFSS/FSS

LETTER OF AGREEMENT

EFFECTIVE: _____

SUBJECT: Special VFR Operations within (Name) Airport Surface Area

1. PURPOSE: To provide operating procedures for Special VFR flight handling in the (name) surface area without individual coordination.

2. SCOPE: The procedures outlined herein are for use in the conduct of Special VFR operations within the (name) Airport surface area at or below _____ feet. These procedures are applicable only to aircraft equipped with functioning 2-way radio in order to effect a recall when required by traffic or weather conditions.

3. RESPONSIBILITIES: Upon request by the (name) AFSS/FSS, the Center/Approach Control Facility may authorize Special VFR operations in the (name) Airport surface area for specific periods of time. The Center/Approach Control Facility shall retain the authority to withdraw the provisions of this agreement at any time.

4. PROCEDURES:

a. Local Special VFR operations. The (name) AFSS/FSS shall not authorize more than one aircraft to operate simultaneously in the surface area unless pilots agree that they will maintain visual separation with other aircraft operating in the surface area.

b. IFR Arrivals and Departures. Special VFR operations shall be controlled by the (name) Center/Approach Control during the following periods:

(1) From 10 minutes prior to the estimated time of arrival of an IFR aircraft over the approach fix until it is on the ground (IFR arrivals shall not be cleared for an approach until the AFSS/FSS confirms that there are no Special VFR operations in progress.)

(2) From 10 minutes prior to the estimated time of departure of an IFR aircraft until it departs the surface area.

c. Special VFR Arrivals and Departures:

(1) The (name) AFSS/FSS may authorize aircraft to enter, depart, or fly through the surface area when no Special VFR operations are in progress. Authorization shall be granted as outlined in 4a.

(2) Aircraft desiring to enter the surface area during times Special VFR operations are in progress shall be instructed to maintain VFR conditions outside the surface area pending recall and landing of aircraft operating in the surface area.

d. Predesigned clearance phraseologies. To authorize Special VFR operations or to issue instructions or other messages pertinent thereto, the (name) AFSS/FSS shall use the following phraseology:

(1) To authorize operations:

A-T-C CLEARS (identification) TO ENTER/OUT OF/THROUGH (name) SURFACE AREA. MAINTAIN SPECIAL VFR CONDITIONS AT OR BELOW (altitude). REPORT LANDING COMPLETED/LEAVING SURFACE AREA, or

A-T-C CLEARS (identification) TO OPERATE WITHIN (name) SURFACE AREA. MAINTAIN SPECIAL VFR CONDITIONS AT OR BELOW (altitude).

(2) To deny operations when visibility is less than one mile:

VISIBILITY (value). A-T-C UNABLE TO ISSUE DEPARTURE/ENTRY CLEARANCE.

(3) To suspend operations:

SPECIAL VFR AUTHORIZATION DISCONTINUED. RETURN TO AIRPORT OR DEPART SURFACE AREA. ADVISE INTENTIONS (after response), REPORT LANDING COMPLETED/LEAVING SURFACE AREA.

(4) To advise an aircraft to remain outside the surface area:

A-T-C ADVISES (identification) TO MAINTAIN VFR OUTSIDE THE (name) SURFACE AREA PENDING ARRIVAL/RECALL/DEPARTURE OF SPECIAL VFR AIRCRAFT.

Air Traffic Manager, (Name) ARTCC/Approach
Control

FIG 4-3-2

Format for an ARTCC/Air Division Letter of Agreement

(Name) Air Route Traffic Control Center and (Name) Air Division	
LETTER OF AGREEMENT	
EFFECTIVE: _____	
SUBJECT: Inter-Facility Coordination for the Control of Aerospace Defense Command Interceptor Aircraft	
1. PURPOSE: (List responsibility and describe necessary coordination.) 2. CANCELLATION: (As required.) 3. SCOPE: (Specify area, names, and types of facilities involved.) 4. RESPONSIBILITIES: (Specify.) 5. PROCEDURES: <ul style="list-style-type: none"> a. ATC Assigned Airspace. (List procedures to be followed for requesting and authorizing airspace, handling aircraft to and from the airspace, and notifying when no longer required.) b. Transfer of Control. (Specify transfer procedures.) c. Departure. (Specify required advanced time for filing flight plans. Outline additional items required in the flight plan; e.g., type of departure, CONAD control facility, and IND position number.) d. En Route. (including information that ATC is responsible for effecting separation in assigned airspace whenever nonparticipating aircraft are cleared to operate within such airspace.) e. Arrivals. (Outline handoff procedures and special instructions.) f. General. (Self-explanatory.) 	
6. ATTACHMENTS (List, as required, items such as chart of ATC-assigned airspace areas, common reference/handoff points, etc.)	
Air Traffic Manager, (Name) ARTCC	
Commander, (Name) Air Division	
(Title of other appropriate authority)	

4-3-8. AUTOMATED INFORMATION TRANSFER (AIT)

a. Radar identification, altitude, and en route fourth line control information approval may be transferred via full data blocks without using point-out procedures or verbal coordination. Air traffic managers wishing to authorize the use of the AIT process shall establish AIT procedures adapted to local traffic situations and use the process only within the context of those specific procedures. These precoordinated procedures and the controller responsibilities shall be specifically defined in facility directives.

REFERENCE-

FAAO 7110.65, Para 5-4-11, En Route Fourth Line Data Block Usage.

b. The controller who first transfers radar identification will also transfer aircraft communications. Either the transferring or the receiving controller, whoever is specified in a facility AIT directive, may

issue the altitude change, if any. Additionally, facility AIT directives shall require that any deviation from the specified procedure invalidates the procedure for that situation and requires that verbal coordination be completed as per FAAO 7110.65, Air Traffic Control, para 2-1-14, Coordinate Use of Airspace, para 2-1-15, Control Transfer, para 5-4-5, Transferring Controller Handoff, para 5-4-6, Receiving Controller Handoff, or para 5-4-7, Point Out. The following are general examples of the AIT process.

1. Transfer of radar identification only:**EXAMPLE-**

Controller A initiates a transfer of radar identification to controller B before the aircraft enters controller B's airspace. Controller B accepts the transfer of radar identification before the aircraft enters his/her airspace. Controller B, traffic permitting, then initiates a transfer of radar identification to controller C before the aircraft enters controller C's airspace. Controller A transfers aircraft communications to controller C before the aircraft

enters controller C's airspace and after observing that controller C has accepted the transfer of radar identification.

2. Transfer of radar identification and altitude control:

EXAMPLE–

1. Controller A initiates a transfer of radar identification to controller B; controller B accepts the transfer. Controller B amends either the interim or assigned altitude in the data block to an altitude within his/her altitude stratum as prescribed in a facility directive. Controller B initiates a transfer of radar identification to controller C before the aircraft enters controller C's airspace. Controller A, after observing controller B initiate a transfer of radar identification to controller C, clears the aircraft to the altitude displayed in the data block by controller B. Controller A, after observing that controller C has accepted the transfer of radar identification, transfers aircraft communication to controller C before the aircraft enters controller C's airspace.

2. Controller C may clear the aircraft to the altitude displayed by controller B if so established in a facility AIT directive.

3. The following is an example of a precoordinated AIT procedure which might be written in a facility directive:

EXAMPLE–

The following procedure is established for implementation under the (AIT) process and is agreed to by the South and East areas. Aircraft departing ELP via J26 to ROW requesting FL 280 or above shall be handled as follows:

(a) Sector 20 shall clear the aircraft to FL 270 within its airspace and then initiate a transfer of radar identification to sector 63.

(b) Sector 63 shall accept the transfer of radar identification then display either an assigned or interim altitude in the data block.

(c) Sector 63 shall then initiate a transfer of radar identification to sector 23 before the aircraft enters sector 23's airspace.

(d) Sector 20, after observing the assigned/interim altitude displayed in the data block and that a transfer of radar identification has been initiated to sector 23, shall then clear the aircraft to the appropriate altitude.

(e) Sector 20 shall transfer communications of the aircraft to sector 23 before the aircraft enters sector 23's airspace and after observing sector 23's acceptance of the transfer of radar identification.

Section 4. Application

4-4-1. OPERATIONS UNDER EXEMPTIONS FROM SECTION 3 OF APPENDIX D TO PART 91 SURFACE AREAS OF CLASS B AND CLASS C AIRSPACE WITHIN WHICH SPECIAL VFR WEATHER MINIMUMS ARE NOT AUTHORIZED FOR FIXED-WING AIRCRAFT

Implement LOAs with operators whose operations are conducted under an exemption to 14 CFR Part 91, Appendix D, Section 3. Letters of Agreement should contain:

- a. The surface area within which exempted operations may be conducted;
- b. The weather minimums required for the operations;
- c. That visual reference to the surface is required;
- d. Sufficient details as to routes, altitudes, communications, reporting points, etc. to facilitate control of these operations;
- e. Code names, if practical, for use in signifying to the pilot the details of each arrival and departure procedure; and
- f. Any additional data which the ATC facility believes necessary to accommodate operations.

NOTE—

14 CFR Part 91, Appendix D, Section 3 lists specific surface area locations in which FW/SVFR flight is prohibited. However, operators may petition for exemptions from these prohibitions. An exemption may only be granted by an FAA Headquarter's office (i.e., Vice President for Terminal Services, or the Administrator).

4-4-2. USE OF AIRCRAFT CALL SIGNS

a. Facility air traffic managers shall ensure that LOAs concerning the use of aircraft call signs by local flight operators conform with the following standards:

- 1. FCC Regulations (87.115) are followed.
- 2. Proposed call signs are coordinated with and approved by System Safety and Procedures before

assignment to avoid possible duplication or conflict with air-ground call signs assigned on a national basis to other aircraft operators.

3. Call signs are only used for:

- (a) Communications with the local tower.
- (b) Local VFR operations.

4. Call signs are not used in filing flight plans.

b. A copy of each LOA covering local aircraft call signs shall be forwarded to Terminal Safety and Operations as soon as practicable after receipt of the approval letter for said call sign.

4-4-3. RUNWAY SUPERVISORY UNITS (RSU)

Facility air traffic managers shall ensure that the following items are included in a LOA with the local military authority when the operation of a military RSU has been directed by the military commander.

- a. Qualification requirements of personnel operating the RSU.
- b. A continuous monitor of the appropriate tower frequency is maintained.
- c. Coordination with the tower is accomplished prior to changing to an alternate frequency.
- d. The primary function of the RSU is to monitor arrivals and departures of designated military aircraft.
- e. The RSU shall not be used for ATC service except:

- 1. In an emergency situation; or
- 2. At undergraduate pilot training/pilot instructor training (UPT/PIT) locations to UPT/PIT aircraft for preventive control purposes.
- f. Radio silence shall be maintained at all times unless actual safety of flight is involved or as outlined in subpara e above.

Section 5. Other Correspondence

4-5-1. LETTERS OF PROCEDURES

a. Facility air traffic managers shall prepare letters of procedure for stating specific terms regarding the release by the using agency of restricted areas as defined in 14 CFR Part 73.

b. Prepare and handle letters of procedure as follows:

1. Coordinate with the using agency procedures for the joint-use of a restricted area. (See 14 CFR Section 73.15.)

2. After coordination, send two copies of the proposed document to the Service Area office.

3. The Service Area office shall review and approve or delegate the authority for approval to the facility air traffic manager. Forward to Service Area office for approval any joint-use letter that proposes procedures considered a substantial departure from the recommended format.

4. Upon receipt of approval from the Service Area office, the facility air traffic manager shall prepare the final letter, incorporating Service Area office guidance, sign (along with the appropriate using agency authority), and establish an effective date allowing at least 30 days for any rulemaking actions necessitated by subpara 5 below, and the cartography and the distribution requirements.

5. An FAA facility must be designated in 14 CFR Part 73 as the controlling agency of any joint-use restricted area. When an ATC requirement exists in a joint-use restricted area, rulemaking action is also necessary to designate restricted areas as controlled airspace below 14,500 MSL.

6. The document shall contain an effective date.

7. Send two copies to each of the participating facilities or agencies; one copy directly to the Service Area office.

4-5-2. LETTERS TO AIRMEN

a. Facility air traffic managers may issue letters to airmen to publicize new or revised services, anticipated interruptions of service, procedural changes, and other items of interest to users.

b. The letter to airmen shall adhere to the following:

1. The letter to airmen shall be prepared in accordance with FIG 4-5-1.

2. The letter to airmen is informational in nature and shall not contain words which imply mandatory instructions. The word “shall” is not to be used in a letter to airmen.

3. Chart attachments shall be used in lieu of narrative descriptions to the extent possible.

4. Letters to airmen shall be numbered consecutively on an annual basis; i.e., 03-1, 03-2, etc.

5. Each letter to airmen shall contain an effective date and a cancellation date and shall not remain in effect beyond the time the information contained in the letter becomes obsolete or more than 24 months, whichever occurs first.

6. Issue a new letter on the same subject at the end of the 24-month period if the information contained in a letter to airmen requires continued exposure. (See FIG 4-5-1.)

FIG 4-5-1
Letters to Airmen

DEPARTMENT OF TRANSPORTATION FEDERAL AVIATION ADMINISTRATION (Name of Facility) (Address of Facility) (City, State)	
ISSUED: (Date)	EFFECTIVE: (Date)
(Name of Facility) LETTER TO AIRMEN NO. ()	
SUBJECT: (Subject of Letter)	
CANCELLATION: (Date: Not to exceed 24 months)	
(Text of Letter)	
(Signature) (Name of Facility Air Traffic Manager) Air Traffic Manager: (Name of Facility)	

4-5-3. DISPOSITION OF VOLCANIC ACTIVITY REPORTING (VAR) FORMS

Should a controller receive a completed volcanic activity report (VAR) form during a pilot briefing, the controller is directed to forward the form to the supervisor/CIC on duty. The supervisor/CIC shall mail or fax the completed form to the Smithsonian Institute as specified at the bottom of the form within 24 hours of receipt.

Section 6. Records

4-6-1. FACILITY RECORDS MANAGEMENT

Manage facility records in accordance with FAAO 1350.15, Records Organization, Transfer, and Destruction Standards.

4-6-2. COLLECTION OF OPERATIONAL DATA

a. Air traffic managers are responsible only for the routine collection and reporting of basic operational information as authorized in this order or by the appropriate service unit. Collection of any data shall be considered a secondary function and shall not interfere with the accomplishment of operational duties.

b. Air traffic managers shall not permit their facilities to participate in special studies and surveys nor agree to the use of facility personnel to tabulate, prepare, or forward to outside organizations or parties any special summaries, abstracts, reports, or aeronautical data unless approved in advance by the Service Area office.

4-6-3. FORMS PREPARATION

a. Exercise care when preparing forms to ensure neatness and accuracy. The forms are a part of the facility's permanent records and subject to review by authorized personnel or agencies.

b. Except as in subpara c, do not erase, strikeover, or make superfluous marks or notations. When it is necessary to correct an entry, type or draw a single horizontal line through the incorrect data, initial that part of the entry, and then enter the correct data.

c. When using an automated Form 7230-4, grammatical and spelling errors may be corrected by use of delete or type-over functions. Substantive changes in contents of remarks should be accomplished by a subsequent or delayed entry. If the computer software used contains a strikeout feature, this feature may be used.

d. Authorized FAA abbreviations and phrase contractions should be used.

e. New daily forms shall be put into use at the start of each day's business.

4-6-4. FAA FORM 7230-4, DAILY RECORD OF FACILITY OPERATION

a. Each air traffic facility shall use Form 7230-4, or an approved automated version of the form. Air traffic managers shall decide whether to use one set of forms to describe the entire operation of the facility or individual sets for smaller units of the facility, such as sectors, air-ground positions, telecommunications positions, etc. An example of the Daily Record of Facility Operation follows this section. (See FIG 4-6-1.)

b. Use of an automated version of Form 7230-4 must be approved by the appropriate Service Area office prior to the form being used by the facility.

c. The use of FAA Form 7230-4 for individual position assignments is authorized only for the STMCIC, OSIC, TMC, TMCIC, and CIC positions, and positions at the ATCSCC.

4-6-5. PREPARATION OF FAA FORM 7230-4

Personnel responsible for preparation of the Daily Record of Facility Operation, FAA Form 7230-4, shall ensure that entries are concise, yet adequately describe the operation of the facility, including any abnormal occurrences. Prepare FAA Form 7230-4 as follows:

a. Use of a typewriter, computer printout, or ink is mandatory. Signatures or handwritten initials shall be in either blue or black ink. Handwritten entries shall be printed, rather than in script. REMARKS section entries shall be single-spaced.

b. Make all time entries in UTC, except that in the section titled "Personnel Log," local time shall be used for time and attendance purposes.

c. Complete the information required at the top of each form.

d. Make an appropriate notation under "Operating Position" to indicate the extent of the operation described on each form; e.g., "AM," "All," "Sector D3," etc.

e. The first entry in the REMARKS section of each day's form shall indicate the employee responsible for the watch and shall be used to show carry-over items. Items to be carried over from the preceding "Daily Record of Facility Operation" are those which will affect the current day's Daily Record (e.g., equipment outages, runway or airspace status, or coordinated routes/procedures). The last entry on each day's form shall indicate the close of business (COB), consider midnight local time or facility closing time, if earlier, as the close of the day's business.

f. Employees shall sign on/off as follows:

1. When a typed or handwritten FAA Form 7230-4 is used, the employee assuming responsibility for the watch shall sign on using their operating initials and shall sign the certification statement at the bottom of the form.

2. When an automated FAA Form 7230-4 is used, in lieu of actually signing the form, the employee assuming responsibility for the watch shall sign on using their name, e.g., "1430 J. SMITH ON." Entering the name of the employee assuming responsibility for the watch, in lieu of entering operating initials, serves the same purpose as signing the certification statement at the bottom of the actual form. Additionally, the employee responsible for the watch at the time that the form is printed out shall sign the certification statement at the bottom of the form, as when the actual FAA Form 7230-4 is used.

3. When FAA Form 7230-4 is used to indicate position responsibility, record employees initials and exact minute on/off the position.

g. Establish and post a list of equipment checks required during each watch; e.g., recorder checks, siren check, DF net check, etc. Make an entry ("WCLC") on FAA Form 7230-4 when the watch checklist has been completed. Notify the organization responsible for corrective action on equipment malfunctions. Record equipment malfunctions, equipment released for service, notification information and/or course of action taken to correct problem, and return of equipment to service. Facilities may establish local forms and procedures for recording and disseminating equipment malfunction and restoration information. Local forms used for recording this information are considered to be supplements to FAA Form 7230-4 and shall be filed with it.

NOTE-

At facilities which are closed prior to the beginning of the new business day, changes in status can occur during nonoperational hours. If the status of equipment or other facility operations has changed from status reported on previous days' FAA Form 7230-4, changes shall be noted in Watch Checklist entry, as well as time of status change, if known (e.g., WCLC - ABC VOR RTS 0700). If necessary, place an "E" in the left margin as prescribed in para 4-6-5, Preparation of FAA Form 7230-4.

h. FAAO 7210.56, Air Traffic Quality Assurance, defines situations requiring a Quality Assurance Review (QAR) and the procedures to be followed to accomplish the review. Promptly notify personnel responsible for conducting the review upon identifying the need for a QAR. Record QARs with the minimum detail necessary in order to identify the initiating incident (e.g., unusual go-around) and how it was identified (e.g., in-flight evaluation). Facilities may establish local forms and procedures for recording, disseminating and documenting the resolution of QARs. Local forms used for recording this information are considered supplements to FAA Form 7230-4 and shall be filed with it.

i. Place a large letter "E" in the left hand margin beside entries on equipment malfunctions. The "E" shall also be used when equipment is restored to service. The "E" is not required for facilities using local forms if procedures are established in accordance with subpara g.

NOTE-

The "E" is to be used on entries related to equipment problems which require Technical Operations involvement. The "E" is not required for routine maintenance items or for carryover entries on previously entered equipment malfunctions.

j. Place a large letter "Q" in the left hand margin beside QAR entries. Resolution of QARs, made in accordance with FAAO 7210.56, Air Traffic Quality Assurance, shall be indicated by either the responsible person initialing and dating the original "Q" entry, or by a second "Q" entry identifying the incident and person responsible for accomplishing its review. It is not necessary to document the details of the review or corrective actions taken in these log entries provided the persons resolving the QAR maintain adequate notes and records so as to reasonably explain the QAR at a later date. The "Q" is not required for facilities using local forms if procedures are established in accordance with subpara h.

k. When this form is used to describe the operation of radioteletypewriter and radiotelegraph circuits, record the following information:

1. Frequencies being used and type of watch (continuous or scheduled) being maintained on each frequency.

2. A record of each communication, test transmission, or attempted communication except when such information is recorded elsewhere in the facility, the time the communication is completed, the station communicated with, and the frequency used.

l. Employees other than the person responsible for the watch who make an entry shall initial or enter initials for each of their own entries.

m. Use additional forms as necessary to complete the reporting of the day's activity.

n. Make an entry closing out FAA Form 7230-4 at the close of business.

o. The air traffic manager, or his/her designee, shall initial the form after reviewing the entries to ensure that the facility operation is adequately and accurately described.

4-6-6. FAA FORM 7230-10, POSITION LOG

a. Air traffic managers shall ensure that FAA Form 7230-10, Position Log, or an automated sign on/off procedure is used for position sign on/off. FAA Form 7230-10 shall be prepared daily. All logs, including automated ones, shall reflect 24 hours or the facility's official operating hours, if less than 24 hours daily.

b. Position logs shall be used as the sole-source record for OJT instructor and evaluator time and premium pay. As a supporting document for time and attendance (T&A) purposes, position logs which

document OJT time shall be retained for one year prior to destruction.

c. Prepare FAA Form 7230-10 as follows:

1. Field 1 shall contain the facility three-letter identification code.

2. Field 2 shall contain a position identifier that is a maximum of five letters and/or numbers, starting in the first space on the left side of the field. Unused spaces shall be left blank.

(a) *ARTCCs*: ARTCCs shall use sector identifiers which have been approved by the En Route and Oceanic Area Office.

(b) *TERMINALS and FSSs/AFSSs*: When there is more than one position of a particular type, establish and use individual identifiers for each position. When only one position of a particular type exists, this field may be left blank.

3. Field 3 shall contain a maximum of two letters to show the position type, as follows:

(a) *ARTCCs*: Starting on the left side of the field, use position codes as follows:

TBL 4-6-1

Field 3 – ARTCC

<i>Designator</i>	<i>Position</i>
A	Assistant Controller
D	Non-Radar Control
F	Flight Data
H or RA	Handoff, Tracker or Radar Associate
R	Radar Control
TM	Traffic Management
O	Other Positions

(b) *Terminals*: Use two-letter position codes as follows:

TBL 4-6-2
Field 3 – Terminal

<i>Designator</i>	<i>Position</i>
AD	Arrival Data Radar
AG	Assistant Ground Control
AL	Assistant Local Control
AP	Approach Control
AR	Arrival Control Radar
CC	Coordinator Tower
CD	Clearance Delivery
CI	Coordinator Radar
DC	Departure Control
DD	Departure Data Radar
DR	Departure Control Radar
FD	Flight Data
FM	Final Monitor
GC	Ground Control
GH	Gate Hold
HO	Handoff
LC	Local Control
OT	Other
PR	Precision Approach Radar
ST	Satellite
TC	Terminal Control
TM	Traffic Management

(c) *FSSs/AFSSs*: Use two-letter codes, as follows:

TBL 4-6-3
Field 3 – FSS/AFSS

<i>Designator</i>	<i>Position</i>
AA	Airport Advisory
AE	Service A Edit
BC	Broadcast
BE	Service B Edit
CO	Coordinator
FD	Flight Data
FW	Flight Watch
IF	Inflight
NO	NOTAM
OT	Other
PF	Preflight
TT	Teletype
WC	Weather Coordinator
WO	Weather Observer

4. Field 4 shall contain the date in digit format. All spaces must be used.

5. Field 5 shall contain the UTC time that the employee assumes responsibility for the position or the UTC time that the position is combined with another. For employees receiving OJT instruction or evaluation, field 5 shall contain the UTC time that the OJT instruction or evaluation begins.

6. Field 6 shall contain the operating initials of the employee working the position.

7. Field 7 shall contain the UTC time that the employee is relieved of responsibility for the position or the UTC time that the position is decombined. For employees receiving OJT instruction or evaluation, field 7 shall contain the UTC time that the OJT instruction or evaluation ends.

8. Field 8 shall contain the appropriate code identified at the bottom of page 1 of the form.

9. Field 9 shall contain the identifier of the position being combined with (per field 2). Field 9 may be left blank if the same entry is appropriate and entered in field 10.

10. Field 10 shall contain the type of position being combined with (per field 3).

11. If the second page (back-side) of FAA Form 7230-10 is used, then fields 1, 2, 3 and 4 on that page shall also be completed.

12. When a mistake is made in filling out fields 5, 6, 7, 8, 9, or 10 – if the portion of the line that is incorrect can be legibly corrected, then line out that portion only and write the correct information. If the incorrect portion cannot be legibly corrected, then line out the entire line and write the correct information on the next line.

4-6-7. AUTOMATED POSITION SIGN ON/OFF

Model 1 Full Capacity (M1FC) AFSS facilities are authorized to use the automated procedures described herein. Facility air traffic managers are responsible for ensuring that facility personnel are briefed on these procedures, that these procedures are included in appropriate facility directives, and that procedures are established to ensure sign on/off data is forwarded to concerned facilities along with other data required for accident packages. Local procedures shall be established to regularly provide sign on/off data to individual air traffic managers in the Flight Service Data Processing System (FSDPS) family. Individual air traffic managers are responsible for ensuring the accuracy of sign on/off data. Sign on/off data shall be retained for six months, in accordance with FAAO 1350.15, Records Organization, Transfer, and Destruction Standards. Data can be retained either on paper at the AFSS or on computer tape at the FSDPS parent facility.

a. The procedures for M1FC AFSS automated position sign on/off are as follows:

1. Sign on a position by entering the keyword “ON,” followed by a space, and the specialist’s initials.

EXAMPLE–

“ON BT”

“ON RM”

2. Indicate training being conducted by entering the keyword “ON,” followed by a space, the specialist’s initials, a space, the trainee’s initials, space, and the contraction “TRNG.”

EXAMPLE–

“ON BT AS TRNG”

“ON CC RM TRNG”

3. Indicate other pertinent information in remarks, in accordance with facility directives.

EXAMPLE–

“ON PK AT 0400 LATE ENTRY”

“ON BT CC TRNG CORS PREVIOUS ENTRY”

4. Sign off when closing or combining a position by entering the keyword “OFF.”

EXAMPLE–

“OFF”

5. When it is necessary for multiple operating positions to be combined at a single M1FC terminal, specialists shall indicate that positions are combined in either the sign-on or sign-off sequence.

(a) Indicate responsibility for a position which is being combined with a different type of operational position by entering the keyword “OFF” followed by a space, and the phrase “COMB WITH XX” (XX representing the position being combined with).

EXAMPLE–

“OFF COMB WITH IF”

(b) Indicate what operational positions are combined at a terminal by entering the keyword “ON” followed by a space, the specialist’s initials, followed by a space, and the positions combined at that terminal.

EXAMPLE–

“ON BK FD BC”

6. The facility manager shall approve two-letter identifiers to be used for those times when it is necessary for specialists already signed on an M1FC terminal to sign on a second terminal, or when a terminal is signed on but not as an operational position.

(a) Specialist signing on a second terminal shall use the keyword “ON” followed by a space, and the approved two-letter identifier, followed by a space, and the specialist’s operating initials, as a minimum.

EXAMPLE–

“ON XX TS” (In this example, XX is the approved two-letter identifier.)

(b) Specialist signing on when not assigned an operational position shall use the keyword “ON,” followed by a space, then the approved two-letter identifier, followed by a space and the specialist’s operating initials.

EXAMPLE–

“ON PD SY” (In this example, PD is the approved two-letter identifier.)

7. If an air traffic manager has reason to authorize two full performance level (FPL) controllers to be signed on a single position simultaneously, then the facility operational position standard shall contain a statement to the effect that “the FPL signing on first has position responsibility, while the second FPL signing on is the assistant.” The procedure to be used in this case is for the FPL with responsibility for the position to sign off and then sign on again with the assisting FPL’s initials added after their own. No entry in the “REMARKS” section is required.

EXAMPLE–

“ON BT”

“OFF”

“ON BT CC” (In this example, FPL “BT” is responsible for the position with FPL “CC” assisting.)

b. TERMINAL/EN ROUTE AUTOMATED POSITION SIGN ON/OFF

Use of automated position sign on/off procedures is approved for terminal and en route facilities. The information requirements described in para 4–6–6, FAA Form 7230–10, Position Log, for FAA Form 7230–10 also apply to the automated procedure, except that times on/off the position may be displayed to the second rather than to the minute. Prior to implementation, facilities must receive En Route and Oceanic Operations Area or Terminal Operations Area office approval and must verify the accuracy of the automated sign on/off procedure by conducting a 30-day trial period. After successfully verifying the

automated procedure’s accuracy, an actual FAA Form 7230–10 is only required to be used during those times that the automated procedure is not available.

4–6–8. TIME AND ATTENDANCE (T&A) RECORDING

Record the actual times an employee works and is absent on a daily basis. Facilities may use any of the following methods for documenting time and attendance reported to the servicing payroll office.

a. The supervisor’s or timekeeper’s observation and subsequent recording of employees’ hours worked. When this method is used, leave usage shall be documented via OPM (Formerly Standard Form 71), Request for Leave or Approved Absence, or a locally produced form/electronic format documented by facility directive.

b. Personnel log. A locally produced sign in/out form documented by facility directive, or FAA Form 7230–4.

1. When employees arrive, they shall sign their name and record their time of arrival. When employees leave, they shall record their time of departure and initial the form.

2. The personnel log shall contain a statement or certification signed by each shift supervisor affirming the form’s accuracy and approving the entries made by personnel while under their supervision. This statement shall include the specific period of time for which each supervisor is providing certification.

3. The personnel log may also be used to document leave usage provided:

(a) The employee records the amount and type of leave used on the day the leave is used.

(b) Since leave use is covered by the Privacy Act, local management shall inform all employees that they may use OPM (Formerly Standard Form 71), Request for Leave or Approved Absence instead of indicating their leave use on the log (or any other group format employed). This notification shall be in writing, signed by the employee and retained in facility files, or the notification may be included in a facility directive which authorizes the group form.

c. Facilities may develop forms other than the personnel log to facilitate the documentation of leave and absence, provided:

1. The form includes, as a minimum, the employee request for leave, and the supervisor's approval/disapproval.

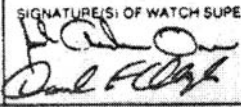

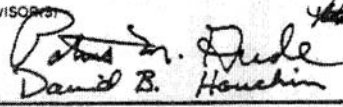

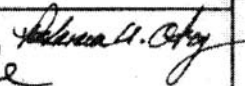

2. Each form and its use shall be contained in a facility directive.

3. Group forms shall allow for the Privacy Act alternative addressed above.

d. Initialing time and attendance reports may be used to document leave usage where this capability still exists.

e. Time clocks or other automated timekeeping devices. These devices may be linked to a supporting computer system for purposes of recording.

FIG 4-6-2
Position Log
[FAA Form 7230-10]

[illegible]

Section 7. Reports

4-7-1. MONTHLY REPORTS

Facilities shall submit monthly reports to the appropriate Service Area office by the 5th day of the following month. Distribution shall be made in accordance with appropriate instructions.

4-7-2. DELAY REPORTING

Air traffic personnel are responsible for reporting delays of 15 minutes or more that occur in facilities or airspace under their control. The cause of the delay, as well as the type aircraft involved (commercial, air taxi, general aviation, or military), and the duration of the delay shall be included in the daily reporting system. The air traffic operations network (OPSNET) is utilized for the purpose of submitting these reports electronically, as well as receiving summary reports and information from System Operations in FAA Headquarters. For more detailed information on OPSNET reporting policies and procedures, consult FAAO 7210.55, Operational Data Reporting Requirements.

4-7-3. SYSTEM IMPACT REPORTS

The ATCSCC is the focal point for the collection of information relating to operational system impacts; i.e., NAVAID/radar shutdowns, runway closures, telco outages, or any system event that has the

potential to create an operational impact that would generate media interest.

a. Therefore, all air traffic facilities shall ensure that a dissemination and communication process is established to keep the ATCSCC abreast of all changes or equipment malfunctions that could have a significant system impact. Facilities without direct access may contact ATCSCC at (703) 925-5349.

b. This does not eliminate, or in any way alter, current operational error/deviation or accident/incident reporting procedures with Safety Investigations, regional operations centers, and FAA Operations Center as set forth in this order, FAAO 8020.11, Aircraft Accident and Incident Notification, Investigation, and Reporting, and other appropriate directives.

4-7-4. UNIDENTIFIED FLYING OBJECT (UFO) REPORTS

a. Persons wanting to report UFO/Unexplained Phenomena activity should contact an UFO/Unexplained Phenomena Reporting Data Collection Center, such as the National Institute for Discovery Sciences (NIDS), the National UFO Reporting Center, etc.

b. If concern is expressed that life or property might be endangered, report the activity to the local law enforcement department.

Section 8. Freedom of Information Act (FOIA)

4-8-1. ACCIDENT/INCIDENT RECORDINGS

The original ATC voice tape or DAT will not ordinarily be used in response to requests for copies. The copies will be made from the original rerecording. When filling a request, do not use a cassette that has a previous recording on it.

a. With the prior approval of the Service Area office and Director of Safety Investigations, a requesting party shall be permitted to obtain a direct rerecording of the original tape or DAT. The facility air traffic manager shall ensure that a qualified FAA employee retains custody of the original recording and is present during reproduction. Recordings will be continuous, thus eliminating starting and stopping of the original tape or DAT to the maximum extent possible.

b. A certified rerecording shall be made of all portions of tape(s) or DAT(s) copied by the requesting party. This recording shall be retained in the facility in accordance with the appropriate records retention criteria; i.e., accidents or incidents, etc. The original tape(s) or DAT(s), will be returned to service.

4-8-2. REQUESTS TO PRESERVE TAPE OR DAT UNDER FOIA

When requests are received to preserve more of the original tape or DAT(s) than required by FAAO 8020.11, Aircraft Accident and Incident Notification, Investigation, and Reporting, or FAAO 7210.3, Facility Operation and Administration, the following will apply:

a. Immediately remove the tape(s) or DAT(s) or the pertinent portion thereof from service. During the time a tape(s) or DAT(s) is to be preserved, the reel, or DAT on which it is to be stored shall be labeled as follows: "WARNING this tape or DAT is to be preserved and is not to be returned to service until released by the Service Area office."

b. The requestor shall be notified in writing that the requested tape(s) or DAT(s) will be held for a period of 20 days from the date of FAA's response. Within this time, the requesting party shall make

arrangements to obtain a rerecording. If, at the end of the 20-day retention period, there has been no contact by the requesting party, or no follow through in obtaining a rerecording, the requestor will be advised in writing of that fact and be advised that we will hold the tape(s) or DAT(s) for an additional 10 days from the date of this notification. If, at the end of the additional 10 days, there has been no contact or follow through by the requesting party, the portion of tape(s) or DAT(s) that is more than we normally retain shall be returned to service.

4-8-3. COMPUTER DATA

The data on a computer tape/disc is normally useless to a requesting party unless reduced to printed form. Therefore, when filling a request for computer data, the tape/disc will be reduced to printed form. The following disclaimer will be attached to any computer reduction: "This document is derived from computer magnetic recordings of internal computer processing. It is not an exact representation of the control position display."

4-8-4. FEES

a. A request may be received for a certified rerecording on cassette tape or digital audio tape format. Unless otherwise specified in the request, prepare certified rerecordings on cassette tape.

1. **Cassette Tape Format:** A fee of \$30.00 will be charged for each hour or portion thereof of actual recordings. No additional fee will be charged for preparation time or personnel costs.

EXAMPLE-

1. *A request is received for a rerecording of 1 hour of Ground Control (GC) and 30 minutes of Local Control (LC). Total time = 1:30. The charges would be computed thus:*

\$30.00 First hour (GC)

\$30.00 Portion of time for the next hour (LC)

\$60.00 Total Charge

EXAMPLE-

2. *A request is received for a total of 25 minutes of actual recordings. The charge would be \$30.00.*

EXAMPLE–

3. A request is received for certified rerecordings of Clearance Delivery, GC, and LC with each position placed on a separate cassette. The total recorded time on all 3 positions is 45 minutes. The charge for the 3 cassettes would be computed thus:

\$30.00 45 minutes

No additional charges would be assessed for the individual cassettes.

2. DAT: A fee of \$25.00 will be charged for each DAT provided under the request. In addition, a flat rate of \$30.00 will be charged for each different block of time requested, limited to the daily 24 hour period recorded on the facility's master DAT. In other words, although a request for one block of time (i.e., 0900–0900) is a total of 24 hours, it is spread over a two day period. Therefore, such a request would be considered as two separate blocks of time.

EXAMPLE–

1. A request is received for a voice recording on DAT format for 2 different blocks of time; from 0900–1200 and 1500–1830 on May 5. Since no specific position(s) were specified, the request could include all recorded positions during the time periods. Regardless, the charges for the service would be computed thus:

\$25.00 1 DAT

\$30.00 1 Block of time (0900–1200)

\$30.00 1 Block of time (1500–1830)

\$85.00 Total Charge

EXAMPLE–

2. A request is received for a voice recording beginning on June 12, at 0900, through June 13, at 1800. The facility will have stored this information on two separate DATs. However, all of the requested data can be transferred to a single DAT for the customer. The charges would be computed thus:

\$25.00 1 DAT

\$30.00 1 Block of time (June 12, 0900–2359)

\$30.00 1 Block of time (June 13, 0000–1800)

\$85.00 Total Charge

EXAMPLE–

3. The same information in example 2 is requested except the customer wants the data to be placed on separate DATs and labeled for each day. The charge would be computed thus:

\$50.00 2 DATs @ \$25.00 each

\$30.00 1 Block of time (June 12, 0900–2359)

\$30.00 1 Block of time (June 13, 0000–1800)

\$110.00 Total Charge

EXAMPLE–

4. A request is received for a voice recording from 0630–2345. The charge would be computed thus:

\$25.00 1 DAT

\$30.00 1 Block of time (0630–2345)

\$55.00 Total Charge

EXAMPLE–

5. A request is received for voice recordings of: LC, August 2, 1015–2255; GC, August 3, 0700–1635; and LC, August 3, 0700–1635. The charges would be computed thus:

\$25.00 1 DAT

\$30.00 1 Block of time (LC, August 2, 1015–2255)

\$30.00 1 Block of time (GC and LC, August 3, 0700–1635)

\$85.00 Total Charge

EXAMPLE–

6. A request is received for a voice recording of: LC, August 2, 1015–2255; LC, August 3, 0700–1635; and GC, August 3, 0700–1530. The charges would be computed thus:

\$25.00 1 DAT

\$30.00 1 Block of time (LC, August 2, 1015–2255)

\$30.00 1 Block of time (LC, August 3, 0700–1635)

\$30.00 1 Block of time (GC, August 3, 0700–1530)

\$115.00 Total Charge

b. CPU cost:

1. AFSS: \$13.00

2. ARTS II/III: \$99.00

3. HOST: \$275.00

c. Fees for a computer search will be computed using the following formula:

$$\text{Fee} = \frac{(\text{minutes of CPU time})}{60} \times (\text{CPU cost}) + \frac{(\text{minutes operator/programmer time})}{60} \times (\text{salary}) \times (1.16)$$

EXAMPLE-

For ARTCC given 15 minutes CPU time; 45 minutes programmer time; \$30 salary.

NOTE-

$$(^{15}/_{60} \times \$275) + ^{45}/_{60} \times \$30 \times 1.16 = \$94.85$$

Chapter 5. Special Flight Handling

Section 1. Presidential Aircraft

5-1-1. ADVANCE COORDINATION

NOTE—

Presidential aircraft and entourage, referred to herein, include aircraft and entourage of the President, the Vice President, or other public figures designated by the White House.

a. An advance survey group comprised of representatives of the Office of the Military Assistant to the President, the U.S. Secret Service, the White House Staff, and a Presidential Advance Agent may visit each location which the Presidential aircraft will transit. The visit is normally made several days in advance of the trip to determine security aspects and the availability of supporting services. On this visit the group may meet with the airport operator, the ATCT manager, and other interested parties. Based on the evaluation by this group, a decision is made on the use of the airport, and further coordination is planned for an advance group.

b. The advance group, comprised of representatives of the same organizations stated in subpara a, will meet with the same airport elements to complete security measures and supporting services and determine the necessary restrictions to air traffic operations before the arrival and the departure of the Presidential aircraft and while the Presidential entourage is on the airport. The security provisions may include stationing a guard in the tower cab or at the tower entrance and maintaining two-way communications between the control tower and agents on the ground. This meeting will be held several days in advance of the planned arrival of the Presidential aircraft. The advance group has been requested to have all elements of the group coordinate with the FAA simultaneously.

1. The air traffic manager shall appoint an air traffic supervisor to serve as coordinator who will be responsible for attending all meetings and briefing all affected personnel. Additionally, the coordinator shall brief the ATCSCC and the appropriate ARTCC of any traffic delays or restrictions.

2. All advance coordination shall be documented, with special attention given to routes, radio

frequencies, and assigned transponder codes. This documentation shall be made available to the personnel on duty who will be handling the Presidential movement.

3. The meeting shall be attended by the ATCT manager, the coordinator, and, if available, the supervisory specialist(s) who will be on duty and directly involved in the control of airport traffic during the arrival and departure, and while the Presidential entourage is on the airport.

4. The air traffic manager shall take whatever steps are necessary to ensure that the Presidential flight, airplanes, helicopters, and entourage are given priority. Restrictions will be placed upon normal air traffic operations to provide priority unless directed otherwise by the Presidential advance agent (USAF) or the Secret Service representative; the latter when the Presidential advance agent (USAF) is not directly involved. ATCT personnel shall be guided by the determinations of the advance group and shall cooperate to the maximum extent possible. The air traffic manager shall consider the following alternatives:

(a) Employing air traffic control techniques to temporarily adjust or suspend the movement of traffic to accommodate the arrival and the departure of the Presidential aircraft and while the Presidential entourage is on the airport.

(b) Requesting traffic, by NOTAM, to voluntarily conform to restrictions in the vicinity of an airport. The NOTAM shall give details of the restrictions and should be cleared by the advance group. It shall avoid any reference to Presidential activities and shall be issued at least 8 hours in advance.

EXAMPLE—

ALL TRAFFIC CAN EXPECT DELAYS FROM (date/time) TO (date/time) AND FROM (date/time) TO (date/time).

(c) The time will normally be 15 minutes before to 15 minutes after the arrival and the departure time.

c. If the advance group determines that mandatory airspace restrictions are required, the Washington headquarters office of the U.S. Government agency responsible for the protection of the personage concerned will contact FAA Headquarters in accordance with established procedures and request the necessary regulatory action. The air traffic manager shall advise the Service Area office of the regulatory proposal. (See 14 CFR Section 91.141 and FAAO 2100.6, Flight Restrictions in the Proximity of the President and Other Parties.)

NOTE—

The actions established herein do not affect the provisions of 14 CFR Section 91.113(b); i.e., an aircraft in distress has the right-of-way over all other air traffic.

REFERENCE—

FAAO 7930.2, Para 7-1-1, FDC NOTAM Categories.

d. To ensure radio communications and radar service, the following should be coordinated with the advance group:

1. All aircraft in the flight should be assigned a discrete transponder code. As a minimum, the lead aircraft and the aircraft containing the President should turn their transponders on when flying in formation. In the event of a formation breakup, all aircraft should squawk their assigned code to facilitate auto-acquire.

2. Normal frequencies are preferred over discrete frequencies.

NOTE—

Secret Service personnel will transmit progress reports on the Presidential entourage to the affected tower as soon as possible.

e. Prior to the actual operation, action shall be taken to ensure that all air traffic specialists who will be on duty during the arrival and departure of the Presidential aircraft are thoroughly briefed concerning the arrangements pertaining to the operation, including movements of the Presidential entourage while on the airport.

f. At military airports, the base commander will determine the restriction or delay of flight operations into that airport and the need to issue a NOTAM. He/she should coordinate his/her actions with the appropriate FAA facilities if air traffic will be affected.

5-1-2. MONITORING THE PRESIDENTIAL AIRCRAFT FLIGHT

a. Advance scheduled movement information of Presidential aircraft received from the White House shall be distributed to the air traffic manager of each facility through which the Presidential aircraft will transit. The air traffic manager will be notified of the scheduled movement by the appropriate Service Area office or, when time critical, by national headquarters through the ATCSCC.

b. Presidential aircraft shall be aurally and visually monitored by a supervisory specialist/controller-in-charge (CIC) from departure to arrival. The air traffic manager of each facility through which the Presidential aircraft transits shall ensure that a supervisory specialist/CIC aurally and visually monitors the aircraft while in the facility's airspace. The supervisory specialist/CIC shall:

1. Be present at each sector/position providing ATC service to the Presidential aircraft from the flight's entry in the facility's airspace until the flight exits the facility's airspace.

2. Aurally and visually monitor the flight to ensure that separation, control, and coordination are accomplished.

NOTE—

Supervisors and managers at FAA Contract Towers (FCT) are qualified to perform the duties required in para 5-1-2.

5-1-3. USE OF FAA COMMUNICATIONS CIRCUITS

Operations personnel shall expedite the movement of Presidential aircraft and related control messages when traffic conditions and communications facilities permit. Honor any request of the pilot concerning movement of the aircraft if the request can be fulfilled in accordance with existing control procedures. Also, honor any request of the pilot, Office of the Vice President, Secret Service, or White House Staff for the relay, via FAA communications circuits, of information regarding the movement or proposed movement of the aircraft.

5-1-4. SECURITY OF INFORMATION

FAA personnel shall not release any information concerning Presidential flights to anyone outside the FAA except properly identified White House staff members, Secret Service personnel, or appropriate military authorities. Any inquiries from the press or

others for information regarding the movement of these aircraft shall be referred to the White House, the Secret Service, the Air Force, or their representatives at either the point of departure or arrival. These security measures also apply to information regarding the movement of Presidential or Vice Presidential family aircraft.

5-1-5. MOVEMENT INFORMATION

Honor any request of the pilot concerning movement of the Presidential aircraft if it can be fulfilled in accordance with existing control procedures. Also, honor any request of the pilot, Secret Service, White House Staff, or Office of the Vice President for the relay, via FAA communications circuits or Defense Switching Network (DSN), of information regarding the movement or the proposed movement of these aircraft.

5-1-6. COORDINATION

ARTCCs shall call CARF direct for ALTRV approval on any Presidential aircraft international flight plan received less than 4 hours before departure.

5-1-7. RESCUE SUPPORT AIRCRAFT

When rescue support aircraft are used, the aircraft will depart from various bases and will file flight plans which will place the aircraft on tracks in proximity of the Presidential aircraft for contingency purposes. Orbits may also be used by the rescue support aircraft. These aircraft will be identified in the remarks section of the flight plan as "Rescue" for purposes of radio and interphone communications.

REFERENCE-

FAAO 7110.65, Para 2-4-20, Aircraft Identification.

Section 2. FAA Aircraft

5-2-1. IDENTIFYING DEPARTMENT OF TRANSPORTATION (DOT) AND FAA FLIGHTS

The following alphanumeric identifiers and radio/interphone call-signs are established for use in air/ground communications when the Secretary of Transportation, Deputy Secretary of Transportation, FAA Administrator, or FAA Deputy Administrator have a requirement to identify themselves:

a. DOT.

1. Secretary:

- (a) Identifier: DOT-1
- (b) Call-Sign: Transport-1

2. Deputy Secretary:

- (a) Identifier: DOT-2
- (b) Call-Sign: Transport-2

b. FAA.

1. Administrator:

- (a) Identifier: FAA-1
- (b) Call-Sign: Safeair-1

2. Deputy Administrator:

- (a) Identifier: FAA-2
- (b) Call-Sign: Safeair-2

5-2-2. FLIGHT INSPECTION AIRCRAFT

a. FAA aircraft engaged in flight inspection of navigation aids shall be provided special handling by ATC facilities to the maximum extent possible. FIAOs/flight inspectors are expected to coordinate with the facility's air traffic supervisor on duty, or a designated representative, prior to conducting flight inspections. Occasionally, due to unplanned/special flight inspection requirements, flight inspectors may attempt to conserve flight hours and accomplish additional opportune flight checks with minimal advance coordination.

b. Unless otherwise agreed to, direct contact shall be maintained between the flight inspection pilot and the ATC facility to provide for an exchange of information regarding the intention of the pilot and

the known traffic in the facility's area of responsibility.

c. Many terminal and en route flight inspections are accomplished using automatic recording equipment, and an uninterrupted flight is necessary for the successful accomplishment of the flight. Maximum cooperation will help the FIAOs accomplish their job within their limited aircraft resources. FAAO 8240.41, Flight Inspection/Air Traffic On-site Coordination Requirements, provides additional details as does FAAO 7110.65, Air Traffic Control.

d. Facility procedures shall provide a means of passing impending flight inspection information on to subsequent shifts and/or immediately notifying FIAOs/PICs when facility air traffic activities make it impossible to handle flight inspections expeditiously.

5-2-3. HIGH ALTITUDE INSPECTIONS

a. High altitude flight inspection operations are generally conducted on IFR flight plans; "VFR-on-top" will not be requested except when weather conditions are ideal and excessive delays would result from operating at an assigned flight level.

b. The pilot shall contact the STMCIC of the appropriate facility for coordination prior to flight when special handling is required for the successful completion of the flight check.

NOTE-

Flight inspection operations requiring the participation of ground personnel or the establishment of specific communications or radar operation capabilities are considered to require special handling. Such flights must be coordinated with the appropriate facilities before departure.

5-2-4. RESEARCH AND DEVELOPMENT FLIGHTS

a. Aircraft participating in FAA research and development test activities are sometimes required to deviate from standard procedures to accomplish the mission. These aircraft should be provided maximum assistance by control facilities subject to other traffic. Direct radio contact should be maintained between the aircraft and the control facility to provide for an

exchange of information regarding the pilot's intention and known traffic.

■ **b.** Upon request by the pilot, the air traffic manager of the controlling facility may authorize the use of special flight procedures to be used by aircraft

participating in FAA research and development activities. Control personnel shall be thoroughly briefed on the procedure prior to the flight.

NOTE—

The actions established herein do not affect the pilot's responsibility to obtain any necessary waivers to the CFRs.

Section 3. DOE and Other Aircraft

5-3-1. DEPARTMENT OF ENERGY (DOE) FLIGHTS

DOE contracts for civil pilots to operate public aircraft to transport radioactive and/or high explosive materials within the conterminous United States. They will operate principally during daylight hours and, although they will be made in VFR conditions insofar as possible, an instrument flight plan will be filed and IFR procedures followed.

5-3-2. IDENTIFICATION OF SPECIAL DOE FLIGHTS

a. When transporting radioactive/high explosive materials, DOE flights will be identified by using the prefix "RAC" followed by the last four digits of the aircraft registration number.

b. The special characteristics of the cargo dictate that the flight be carefully planned along selected routes. Pilots may refuse clearances that require route or altitude changes.

5-3-3. NOTIFICATION OF DOE REPORTED ACCIDENT/UNREPORTED AIRCRAFT

In the event a RAC flight is involved in an accident, inform the STMCIC of the appropriate center so that he/she may immediately notify local and state rescue and law enforcement authorities of the accident and tell them that the flight was transporting radioactive/high explosive materials. The STMCIC shall then notify the DOE duty officer in Albuquerque, NM, of the accident via urgent collect telephone: (505) 845-4667. The duty officer shall also be notified whenever a loss of radio/radar occurs en route or the flight is overdue at the destination.

5-3-4. ATMOSPHERE SAMPLING FOR NUCLEAR CONTAMINATION

a. Following a foreign nuclear weapons test, a planned arrival sampling schedule is established by the USAF. Although sampler aircraft are flight planned to the suspected atmosphere area of nuclear contamination, the aircraft are likely to require altitude and route changes which cannot be anticipated prior to departure. The purpose of those altitude and route changes is to permit direct contact with and

sampling of the *cloud* debris whose exact location and altitude distribution cannot be accurately predicted.

b. To afford these operations optimum flexibility during in-flight profiles, ATC facilities shall honor in-flight clearance requests for altitude and route changes to the maximum extent possible. If necessary, other IFR traffic may be recleared so that requests by sampler aircraft are honored. However, in no case shall the separation minima outlined in FAAO 7110.65, Air Traffic Control, be compromised.

c. USAF aircraft engaged in aerial sampling missions shall use the call sign "SAMP" followed by the last three digits of the aircraft's serial number.

REFERENCE-

FAAO 7110.65, Para 9-3-15, SAMP.

FAAO 7610.4, Para 12-4-3, Atmospheric Sampling for Nuclear Contamination.

5-3-5. DUE REGARD OPERATIONS

a. Article 3 of the International Civil Aviation Organization (ICAO) Chicago Convention of 1944 includes the following:

1. This Convention shall be applicable to civil aircraft and shall not be applicable to state aircraft.

2. Aircraft used in military, customs and police services shall be deemed to be state aircraft.

3. The contracting States undertake, when issuing regulations for their state aircraft, that they will have due regard for the safety of navigation of civil aircraft.

b. Department of Defense and U.S. Customs Service have specified the following conditions for flight operations outside of U.S. Domestic airspace which are conducted under the "due regard" or "operational" prerogative of state aircraft and not in accordance with standard ICAO flight procedures. Under these conditions the PIC assumes the responsibility for separating his/her aircraft from all other air traffic.

1. Aircraft shall be operated in visual meteorological conditions (VMC);

2. Aircraft shall be operated within radar surveillance and radio communications of a surface radar facility;

3. Aircraft shall be equipped with airborne radar that is sufficient to provide separation from other aircraft; and

4. Aircraft shall be operated within Class G airspace.

c. Search and rescue actions for flights conducted under due regard provision are the responsibility of the parent organization.

5-3-6. WEATHER RECONNAISSANCE FLIGHTS

The Air Force Reserve (AFRES) 53rd Weather Reconnaissance Squadron (53WRS) and the National Oceanic & Atmospheric Administration (NOAA) Aircraft Operations Center (AOC) have responsibility for flying winter storm, hurricane, and tropical storm reconnaissance missions. When conducting these missions, aircraft from the 53WRS will utilize the call-sign "TEAL," and aircraft from the AOC will utilize the call-sign "NOAA." Due to the unique nature of these missions it is necessary to provide a degree of special handling to ensure that sufficient meteorological data is collected. The routes flown are dictated by storm movement, not traffic flows. The nature of these weather phenomena may result in very little time between the filing of a flight plan and the actual departure.

a. WINTER STORM MISSIONS.

1. Winter storm missions are flown in support of the National Winter Storm Operations Plan (NWSOP). Routes will normally follow published tracks as delineated in the Winter Storm Tracks LOA between CARF and AFRES.

2. Prior to a NWSOP mission, the 53WRS Current Operations or the AOC Flight Operations Division shall submit an Altitude Reservation Approval Request (ALTRV APREQ) for a published or adhoc winter storm track to CARF and include the following data:

- (a) Mission call-sign.
- (b) Estimated time over start fix.
- (c) Storm track to be flown.
- (d) Location of dropsonde release points.
- (e) Requested altitude(s) if other than FL290B310.

(f) Any requests to deviate from published routes.

NOTE-

1. *The passing of this data does not pre-empt the mission commander's responsibility to file a flight plan, nor does it constitute an ATC clearance.*

2. *A dropsonde is a cylinder shaped 18-inch long metal weather sensor; weighs 3 and 1/2 pounds, and has a parachute attached. The flight will release dropsondes at pre-designated points along the published track. The aircraft commander will want to follow a specific pressure gradient (as opposed to altimeter setting of 29.92) when flying these missions. The correct pressure for dropsondes release is normally found at altitudes between FL290 and FL310. These dropsondes are configured to fall at an average rate of 1,000 feet per minute.*

3. *Flight between departure airport and ALTRV ingress point, as well as between ALTRV egress and destination airport will be via normal flight plan filing.*

3. CARF shall pass this information to impacted facilities and upon receipt of this data, appropriate facility personnel shall ensure that the information is properly distributed to all control positions involved.

4. Requests to permanently change a published winter storm track or drop site shall be coordinated with CARF and impacted facilities. Requests to change any other portion of the NWSOP shall be coordinated with System Operations and Safety.

b. HURRICANE AND TROPICAL CYCLONE MISSIONS.

1. These missions are flown in support of the National Hurricane Operations Plan (NHOP). Prior to a hurricane/tropical cyclone reconnaissance mission the 53WRS Current Operations or the AOC Flight Operations Division will contact the ATCSCC, and provide the following data:

- (a) Mission call-sign.
- (b) Departure point and estimated time of departure.
- (c) Approximate route(s) to be flown.
- (d) Requested altitude(s).
- (e) Any special requests.

NOTE-

The passing of this data does not pre-empt the mission commander's responsibility to file a flight plan, nor does it constitute an ATC clearance.

2. Upon receipt of this data, the ATCSCC shall ensure that the information is properly distributed to all impacted facilities.

3. The appropriate facility personnel shall, upon receipt of this data, ensure that it is distributed.

4. Should it become necessary to contact a TEAL or NOAA flight and all other methods of communication are not possible (e.g., direct radio, ARINC, aircraft relay), the Chief, Aerial Reconnaissance Coordinator, All Hurricanes (CARCAH) may be requested to relay messages to/from the aircraft. You may receive a phone call from CARCAH to authenticate the request.

5. Requests to change any portion of the NHOP shall be coordinated with System Operations and Safety.

5-3-7. OPEN SKIES TREATY AIRCRAFT

a. The David J. Hurley Air Traffic Control System Command Center (ATCSCC) shall be the FAA coordination unit between the Defense Threat Reduction Agency (DTRA) and field facilities for all OPEN SKIES operational information. This includes initial notification and follow-up information on each mission.

b. ARTCCs shall designate and advise the ATCSCC of a focal point within that facility for OPEN SKIES information.

c. Advance scheduled movement information of OPEN SKIES aircraft received from the DTRA will be forwarded by the ATCSCC.

d. Upon notification of an OPEN SKIES flight, the affected ARTCCs shall inform all affected FAA facilities and any other facility/agency it deems necessary within their area of responsibility of the flight path and possible deviation path of the aircraft.

NOTE-

The possible deviation path for an OPEN SKIES aircraft is defined by treaty as fifty (50) kilometers or twenty seven (27) nautical miles either side of the intended route of flight. OPEN SKIES flights will not deviate from approved route of flight without ATC clearance.

e. The air traffic manager of each facility through which the OPEN SKIES aircraft transits shall ensure that a supervisory specialist(s)/CIC monitors the aircraft while in the facility's airspace. The supervisory specialist(s)/CIC shall monitor the movement of the OPEN SKIES aircraft from the flight's entry into the facility's airspace until the flight exits the facility's airspace, to ensure that priority handling, separation, control, and coordination are accomplished.

REFERENCE-

1. FAAO 7110.65, Subpara 2-1-4n, Operational Priority.
2. FAAO 7110.65, Para 9-3-20, Open Skies Treaty Aircraft.
3. TREATY ON OPEN SKIES, TREATY DOC. 102-37.

f. Air traffic facilities shall notify the ATCSCC immediately in the event of any incidents or problems generated by OPEN SKIES aircraft.

g. The ATCSCC shall immediately notify System Operations Security/Strategic Operations Security for resolution of problems or incidents, if necessary.

Section 4. Other Flight Requests

5-4-1. REQUESTS FOR DEVIATION FROM TRANSPONDER REQUIREMENTS

a. Operations at and above 10,000 feet MSL and below the floor of Class A airspace.

1. Facility air traffic managers or their designated representative may approve or disapprove preflight requests for ATC authorization to deviate from transponder requirements. When coordination requirements are beyond the interphone capability of a terminal facility, the appropriate ARTCC shall assume the interfacility coordination task.

2. Pilots/operators may be required to comply with reasonable conditions as necessary to maintain an acceptable level of safety. Such conditions may include:

(a) Filing a flight plan.

(b) Maintaining radio contact with ATC.

(c) Notifying ATC prior to entering the affected airspace.

3. Information regarding approved VFR operations in noncompliance with Mode C transponder requirements shall be forwarded to all affected facilities. Facilities shall ensure that the information is available at the proper control positions.

4. LOA between facilities and operators or individuals may be established pending the installation of appropriate transponder equipment. Deviations should not be approved for more than 6 months but additional 6-month agreements may be established when required by unusual operational circumstances.

5. Facility air traffic managers shall ensure that the local FSDO is provided with sufficient information to permit follow-up on operators who create an unnecessary burden on the ATC system by continually attempting such operations without reasonable effort to install the appropriate equipment.

b. Operations within a Mode C veil and within and above Class C airspace up to 10,000 feet MSL.

NOTE—

A Mode C veil is that airspace within a 30 NM radius of a Class B airspace primary airport from the surface to 10,000 feet MSL excluding the Class B airspace itself.

1. Approvals to deviate from the Mode C requirement by operators of aircraft without transponders shall be issued by the facility air traffic manager or his/her designee.

2. Authorizations may be issued for a single event or on a continuing basis.

(a) Single-event authorizations may be issued verbally or in a letter to the proponent.

(b) Long term authorizations must be issued in writing by the appropriate facility air traffic manager or his/her designee. In cases involving another facility's airspace or fringe airports, the authorization should be incorporated into a LOA. Multi-signature LOAs should be used in situations involving two or more individual operators.

3. The following are examples of operations for which authorizations may be issued:

(a) Aircraft with insufficient panel space or electrical system capacity to accommodate a Mode C transponder (e.g., antique aircraft; agricultural aircraft).

(b) Ferrying aircraft.

(c) Operations for the purposes of installing or repairing an aircraft's transponder, or other maintenance/service.

(d) Operations conducted in facility defined areas of nonradar coverage.

(e) Operations conducted by aircraft based at a fringe airport shall be limited to those that:

NOTE—

A fringe airport is an airport that is approximately 25 NM or farther from Class B airspace primary airport and is not served by a scheduled air carrier; or an airport outside the Mode C veil at which aircraft operations in the traffic pattern routinely enter the Mode C veil.

(1) Will not adversely impact other operations receiving radar service in the area.

(2) Are restricted to altitudes below 2,500 feet AGL.

(3) Are not coincidental with controlled traffic flows within the terminal area.

(4) Are conducted in the airport traffic pattern and via the most direct routing out of the Mode C veil, consistent with existing traffic and noise abatement procedures.

(f) National defense operations or other operations in the public interest which can be accommodated safely and would not adversely impact the efficient movement of traffic.

4. Written authorizations shall specify an effective and expiration date/time, a description of any area(s) and altitude(s) to which the authorization is limited, and any advance call up or other communications requirements deemed appropriate.

5. Facilities shall limit each authorization to the airspace for which it is responsible by having the aircraft enter/exit the affected airspace through its delegated airspace. However, to provide expeditious responses to requests, facility managers may consider other methods for processing authorization requests and incorporate such methods in letters of agreement with those ATC facilities that control traffic within the affected airspace.

5-4-2. CROP DUSTER/ANTIQUE AIRCRAFT

Handle requests by pilots of these aircraft to operate into airports having U.S. Government operated control towers as follows:

a. If the pilot is unable to contact the tower where the authorization is needed via local telephone, he/she may relay the request through the nearest AFSS/FSS or the tower if there is no collocated AFSS/FSS. The request shall include:

1. The aircraft identification.
2. The aircraft type.
3. The pilot's name.
4. The departure point.
5. The destination airport.
6. The proposed date and the time of arrival.

b. The facility relaying the request shall:

1. Inform the pilot that approval will be invalid if the aircraft does not arrive within 30 minutes before or after the proposed arrival time.

2. Inform the destination airport tower via Service B or Service F circuit. On Service B, the text shall begin "NORDO CROP DUSTER LNDG AUZN REQ."

c. The destination tower shall transmit an approval or a disapproval to the originating facility for delivery to the pilot. This approval/disapproval shall include consideration of local airport management rules, anticipated traffic, and other influencing factors. As appropriate, it shall include special instructions, reason for disapproval, or a suggested alternative arrival time.

5-4-3. FLIGHT TEST OPERATIONS

14 CFR Part 91 requires that flight test operations be conducted only over open water or sparsely populated areas having a light volume of air traffic. FAA personnel are sometimes asked to assist aircraft operators in selecting areas where it is likely that only a few aircraft will be operating. When such requests are received, FAA personnel shall cooperate in every reasonable way. In Class A airspace, aircraft may be cleared on an individual basis to areas having a light volume of air traffic, or they may be required to operate within special operating areas established for flight test activity.

5-4-4. SANCTIONED SPEED RECORDS

The National Aeronautic Association (NAA) sanctions all speed record attempts before they are made and certifies them on completion. The FAA has agreed to participate in this program by obtaining the certifying start and finish time. Remunerations shall not be accepted for services rendered in support of this program.

5-4-5. CERTIFYING RECORD ATTEMPTS

FAA tower specialists shall act as NAA officials for certifying record attempts by commercial aircraft provided that the following conditions are met:

a. Departure Point: Before takeoff, a representative of the airline must submit the NAA Certificate of Start form to the tower specialist and make arrangements with him/her to give and time the signal to the pilot to start the takeoff roll.

b. Arrival Point: A representative of the airline must notify the tower controller at the terminating airport as far in advance as possible that a record

attempt is to be made so that he/she will be alerted to time the moment of touchdown. The airline representative must also submit the Certificate of Finish form to the tower controller for certification of the time of touchdown. The participating airline is responsible for collecting and forwarding all NAA forms certified by FAA tower specialists.

5-4-6. PHOTOGRAMMETRIC FLIGHTS

a. Except for rare instances, photogrammetric missions must be conducted on “clear days,” in VFR flight conditions, and usually when the sun angle is high. Accordingly, infrequent IFR flight plan filing can be anticipated.

b. Most missions will involve a series of overlapping photographic exposures, although some missions may involve only a single exposure. In any case, the aircraft must necessarily move precisely along a predetermined course/s at a predetermined altitude. This part of the mission is called the *flight line*.

c. Facility management personnel shall be guided by the following when handling photogrammetric flights.

1. Facilities are expected to make every reasonable effort to accommodate photogrammetric missions, but judgment must be exercised to minimize overall system impact.

2. When contacted by the pilot in advance, the controlling facility is required to secure a complete understanding of the operation to be conducted. In this regard, it must be anticipated that the operation may be delayed due to weather (this possibility should be covered in the preflight planning). Since the flight could be delayed not only for hours but in some cases for days, facility personnel must be adequately briefed to cope with such situations on a spontaneous basis.

3. When the pilot commences a flight line (the actual photographic run), every reasonable effort should be made to permit the flight to continue uninterrupted; i.e., without change in course or altitude. Should it become necessary to break the aircraft off the flight line, it should be vectored or cleared back into position for another run as soon as possible.

NOTE-

The Legislative Council for Photogrammetry (LCP) speaks for the photogrammetric flight industry. The agency has emphasized the following points to the LCP:

a. *The pilot is expected to make every effort to contact the appropriate ATC facility prior to the mission to explain flight requirements and to avoid “no notice” air/ground telephone requests whenever possible.*

b. *That firm “hard and fast” approvals cannot be guaranteed due to the rapid changes which can occur in the ATC operational situation, but every reasonable effort will be made by ATC to accommodate pilot requests.*

c. *The pilot is expected to say “This is a photo survey mission” when contacting the ATC facility via air/ground communications and subsequently to inform the controller when the flight line is commenced.*

5-4-7. AEROBATIC PRACTICE AREAS

Air traffic managers may approve requests to conduct aerobatic practice activity within Class B, C, D, or E airspace, provided the following requirements have been satisfied:

a. The operations are conducted in accordance with a waiver issued by the appropriate FSDO to the aircraft operator for all applicable Code of Federal Regulations (CFR).

b. The operation shall not adversely affect the safety of the air traffic operation or result in a reduction of service to other users.

c. The facility manager shall evaluate the impact on air traffic controller workload and the service requirements of the airspace where the operation will be conducted before authorizing these operations.

d. A facility directive shall be prepared describing the procedures for managing these operations. The directive shall contain, as a minimum, the controller and aircraft operator responsibilities, and a diagram that depicts the geographical area in which the activity will take place.

NOTE-

1. *The air traffic manager’s approval to conduct these operations is not a waiver to the CFR. The issuance of waivers to applicable part/section of the CFR is the responsibility of the FSDO.*

2. *The Class of airspace the operation is conducted in determines what air traffic approval, if any, is required.*

REFERENCE-

14 CFR Section 91.303, Aerobatic flight.

Part 2. AIR ROUTE TRAFFIC CONTROL CENTERS

Chapter 6. En Route Operations and Services

Section 1. General

6-1-1. AREAS OF OPERATION

The control room is divided into easily managed segments or areas of operation. An area of operation consists of a group of sectors requiring the service of ATCSs. The number of areas authorized is based on the ARTCC's requirements and staffing needs. Vice President of En Route and Oceanic Services approval must be obtained prior to changing the number of areas of operation.

6-1-2. SECTORS

The basic unit in each area of operation is the sector. Sectors are classified as Radar, Non-Radar, or Oceanic and subclassified by altitude strata.

6-1-3. SECTOR CONFIGURATION

a. The size and configuration of sectors are determined by:

1. Traffic volume.
2. Traffic flow.
3. Types of aircraft.
4. Location and activity of terminals.
5. Special operations/procedures.
6. Coordination requirements.
7. Consolidation capability.
8. Radar/radio coverage.
9. Equipment limitations.
10. Airway alignments.

b. Accordingly:

1. Align sector boundaries so as to contain the longest possible segments of airways.
 2. Align sector consoles to conform with the primary traffic flow.
 3. Distribute the workload equitably among the sectors.
 4. Provide for a sector consolidation capability.
- c. The lateral boundaries of sectors in different altitude strata need not coincide.
- d. A LOA must be prepared when adjacent sectors of two facilities are stratified at different levels.

6-1-4. AREAS OF SPECIALIZATION

ARTCC air traffic managers shall divide their control rooms into areas of specialization as sector complexity dictates. ATCSs shall be assigned to one or more areas of specialization commensurate with individual qualifications. An area of specialization is a group of interrelated sectors on which an ATCS is required to maintain currency. ARTCC air traffic managers should strive to make areas of specialization coincident with areas of operation. There may be more than one area of specialization in an area of operation. Avoid, if possible, establishing an area of specialization encompassing portions of two areas of operation. The En Route and Oceanic Service Area Office should be notified of changes affecting the number and type of areas of specialization.

6-1-5. OPERATING POSITION DESIGNATORS

a. The following designators may be used to identify operating positions in an ARTCC: (See TBL 6-1-1).

TBL 6-1-1
OPERATING POSITION DESIGNATORS

	<i>Designator</i>	<i>Position</i>
1.	A	Developmental Controller
2.	C	Coordinator
3.	D	Sector Controller
4.	DR	Radio Controller
5.	DSC	Data Systems Coordinator
6.	ERM	ERM Route Metering
7.	FDCS	Flight Data Communications Specialist
8.	M	AMIS Controller
9.	MC	Mission Coordinator
10.	OM	Operations Manager
11.	OS	Operations Supervisor
12.	R	Radar Controller
13.	RH	Radar Handoff
14.	SDCS	Supervisory Data Communications Specialist
15.	STMCIC	Supervisory Traffic Management Coordinator-in-Charge
16.	TMC	Traffic Management Coordinator
17.	WC	Weather Coordinator

b. Facility air traffic managers may use designators other than those listed to accommodate local situations.

6-1-6. FLIGHT PROGRESS STRIP USAGE

Air traffic managers may authorize optional strip marking at specific sectors provided all of the following are met:

a. The sector/position is using an automated system with System Analysis Recording (SAR) capabilities;

b. Computer generated flight progress strips are being posted;

c. Radio and interphone transmissions are being recorded;

d. Control instructions or coordination not recorded on a voice recorder shall be documented on the flight progress strip;

e. Standard strip marking procedures are used until the aircraft is in radar contact, the hand-off has been accepted and direct radio communications has been established;

f. The members of the radar team concur and ensure no misunderstanding or duplication of workload will exist;

NOTE-

Posting control information onto the flight progress strip serves as an important nonverbal communications tool between members of the control team.

g. Authorized sectors and local optional strip marking procedures are documented in a facility directive;

h. Standard strip marking procedures shall be used for aircraft requiring special handling, such as, emergency, holding, etc.; and

i. When training is being conducted at the sector, standard strip marking procedures shall be used.

Section 2. Sector Information Binders

6-2-1. EN ROUTE CONTROLLER TEAM CONCEPT

a. There are no absolute divisions of responsibilities regarding position operations. The tasks to be completed remain the same whether one, two, or three people are working positions within a facility/sector. The team, as a whole, has the responsibility for the safe and efficient operation of that facility/sector.

b. The intent of the team concept is not to hold the team accountable for the action of individual members in the event of an operational error/deviation.

6-2-2. EN ROUTE SECTOR INFORMATION BINDER

The en route sector information outline is to be used for guidance in developing facility sector binders for each sector of operation. The pertinent items in subpara a thru subpara e below shall be incorporated into each sector binder. The format of the binder shall be determined by the air traffic manager and shall contain all information necessary for the safe and efficient operation of each sector. A sector specific binder is required for each operational sector and is to be in a location easily accessible by each position/sector.

a. Sector Narrative: General description of normal traffic flows and adjacent sector/facility coordination and potential trouble spots.

b. Assignment of airspace:

1. Delegation of Approach Control airspace.
2. Sectors normally combined.

EXAMPLE-

Which sector assumes responsibility when combined or which sector assumes responsibility for approach control airspace.

3. Military airspace delegation.

c. Sector Information.

1. Frequency Information.

(a) Primary frequency.

(b) Back-up frequency.

(c) Primary and back-up frequency remote communications air-ground facility (RCAG).

(d) Back-up emergency communication (BUEC) operation priorities.

(e) Position location.

(f) Location of emergency frequencies and RCAG.

(g) Special Use frequencies and RCAG.

2. Indirect access (IA) dial codes.

3. Sector Description (map, video map, and/or narrative).

(a) Lateral limits.

(b) Vertical limits.

4. Specify unique sector equipment configurations.

d. Sector Procedures.

1. Sector specific directives.

2. LOAs or LOA procedures applicable to that sector.

3. Areas of limited radio/radar coverage.

4. Mandatory speed restrictions.

5. Mandatory heading requirements.

6. Mandatory altitude requirements.

7. Sector handoff/point out procedures if different from requirements of FAAO 7110.65, Air Traffic Control, Chapter 5, Section 4, Transfer of Radar Identification.

8. Transfer of control points other than airspace boundaries.

9. Radar arrival routes and restrictions for airports within facility/sector jurisdiction.

10. Normally used sector holding fixes to include published/unpublished hold, allowable altitudes, maximum speed, maximum length, direction of turn, direction from fix, and if applicable, published procedures involved.

11. Special strip or flight data requirements of sector.

12. Authorized jump areas in Class A airspace within area of jurisdiction.

13. Special routes for dangerous cargo or inert devices flights in area of jurisdiction.

14. Sensitive/classified activities to be avoided by special interest flights.

15. IFR Military Training Routes (IR) in area of jurisdiction.

16. Aerial refueling routes, including air refueling initial point (ARIP), air refueling control point (ARCP), and egress fix(es).

17. Special use and ATC assigned airspace within area of jurisdiction.

e. Flight Data Requirements.

1. Primary and back-up printers.

2. Alternative methods for relaying/requesting information.

3. Data that requires expeditious handling including, flight plan data, weather information, traffic management messages, and miscellaneous data.

4. Specify flight progress strips to be posted and the location to place them.

5. Sources to obtain weather information.

6. Sources and data required for display in SIAs.

Section 3. Operations

6-3-1. HANDLING OF SIGMETs, CWAs, AND PIREPs

a. SIGMETs and CWAs:

1. The CWSU meteorologist is the focal point for the review of SIGMETs to determine application to the ARTCC area of responsibility and may issue a CWA to modify or redefine the SIGMET information.

2. The CWSU meteorologist may also issue a CWA in advance of a SIGMET when the observed or the expected weather conditions meet SIGMET criteria or when conditions do not meet SIGMET criteria but are considered significant.

3. The weather coordinator (WC) has the primary responsibility for the inter/intrafacility dissemination of SIGMETs and CWAs and shall insure that sufficient information is disseminated to facilitate the required alert broadcasts.

4. Terminal ATC facilities shall relay the SIGMET and the CWA information to towers under their jurisdiction.

b. PIREPs:

1. The WC is the focal point for handling PIREP requests and for the dissemination of Urgent PIREPs within the ARTCC and to the terminal ATC facilities without LSAS which are or may be affected.

2. The CWSU meteorologist solicits PIREPs through the weather coordinator or directly from the controllers when required. Both solicited and unsolicited PIREPs that meet the Urgent PIREP criteria will be distributed immediately via the Leased Service A System (LSAS).

c. PIREP classification: Categorize PIREPs as follows:

1. URGENT: Weather phenomena reported by a pilot which represents a hazard or a potential hazard to flight operations. Disseminate reports of the following conditions as URGENT PIREPs:

- (a) Tornadoes, funnel clouds, or waterspouts.
- (b) Severe or extreme turbulence (including clear air turbulence).
- (c) Severe icing.

(d) Hail.

(e) Low level wind shear.

NOTE-

Defined as wind shear within 2,000 feet of the surface.

(f) Volcanic eruptions and volcanic ash clouds.

(g) Any other weather phenomena reported which are considered by the specialist as being hazardous or potentially hazardous to flight operations.

2. ROUTINE: Classify as ROUTINE all PIREPs received except those listed above.

6-3-2. RECEIPT OF NOTAM DATA

ARTCC air traffic managers shall coordinate with other air traffic facilities in their area to ensure that adequate procedures are established for the receipt and distribution of NOTAMs.

6-3-3. DF NET CONTROL POSITION OPERATION

The FSS/AFSS in whose area the DF service is requested shall have full responsibility for all DF activities until the aircraft has been located or has passed into an adjacent FSSs/AFSSs flight plan area; then, responsibility shall be transferred to the receiving FSS/AFSS. DF Net control facilities shall be assigned by the En Route and Oceanic Operations Area Office Director. DF Net control shall not be assigned to FSS/AFSS facilities, until such time as a telephone system, equal to or better than the ARTCC system, is fully operational to appropriate adjacent facilities.

a. Provide maximum assistance to the aircraft in distress. Priority should be given to establishing radar contact with an aircraft in distress. When an aircraft directly contacts a DF facility and requests assistance, that facility shall:

- 1. Coordinate with the appropriate radar facility to establish radar contact by using code 7700 or a discrete beacon code assigned by the radar facility.
- 2. Provide any necessary assistance to the aircraft and coordinate with the appropriate control facility when radar contact cannot be established.

b. When requested by the DF Facility, the ARTCC shall function as a relay agent to assist in alerting and for coordination between control facilities and DF locations.

NOTE—

ARTCCs acting as relay agents may become necessary due to line outages or other direct communication disruption between DF facilities.

c. Radar control facilities shall alert DF facilities that might be able to provide service whenever radar contact cannot be established and one of the following conditions exist:

1. A pilot becomes lost or disoriented.
2. An emergency is declared.

NOTE—

DF facilities that might be able to provide service should still be alerted as a backup method of assistance, especially if loss of radar contact or loss of transponder is a concern.

d. An ARTCC may request assistance from military aircraft to provide UHF/VHF DF bearing information. However, the aircraft commander retains the prerogative as to the availability of this service.

e. Emergency DF operations will normally be conducted on emergency frequency 121.5 MHz. If the aircraft in distress is unable to utilize 121.5 MHz, a discrete frequency may be used. Also, discrete frequencies should be used for practice DFs.

f. It shall be the responsibility of DF stations to maintain a satisfactory level of operator proficiency. DF stations shall devise forms to satisfactorily record incidents of navigational assistance provided to aircraft, DF training activities, and for recording inoperable status. Voice recordings of DF service to aircraft shall be as prescribed for normal ATC requirements at each DF facility.

6-3-4. REVIEW AIRSPACE STRUCTURE

Although magnetic radials are used in planning airways/routes, conversion to true radials is required for designation. The final magnetic radials are not

determined until the airspace action is charted. As a result, differences from planned magnetic radials may occur in the conversion of true to magnetic radials. Differences may also occur later due to changes in the magnetic variation, which is recomputed every 5 years. These differences could contribute to the misapplication of the VFR altitude hemispheric rule. Therefore, ARTCC air traffic managers shall conduct a continuing review of the airway and jet route structures and proposed new airspace cases and bring any differences to the attention of the En Route and Oceanic Operations Service Area Office.

6-3-5. DATA COMMUNICATION

ARTCC air traffic managers shall furnish personnel assigned Flight Data duties a copy of FAAO 7110.10, Flight Service, and ensure they are familiar with it.

6-3-6. MTR (IR) AND CHANGES TO PUBLISHED MOA ACTIVITY SCHEDULES

a. ARTCCs shall use the procedures as outlined in FAAO 7110.10, Flight Services, para 6-5-1 for forwarding these schedules or changes via Service B.

NOTE—

Facilities may develop procedures for forwarding these scheduled MTR/MOA via the GI message provided the “all” option is not utilized and there is no adverse impact on computer processing.

b. The message(s) containing these schedules shall be forwarded not more than 24 hours in advance of confirmation of the planned activity.

c. The message shall only contain the following and be formatted as per FAAO 7110.10, Flight Services, para 6-5-1:

1. The name of the MTR or MOA.
2. The scheduled use times.
(MOA—only if different from published periods).
3. The planned altitudes.
(MOA—only if different from published altitudes).

Section 4. Services

6-4-1. ADVANCE APPROACH INFORMATION

Assign responsibility for issuing advance approach information to a specific position when more than one position could issue the data. Responsibility shall be delegated in a directive in accordance with FAAO 1320.1, FAA Directives System. Display the information so that it is accessible to the controllers having need for it.

6-4-2. MINIMUM IFR ALTITUDES (MIA)

Determine minimum IFR altitude information for each control sector and display them at the sector. This shall include off-airway minimum IFR altitude information to assist controllers in applying 14 CFR Section 91.177 for off-airway vectors and direct route operations. Facility air traffic managers shall determine the appropriate chart/map method for displaying this information at the sector. Forward charts and chart data records to the FIFO for certification and annual review.

NOTE-

1. *This may be accomplished by appending the data on sector charts or MVA charts. Special translucent sectional charts are also available. Special ordering information is contained in FAAO 1720.23, Distribution of Aeronautical Charts and Related Flight Information Publications.*

2. *For guidance in the preparation and review of Minimum IFR Altitude charts see FAAO 7210.37, En Route Minimum IFR Altitude (MIA) Sector Charts.*

REFERENCE-

Para 3-8-2, Radar Mapping Standards.

6-4-3. SPECIAL USE FREQUENCIES

Special use frequencies (296.7, 321.3, 364.8 and 369.9MHz) are controller-to-pilot communication channels established to minimize frequency changes for certain military aircraft operating in the high altitude sectors. The specific frequencies shall not be publicized. However, information concerning their authorized use may be published in official military documents or in agency directives.

6-4-4. PRACTICE INSTRUMENT APPROACHES

To the extent practicable, each ARTCC should provide IFR separation to aircraft not on IFR flight plans conducting practice instrument approaches to airports where that ARTCC provides approach control service.

a. At locations where IFR separation is applied to VFR aircraft conducting practice instrument approaches and that airport has a nonapproach control tower or an AFSS/FSS, provisions for handling such aircraft, including aircraft being provided DF services, shall be included in a letter of agreement.

b. ARTCCs shall issue a letter to airmen advising users of airports where IFR separation is provided for VFR aircraft conducting practice instrument approaches. The letter should include appropriate frequencies for the airport concerned.

Section 5. Stored Flight Plan Program

6-5-1. CRITERIA

The following criteria shall be used in coordinating and implementing the stored flight plan program. The term *air carrier*, as used below, includes scheduled air taxi operators meeting the criteria for this program.

a. Each air carrier will provide the appropriate ARTCCs with a specific contact for coordination of this program.

b. The individual air carrier is responsible for providing the ARTCC the following:

1. Current flight plan schedule data at least 7 days prior to the effective date of the scheduled change.

(a) Changes to become effective between the 15th and the last day of the month shall be received by the facility no later than the 8th day of the month.

(b) Changes to become effective between the 1st and the 14th of the month shall be received by the facility no later than the 23rd of the month.

2. Permanent cancellations to flight plans currently stored will be accepted on a day-to-day basis.

3. When submitting revised listings, permanent cancellations, and additions, all changes must be clearly indicated.

(a) Additions to the current listings must be noted as such by placing the word *ADD* preceding item G(4) of the format and outside the normal left-hand margin.

(b) Deletions from the current listings should be noted by adding the contraction *DLT* preceding item G(4) of the format and outside the normal left-hand margin.

(c) Changes, such as departure time, altitude, equipment, and route of flight should be indicated by adding the contraction *CHG* preceding item G(4) of the format and outside the normal left-hand margin with the change underlined.

(d) Subsequent listings will not include the added, deleted, or changed information.

c. Each air carrier is responsible for providing day-to-day modifications to computer-stored flight plans to the appropriate ARTCC or terminal facility control positions no more than 30 minutes prior to the stored proposed departure time. The following procedures apply:

1. The ARTCC/ATCT facilities will provide the airline officials with the controller position phone number for modification of the stored flight plan. This procedure only affects the flight for this particular day and is not intended to be a modification to the permanent stored flight plan.

2. Changes to the flight plan, other than the identification, considered to fall in this category are change in the type of aircraft, DME or transponder equipment, altitude, route of flight, or cancellation.

3. If the proposed departure time is changed by less than 1 hour, there is no requirement for it to be forwarded to the ARTCC.

4. If the trip number is changed, a new flight plan must be filed at least 40 minutes prior to the proposed departure time.

5. Day-to-day modifications to computer-stored flight plans destined for Newark, LaGuardia, or Kennedy Airports shall be accepted up to 1 hour and 30 minutes prior to stored proposed departure time. If the proposed departure time of flights for these three airports is changed by 30 minutes or more, the center should be advised.

d. Flights scheduled at least 1 day each week may be submitted to the ARTCC for the stored flight plan program.

e. Only these flight plans involving a reasonable amount of stability in the flight planned routes will be accepted in the program. The initial minimum stability factor is 85 percent.

f. Flight plan data must be submitted in chronological order by airports of departure and in the format outlined in the following example:

NOTE-

The number above each item is explained in detail by the coinciding numbers listed below the Example.

g. Each airline is responsible for developing procedures to preclude any misunderstanding between controller and pilot in the event of changes to the stored flight plan. If the airline has a requirement for the controller to issue a complete clearance for a period of time after the effective date of a stored flight plan, the airline will alert its pilots not to accept “cleared as filed” and add the following information to remarks after the route of flight data forwarded to the ARTCC: FULL RTE CLRNC TIL, PAREN DATE PAREN.

EXAMPLE—

(See FIG 6-5-1.)

6-5-2. IMPLEMENTATION AND COORDINATION

Each ARTCC shall provide the airline with a contact for implementing and coordinating this program.

6-5-3. PREPARATION AND MAINTENANCE OF BULK STORE FILE

Each ARTCC shall prepare and maintain card decks, magnetic tapes, and discs necessary for computer processing of the data provided by the airlines.

6-5-4. REMARKS DATA

ARTCC controllers shall not use “cleared as filed” until after the date specified in the remarks portion of the stored flight plan. (See subpara 6-5-1g.) The remarks data may be removed from the stored flight plan after the date specified.

FIG 6-5-1
Stored Flight Plan Program

(1) STORED FLIGHT PLAN DATA FOR THE ZDC ARTCC						
(2) 11-5-86						
(3) 11-13-86						
(4) XXXXXXO	(5) EAL490	(6) DC9	(7) 0425	(8) DCA	(9) P1830	(10) 170
(11) DCA 7NP V123 RBV			(12) JFK		(13) 0105	

(1) Heading indicating the ARTCC for which the flight plan was prepared.

(2) Date flight plan prepared.

(3) Effective date of the stored flight plan based on UTC. (Must be submitted prior to the 8th of the month for an effective date between the 15th and the last day of the month or by the 23rd of the month for an effective date of the 1st to the 14th.)

Note.—Items (1), (2), and (3) must be included on each page of data submitted.

(4) Seven characters reflecting operating frequency with the letter “X” appearing in the days of operation and the letter “O” appearing in the days of nonoperation; e.g., XXXXXXO means the flight operates daily except Saturday. The frequency of operation should always be based on UTC; e.g., a flight proposed to depart at 2000 EST on Friday would be filed as a 0100Z Saturday operation.

(5) The identification of the flight using the ICAO–authorized 3-letter designator followed by the trip number of this flight; i.e., UAL743 would be United Airlines flight number 743. The minimum number of characters is three (3), and the maximum number is seven (7) characters of information.

(6) The type of aircraft to be used on this flight. When equipment varies by the day of the week, this may be entered into the listing as a different flight plan. Although the aircraft identification may be the same, the operating frequency would be different and would preclude ambiguity. The type of aircraft may consist

of three items of data. First, if appropriate, the heavy jet indicator “H,” followed by a required second item containing a maximum of four (4) characters (the authorized contraction for the aircraft designator as described in FAAO 7340.1, Contractions). The third item may be a virgule “/” and one alphabetic character to indicate transponder and distance measuring equipment (DME) as described in FAAO 7110.65 and the AIM.

(7) The filed true airspeed (TAS) in knots or Mach speed. The required format for Mach speed is three (3) digits preceded by the letter “M;” e.g., M095.

(8) The airport of departure shall be a maximum of five (5) characters using the authorized identifier as listed in FAAO 7350.7, Location Identifiers, or the ICAO Location Indicators Document 7910.

(9) The proposed departure time shall always consist of the “P” followed by four numerics expressing the proposed departure time in 24 hour Coordinated Universal Time (UTC).

(10) The requested altitude shall be a maximum of three (3) characters expressing the requested altitude in hundreds of feet; e.g., 140, fourteen thousand feet; 80, eight thousand feet.

(11) The intended route of flight to the first destination airport. (When a flight has multistops, each portion of the scheduled route shall form the basis for a new flight-plan and will be distinguished from other portions by changing the point of departure.) The absence of an airway or route number between two fixes indicates direct; therefore no symbol or abbreviation is required.

(a) All junctions between airways shall be included when they can be identified as fixes listed in FAAO 7350.7, Location Identifiers, or the ICAO Location Indicators Document 7910. If any problem exists in using the name or the fix identifier, coordination between the carrier and the ARTCC shall be accomplished to resolve the problem.

(b) The point of departure shall always be the first item of the route data. If a standard instrument departure (SID) routing is requested, it must be filed using the official designator, followed by the departure point and the transition/exit fix.

(12) The last item in the route of flight will be the destination of the flight as identified in FAAO 7350.7 Location Identifiers, or the ICAO Location Indicators Document 7910.

(13) Estimated Time En Route (ETE).

Section 6. Air Carrier Computer Interface Program

6-6-1. GENERAL

Apply the provisions of this section when coordinating and implementing the air carrier computer interface program. The term *air carrier* used in this section includes scheduled air taxi operators that have the capability to transmit flight plans via the NADIN/Center B interface to ARTCC computer programs.

6-6-2. FACILITY RESPONSIBILITIES

The ARTCC, upon request from an air carrier to participate in this program, shall:

- a. Obtain local contacts from the air carrier for coordinating the program.
- b. Provide the air carrier with a contact for the continued coordination of the program.
- c. Ensure that the air carrier is apprised of the criteria in para 6-6-3, Criteria for Participation.
- d. Develop facility procedures to monitor air carrier flight plan input as specified in Chapter 6, Section 5, Stored Flight Plan Program.

6-6-3. CRITERIA FOR PARTICIPATION

Air carriers participating in the program shall be advised of the following criteria:

- a. Departure points and destinations shall be contained within the CONUS. However, some users have made previous arrangements with various ICAO States (Puerto Rico, Panama, Canada, etc.) to accept domestic format. These agreements shall be honored.
- b. Flight plans shall not be filed more than 3 hours in advance of the proposed departure times. Flight plans shall be telephoned to the appropriate facility if less than 45 minutes from the proposed departure time. All changes in the flight plan after filing shall be telephoned to the appropriate facility.
- c. All flight plans shall adhere to the format convention and content specified in para 6-6-4, Format Conventions, and para 6-6-5, Message Content.

6-6-4. FORMAT CONVENTIONS

Flight plans shall be filed in the following format:

- a. Data input shall adhere to a fixed order and not exceed the stated maximum number of characters or elements allowed for each field in messages addressed to an ARTCC computer.
- b. Each field of data is composed of one or more elements. Discrete elements of information within a field are separated by delimiters; generally, virgules (/) or periods.
- c. Some fields contain the necessary functions to operate the computer adapters and are designated by alpha characters. Do not separate these fields with spaces.
- d. One space character must be entered at the end of each data field, except:
 1. The first data field of a message shall not be preceded by a space.
 2. The last data field of message need not be followed by a space.
 3. The Remarks (Field 11) terminate with the last nonspace character transmitted.

6-6-5. MESSAGE CONTENT

The complete message content, the order of data, the number of characters allowed within any data field or element, and any associated operational procedure or restrictions shall be as follows: (See FIG 6-6-1).

- a. Start of Message Code (Field A). Appropriate individual company coding to ensure entry into the AFTN system.
- b. Preamble Line (Field B). Consists of priority and addressees in ICAO format.
- c. End of Line Function (Field C). Three characters composed of carriage return, carriage return, line feed.
- d. Computer Adapter Turn-on Code (Field D). Three characters specifying the facility adapter code plus carriage return, carriage return, line feed.
- e. Source Identification (Field 00). Ten characters followed by a space character in the following order:

1. Three-character address of the originating office.

2. Four-character (digits) time in UTC.

3. Three characters (digits) representing the number of the message being transmitted to the specific facility. All facilities will have individual sequence numbers beginning with number 000 at 0000Z.

f. Message Type (Field 01). The letters “FP” followed by a space character.

g. Aircraft Identification (Field 02). Consists of two to seven characters followed by a space character. The first character of the identification must be a letter.

h. Aircraft Data (Field 03). Consists of two to nine characters followed by a space character. Aircraft data within the field may vary from one to three elements consisting of:

1. Heavy aircraft indicator (H/): When aircraft are designated heavy, the heavy indicator is mandatory.

2. Type of Aircraft: This element is mandatory and contains two to four characters consisting of the authorized aircraft designator as contained in the FAAO 7340.1, Contractions.

3. Equipment Suffix: This element is optional and consists of a slash followed by one letter which is one of the approved designators identifying transponder and/or navigation equipment.

i. Airspeed (Field 05): Consists of two to four characters followed by a space character. This field shall include the filed true airspeed in knots or Mach speed.

j. Departure Point (Field 06): The airport of departure shall be two to a maximum of five characters using the authorized identifier as listed in FAAO 7350.7, Location Identifiers, and must duplicate the first element of the route of flight (Field 10).

k. Proposed Departure Time (Field 07): Consists of five characters followed by a space character. This field contains the letter “P” followed by a four-digit time group (in UTC).

l. Requested Altitude (Field 09): Consists of two to three characters followed by a space character. Altitudes or flight levels, as appropriate, shall be expressed in hundreds of feet.

m. Route of Flight (Field 10): The route of flight consists of the departure point, the route of flight, and a destination:

1. Field 10 is fixed sequence field and shall begin with a fix; e.g., fix.route.fix.route., etc. An element is separated from another element by a period character.

2. When consecutive fix elements or route elements are filed, the fixed sequence format is maintained by inserting two period characters between the filed Field 10 elements; e.g., fix..fix or route..route.

3. The maximum number of filed field elements for computer-addressed flight plans is 40. Double period insertions do not count against the 40-element limitation.

(a) Fix Descriptions: A fix identifies a geographic point and shall be one of either domestic, Canadian, or international identifiers, which are two to twelve alphanumeric characters.

(b) Route Descriptions: A route element must be one of the following:

(1) Airway: The official airway designator must be filed.

(2) Standard Instrument Departures (SID): SIDs, if used, must be filed by the computer-code designator as the second element of Field 10 and followed by the transition fix.

(3) Standard Terminal Arrivals (STAR): STARs, if used, must be filed by the computer-code designator as the next to last element of Field 10 and be immediately preceded by the entry or transition fix.

(4) Published Radials: Published radials; e.g., within a preferred route, are considered airways. Do not file unpublished radials.

EXAMPLE–

“RBV020”

“JFK053”

“DPK017”

(5) North American Routes (NAR): Numerically coded routes preplanned over existing airways and route system to and from specific coastal fixes serving the North Atlantic.

EXAMPLE–

“.NA50”

“.NA9”

(c) Estimated Time En Route Suffix: Consists of an element separator (/) and four digits appended to the destination. Leading zeros are required, and the time en route is expressed in hours and minutes.

EXAMPLE–

“.STL/0105”

n. Remarks (Field 11): Consists of the remarks code character—a clear sky symbol or an overcast sky symbol, and the remarks.

NOTE–

If remarks (Field 11) are present, a space is required after the last element of Field 10. If remarks are not present, no

space is required, and Field E (End of Text) should be the next entry.

1. The overcast sky symbol limits the transmittal of the remarks to the center controlling a point of departure. This should be used when the only remarks are a request for a full route clearance (FRC). It may also be used when it is known that the remarks are only pertinent to the center controlling the departure airport.

2. Remarks are not interpreted by the NAS En Route Program and are optional. When used, they shall be limited to flight information pertinent to ATC.

o. End of Text Signal/End of Message Function (Field E).

NOTE–

Fields 04 and 08 are not applicable to proposed flight plans and have been intentionally omitted. (See FIG 6–6–1.)

D	End of Line (EOL) Function	New Line Key	Required to end all lines except line of text
E	EOT/EOM	Enter Key	Terminates message

Section 7. User Request Evaluation Tool (URET)

6-7-1. GENERAL

a. URET, a decision support technology and component of the Free Flight Program, is utilized in the en route environment and is located at the Radar Associate (RA) position at an operational sector. The purpose of the tool is the prediction of conflicts between aircraft and between aircraft and special use or designated airspace, and it also provides trial planning and enhanced flight data management capabilities.

b. URET is designed to enhance the efficiency of the Sector Team by providing decision support in the prediction and resolution of potential conflicts, and as a result, allowing controllers more latitude in other tasks, such as responding to user requests. Further, the use of the tool could provide increased system safety, decreased system delays, and increased system flexibility, predictability, productivity, and user access.

c. URET predicts conflicts up to 20 minutes in advance using flight plan, forecast winds, aircraft performance characteristics, and track data to derive expected aircraft trajectories. URET supports early identification and resolution of predicted conflicts and the evaluation of user requests, and it is to be used by the sector team in performing their strategic planning responsibilities.

6-7-2. OPERATIONAL SUPERVISOR-IN-CHARGE RESPONSIBILITIES

a. Where authorized, perform URET data entries to keep the activation status of designated URET Airspace Configuration Elements current.

b. Perform coordination and designated actions in the event of a URET outage or degradation, in accordance with the requirements of this order and as designated by facility directive.

c. Assist in sector preparations needed to transition to and from URET operations.

d. Ensure changes to restrictions based on the Restrictions Inventory and Evaluation are implemented in a timely manner.

6-7-3. OPERATIONAL MANAGER-IN-CHARGE RESPONSIBILITIES

a. Where authorized, perform URET data entries to keep the activation status of designated URET Airspace Configuration Elements current.

b. Perform coordination and designated actions in the event of a URET outage or degradation, in accordance with the requirements of this order and as designated by facility directive.

c. Ensure changes to restrictions based on the Restrictions Inventory and Evaluation are implemented in a timely manner.

6-7-4. FACILITY MANAGER RESPONSIBILITIES

a. Ensure LOAs, SOPs, MOUs and Sector Position Binders are current to support URET.

1. Facility managers shall consider URET functions and limitations in reviewing all current LOAs and/or negotiating all future LOAs.

2. The following items should be considered when reviewing LOAs:

(a) Interfacility coordination procedures.

(b) Special Use Airspace (SUA) use and status.

(c) Restriction relaxation/removal.

(d) Outage notification.

(e) Degradation of functions notification.

(f) Automated Information Transfer (AIT) procedures.

b. Ensure all facility directives are current to support URET. Directives shall include, but are not limited to:

1. URET Outages.

2. URET Airspace Configuration Elements Data Entry.

3. Standard Use of Automated Flight Data Management.

c. Ensure the Restrictions Inventory and Evaluation is conducted and maintained in accordance with this order.

d. Ensure changes to restrictions based on the Restrictions Inventory and Evaluation are implemented in a timely manner.

6-7-5. URET AIRSPACE CONFIGURATION ELEMENTS

a. URET Airspace Configuration Elements are:

1. Special Activity Airspace (SAA).
2. Arrival Stream Filters (ASF).
3. URET adapted altitude and speed restrictions.

b. For each airspace configuration element adapted in URET, facility directives shall designate at least one primary position and one secondary position to be responsible to update the status (e.g., active/inactive) and/or the activation schedule for that element.

NOTE-

1. *Accurate conflict probe results require timely updates to the current activation status and/or the projected activation schedule for airspace configuration elements.*

2. *Designating a position to have secondary responsibility for each URET Airspace Configuration Element is essential to maintain the capability to perform updates in the event that equipment at the primary position is temporarily out of service.*

3. *Positions to be considered for primary or secondary designation include a specified sector, TMU, or operations supervisor.*

c. ATC positions and personnel authorized by facility directive shall perform automation entries in a timely manner to update the status of SAA, restrictions, and ASF.

d. For a URET airspace configuration element that is associated with a particular sector or sectors and whose status is highly dynamic in nature:

1. The designated sector(s) should be assigned the primary responsibility to keep the URET status current.

2. The TMU or the appropriate operations supervisor should be assigned the secondary responsibility to keep URET status current.

6-7-6. STANDARD USE OF AUTOMATED FLIGHT DATA MANAGEMENT

Use of the following flight data management features of URET shall be standardized in accordance with individual facility directives:

- a. Highlight for special attention.
- b. Grouping for special attention.
- c. Checkbox.
- d. Heading and Speed.

6-7-7. URET OUTAGES

a. In accordance with Chapter 8, NAS En Route Automation, and the requirements in this chapter, URET facilities shall develop and maintain procedures for transition to and from URET operations.

NOTE-

The back-up for URET is flight progress strips.

b. Planned Outages.

1. Schedule preventive or periodic maintenance of URET to coincide with periods of low air traffic volume.

2. Notification of planned local URET outages shall be coordinated with the Operations Manager no less than 2 hours in advance.

3. The Operations Manager shall notify the neighboring URET facilities of a planned URET outage no less than 1 hour in advance.

4. The Operations Manager shall notify Operations Supervisors of a planned URET outage as soon as known.

5. Each Operations Supervisor shall notify the sector teams in their area of a planned URET outage as soon as known.

6. At least 20 minutes prior to a local URET outage, Operations Supervisors shall ensure that sectors resume posting and maintenance of flight progress strips, in accordance with FAAO 7110.65, Air Traffic Control, requirements for a non-URET environment, except as otherwise permitted by facility directive.

c. Unplanned URET Outages.

1. A facility directive shall include a checklist detailing actions to be taken and roles and responsibilities during an unplanned URET outage.

2. When an unplanned URET outage occurs, sectors shall post and maintain flight progress strips in accordance with FAAO 7110.65, Air Traffic Control, requirements for a non-URET environment, except as otherwise permitted by facility directive.

NOTE—

1. *A full transition to strips may not be necessary based on the duration of the outage. Outages of short duration may allow continued use of the URET data while strips are prepared for use in the event that the outage continues.*

2. *A “snapshot” of URET flight data at the time of the outage will be available to the sector team. Although the data will not be updated and will become stale, it may be used to assist the sector team while reestablishing the support of strips.*

3. Any failure recovery action that will result in the automatic clearing of the URET data on a position's display shall be approved by the Operations Manager.

d. Degraded Conditions.

1. In the event that URET is operational, but alert data may be affected due to an associated equipment malfunction, the National Operations Manager (NOM) shall notify the Operations Manager who shall in turn notify Operations Supervisors. Each Operations Supervisor shall ensure that each sector team in their area of specialization is cognizant of the potential for degradation.

2. When the associated equipment malfunction is corrected, the NOM shall notify the Operations Manager who shall in turn notify Operations Supervisors. Each Operations Supervisor shall ensure that each sector team in their area of specialization is cognizant that the source of possible degradation has been corrected.

6-7-8. TRANSITION AND TRAINING PLANNING

The Facility air traffic manager shall ensure that detailed facility plans are prepared defining:

a. Training schedules of Certified Professional Controllers, Operations Supervisors, Operations Managers, Traffic Management Coordinators, and Traffic Management Supervisors.

b. Training schedules of developmental controllers based on national training directives.

6-7-9. RESTRICTIONS INVENTORY AND EVALUATION

a. Facilities shall identify responsibilities and establish procedures for the creation and maintenance of a facility restriction inventory once URET is fully operational. Facility plans should include identification and cataloging each air traffic restriction by type, purpose, and frequency/duration in effect.

b. Facilities shall create a plan and conduct ongoing evaluations on the need to relax or remove restrictions not warranted during URET operations. This shall include URET impact on ability to relax/remove restrictions and identification of dependencies between ability to remove restrictions and automation capabilities/limitations.

c. Submit annually to the Vice President of En Route and Oceanic Services, an Evaluation Report on facility restriction relaxation/removal related to URET.

d. Prior to implementation of restriction changes each ARTCC shall:

1. Coordinate with any affected ATC facility.

2. Coordinate with the ATCSCC, as appropriate.

3. Inform individual air carriers, as appropriate.

6-7-10. TRAFFIC COUNTS AND DELAY REPORTING

a. Automated counts of traffic activities are the preferred methods during use of URET.

b. Adherence to all applicable delay reporting directives shall continue while URET is operational.

c. Delay information, shall be recorded either on available flight progress strips, or on facility approved forms. Facility directives shall detail the procedures for collecting and reporting this information to the ATCSCC.

6-7-11. COMPUTER DATA RETENTION

Follow the guidelines detailed in this order to retain URET recorded data.

6-7-12. WAIVER TO INTERIM ALTITUDE REQUIREMENTS

a. If, at any URET facility, a facility directive has been issued to waive the mandatory computer entry of interim altitudes, controllers and supervisors in any affected area and adjacent areas or facilities shall be informed of the resulting potential for misleading URET alert data.

b. Each URET facility should strongly consider the benefits of URET in evaluating any current or

future waiver for data entry of interim altitudes. URET accuracy in assigning alert priorities for surrounding sectors, including those in neighboring URET facilities, is dependent upon the subject sector's entry/update of interim altitudes.

6-7-13. TRANSFER OF POSITION RESPONSIBILITY

Each URET facility shall ensure that pertinent URET information is integrated into any Position Relief briefing list, whether manual or electronic.

Section 8. Ocean21

6-8-1. GENERAL

a. Ocean21 is an Air Traffic Control (ATC) System deployed in designated en route and oceanic airspace. Ocean21 includes both surveillance and flight data processing, which provides the controllers with automated decision support tools to establish, monitor, and maintain separation between aircraft, and aircraft to airspace and terrain.

b. Ocean21 capabilities include:

1. MEARTS based radar surveillance processing.
2. Conflict Prediction and Reporting for conflict probe.
3. Automatic Dependence Surveillance-Addressable (ADS-A).
4. Automatic Dependence Surveillance-Broadcast (ADS-B).
5. Controller Pilot Data Link Communications (CPDLC).
6. ATC Interfacility Data Communications (AIDC).
7. Decision Support Tools used primarily for situation awareness.
8. Electronic Flight Data including Electronic Flight Strips.

6-8-2. OPERATIONAL SUPERVISOR-IN-CHARGE RESPONSIBILITIES

In addition to the watch supervision described in Chapter 2, Administration of Facilities, Section 6, Watch Supervision-Terminal/En Route, facilities shall provide in facility directives the operational duties and procedures for the Supervisor-In-Charge associated with the Ocean21 System. Responsibilities and procedures shall include but are not limited to the following:

- a. Disseminate flight information received at the Supervisor workstation in a timely manner.
- b. Supervisor workstation message management.
- c. Ocean21 data management when a channel changeover is being performed.

d. Assignment of Error Repair responsibilities.

6-8-3. ERROR REPAIR POSITION RESPONSIBILITIES

Facilities shall define responsibilities and develop procedures associated with the Ocean21 System for the Error Repair position. Responsibilities and procedures shall include but are not limited to:

- a. Disseminate messages received at the workstation in a timely manner.
- b. Edit and repair messages.

6-8-4. FACILITY MANAGER RESPONSIBILITIES

a. Ensure LOAs, SOPs, MOUs and Sector Position Binders are current to support Ocean21.

1. Facility managers shall consider Ocean21 functions and limitations when reviewing current LOAs and/or negotiating future LOAs.

2. Consider the following items when reviewing LOAs:

- (a) Interfacility coordination procedures.
- (b) Outage notification.
- (c) Degraded functions notification.
- (d) Automated Information Transfer Procedures.

b. Ensure all facility directives, where applicable, support Ocean21. Directives should include but are not limited to:

1. System problem reporting.
2. Airspace and sector configuration.
3. Use of surveillance sources.
4. Use of paper strips and strip marking.
5. Electronic flight data management.
6. Conflict Probe/Decision Support Tools use, limitations, and exceptions.
7. Internal coordination.
8. Contingency plans.
9. Controller preference management.

6-8-5. TRANSFER OF POSITION

In addition to the procedures outlined in para 6, Step-by-Step Process, of Appendix D, Standard Operating Practice (SOP) for the Transfer of Position Responsibility, in FAAO 7110.65, Air Traffic Control, ensure facility directives include, at a minimum, the following procedures:

- a. Position relief briefing checklist.
- b. Sign-over procedures.

6-8-6. OCEAN21 CHANNEL CHANGEOVERS

Facilities shall identify the procedures for a channel changeover that include a checklist detailing actions to be taken, and roles and responsibilities.

6-8-7. OUTAGES

In accordance with Chapter 8, NAS En Route Automation, and requirements in this chapter, facilities

shall develop and maintain procedures for the transition to and from, and during Ocean21 degraded operations. A facility directive shall include a checklist detailing actions, roles, and responsibilities during planned and unplanned outage or degraded operation.

6-8-8. CONTROLLER PILOT DATA LINK COMMUNICATIONS

Facility managers shall ensure that local procedures are developed for the use of CPDLC. These procedures shall include but not be limited to:

- a. The use of free-text messages in air-to-ground communication.
- b. Data link limitations and exceptions.
- c. Lost communications procedures.
- d. Frequency assignment for automated transfer.

Section 9. Reduced Vertical Separation Minimum (RVSM)

6-9-1. GENERAL

a. RVSM reduces the standard separation between FL290 and FL410 from 2,000 feet to 1,000 feet for those aircraft approved for operation within these altitude strata. The six additional altitudes provide the users fuel savings and operational efficiencies while providing ATC flexibility, mitigation of conflict points, enhanced sector throughput and reduced controller workload for air traffic control operations.

b. RVSM is applied in that airspace from FL290 through FL410 over the domestic United States, Alaska, the Gulf of Mexico where the FAA provides air traffic services, the San Juan FIR, across international borders with Canada and Mexico, and the Pacific and Atlantic Oceanic airspace controlled by the FAA. There are two forms of RVSM airspace:

1. RVSM Airspace. Use of the term RVSM airspace refers to the RVSM exclusive environment. Aircraft operating in this airspace must be RVSM approved.

NOTE-

1. *The following non-RVSM aircraft are exceptions to the exclusive RVSM airspace however, access will be on a workload-permitting basis:*

- a. DOD aircraft.
 - b. Lifeguard aircraft.
 - c. Aircraft being flown by manufacturers for development and certification.
 - d. Foreign State aircraft.
2. *Aircraft not approved for RVSM operations may transition through RVSM airspace to operate above or below.*

2. Transition Airspace. Airspace where both RVSM aircraft and non-RVSM aircraft may be accommodated at all altitudes and RVSM approval is not required. Transition airspace connects airspace wherein conventional separation is applied to RVSM airspace. One thousand feet vertical separation can only be applied between RVSM aircraft. Two thousand feet separation must be applied between non-RVSM aircraft or whenever one of the aircraft is non-RVSM.

c. Non-RVSM exception aircraft may access RVSM airspace in one of the following ways:

1. LOA/MOU: Complies with a Letter of Agreement (LOA)/Memorandum of Understanding

(MOU) for operations within a single or adjacent ARTCCs.

2. File-and-Fly: Files a flight plan and makes the initial request to access RVSM airspace by requesting an ATC clearance.

d. Facilities with RVSM airspace must:

1. Provide guidance in the facility Standard Operating Procedures (SOP) for managing non-RVSM flights.

2. Where available, display the Center Monitor on the Traffic Situation Display (TSD) in each area and the Traffic Management Unit (TMU). This will aid in the coordination and decision making process for approving non-RVSM flights.

e. A non-RVSM exception designated by the DOD for special consideration via the DOD Priority Mission website shall be referred to as a STORM flight.

6-9-2. FACILITY MANAGER RESPONSIBILITIES

a. Ensure all facility directives are current to support RVSM.

b. Ensure all LOAs, SOPs, MOUs and Sector Position Binders are current to support RVSM.

c. Ensure airspace is continually reviewed for impact of RVSM.

d. Ensure all height deviations of 300 feet or more are recorded and forwarded to the FAA Technical Center in Atlantic City, New Jersey at NAARMO@faa.gov.

REFERENCE-

FAAO 7210.56, para 4-1-9, Invalid Mode C Reporting.

6-9-3. OPERATIONS MANAGER-IN-CHARGE RESPONSIBILITIES

Responsibilities shall include but not be limited to the following:

a. Maintain an operational awareness of RVSM impact specifically any non-RVSM aircraft being worked within RVSM airspace.

b. Ensure proper coordination is accomplished between the STMC/TMU and the operations supervi-

sors/controllers-in-charge regarding the accommodation and handling of any non-RVSM aircraft.

c. Ensure, in conjunction with the Traffic Management Officer, that monitor alert values are addressed with RVSM impacts considered.

d. Ensure the proper RVSM software is turned on.

e. Ensure that all operational supervisor workstations have access to the DOD Priority Mission website and that supervisors/controllers-in-charge have received appropriate training on the website.

6-9-4. OPERATIONS SUPERVISOR-IN-CHARGE/CONTROLLER-IN-CHARGE RESPONSIBILITIES

Responsibilities shall include but not be limited to the following:

a. Maintain an awareness of all operational impacts associated with RVSM, specifically any non-RVSM aircraft currently within area sectors or projected to be in sectors under his/her area of responsibility.

b. Ensure sector personnel have been properly briefed regarding any known non-RVSM aircraft in or projected to be in sectors under his/her area of responsibility, including DOD STORM flight status.

c. Ensure sector workload remains manageable when non-RVSM aircraft are in or projected to be in sectors under his/her area of responsibility.

d. Coordinate all non-RVSM aircraft with operational supervisors/CIC as appropriate, both internally and externally, to ensure the aircraft is coordinated and accepted along its route of flight.

e. Non-RVSM Exception Flights Outbound from the U.S. The operational supervisor/CIC from the last area to have communications and operational control of the aircraft in the facility where an aircraft departs RVSM airspace designated for U.S. air traffic control, or exit facility, shall coordinate with the international point-of-contact in a timely manner.

f. For non-RVSM exception aircraft that will enter Canadian Controlled Airspace, the operational supervisor/CIC from the last area to have communications and operational control of the aircraft in the

exit facility shall coordinate with the National Operations Center (NOC) in a timely manner.

g. Verify DOD STORM flight status via the DOD Priority Mission website whenever a DOD exception aircraft requests accommodation, and whenever notified by a controller that a DOD exception's request for accommodation was denied.

h. Give special consideration to DOD STORM flights when determining whether an exception aircraft can be accommodated in your area.

i. Ensure coordination is accomplished to inform sectors when an inbound flight is a DOD STORM flight. This procedure applies to coordination in U.S. airspace only.

j. Ensure controllers at applicable sectors have their DSR MDM properly aligned to display the RVSM indicator depicting those aircraft that are non-RVSM.

6-9-5. NON-RVSM REQUIREMENTS

a. RVSM approval is required for aircraft to operate within RVSM airspace. The operator must determine that the appropriate State authority has approved the aircraft.

b. DOD, Lifeguard, aircraft operated by manufacturers for certification and development, and Foreign State exception aircraft will be accommodated in RVSM airspace on a workload permitting basis.

c. Non-RVSM Exception Flights Inbound to U.S. The TMU at the facility where an aircraft penetrates RVSM airspace designated for U.S. air traffic control, or entry facility, receives the coordination from an international point-of-contact advising of an inbound non-RVSM exception. The TMU shall coordinate with the operational supervisor/CIC in a timely manner.

6-9-6. EQUIPMENT SUFFIX AND DISPLAY MANAGEMENT

RVSM aircraft will file the equipment suffix "W" or "Q". NAS automation has been modified to reflect non-RVSM aircraft with a coral box around the fourth character in the altitude segment of the data block. Conflict alert parameters will distinguish between RVSM and non-RVSM aircraft based upon the "W" or "Q" suffix for the appropriate separation standard to be applied.

6-9-7. MOUNTAIN WAVE ACTIVITY (MWA)

In areas of known MWA, aircraft operators have been encouraged to report encountering this weather event and the severity of its impact. Operators may request assistance in the form of reroutes, change of altitude, vectors, or merging target procedures.

6-9-8. WAKE TURBULENCE AND WEATHER RELATED TURBULENCE

a. Domestic: Aircraft experiencing turbulence can be anticipated to advise ATC and request a clearance for mitigation in the form of vectors, altitude change, or to fly an offset.

b. Oceanic: Aircraft experiencing turbulence can be anticipated to advise ATC and request a revised clearance. In instances where a revised clearance is not possible or practicable, the aircraft may fly a

lateral offset not to exceed 2NM from the assigned route or track. Advise ATC as soon as practical and return to the assigned route when the offset is no longer required.

6-9-9. SUSPENSION OF RVSM

a. Domestic: RVSM will not be suspended in domestic airspace. Should turbulence or other weather phenomena require, separation can be increased in a defined area and thoroughly coordinated operationally.

b. Oceanic: Air Traffic Service providers will consider suspending RVSM procedures within affected areas when pilot reports of greater than moderate turbulence are received. Within airspace where RVSM procedures are suspended, the vertical separation minimum between all aircraft will be 2,000 feet above FL290.

Chapter 7. En Route Data

Section 1. Performance Checks

7-1-1. RADAR PERFORMANCE CHECKS

Daily radar performance checks and special radar accuracy checks of long-range radar (LRR) systems used by FAA for ATC shall be accomplished as follows:

a. Radar systems performance shall be evaluated by radar-qualified air traffic controllers through daily observations and use of the radar systems. FAA Flight Check aircraft may be used to assist the controller in performing radar checks. Controllers should utilize Flight Check aircraft or targets of opportunity to verify radar video and fixed map accuracy when necessary.

NOTE-

Neither the daily radar performance checks nor the special radar accuracy checks replace commissioning and special flight inspection. (See para 3-7-1, Commissioning Radar Facilities.)

b. Each sector radar controller is responsible for determining on a day-to-day basis if the quality of the radar display is satisfactory for ATC purposes. For digitized (narrowband) radar systems, this check is performed by the computer program and is certified daily by Technical Operations personnel. Controllers shall monitor the acceptability of the digitized system by indirect methods; e.g., stability and accuracy of presentation, visible alarm lights, and accuracy of registration. The controller must be satisfied that the system is performing effectively for ATC purposes.

c. Narrowband radar systems shall not be used for operational purposes unless they are certified by the appropriate Technical Operations personnel. Uncertified radar subsystems shall be inhibited from an operational narrowband system. The OMIC shall make an entry on FAA Form 7230-4 when the digitized radar system is certified and/or when the display from an uncertified radar subsystem is inhibited or restored to the operational system.

7-1-2. CONTROLLER PERFORMANCE CHECKS

At the start of duty, or as soon as practicable thereafter, the first-line supervisor shall ensure that

each radar controller, or Technical Operations personnel if Technical Operations has been delegated the responsibility for any of the adjustments, completes the following actions to allow the controller to certify the radar display is satisfactory for ATC purposes:

a. Adjust the MTI and the NORMAL VIDEO LEVEL controls so as to obtain optimum target strength with a minimum amount of clutter.

b. Adjust the MTI/NORMAL GATE RANGE to the desired MTI/NORMAL range crossover. This crossover point will normally be just beyond the first ground clutter in view with normal video, usually 30 to 60 miles.

NOTE-

Whenever possible, normal video should be used to better target sensitivity and to eliminate the possibility of radar blind speeds. In some radar systems having integrated MTI, the controller will not have the capability of using the MTI/NORMAL GATE RANGE.

c. Adjust the BEACON VIDEO LEVEL control for bright targets without blooming.

NOTE-

Excessive gain will result in poor target definition and blooming.

d. Check the RANGE MARK VIDEO LEVEL control to ensure the availability of adequate visible range marks, if required, and the linearity of the scope.

e. Adjust the RANGE MARK VIDEO LEVEL control for adequate visible map lines. For off-centered operations, use the following procedure:

1. Turn the OFF CENTER switch ON.

2. Adjust the course N-S E-W OFF CENTER (large knobs) for the desired off-centered position.

NOTE-

In most RBDE-5 scan converter systems, placing the beacon test trigger switch to an ON position will activate three test rings on the display. Normally, the video gains are adjusted properly if the three test rings are visible. By momentary activation of the switch, only a short segment of the rings needs to be displayed. These three rings are only a tool to assist in adjusting the video gain levels and should not be used as the only method of adjustment.

Overall presentation (grass/noise level, target strength, etc.) must also be considered.

f. When equipped, check and adjust the appropriate alphanumeric controls.

7-1-3. SPECIAL RADAR ACCURACY CHECKS

a. When these checks are made, consider video and fixed map accuracy. To insure a thorough understanding of the program and its objectives by all personnel, close coordination is required among air traffic and technical operations personnel. Initial coordination for common digitizer radar accuracy flight checks is effected by the Maintenance Control Center (MCC) coordinator with the facility's test coordinator and Technical Operations. Effect interfacility coordination and with the ARTCC within which the Flight Check aircraft originates. Give special attention to assure the unique assignment of a discrete beacon code; i.e., assure that other aircraft within the same radar coverage as the Flight Check aircraft are not assigned the same beacon code and that the beacon code assigned the Flight Check aircraft is not changed.

b. The ARTCC air traffic manager shall ensure that a sufficient number of controllers are fully qualified to participate in the special radar accuracy check. A detailed list of minimum accuracy requirements of the radar shall be made available to the controller/s.

c. The controller/s assigned to participate in these checks must be thoroughly familiar with the requirements set forth herein as well as the commissioning flight inspection data.

NOTE-

FAA aircraft normally operate on published routes.

d. When necessary, ARTCC controllers shall:

1. Check the accuracy of as many of the predetermined checkpoints as possible while the Flight Check aircraft is operating within the area of radar coverage.

2. Request the pilot to advise when he/she is over each predetermined checkpoint. When these checks are being conducted, the pilot shall alert the controller that the checkpoint is being approached and state "mark" when over the point.

3. Do not change the previously assigned discrete beacon code.

e. Satisfactory radar performance of video and fixed map accuracy will be such that an aircraft reporting over a checkpoint will be within a circular area about the checkpoint, the radius of which is 3 percent of the distance from the checkpoint to the radar antenna site or 500 feet, whichever is greater.

1. Type radar system.

2. Date.

3. Aircraft identification.

4. Type aircraft.

5. Altitude/flight level.

6. Aircraft reported position.

7. Radar indicated position.

8. Discrepancy.

9. Primary or secondary radar.

10. CP or LP.

Section 2. Deficiencies

7-2-1. DEFICIENCIES IN SYSTEM

Note deficiencies in the radar system on FAA Form 7230-4. Reconcile them as follows:

a. After consultation with the Technical Operations representative, the ARTCC air traffic manager or his/her designated representative shall decide if the radar system is usable. Consider atmospheric or other phenomena that may temporarily affect the radar performance.

b. A certification by Technical Operations personnel that the malfunction has been corrected shall be entered on the sector's and the OMIC log.

NOTE-

Technical Operations representatives ground check the equipment to determine if the system is operating satisfactorily or request a special flight check.

7-2-2. AMPLITRON OR PARAMETRIC AMPLIFIER FAILURE

a. When an ARSR/amplitron fails, the magnetron continues to feed normal magnetron power to the transmitting system. In the receiving system, a failure of the parametric amplifier will not cause a complete system failure. Under these conditions, the radar system still has limited operational capabilities.

b. When amplitron and/or parametric amplifier service fails in both channels at the same time, the radar will continue to operate but a loss of coverage will be experienced. The Technical Operations technician will immediately advise the ARTCC STMCIC of any failure. Following this, the technician will provide an estimate of the shortest period of time required to restore normal service to one channel and will estimate how much time, if any, could be saved by a complete radar shutdown. The STMCIC shall determine the course of action to be followed. The Technical Operations technician will abide by the STMCIC's decision and proceed accordingly.

c. The STMCIC shall contact the associated AFSS/FSS, which will then issue a NOTAM as required.

7-2-3. ELECTRONIC ATTACK (EA)

At joint-use radar locations, EA activity can subsequently result in a request to apply EA videos to the radar system, which may necessitate the decertification of the narrowband search radar. The SE should be consulted concerning the effect of EA on the operational use of the radar (narrowband/broadband) prior to approving/disapproving a request to conduct EA activity.

Chapter 8. NAS En Route Automation

Section 1. General

8-1-1. TRANSITION PROCEDURES

a. Facilities shall develop and maintain current detailed procedures for transition to and from the various automated and nonautomated modes of operation.

b. The transition plans shall include as a minimum:

1. Transition decision authority; i.e., the individual responsible for making the transition decision.

2. Specific transition procedures.

3. Detailed checklists specifying the duties and the responsibilities for the STMCIC, OS, Radar Position (R), and other appropriate positions. The checklist shall include, as a minimum, the following information/procedures:

(a) Transition decision authority.

(b) Coordination/notification procedures (intra- and interfacility).

(c) Specific duties/responsibilities (including detection and resolution of potential conflicts).

NOTE-

Whenever possible, coordination/notification procedures and duties/responsibilities should be listed in the order in which they are to be accomplished.

c. The air traffic manager shall not cause or permit the operational use of the Direct Access Radar Channel (DARC) solely for purposes of training when the primary operational system is available.

8-1-2. ALTRV FLIGHT DATA PROCESSING

a. Facilities shall limit the computer processing of ALTRV flight plans to the following specific instances:

1. Classified ALTRV data, stationary and/or flight plan information, shall not be entered into the computer, processed, stored, or transmitted by the computer unless specific declassification data is provided, e.g., "declassified for NOTAM/computer flight plan processing 24 hours in advance." In the

absence of declassified data, process this information manually and pass to only those personnel with a need-to-know. All data shall be marked with the appropriate level of security classification, collected when the need-to-know is completed and destroyed according to security guidelines.

NOTE-

The use of a mission plan (MP) message is not authorized for processing classified ALTRV flight plans.

2. Unclassified ALTRV flight plan information may be entered into the computer for the purpose of generating flight progress strips in advance of the normal activation to reduce workload by use of the Mission Flight Plan Message (MP). The use of this message automatically inhibits the on-line transfer of ALTRV data.

3. Unclassified ALTRV flight plan information may be entered into the computer and transferred on-line when the mission will conduct a departure climb to a cruising altitude or block of altitudes and remain until conducting a descent to the destination airport.

4. Based on advance interfacility coordination, unclassified ALTRV flight plans may be entered, processed, and transferred on-line up to, but not beyond, the fix at which an en route altitude change occurs. "XXX" shall be inserted into the route of flight immediately after the fix at which the altitude change is to occur to prevent the production of any flight progress strips containing erroneous altitude information.

5. Based on advance interfacility coordination, unclassified ALTRV flight plans containing "XXX" in the route of flight in accordance with subpara 3 above, may be processed manually beyond the "XXX" fix or reentered into the computer for on-line processing with updated altitude information. An updated "XXX" shall again be inserted in the route of flight following the fix at which any further altitude change, except arrival descent, is to occur.

6. Based on advance interfacility coordination, unclassified ALTRV flight plans may be entered into the computer for on-line processing and transfer commencing at a fix after the last altitude change.

b. The facility officer designated military liaison and security duties is responsible for the development and implementation of methods for assuring the accuracy and the completeness of ALTRV flight plan and control information.

c. Estimates and revisions of ALTRV flight plans not processed on-line shall be forwarded via the Aeronautical Information System from facility to facility.

8-1-3. COMPUTER DATA RETENTION

a. Retain SAR/CDR computer and DLOG (if recorded) recordings and data communications/console typewriter printouts for 15 days unless they are related to an accident/incident as defined in FAAO 8020.11, Aircraft Accident and Incident Notification, Investigation, and Reporting. Retention of the latter shall be in accordance with FAAO 1350.15, Records, Organization, Transfer, and Destruction Standards, Chapter 14, subparas 8020(1), (a), (b), (c), (d), and (exception).

b. If a request is received to retain computer data following an accident, the printout of the relative data will suffice, and the recording tape/disc may then be returned to service through the normal rotational

cycle. The printout data are considered a permanent record and shall be retained in accordance with aircraft accident/incident retention requirements. Reduction of the SAR/CDR and DLOG (if recorded) tapes/discs to hard-copy format shall be made at the earliest time convenient to the facility involved without derogating the ATC function and without prematurely taking the computer out of ATC service. Do not make these data and printouts a part of the accident/incident package.

c. If a request is received to retain a specific data recording and the data are available and contained on tape, the tape shall be retained in its entirety. If the data are contained on disc, the facility may transfer all pertinent data to magnetic tape and label the tape a *Duplicate Original*. After successful transfer, the disc pack may be returned to service through the normal rotational cycle. However, if a specific request is received to retain the disc, the disc pack shall be retained in its entirety.

d. Treat SAR/CDR and DLOG (if recorded) tapes/discs/*duplicate and/or originals* and data communications/console typewriter printouts related to hijack aircraft the same as voice recorder tapes. (See para 3-4-4, Handling Recorder Tapes or DATs.)

Section 2. Procedures

8-2-1. SINGLE SITE COVERAGE STAGE A OPERATIONS

Facilities may adapt all sort boxes within 40 miles of the antenna to that site as preferred and with the single site indicator set to permit the use of 3 miles radar separation as defined in FAAO 7110.65, Air Traffic Control, subpara 5-5-4b3, Minima. This adaptation may be used provided:

- a. A significant operational advantage will be obtained using single site coverage. Consideration must be given to such aspects as terminal interface, radar reliability, etc.; and
- b. Facility directives are issued to:
 1. Define areas within 40 NM of any radar site in which the adaptation has been modified.
 2. Permit 3 NM separation in the modified area.
 3. Accommodate local procedural changes.

8-2-2. ADAPTED ALTIMETER SETTINGS

Ensure a current altimeter setting from the adapted reporting station for each radar sort box or geographic area is input into the center's computer. When an altimeter setting for an adapted reporting station cannot be obtained, enter the altimeter setting from the appropriate alternate reporting station.

8-2-3. ADAPTATION OF EXTERNAL ALTIMETER SETTINGS

Adaptation of altimeter settings for reporting stations outside a facility's area is optional up to the maximum number listed in the NAS adaptation specifications.

8-2-4. CONFLICT ALERT FUNCTION PARAMETERS

a. Use the nominal value of parameters specified in NAS Configuration Management Documents for the CA function unless a waiver to adjust parameter value is received from the En Route and Oceanic Safety and Operation Support Office.

b. Facility air traffic managers are authorized to inhibit the display of CA at specified sectors.

8-2-5. MODE C INTRUDER (MCI) ALERT PARAMETERS

a. Use the nominal value of parameters specified in the NAS Configuration Management Document for the MCI Alert function, except the base altitude parameter, unless a waiver to adjust parameter value is received from the En Route and Oceanic Safety and Operations Support Office.

b. MCI Alert base altitude shall be set at any value between ground level and 5,000 feet MSL at the discretion of the facility air traffic manager. When a facility's or sector's ground level is above 5,000 feet MSL, base altitudes may be set to 1,500 AGL. Any instance of base altitudes above 5,000 feet MSL shall be documented and forwarded to the En Route and Oceanic Safety and Operations Support Office through the respective Service Area Operations Directorate.

c. Facility air traffic managers are authorized to temporarily adjust the Mode C Intruder Alert base altitude at a sector(s) when excessive MCI alerts derogate the separation of IFR traffic. For the purpose of this section, temporary is considered to be of less than 4 hours duration, not necessarily continuous, during any calendar day. The following is required when MCI base altitude is adjusted:

1. Log each occurrence when this procedure is used on FAA Form 7230-4, including the sector and temporary altitude.
2. Documentation shall be forwarded according to subpara b above, if it is determined that a temporary adjustment of the MCI base altitude does not meet the needs of the sector.
3. Facility air traffic managers are authorized to inhibit the situation display of MCI Alert at specified sectors.

8-2-6. E-MSAW ADAPTATION

Ensure that all internal airspace is adapted for E-MSAW processing. Ensure that the altitude information adapted in the polygons agrees with the MIA sector charts and that the automation is adapted in accordance with the appropriate NAS Management Documents.

8-2-7. WAIVER TO INTERIM ALTITUDE REQUIREMENTS

Where sector conditions; e.g., heavy traffic or sector complexity, preclude meeting the requirements of FAAO 7110.65, Air Traffic Control, subpara 5-14-3b, Computer Entry of Assigned Altitude, ARTCC air traffic managers may authorize the deletion of the requirements if an operational advantage is gained. A facility directive shall be

issued with instructions governing permissible procedures. It shall contain:

- a.** Procedures/sectors where the waiver applies.
- b.** Coordination procedures if required.
- c.** Specific instructions to input a reported altitude for non-Mode C-equipped aircraft when it will operate at an altitude before proceeding to the assigned altitude.

Section 3. Displays

8-3-1. DIGITAL MAP VERIFICATION

Verification of the accuracy of new or modified digital maps shall be accomplished through the use of “targets of opportunity” over displayed fixes, navigational aids, etc. Any observed discrepancies shall be documented to indicate the observed direction and displacement. If any errors cannot be corrected or if a facility is otherwise dissatisfied with the results from “targets of opportunity,” a request may be made through the FIFO for a flight check. If no discrepancies are noted, no documentation is required.

8-3-2. DATA DISPLAY FOR BLOCK ALTITUDE FLIGHTS

Facilities operating in the narrowband mode shall ensure that, as a minimum, radar target symbols, aircraft identifications (ACIDs), and altitude information are displayed at all sectors affected by altitude assignments involving more than one altitude (Block Altitude) when radar separation is being provided.

8-3-3. SELECTED ALTITUDE LIMITS

The display of Mode C targets and limited data blocks is necessary for application of Merging Target Procedures. Sectors shall ensure the display of Mode

C targets and data blocks by entering appropriate altitude limits and display filters to include, as a minimum, the altitude stratum of the sector plus:

a. 1,200 feet above the highest and below the lowest altitude or flight level of the sector where 1,000 feet vertical separation is applicable; and

b. 2,200 feet above the highest and below the lowest flight level of the sector where 2,000 feet vertical separation is applicable.

NOTE-

1. *The data block, for purposes of this paragraph, must contain the beacon code and mode C altitude at a minimum.*

2. *Exception to these requirements may be authorized for specific altitudes in certain ARTCC sectors if defined in appropriate facility directives and approved by the respective service area operations directorate.*

8-3-4. AUTOMATED WEATHER DISPLAY STATUS

Facilities operating in the narrowband mode shall ensure that sector controllers are immediately briefed on any change in the status of the Weather Fixed Map Unit (WFMU) or radar polarization.

Chapter 9. Facility Statistical Data, Reports, and Forms

Section 1. Operational Count Data

9-1-1. IFR AIRCRAFT HANDLED

The IFR Aircraft Handled count is the statistic maintained by ARTCCs. The statistic is used to fulfill a variety of management planning and administrative requirements, but one of the primary requirements is that of determining controller grade level. As such, it reflects the factors of knowledge and skills required by and the responsibility involved with the type of service being provided. Not every service provided will qualify for an operational count, but those which do are considered typical of the total facility responsibility.

9-1-2. CATEGORIES OF OPERATIONS

Maintain data on the following categories of aircraft operations:

a. Air Carrier: Operations by aircraft identified in Appendix 3, Air Carrier Aircraft for Air Traffic Activity Operations Count, which use three letter company designators.

b. Air Taxi: Operations by aircraft other than those identified in Appendix 3 which use three letter company designators or the prefix "TANGO."

NOTE-

Air Taxi operators who do not have a FAA-issued designator have been authorized to use the prefix "TANGO."

c. Military: All classes of military operations.

d. General Aviation: Civil operations which are not classified under *air carrier* or *air taxi*.

9-1-3. CRITERIA FOR IFR AIRCRAFT HANDLED COUNT

a. Basic Criteria: ARTCCs shall maintain a count of IFR Aircraft Handled which meet both the following criteria:

1. The aircraft must be:

(a) On an IFR flight plan or a Special VFR clearance; or

(b) Provided approved standard separation while conducting practice instrument approaches; and

2. The facility must have control jurisdiction over the aircraft. Radio communication while doing this is not a requirement for an allowable IFR Aircraft Handled count.

b. By Operation Type: IFR Aircraft Handled is broken down as Domestic aircraft handled and Oceanic operations. The Domestic count is further subdivided into Departure operations, Arrival operations, and Over operations. Presently, the counting of Arrivals is only an option which may be exercised by ARTCCs using a computer counting routine. Count those operations which qualify under the following guidelines:

1. Domestic Departures: Record one departure for each:

(a) IFR flight which originates in an ARTCC's area and enters that center's airspace. (ARTCCs shall not count Departures which operate solely under tower en route control nor any other aircraft which never enters the center's airspace.)

(b) Airborne aircraft changing from VFR to IFR except those covered in subpara b3(b).

(c) VFR departure from a Class D or Class E surface area when cleared by the ARTCC in accordance with Special VFR procedures.

(d) IFR flight plan extension (alternate or new destination, or proceeding to original destination after completing practice penetrations or low approaches en route) made after the aircraft has been cleared for an approach by the center or after jurisdiction has been received by approach control.

2. Domestic Arrivals: Record one Arrival for each:

NOTE–

ARTCCs using a computer counting routine may elect to count both Departures and Arrivals in lieu of counting only the Departures and multiplying by two. The purpose of this option is to provide sufficient flexibility in the counting procedures to be compatible with efficient computer utilization. When using this option, no change is made to the Departure and Over operations procedures except as noted here.

(a) IFR flight terminating at an airport within the ARTCC's area.

(b) VFR entry into a Class D or Class E airspace when cleared by the ARTCC in accordance with SVFR procedures in lieu of the Departure count of subpara b1(c).

(c) VFR aircraft that conducts a practice instrument approach procedure and is provided IFR separation by the ARTCC when it is providing approach control service in lieu of the Over count in subpara b3(e).

3. Domestic Overs: Record one Over count for each:

(a) IFR flight not previously counted which proceeds from outside an ARTCC's advisory area and passes through the area without landing.

NOTE–

Such count is not taken for en route flights traversing approach control airspace.

(b) Military Training Route (MTR) operations as follows:

(1) IR (IFR MTRs).

[a] Each entry/reentry at an entry or alternate entry point.

[b] Each recovery to IFR en route phase of flight after completing the IR.

(2) VR (VFR MTRs). No count is authorized for the VR route itself as it is a VFR maneuver. Flight to and from a VR is normally conducted on an IFR flight plan. When the aircraft completing the VR requests IFR en route service:

[a] Record an Over count, as in subpara b3(c) below, for the recovery into ARTCC airspace for an IFR leg of a composite flight plan.

[b] Record a Departure count under subpara b1(b) above for the recovery into center

airspace when the aircraft has not previously filed an IFR flight plan and is now requesting IFR service.

(c) Military aircraft recovering from a block of assigned airspace into the ARTCC's area. Only the ARTCC into whose area the aircraft recovers and which provides IFR en route service to that aircraft shall take this count.

NOTE–

Block of Assigned Airspace is airspace of defined vertical/lateral limits, assigned by ATC for the purpose of allowing the military to control and operate during specified periods within these areas without interference from other IFR aircraft. Such airspace includes special use airspace, ATCAAs, MOAs, and Refueling Tracks, but does not include activities, such as expanded route widths, course deviations, or random altitude blocks.

(d) Civilian aircraft which recover from a block of assigned airspace, similar to the military count above, provided the block fits the definition and its use is covered by a LOA.

(e) VFR aircraft that conducts a practice instrument approach procedure and is provided IFR separation by the ARTCC.

4. Oceanic Operations: Facilities having oceanic airspace may record one Oceanic operation count for each:

NOTE–

Oceanic operations are not categorized as Departures, Arrivals, and Overs.

(a) IFR flight which penetrates an oceanic ARTCC's area. This count is independent of the Domestic count to be taken.

(1) Only one Domestic and one Oceanic count is normally accrued by a flight transiting domestic and oceanic areas. If the aircraft exits the FIR and then subsequently reenters, or exits ARTCC airspace to another ARTCC and then reenters, additional counts may be taken.

(2) ARTCCs shall not take more than one Domestic count, even though the aircraft exits an ARTCC's domestic area, crosses the same ARTCC's oceanic area, and again enters the domestic area.

(3) An Oceanic count shall not be taken for each hour an aircraft is operating "on station."

(b) IFR flight which originates in an ARTCC's oceanic airspace.

9-1-4. MILITARY AIRCRAFT MOVEMENTS

The military services frequently fly several aircraft in formation receiving ATC services as if they were a single unit. Such operations must qualify for a Departure, Arrival, or Over count using the guidelines in para 9-1-3, Criteria for IFR Aircraft Handled Count. Count such military aircraft movements as follows:

a. Consider flights of more than one aircraft operating in a formation and handled as a single aircraft as a single unit, however, if the formation breaks up into smaller formations, take another count for each individual formation or individual flight.

b. Consider as a military mission any operation involving two or more military aircraft flying over routes which require coordination to reserve an altitude or a block of altitudes and count the entire mission as one flight.

NOTE-

"Military Mission" refers to an "altitude reservation" that is approved by CARF or by the ARTCC when the operation is not covered in a letter of agreement.

c. Take a separate operations count for each aircraft in a military mission when:

1. Radar service is provided to individual aircraft (or flights).

2. Aircraft operating outside areas of radar coverage have at least 15 minutes separation.

9-1-5. USE OF AUTOMATED COUNTS

ARTCCs may elect to use a computer counting routine or a combination of manual and automated counting procedures. For example, a computer count may be used for typical airline Departures and Overs, while the more unique military Overs are added in manually. The accuracy of computer counts shall be verified periodically to be within plus/minus 3 percent of the actual traffic count.

9-1-6. FAA FORM 7230-14, ARTCC OPERATIONS DAILY SUMMARY

The FAA Form 7230-14 is a monthly form which shall be used by ARTCCs and CERAPs for reporting their daily and monthly operational traffic counts. The front side of the form is for Domestic operations and VFR advisory count. This side will meet the normal requirements of most facilities. The back of

the form is for Oceanic operations and must be filled out by those facilities having oceanic airspace. In addition, the areas might be used by any or all facilities. Any time the back of the form is used, the facility must fill in the month and the year blocks and the facility's location identifier. This provision ensures proper identification in the case of multiple copies. Forms forwarded as the official facility traffic count must be neat and readable as each column will be keypunched for computer processing and storage.

9-1-7. INSTRUCTIONS FOR COMPLETING FAA FORM 7230-14

a. **FRONT SIDE:** Enter the facility's name and location. Use two digits each for the month and the year (March 2004 would be 03, 04), and fill in the facility's three-letter identifier.

1. **Domestic Operations:** Each day record by category the count for Departures, Arrivals, and Overs. These columns are added across to get the "Domestic Aircraft Handled" column. Those facilities not using an arrival count shall leave those columns blank, enter the actual number of departures in the departure column, and reflect departures multiplied by 2 plus overs in the "Domestic Aircraft Handled" column. Safety and Operations Support does not keypunch the "Domestic Aircraft Handled" column. Rather, it uses a computer routine to add the individual entries, and that column is provided only for the convenience of the facilities and the Service Area office. At the bottom of the form, a row marked "TOTAL" is for the monthly total of each column. Below that row, and at the very bottom, is a row marked "1," which may be used any way the facility desires to use it.

2. **VFR Advisories:** The far right-hand column is for the VFR Advisories count. The count is used in various studies of expanded ARTCC service and is required of all facilities.

b. **REVERSE SIDE:** Facilities which are required to use the back side for any reason must repeat the entries for the month, the year, and the facility location identifier.

1. **Oceanic Operations:** The primary use of the back of the form is for Oceanic operations. If a facility has oceanic airspace, Oceanic operations shall be filled in each day by category. If a category has no Oceanic operations for a day, leave it blank, do not use a zero. These columns are added across to get the

“TOTAL” Oceanic operations column. At the bottom of the form, a row marked “TOTAL” is for the monthly total of each column.

2. Grand Total: For the convenience of the facility (it is not keypunched), this column provides space to add the Domestic total to the Oceanic total to get a grand total for the day. The form is designed to be folded so that the three columns are side by side and folding instructions are printed on the form.

3. Special Use: Routinely these columns are not used, but are provided for the occasional special project which may be directed by Washington or En Route and Oceanic Operations Area offices.

4. Remarks: The remarks column may be used at any time to enter pertinent remarks concerning other portions of the form.

9-1-8. DISTRIBUTION AND AMENDMENT

a. Distribute FAA Form 7230-14 as follows (it may be combined in one envelope with the other monthly forms):

1. The original and one copy to the Service Area office not later than the 2nd workday (Monday-Friday) of the following month.

2. One copy to the facility’s files.

b. Correct any errors in the forms sent in last month by completing a new form, circling the revised fields, and marking the form “AMENDED COPY.”

Amended copies of forms more than 1 month old will not be accepted unless approval has been obtained from Acquisition and Business Services, ATO Information Technology, Data Services by the En Route and Oceanic Operations Area Office. Send amended copies along with the current reporting month’s forms to the En Route and Oceanic Operations Area Office.

9-1-9. FAA FORM 7230-25, RECORD OF MILITARY TRAINING ROUTE (MTR) OPERATIONS

a. Use FAA Form 7230-25, Record of MTR Operations (RIS: AT-7230-150; unit of issue: sheet; NSN: 0052-00-868-7000), to record the daily usage of IFR MTR’s handled, and retain the original copy for the facility’s files. Forward one copy to System Operations Security, Military Operations Security and one copy to the Service Area office biannually on January 5 and July 5.

NOTE-

This form and its purpose is not to be confused with the operational count procedures in para 9-1-3, Criteria for IFR Aircraft Handled Count.

b. Record one usage for each individual aircraft operation (sortie) as follows:

1. Each entry procedure.

2. Each reentry procedure/s.

c. Record MTR usage for each specific MTR number.

Section 2. Instrument Approach Data

9-2-1. GENERAL

ARTCCs are responsible for the tabulation and reporting of instrument approach data for those nontower, nonapproach control, or VFR tower airports under the ARTCC's jurisdiction to which instrument approaches are conducted. Instrument approach data are used primarily to determine the need and priority order of approach aids, such as ILS/MLS and VOR. Therefore, it is not necessary to report instrument approaches made to purely military airports unless the FAA is responsible for providing the aids for that airport. One count shall be recorded for each approach meeting the criteria.

9-2-2. INSTRUMENT APPROACHES

a. An instrument approach is an approach made to an airport by an aircraft on an IFR flight plan when the visibility is less than 3 miles or the ceiling is at or below the minimum initial approach altitude.

b. Where no weather reporting service is available at nontower satellite airports, the following criteria in descending order shall be used to determine valid instrument approaches.

1. A pilot report.
2. If the flight has not canceled its IFR flight plan prior to reaching the initial approach fix.
3. The official weather as reported for any airport located within 30 miles of the airport to which the approach is made.

9-2-3. AIRPORTS REPORTED

Instrument approaches shall be reported for all airports where instrument approaches are conducted. Reporting is the responsibility of the facility having the authority for clearing the approach. Therefore, the ARTCC is responsible to report instrument approaches for the nontower airports and nonapproach control (VFR) airports in its area. At airports where there is an FAA VFR tower, the ARTCC and the tower shall determine which facility shall maintain the count. If the tower counts the approaches, it shall forward the appropriate totals to the ARTCC for inclusion in the center's monthly report. (VFR towers do not report instrument approaches to Washington.)

When the ARTCC provides approach control on a part-time basis; i.e., during periods when the primary approach control facility is closed, the ARTCC shall forward the instrument approach count for those hours to the primary approach control facility for inclusion in their monthly report.

9-2-4. FAA FORM 7230-16, APPROACH DATA WORKSHEET

FAA Form 7230-16 is a worksheet furnished for the purpose of recording instrument approaches. It does not have a specific arrangement allowing each facility to tailor it to its own needs. Instrument approaches will be counted by the standard *air carrier*, *air taxi*, *general aviation*, and *military* categories. At the end of the month, the totals, by airport, will be transferred to FAA Form 7230-12. FAA Form 7230-16 shall be retained in the facility's files.

9-2-5. FAA FORM 7230-12, INSTRUMENT APPROACHES MONTHLY SUMMARY

FAA Form 7230-12 is a monthly form, submitted by both ARTCC and terminal approach control facilities, for reporting the number of instrument approaches made at airports for the month. The facility's name and location will be entered; two digits each will be used for the month and the year (January would be 01), and the three-letter identifier filled in at the top of the form. ARTCCs shall check box H: ARTCC or CERAP. ARTCCs shall not enter any data in the block for instrument approaches terminating at a primary approach airport. ARTCCs list all airports, using a three-character identifier, under the heading "Instrument Approaches to Non-approach Control Airport," with the respective monthly totals by category. If an ARTCC has more airports than can be listed on the front, continue on the back of the form. In this case, the ARTCC's identifier and the month and the year must be entered again on the back. Only ARTCCs and approach controls submit this form. Under no circumstances should two facilities report the same airport. Therefore, it may be necessary for facilities to make arrangements to ensure no duplicate reporting of instrument approaches.

9-2-6. DISTRIBUTION AND AMENDMENT

a. Distribute FAA Form 7230-12 as follows (it may be combined in one envelope with the other monthly forms):

1. The original and one copy to the Service Area office not later than the 2nd workday (Monday-Friday) of the following month.

2. One copy to the facility's files (with FAA Form 7230-16).

3. One copy to the local airport officials as requested.

b. Correct any errors in the forms sent in last month by completing a new form, circling the revised

fields, and marking the form "AMENDED COPY." Amended copies of forms more than 1 month old will not be accepted unless approval has been obtained from Safety and Operations Support by the Service Area office. Send amended copies along with the current reporting month's forms to the Service Area office.

9-2-7. FORWARD COPY TO ADJACENT SERVICE AREA

If the report contains data for an airport which is under the administrative jurisdiction of another Service Area office, forward a copy to that Service Area office.

Section 3. Other Reports and Forms

9-3-1. FAA FORM 7210-8, ELT INCIDENT

In order to expedite the data flow necessary for the accomplishment of the ELT investigations, use FAA Form 7210-8, ELT Incident (unit of issue: sheet; NSN: 0052-00-889-5000), for coordination with the Rescue Coordination Center (RCC) when an ELT signal is heard or reported. (See FIG 9-3-1.)

a. Form Disposition. Air traffic managers shall ensure that forms prepared for ELT incidents which have not been closed shall be readily accessible at the operating position responsible for coordinating with the RCC. Forms prepared for an ELT incident which has been closed shall be retained for 15 days except when filed as part of an incident, an accident, or another case file.

b. Instructions for completing FAA Form 7210-8. (See FIG 9-3-1.)

1. Enter the ELT Incident number (#) in the upper right corner of the form.

2. Initial Notification:

(a) Enter the three-letter facility identifier followed by the initials of the person completing the form and the time, and the initials of the persons and the time coordinated with in the RCC and the ROC. If the region does not maintain a ROC, the box may be adapted for local application. Enter the date (UTC) the ELT incident number assigned.

(b) If the ELT signal was first heard by an aircraft, or a ground station reported that an aircraft had first heard an ELT signal, circle Acft and enter the ACID. If the signal was first heard by a ground station, circle GRD Station and enter the station ID. If the first report received was from the RCC stating that an ELT signal was being received via Search and Rescue Satellite, circle SRSAT.

(c) If the signal is heard on only one frequency, circle that frequency. If the signal is reported on both VHF and UHF, circle both frequencies.

(d) If no aircraft has been reported overdue, circle UNK. If a known aircraft is overdue, enter the aircraft ID and record the last known position.

(e) Individual Signal Reports: Enter each ELT signal report received from an aircraft or a ground station emanating from the same geographic area until sufficient reports have been received to pinpoint the signal location. If the investigation reveals that more than one ELT is transmitting in the same general area at the same time, it may be necessary to prepare another FAA Form 7210-8 and handle as separate incidents. (See FIG 9-3-1.)

(f) Time Heard: Enter the time (UTC) an aircraft, a ground station, or SRSAT first received the signal.

(g) Location: Enter the location of the aircraft when the signal was first heard. If the aircraft is DF equipped, enter the reported bearing of the signal from the ground location. If the signal report is received from a DF-equipped ground station, enter the bearing from the station.

(h) Altitude: Enter the altitude(s) of the aircraft reporting the signal.

(i) Remarks: Enter any additional information, such as signal strength, which may be pertinent to the incident investigation.

(j) Enter the presumed location of the ELT. This information is the product of the ARTCC investigation.

3. Additional Notifications/Time (UTC): List any airport managers, base operators, or local police notified and the time of notification. List any other notifications/time, including any ground stations not previously listed on the form.

4. Incident Termination.

(a) List the date and the location where the ELT was discovered. Check the appropriate category for Military/Civilian and Distress/Nondistress.

(b) If the source of the ELT signal was not discovered, enter an applicable statement describing the reason for investigation termination, such as: "all investigative resources exhausted" or "no additional reports received." If a more lengthy explanation is required, enter "See Reverse," and use the Additional Remarks section on the back of the form.

(c) Enter the date (UTC) of the ELT incident closure, followed by the initials of the person recording the closure and the time, and the initials of the persons and the time the closure is coordinated within the RCC and ROC. Enter any other notifications of incident closure by identifying the facility or organization and record the initials and the time.

5. *Additional Remarks:* This section, on the back of the form, may be used for overflow information or any information which is too lengthy to be included on the front of the form.

FIG 9-3-1
FAA FORM 7210-8

[illegible]

Part 3. TERMINAL AIR TRAFFIC CONTROL FACILITIES

Chapter 10. Terminal Operations, Services, and Equipment

Section 1. General

10-1-1. OPERATING POSITION DESIGNATORS

a. The following designators may be used to identify operating positions in a terminal. (See TBL 10-1-1.)

TBL 10-1-1

OPERATING POSITION DESIGNATORS

	<i>Designator</i>	<i>Position</i>
1.	AD	Arrival Data (Radar)
2.	AP	Approach Control
3.	AR	Arrival Control (Radar)
4.	CC	Coordinator (Tower)
5.	CD	Clearance Delivery
6.	CI	Coordinator (Radar)
7.	DC	Departure Control
8.	DD	Departure Data (Radar)
9.	DR	Departure Control (Radar)
10.	EN	Flight Service
11.	FD	Flight Data
12.	GC	Ground Control
13.	LC	Local Control
14.	OM	Operations Manager
15.	OS	Operations Supervisor
16.	PAR	Precision Approach Radar
17.	STMCIC	Supervisory Traffic Management Coordinator-in-Charge

b. Facility air traffic managers may use designators other than those listed to accommodate local situations.

10-1-2. TOWER/RADAR TEAM CONCEPTS

a. There are no absolute divisions of responsibilities regarding position operations. The tasks to be completed remain the same whether one, two, or

three people are working positions within a tower cab/facility/sector. The team, as a whole, has responsibility for the safe and efficient operation of the tower cab/facility/sector.

b. The intent of the team concept is not to hold the team accountable for the action of individual members in the event of an operational error/deviation.

10-1-3. MILITARY ATC BOARDS

a. Commanders at USAF bases with flight operations have been directed by USAF to establish airfield operations boards. Among other things, the boards develop recommendations for improving ATC and airfield services and attempt to resolve local air traffic problems.

b. The ATCT manager, his/her representative, or the ATREP at these bases may be designated as a member of the board. The FAA member shall inform the board that his/her participation does not commit the FAA to abide by the board's recommendations even though they may be approved or even suggested by him/her.

c. The FAA member should become familiar with Air Force Regulation 55-48, Air Force Instructions 13-203, Air Traffic Control, and 13-213, Airfield Management.

10-1-4. SECTIONAL AERONAUTICAL AND TERMINAL AREA CHARTS

a. Terminal Area Charts (TACs) provide detailed information needed for flight within or in the vicinity of Class B airspace. Visual checkpoints are depicted on TACs, and at some locations, on Sectional Charts.

b. VFR Flyway Planning Charts are published on the back of existing TACs. Facilities with a TAC desiring publication of a VFR Flyway Planning Chart should submit requests through the Terminal Operations Service Area office to Terminal Safety and Operations Support. Additional charts may be con-

sidered after all Class B airspace locations have been completed. VFR Flyway Planning Charts, which are intended to facilitate VFR transition through high density areas, depict generalized VFR routing clear of major controlled traffic flows which may be used as alternatives to flight within Class B airspace. Pictorial ground references and VFR checkpoints are provided to aid visual navigation. These charts are designed for information and planning purposes and are not intended to discourage VFR operations within Class B airspace. Pilot compliance with recommended flyways and associated altitudes is strictly voluntary. Controllers shall not assign a charted VFR flyway to a pilot as part of a clearance nor predicate separation of aircraft on any expected pilot compliance with the depicted altitudes.

c. Facility air traffic managers shall review VFR checkpoints published on Sectionals, TACs, and VFR Flyway Planning Charts for accuracy, completeness, and reasonableness. Nearby ATCT that make use of the same area depicted on the charts shall agree upon the checkpoints to be depicted.

d. Submit changes or revisions to VFR checkpoints to System Operations Airspace and Aeronautical Information Management at least 10 weeks prior to the scheduled publication date.

e. If required, a list of checkpoints may be developed in association with local flight schools and fixed base operators for local use. They may only be used with local users who participated in developing the list. They may not be charted or published.

10-1-5. AREAS OF NONVISIBILITY

Air traffic managers of towers located where portions of the airport surface are normally designated movement areas and/or where portions of the airport traffic pattern are not visible from the tower shall, after coordination with the airport management, issue a letter to airmen describing the condition. The recommended wording is:

a. “Due to obstructed vision, (facility identification) tower is unable to provide airport traffic control service in following areas: (describe the areas).”

b. “Due to the movement of uncontrolled ground traffic, (facility identification) tower is unable to provide airport traffic control service in the following areas: (describe the areas).”

c. “Use caution, the following areas are not visible from the (facility name) tower: (describe the areas, traffic pattern, active runway).”

10-1-6. SELECTING ACTIVE RUNWAYS

a. ATCT supervisor/CIC has primary responsibility for determining which runways are to be designated as “active” runways. Where optional configurations of multiple active runways are used for operational flexibility, responsibility for designating which of the optional runways are active at any time may be further delegated. A facility directive shall be issued to define specific coordination requirements. (See FAAO 7110.65, Air Traffic Control, para 3-1-3 thru para 3-1-5, para 3-5-1, para 3-5-2, etc.)

b. Determination of the active runway/s requires consideration of all known factors that may in any way affect the safety of takeoff/landing operations including the initial departure and the instrument approach phases of flight within terminal area airspace. (See FAAO 7110.65, para 2-1-16, para 2-1-18, para 2-6-1 thru para 2-6-5, para 3-1-8, para 3-3-1 thru para 3-5-3, etc.)

NOTE-

Example of items to be considered are: surface wind direction and velocity, wind shear/microburst alerts/reports, adjacent airport traffic flows, severe weather activity, IFR departure restrictions, environmental factors, etc.

10-1-7. USE OF ACTIVE RUNWAYS

a. Facility air traffic managers shall issue a facility directive containing procedures to ensure the efficient use of runways, positive control and coordination of aircraft/vehicles on or near active runways. Authorization for aircraft/vehicles to taxi/proceed on or along an active runway, for purposes other than crossing, shall be provided via direct communications on the appropriate local control frequency. This authorization may be provided on the ground control frequency after coordination with local control is completed for those operations specifically described in a facility directive. In addition, a facility directive shall include procedures for the use of a memory aid for appropriate operational positions. This memory aid shall visually and/or aurally indicate that an aircraft/vehicle/pedestrian is on or near an active runway. Where memory aids for runway use have been established, their use shall be mandatory. Where memory aids are not in place, utilize collaborative

effort, and develop and implement site-specific memory aids and procedures outlining their use.

b. Facility air traffic managers shall include local procedures in the facility directive to assist the local and ground controllers in maintaining awareness of aircraft positions on the airport.

REFERENCE—

FAAO 7110.65, Para 3–1–4, *Coordination Between Local and Ground Controllers.*

FAAO 7110.65, Para 3–1–7, *Position Determination.*

c. FAAO 7110.65, Air Traffic Control, contains procedures for the control of aircraft/vehicle movements on active runways. Exceptions may be authorized, upon approval by the Terminal Operations Service Area Director, to allow prearranged coordination where equivalent procedural safeguards exist to preclude a loss of separation. Exceptions shall be limited to complex locations with clearly demonstrated extraordinary requirements that cannot be met through the application of the standard procedures in FAAO 7110.65, Air Traffic Control. The following are required:

1. A facility directive that clearly defines ground/local/cab coordinator responsibilities and contains safeguards to prevent inadvertent use of runways by local/ground/cab coordinator at the same time and do not rely solely on visual observation (look-and-go).

2. The use of the cab coordinator in runway crossing procedures must have restraints to guard against unanticipated actions by the local controller to prevent traffic conflicts. Coordinators shall not approve runway crossings in front of aircraft on the runway awaiting takeoff without first coordinating with the local controller. Similar restraints should be included with regard to landing aircraft; e.g., cutoff points that ensure the runway is clear before landing aircraft arrive over the threshold. Based on a direct knowledge of the local controller's instant traffic situation, the cab coordinator may authorize ground control to conduct an operation across an active runway. The cab coordinator must ensure the timeliness of all such operations and initiate any necessary action to prevent runway crossing incidents. When not absolutely certain of local control's traffic, the cab coordinator may still effectively function as a communications link between the local controller and the ground controller.

3. A separate facility directive must explicitly outline the responsibilities of the cab coordinator in authorizing active runway crossings. This directive must address and clearly answer the questions of the cab coordinator's function, authority, and accountability in these operations. The Terminal Operations Service Area Director must review and approve this facility directive prior to its implementation.

4. The Terminal Operations Service Area Director shall forward a copy of the approved facility directive to the Director of System Operations Airspace and Aeronautical Information Management.

d. Facility air traffic managers at instrumented airports with operating control towers shall, in addition to the above, annually review local airport surface diagrams to ensure that the runway centerline heading information is current. This may be accomplished by comparing the posted magnetic headings of the runways shown on the airport obstruction chart, corrected to the current magnetic variation for the facility, with the heading shown on the airport surface diagram. The air traffic manager shall review local departure procedures to ensure continued compatibility with the runway headings posted on the airport surface diagram.

e. Air traffic managers shall develop a facility directive which specifically defines the responsibilities of local and ground control to ensure that coordination is accomplished to accommodate an aircraft exiting the runway which must enter another taxiway/runway/ramp area, other than the one used to exit the landing runway, in order to taxi clear of the runway.

NOTE—

This directive is only required at facilities where an aircraft exiting the runway must enter another taxiway/runway/ramp area, other than the one used to exit the landing runway, in order to taxi clear of the runway.

10–1–8. FLIGHT PROGRESS STRIP USAGE

Air traffic managers at automated terminal radar facilities may waive the requirement to use flight progress strips provided:

a. Back-up systems such as multiple radar sites/systems or single site radars with CENRAP are utilized.

b. Local procedures are documented in a facility directive. These procedures should include but not be limited to:

1. Departure areas and/or procedures.
2. Arrival procedures.
3. Overflight handling procedures.
4. Transition from radar to nonradar.
5. Transition from ATTS to non-ATTS.

c. No misunderstanding will occur as a result of no strip usage.

d. Unused flight progress strips, facility developed forms and/or blank notepads shall be provided for controller use.

e. Facilities shall revert to flight progress strip usage if back-up systems referred to in subpara a above are not available.

10-1-9. LOW VISIBILITY OPERATIONS

a. Facility air traffic managers shall participate in developing a local SMGCS plan when the airport is under the guidelines of the National SMGCS plan.

REFERENCE-

AC 120-57, *Surface Movement Guidance and Control System (SMGCS)*.

b. Facility air traffic managers shall ensure all operational personnel are properly briefed prior to the effective date of local SMGCS plan. All air traffic procedures included in the SMGCS plan shall be contained in a facility directive.

10-1-10. MOBILE CONTROL TOWERS

a. Mobile control towers shall be used at FAA locations:

1. To provide services during a move from an old tower structure into a new tower.

2. When repairs, rehabilitation, or installation of new equipment make the tower structure temporarily uninhabitable.

3. During periods of natural emergency; e.g., the tower structure has been damaged by fire, accident, or wind.

4. During national emergencies as required by the DOD at FAA and non-FAA locations.

b. Mobile control towers may be used at non-FAA locations when requested by flying organizations, cities, or other political entities to assist in the operation of fly-ins, air races, etc., provided:

1. The Terminal Operations Area Office, after careful consideration of a request to use FAA personnel and/or equipment, determines that the service is required and can be made available without:

(a) Jeopardizing FAA activities.

(b) Interfering with the gainful employment of competent non-Federal personnel.

2. Non-Federal personnel selected to support the event are properly certificated and rated in accordance with 14 CFR Part 65 for the airport.

3. The requesting organization is apprised that the mobile unit is subject to immediate recall should an emergency arise.

10-1-11. PARTICIPATION IN LOCAL AIRPORT DEICING PLAN (LADP)

a. Officials, at airports operating under 14 CFR Part 107 and Part 139 subject to icing weather conditions with control towers, should develop LADPs in order to involve all interested parties in the deicing/anti-icing process. Aircraft departing from airports without a LADP are not exempt from any traffic management initiative.

b. The operators of these airports have been requested to host meetings involving airport users and air traffic in a partnership effort to achieve common solutions to local aircraft ground deicing/anti-icing problems. The emphasis is on developing local strategies that minimize the amount of time an aircraft spends on the ground after being deiced/anti-iced.

NOTE-

Deicing is the process of removing existing frozen precipitation, frost, or ice from aircraft surfaces. Anti-icing is the process of preventing accumulation of frozen contaminants on aircraft surfaces. Both processes may involve the application of various fluids to the aircraft.

c. Air traffic managers who receive requests from airport operators to participate in these meetings will use the following guidance:

1. When requested by the airport operator, the air traffic manager shall participate in the development of a LADP. Since a LADP can affect an airport acceptance rate and/or departure rate, the air traffic manager shall include the participation of the air traffic manager from the appropriate ARTCC, who shall participate and/or utilize their traffic management unit (TMU). The plan will be reviewed and updated annually. The plan shall include:

(a) A clear definition of triggering mechanism(s) used to implement the LADP, e.g., holdover tables, visible precipitation.

(b) Assignment of responsibility to notify air traffic of implementation and cessation of the LADP.

NOTE—

Air traffic facilities should not become the triggering mechanism except in rare circumstances. If air traffic is designated as the triggering mechanism, submit the proposed LADP to the Terminal Operations Service Area office for approval.

2. Develop or enhance local strategies to manage the number of aircraft at the departure runway queues and minimize the amount of time an aircraft spends on the ground after being deiced.

3. Gate hold procedures, when used as part of a LADP, should be initiated at the time the plan is implemented. The application of gate hold procedures during deicing/anti-icing operations are not predicated on other requirements of FAAO 7210.3.

NOTE—

The pilot-in-command remains the final authority as to aircraft operation. Air traffic is not responsible for tracking or adherence to aircraft holdover times.

4. Coordinate the expected start time, actual start time and stop time of the LADP with the appropriate ARTCC TMU. The ARTCC TMU will forward these times to the ATCSCC.

5. Balance the airport flow to accommodate demand. Adjust the arrival rate with the departure rate. These rates should reflect the number of operations expected to occur during deicing/anti-icing conditions and facilitate minimizing the amount of time an aircraft spends on the ground after being deiced/anti-iced.

6. Aircraft operators at LADP airports are responsible for complying with issued Expect Departure Clearance Time (EDCT) times and will not be exempted from compliance with these times. However, once an aircraft has been deiced/anti-iced, it shall be released unless a ground stop applicable to that aircraft is in effect. If a facility believes aircraft operators are not performing deicing/anti-icing in a manner consistent to meet the EDCT time, the facility shall notify the ATCSCC through the appropriate TMU.

7. Allocate the available departure slot capacity, when departure rates are reduced because of deicing,

consistent with available resources. Facilities should consider the following unprioritized list of options when developing departure allocation procedures.

(a) OPTION A: First come, first served. When departure demand exceeds capacity, the air traffic facility will minimize departure delays at the runway queue by using gatehold or an equivalent procedure.

(b) OPTION B: Air traffic will determine the departure allocation based upon the departure rate and the stated demand, obtained directly from the users, during a specified time period. For example, air traffic will coordinate with each user and receive their demand for a 15-minute time period. Then, based upon the total airport departure demand for the 15-minute time period, determine the number of flights which the user will be allocated, advise each user, and determine which flights they will use to fill their allocation.

(c) OPTION C: Airport users determine the departure allocation. Air traffic will notify the users of the departure rate in effect and the users will then advise air traffic which flights they will use to fill their allocation. Air traffic will provide input on the coordination process but will not accept an active role in developing the departure allocation.

(d) OPTION D: Air traffic determines the departure rate and informs the users of the number of operations expected during a specific time period. Air traffic determines the total percentage of each users' daily operations based upon a "typical busy day" by dividing each of the users total daily operations by the airports total daily operations. Then, air traffic determines each users hourly share by multiplying the users daily percentage times the departure rate. The users will then distribute their hourly share evenly throughout the specific time intervals.

NOTE—

1. *Air traffic may or may not take an active role in determining the percentage of each user's operations on a "typical busy day" and each user's hourly share.*

2. *If a user has only one aircraft scheduled per hour, attempts should be made to accommodate it.*

8. Provide coordination, communication, and feedback with the parties included in the plan. Coordination should take place when airports are forecast to have icing conditions, during deicing/anti-icing and after deicing/anti-icing, to effect necessary ad-

justments. Prior to and after each winter season, the airport participants should assess the efficiency of the airport plan and address any specific concerns.

■ **9.** Develop an air traffic facility training program. Prior to each winter deicing/anti-icing season, conduct annual controller refresher training including, but not limited to, awareness of and sensitivity to the peculiar nature of deicing/anti-icing operations, icing conditions, and minimizing delays at the runway departure queue.

10-1-12. PRECISION OBSTACLE FREE ZONE (POFZ)

Coordinate with the Airport Division and Flight Standards to determine if precision approach operations are impacted by the POFZ. ILS hold lines will need to be relocated if aircraft (vertical surfaces) or vehicles fall within the POFZ.

Section 2. Position Binders

10-2-1. POSITION DUTIES AND RESPONSIBILITIES

a. The air traffic manager may assign duties and responsibilities to positions as facility needs dictate. Those assignments may apply to one or more positions. Standards shall be developed to enhance the overall operational capabilities of the facility. Local practices, procedures, equipment, communications, etc., used in this directive shall be in accordance with national directives. Site specific details required for pertinent items should describe the appropriate procedure, method, strategy, system equipment, etc., necessary at the facility level to achieve the desired level of service.

b. The air traffic managers shall retain one copy of the completed facility standard operating procedures directive in each area of operation, and distribute applicable sections to the positions to which they apply.

REFERENCE-

FAAO 7210.3, Para 2-1-3, Position/Sector Binders.

c. Changes shall be maintained in accordance with changes to national, Service Area office, and facility orders, and documents. Changes shall be timely to ensure the currency of position binders. Cross reference should be provided to related documents where applicable.

10-2-2. TOWER/RADAR TEAM POSITION BINDERS

a. Position duties and responsibilities: general description.

b. Position information:

1. Frequency information – primary/back-up.

2. Position specific equipment – availability, not use.

3. Area of jurisdiction – map, video map, diagram and/or narrative.

4. Position procedures – may include, but not limited to:

(a) Arrival procedures.

(b) Departure procedures.

(c) Special procedures.

(d) Coordination procedures.

(e) LOA or LOA procedures applicable to that position.

(f) Normally used sector holding fixes to include published/unpublished hold, allowable altitudes, maximum speed, maximum length, direction of turn, direction from fix, and if applicable, published procedures involved.

(g) Local strip marking.

(h) Process flight plan information.

(i) Forward flight plan information.

(j) Process traffic management information.

(k) Process field condition reports.

(l) Process miscellaneous flight data.

(m) Process weather information.

(n) ATIS.

(o) SIA.

(p) Special flight handling.

(q) Emergencies.

5. Potential problem areas.

Section 3. Operations

10-3-1. SIGMET AND PIREP HANDLING

Facility air traffic managers shall establish procedures for the prompt collection and dissemination of SIGMET, CWA, and PIREP information. These procedures shall contain direction for a central source to be responsible for:

a. Soliciting and handling PIREPs in accordance with the provisions of FAAO 7110.65, Air Traffic Control, para 2-6-3, PIREP Information.

b. Reviewing SIGMETs and CWAs to determine the required distribution, and disseminating SIGMET and/or CWA information in accordance with the following:

NOTE-

Simply attempting to accelerate the movement of all weather data will not accomplish our objectives. Greater emphasis is being placed on screening and selective dissemination of weather data. Selective dissemination takes into account the need to alert pilots to significant weather reports in sufficient detail to assist them in making decisions pertinent to flight safety and to provide the information an ATC facility requires to promote the safe and efficient use of its airspace.

1. Disseminate pertinent information from SIGMET or CWA to other terminal ATC facilities within your terminal area.

2. Disseminate selective SIGMET and CWA information on a need-to-know basis in accordance with the provisions of FAAO 7110.65, para 2-6-2, Hazardous Inflight Weather Advisory Service (HIWAS).

10-3-2. WIND INSTRUMENTS AT APPROACH CONTROL FACILITIES

a. The same wind sensor may be used to provide wind information in ATCT and approach control facilities when they are located on the same airport.

b. Approach control facilities not located at the airport to which radar service is being provided may issue wind data received from the tower at that airport. The wind data may be transmitted to the approach control facility by TelAutograph, data communication circuit, voice lines, etc.

c. The facility air traffic manager of an approach control that provides radar service to an Air Force Base shall identify facility requirements for wind indicators, in writing, to the local USAF Air Weather Service Commander.

10-3-3. LOW LEVEL WIND SHEAR/MICROBURST DETECTION SYSTEMS

a. Procedures for the dissemination of wind information derived from the Low Level Wind Shear Alert System (LLWAS) or other automated wind shear detection systems, are contained in FAAO 7110.65, para 3-1-8, Low Level Wind Shear/Microburst Advisories. Guidance to facility air traffic managers concerning the operational use of the LLWAS is as follows:

1. Prior to operational use of LLWAS facilities, a letter to airmen shall be published explaining, as a minimum, the location and designation of the remote sensors, the capabilities and limitations of the system, and the availability of current LLWAS remote sensor wind information if requested by the pilot. A new letter to airmen shall be issued whenever changes to the above minimum criteria or system upgrade/modifications are made.

NOTE-

The LLWAS may be retained as a backup system no longer than 6 months after the WSP has been commissioned.

2. At positions of operation where installed, LLWAS airport wind information appearing on the tower LLWAS display may be used in place of the direct dial or commissioned AWOS/ASOS automated display wind information.

NOTE-

Towers having the responsibility for weather observations shall comply with the requirements as specified in sub-para 2-10-1a, Wind Instrument Sensors.

3. TRACONs may use direct dial, LLWAS, or commissioned AWOS/ASOS automated display wind information for operational purposes.

4. Facility managers may designate the use of displayed wind information oriented to the threshold end of the runway in lieu of airport winds where LLWAS expanded network systems or LLWAS that are integrated with TDWR are installed, if deemed operationally advantageous.

5. The LLWAS airport, direct dial, or commissioned AWOS/ASOS automated winds may be used during outages of the sensors that provide threshold winds:

(a) Include in the letter to airmen an explanation that wind information given to arriving aircraft on that runway/s may be derived from the automated AWOS/ASOS wind equipment or wind sensor equipment near the runway threshold rather than from the LLWAS airport wind source. It is not intended that controllers specify the remote source when issuing these winds to arriving aircraft, except when an alert occurs. This shall be explained in the letter to airmen.

(b) Use wind information derived from commissioned AWOS/ASOS for ATIS broadcasts and issuing weather reports. Wind information from commissioned AWOS/ASOS or LLWAS centerfield may be used when issuing surface wind to departing aircraft.

REFERENCE—

Para 2–10–1, Wind Instrument Sensors.

b. When it is determined that a component or the whole LLWAS has failed, take the following action: If a component such as a remote sensor fails, notify airway facilities. During periods when wind shear is likely to occur or has been reported; e.g., frontal activity, thunderstorms, or pilot reports, inform users by broadcasting on the ATIS that the component is out of service.

EXAMPLE—

“Low level wind shear west boundary sensor out of service.”

c. Technical Operations is responsible for the verification of the accuracy of the LLWAS. The SMO will notify air traffic of any equipment that is out of tolerance.

10–3–4. RELAY OF RVV/RVR VALUES

a. Relay of RVV/RVR values from the weather observing facility to the control tower may be discontinued at the request of the tower when there is no traffic activity at that specific location.

b. Establish relative priorities on the visibility information at locations with two or more RVR or RVV runways where data is required for two or more runways.

10–3–5. ADVANCE APPROACH INFORMATION

Where more than one position could issue the data, assign responsibility for issuing advance approach information to a specific position in a facility directive. Display the information so that it is readily accessible to the controller having a need for it.

10–3–6. ILS/MLS HEIGHT/DISTANCE LIMITATIONS

a. An ILS is normally flight checked to 4,500 feet and 18 miles for the localizer and to 4,500 feet and 10 miles for the glide slope.

b. An MLS is normally flight checked to 20,000 feet and 20 miles for the azimuth and the glide path.

c. If an operational need to exceed these limitations exists, inform the FIFO, and they will flight check the ILS to the stipulated requirement. Ensure that current flight check data are available to facility personnel.

10–3–7. LAND AND HOLD SHORT OPERATIONS (LAHSO)

a. The air traffic manager must determine a valid operational need exists before conducting simultaneous takeoff and landing or simultaneous landing operations. This need may be considered evident if:

1. Present airport capacity/acceptance rate will be increased; and

2. Arrival/departure delays will be reduced; and

3. A reasonable savings in fuel consumption will result.

b. Before authorizing simultaneous takeoff and landing or simultaneous landing operations as specified in the current LAHSO directive.

1. Coordinate with each of the appropriate Flight Standards field offices having jurisdiction at the airport according to the type of aircraft operations involved and with user groups as required by para 4–2–4, Coordination of ATC Procedures, including the appropriate military authority where units are based at the airport.

NOTE—

Appropriate Flight Standards offices are: the ACDO for air carrier operations or the FSDO or both/either.

2. Prepare a facility directive using the information as specified in the current LAHSO directive

prescribing procedures for conducting these operations. The directive must contain a diagram that depicts the airport runway configuration, identifies the configuration to be used, and specifies the Available Landing Distance (ALD) from the landing threshold to the Hold–Short Point.

NOTE–

Any aircraft that is not listed in the current LAHSO directive shall not be considered for LAHSO.

REFERENCE–

FAAO 7110.65, Para 3–10–4, Intersecting Runway Separations.

3. Ensure the directive identifies the eligible aircraft which may operate on each runway, based on the ALD, current LAHSO directive, and/or FAAO 7110.65, Appendix A, Aircraft Information.

4. Provide a list of runways authorized for

LAHSO, along with the appropriate ALD to System Operations Airspace and Aeronautical Information Management, for publication in the Airport/Facility Directory and appropriate U.S. Terminal Procedures Publications.

5. Conduct user briefings at least 45 days before implementation.

c. Air traffic managers must obtain concurrence from the appropriate Flight Standards field offices and conduct a preliminary environmental review before conducting LAHSO.

REFERENCE–

FAAO 1050.1, Policies and Procedures for Considering Environmental Impacts.

NOTE–

This is only applicable to those facilities not currently conducting SOIR operations.

Section 4. Services

10-4-1. AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)

a. ATIS provides advance noncontrol airport/terminal area and meteorological information for use by aircraft arriving and departing and operating within the terminal area. This can be accomplished by data link text, available upon request, and/or a voice message recording, which is a repetitive broadcast on a voice outlet.

b. Assign ATIS responsibilities to a specific position of operation. These shall include updating ATIS messages and disseminating current messages to pertinent positions of operation.

c. Before transmitting, the voice and/or text message shall be reviewed to ensure content is complete and accurate. When appropriate, the voice/text shall be cross checked to ensure the message contents is the same. In a conventional controller prepared voice recording, ensure the speech rate does not exceed 100 words per minute, the enunciation is of the highest quality, and each part of the message is easily understood. When feasible, the review of the message should be made by a person other than the one who prepared the original, preferably a supervisor or CIC.

d. Specific sequential portions of the alphabet may be assigned between facilities or for an arrival and departure ATIS when confusion could result from using the entire alphabet for each ATIS.

1. A LOA shall be established between facilities designating the ATIS codes which will be used by each facility.

2. A facility directive shall be developed designating the ATIS alphabet codes which will be used by each facility or for an arrival and departure ATIS.

REFERENCE-

FAAO 7110.65, Para 2-9-1, Application.

EXAMPLE-

Departure ATIS codes could be assigned codes of "Alfa" through "Mike" and arrival ATIS codes assigned "November" through "Zulu." The ATIS codes may also be divided between facilities.

e. Make ATIS messages a matter of record on facility recorders. If not possible, retain a written record of each message in the facility's files for 15 days.

f. Keep messages as brief and as concise as possible. Optimum duration of up to 30 seconds should not be exceeded unless required for message content completeness.

g. During the hours of operation, part-time towers that have ATIS capabilities and ASOS/AWOS ground to air broadcast capability, shall ensure that the latest METAR/SPECI weather sequence is broadcast only on ATIS. ASOS/AWOS shall not be allowed to broadcast weather concurrent with ATIS.

h. During the hours of nonoperation, part-time towers that have ATIS capabilities should record for continuous broadcast the following information:

NOTE-

Those facilities that have ASOS/AWOS broadcast capability shall allow the automated weather report to be broadcast on the ASOS/AWOS frequency in the one minute update mode and include the applicable information in subparas 10-4-1h, 1 thru 5 at the time of closing.

1. The local tower hours of operation.

2. ASOS/AWOS frequency.

3. The appropriate common traffic advisory frequency (CTAF).

4. The frequency for operating radio controlled approach lights.

5. The FAA facility and frequency for additional information.

EXAMPLE-

(Name of tower) tower hours of operation are (time) local time to (time) local time. The frequency for automated weather is (frequency). The common traffic advisory frequency is (frequency). Pilot operated approach lighting is available on (frequency). For additional information contact (name of approach control or center) on (frequency).

10-4-2. PRETAXI CLEARANCE PROCEDURES

a. If a need exists, facilities should develop pretaxi clearance procedures for departing IFR aircraft. Use of CD frequency is desirable for implementing such procedures. However, facilities without CD frequency may use GC frequency for pretaxi clearance if the service can be provided without derogating the primary function of GC. When developing pretaxi clearance procedures, do the following:

1. Coordinate the proposed procedures with the airport users.

2. Inform System Safety and Procedures, when procedures are implemented.

b. Include the following in pretaxi procedures:

1. The procedures are not mandatory.
2. The pilot calls CD or GC not more than 10 minutes before proposed taxi time.
3. The IFR clearance or the delay information should be issued at the time of initial callup.
4. When the IFR clearance is issued on CD frequency, the aircraft is changed to GC for taxi clearance.
5. Normally, the pilot need not inform GC of having received IFR clearance on CD frequency. Some high activity towers with unique operating position arrangements or operating conditions may require the pilot to inform GC of a portion of his/her routing or that he/she has received his/her IFR clearance.

10-4-3. GATE HOLD PROCEDURES

a. The objective of gate hold procedures is to restrict departure delays to 15 minutes or less after engine start and taxi time. Facility air traffic managers shall ensure gate hold procedures and departure delay information are made available to all pilots prior to engine startup. Implement gate hold procedures when departure delays exceed or are expected to exceed 15 minutes.

b. Facility air traffic managers shall meet with airport management and users to develop local gate hold procedures at airports that have identified the need and where air traffic operations dictate. Gate hold procedures, when required, will be developed in accordance with limitations imposed by local conditions. Include the following general provisions in the procedures when gatehold procedures are established.

1. Pilots shall contact GC/CD prior to starting engines to receive start time or taxi time, as appropriate. The sequence for departure shall be maintained in accordance with the initial callup unless modified by flow control restrictions.

2. Develop notification procedures for aircraft unable to transmit without engine(s) running.

NOTE-

Inability to contact GC/CD prior to engine start shall not be justification to alter the departure sequence.

3. The operator has the final authority to decide whether to absorb the delay at the gate, have the aircraft towed to another area, or taxi to a delay absorbing area.

4. GC/CD frequency is to be monitored by the pilot. A new proposed engine start time or taxi time shall be issued if the delay changes.

10-4-4. ADVISORY SERVICE TO ARRIVING VFR FLIGHTS

When it is desirable to reduce the workload at the LC position, procedures should be established whereby arriving aircraft make their first contact with the control tower on the approach control frequency, regardless of weather, provided the following conditions exist:

a. Approach control and LC positions use separate frequencies.

b. ATC service to IFR flights is not affected.

c. Use of the procedure will not hinder the operation of VFR aircraft by requiring excessive routing or spacing.

d. Consideration is given to establishing radio contact points based on time or distance rather than on landmarks with which some pilots may not be familiar.

e. Where possible, radio contact points and the routes between them and the airport are different from those used by IFR flights.

f. Pilot participation is encouraged rather than required, and compliance with the procedures is not made mandatory.

10-4-5. PRACTICE INSTRUMENT APPROACHES

a. VFR aircraft practicing instrument approaches at the approach control's primary airport shall be provided IFR separation in accordance with FAAO 7110.65, Air Traffic Control, Chapter 4, Section 8, Approach Clearance Procedures.

NOTE-

The primary airport is the airport from which approach control service is provided, except for remoted facilities where the facility air traffic manager will designate the primary report.

b. IFR separation to VFR aircraft in accordance with FAAO 7110.65, Chapter 4, Section 8, Approach Clearance Procedures, shall be provided to all secondary airports under the approach control's jurisdiction to the extent possible within existing resources. Where separation service is provided to an airport with an AFSS/FSS that provides LAA, or a nonapproach control tower, provisions for handling such aircraft, including aircraft being provided DF service, shall be included in a LOA.

c. Where standard separation is not provided to VFR aircraft conducting practice approaches, instruct the aircraft to maintain VFR and provide traffic information.

d. At airports where the tower does not provide approach control service, handle practice instrument approaches in accordance with a LOA between the tower and the facility providing approach control service.

e. Facilities shall issue a letter to airmen advising the users of those airports where standard separation is provided for VFR aircraft conducting practice instrument approaches. The letter should specify which facility will handle the aircraft practicing instrument approaches and include the appropriate frequencies.

REFERENCE—
Para 4-5-2, Letters to Airmen.

10-4-6. SIMULTANEOUS ILS/MLS APPROACHES

The concept for conducting simultaneous ILS, MLS, or ILS and MLS approaches to parallel runways with straight-in approaches is:

a. A separate ILS/MLS system is required for each parallel runway. A minimum distance of 4,300 feet between centerlines is required when dual simultaneous MLS or ILS front course approaches are used. A minimum distance of 5,000 feet between centerlines is required for triple simultaneous ILS, MLS or ILS, and MLS approaches at airports with field elevation less than 1,000 feet MSL. Other integral parts of the total Simultaneous ILS/MLS Approach System include radar, communications, ATC procedures, and appropriate airborne equipment.

b. When simultaneous ILS/MLS approaches are being conducted, the pilot is expected to inform approach control, prior to departing an outer fix, if the

aircraft does not have the appropriate airborne equipment or they do not choose to conduct a simultaneous approach. Provide individual handling to such aircraft.

c. Closely monitor weather activity that could impact the final approach course. Weather conditions in the vicinity of either final approach course may dictate a change of the approach in use. (See subpara 10-1-6b Note, Selecting Active Runways.)

d. All turn-on's and final approaches are monitored by radar. Since the primary responsibility for navigation rests with the pilot, instructions from the controller are limited to those necessary to ensure separation between aircraft. Information and instructions are issued, as necessary, to contain the aircraft's flight path within the "Normal Operating Zone" (NOZ). Aircraft which are observed to enter the "No Transgression Zone" (NTZ) are instructed to alter course left or right, as appropriate, to return to the desired course. Unless altitude separation is assured between aircraft, immediate action must be taken by the controller monitoring the adjacent parallel approach course to require the aircraft in potential conflict to alter its flight path to avoid the deviating aircraft.

e. Missed approach procedures are established with climbs on diverging courses. To reduce the possibility of error, the missed approach procedure for a single runway operation should be revised, as necessary, to be identical with that of a simultaneous ILS/MLS operation.

f. The following minimum radar and communications equipment shall be provided for monitoring simultaneous ILS/MLS approaches:

1. One separate airport surveillance radar display of a model currently certified for ATC functions. A high-resolution, color monitor with alert algorithms, such as the Final Monitor Aid or that required in the Precision Runway Monitor program, shall be required as follows:

(a) At locations where triple simultaneous approaches are conducted to parallel runways with centerlines separated by at least 4,300 feet but less than 5,000 feet, and the airport field elevation is less than 1,000 feet MSL.

(b) At locations where triple simultaneous approaches are conducted to parallel runways with field elevation 1,000 feet MSL or greater require an approved FAA aeronautical study.

2. Authorize simultaneous ILS/MLS approaches to parallel dual runways with centerlines separated by 3,000 feet with one localizer offset by 2.5 degrees using a precision runway monitor system with a 1.0 second radar update system, and, when centerlines are separated by 3,400 feet when precision runway monitors are utilized with a radar update rate of 2.4 seconds or less.

3. The common NOZ and NTZ lines between the final approach course centerlines shall be depicted on the radar video map. The NTZ shall be 2,000 feet wide and centered an equal distance from the final approach centerlines. The remaining spaces between the final approach courses are the NOZs associated with each course.

4. Establish monitor positions for each final approach course which have override transmit and receive capability on the appropriate control tower frequencies. A check of the override capability at each monitor position shall be completed before monitoring begins. Monitor displays shall be located in such proximity to permit direct verbal coordination between monitor controllers. A single display may be used for two monitor positions.

5. Facility directives shall define the position responsible for providing the minimum applicable longitudinal separation between aircraft on the same final approach course.

g. Dual local control positions, while not mandatory, are desirable.

h. Where possible, establish standard breakout procedures for each simultaneous operation. If traffic patterns and airspace permit, the standard breakout altitude should be the same as the missed approach altitude.

10-4-7. PRECISION RUNWAY MONITOR-SIMULTANEOUS OFFSET INSTRUMENT APPROACHES

a. Precision Runway Monitor-Simultaneous Offset Instrument Approaches (PRM-SOIA) may be conducted at airports with dual parallel runways with centerlines separated by at least 750 feet and less than 3,000 feet, with one straight-in Instrument Landing System (ILS)/Microwave Landing System (MLS) and one Localizer Directional Aid (LDA), offset by 2.5 to 3.0 degrees using a PRM system with a 1.0 second radar update system in accordance with the

provisions of an authorization issued by the Director of Terminal Safety and Operations Support in coordination with AFS. A high-resolution color monitor with alert algorithms, such as a final monitor aid (FMA) shall be required.

b. Notification procedures for pilots unable to accept an ILS PRM or LDA PRM approach clearance have been established in accordance with Advisory Circular 90-98, Simultaneous Closely Spaced Parallel Operations Airports Using Precision Runway Monitor Systems.

c. Closely monitor weather activity that could impact the final approach course. Weather conditions in the vicinity of either final approach course may dictate a change of the approach in use. (See para 10-1-6, Selecting Active Runways, subpara b Note.)

d. All turn-ons and final approaches are monitored by radar. Since the primary responsibility for navigation rests with the pilot, instructions from the controller are limited to those necessary to ensure separation between aircraft and to prevent aircraft from penetrating the NTZ. Information and instructions are issued, as necessary, to contain the aircraft's flight path within the Normal Operating Zone (NOZ). Aircraft which are observed approaching the No Transgression Zone (NTZ) are instructed to alter course left or right, as appropriate, to return to the desired course. Unless altitude separation is assured between aircraft, immediate action must be taken by the controller monitoring the adjacent parallel approach course to require the aircraft in potential conflict to alter its flight path to avoid the deviating aircraft.

e. Missed approach procedures are established with climbs on diverging courses. To reduce the possibility of error, the missed approach procedure for a single runway operation should be revised, as necessary, to be identical with that of the PRM-SOIA operation.

f. The following requirements shall be met for conducting PRM-SOIA:

1. All PRM, FMA, ILS, LDA with glideslope, distance measuring equipment, and communications frequencies must be fully operational.

2. The common NOZ and NTZ lines between the final approach course centerlines shall be depicted on the radar video map. The NTZ shall be

2,000 feet wide and centered an equal distance from the final approach centerlines. The remaining spaces between the final approach courses are the NOZs associated with each course.

3. Establish monitor positions for each final approach course that have override transmit and receive capability on the appropriate control tower frequencies. A check of the override capability at each monitor position shall be completed before monitoring begins. Monitor displays shall be located in such proximity to permit direct verbal coordination between monitor controllers. A single display may be used for two monitor positions.

4. Facility directives shall define the position responsible for providing the minimum applicable longitudinal separation between aircraft on the same final approach course.

g. Dual local control positions, while not mandatory, are desirable.

h. Where possible, establish standard breakout procedures for each simultaneous operation. If traffic patterns and airspace permit, the standard breakout altitude should be the same as the missed approach altitude.

i. Wake turbulence requirements between aircraft on adjacent final approach courses inside the LDA MAP are as follows (standard in-trail wake separation shall be applied between aircraft on the same approach course):

1. When runways are at least 2,500 feet apart, there are no wake turbulence requirements between aircraft on adjacent final approach courses.

2. For runways less than 2,500 feet apart, whenever the ceiling is greater than or equal to 500 feet above the MVA, wake vortex spacing between aircraft on adjacent final approach courses need not be applied.

3. For runways less than 2,500 feet apart, whenever the ceiling is less than 500 feet above the MVA, wake vortex spacing between aircraft on adjacent final approach courses as described in FAAO 7110.65, Air Traffic Control, para 5-5-4, Minima, shall be applied unless acceptable mitigating techniques and operational procedures are approved by the Director of Terminal Safety and Operations Support pursuant to an AFS safety assessment. A request for a safety assessment must be

submitted to the Terminal Safety and Operations Support Office through the service area office manager. The wake turbulence mitigation techniques employed will be based on each airport's specific runway geometry and meteorological conditions and implemented through local facility directives.

4. All applicable wake turbulence advisories must be issued.

j. A local implementation team shall be established at each facility conducting PRM-SOIA. The team should be comprised of representatives from the local airport sponsor and other aviation organizations. The team will monitor local operational integrity issues and report/refer issues for national consideration as appropriate.

k. For any new proposal to conduct PRM-SOIA, an operational need must be identified by the ATC facility manager, validated by the service area office manager, and forwarded to the Terminal Safety and Operations Support Office for appropriate action. The statement of operational need should identify any required site specific procedures.

10-4-8. REDUCED SEPARATION ON FINAL

Separation between aircraft may be reduced to 2.5 NM in-trail separation on the final approach course within 10 NMs of the runway provided an average Runway Occupancy Time (ROT) of 50 seconds or less is documented for each runway. ROT is the length of time required for an arriving aircraft to proceed from over the runway threshold to a point clear of the runway. The average ROT is calculated by using the average of the ROT of no less than 250 arrivals. The 250 arrivals need not be consecutive, but shall contain a representative sample of the types of aircraft that use the runway. Average ROT documentation shall be revalidated, within 30 days, if there is a significant change in runway/taxiway configuration, fleet mix, or other factors that may increase ROT. Revalidation need not be done for situations that are temporary in nature. Only the ROT for the affected runway(s) will need to be revalidated. The revalidation documentation shall contain the following information for each arrival:

- a.** Aircraft call sign.
- b.** Aircraft type.
- c.** Time across the threshold.
- d.** Time clear of the runway.

e. Items c and d above may be omitted if using a stopwatch. Record the total number of seconds required for an aircraft to proceed from over the landing threshold to a point clear of the runway when using a stopwatch.

REFERENCE—

FAAO 7110.65, Subpara 5–5–4f, Minima.

10–4–9. MINIMUM IFR ALTITUDES (MIA)

At terminal facilities that require minimum IFR altitude (MIA) charts, determine MIA information for each control sector and display them at the sector. This shall include off-airway minimum IFR altitude information to assist controllers in applying 14 CFR Section 91.177 for off-airway vectors and direct route operations. Facility air traffic managers shall

determine the appropriate chart/map method for displaying this information at the sector. Forward charts and chart data records to Technical Operations Aviation System Standards, National Flight Procedures, for certification and annual review.

NOTE—

1. For guidance in the preparation and review of Minimum IFR Altitude charts see FAAO 7210.37, *En Route Minimum IFR Altitude (MIA) Sector Charts*.

2. This may be accomplished by appending the data on sector charts or MVA charts; Special translucent sectional charts are also available. Special ordering information is contained in FAAO 1720.23, *Distribution of Aeronautical Charts and Related Flight Information Publications*. (Reference – para 3–8–2.)

Section 5. Terminal Radar

10-5-1. SHUTDOWN OF PAR ANTENNAS

When PAR equipment is not required for ATC controller training, maintenance, or other use, shut down the antenna. Keep the main power supply and the high voltage system energized to permit immediate restoration of PAR equipment for operational use.

10-5-2. RADAR DISPLAY INDICATORS

a. Radar approach and departure control functions will normally be conducted from a TRACON. Either direct view or a CTRD may be used. These functions may be performed from the tower cab if:

1. Not more than two radar operating positions are required and CTRDs are used on a permanent basis.

2. More than two operating positions are required and CTRDs are installed on an interim basis pending the establishment of a TRACON.

3. On a temporary basis if other than CTRDs are installed.

b. Consider the following if scan conversion type bright display equipment is used:

1. A standard bright display installation consists of one operational and one standby scan conversion unit. The range and centering selected for the master bright display will be the same on all slaved bright display indicators.

2. If the particular radar operating positions concerned require a capability for individual beacon decoding, each bright display position will require a separate scan conversion unit.

3. That a determination must be made if surveillance approach capability would be lost using only scan conversion bright display indicators. If the determination is that it would be lost, at least one direct view indicator must be retained.

c. VFR Radar Advisory Service functions will normally be conducted from the TRACON.

d. A CTRD installed in the tower cab for LC use shall be positioned where it can be conveniently

viewed from the local controller's normal sitting or standing position.

e. PAR functions will normally be conducted in a TRACON.

f. ASDE indicators shall be placed in the tower cab so as to serve the LC and GC positions.

g. The CTRD may be used for any terminal radar function.

h. The 12-inch or larger display monitor may be used in lieu of a CTRD when authorized by the region and the display is certified by airway facilities. Any display monitor less than 12 inches shall not be used for ATC separation purposes. It is primarily to provide alphanumeric readout capability to the CD/FD position at locations where that position has keyboard access to an ATTS.

10-5-3. FUNCTIONAL USE OF CERTIFIED TOWER RADAR DISPLAYS

a. At towers combined with full radar approach control facilities where controllers rotate between the approach control and the tower, CTRDs may be used by local controllers for any terminal radar function provided their ability to satisfy FAA's air traffic responsibilities regarding the aircraft operating on the runways or within the surface area for which the tower has responsibility is not impaired. The conditions and/or limitations for the radar usage shall be specified by a facility directive.

b. At towers combined with full radar approach control facilities where controllers do not rotate between the approach control and the tower, or at towers not combined with full radar approach control facilities, CTRDs may be used by local controllers for the following functions:

1. To determine an aircraft's identification, exact location, or spatial relationship to other aircraft.

NOTE-

This authorization does not alter visual separation procedures. When employing visual separation, the provisions of FAAO 7110.65, Air Traffic Control, para 7-2-1, Visual Separation, apply.

2. To provide aircraft with radar traffic advisories.

3. To provide a direction or suggested headings to VFR aircraft as a method for radar identification or as an advisory aid to navigation.

4. To provide information and instructions to aircraft operating within the surface area for which the tower has responsibility.

5. To ensure separation between successive departures, between arrivals and departures, and between overflights and departures within the surface area for which the tower has responsibility provided:

(a) There is no airspace delegated to the tower;

(b) The local controllers have radar training and certification commensurate with their radar duties;

(c) A LOA, approved by the respective Terminal Operations Service Area Office, exists with the IFR facility having control jurisdiction which authorizes the specific radar function and prescribes the procedures to be used;

(d) The LOA prescribes the process for a transition to nonradar procedures or the suspension of separation authority in the event of a radar outage;

(e) The procedures for giving and receiving radar handoffs or pointouts do not impair the local controller's ability to satisfy FAA's air traffic responsibilities regarding the aircraft operating on the runways or within the surface area for which the tower has responsibility; and

(f) The procedures for ensuring radar separation do not require the tower to provide radar vectors.

c. At locations where uncertified tower displays are in use, the services and phraseology set forth in FAAO 7110.65, Air Traffic Control, Chapter 5, Radar, shall not be utilized. Uncertified displays shall be used only as an aid to assist controllers in visually locating aircraft or in determining their spatial relationship to known geographical points.

d. Operational applications of tower radar displays other than those outlined in subparas a and b, and/or the delegation of airspace to a tower require a staff study as prescribed in para 2-1-14, Authorization for Separation Services by Towers.

10-5-4. ASR PERFORMANCE CHECKS

a. Each radar controller is responsible for determining on a day-to-day basis if the quality of their radar display and video display accuracy is satisfactory for ATC purposes. Radar quality and performance is determined by comparing identified targets against data obtained during the commissioning flight check or through minimum performance criteria determined jointly by air traffic and Technical Operations personnel. Radar controllers shall be familiar with commissioning flight check and minimum performance data. Air traffic managers shall make this information available to the controllers. Aircraft selected for these daily checks should be small aircraft similar in size to those used in the commissioning flight checks.

REFERENCE-

FAAO 7110.65, Para 5-1-2, Alignment Check.

b. The daily radar performance check, except at MEARTS and REHOST facilities, shall be a part of the routine checks of equipment. (See para 4-6-5, Preparation of FAA Form 7230-4). The check shall be accomplished once each watch. It is recognized that on some watches this check may not be accomplished because of the lack of traffic. The facility air traffic manager may request a special flight check to ensure that the requirements of para 10-5-4, ASR Performance Checks, are met.

NOTE-

The MEARTS and REHOST operational programs accomplish ASR performance checks automatically.

10-5-5. DEFICIENCIES IN SYSTEM

Note deficiencies in the radar system on FAA Form 7230-4. Reconcile them as follows:

a. After consultation with the Technical Operations representative, the terminal air traffic manager or his/her representative shall decide if this radar system is usable. Consider atmospheric or other phenomena that may temporarily affect radar performance.

b. Certification by Technical Operations personnel that a malfunction has been corrected shall be entered on FAA Form 7230-4.

NOTE-

Technical Operations representatives may ground check the equipment to determine if the radar system is operating satisfactorily or request a special flight check.

10-5-6. RADAR TOLERANCES

ASR systems shall conform to the following tolerances for radar performance checks:

a. Coverage: A usable target return (one which is not missed on more than two consecutive scans) will be maintained along the entire airway/route or arrival/departure control routes for which radar service is provided. Tracking accuracy along these routes will be within the fix/map accuracy in subpara b. Radar services for arrival or departure routes are considered to exist between the normal handoff point and a point $1/2$ mile from the end of a runway or for secondary airports, the point where the aircraft leaves or enters the bottom fringe of the radar coverage pattern.

1. Horizontal: No tolerance assigned.

2. Vertical – Acceptance Check: A complete radar coverage pattern shall be flown to determine whether the radar meets engineering and operational specifications.

3. Commissioning: The vertical coverage pattern will meet the operational requirements of the facility in both the horizontal (distance from the antenna to the outer fringe) and the vertical planes.

b. Accuracy:

1. Fix/map accuracy: Radar accuracy must be such that reporting aircraft are within a circular area about the fix, the radius of which is 3 percent of the fix-to-station distance or 500 feet (1,000 feet for air traffic control radar beacon system (ATCRBS)), whichever is the greater.

2. Fixed Target Identification: No tolerance assigned.

3. MTI: No tolerance assigned.

c. Surveillance Approaches: Radar used for surveillance approaches shall present a usable target return (one which is not missed on more than

two consecutive scans) through the final course as follows:

1. Approach to Runway (Straight-in): The surveillance approach course line will coincide with the runway centerline extended. Maximum error left or right of the runway edges shall not exceed 500 feet at the missed approach point.

2. Approach to an Airport (Circling): The approach course may be aligned to the center of the airport or, where advantageous, to any portion of the usable landing area. For helicopters only, the final approach may be established to a missed approach point not farther than 2,600 feet from the center of the landing area, or for a point-in-space approach, to a point from which flight to the landing area must be accomplished by visual reference to a prescribed route along the surface. In each instance, approach guidance will be provided to the prescribed missed approach point. Guidance accuracy must be within 3 percent of the distance between the selected delivery point and the radar antenna.

3. Surveillance approaches must meet the tolerances in subparas c1 and c2 or will be canceled.

10-5-7. RECOMMENDED ALTITUDES FOR SURVEILLANCE APPROACHES

At locations which provide surveillance approaches, facility managers shall request the office responsible for the preparation of the approach to provide the recommended altitudes for the final approach. This information will be placed in the radar facility where it will be readily available for the controllers to use as required.

10-5-8. ASDE PERFORMANCE CHECKS

One hour prior to the anticipated need to use the ASDE, turn the equipment on and evaluate its performance.

Section 6. Airport Lighting

10-6-1. GENERAL

The airport manager/operator is responsible for operating airport lights during the hours the tower is closed.

10-6-2. OPERATION OF LIGHTS WHEN TOWER IS CLOSED

When the tower is closed, the airport lights shall be operated:

a. By the on-site AFSS/FSS when:

1. The controls are extended into the station and are located conveniently at the operating position.

2. The operating quarters afford a sufficient view to determine the operating status of the lights without the specialist having to leave his/her post of duty, or an indicator is provided in the station's quarters which will show the actual operating status.

b. If no AFSS/FSS is located on the airport and the lighting controls are provided in the tower cab, tower personnel before closing the tower shall ensure that the airport rotating beacon, obstruction lights, and boundary lights are turned on. All other lighting systems, including runway lights, shall be set in accordance with a letter of agreement with the airport manager/operator. However, runway lights shall not be lighted by tower personnel if a NOTAM closing that runway is in effect.

c. At locations where the setting of the runway edge lights control the associated medium approach light system/runway alignment indicator lights, include in a letter of agreement with the airport manager/operator that during the period the tower is closed, the runway edge lights shall be operated at the following step settings:

1. High Intensity Runway Lights (HIRL)–Step 3.

2. Medium Intensity Runway Lights–Step 2.

d. If the airport manager/operator will not agree to the step settings, the provisions of subpara c above, shall apply. In addition, notify the appropriate FSDO.

e. If the airport manager/operator will not enter into a letter of agreement, all runway lighting controls operating from the tower shall be turned off. If

appropriate, a runway lighting NOTAM will be issued.

f. Unless otherwise directed by the Terminal Operations Service Area Office, the air traffic facility responsible for controlling or monitoring lighting aids shall originate NOTAMs concerning the aids.

10-6-3. INCOMPATIBLE LIGHT SYSTEM OPERATION

If the operation of a light system is not compatible with the instructions herein, or if the manager/operator of a civil airport or the commanding officer of a military airport prescribes an operating period different from those in this section or FAAO 7110.65, Air Traffic Control, Chapter 3, Section 4, Airport Lighting, or FAAO 7110.10, Flight Services, (except for the airport rotating beacon), the airport lighting system may be operated if a letter of agreement is executed. Each agreement shall set forth the operating periods, the pertinent requirements, and a statement that the lights will be available upon pilot request. If an agreement covers the operation of runway lights while the tower or the AFSS/FSS is closed, it shall also contain the following clauses:

a. The airport owner/operator covenants and expressly agrees that with regard to any liability which may arise from the operation of the runway lights at the airport during any period when the airport traffic control tower (flight service station) at (name) airport is closed or nonoperational, that each party shall be solely and exclusively liable for the negligence of its own agents, servants, and/or employees, in accordance with applicable law, and that neither party looks to the other to save or hold it harmless for the consequences of any negligence on the part of one of its own agents, servants, and/or employees.

b. Runway lights may not be lighted by tower (AFSS/FSS) personnel if a NOTAM closing that runway is in effect.

10-6-4. APPROACH LIGHT SYSTEMS

a. The procedures in this paragraph pertain to the following approach light systems (see FAAO 6850.2, Visual Guidance Lighting Systems):

1. ALSF-1: Approach Light System (ALS) with Sequenced Flasher Lights (SFL) in Category 1 configuration.

2. ALSF-2: Approach Light System with Sequenced Flasher Lights in Category 2 configuration.

3. MALS: Medium Intensity Approach Light System. When associated with Sequenced Flashers, MALSF.

4. MALSR: Medium Intensity Approach Lights with Runway Alignment Indicator Lights.

5. SSALS: Simplified Short Approach Light System. When complemented by Sequenced Flashers, SSALF.

6. SSALR: Simplified Short Approach Lights with Runway Alignment Indicator Lights.

7. ODALS: Omnidirectional Approach Lighting System.

b. Facility air traffic managers having responsibility for approach light systems shall adhere to the following:

1. Where an approach light system monitoring device is provided, perform a monitor check at the beginning of each workday. Consult with the Technical Operations technician for monitor check procedures. Report any discrepancy noted in the monitor check or any report of malfunction, either observed or received from any source, to the Technical Operations technician as soon as possible regardless of the time (day/night).

NOTE—

During periods of known commercial electrical power shortage within the areas where the approach lighting system is located, the monitor check should be delayed until off-peak hours. The interval between monitor checks shall not exceed 24 hours during electrical power shortages.

2. When the monitor alarms, advise aircraft on approach that the monitor panel indicates a system malfunction. The monitor is designed to indicate that at least the predetermined number of light units (lamps), plus or minus one, are inoperative. The approach light system should not be reported as unusable or inoperative until receipt of the technician's report that the system is not operating or is malfunctioning unless it can be determined by visual reference from the tower or from a reliable source (e.g., pilot, airport manager) that one of these two conditions exists. When a report indicates that at least four adjacent bars are out (three or more lamps out on a bar determine bar outage) or four consecutive

sequence flashers are out, landing minima criteria are changed. If this condition exists, the air traffic facility manager shall send the appropriate NOTAM.

3. Monitors do not indicate light obscurement due to snow, sand, plant growth, etc. When such a condition is reported or suspected, request the Technical Operations technician to describe the visibility condition of the approach light system. If the technician reports at least four adjacent bars or four consecutive sequence flashers are obscured, the air traffic facility manager shall send the appropriate NOTAM.

4. At locations which do not have duplicate lighting controls in the AFSS/FSS on the airport, operation of the ALS during the hours of darkness when the tower is unmanned shall be as follows:

(a) ALSF-1 and ALSF-2 shall be turned on and set to intensity #3. The Sequence Flashing Lights (SFL) shall not be turned on.

(b) SSALR not controlled by radio or other suitable means shall be turned on and set to intensity #3. The Runway Alignment Indicator Lights (RAIL) shall not be turned on unless the ALS has been modified to provide variable RAIL intensity.

(c) MALSR not controlled by runway edge lights, radio, or other suitable means shall be turned on and set to intensity #2 for Three Step MALS/Three Step RAIL, and Low setting for Two Step MALS/One Step RAIL. The RAIL shall not be turned on unless the ALS has been modified to provide variable RAIL intensity.

(d) When MALSR intensity is controlled by runway edge lights, apply the procedures in subpara 10-6-2c.

(e) If the ALS system is equipped with ground-to-ground/air-to-ground links, tower personnel shall switch the system to air-to-ground radio control before closing the tower.

(f) Issue a NOTAM containing information that the system is unattended and the appropriate FSFO having jurisdiction over the area shall be notified of the operational status of the ALS.

(g) When required to meet local atmospheric, topographic, or twilight conditions, prepare a facility directive specifying the intensity settings for the ALS and forward a copy to the FSDO.

10-6-5. VISUAL APPROACH SLOPE INDICATOR (VASI) SYSTEMS

a. There are three basic VASI configurations: VASI-2, VASI-4, and VASI-12. Two additional configurations were developed for use with long-bodied aircraft by adding a third bar to either the VASI-4 or the VASI-12. These configurations are referred to as VASI-6 and VASI-16.

b. The basic FAA standard for VASI systems permit independent operation by means of a photo-electric device. This system has no remote monitor and no on-off control feature. It is intended for continuous operation.

c. Other VASI systems in use include the following:

1. The basic VASI as described in subpara b, except at locations where the system was installed with an on-off remote switch in the control tower. If an on-off switch is provided, it is intended that the VASI be operated on a continuous basis when the runway it serves is in use. Airport operators at some locations may request the facility air traffic manager to operate this system only during certain hours and/or conditions. When this occurs, facility air traffic managers shall contact the Terminal Operations Service Area Office for guidance.

NOTE-

When VASI systems are installed under the FAA's Airport Improvement Program, the sponsor may negotiate a letter of agreement with the regional Airports Division for a part-time VASI operation. Terminal Operations Service Area Offices should consult with the regional Airports Division on such matters.

2. Systems that are operated remotely from the control tower may be either two-step or three-step. It is intended that these systems be operated on a continuous basis when the runway they serve is in use.

3. Systems with steep descent profiles intended for STOL operations may be operated on an individual aircraft basis or as determined by the facility air traffic manager dependent upon the frequency of use.

d. The basic FAA standard VASI is not provided with a remote status indicator. At locations where a VASI remote status indicator is installed, specialists shall notify air traffic when a malfunction is indicated or reported. The VASI should not be turned off nor a

NOTAM issued unless the Technical Operations technician advises it is inoperative or if it is obvious that it is inoperative. In the event the technician advises there is a one side operating condition at locations with a VASI on both sides of a runway, the system shall remain in operation and NOTAM indicating partial operations issued.

10-6-6. PRECISION APPROACH PATH INDICATOR (PAPI) SYSTEMS

a. The basic FAA standard for PAPI systems permit independent operation by means of a photo-electric device. This system has no remote monitor and no on-off control feature. It is intended for continuous operation.

b. Other PAPI systems in use include the following:

1. The basic PAPI system as described in subpara a, except at locations where the system was installed with an on-off remote switch in the control tower. If an on-off switch is provided, it is intended that the PAPI be operated on a continuous basis when the runway it serves is in use. Airport operators at some locations may request the facility air traffic manager to operate this system only during certain hours and/or conditions. When this occurs, facility air traffic managers shall contact the Terminal Operations Service Area office for guidance.

2. Systems that are operated remotely from the control tower may be five-step. It is intended that these systems be operated on a continuous basis when the runway they serve is in use.

NOTE-

When PAPI systems are installed under the FAA's Airport Improvement Program, the sponsor may negotiate a letter of agreement with the regional Airports Division for a part-time PAPI operation. Terminal Operations Service Area offices should consult with the regional Airports Division on such matters.

10-6-7. RUNWAY AND TAXIWAY LIGHTS

When required, prepare a facility directive specifying local procedures for the operation of Runway End Identifier Lights (REIL), High Speed Turnoff Lights, or Runway Centerline and Touchdown Zone Light Systems (RCLS TDZL), and forward a copy to the FSDO.

10-6-8. RUNWAY FLOODLIGHTS

Where runway floodlights are installed, local procedures shall be established for their operation. These shall provide that they be turned off when an aircraft is required to taxi toward the lights and they may be blinding to the pilot. Also, that they shall be operated as requested by a pilot for his/her operation.

10-6-9. RUNWAY EDGE LIGHTS ASSOCIATED WITH MEDIUM APPROACH LIGHT SYSTEM/ RUNWAY ALIGNMENT INDICATOR LIGHTS

Two MALS/RAIL installations associated with run-

way edge lights are available. One is a two step brightness MALS and a one step brightness RAIL. The other is a three step brightness MALS and a three step brightness RAIL. The associations with runway edge step settings are shown in the following table. Facility air traffic managers shall coordinate with the Technical Operations SMO sector to determine which of the two has been installed and issue a facility directive informing facility personnel. (For intensity settings see TBL 10-6-1.)

*TBL 10-6-1***MALSR STEP INTENSITY SETTINGS**

<i>Runway Edge Lights</i>		<i>Two Step MALS/One Step RAIL</i>		<i>Three Step MALS/Three Step RAIL</i>	
<i>Intensity</i>		<i>Intensity</i>		<i>Intensity</i>	
<i>HIRL</i>	<i>MIRL</i>	<i>MALS</i>	<i>RAIL</i>	<i>MALS</i>	<i>RAIL</i>
Step 5	Step 3	100%	100%	100%	100%
Step 4			100%	100%	100%
Step 3	Step 2	10%	OFF	20%	26% outer 8% inner
Step 2			OFF	OFF	4%
Step 1	Step 1	OFF	OFF	4%	1%

Section 7. Airport Arrival Rate (AAR)

10-7-1. PURPOSE

To establish standards for determining the airport arrival rate (AAR).

10-7-2. POLICY

Airport runways are assets of the National Airspace System (NAS). System-wide standards for AARs enable the Air Traffic Organization (ATO) to manage these assets in the most efficient manner.

10-7-3. DEFINITIONS

a. AAR: A dynamic parameter specifying the number of arrival aircraft that an airport, in conjunction with terminal airspace, can accept under specific conditions throughout any consecutive sixty (60) minute period.

b. Airport Primary Runway Configuration: An airport runway configuration which handles three (3) percent or more of the annual operations.

10-7-4. RESPONSIBILITIES

a. System Operations Services is responsible for the development, establishment, and implementation of AARs at select airports in the NAS.

b. The Managers, Tactical Operations (MTOs) in collaboration with Terminal Facility Managers must:

1. Identify the airport primary runway configurations for airport(s) identified by System Operations Services.

2. Establish optimal AARs for airport(s) using the method detailed in para 10-7-5, Calculating AARs.

3. Review and validate the airport primary runway configurations and associated AARs in February of each year, or at more frequent intervals if required.

NOTE-

In the event consensus cannot be reached between facilities, the MTO will make the final determination.

c. MTOs must ensure that the data is entered in the National Traffic Management Log (NTML) under the runway template.

d. Consistent with para 10-1-6, Selecting Active Runways, Terminal Facility Managers must ensure efficiency at airport(s) within their jurisdiction consistent with the goals outlined in the Administrator's Flight Plan.

10-7-5. CALCULATING AARs

a. Calculate optimal AAR values for each airport runway configuration for the following weather conditions:

1. Visual Meteorological Conditions (VMC)—Weather allows vectoring for a visual approach.

2. Marginal VMC—Weather does not allow vectoring for a visual approach, but visual separation on final is possible.

3. Instrument Meteorological Conditions (IMC)—Visual approaches and visual separation on final are not possible.

4. Low IMC—Weather dictates Category II or III operations, or 2.5 miles-in-trail (MIT) on final is not available.

b. Calculate the maximum runway arrival capacity for each runway using the following methodology:

1. Determine the average ground speed crossing the runway threshold and the spacing interval required between successive arrivals.

2. Divide the ground speed by the spacing interval or use TBL 10-7-1, Maximum Runway Capacity, to determine the maximum runway arrival capacity.

FORMULA:

Ground Speed in knots at threshold / Spacing Interval at runway threshold in miles

NOTE-

When the maximum runway arrival capacity is a fraction, round down to the next whole number.

EXAMPLE-

1. $130 / 3.25 = 40$ Runway capacity = 40

2. $125 / 3.0 = 41.66$ Runway capacity = 41

TBL 10-7-1

MAXIMUM RUNWAY CAPACITY

Threshold Ground Speed	Miles Between Aircraft										
	2.5	3	3.5	4	4.5	5	6	7	8	9	10
130 Knots	52	43	37	32	28	26	21	18	16	14	13
140 Knots	56	46	40	35	31	28	23	20	17	15	14

c. Identify any conditions that may reduce the maximum runway arrival capacity. These factors include, but are not limited to:

1. Intersecting arrival/departure runways.
2. Distance between arrival runways.
3. Dual purpose runways (shared arrivals and departures).
4. Land and Hold Short utilization.
5. Availability of high speed taxiways.
6. Airspace limitations/constraints.
7. Procedural limitations (missed approach protection, noise abatement, etc.).
8. Taxiway layouts.
9. Meteorological conditions.

d. Determine the adjusted runway arrival capacity by adjusting the maximum runway capacities using the factors in subpara c for each runway used in an airport configuration. Total the adjusted runway arrival capacities for all runways used in an airport configuration to determine the optimal AAR for that airport runway configuration.

10-7-6. OPERATIONAL AARs

a. When using an airport primary runway configuration, the associated optimal AAR must be utilized.

The MTOs must ensure that the responsible person at the Aviation System Performance Metrics (ASPM) airports document the runway information in the NTML.

b. Real-time factors may dictate dynamic adjustments to the optimal AAR. These factors include, but are not limited to:

1. Aircraft type/fleet mix.
2. Runway conditions.
3. Runway/taxiway construction.
4. Equipment outages.
5. TRACON constraints.

These factors will be included in the facility log. The MTOs must ensure that the responsible person at the ASPM airports document the information in the NTML.

c. A dynamic adjustment to the AAR is subject to the review and approval of the Director of System Operations, ATCSCC.

d. Non-primary configurations at ASPM airports must be entered in the NTML as "Other," and free-text used to describe the configuration and associated AAR.

Chapter 11. National Programs

Section 1. Terminal VFR Radar Services

11-1-1. PROGRAM INTENT

Basic Radar Service, TRSA Service, Class B and Class C services are the four types of Radar Services designed to enhance safety by providing air traffic services to VFR aircraft. The services were designed to provide the maximum level of radar services possible with existing equipment. Additional resources (displays, communications, telco, space, etc.) must be justified by requirements other than the volume of radar service provided to VFR aircraft. Pilots should be encouraged to participate by all available methods. This is best accomplished through effective procedures and a clear understanding of the Terminal VFR Radar Services available.

REFERENCE—

Pilot/Controller Glossary Term— Terminal VFR Radar Services
FAAO 7110.65, *Basic Radar Services, TRSA Services, Class B and Class C Services.*

11-1-2. IMPLEMENTATION

a. Facilities unable to meet the following requirements shall submit justification to the respective Terminal Operations Area Office:

1. Newly commissioned terminal radar facilities shall implement basic radar services to VFR aircraft, as prescribed in FAAO 7110.65, Air Traffic Control, para 7-6-1, Application, within 30 to 60 days after full IFR service is available. All radar facilities shall provide basic radar service at primary airports and, where operationally feasible, at satellite airports with a control tower.

2. TRSA Service: In addition to basic radar service, provide separation between all participating aircraft operating in an established TRSA. If a need exists, facilities may develop coded VFR departure routes for TRSA service. When such routes are established, the following provisions apply:

(a) Prior to implementing coded VFR departure routes, the facility shall coordinate with local user groups.

(b) A letter to airmen shall be issued advising pilots of the procedure.

(c) These routes shall only be issued to local users familiar with the procedure.

(d) Detailed departure instructions shall be furnished when requested by the pilot.

3. Facility air traffic managers shall address in writing, as a minimum, the following pertinent factors when submitting for service area office approval, either a recommendation for revision or withdrawal of an existing TRSA.

(a) Safety record/NMAC analysis.

(b) Airspace and operational efficiency.

(c) Unique geographical features.

(d) Hourly air carrier traffic density.

(e) User input. (User meetings, while highly desirable, are not required for withdrawals.)

b. Revisions to TRSAs shall be submitted to System Operations Airspace and Aeronautical Information Management, NFDC, at least 9 weeks prior to one of the appropriate publication dates; i.e., Sectional Charts, Notice to Airmen, or the Airport/Facility Directory. The following are considered sufficient justification to warrant revision:

1. Changes in configuration, frequencies, or primary airport status (name, elevation, closed, abandoned, etc.).

2. Additions or deletions to the VFR checkpoints/NAVAIDs.

3. Typographical errors.

c. Advertising Basic Radar Services:

1. A sufficient number of user group meetings shall be held to publicize implementation of basic radar services to as many local pilots as practicable.

2. Disseminate a letter to airmen explaining the program and including a drawing of the basic radar service area. The drawing should be on a cutout from the appropriate sectional chart and should show the following:

(a) Lateral and vertical dimensions.

(b) Frequency for each sector.

(c) Initial VFR checkpoints indicated by flags.

3. The facility air traffic manager shall seek the cooperation of the FSDO in informing aviation interests about their responsibilities while operating in a basic radar service environment. Special emphasis should be placed on such points as:

(a) Pilot participation is urged, but it is not mandatory.

(b) Pilots should be aware that aircraft sequencing and traffic advisories are primarily based on aircraft maintaining assigned headings and altitudes.

(c) If a pilot cannot abide with an ATC instruction or clearance, he/she should notify ATC immediately.

4. Follow-up meetings (“HOW GOES IT” type) shall be conducted.

11-1-3. TRSA

a. TRSAs are not officially designated by airspace action and were established solely to define an area within which a separation service will be provided. Therefore, at all TRSA locations it is intended that facilities shall provide the full extent of TRSA services throughout the entire advertised TRSA area. Although the TRSA area extends downward to the surface within the surface area of Class D airspace at the primary airport, a base should be established outside this surface area of Class D airspace to permit free movement of nonparticipating aircraft. The base of the TRSA shall not be below the base of an associated Class E airspace.

b. The size and shape (laterally/vertically) of the TRSA will vary depending upon operational requirements. However, each TRSA shall reflect the most efficient and reasonable configuration to contain large turbine-powered aircraft while achieving a higher level of overall safety.

NOTE-

There is no requirement for the TRSA facility to retain operational jurisdiction of the airspace in its entirety if another facility can more effectively manage a particular portion of the airspace. The requirement is that the system provides the required service.

c. All IFR procedures used by large turbine-powered aircraft arriving and departing designated air-

ports shall be fully contained in the TRSA. Each TRSA should be configured to ensure the most efficient use of airspace.

d. Arriving and departing large turbine-powered aircraft should enter/exit the TRSA through the ceiling. However, arriving aircraft at altitudes below the ceiling are not required to climb to achieve this objective, nor are departing aircraft filed at lower altitudes.

11-1-4. CLASS C AIRSPACE

Class C airspace shall be officially designated by airspace action in 14 CFR Part 71 and is established solely to define the airspace in which all aircraft are subject to operating rules and equipment requirements specified in 14 CFR Part 91.

NOTE-

While the regulatory nature of this airspace requires pilots to establish two-way communications with ATC prior to entering, aircraft should not be unnecessarily prohibited from entering Class C airspace.

a. Facility managers who determine a need for Class C airspace establishment shall prepare and submit a staff study in accordance with FAAO 7400.2, Procedures for Handling Airspace Matters.

b. The physical dimensions of the Class C airspace will normally be a 10 NM radius capped at 4,000 feet above the primary airport elevation. This airspace shall extend no lower than 1,200 feet above the surface, except that an inner core with a 5 NM radius shall extend down to the surface.

c. Encompassing each Class C airspace shall be a site specific Outer Area with a normal radius of 20 NM. The Outer Area shall extend outward from the primary Class C airspace airport and extend from the lower limits of radar/radio coverage up to the ceiling of the approach control delegated airspace excluding the Class C airspace and other airspace as appropriate.

d. After issuance of the final rule designating a Class C airspace, user education meetings shall be held to publicize implementation of Class C service to as many pilots as practicable.

e. Issue a letter to airmen explaining the program and including a drawing of the Class C airspace. The drawing should depict, as a minimum, the following:

1. The lateral and vertical dimensions of the Class C airspace and the associated Outer Area.

2. Any procedural exclusions when the Class C airspace overlaps an adjacent Class D airspace.

3. Initial VFR checkpoints located outside the Class C airspace.

4. Frequencies.

f. Followup meetings (“HOW GOES IT” type) shall be conducted after implementation.

g. Exceptions to Class C services may be established within the Class C airspace for special activities; i.e., practice areas, banner tows, gliders, ultralights, etc., provided the procedures are outlined in a letter of agreement with the users.

h. Where the Class C airspace overlaps the Class D airspace of an adjacent airport, facility managers shall include in a letter of agreement procedures defining responsibility for the control of aircraft in the overlapping area.

i. The *National Terminal Radar Program* includes military as well as civil airports. Each case of military airport inclusion or establishment of Class C airspace shall be processed through appropriate military channels for thorough examination and individual justification.

j. When recommending a location for withdrawal from the Class C airspace, facility air traffic managers shall prepare and submit a staff study to Washington headquarters, Airspace and Rules through the appropriate Terminal Operations Service Area Office in accordance with FAAO 7400.2, Procedures for Handling Airspace Matters.

11-1-5. CLASS B AIRSPACE

a. Class B airspace shall be officially designated by airspace action in 14 CFR Part 71 and is established solely to define the airspace in which all aircraft are subject to operating rules and pilot and equipment requirements specified in 14 CFR Section 91.131.

b. The size and shape (laterally/vertically) of the Class B airspace will vary depending upon operational requirements. However, each Class B airspace shall reflect the most efficient and reasonable configuration to contain large turbine-powered aircraft while achieving a higher level of overall safety.

NOTE-

There is no requirement for the Class B airspace facility to retain operational jurisdiction of the airspace in its entirety if another facility can more effectively manage a particular portion of the airspace. The requirement is that the system provide the required service.

c. All IFR procedures used by large turbine-powered aircraft arriving and departing designated airports shall be fully contained in the Class B airspace. Each Class B airspace should be configured to ensure the most efficient use of airspace.

d. Arriving and departing large turbine-powered aircraft should enter/exit the Class B airspace through the ceiling. However, arriving aircraft at altitudes below the ceiling are not required to climb to achieve this objective, nor are departing aircraft filed at lower altitudes.

e. Procedures shall be developed to accommodate VFR aircraft desiring to transit the Class B airspace. If VFR corridors are published, recommend the establishment of frequency 122.750 for pilots to exchange position information when transiting the associated Class B airspace VFR corridor.

Section 2. Automated Terminal Tracking Systems (ATTS)

11-2-1. OPERATIONAL USE

a. Do not use ATTS data when the system, or that portion of the systems, is released to Technical Operations technicians.

b. Verify the operational status of all ATTS components daily prior to operational use.

c. Advise effected facilities when ATTS equipment will not be operational at normal startup time, when it fails, is shut down, resumes operation, or when interfacility mode is lost/regained.

11-2-2. DATA ENTRIES

Facility directives shall prescribe the use of the Scratch Pad and the specific responsibility for entering the current ATIS alpha character, the current General System Information (GSI), and the System Altimeter Setting. When an ATTS facility serves more than one controlled airport, an average of the altimeter settings for those airports may be specified as the System Altimeter Setting. A remote altimeter setting may be used in accordance with para 2-10-4, Comparison Checks, in the event that all local altimeter indicators fail. Do not use this procedure whenever conditions indicate the probability of a steep pressure gradient between two locations.

NOTE-

The ARTS II system does not provide a GSI area; however, it does provide the capability to enter and display an assigned altitude.

11-2-3. DISPLAY DATA

a. When a malfunction causes repeated discrepancies of 300 feet or more between the automatic altitude readouts and pilot reported altitudes, request authorized personnel to inhibit the automatic altitude report (Mode C) display until the malfunction has been corrected.

b. If available, operate the field inhibit/select switches in the select position for the leader line, ACID, altitude, and handoff fields. The control position symbol and other full data block fields shall be selected/inhibited in accordance with facility directives.

c. Display Mode C on untracked (unassociated) targets within each controller's area of responsibility by setting the altitude filters to encompass all altitudes within the controller's jurisdiction. Set the upper limits no lower than 1,000 feet above the highest altitude for which the controller is responsible. In those stratified positions, set the upper and lower limit to encompass at least 1,000 feet above and below the altitudes for which the controller is responsible. When the position's area of responsibility includes down to an airport field elevation, the facility will normally set the lower altitude filter limit to encompass the field elevation, so that provisions of FAAO 7110.65, Air Traffic Control, para 2-1-6, Safety Alert, and subpara 5-2-17a2, Validation of Mode C Readout, may be applied. Air traffic managers may authorize the temporary suspension of this requirement when target clutter is excessive.

REFERENCE-

FAAO 7110.65, Para 5-2-23, Altitude Filters.

11-2-4. USE OF MODIFY AND QUICK LOOK FUNCTIONS

a. Where ATTS data from a system common to the TRACON and the tower is presented on a CTRD, and if operational benefits will accrue by using the MODIFY or QUICK LOOK functions, a facility directive or a LOA shall be prepared specifying:

1. Procedures for data transfer between the TRACON and the tower cab.
2. Communications changeover points.
3. Transfer of control points.
4. Hours or conditions under which facility policy prohibits use of these functions.
5. The responsibility of the local control position to determine whether use of MODIFY or QUICK LOOK functions is satisfactory or some other mode of data transfer is to be used; e.g., voice call or computer handoff.

b. Factors to be considered by the controller in determining use of the MODIFY or QUICK LOOK functions and by the facilities for prohibiting their use include, but are not limited to, light on the face of the CTRD, traffic volume, other duties requiring the controller's attention, and the number of controllers available in the tower.

11-2-5. AUTOMATION PROGRAM CHANGES

The air traffic manager of automated facilities shall:

a. Approve all requests for automation changes sent to the respective Operational Support Facility via the National Automation Request form, FAA Form 6000-14.

b. Review each SITE PROGRAM BULLETIN (TERMINAL) issued by the Terminal Automation Support for local program functionality and changes to the data base to determine any operational/procedural impact. When necessary:

1. Issue a facility directive describing the functional change/s and any resulting procedural change/s.

2. Coordinate any functional, procedural, and airspace change/s with the ARTCC providing automation interface.

c. Ensure that operational suitability acceptance for software modifications is recorded on FAA Form 7230-4.

EXAMPLE-

ARTS IIIA:

"A3.06, National Patch Level P operational suitability testing completed, acceptable."

COMMON ARTS:

"A605, REV 20 operational suitability testing completed, acceptable."

"A2.09, REV 20 operational suitability testing completed, acceptable."

MICRO EARTS:

"M4.08R, operational suitability testing completed, acceptable."

11-2-6. AUTOMATIC ACQUISITION/TERMINATION AREAS

a. Facility air traffic managers shall:

1. Establish automatic acquisition areas for arrivals and overflights at ranges permitting auto-acquisition of targets prior to the ARTCC/ATTS-to-ATTS automatic handoff area when the center is in the radar data processing (RDP) mode.

2. Coordinate with the adjacent automated facilities to ensure that computer handoffs will be initiated only after the aircraft is within their facility's automatic acquisition area. Where this is not feasible

due to airspace assignment, facility directives shall require use of an appropriate procedure specified in FAAO 7110.65, Air Traffic Control, to confirm the identity of all aircraft handed off prior to ATTS auto-acquisition.

3. Establish Automatic Acquisition Areas for departing aircraft 1 mile or less from the runway end.

4. Establish Automatic Termination Areas for arriving aircraft 1 mile or less from the runway threshold or, at satellite airports, the minimum radar coverage range/altitude whichever is greater.

5. Prescribe in a facility directive the operating position responsibility for determining if automatic acquisition of a departure track has occurred.

NOTE-

This is intended for operations where automatic acquisition responsibility could be confused, e.g., uncontrolled airports within a single sector; or between different radar sectors that serve the same airport.

b. Terminal Operations Service Area Directors may authorize a distance greater than specified in subparas a3 and 4 above, where the operational conditions dictate.

11-2-7. MINIMUM SAFE ALTITUDE WARNING (MSAW), CONFLICT ALERT (CA) AND MODE C INTRUDER (MCI)

a. MSAW, CA and MCI values shall be set in accordance with the standards specified in the Standards and Guidelines for CARTS Appendix D, Standards and Guidelines for ARTS IIIA, and Standards and Guidelines for MEARTS. Any instances of requests for values outside the standards shall require a waiver from Vice President, Terminal Services.

b. When their continued use would adversely impact operational priorities, air traffic managers may temporarily inhibit the MSAW, the Approach Path Monitor portion of MSAW, and/or the CA and/or MCI functions. Except when equipment or site adaptation problems preclude these functions being used, a brief written report shall be sent to the Terminal Operations Service Area Office whenever they are inhibited. A copy of the report shall be sent to Terminal Safety and Operations Support.

c. Facility air traffic managers are authorized to inhibit CA at specific operating positions if an operational advantage will occur.

d. Terminal Operations Area Office shall:

1. Furnish ARTS IIIA, CARTS and MEARTS facilities a copy of:

(a) Newly received FAA Forms 7460-2, Notice of Actual Construction or Alteration.

(b) Emergency Notices of Construction of structures of 200 feet or more above ground level lying within 60 NM of their radar site.

2. Ensure that the daily National Flight Data Digest (NFDD) is provided to ARTS IIIA, and CARTS, MEARTS and other offices when it affects their area of jurisdiction.

e. Facility air traffic managers shall ensure that:

1. MSAW and CA nuisance alarms are minimized by monitoring alarm frequency and location and forwarding suspected problem areas to the servicing Operational Support Facility along with any supporting documentation, via a National Automation Request (NAR) form.

2. A visual inspection and aural test of the MSAW speakers located in the operational quarters by supervisory personnel is included as part of the equipment check list required during each watch. The purpose of this inspection is to ensure the aural alarm is functioning and audible to the appropriate operational personnel.

3. The operational support facility has adapted the software functionality to ensure the aural alarms operate in the ATCT.

4. Aural alarms are received in the ATCT upon transfer of communications.

5. Controllers are aware of the towers geographic locations where aural alarms sound. (MSAW aural alarm areas.)

6. Tower aural alarm areas are identified.

11-2-8. MAGNETIC VARIATION OF VIDEO MAPS/GEO MAPS AT ARTS FACILITIES

Air traffic managers shall ensure that:

a. The magnetic variation of radar video maps/geo maps, MSAW, DTMs/GTMs and radar site settings coincide and is verified annually.

b. Affected map or maps are recompiled when the official magnetic variation of record is changed/implemented.

NOTE-

1. *The video map is the primary reference for maintaining radar antenna alignment.*

2. *The DTM is constructed to align with the radar antenna offset for magnetic north. Consequently, any change in antenna offset will result in a corresponding change in the relative positions of the terrain points and obstacles used to determine DTM bin altitude assignments. This will require generating and verifying a new DTM.*

3. *The GTM is constructed to align with true north offset by the site adaptable radar antenna magnetic variation. Consequently, any change in antenna offset will result in a corresponding change in the relative position of bin locations.*

4. *In both cases, DTM or GTM, any change in antenna offset will result in readaptation of the MSAW and CA databases; e.g., airport areas, inhibit volume areas, capture boxes, etc., to coincide with the changed declination.*

5. *Technical Operations Aviation System Standards has the responsibility to assign and maintain the Magnetic Variation of record for navigational facilities and airports.*

REFERENCE-

Para 11-2-9, MSAW DTM Cartographic Certification, Updates, and Re-compilation.

FAAO 8260.19C Chg 1, Flight Procedures and Airspace.

11-2-9. MSAW DTM CARTOGRAPHIC CERTIFICATION, UPDATES, AND RECOMPILATION

a. System Operations Airspace and Aeronautical Information, shall be responsible for assuring that the National Aeronautical Charting Office (NACO) performs the certification of the terrain elevations and the obstacle elevations. Each new or recompiled MSAW DTM shall be certified by the NACO through the AT/NACO Precise Geographic Position and Elevation Program (PREGPEP). Also, NACO shall certify the periodic update of the MSAW obstacle elevation files.

b. The MSAW DTM shall be recompiled by the NACO if:

1. The ASR antenna on which the map is based is relocated more than 300 feet away from its original position and/or,

2. The magnetic variation of the site changes by two degrees or more.

NOTE–

Requests for new or recompiled DTMs are routed to System Operations Airspace and Aeronautical Information.

11–2–10. DIGITAL MAP VERIFICATION

Verification of the accuracy of new or modified digital maps shall be accomplished through the use of

“targets of opportunity” flying over displayed fixes, navigational aids, etc. Any observed discrepancies shall be documented to indicate the observed direction and displacement. If any identified error cannot be corrected or if a facility is otherwise dissatisfied with the results from “targets of opportunity,” a request may be made through the FIFO for a flight check.

Section 3. Data Recording and Retention

11-3-1. DATA RECORDING

a. Type or write the date on the console printout at the start of each operational day or as specified in a facility directive. The facility directive shall require the time that the date shall be entered daily.

NOTE—

The operational day for a 24-hour facility begins at 0000 local time. The operational day at a part time facility begins with the first operational shift in each calendar day.

b. As a minimum, record on the console failure/error messages regarding Data Acquisition Subsystem (DAS), Data Entry and Display Subsystem (DEDS), and Interfacility (IF).

NOTE—

When a failure is known to exist, that particular failure printout may be inhibited to minimize its impact on the system.

c. Facilities having continuous data recording capabilities shall extract and record on tape or disc:

1. Tracking messages, target reports, and sector time.
2. Automatic functions and keyboard input data.
3. Interfacility messages.
4. MSAW and CA warning message data. Other data available in the extraction routine may be extracted.

d. Air traffic facilities using a teletype emulator (TTYE) in lieu of a console printout (TTY) shall store and retain data in accordance with paras 11-3-1, Data Recording, and 11-3-2, Data Retention. However, the data may be retained on a disc or hard drive as specified in a facility directive.

11-3-2. DATA RETENTION

- a. Write on each data extraction tape/disc:
1. The tape/disc drive number.
 2. The date.
 3. The times (UTC) the extraction started and ended.

4. The items listed in subpara 11-3-1c not extracted.

5. The data extracted in addition to that required by subpara 11-3-1c.

6. The initials of the person changing the recording.

b. Retain data extraction recordings for 45 days except:

1. En route facility utilizing system analysis recording tapes as their radar retention media shall retain radar data for 15 days.

2. Accidents: Retain data extraction recordings in accordance with FAAO 8020.11, Aircraft Accident and Incident Notification, Investigation, and Reporting.

3. Incidents: Retain data extraction recordings in accordance with FAAO 8020.11, and/or FAAO 7210.56, Air Traffic Quality Assurance.

4. Accidents: Retain TTYE stored captured files (or TTY if TTYE captured files are unavailable) for 30 days unless they are related to an accident or incident as identified in FAAO 8020.11 or FAAO 7210.56.

NOTE—

A facility using a console typewriter printout take-up device may retain the printout on the spool for 15 days after the last date on the spool. Retention of the daily printouts relating to accidents/incidents shall be in accordance with subpara b.

c. If a request is received to retain data information following an accident or incident, the printout of the relative data will suffice. The tape/disc may then be returned to service through the normal established rotational program. The printout data are considered a permanent record and shall be retained in accordance with aircraft accident/incident retention requirements. Reduction of the extracted data to hard-copy format will be made at the earliest time convenient to the facility involved without derogation of the ATC function and without prematurely taking the computer out of service. Do not make these data and printouts a part of the accident/incident package.

d. If a request is received to retain a specific data recording and the data are available and contained on

tape, the tape shall be retained in its entirety. If the data are contained on disc, the facility may transfer all pertinent data to magnetic tape and label the tape a *Duplicate Original*. After successful transfer, the disc pack may be returned to service through the normal rotational cycle. However, if a specific request is received to retain the disc, the disc pack shall be retained in its entirety.

e. Treat data extraction recordings and console typewriter printouts pertaining to hijack aircraft the same as voice recorder tapes.

REFERENCE—

Para 3–4–4, Handling Recorder Tapes or DATs.

11–3–3. FAULT LOG

a. Whenever the computer fails during normal operations, all pertinent data shall be recorded on the Fault Log. However, if the computer failure is the first of a particular nature and an operational requirement exists to resume normal computer operation as soon as possible, a Fault Log need not be recorded.

b. When you anticipate the need for assistance from the National Field Support Group (NFSG), record the entire contents of memory before restarting the operational program.

c. Retain the Fault Log and the memory dump until the cause of the fault has been determined or NFSG requests them.

Section 4. TPX-42

11-4-1. OPERATIONAL USE

a. Do not use TPX-42 data when the system is released to Technical Operations technicians.

b. Verify the operational status of the TPX-42 prior to operational use.

c. Inform affected facilities of scheduled and unscheduled shutdowns.

d. Develop local procedures, operating instructions, and training materials required to ensure intrafacility standardization of operation.

e. Facility directives shall specify the discrete codes assigned to each operating position from the code subsets allocated to the facility.

f. Traffic entering the terminal airspace on an ARTCC computer-assigned discrete beacon code shall not remain on that code any longer than the time specified in a LOA.

NOTE-

Center computer parameters are adjusted to minimize the time in which a discrete code is assigned to an aircraft. The time specified in the letter of agreement should not exceed the Arrival Flight Plan Drop Interval adapted for your airport.

11-4-2. LOW ALTITUDE ALERT SYSTEM (LAAS)

a. When continued use would adversely impact operational priorities, air traffic managers may temporarily inhibit the LAAS. Except when equipment or site adaptation problems preclude the use of LAAS, a brief written report shall be sent to the respective Terminal Operations Service Area Office whenever it is inhibited. A copy of the report shall be

sent to System Operations and Safety, System Safety and Procedures.

b. Air traffic managers are authorized to inhibit LAAS at specific operating positions if an operational advantage will be realized.

c. Sector/altitude maps shall be kept current.

d. Terminal Operations Service Area Offices shall:

1. Furnish LAAS facilities a copy of:

(a) Newly received FAA Form 7460-2, Notice of Actual Construction or Alteration.

(b) Emergency Notices of Construction of structures more than 200 feet above ground level lying within 60 NM of the radar site.

2. Ensure that the daily National Flight Data Digest is provided to LAAS facilities when it affects their area of jurisdiction.

e. Facility managers shall ensure that:

1. The material described in subpara d1 above, is reviewed, and that the appropriate corrections to the sector/altitude map are made.

2. The magnetic variation of the facility's sector/altitude map coincides with the magnetic variation of the facility's radar video maps/geo maps.

NOTE-

The sector/altitude map is constructed to align with the radar antenna offset for magnetic north. Consequently, any change in antenna offset will result in a corresponding change in the relative position of the terrain points and the obstacles used to determine altitude assignments. This will require generating a new sector/altitude map.

Section 5. Charted VFR Flyway Planning Chart Program

11-5-1. DEFINITION

VFR flyways are general flight paths not defined as a specific course, for use by pilots in planning flights into, out of, through, or near complex terminal airspace to avoid Class B airspace. An ATC clearance is NOT required to fly these routes.

11-5-2. CRITERIA

Use the following criteria for establishing VFR Flyway Planning Charts:

a. Flyway Course: The flight paths used to describe VFR flyways, shall, to the maximum extent practicable, reference ground objects that can be readily identified from the air. If necessary, and if an operational benefit can be derived, radio NAVAID references may be used.

b. Flyway Altitudes: Each segment of a charted VFR flyway should contain recommended altitudes.

1. Recommended altitudes shall avoid airspace requiring prior authorization or clearance to enter.

2. Care should be exercised to avoid recommending altitudes which could cause the aircraft on a flyway to encounter inflight wake turbulence generated by large aircraft.

3. When altitude changes are required, they should be based on a descent rate of 250–350 feet per nautical mile.

c. Altitude Compression: Charted VFR flyways established under the floors of Class B airspace require careful evaluation to avoid compression of the airspace and the altitudes available for VFR operations.

d. Military Considerations: Avoid establishing VFR Flyways which would conflict with military ground control radar approach paths. When charting VFR flyways which cross or are in proximity to an MTR, include communications instructions for pilots to determine the status of the MTR.

e. Once a flyway is charted, it will only be moved when it significantly interferes with other operations.

11-5-3. RESPONSIBILITIES

a. Flyway Development: The facility air traffic manager develops requirements for VFR flyways charting. All actions leading to the development of a VFR Flyway Planning Chart should be initiated by the facility air traffic manager.

1. Initial Action: The requesting facility air traffic manager shall establish a task force of air traffic, FSDO, military, and local aviation interests, as appropriate, to recommend where the charted VFR flyways should be located.

2. Flyway Justification: As a minimum, the facility air traffic manager shall address in writing the following pertinent factors:

(a) Background information pertaining to the development of the chart, such as the composition of the task group.

(b) The major areas examined.

(c) Special VFR procedures.

(d) Recommendations by the task group.

(e) Reasons supporting the establishment of a VFR Flyway Planning Chart for the area.

3. Charts and Description: A narrative description of the flyway and the appropriate VFR Terminal Area Chart or a drawing shall depict the following data:

(a) VFR flyway flight paths with named visual checkpoints, NAVAID magnetic radials, and altitudes;

(b) Any large turbine-powered aircraft arrival/departure routes that cross the charted VFR flyway;

(c) Procedural notes positioned on the drawing or the VFR TAC; and

(d) The communication frequencies if frequencies are recommended for advisories. Indicate the flyway segment/s associated with each frequency.

b. Flyway Approval: Terminal Operations Service Area Offices are responsible for approving the proposed VFR Flyway Planning Charts and ensuring that they comply with the prescribed criteria. If approval is granted, the Terminal Operations Area Offices shall forward the proposal to System Operations Airspace and Aeronautical Information Office at least 9 weeks prior to the planned implementation date. The planned implementation date shall coincide with a publication date of the respective VFR TAC.

c. Annual Review: Terminal Operations Area Offices are responsible for reviewing existing VFR Flyway Planning Charts on an annual basis to determine their continued need.

d. Revision to Flyways: In order that System Operations Airspace and Aeronautical Information Office can meet its responsibilities, revisions to VFR Flyway Planning Charts must be submitted to System Operations Airspace and Aeronautical Information Office at least 9 weeks prior to the publication date of the respective VFR Terminal Area Chart. Revisions may be initiated by the facility air traffic manager or the Terminal Operations Area Office. The

following are considered sufficient justification to warrant revision:

- 1.** Changes, additions, or deletions to VFR flyways or altitudes, frequencies, procedural notes, or changes to airport status; i.e., name, closed, abandoned, etc.

- 2.** Changes in large turbine-powered aircraft arrival/departure routes.

- 3.** Additions or deletions to checkpoints/NAVAIDs.

e. Publicity: The facility air traffic manager shall seek the cooperation of the FSDO in informing aviation interests about the VFR Flyway Planning Chart Program. Special emphasis should be placed on:

- 1.** Pilot adherence to flyways and recommended altitudes is voluntary.

- 2.** Flyways are not devoid of IFR or military traffic. They represent flight paths that are believed to have the least IFR or military activity.

- 3.** A “see and avoid” environment must be maintained and emphasized.

Section 6. Helicopter Route Chart Program

11-6-1. POLICY

a. The Helicopter Route Chart Program has been established to enhance helicopter access into, egress from, and operation within high density traffic areas by depicting discrete and/or common use helicopter routes, operating zones, and, where necessary, radio frequencies. The program had been designed to improve operational safety in areas where significant helicopter operations occur, and to establish a systematic process for chart development, modification, and acquisition.

b. Pilot adherence to charted helicopter routes and the recommended altitudes or flight ceilings associated with them will normally be voluntary. However, controllers may assign charted routes and altitudes and expect or request pilot compliance with them, provided such procedures are called for in specific FAA-operator Letters of Agreement, or are necessitated by traffic density and/or safety considerations; controllers also may restrict operations within designated operating zones when requested by local law enforcement officials and the restriction would not adversely affect other aircraft operations.

c. Helicopter route charts shall be published individually, on a site-specific basis. They are not updated on a regular basis as are other visual charts. They will be updated when a significant number of changes have accumulated, or when safety related or major airspace modifications warrant the printing of a new chart. The *Dates of Latest Editions*, published by the National Ocean Service will serve as a notice when a new chart is about to be published and which editions of charts are currently in use.

11-6-2. DEFINITION

Helicopter Route Charts are graphic portrayals of discrete and/or common use helicopter routes and/or operating zones located in high density traffic areas; their purpose is to facilitate helicopter pilot access into, egress from, or operation within charted areas. They generally will include associated altitude or flight ceiling information to facilitate IFR traffic avoidance and pilot adherence to minimum safe altitude requirements. The charts provide expanded, and in some cases unique, ground reference symbology to improve visual navigation.

11-6-3. CRITERIA

Use the following criteria when determining the need for a new or revised helicopter route chart:

a. Routes:

1. Recommended altitudes/flight ceilings/floors shall avoid restricted/military airspace requiring prior authorization or clearance to enter.

2. All routes depicted on a helicopter route chart shall, to the maximum extent practicable, reference ground objects that can be readily identified from the air.

b. Operating zones: Airspace encompassed by a helicopter route chart shall, when necessary and required by operational considerations, be divided into a sufficient number of operating zones or sectors to permit local law enforcement agencies to operate within them on an exclusive basis.

c. Altitudes and flight ceilings/floors: Each segment of a helicopter route may contain recommended altitudes or flight ceilings/floors. It is the discretion of the local air traffic tower if such altitudes will be depicted, or, assigned at a later date when the pilot contacts the tower.

1. Recommended altitudes/flight ceilings/floors shall avoid airspace requiring prior authorization or clearance to enter.

2. Care should be exercised to avoid recommending altitudes or flight ceilings/floors which could cause helicopters operating on a designated route to encounter inflight wake turbulence generated by large, fixed wing traffic.

3. When altitude/flight ceiling changes are required, they should be based on a descent rate of 250–350 feet per nautical mile.

d. Communications information: Each helicopter route chart shall include sufficient radio communications information to permit pilot compliance with all pertinent regulatory requirements, and facilitate the acquisition and dissemination of air traffic advisory information.

e. Military considerations: Avoid establishing helicopter routes or operating zones which would conflict with military ground control radar approach paths. When charting a route or operating zone which

crosses or is located in close proximity to a MTR, include communications instructions that will permit pilots to determine the status of the MTR.

f. Helicopter routes may be changed or modified whenever a new chart is updated. It is recommended that all route modifications be coordinated with operating groups in the local area.

11-6-4. RESPONSIBILITIES

a. Helicopter route chart development: Facility air traffic managers are responsible for determining the need for chart development or revision, and for compliance with the following:

1. Initial action: Facility air traffic managers who desire to establish a new route chart or revise an existing chart shall establish a task force or planning group comprised of local air traffic, FSDO, military, law enforcement, and helicopter operator personnel to recommend the area of chart coverage and the paths, routes, and operating zones that will comprise it.

2. Justification: All recommendations for new and/or revised charting shall include justifying information that includes, as a minimum, the following information:

(a) Background information pertinent to chart development or revision, including the composition of the task force or planning group;

(b) The airspace areas and proposed routes, operating zones, and altitude/flight ceiling/floor considerations examined;

(c) Special VFR procedural implications;

(d) Task force or planning group recommendations; and

(e) Supporting rationale.

3. Charts and description: Facility air traffic managers shall provide a narrative description or drawing of the chart area, including:

(a) Identification of all integral routes or operating zones, with named visual checkpoints and elevations, and associated altitude or flight ceiling limitations;

(b) Any IFR routes that fall within the charted area;

(c) Procedural notes pertinent to operations within the charted area or an operating zone, and on designated routes; and

(d) Traffic advisory radio communications frequencies and ATC facility names associated with area, route, or zone operations.

b. Chart approval: Terminal Operations Service Area Directors are responsible for reviewing and approving new or revised helicopter route chart proposals, and assuring that they comply with all prescribed criteria. However, procedural implementation may not occur until the proposal has been reviewed by System Operations Airspace and Aeronautical Information Management, and subsequently published. Consequently, managers should forward their approved packets through System Operations Airspace and Aeronautical Information Management as far in advance of the desired publication/implementation date as possible.

NOTE-

The publication lead times for new charts and minor chart revisions will routinely approximate 6-9 months and 3-4 months, respectively.

c. Annual review: Terminal Operations Service Area Directors are responsible for the conduct of annual reviews of existing VFR helicopter route charts to determine their accuracy and continued utility.

d. Chart revisions:

1. Revisions to existing helicopter route charts may be initiated by any facility air traffic manager, but can only be approved by the Terminal Operations Service Area Directors. However, to assure completion of all requisite Airspace and Rules review and publication requirements, proposals must be submitted through System Operations Airspace and Aeronautical Information Management to Airspace and Rules at least 6-9 months or 3-4 months (as appropriate) prior to their expected or recommended implementation date.

2. The following are considered sufficient justification for a revision:

(a) Changes, additions, or deletions to area coverage, designated routes or operating zones, controlling agencies and/or frequencies, procedural notes, or airport/heliport/helistop status;

(b) Changes in IFR routes within the chart coverage area; and

(c) Additions or deletions to visual checkpoints.

e. Publicity: Facility air traffic managers shall seek the cooperation of local FSDO personnel in informing local aviation interests about the Helicopter Route Chart Program. Special emphasis should be placed on:

1. The voluntary nature of pilot adherence to designated routes, operating zones, altitudes/flight ceilings, and procedural notes;

2. The importance of chart use to operational safety and IFR traffic avoidance; and

3. The “see and avoid” nature of operations within the chart area.

Section 7. Terminal Area VFR Route Program

11-7-1. POLICY

a. The Terminal Area VFR Route Chart Program has been developed to assist pilots operating under VFR who do not wish to communicate with ATC to avoid airspace requiring such contact.

b. Pilot adherence to Terminal Area VFR Routes, and the recommended altitudes associated with them, is strictly voluntary and in no way relieves pilots from requirements to comply with all applicable Federal Aviation Regulations.

11-7-2. DEFINITION

Terminal Area VFR Routes are specific flight courses depicted on the chart(s), which may include recommended altitudes, and described by reference to electronic navigational aids and/or prominent visual landmarks for optional use by pilots to avoid Class B, Class C, and Class D airspace while operating in complex terminal airspace. An ATC clearance is not required to fly these routes.

11-7-3. CRITERIA

Use the following criteria for establishing Terminal Area VFR Routes:

a. Routes:

1. Recommended routes should avoid the flow of IFR traffic.

2. Recommended routes shall, to the maximum extent practical, reference prominent landmarks that can be readily identified from the air.

3. The course shall be described by magnetic compass headings and latitude/longitude. Radio aids to navigation may be used as supplemental course guidance when feasible.

b. Recommended Altitudes: Each segment of a route shall have recommended minimum/maximum altitudes.

1. Recommended altitudes shall avoid airspace requiring prior ATC authorization or contact to enter.

2. Recommended altitude must be in accordance with VFR cruising altitudes.

3. Recommended altitudes shall avoid areas of expected wake turbulence from large aircraft.

4. Altitude changes should be based on climb/descent rate of 250–350 feet per nautical mile.

5. Recommended altitudes beneath the floors of Class B and Class C airspace, require careful evaluation to avoid compression of uncontrolled traffic.

c. Military considerations: Avoid establishing routes which conflict with military ground control radar approach paths. Recommended routes which cross or are close to MTR should include communication instructions to allow pilots to determine MTR status.

11-7-4. RESPONSIBILITIES

a. Terminal Area VFR Route Development: Terminal Operations Service Area Directors are responsible for determining the need for recommended routes and for compliance with the following:

1. Initial action: Terminal Operations Service Area Directors desiring to establish recommended routes shall form a task group consisting of local air traffic, FSDO, military, and other interested parties.

2. Justification: Recommendations for routes shall include as a minimum:

(a) Background information including composition of the task group.

(b) Airspace areas, proposed routes, recommended altitudes, and other pertinent considerations.

3. The task force shall develop descriptions of the recommended routes which shall include as a minimum:

(a) Arrival/departure airports.

(b) Latitude/longitude of each turning point on the route. The description shall include a sufficient number of points to establish the desired turn radius. NAVAID data may be included if appropriate: e.g., VOR radials.

(c) Recommended altitudes for each route segment and flight status: i.e., level, climbing, or descending.

(d) A list of recommended VFR checkpoints (including latitude/longitude) may be included, if appropriate.

b. Route Review: Terminal Operations Service Area Directors are responsible for reviewing recommended VFR routes and for ensuring that they comply with all prescribed criteria. Terminal Operations Service Area Directors shall submit route descriptions to the System Operations Airspace and Aeronautical Information Management in a tabular format suitable for publication in the National Flight Data Digest without additional processing.

c. Annual Review: Terminal Operations Service

Area Directors shall as a minimum, on an annual basis, review routes and submit revisions to System Operations Airspace and Aeronautical Information Management in format described above.

d. Route Revisions: The System Operations Airspace and Aeronautical Information Management office, shall ensure that route descriptions/revisions submitted by Service Area offices are published in the National Flight Data Digest for the use of chart makers and other interested parties.

Section 8. Standard Terminal Automation Replacement System (STARS)

11-8-1. OPERATIONAL USE

a. Do not use STARS data when the system is released to Technical Operations Services.

b. Verify the operational status of all STARS components daily.

c. Advise effected facilities when STARS equipment will not be operational at normal startup time, when it fails, is shut down, resumes operation, or when interfacility mode is lost/regained.

11-8-2. DATA ENTRIES

Facility directives shall prescribe the use of the scratch pad and the specific responsibility for entering the current ATIS alpha character, the current general system information (GSI), and the system altimeter setting. When an ARTS facility serves more than one controlled airport, an average of the altimeter settings for those airports may be specified as the system altimeter setting. A remote altimeter setting may be used in accordance with para 2-10-4, Comparison Checks, in the event that all local altimeter indicators fail. Do not use this procedure whenever conditions indicate the probability of a steep pressure gradient between two locations.

11-8-3. DISPLAY DATA

a. When a malfunction causes repeated discrepancies of 300 feet or more between the automatic altitude readouts and pilot reported altitudes, request the AUS or Technical Operations personnel to inhibit the automatic altitude report (Mode C) display until the malfunction has been corrected.

b. Display Mode C on untracked (unassociated) targets within each controller's area of responsibility by setting the altitude filters to encompass all altitudes within the controller's jurisdiction. Set the upper limits no lower than 1,000 feet above the highest altitude for which the controller is responsible. In those stratified positions, set the upper and lower limit to encompass at least 1,000 feet above and below the altitudes for which the controller is responsible. When the position's area of responsibility

includes down to an airport field elevation, the facility will normally set the lower altitude filter limit to encompass the field elevation, so that provisions of FAAO 7110.65, Air Traffic Control, para 2-1-6, Safety Alert, and subpara 5-2-17a2, Validation of Mode C Readout, may be applied. Air traffic managers may authorize the temporary suspension of this requirement when target clutter is excessive.

REFERENCE-

FAAO 7110.65, Para 5-2-23, Altitude Filters.

11-8-4. USE OF STARS QUICK LOOK FUNCTIONS

a. Where STARS data from a system common to the TRACON and the tower is presented on the TDW or supplemental display in the tower cab, and if operational benefits will accrue by using the QUICK LOOK function, a facility directive or a LOA shall be prepared specifying:

1. Procedures for data transfer between the TRACON and the tower cab.
2. Communications changeover points.
3. Transfer of control points.
4. Hours or conditions under which facility policy prohibits use of these functions.
5. The responsibility of the local control position to determine whether use of QUICK LOOK function is satisfactory or some other mode of data transfer is to be used; e.g., voice call or computer handoff.

b. Factors to be considered by the controller in determining use of the QUICK LOOK function and by the facilities for prohibiting their use include, but are not limited to, light on the face of the TDW or supplemental display, traffic volume, other duties requiring the controller's attention, and the number of controllers available in the tower.

11-8-5. AUTOMATION PROGRAM CHANGES

The air traffic manager of STARS facilities shall:

- a. Approve all requests for automation changes sent to the respective Operational Support Facility

via the National Automation Request form, FAA Form 6000–14.

b. Review each SITE PROGRAM BULLETIN (TERMINAL) issued by the Terminal Automation Support for local program functionality, and changes to the data base to determine any operational/procedural impact. When necessary:

1. Issue a facility directive describing the functional change/s and any resulting procedural change/s.

2. Coordinate any functional, procedural, and airspace change/s with the ARTCC providing automation interface.

c. Ensure that operational suitability acceptance for software modifications is recorded on FAA Form 7230–4.

EXAMPLE–

“National operating system suitability testing completed, acceptable.”

11–8–6. AUTOMATIC ACQUISITION/TERMINATION AREAS

a. Facility air traffic managers shall:

1. Establish automatic acquisition areas for arrivals and overflights at ranges permitting auto-acquisition of targets prior to the ARTCC/STARS-to-STARS automatic handoff area when the center is in the radar data processing (RDP) mode.

2. Coordinate with the adjacent automated facilities to ensure that computer handoffs will be initiated only after the aircraft is within their facility’s automatic acquisition area. Where this is not feasible due to airspace assignment, facility directives shall require use of an appropriate procedure specified in FAAO 7110.65, Air Traffic Control, to confirm the identity of all aircraft handed off prior to ARTS auto-acquisition.

3. Establish automatic acquisition areas for departing aircraft 1 mile or less from the runway end.

4. Establish automatic termination areas for arriving aircraft 1 mile or less from the runway threshold or, at satellite airports, the minimum radar coverage range/altitude whichever is greater.

5. Prescribe in a facility directive the operating position responsibility for determining if automatic acquisition of a departure track has occurred.

NOTE–

This is intended for operations where automatic acquisition responsibility could be confused, e.g., uncontrolled airports within a single sector; or between different radar sectors that serve the same airport.

b. Terminal Operations Service Area Directors may authorize a distance greater than specified in subparas 3 and 4 above, where the operational conditions dictate.

11–8–7. MINIMUM SAFE ALTITUDE WARNING (MSAW) AND CONFLICT ALERT (CA)

a. When their continued use would adversely impact operational priorities, facility air traffic managers may temporarily inhibit the MSAW, the Approach Path Monitor portion of MSAW, and/or the CA functions. Except when equipment or site adaptation problems preclude these functions being used, a brief written report shall be sent to the respective Terminal Operations Area Office whenever they are inhibited. A copy of the report shall be sent to Terminal Safety and Operations Support.

b. Facility air traffic managers are authorized to inhibit CA at specific operating positions if an operational advantage will accrue.

c. MSAW Digital Terrain Maps (DTMs) shall be kept current.

d. Terminal Operations Area Offices shall:

1. Furnish STARS facilities a copy of:

(a) Newly received FAA Forms 7460–2, Notice of Actual Construction or Alteration.

(b) Emergency Notices of Construction of structures of 200 feet or more above ground level lying within 60 NM of their radar site.

2. Ensure that the daily *National Flight Data Digest* (NFDD) is provided to STARS facilities and other offices when it affects their area of jurisdiction.

e. Facility air traffic managers shall ensure that:

1. The material described in subpara d1 above, is reviewed and that appropriate corrections to the DTM are made.

2. The magnetic variation of the facility’s DTM coincides with the magnetic variation of the facility’s radar video maps/geo maps.

NOTE—

The DTM is constructed to align with the radar antenna offset for magnetic north. Consequently, any change in antenna offset will result in a corresponding change in relative positions of the terrain points and obstacles used to determine DTM bin altitude assignments. This will require not only generating and verifying a new DTM, but also readapting the MSAW and CA data bases; e.g., airport areas, inhibit volume areas, capture boxes, etc., to coincide with the changed declination.

REFERENCE—

Para 11–2–8, Magnetic Variation of Video Maps/Geo Maps at ARTS Facilities.

3. MSAW parameters are modified, as appropriate, to minimize the extent of inhibit areas as specified in the Standards and Guidelines for STARS.

4. An aural test of the MSAW speakers located in the operational quarters is included as part of the equipment checklist required during each watch. The purpose of this test is to ensure the aural alarm is functioning and audible to the appropriate operational personnel.

5. Controllers are aware of the towers geographic locations where aural alarms sound. (MSAW aural alarm areas.)

6. Tower aural alarm areas are identified.

7. MSAW and CA nuisance alarms are minimized by monitoring alarm frequency and location and forwarding suspected problem areas to the servicing Operational Support Facility along with any supporting documentation, via a National Automation Request (NAR) form.

11–8–8. MAGNETIC VARIATION OF VIDEO MAPS/GEO MAPS AT STARS FACILITIES

Air traffic managers shall ensure that the magnetic variation of radar video maps/geo maps, MSAW, DTMs, and radar site settings coincide. The magnetic variation shall be verified annually and a change of 2 degrees or more requires a recompiling of the effected map or maps.

NOTE—

The video map is the primary reference for maintaining radar antenna alignment.

REFERENCE—

Para 11–8–7, Minimum Safe Altitude Warning (MSAW) and Conflict Alert (CA).

Para 11–8–9, MSAW DTM Cartographic Certification, Updates, and Recompilation.

11–8–9. MSAW DTM CARTOGRAPHIC CERTIFICATION, UPDATES, AND RECOMPILATION

a. System Operations Airspace and Aeronautical Information Management shall be responsible for assuring that the National Aeronautical Charting Office (NACO) performs the certification of the terrain elevations and the obstacle elevations. Each new or recompiled MSAW DTM shall be certified by the NACO through the Air Traffic/NACO Precise Geographic Position and Elevation Program (PREG-PEP). Also, NACO shall certify the periodic update of the MSAW obstacle elevation files.

b. The MSAW DTM shall be recompiled by the NACO if:

1. The ASR antenna on which the map is based is relocated more than 300 feet away from its original position and/or,

2. The magnetic variation of the site changes by two degrees or more.

NOTE—

Requests for new or recompiled DTMs are routed to System Operations Airspace and Aeronautical Information Management. The NACO requires approximately ten weeks to build and deliver a DTM.

11–8–10. DIGITAL MAP VERIFICATION

Verification of the accuracy of new or modified digital maps shall be accomplished through the use of “targets of opportunity” flying over displayed fixes, navigational aids, etc. Any observed discrepancies shall be documented to indicate the observed direction and displacement. If any identified error cannot be corrected or if a facility is otherwise dissatisfied with the results from “targets of opportunity,” a request may be made through the FIFO for a flight check.

11–8–11. MODE C INTRUDER (MCI) ALERT PARAMETERS

a. Use the nominal value of parameters specified in the appropriate NAS Configuration Management Document and Site Program Bulletins for the MCI Alert functions, except for the base altitude parameter, as specified in subparas b or c below, unless a waiver to adjust the base altitude parameter value is received from System Operations Security.

b. MCI Alert base altitude shall be set at any value between ground level and 500 feet AGL at the

discretion of the facility air traffic manager. Any instance of base altitudes above 500 feet AGL shall be documented and forwarded to System Operations Security, through the respective Terminal Operations Area Office.

c. Facility air traffic managers are authorized to temporarily adjust the MCI Alert base altitude at a sector(s)/position(s) when excessive MCI Alerts derogate the separation of IFR traffic. For the purpose of this section, temporary is considered to be of less than 4 hours duration, not necessarily continuous, during any calendar day. The following is required when MCI base altitude is adjusted:

1. Log each occurrence on FAA Form 7230-4, when this procedure is being used, including the sector/position and temporary altitude.

2. Documentation shall be forwarded to System Operations Security if it is determined that a temporary adjustment of the MCI base altitude does not meet the needs of the sector/position.

d. Facility air traffic managers are authorized to inhibit the display of MCI Alert at specified sectors/position.

11-8-12. OPERATIONAL MODE TRANSITION PROCEDURES

a. Facilities shall develop and maintain current detailed procedures for transition to and from the various automated and nonautomated modes of operation.

NOTE-

The architecture of STARS allows for different operational modes during display component failures. For example, a system component failure could result in positions within the same facility operating in EASL, ESL, or FSL mode. Facilities are encouraged to take advantage of this capability to minimize the impact of display system outages.

b. The transition plans shall include as a minimum:

1. Transition decision authority; i.e., the individual responsible for making the transition decision.

2. Specific transition procedures.

3. Detailed checklists specifying the duties and the responsibilities for the OSIC and other appropriate positions. The checklist shall include, as a minimum, the following information/procedures:

- (a) Transition decision authority.

- (b) Coordination/notification procedures (intra- and interfacility).

- (c) Specific duties/responsibilities (including detection and resolution of potential conflicts).

NOTE-

Whenever possible, coordination/notification procedures and duties/responsibilities should be listed in the sequence in which they are to be accomplished.

11-8-13. RADAR SELECTION PROCEDURES

a. Facilities shall develop and maintain current detailed procedures for selection of radar sites.

NOTE-

The architecture of STARS allows for the selection of up to 16 different radars including short range and long-range radars at each display. This could result in positions within the same facility working and receiving radar information from different radars. Facilities are encouraged to take advantage of this capability to minimize the impact of radar outages, blind areas, limited radar coverage, etc.

b. The selection plans shall include as a minimum:

1. Radar selection decision authority; i.e., the individual responsible for making the radar selection decision.

2. Specific radar selection procedures.

3. Detailed checklists specifying the duties and the responsibilities for the OSIC and other appropriate positions. The checklist shall include, as a minimum, the following information/procedures:

- (a) Radar selection decision authority.

- (b) Coordination/notification procedures (intra- and interfacility).

- (c) Specific duties/responsibilities (including detection and resolution of potential conflicts).

NOTE-

Whenever possible, coordination/notification procedures and duties/responsibilities should be listed in the sequence in which they are to be accomplished.

11-8-14. MULTI-SENSOR RADAR OPERATIONS

a. Facilities shall develop and maintain current detailed procedures for selection and use of multi-sensor radar operations.

NOTE-

The architecture of STARS allows for the use of multi-sen-

sor radar coverage. This could result in positions within the same facility working in both single sensor slant range mode and multi-sensor mode. Facilities are encouraged to take advantage of this capability to minimize the impact of radar outages, blind areas, limited radar coverage, etc.

b. The plans shall include as a minimum:

1. Decision authority to use multi-sensor coverage; i.e., the individual responsible for making the decision.

2. Specific multi-sensor radar procedures.

3. Detailed checklists specifying the duties and the responsibilities for the OSIC and other appropriate positions. The checklist shall include, as a minimum, the following information/procedures:

(a) Decision authority to use multi-sensor radar coverage.

(b) Coordination/notification procedures (intra- and interfacility).

(c) Specific duties/responsibilities (including detection and resolution of potential conflicts).

NOTE–

Whenever possible, coordination/notification procedures and duties/responsibilities should be listed in the sequence in which they are to be accomplished.

11–8–15. SINGLE SITE COVERAGE ATTS OPERATIONS

Facilities may adapt all sort boxes within 40 miles of the antenna to that site as preferred and with the single site indicator set to permit the use of 3 miles radar separation as defined in FAAO 7110.65, Air Traffic Control, subpara 5–5–4b3, Minima. This adaptation may be used provided:

a. A significant operational advantage will be obtained using single site coverage. Consideration must be given to such aspects as terminal interface, radar reliability, etc.; and

b. Facility directives are issued to:

1. Define areas within 40 NM of any radar site in which the adaptation has been modified.

2. Permit 3 NM separation in the modified area.

3. Accommodate local procedural changes.

Section 9. Airport Movement Area Safety System (AMASS) Supervisory/Controller-in-Charge (CIC) Procedures

11-9-1. ENSURE STATUS

a. The supervisor/CIC shall ensure that the operational status of the Airport Movement Area Safety System (AMASS) is known to all operational personnel.

b. When a change in AMASS status (i.e., online or offline) is made, all operational personnel on position shall be notified verbally.

c. When AMASS is offline, it shall be noted on FAA Form 7230-4, Daily Record of Facility Operation. Such status shall be shown in the facility Status Information Area (SIA). The supervisor/CIC shall ensure that all outages are carried over on applicable logs.

11-9-2. TAKING AMASS OFFLINE

The process of taking AMASS offline (or powering AMASS up) is a Technical Operations function. In the event that Technical Operations personnel are not available to change the status of AMASS from online to offline, AMASS shall be put in limited configuration by the supervisor/CIC.

11-9-3. MONITOR ALERTS AND ENSURE CORRECTIVE ACTION

The supervisor/CIC shall ensure that AMASS is monitored and all alerts are complied with.

a. When AMASS is online; any alerts generated shall be documented on FAA Form 7230-4.

b. If the alert is determined to be of a possible false or nuisance origin, it shall be noted and a brief explanation (if known) included on FAA Form 7230-4. If unable to determine origin, treat the alert as false.

NOTE-

The purpose of logging AMASS alerts is to track the reliability and performance of the system. Therefore, the quality assurance review (QAR) process shall not be used for AMASS false or nuisance alerts.

11-9-4. SETTING RUNWAY CONFIGURATION

The supervisor/CIC is responsible for ensuring that AMASS is set for the correct runway configuration.

11-9-5. LIMITED CONFIGURATION

a. Under certain circumstances, there may be a need to change the operational setting of AMASS to limited configuration. The limited configuration disables all alerts except arrivals to a closed runway. The circumstances under which limited configuration may be used is at the discretion of the supervisor/CIC, and include:

1. Moderate to Heavy Precipitation. Numerous false AMASS alerts may be caused by precipitation of moderate or greater intensity. Should precipitation of this magnitude occur or should it be imminent, the AMASS limited configuration may be applied.

NOTE-

Technical Operations need not be notified when entering limited configuration as protection from false alerts caused by precipitation.

2. Nonoptimized Configuration. Rarely-used runway configurations may not be programmed in AMASS since sufficient data to do so may not exist. When limited configuration is set for this purpose, local Technical Operations personnel shall be so notified in order that a note be made for data collection on nonoptimized runway configurations.

3. False Alerting. Following an AMASS false alert, limited configuration shall be entered and Technical Operations notified. Until the problem is corrected, full AMASS core alerting shall not be operated on the runway configuration which alerted.

4. Runway Change. Limited configuration may be used in transition from one runway configuration to another. (See para 11-9-4, Setting Runway Configuration.)

5. Technical Operations Support Unavailable. If AMASS is not performing properly and Technical Operations is unavailable to provide support, AMASS may be set in limited configuration.

b. When limited configuration is no longer required, AMASS shall be reset to normal runway configuration/operational parameters.

c. When limited configuration is applied, it shall be noted on FAA Form 7230-4 including the reason for doing so. Ensure that all limited configurations are carried over on applicable logs.

NOTE-

Limited configuration prevents AMASS from processing ASDE data. Therefore, the only alerts generated will be arrivals to closed runways.

11-9-6. CHANGING RUNWAY CONFIGURATION (DELAY)

During runway configuration changes, as required by operational responsibilities, AMASS may be set to limited configuration for a period required to accomplish associated tasks. The intent of this suspension is to allow for operational duties to be performed in conjunction with configuration changes and to avoid nuisance alerts.

NOTE-

When AMASS is offline or in limited configuration, a line of defense is lost in preventing runway collisions. The amount of time AMASS is not in full operation should be minimized.

11-9-7. AMASS MAINTENANCE MODE

When ASDE and/or AMASS is in maintenance mode, AMASS data shall be considered invalid and the system shall be taken offline. The supervisor/CIC shall validate, upon resumption of normal AMASS operations, that runway configurations and other user settings are adequate for operational use.

NOTE-

Action to change AMASS on-line/off-line status is an Technical Operations responsibility. It is an air traffic supervisory/CIC function to ensure the technician enters the appropriate status.

11-9-8. WATCH CHECKLIST

AMASS status shall be checked at the beginning of each shift and included in the facility watch checklist. At a minimum, the following items shall be reviewed:

- a. AMASS operational status.
- b. Runway configuration.
- c. Presentation of AMASS data on all appropriate ASDE displays.
- d. When test button is activated, the aural alert is heard, and the speaker volume is adequate.

Section 10. VFR Waypoint Chart Program

11-10-1. POLICY

a. The VFR Waypoint Chart Program was established to provide VFR pilots with a supplemental tool to assist with position awareness while navigating visually in aircraft equipped with area navigation (RNAV) receivers. The program's purpose is to enhance safety, reduce pilot deviations, and provide navigation aids for pilots unfamiliar with an area in or around Class B, Class C, and Special Use Airspace (SUA). The use of VFR waypoints does not relieve the pilot of any responsibility to comply with the requirements of 14 CFR Part 91.

b. This program contains the process for developing and submitting requests for inclusion of VFR waypoints on VFR navigational charts.

11-10-2. DEFINITION

A VFR waypoint is a predetermined geographical point depicted on a chart for transitioning and/or circumventing controlled and/or SUA, that is defined relative to a visual reporting point or in terms of latitude/longitude coordinates.

11-10-3. CRITERIA

Use the following criteria for establishing VFR waypoints on VFR navigation charts. Establishment of VFR waypoints should be minimized to reduce chart clutter and complexity. RNAV and Global Positioning System aircraft will more accurately fly over a specific point and this should be considered when developing VFR waypoints. Avoid placement of VFR waypoints directly over heavily populated or sensitive structures or areas; e.g., hospitals, government buildings, schools, power plants, etc.

a. Applications.

1. Avoidance of specific airspace; e.g., Class B, SUA, etc. VFR waypoints shall not be used to define airspace boundaries.

2. Support VFR flyway routes with entry and exit points, and, when necessary, intermediate waypoints.

NOTE-

For VFR routes, refer to Section 7, Terminal Area VFR Route Program.

3. Assist in identifying VFR checkpoints (visual reporting points) where the associated landmark is difficult to discern.

NOTE-

When a VFR waypoint is associated with a VFR checkpoint, the name of that checkpoint shall be used in ATC communications.

4. Guidance for the development of VFR waypoints to identify mountain passes/routes is or will be provided in Flight Standards' directives.

5. VFR waypoints are not for use in ATC communications; therefore, the VFR waypoint names are not pronounceable. If it is desired that a VFR waypoint be used for communications, then a new VFR checkpoint shall be established. VFR checkpoints can be established by submitting a letter to System Operations Airspace and Aeronautical Information Management, describing the checkpoint and providing the latitude/longitude location.

6. VFR waypoints shall not be used for those navigational aids, airports, etc., which currently exist in the National Flight Data Center database. When a VFR waypoint is desired where a fix already exists in the database, locate the VFR waypoint in the general vicinity considered the next most desired location.

b. VFR chart depiction:

1. VFR waypoint names (for computer-entry and flight plans) consist of five letters beginning with the letters "VP" and are retrievable from navigation databases.

2. VFR waypoints associated with VFR checkpoints will not have the waypoint symbology depicted; the Interagency Air Cartographic Committee (IACC) checkpoint symbol will remain. Only the five-letter identifier will be charted next to the name of the checkpoint.

3. VFR waypoints will be illustrated using the IACC waypoint symbology.

4. The latitude/longitude for each waypoint will be published in the Airport/Facility Directory (A/FD) and on one of the panels of the appropriate chart.

11-10-4. RESPONSIBILITIES

a. Proponent. Any interested party may recommend the addition of VFR waypoints to VFR navigation charts or helicopter charts via the appropriate air traffic facility.

b. Air traffic facilities shall:

1. Prepare VFR waypoint recommendations. The most important task in preparing the recommendation is coordination with local aviation interests; i.e., Aircraft Owners and Pilots Association, Flight Standards District Office, Automated Flight Service Station (AFSS), military, law enforcement, etc.

NOTE—

As AFSSs play an integral part in the VFR flight planning process, they may serve as a valuable resource in identifying VFR waypoint recommendations.

2. After consensus with all affected air traffic facilities and local aviation interests on the need and location of the proposed VFR waypoints, submit a package to the respective Terminal Operations Area Office containing:

(a) A new or revised VFR navigation chart depicting the location and five-letter name of each waypoint/checkpoint.

(b) A completed FAA Form 8260-2, Radio Fix and Holding Data Record, in accordance with FAAO 8260.19, Flight Procedures and Airspace. A list of VFR waypoint five-letter names can be obtained from the Terminal Operations Service Area offices obtain five-letter names from System Operations Airspace and Aeronautical Information Management. Flight checks are not required.

(c) A camera-ready textual description of each waypoint including the name. Contact the Terminal Operations Area Office for assistance in preparing this document.

(d) A 7 1/2-minute quadrangle chart or obstruction evaluation (OE)/airport airspace analysis (AAA) Geographical Information System (GIS) graphics with the precise point of the VFR waypoint depicted. It is critical that the depictions be easily readable by the Technical Operations Aviation Systems Standards, National Aeronautical Charting office, in order to verify the position for accurate charting. If using OE/AAA GIS graphics, provide the applicable 7 1/2-minute quadrangle map names.

Contact the Terminal Operations Area Office for assistance in preparing this chart.

(e) Justification/supporting rationale.

c. The Terminal Operations Area Office shall:

1. Provide assistance to the air traffic facility, when requested, to prepare the camera-ready textual description of each waypoint including the name and/or to depict the VFR waypoints on a 7 1/2-minute quadrangle chart.

2. Approve the VFR waypoint charting and insure compliance with the prescribed criteria. If approval is granted, the Terminal Operations Area Office shall forward the package to System Operations Airspace and Aeronautical Information Management at least 12 weeks prior to the planned implementation date. The planned implementation date shall coincide with a publication date of the respective VFR navigation chart.

3. Coordinate overall activity when multiple facilities are affected by the planned use of VFR waypoints such as numerous VFR waypoints on a VFR chart.

4. Maintain the VFR waypoint forms (FAA Form 8260-2, Radio Fix and Holding Data Record) to include corrections, changes, or modifications, as necessary.

5. Conduct annual reviews.

d. System Operations Airspace and Aeronautical Information Management shall:

1. Review the incoming VFR waypoint proposals for completeness.

2. Verify that the requested five-letter “VP” combinations are available for use.

3. Forward the package to National Aeronautical Charting for verification of the geographic positions.

4. Upon verification, National Aeronautical Charting shall notify System Operations Airspace and Aeronautical Information Management prior to publication in the National Flight Data Digest (NFDD).

5. Maintain VFR waypoint forms (FAA Form 8260-2) to include corrections, changes, or modifications, as necessary.

e. National Aeronautical Charting shall:

1. Review the incoming VFR waypoint proposals for completeness.

2. Coordinate with System Operations Airspace and Aeronautical Information Management for the resolution of any geographic positions that require FAA Form 8260–2 revisions; provide System Operations Airspace and Aeronautical Information Management with verification that geographic positions

are ready for publication in the NFDD.

3. Coordinate with System Operations Airspace and Aeronautical Information Management to ensure that any new or revised VFR checkpoints are published in the NFDD.

4. Publish VFR waypoint geographic positions in the A/FD and on appropriate VFR charts.

Chapter 12. Facility Statistical Data, Reports, and Forms

Section 1. General Information

12-1-1. GENERAL

Since the inception of ATC, there has been some method of recording the volume of air traffic activity. The FAA collects this statistical data to be used for a wide variety of reasons, including budgeting, forecasting, planning, facility classification, decision making, programming new equipment, historical analysis, etc. Because of its broad application and national use, it is imperative that the gathering of statistics be both standardized and accurate. A primary use of operational count data is that of determining controller grade levels. As such, it reflects the factors of knowledge and skills required and responsibility involved with the type service being provided. Not every service provided will qualify for an operational count, but those which do are considered typical of the total facility responsibility. Two basic requirements must be met for operational count: first, the facility must be actively working the aircraft, and second, the service provided must qualify using the guidelines established throughout the remainder of this chapter. Facility air traffic managers, therefore, must insure that the intent of the provisions in this chapter are fulfilled.

12-1-2. USE OF AUTOMATED COUNTS

Computer counting routines may be used for any of the operational counts required for the completion of FAA Forms 7230-1, 7230-12, or 7230-26. A facility may also elect to use a combination of manual and automated procedures to meet the traffic count requirements. For example, an ARTS terminal may count instrument operations for primary and secondary airports, plus instrument approaches for the primary airport, using the computer, while airport operations, TRSA operations, and instrument approaches for secondary airports are counted manually. The accuracy of computer counts shall be verified periodically to be within plus/minus 3 percent of the actual traffic count.

12-1-3. QUESTIONS OR CHANGES

Any questions as to how a particular operation should be counted, or any recommendations for changes to the procedures and the reports below, should be forwarded to the respective Terminal Operations Area Office. Terminal Operations Area Offices shall forward their questions/recommendations to Operations Analysis.

12-1-4. SUMMARY OF STATISTICAL REPORTS AND FORMS

The charts presented below are offered as quick reference summaries of the requirements in this chapter. (See TBL 12-1-1.)

TBL 12-1-1
Forms Summary

<i>Name</i>	<i>Form #</i>	<i>RIS #</i>	<i>Period of Report</i>	<i>Section for Details</i>	<i>Who Submits</i>
Airport Traffic Record	7230-1	7230-99	Monthly	2	All towers
Instrument Operations	7230-26	7230-151	Monthly	3	Approach Control facilities
Instrument Approach Worksheet	7230-16		Daily	4	Facilities use only
Instrument Approaches Monthly Summary	7230-12	7230-130	Monthly	4	Approach Control facilities
Others			As required	6	As required

TBL 12-1-2
MONTHLY SUBMISSION SUMMARY

<i>Facilities Classified As:</i>	<i>Must Submit Form 7230-#</i>		
	<i>1</i>	<i>26</i>	<i>12</i>
Limited Radars	X	X	
No Tower RAPCON/RATCF/C Common I		X	X
Nonradar Approach	X	X	X
Radar Approach Controls with Towers	X	X	X
VFR Towers	X		

Section 2. Airport Operations Data

12-2-1. AIRPORT OPERATIONS COUNT

The airport operations count is the statistic maintained by the control tower. Basically, it is the number of arrivals and departures from the airport at which the airport traffic control tower is located. Specifically, one airport operation count is taken for each landing and takeoff, while two airport operations counts; i.e., one landing and one takeoff, are taken for each low approach below traffic pattern altitude, stop and go, or touch and go operation.

12-2-2. CATEGORIES OF OPERATIONS

Maintain airport operations data by the following categories:

a. ITINERANT: Operations not classified as “local,” including the following subcategories:

1. Air Carrier: Operations by aircraft identified in Appendix 3, Air Carrier for Air Traffic Activity Operations Count, which use three-letter company designators.

2. Air Taxi: Operations by aircraft other than those identified in Appendix 3 which use three-letter company designators or the prefix “TANGO” or “Lifeguard.”

NOTE—

Air Taxi operators who do not have an FAA issued designator have been authorized to use the prefix “TANGO” or “Lifeguard.”

3. Military: All classes of military operations.

4. General Aviation: Civil operations not classified as air carrier or air taxi.

b. LOCAL: Operations remaining in the local traffic pattern, simulated instrument approaches at the airport, including the following subcategories, and operations to or from the airport and a practice area within a 20-mile radius of the tower.

1. Military: All classes of military operations.

2. Civil: All civilian operations, including local flights by air carrier and air taxi aircraft.

12-2-3. FORMATION FLIGHT OPERATIONS COUNT

Consider more than one aircraft operating in a formation as a single aircraft, except that if the formation breaks up into smaller formations, consider each additional formation as a separate aircraft.

12-2-4. FAA FORM 7230-1, AIRPORT TRAFFIC RECORD

FAA Form 7230-1 is a monthly form which shall be used by all towers for reporting daily and monthly total airport operations traffic count. The front side has the provisions for normal airport operations count. These are the data used for classification purposes by nonapproach (VFR) or nonradar approach control facilities. The back of the form has provisions for remarks and for instrument operations to be reported by facilities which are VFR towers only. The form which is forwarded as the official facility traffic count must be neat, readable, and conform to the standard layout, as many of the individual columns will be keypunched for computer processing and storage.

12-2-5. INSTRUCTIONS FOR COMPLETING FAA FORM 7230-1

a. FRONT SIDE: The facility’s name and location will be spelled out; two digits each will be used for the month and the year (March 2004 would be 03, 04); and the three-character location identifier filled in. The facility type should be checked. If Box E (VFR TOWER) is checked, the facility is a VFR tower only, receiving approach control services from an ARTCC or a nonrelated approach control. Such a VFR tower must also report the instrument operations for that airport on the back side of this form. If Box B, C, or D is checked, the facility is itself an approach control and will report its instrument operations on FAA Form 7230-26. If a facility changes its type, such as changing from a nonradar approach to a radar approach control, the “Facility Type Changed” box should be marked on the 1st month this change occurs. Finally, if a facility changes its hours of operation, the new hours should be filed in the month the change takes place. As both the latter two items affect classification, it is important for the facility to properly reflect such changes.

1. Airport Operations Count: Each day record the airport operations count by category. The categories are added across to get total *itinerant* and total *local*, which two are also added across to get the total operations for the day. At the bottom of the form, a row marked “TOTAL” is for the monthly total of each column.

2. Special Use: Routinely, the special use column is not used, but it is provided for the occasional special project which may be directed by the Washington or the Terminal Operations Area Office.

b. REVERSE SIDE: Facilities which use the back side for any reason must repeat the entries for the month, the year, and the location identifier. This provision ensures proper identification in the case of multiple copies.

1. Instrument Operations: VFR towers that checked Box E on the front side of this form report their instrument operations count here. These operations will not be used in any classification process. They will only be used in the air traffic activity publications. Detailed definitions for what constitutes an instrument operation may be found in Section 3, Instrument Operations Data, but a concise summary is offered below. Approach control facilities are reminded to report their instrument operations in accordance with Section 3 of this chapter.

2. Remarks: The remarks area may be used any time to enter pertinent comments concerning other portions of the form.

12-2-6. DISTRIBUTION AND AMENDMENT

a. Distribute FAA Form 7230-1 as follows: (*It may be combined in one envelope with the other monthly forms*).

1. The original and one copy to the Terminal Operations Area Office not later than the 2nd workday (Monday–Friday) of the following month.

2. One copy to the facility’s files.

3. One copy to the airport manager as requested.

b. Correct any errors in the forms sent in last month by completing a new form, circling the revised fields, and marking the form “AMENDED COPY.” Amended copies of the forms more than 1 month old will not be accepted unless approval has been obtained from Aviation Policy, Planning, and Environment, Statistics and Forecast Branch, APO-110, by the Terminal Operations Area Office. Send the amended copies along with the current reporting month’s forms to the Terminal Operations Area Office.

12-2-7. CRITERIA FOR INSTRUMENT OPERATIONS COUNT, NONAPPROACH CONTROL FACILITIES

a. Nonapproach control terminal facilities count one instrument operation for aircraft which:

1. Are on an IFR flight plan or a Special VFR clearance and depart or arrive at the airport.

2. Are on an IFR flight plan and execute a missed approach procedure.

3. Are on a Special VFR clearance and transit the Class D and Class E surface area.

4. Are on a Special VFR clearance and operating wholly within the Class D and Class E surface area; e.g., local Special VFR making a series of landings and takeoffs.

b. Tabulate this count by *air carrier*, *air taxi*, *military*, and *general aviation* categories of aircraft.

Section 3. Instrument Operations Data

12-3-1. INSTRUMENT OPERATIONS COUNT

a. The instrument operations count is the statistic maintained by the terminal approach control facility. Basically, it is an arrival or a departure of an aircraft operating in accordance with an IFR flight plan or an operation where IFR separation between aircraft is provided. Specific guidelines are provided in the following paragraphs.

b. The count is reported separately for: the activity at the primary airport, which is normally the airport on which the approach control is located; activities at all the secondary airports combined; and the activity classified as an overflight, which is an aircraft that transits the area without intent to land. The instrument operations count also includes Class B or C service and TRSA operations which are reported separately, but added together in Washington.

12-3-2. CATEGORIES OF OPERATIONS

Maintain instrument operations data on the following categories:

a. Air Carrier: Operations by aircraft identified in Appendix 3, Air Carrier Aircraft for Air Traffic Activity Operations Count, which use three-letter company designators.

b. Air Taxi: Operations by aircraft other than those identified in Appendix 3 which use three-letter company designators or the prefix "TANGO" or "Lifeguard."

NOTE-

Air Taxi operators who do not have an FAA issued designator have been authorized to use the prefix "TANGO" or "Lifeguard."

c. Military: All classes of military operations.

d. General Aviation: Civil operations which are not classified under *air carrier* or *air taxi*.

12-3-3. FORMATION FLIGHT OPERATIONS COUNT

Consider more than one aircraft operating in a formation as a single aircraft, except that if the formation breaks up into smaller formations, consider each additional formation as separate aircraft.

12-3-4. CRITERIA FOR INSTRUMENT OPERATIONS COUNT, APPROACH CONTROL FACILITIES

Terminal approach control facilities shall maintain a count of instrument operations which meet both the following criteria:

a. The aircraft must be:

1. On an IFR flight plan or SVFR clearance; or
2. Provided approved standard separation while conducting practice instrument approaches; and

b. The facility must have control jurisdiction over the aircraft. (An instrument operations count shall not be taken by approach control for aircraft remaining wholly within the traffic pattern under control of the local controller in the tower executing touch and go's, low approaches, stop and go's, or full stop landings with a subsequent taxi back for another departure.) Radio communications for doing this is not a requirement for an allowable instrument operations count.

12-3-5. TABULATION

Count instrument operations as follows:

a. For aircraft operating on an IFR flight plan, count one instrument operation for each aircraft that:

1. Takes off.
2. Lands.
3. Executes an unplanned missed approach.
4. Transits the facility's area. (The flight originates outside approach control airspace and passes through approach control airspace without landing or without making an instrument approach with the intent to land.)

b. For aircraft practicing instrument procedures (either on an IFR flight plan or a VFR aircraft if approved standard separation is provided), count one instrument operation for each aircraft that:

1. Takes off from a complete stop and practices an instrument departure.
2. Practices an instrument approach procedure.

NOTE–

Except for subpara b3 below, when a count has been taken for a practice instrument approach, do not take a second instrument count for the departure phase of the flight when the aircraft executes a planned missed approach, a low approach, or a touch and go. (Example: An aircraft takes off on an IFR flight plan to fly five practice instrument approaches, landing on the last one. His/her total instrument count would be six: one for the takeoff and instrument departure, plus one for each of the approaches.) Practice instrument approaches are to be reported as instrument operations, not as Class B or C service or TRSA operations.

3. Executes a departure after a low approach, touch and go, or planned missed approach for a destination other than the airport at which the practice approach was made.

c. For aircraft operating on a SVFR clearance, count one instrument operation for each aircraft that:

1. Takes off.

2. Lands. (Exception—for an aircraft that takes off from one airport and lands at another airport within the same surface area, only one instrument operation shall be counted.)

NOTE–

When an aircraft operates on a SVFR clearance for the purpose of practicing instrument approaches, it is counted as in subpara b above; when the SVFR clearance is for a series of VFR patterns and landings, only one instrument count shall be taken for the SVFR clearance, while each takeoff and landing is tabulated as an airport operation.

3. Transits the facility's surface area. (The flight originates outside the surface area and passes through the surface area without intent to land.)

d. Only one count shall be tabulated for each instrument operation which occurs within a combined facility; e.g., RAPCON/Tower, RATCF/Tower, or Tower/VFR Tower. Separate strips may be prepared in the two facilities to record the same aircraft, but only one instrument count shall be taken.

12-3-6. CRITERIA FOR CLASS B OR C SERVICE AND TRSA OPERATIONS COUNT

Terminal radar facilities providing Class B or C service in Class B or C airspace and Outer Areas or TRSA service shall maintain a count of Class B or C

services or TRSA operations which meet both the following criteria:

a. The aircraft must be provided approved standard separation by the radar controller.

b. The facility must have control jurisdiction over the aircraft.

NOTE–

Aircraft which remain under the tower's control shall not be counted as Class B or C services or TRSA operations even though the tower controller uses BRITE/DBRITE to supplement his/her visual observations.

12-3-7. TABULATION OF CLASS B OR C SERVICE AND TRSA OPERATIONS

Terminal radar facilities shall tabulate Class B or C service and TRSA operations using the same criteria as used for tabulating instrument operations for aircraft on an IFR flight plan.

NOTE–

The terminal facilities instrument operations as published in the air traffic activity publication will include the instrument operations plus the Class B or C service and the TRSA operations. This data will be reported separately by facilities but totaled by Operations Analysis in Washington.

12-3-8. FAA FORM 7230-26, INSTRUMENT OPERATIONS

FAA Form 7230-26 is a monthly form which shall be used by all terminal approach control facilities for reporting their daily and monthly instrument operations count, including the Class B or C services and the TRSA count if applicable. Side 1 of the form has provisions for the reporting of the normal instrument operations count required for all approach control facilities. This side fulfills the requirement of the majority of facilities. Side 2 of the form is for the Class B or C services or the TRSA count and must be filled in by facilities providing that service in Class B or C airspace or a TRSA. Such facilities must repeat the heading entries for the month, the year, and the location identifier. This provision ensures proper identification in the case of multiple copies. The form which is forwarded as the official facility traffic count must be neat, readable, and conform to the standard layout. No exceptions to this standardization policy can be allowed since the data will be keypunched for computer processing and storage by operators who are not familiar with air traffic terminology.

12-3-9. INSTRUCTIONS FOR COMPLETING FAA FORM 7230-26

a. FRONT SIDE or SIDE 1: The facility's name and the location will be spelled out; two digits each will be used for the month and the year (March 2004 would be 03, 04); and the three-character location identifier will be filled in. The appropriate facility type box should be "x"ed. If a facility changes its type, such as changing from a Tower/TRACON operation to a common IFR room concept, the "Facility Type Changed" box should be marked on the 1st month the change occurs. Finally, if a facility changes its hours of operation, the new hours should be filed in the month the change takes place. As both the latter two items affect classification, it is important for the facility to properly reflect such changes.

1. Instrument Operations Count: Each day, record by category the instrument operations count for the primary airport, all the secondary airports combined, and the overflights. The categories shall be added across to get a total for the Primary, Secondary, and Overs. These three subtotals shall, in turn, be added across to get the "DAILY TOTAL." Near the bottom of Side 1, a row marked "TOTAL" is for the monthly total of each column. This provision allows facilities to double check their addition. Adding across the "TOTAL" row for AC, AT, GA, and MI should equal the number achieved by adding down the "TOTAL" column in each of the three breakouts of Primary, Secondary, and Overs. Similarly, adding across the "TOTAL" row for Primary, Secondary, and Overs should equal the number achieved by adding down the "DAILY TOTAL" column. This check should be performed, and any discrepancies corrected prior to mailing the form. At the very bottom of the form is a row marked "1," which may be used any way the facility desires to use it.

2. Grand Total: The "GRAND TOTAL" column should only be used by facilities which provide Class B or C service or TRSA service. It allows for adding together the "DAILY TOTALS" of Side 1 and Side 2 to get the grand total of instrument operations and Class B or C services or TRSA operations combined. This column is provided for the convenience of the facility and the region since it will not be used in Washington, rather the computer program will add the two daily total columns.

b. SIDE 2: Facilities which use Side 2 must repeat their entries for the month, the year, and the location identifier. Additionally, if you are reporting Class B or C service for the first time, the "yes" box should be checked.

NOTE-

Class B or C airspace facilities are to line out the TRSA service references at the top of the form and insert Class B or C service. A change from TRSA airspace to Class B or C airspace requires a checkmark in the "yes" box.

1. Side 2 is set up the same way as Side 1. Each day, record by category the Class B or C service or the TRSA operations count for the Primary and Secondary airports and the Overflights. Subtotals for these three breakouts and the "DAILY TOTAL" column are the same as Side 1. Also, the "TOTAL" row and "1" row at the bottom are the same as Side 1.

2. Folding: Fold marks are provided at the top and bottom margins of Side 2. Folding the form on these marks positions the "DAILY TOTAL" of Class B or C service or TRSA operations side-by-side with the "DAILY TOTAL" of instrument operations. These two columns may now be easily added across to get the "GRAND TOTAL." This is a required entry for facilities using both sides of the form.

12-3-10. DISTRIBUTION AND AMENDMENT

a. Distribute FAA Form 7230-26 as follows: *(It may be combined in one envelope with other monthly forms).*

1. The original and one copy to the Terminal Operations Area Office not later than the 2nd workday (Monday-Friday) of the following month.

2. One copy to the facility's files.

3. One copy to the airport manager as requested.

b. Correct any errors in the forms sent in last month by completing a new form, circling the revised fields, and marking the form "AMENDED COPY." Amended copies of forms more than 1 month old will not be accepted unless approval has been obtained from Aviation Policy, Planning, and Environment, Statistics and Forecast Branch, APO-110, by the Terminal Operations Area Office. Send the amended copies along with the current reporting month's forms to the Terminal Operations Area Office.

Section 4. Instrument Approach Data

12-4-1. GENERAL INTRODUCTION

Terminal approach control facilities are responsible for the tabulation and reporting of instrument approach data for those nontower and VFR tower airports under their jurisdiction to which instrument approaches are conducted. Instrument approach data are used primarily to determine the need and the priority order of approach aids, such as ILS, MLS, and VOR. Therefore, it is not necessary to report instrument approaches made to purely military airports unless the FAA is responsible for providing the aids for that airport. One count shall be recorded for each approach meeting the criteria listed below:

a. An *instrument approach* is an approach made to an airport by an aircraft on an IFR flight plan when the visibility is less than 3 miles or the ceiling is at or below the minimum initial approach altitude.

b. Where no weather reporting service is available at nontower satellite airports, the following criteria in descending order shall be used to determine valid instrument approaches:

1. A pilot report.
2. If the flight has not canceled its IFR flight plan prior to reaching the initial approach fix.
3. The official weather as reported for any airport located within 30 miles of the airport to which the approach is made.

12-4-2. AIRCRAFT NOT INCLUDED IN INSTRUMENT APPROACH CATEGORY

Do not consider aircraft requesting clearance to enter the surface area or the traffic pattern for VFR flight in weather below basic VFR minima as being on an IFR flight plan nor as executing an "instrument approach." (Do not confuse an "instrument approach" for an "instrument operation.")

12-4-3. FAA FORM 7230-16, APPROACH DATA WORKSHEET

FAA Form 7230-16 is a worksheet for the purpose of recording instrument approaches. The form does not have a specific arrangement, thus allowing each

facility to tailor the form to its own needs. Instrument approaches will be counted by the standard *air carrier*, *air taxi*, *general aviation*, and *military* categories. At the end of the month, the totals by airport will be transferred to FAA Form 7230-12. The 7230-16 shall be retained in the facility's files.

12-4-4. INTRAFACILITY SYSTEM

Terminal facilities may establish an intrafacility system for denoting an instrument approach; e.g., an appropriate symbol on the strip. However, the data shall be indicated on FAA Form 7230-16 at the end of the watch or the day.

12-4-5. AIRPORTS REPORTED

Instrument approaches shall be reported for all airports to which instrument approaches are conducted when the FAA is responsible for the approach aids. The reporting is the responsibility of the facility which has the authority for clearing the approach. Therefore, the terminal approach control is responsible for reporting instrument approaches for the nontowered airports and the nonapproach control (VFR) towered airports in its area, as well as for the airport at which it is located. At airports where there is an FAA VFR tower, the approach control and the VFR tower shall determine which facility shall maintain the count. If the tower counts the approaches, they shall forward the appropriate totals to the approach control for inclusion in the approach control's monthly report. VFR towers do not report instrument approaches to Washington.

12-4-6. PART-TIME FACILITIES

If an approach control facility has reduced hours of operation, it retains the responsibility for reporting all instrument approaches. Therefore, it must make arrangements to obtain the number of instrument approaches conducted during its nonoperational hours from the facility, either another approach control or the ARTCC, which assumes the approach control jurisdiction during those nonoperational hours. In no case, shall two facilities report instrument approaches for the same location.

12-4-7. MILITARY STAFFED APPROACH CONTROLS

The military services are not required to tabulate or report traffic activity in accordance with this order. Where military approach controls clear instrument approaches into airports where the FAA is responsible for the approach aids, it shall be the responsibility of the Service Area offices to ensure the instrument approaches are correctly reported. They may be reported either by the ATREP or by including the instrument approaches count on an adjacent FAA facility's (terminal or ARTCC) FAA Form 7230-12.

12-4-8. FAA FORM 7230-12 INSTRUMENT APPROACHES MONTHLY SUMMARY

FAA Form 7230-12 is a monthly form, submitted by both centers and terminal approach control facilities, for reporting the number of instrument approaches made at airports for the month. The facility's name and location will be entered; two digits each will be used for the month and the year (January would be 01); and the three-character identifier filled in at the top of form. Terminal facilities shall check box A, B, or D as appropriate. Those facilities checking box A, Common IFR Rooms, RAPCONs, etc., shall not enter any data in the block for "Instrument Approaches Terminating at Primary Approach Control Airport." These facilities shall list all their airports under the heading "Instrument Approaches to Nonapproach Control Airport" by filling in the airport three-character identifier with the respective monthly totals by category. ATREPs would also report in this manner. Facilities checking box D will report the airport whose identifier has been filled in at the top of the form as the primary approach control airport. This is usually the airport from which the approach control service is provided. All other airports shall be listed under "Instrument Approaches to Nonapproach Control Airports" by filling in the airport three-character identifier with the respective monthly totals by category. If a facility has more airports than can be

listed on the front, continue on the back of the form. In this case, the approach control facility's identifier and the month and the year must be entered again at the top of the back. Only centers and approach controls submit this form, not VFR towers, and, in no case, should two facilities report the same airport. Therefore, it may be necessary for facilities to make arrangements to ensure that there is no duplicate reporting of instrument approaches.

12-4-9. DISTRIBUTION AND AMENDMENT

a. Distribute FAA Form 7230-12 as follows: (*It may be combined in one envelope with the other monthly forms*).

1. The original and one copy to the Terminal Operations Area Office not later than the 2nd workday (Monday-Friday) of the following month.

2. One copy to the facility's files (with FAA Form 7230-16).

3. One copy to the airport manager as requested.

b. Correct any errors in the forms sent in last month by completing a new form, circling the revised fields, and marking the form "AMENDED COPY." Amended copies of forms more than 1 month old will not be accepted unless approval has been obtained from Aviation Policy, Planning, and Environment, Statistics and Forecast Branch, APO-110, by the respective Terminal Operations Area Office. Send the amended copies along with the current reporting month's forms to the appropriate Terminal Operations Area Office.

12-4-10. FORWARD COPY TO ADJACENT REGION

If the report contains data for an airport which is under the administrative jurisdiction of another Terminal Operations Area Office, also forward a copy to that Terminal Operations Area Office.

Part 4. FLIGHT SERVICE STATIONS

Chapter 13. Flight Service Operations and Services

Section 1. General

13-1-1. OPERATING POSITION DESIGNATORS

a. The following designators may be used to identify operating positions in an FSS. (See TBL 13-1-1.)

TBL 13-1-1

OPERATING POSITION DESIGNATORS

	<i>Designator</i>	<i>Position</i>
1.	AA	Airport Advisory
2.	BC	Broadcast
3.	C	Coordinator
4.	DSC	Data Systems Coordinator
5.	FD	Flight Data
6.	FW	Flight Watch
7.	IF	Inflight
8.	N	NOTAM
9.	OM	Operations Manager
10.	OS	Operations Supervisor
11.	PF	Preflight
12.	STMCIC	Supervisory Traffic Management Coordinator-in-Charge
13.	WO	Weather Observer

b. Facility air traffic managers may use designators other than those listed to accommodate local situations.

13-1-2. TEMPORARY FSS

a. Employ temporary AFSS/FSSs to assure that the aviation public is afforded adequate services. Temporary facilities may be established when requested by flying organizations, cities, and other political subdivisions to assist in the operation of fly-ins, air races, etc.

b. Each request for a detail of FAA personnel and/or equipment should be carefully considered with regard to the actual need for the service. When

it is determined that the service is required and that the required personnel/equipment can be made available without jeopardizing FAA activities, Flight Services Operations Service Area Offices should accede to the request.

13-1-3. FLIGHT PLAN AREA

The Airport/Facility Directory lists each public use airport and its associated AFSS/FSS. As changes occur, determine the flight plan area assignments as follows:

a. Normally, the Flight Services Operations Service Area Office shall assign a new airport to the nearest AFSS/FSS regardless of regional boundaries. This also shall be the determining factor for establishing flight plan areas or airport reassignments associated with AFSS/FSS commissioning, decommissioning, or functional changes.

NOTE-

Long distance telephone rates are a factor in determining the nearest AFSS/FSS to an airport.

b. Make adjustments to the flight plan area assignment through interfacility coordination with Flight Services Operations Service Area Office approval.

13-1-4. ICSS INTRODUCTORY ANNOUNCEMENT

a. FSS facilities using ICSS equipment shall provide an introductory announcement to alert pilots they are accessing the ICSS system.

EXAMPLE-

WELCOME TO THE (facility name) FLIGHT SERVICE STATION. FOR FLIGHTS OUTSIDE OF UNITED STATES CONTROLLED AIRSPACE, CHECK DATA AS SOON AS PRACTICAL AFTER ENTERING FOREIGN AIRSPACE, AS OUR INTERNATIONAL DATA MAY BE INACCURATE OR INCOMPLETE. ADVISE THE BRIEFER YOU HAVE THE INTERNATIONAL CAUTIONARY ADVISORY. TOUCH-TONE USERS MAY PRESS (ap-

appropriate code) FOR A BRIEFER OR (appropriate code) FOR THE MAIN MENU OF SERVICES. IF YOU ARE USING A PULSE OR ROTARY TELEPHONE, PLEASE REMAIN ON THE LINE AND YOUR CALL WILL BE SEQUENCED FOR THE NEXT AVAILABLE BRIEFER.

b. Newly commissioned facilities may expand the introductory announcement to include additional

access instructions until users become familiar with the system— for a period not to exceed 6 months from the date of system commissioning.

c. With Flight Services Operations Service Area Office approval, facilities may add additional menu instruction for special purpose requirements, e.g., coastal route, TIBS sectorization, etc.

Section 2. Position/Service Information Binders

13-2-1. RESPONSIBILITY

a. The air traffic manager shall provide position binders to include, but not be limited to, procedures for accomplishing position related duties and responsibilities as outlined below. Additionally, examples and formats shall be included for seldom used procedures. Cross references to documents and lists contained in other publications may be used where applicable. The air traffic manager may assign those functions, detailed below, to the appropriate position(s) as facility needs dictate but must provide those items appropriate for each position in the binders.

b. The air traffic manager shall retain one copy of the completed facility standard operating procedures directive in the operations area and distribute applicable sections to the positions to which they apply.

13-2-2. BOUNDARIES

Flight Plan Area: Provide a narrative and/or graphic depiction of the flight plan area. This includes areas covered when accepting flight plan responsibility for part-time facilities.

13-2-3. POSITIONS/SERVICES

a. Broadcast:

1. Define broadcast area and list outlets.
2. List locations and weather products.
3. Specify broadcast hours.

b. Pilot Briefing:

1. List and/or specify preflight briefing display.
2. Specify flight plan handling procedures.

c. In-Flight:

1. Document aircraft contacts.
2. List control frequencies/dial code information.

3. Specify local airport advisory/remote airport information service (RAIS)/remote airport advisory (RAA) procedures.

4. Specify SVFR procedures.

5. Specify aircraft orientation/emergency procedures.

6. Specify NAVAID monitoring procedures.

7. Specify PIREP handling procedures.

8. Specify procedures/checkpoints for DF check.

9. Specify procedures for altimeter check.

d. NOTAM Handling:

1. List authorized sources/telephone numbers. Data may be stored and displayed via electronic means such as the Model One Full Capacity View Sequences where available.

2. Specify NOTAM dissemination procedures.

3. Specify NOTAM currency/display procedures.

e. Flight Data:

1. Specify military flight plan handling/coordination procedures.

2. Specify notification procedures for military training activities, including MTRs and MOAs.

3. Specify IFR/Defense VFR (DVFR), ADIZ, Canadian, Mexican, and ICAO procedures with examples.

4. Specify customs notification procedures.

5. Specify search and rescue notification procedures.

6. List airport search/contact telephone numbers.

f. En Route Flight Advisory Service (EFAS): Provide graphic depiction of flight watch area and include communications outlets.

Section 3. Operations

13-3-1. AIRPORT CONDITION FILE

Maintain a current file of all public use civil landing areas within the AFSSs/FSSs flight plan area. Post the latest available information regarding airport conditions and facilities on the current FAA Airport Master Record (FAA Form 5010-1). Review the National Flight Data Digest, and post changes not previously received.

13-3-2. LANDING AREA STATUS CHECKS

To the extent that their operational duties permit, AFSS/FSS air traffic managers are encouraged to visit airports and to contact airport managers. Operational changes in airport conditions, facilities, or services that are observed by or reported to the FSS shall be transmitted to System Operations Airspace and Aeronautical Information Management.

13-3-3. AIRPORT SEARCH ARRANGEMENTS

AFSS/FSS air traffic managers shall arrange with the airport management of each civil landing area in the AFSSs/FSSs flight plan area, including private landing areas as appropriate, to be searched for an overdue or unreported aircraft upon request from the station. Request police assistance in searching unattended landing areas.

13-3-4. LIAISON VISITS

As practicable:

a. Visit attended landing areas at least once each year. Visit unattended fields at the discretion of the AFSS/FSS air traffic manager. Rotate liaison visits among professional level specialists.

b. Make familiarization flights over the AFSSs/FSSs flight plan area and particularly the area within 100 miles of the station. This will enable specialists to acquire and maintain knowledge of the landmarks and the facilities used in aircraft orientation and pilot

briefings. Combine familiarization flights and liaison visits as practicable.

13-3-5. DUTIES

Typical duties for liaison visits and familiarization flights include:

- a. Acquiring knowledge of airports, facilities, and topography.
- b. Becoming familiar with landmarks.
- c. Becoming familiar with the operation of aircraft equipment and navigation procedures.
- d. Discussing FAA services.
- e. Checking arrangements for handling NOTAMs.
- f. Checking arrangements for the search of airports for missing aircraft.
- g. Checking arrangements for alerting airport emergency equipment.
- h. Checking the listing of airports and other facilities in aeronautical publications and their depiction on aeronautical charts.
- i. Collecting information for the Airport Condition File and the aircraft orientation board.
- j. Ascertaining the number of based aircraft and/or itinerant operations for planning FX or other communications needs to the associated AFSS/FSS.
- k. Obtaining pilots' opinions of the services provided by the station.
- l. Practicing aircraft orientation procedures.

13-3-6. TIE-IN NOTAM RESPONSIBILITY

Tie-in AFSSs/FSSs shall make arrangements with other agencies and facilities (NWS, U.S. Army, control tower, etc.) for the proper exchange of NOTAM information.

Section 4. Services

13-4-1. PREFILED FLIGHT PLANS

When an aircraft operator regularly makes two or more identical flights per week and the AFSS/FSS air traffic manager believes that a prefiled flight plan program would provide beneficial service, a LOA shall be executed between the concerned AFSS/FSS and the scheduled operator, preferably operators certificated under 14 CFR Part 121 or 14 CFR Part 135, or the military desiring to prefile flight plans. The following criteria shall be used in coordinating and implementing the prefiled flight plan program:

a. The LOA shall provide for but not be limited to:

1. Each operator will furnish the appropriate AFSS/FSS with a specific contact for coordination including the name, address, and telephone number of the party to notify if an aircraft becomes overdue, day or night.

2. Prefiled flight plans shall be furnished for each flight, and signed by an authorized representative of the company.

3. Immediate notification by the operator of permanent cancellation or change of prefiled flight plans. This permanent data change shall be accepted any time prior to the activation of the flight plan.

4. Separate and complete flight plans shall be required when the operator desires to deviate from the prefiled data.

5. The operator shall request activation with the appropriate AFSS/FSS not more than 24 hours or less than 1 hour in advance of the estimated time of departure for prefiled flight plans. Flight plans may be automatically activated if this is contained in a LOA.

6. Violations of these procedures by the operator will be grounds to terminate the program with the operator.

b. Only those prefiled flight plans for which the operator has requested activation shall be transmitted. Prefiled flight plans which are known to be in error, not going to depart, or any other reason which will cause a cancellation or a resubmission shall not be transmitted to a control facility.

13-4-2. PRACTICE INSTRUMENT APPROACHES

At locations providing Local Airport Advisories (LAA) where either an ARTCC or an approach control facility provides standard separation to VFR aircraft practicing instrument approaches, provisions for handling such aircraft shall be included in a letter of agreement.

13-4-3. OPERATION OF AIRPORT LIGHTS

a. When an AFSS/FSS is located at an airport or at a part-time tower location, the AFSS/FSS air traffic manager may, under the terms of a LOA with the airport manager and the tower, assume this responsibility provided that:

1. The controls are extended into the station and are located conveniently at the operating position.

2. The operating quarters afford a sufficient view to determine the operating status of the lights without the specialist having to leave his/her post of duty or an indicator is provided in the station quarters which will show the actual operating status.

b. AFSS/FSS operating less than 24 hours a day which have lighting control responsibility shall be guided by the instructions in Part 3, Chapter 10, Section 6, Airport Lighting.

13-4-4. RUNWAY EDGE LIGHTS ASSOCIATED WITH MEDIUM APPROACH LIGHT SYSTEM/ RUNWAY ALIGNMENT INDICATOR LIGHTS

AFSSs/FSSs having responsibility for the control of MALS/RAIL brightness shall comply with the instructions in para 10-6-8, Runway Edge Lights Associated with Medium Approach Light System/ Runway Alignment Indicator Lights.

13-4-5. LOCAL AIRPORT ADVISORY (LAA)/ REMOTE AIRPORT ADVISORY (RAA)/REMOTE AIRPORT INFORMATION SERVICE (RAIS)

a. Provide LAA at AFSSs/FSSs during the published service hours when:

1. Located on the airport.

2. There is no operating control tower on the airport.

3. The facility has a continuous display of the automated weather data or manual weather observations.

4. A discrete frequency or the tower frequency, when the tower is closed, is available.

5. The pilot says, "I have the automated weather."

b. Provide RAA at AFSSs/FSSs during the published service hours when:

1. The airport authority or airport manager has requested the service and the facility has the resources available to provide the service.

2. The annual traffic density and employee productivity factor is high enough to justify the cost of providing the service. Published service times may be adjusted by the facility manager to accommodate anticipated or forecast traffic density changes.

EXAMPLE—

Winter service hours may be longer than summer service hours at airports that service several popular ski resorts. Therefore, the manager may choose to reduce or suspend summer service to mitigate short-term productivity concerns.

3. There is no operating control tower on the RAA airport.

4. The facility has a continuous display of the automated weather data or manual observations are reported to the facility.

5. There is a remote discrete frequency or the tower frequency is remotized to the AFSS/FSS, when the tower is closed.

6. The airport has a traffic density of 25,000 or more aircraft operations per year.

NOTE—

If a new airport fails to deliver 25,000 aircraft operations during the first year of service, RAA shall be discontinued. After the first year is completed and yields 25,000 or more

aircraft operations, the decision to continue services is evaluated on the anniversary date and based on a minimum of 25,000 aircraft operations at the target airport during any consecutive twelve months of the previous 3 years.

7. The facility's productivity factor is determined by dividing the annual RAA service count by 16,000.

NOTE—

The productivity factor is compared to the number of employees used to provide the service and must be equal to or greater than the number of employees needed to provide the service. Normally about 2.5 employees are factored annually to provide 10 hours of service per day. (The .5 factor ensures employee vacations, training periods, sick days, and daily break periods).

c. Provide RAIS to support special events at airports during NOTAM D service hours when:

1. The airport authority has requested the service at least 30 days in advance and the facility has the resources available to provide the service.

2. There is no operating control tower at the airport.

3. The facility has discrete communications capability at the airport.

4. The RAIS airport has automated weather reporting for the pilots with voice capability.

5. The pilot says, "I have the automated weather."

6. A NOTAM D has been issued at least 24 hours in advance.

13-4-6. TRANSMISSION OF MESSAGES FROM AIRPORT INSPECTORS

Accept administrative messages from airport inspectors for transmission to NFDC and other FAA offices as prescribed in Chapter 2 of FAAO 5010.4, Airport Safety Data Program.

Chapter 14. Aviation Meteorological Services and Equipment

Section 1. General

14-1-1. FAA-NWS AGREEMENT

By interagency agreement, FAA and NWS cooperate in providing aviation meteorological services to the aviation public. This cooperation is designed to provide maximum service within the combined capabilities of the two agencies.

14-1-2. CERTIFICATES OF AUTHORITY

a. AFSS/FSS personnel shall obtain a certificate of authority from the NWS before performing the following functions:

1. Weather observing.
2. Interpretation of weather radar.
3. Pilot weather briefing.
4. EFAS (Flight Watch).

b. AFSS/FSS personnel selected as Academy instructors who hold current certificates of authority for Weather Observations/Pilot Weather Briefings may maintain their currency by forwarding the certificates to the Weather Service Coordinator, AMA-514.

14-1-3. LIAISON WITH AVIATION INTERESTS

a. Because of their aviation service responsibilities, AFSS/FSS supervisors should establish and maintain cordial relations with aviation interests within their flight plan areas. They should keep apprised of aviation users' weather and aeronautical information needs and assist them in making effective use of the available services. This liaison should include other FAA facilities, NWS facilities, airport management, airline and military operations offices, fixed base operators, pilot organizations, and Civil Air Patrol (CAP).

b. Some aviation operations (e.g., emergency medical flights) require time critical services. Immediate dispatch of the mission is imperative and delays in obtaining required weather and aeronautical information may be life endangering. AFSS/FSS

managers shall cooperate to the fullest extent possible with organizations making requests for special arrangements to satisfy their requirement.

14-1-4. TELEPHONE LISTINGS

AFSS/FSS air traffic managers shall insure that appropriate telephone numbers are properly listed in telephone directories (including yellow pages when applicable) and in the Airport/Facility Directory. Include TEL-TWEB (Alaska only), and Fast File in the local directories, and insure that Foreign Exchange, Enterprise, etc., are listed in the directories of the areas which they serve. Numbers should always be listed under the subheading Flight Service Station under United States Government, Department of Transportation, Federal Aviation Administration. When possible, list the primary pilot weather briefing number under the Frequently Requested Numbers section at the beginning of United States Government listings.

EXAMPLE-

United States Government
Department of Transportation
Federal Aviation Administration
Flight Service Station
(Address)

Pilot Weather Briefing ¹

Fast File Flight Plan

Facility Supervisor ²

/1/ Parent AFSS/FSS number for part-time AFSSs/FSSs.

/2/ Administrative number.

14-1-5. MINIMUM WEATHER EQUIPMENT

AFSSs/FSSs taking basic weather observations shall have:

- a. A ceilometer (balloons and ceiling lights are acceptable until replaced).
- b. A hygrothermometer and a sling psychrometer for use in the event the hygrothermometer is inoperative.
- c. A wind direction and speed system. (A gust recorder, if required, will be furnished by NWS.)

d. A standard 8-inch rain gauge (furnished by NWS if the station reports precipitation).

e. An altimeter setting indicator and a traceable pressure standard. (A barograph, if required, will be furnished by NWS.)

14-1-6. SUPPLY-SUPPORT

Equipment used exclusively for aviation observations will be procured, installed, operated, maintained, and supply-supported by FAA. Observational equipment; e.g., gust recorders, barographs, and rain gauges, serving multiple NWS/FAA purposes will be procured, installed, maintained, and supply-supported by NWS unless otherwise agreed to. To the maximum extent possible, each agency should avail itself of the facilities offered by the other in contracting for, installing, maintaining, and supply-supporting observational equipment on a nonreimbursable basis where appropriate.

14-1-7. NWS OPERATIONS MANUAL

a. Specialized Weather Services, Chapter D-20 through Chapter D-27, are distributed by Washington headquarters to all AFSS/FSS facilities. When other D Chapters are required, facility managers shall arrange for routine distribution through the respective Flight Services Operations Service Area Office.

b. If the listed Weather Service Operations Manuals (WSOM) and associated Operational Manual Letters (OML) are not available through FAA Distribution, those items annotated with an asterisk may be obtained from:

National Oceanic and Atmospheric Administration
(NOAA) Logistics Supply Center
1510 East Bannister Road
Building 1
Kansas City, Missouri 64131

Remaining documents may be obtained by contacting the Weather Service Evaluation Officer (WSEO) servicing your area.

c. Following is a list of the available chapters. They are amended and supplemented by the issuance of either a revision or an Operations Manual Letter (OML). When ordering, specify the effected D chapter, the revision or the OML, and include the issuance number and the date. (See TBL 14-1-1.)

TBL 14-1-1

Section 2. Pilot Weather Briefing

14-2-1. BRIEFING RESPONSIBILITY

AFSSs/FSSs are responsible for providing weather briefings to users of aviation weather information calling in person, by radio, or telephone. These briefings are fulfilled by direct application or interpretation of NWS guidance forecasts supplemented by the latest observations and pilot reports.

14-2-2. WEATHER CHART DISPLAY

Some of the more useful weather charts for pilot weather briefings are: surface and upper air analysis, freezing level analysis, stability index analysis, radar depiction, weather depiction, surface and upper air prognosis, significant weather (high and low level) prognosis, and maximum wind and wind shear analysis and prognosis. Weather chart displays should include but not necessarily be limited to these charts.

14-2-3. TELEVISION EQUIPMENT

Closed circuit television equipment (CCTV) is available in a number of high-activity AFSSs/FSSs. Facilities should use the equipment to display weather graphic information. Facilities that have additional television cameras available, after graphics requirements are met, may display alphanumeric data.

14-2-4. AFSS/FSS-WSO/WSFO ADJOINING

When the offices are adjoining, the aviation briefing facilities should be combined to the extent practicable for efficient weather briefing service. A joint display should provide all needed aviation weather information. The briefing function will be conducted in accordance with local agreements prepared by the NWS and the FAA regions and based on interagency policy. Normally, briefings will be provided by AFSS/FSS personnel. The NWS will provide support by providing and updating briefing material, consultation with the AFSS/FSS briefers, and direct briefing service to the aviation user when requested by the user or the AFSS/FSS specialists.

14-2-5. AFSS/FSS-WSO/WSFO NOT ADJOINING

At locations where joint briefing displays are not practicable, cooperative briefing service may be furnished by means of a one-call phone arrangement. This system provides for all aviation weather briefing telephone requests to be received in the AFSS/FSS on lines listed under the AFSS/FSS. By a switching arrangement, the pilot can be referred to the WSO/WSFO when requested by the pilot.

14-2-6. FLIGHT PLANNING DISPLAY

Maintain flight planning displays in AFSSs/FSSs and other locations, as appropriate, convenient for pilot use. Such displays include:

- a. Aeronautical charts covering the flight plan area that depict military training routes.
- b. A planning chart with a means for measuring distances and plotting courses.
- c. Airport/Facility Directory, NOTAM publication, and Aeronautical Information Manual.
- d. Army Aviation Flight Information Bulletin.
- e. DOD IFR En Route Supplement and DOD VFR Supplement.

REFERENCE-

Para 14-2-8, Military Training Activity.

- f. Drawing of the local airport.
- g. Sunrise and sunset tables.
- h. Aero computer.
- i. Pilot chart working area.

14-2-7. FLIGHT PLANNING FORMS

AFSS/FSS facility managers shall assure FAA Form 7233-1, Flight Plans, are available in the pilot briefing area for use by pilots. Maintain a sufficient supply to provide additional copies, as needed, to pilots, aviation companies, and organizations on request.

14-2-8. MILITARY TRAINING ACTIVITY

Ensure that the current DOD General Planning (GP), DOD Flight Information Publication (FLIP), Special Use Airspace (AP/1A), Military Training Route (AP/1B), and associated charts are readily available for preflight briefings to pilots:

a. Post the DOD FLIP chart, or that portion covering at least the flight plan area plus a 100 NM extension of the AFSSs/FSSs existing flight plan area.

b. Publicize new or revised MTRs and MOAs through letters to airmen, pilot meetings, and where practicable, “handouts” charting the routes/areas within the AFSS/FSS flight plan area and the 100 NM extension of the existing flight plan area.

14-2-9. TRANSFER OF BRIEFERS

a. A pilot weather briefer transferring from one briefing assignment to another or returning to a pilot weather briefing position after a break of 3 months to 1 year in the performance of briefing duties is required to obtain a reorientation check before performing pilot weather briefing duties.

b. A pilot weather briefer returning to briefing duties after an absence of more than 1 year from briefing duties is required to be requalified by means of an oral examination by the NWS.

c. AFSS/FSS personnel who are selected as Academy Instructors. (See para 14-1-2, Certificates of Authority.)

Section 3. En Route Flight Advisory Service (EFAS)

14-3-1. GENERAL

EFAS, Radio call; “FLIGHT WATCH” is a service specifically designed to provide en route aircraft with timely and meaningful weather advisories pertinent to the type of flight being conducted. This information is limited to near-time or real-time weather that will directly affect an aircraft’s route of flight. Full weather briefings and nonweather aeronautical information are not provided by Flight Watch Specialists (FWS).

14-3-2. FLIGHT WATCH AREA (FWA)

The FWA is the area within which EFAS is provided by the Flight Watch Control Station (FWCS).

a. The FWA shall normally be defined by the boundary of the associated ARTCC plus 100 NM.

b. The Flight Services Operations Service Area Director may redesignate the FWA when necessary to accommodate service responsibilities at facilities not yet consolidated into ARTCC areas. These FWAs will vary according to the number and range of the communications outlets, but should include an area that overlaps adjacent FWCS operational areas by at least 50 NM.

14-3-3. SYSTEM CONFIGURATION

a. EFAS shall be provided to aircraft within communications coverage of the FWCS. This will normally be considered congruent to the FWA.

b. Remote Communication Facilities (RCF) locations shall be at an AFSS/FSS, an existing RCF, or a VOR location when possible. The locations may be adjusted when it is advantageous to do so for reasons such as better communications coverage, leasing problems, etc.

c. Communications, through local or remote outlets, shall be provided to enable pilots operating at or above 5,000 feet above ground level to maintain communications over the area served by the FWCS.

d. Frequency 122.0 MHz shall be provided as a common frequency at all EFAS facilities and used for communications with aircraft flying below 18,000 feet MSL.

e. An assigned discrete frequency shall be available for communications with aircraft operating at FL180 and above within each FWCS’s associated ARTCC area. This does not preclude use of the frequency for communications with aircraft operating at a lower altitude where frequency coverage permits.

14-3-4. HOURS OF OPERATION

EFAS shall be available from 6 a.m. to 10 p.m. local time, 7 days a week. The Flight Services Operations Service Area Office, with concurrence of the Vice President, Flight Services, may authorize extension of hours or a 24-hour operation when it is determined that expanded or continuous operation is essential to aviation safety.

14-3-5. STAFFING

a. The EFAS operating position shall be manned by certified FWS. Each FWCS shall be staffed sufficiently for the authorized hours of operation. The Flight Services Operations Service Area Office can authorize additional staffing levels when justified and requested by the facility air traffic manager.

b. During periods of high activity, an additional specialist may be assigned to the position to assist the FWS in the processing, posting, and dissemination of weather information. It is not required that this specialist be EFAS qualified to perform these duties.

14-3-6. NATIONAL WEATHER SERVICE (NWS) SUPPORT

a. The NWS area manager (normally the WSFO meteorologist-in-charge) of the WSFO within which the FWCS is located, or as designated by the NWS regional office, has the responsibility to monitor and evaluate the various links between the NWS and FAA facilities. The air traffic manager shall coordinate with the designated NWS area manager to establish and maintain EFAS/NWS local procedures.

b. The CWSU of the associated ARTCC is designated as the primary operational support facility for the FWCS. The CWSU will, to the extent practicable, commensurate with other duties:

1. Provide duty briefings once per shift, as initiated by the FW specialist, which will include a

thorough description of meteorological conditions which are impacting, or are expected to impact, aviation weather within the FW/ARTCC area.

2. Provide expertise for consultation of ongoing weather trends during the hours the CWSU is operational.

c. Support for EFAS operational questions or clarification concerning weather is also provided by the associated WSFO and the National Aviation Weather Advisory Unit (NAWAU) for specific products originated by these offices. The WSFO will also provide EFAS support, (weather consultation) as necessary, when CWSU service is unavailable.

NOTE—

The CWSU hours of operation are normally the same as the EFAS facility. Preparation and priority duties may preclude extended service for the first 1 to 2 hours of operation.

14-3-7. EQUIPMENT

A separate position of operation shall be provided for EFAS. The following equipment and/or material shall be terminated in, or readily accessible at, the EFAS console:

a. Graphic weather chart, computer “view sequences,” and written message display equipment.

b. Weather radar displays to provide presentations from local and remote sites covering the associated ARTCC area plus 100 NM when available and feasible. (Dependent on sites and coverage.)

c. Weather satellite displays.

d. Alphanumeric Service A weather data.

e. AFSS/FSS/NWS lines. Access shall be provided to the associated CWSU and WSFO providing aviation meteorological support.

f. Position recording of the FW position and an associated time signal shall be provided at FWCSs.

g. PIREP display. A PIREP graphic display, computer “view sequence” or manual equivalent (written) shall be provided at the EFAS position for display and maintenance of pilot reported weather conditions over the FWA.

14-3-8. TRAINING

a. FAA Academy Training. Successful completion of Course 50201, Flight Service Station En Route Flight Advisory Service is required prior to position certification.

b. Facility Training. “Facility qualification training and certification requirements for the FWS position shall be developed and administered using the guidance contained in FAAO 3120.4, Air Traffic Technical Training.”

14-3-9. CERTIFICATION

The following personnel shall be certified on the FWS position:

a. All newly selected FWS.

b. All first-line supervisors assigned to FWCS locations. The certification must be accomplished within 1 year of selection or during the probationary period.

c. All permanently assigned training specialists and quality assurance specialists at FWCS locations. Resident Course 50201 should be completed within the first year of assignment.

14-3-10. RECERTIFICATION REQUIREMENTS

a. Previously certified personnel, after an absence of more than 120 days but less than 1 year shall be provided refresher training at the facility as determined by the facility manager and recertified on the position by their first-line supervisor.

b. Previously certified personnel, after an absence of more than 1 year from the FWS duties shall be provided refresher training at the facility as determined by the facility manager, pass an EFAS Recertification Examination, and be recertified on the position by their first-line supervisor.

c. The EFAS certification exam is maintained by Mike Monroney Aeronautical Center, Initial Training Branch, Flight Service Training Section. To obtain a copy, forward a written or electronic request to the Flight Service Training Section. Instructions for administration and grading of the examination will be included in the package.

14-3-11. QUALIFICATION AND SELECTION

a. To be considered for an EFAS position, an air traffic control specialist must have, as a minimum, 2 years experience as a facility-rated FPL specialist.

b. All personnel shall be selected under applicable agency personnel policies.

Section 4. Broadcasts

14-4-1. STATION BROADCASTS

Facility air traffic managers shall select the specific reports to be included in the Scheduled Weather Broadcast (SWB) and the Transcribed Weather Broadcast (TWEB). Include in each type broadcast a sufficient number of reports to serve the users' needs. The selection of the reports and any proposed changes shall be coordinated with known users of the station broadcast. In addition, facility air traffic managers at TWEB transcribing locations shall coordinate with facility air traffic managers at remote outlets to ensure adequate service to the users in all areas covered by the TWEB facility. The reports should be broadcast in clockwise order, beginning with the report nearest to but east of true north from the broadcast station. Changes may be implemented immediately unless prior Flight Services Operations Area Office approval is required.

14-4-2. COORDINATE WITH WEATHER SERVICE FORECAST OFFICE (WSFO) (ALASKA ONLY)

AFSS/FSS air traffic managers at TWEB transcribing locations shall coordinate with the associated WSFO to ensure that TWEB forecast texts are adjusted as requirements change.

14-4-3. COMMERCIAL BROADCAST STATIONS

Requests to broadcast scheduled or transcribed weather broadcasts which may be useful to the aviation community may be approved on an individual basis provided:

- a. Any such request is coordinated with the FAA and the NWS regional office before approval.
- b. The radio station identifies the source of the information.
- c. The broadcast is confined to within 1 hour of the time announced on the TWEB or the SWB.
- d. If feasible, the broadcast is not identified or associated with a sponsor. The FAA and the NWS

prefer such a program be carried as a public service feature of the standard broadcast station.

e. No commercial broadcast station or other special equipment is located in the AFSS/FSS.

f. FAA personnel shall not make direct or recorded broadcasts regularly over a standard broadcast station. A waiver to this policy must be approved by the respective Flight Services Operations Area Office and the Vice President of Flight Services.

NOTE-

TWEB procedures apply only to FSS and AFSS facilities in Alaska.

14-4-4. REDUCING RECORDED WEATHER INFORMATION SERVICES

Recorded weather services are TWEB (Alaska only) and TIBS. These services are very valuable and cost effective when utilized by the aviation community. The following guidelines will assist facility managers when adjusting services.

a. Minimum service hours for recorded weather services shall be from 0600 thru 1800 local. Waivers shall not be granted.

b. The facility manager may increase or reduce services between the hours of 1800 thru 0600 hours. To assist in the decision process the manager shall proactively solicit user input at least twice annually.

c. A record summarizing the semi-annual solicitation activities shall be maintained to justify and support the decision process and resultant changes in service. The record shall contain an evaluation section with conclusions, as statement of actions taken in response to the information, and a 60-day follow-up plan to verify use of the requested services.

d. The record shall be retained locally for three years then destroyed.

e. When services are added in direct response to a request for services from local aviators and the 60-day evaluation determines a lack of use or very low use, prior to discontinuing the new services discuss the issues with the group's representative.

Chapter 15. Equipment

Section 1. General

15-1-1. RESPONSIBILITY

AFSS/FSS air traffic managers shall identify requirements for new and replacement equipment and facilities, including weather observing equipment, by budget submission.

15-1-2. AIRCRAFT ORIENTATION PLOTTING BOARD

FIG 15-1-1

Example of a Standard Aircraft Orientation Plotting Board

Maintain an aircraft orientation plotting board (see FIG 15-1-1), parallel rulers, plotters, and fine-line china marking pencils for use in aircraft orientation. Record pertinent information directly on the board using the marking pencils. After the orientation is completed, transfer the information from the plotting board to official forms for record purposes.

15-1-3. ADDITIONAL TELEPHONE SERVICE

Submit operational justification for additional local telephone service to the service area office when a facility receives or makes telephone calls amounting to an aggregate of more than 20 minutes per line during a normal daily peak hour. The rotary system shall be used for this service.

15-1-4. ORDERING OVERLAYS

a. Compass Rose Clear Plastic Overlays. When ordering the overlays, use the following National Stock Numbers (NSN):

1. DF plotting board 6-inch compass rose:
NSN 5220-01-062-8230.

2. VOR 3-inch compass rose:
NSN 5220-01-062-8231.

b. Requests for aircraft orientation plotting board and compass rose overlays should be forwarded to:

FAA Mike Monroney Aeronautical Center
P.O. Box 25082
Oklahoma City, Oklahoma 73125

c. Items shall be ordered by using one of the following three methods:

1. LIS System: NSELITE System through Service Area office; must have NSN, user ID and password, supply support code (SSC), facility type (equipment application), and facility location identifier.

2. IMPART: www.impart.faa.gov; must have NSN, user ID and password, facility location identifier.

3. FAA Logistics Center, Customer Care Center—(405) 954-3793 or 1-888-322-9824; must have NSN or part number, supply support code (SSC), equipment application, facility location identifier.

15-1-5. LEASED EQUIPMENT SUPPLIES

a. AFSSs/FSSs equipped with Leased Service A Systems (LSAS) shall provide all expendable items. These should normally be obtained through the FAA supply system.

b. Paper used in the LSAS monitor printer shall be retained for 15 days.

Section 2. Frequencies

15-2-1. VOR AND VORTAC VOICE CHANNELS

Provide control lines for air-ground communications and Category I monitoring on all VORs and VORTACs as follows:

a. Provide independent transmitting and receiving lines to the controlling AFSS/FSS when a remote communications outlet is associated with the VOR or the VORTAC.

b. Provide one line when a remote communications outlet has only a 122.1 MHz receiver.

c. Control lines are not required if line costs considerably exceed normal costs and cannot be justified in a particular case.

15-2-2. UHF EN ROUTE CHANNEL

Frequency 255.4 MHz shall be the UHF channel for en route communications with military aircraft and shall be provided as necessary to meet military en route requirements.

Chapter 16. Facility Statistical Data, Reports, and Forms

Section 1. General Information

16-1-1. FORM USAGE

a. AFSSs/FSSs, as used herein, include and apply to combined facilities insofar as station functions are concerned. All domestic and IAFSS/IFSS shall use FAA Form 7230-13 daily for recording in-flight, flight plan, and pilot briefing activity.

REFERENCE-

Para 16-5-3, Distribution and Amendment.

TBL 16-1-1

National Activity Summarization

<i>Type of Activity</i>	<i>Required Breakdown</i>	
	<i>Type of Service Involved</i>	<i>Category of Use</i>
Aircraft contacted	IFR/DVFR/SVFR (grouped) VFR	AC, AT, GA, MI
Flight plan count	IFR & DVFR (grouped) VFR	No breakdown required
Pilot briefs		No breakdown required

b. A minimum amount of information regarding AFSS/FSS activity, suitably broken down, is required to determine manpower requirements and for budgetary and personnel matters. There is a need for national summarization monthly of the above activity: (See TBL 16-1-1.)

16-1-2. TOTAL FLIGHT SERVICES FORMULA

Total Flight Services have historically been and continue to be used as a measurement of the overall activity of individual AFSSs/FSSs. Total Flight Services are based on the following formula:

a. AFSS/FSS: Total Flight Services equal two times pilot briefs plus two times flight plans originated plus aircraft contacted.

b. IAFSS/IFSS: Total Flight Services equal two times pilot briefs plus two times flight plans originated plus two times aircraft contacted.

c. IAFSS/FSS/IFSS: Total Flight Services equal two times pilot briefs plus two times flight plans originated plus two times international aircraft contacted plus one times domestic aircraft contacted.

NOTE-

Total Flight Services are not to be confused with the Flight Service Activity Factor, which is used for facility grade level determination and reclassification purposes. The present classification criteria and related formula for the Flight Service Activity Factor are contained in the GS-2152 position-classification standard issued by Civil Service Commission (CSC) (now Office of Personnel Management (OPM)) in June 1978.

Section 2. Aircraft Contacted

16-2-1. AIRCRAFT CONTACTED

a. Maintain data on the following categories of aircraft operations:

1. Air Carrier: Operations by aircraft identified in Appendix 3 which use three-letter company designators.

2. Air Taxi: Operations by aircraft other than those identified in Appendix 3 which use three-letter company designators or the prefix "TANGO."

NOTE-

Air Taxi operators who do not have a FAA issued designator have been authorized to use the prefix "TANGO."

3. Military: All classes of military operations.

4. General Aviation: Civil operations which are not classified under "air carrier" or "air taxi."

b. One count shall be taken for each flight contacted regardless of the number of contacts made with the aircraft during the same flight.

c. IAFSSs/IFSSs shall count aircraft contacted times two. IAFSSs/IFSSs combined with other options shall take the aircraft contacted times two only on the international portion of their operations.

NOTE-

For aircraft contacted purposes, a flight is considered to be in progress from the time taxiing is begun until it has landed and parked.

d. One aircraft contacted count shall be taken when relaying IFR departure clearances or ATC instructions via telephone, "data communication circuits," or interphone. Subsequent radio communications shall not be the basis for an additional aircraft contacted count.

e. For EFAS, one aircraft contacted count may be taken for each communications outlet over which the same aircraft is provided service.

16-2-2. LOCAL AIRPORT ADVISORY (LAA)/REMOTE AIRPORT ADVISORY (RAA)/REMOTE AIRPORT INFORMATION SERVICE (RAIS)

In addition to the aircraft contacted count, airport advisory/remote advisory/remote information activity shall be determined as follows:

a. One airport advisory/remote advisory/remote information service count shall be taken for each separate inbound or outbound aircraft operation if the pilot acknowledges receiving the information.

b. Touch-and-go operations are considered to consist of a separate inbound and outbound phase. One count shall be taken during the inbound phase, and an additional count shall be taken for the outbound phase if LAA/RAA/RAIS is performed during each phase.

c. Although aircraft making practice instrument approaches do not normally land, they should be counted under the same criteria as touch-and-go operations.

16-2-3. RADIO CONTACTS

Count radio contacts in addition to numbers of aircraft contacted. A radio contact includes the initial radio call-up, a complete interchange of information, and a termination of the contact. A radio contact count shall not be taken for a contact which is included in the LAA/RAA/RAIS count.

Section 3. Flight Plan Count

16-3-1. FLIGHT PLAN COUNT

The first FAA station which receives a flight plan, a Special VFR clearance request, or a flight plan change en route (regardless of source: e.g., pilot or his/her representative, foreign location, military operations office, state aeronautical communications station, air carrier, etc.) shall take one count for each one received except:

- a. Do not count flight plans received from or relayed by means of an automatic or semi-automatic installation even though the station is the first FAA station to receive same.
- b. Do not count minor changes, such as cancellations, closures, or amendments, that do not change the destination. The change must result in the transmission of a flight notification message to be countable.
- c. Do not count prefilled flight plans unless the operator has requested activation.

16-3-2. ADDITIONAL ITEMS

Flight plans are to be counted without regard to the elapsed time or the distance of the flight or the fact that the flight terminates at the same place from which it departed.

16-3-3. FLIGHT PLAN CHANGE EN ROUTE

A flight plan change en route to be countable must be a plan which is substantially modified or extended, such as a route or destination change, and the aircraft continues on a flight plan. The change must result in the transmission of a flight notification message to be countable.

16-3-4. FLIGHT PLAN FORMS

- a. Use FAA Forms 7233-1 or 7233-4, as appropriate, to record flight plans copied by specialists.
- b. Provide FAA Forms 7233-1 or 7233-4 and carbon for pilot use. Duplicating machine may be used in lieu of carbon.

Section 4. Pilot Briefing Count

16-4-1. PILOT BRIEFING COUNT

A pilot brief is the dissemination of meteorological and aeronautical data pertinent to the pilot's requirement for an intended flight. The intent is to give one count for each pilot briefed regardless of the length of time spent or of multiple routes or destinations. Take a briefing count for:

- a. Delivery of an in-flight weather advisory (SIGMET, AIRMET) when the pilot states he/she has not previously received the information.
- b. Significant information furnished which results in the pilot altering, diverting, or canceling his/her flight.
- c. Each briefing as defined above and not counted under subparas a or b.

NOTE-

Do not take a count for a response to a request for a single item of information; e.g., surface weather report, airport conditions at a single location, or the status of a single NAVAID. Also, information not pertinent to the route of flight shall not be volunteered to meet the criteria for a briefing count nor shall information routinely given during radio contact with an aircraft be used for this purpose: e.g., altimeter setting, LAA information, etc.

16-4-2. RETENTION OF FORMS CONTAINING PILOT BRIEFING ("PB") DATA

In nonautomated FSSs retain FAA Forms 7233-1, 7233-3, and 7233-5 containing "PB" data in a station's files for 15 days except when an incident or an accident occurs where a briefing may have a bearing. In this case, include the form as a part of the accident/incident report.

Section 5. Other Reports and Information

16-5-1. COMPLETION OF MONTHLY ACTIVITY RECORD

a. This form is to be completed by all AFSSs/FSSs. All computerized, or automated versions of FAA Form 7230-13 must be pre-approved by the Office of Aviation Policy and Plans, Planning Analysis Division, Statistics and Forecast Branch, APO-110, prior to use.

b. Enter daily totals for each applicable category on the daily activity record. Leave sections that do not apply to an individual facility blank. Any time there is an equipment failure, and actual figures are unavailable, provide estimated figures where appropriate. Annotate such estimates in the "Reserved" column on side 2 of the form.

c. To facilitate automatic data processing, complete the header and the monthly total rows on both sides of the form. Follow the instructions below to complete the form:

1. Facility Name: Enter the facility name as specified in FAAO 7350.7, Location Identifiers.

2. Location: Enter city and state.

3. Communications Equipment: Check as appropriate.

4. Facility Type: Check as appropriate.

5. Month: Enter the month using two digits (e.g., 01 – for month of January).

6. Year: Enter the year using the last two numerals of the calendar year (CY).

7. Location Identifiers: Enter the three-letter identifier specified in FAAO 7350.7.

8. Aircraft Contacted: Enter the number of aircraft contacted in accordance with para 16-2-1, Aircraft Contacted.

9. Flight Plans Originated: Enter the number of flight plans in accordance with para 16-3-1, Flight Plan Count.

10. Pilots Briefs: Enter the number of pilot briefings in accordance with para 16-4-1, Pilot Briefing Count.

11. TIBS Calls Received: Enter the total number of calls to the TIBS.

12. NOTAMs issued: Enter the total number of NOTAMs issued. Count all NOTAM D, and NOTAM L. Do not count NOTAM cancellations.

13. Calls to Briefers: Calls to Briefers and TIBS Calls Received are separate categories and are not to be combined. Do not use decimals. Indicate the number of call as follows:

(a) Litton facilities enter the number of "calls offered" from the Gate 1 Report.

(b) Denro facilities enter the number of calls received ("RCVD") from the Automatic Call Director (ACD) Call History -- Briefer Calls.

14. Calls Lost: All calls lost after zero (0) seconds delay shall be counted.

(a) Litton facilities enter the "average speed answered" in whole seconds for calls to briefers from the Gate 1 Report.

(b) Denro facilities enter the average delay ("AVDLY") History--Briefer Calls.

15. Airport Advisories: Enter the number of airport advisories in accordance with para 16-2-2, Local Airport Advisory (LAA)/Remote Airport Advisory (RAA)/Remote Airport Information Service (RAIS).

16. Radio Contacts: Enter the number of radio contacts in accordance with para 16-2-3, Radio Contacts.

16-5-2. EFAS MONTHLY REPORT

Facilities which provide EFAS should record and submit this monthly activity on FAA Form 7230-13, plainly marked "EFAS."

16-5-3. DISTRIBUTION AND AMENDMENT

a. Distribute FAA Form 7230-13 (FSS Activity) and FAA Form 7230-13 (En Route Flight Advisory System only) as follows:

1. Forward the original form to the Flight Services Operations Area Office not later than the 2nd workday (Monday-Friday) of the following month.

2. Retain a copy of the form in the facility's files.

b. Correct any errors in the forms sent in prior months by completing a new form, circling the revised fields, and marking the form "AMENDED COPY." Amended copies of the forms more than one month old will not be accepted unless approval has been obtained from the Statistics and Forecast Branch, APO-110, by the Flight Services Operations Area Office. Send amended copies, along with the current reporting month's forms, to the Flight Services Operations Area Office.

16-5-4. MESSAGE TRAFFIC NUMBER

RECORD

Use FAA Form 7233-6 or local substitute to record message traffic.

16-5-5. UNANNOUNCED MILITARY AIRCRAFT ARRIVALS

The destination and departure tie-in stations shall record on or attach to unannounced arrival messages all available related information and shall coordinate with the local military bases for corrective action when necessary. These messages shall be filed with the military daily traffic and unless a part of an incident, alleged violation, or accident, be retained for 15 days before disposal.

Section 6. AFSS Printing of Lists and Tallies

16-6-1. PRINTING OF LISTS

a. Every hour on the minute specified by the Inbound List Print Interval (ILPI) system parameter, the Suspense List and the Inbound List shall be printed at the appropriate AFSS on the flight plan (FP) printer. For each list and AFSS, this function shall:

1. Retrieve the list data from the data base.
2. Format the title and the column headings.
3. List the entries in chronological order.

b. The Inbound List hourly printout consists of:

1. Time.
2. ACID.
3. Type of Flight.
4. A/C Type.
5. Departure.

c. The Suspense List hourly printouts consist of:

1. Time.
2. Message ID and/or ACID.
3. Type.
4. Addresses.

d. The Inbound List and the Suspense List printouts shall be retained for 15 days.

16-6-2. PRINTING OF TRANSACTIONS INVOLVING LIST UPDATES

Transactions involving updates shall be printed at the time of the transaction at the affected AFSS on the flight movement printer.

a. The conditions for this function are a Flight Data List being updated by:

1. Acknowledging a general Service B message.
2. Not acknowledging the last address of a flight plan.
3. Receipt of an inbound flight plan.
4. Receipt of a change ETA message.

5. Receipt of a Roger message.

b. The List Update printouts shall be retained for 15 days.

16-6-3. FLIGHT PLAN LOG PRINTING

The Flight Plan Log shall be printed on the FP printer for the appropriate AFSS once a day at the Log/Tally Print Time (LOGT) for that AFSS. The entries in the log shall be printed in chronological order.

a. The Flight Plan Log shall consist of:

1. Date/Time.
2. ACID.
3. Types of Flight.
4. Departure Point.
5. Destination.
6. Position Number.

b. Should the log buffer for an AFSS become full (100,000 characters) before the LOGT, the data will be printed.

c. The Flight Plan Log printout shall be retained for 15 days.

16-6-4. PREFLIGHT BRIEFING LOG PRINTING

The Preflight Briefing Log shall be printed on the FP printer for the appropriate AFSS once a day at the LOGT for the AFSS. The entries in the log shall be printed in chronological order.

a. The Preflight Briefing Log shall consist of:

1. Time.
2. ACID.
3. Departure Point.
4. Destination.
5. Position Number.
6. Remarks.

b. Should the log buffer for an AFSS become full (100,000 characters) before the LOGT, the data will be printed.

c. The Preflight Briefing Log printout shall be retained for 15 days.

16-6-5. IN-FLIGHT CONTACT LOG PRINTING

The In-Flight Contact Log print function shall be printed on the FP printer for the appropriate AFSS once a day at the LOGT for the AFSS. The entries in the log shall be printed in chronological order.

a. The In-Flight Contact Log shall:

1. Retrieve the data from the In-Flight Contact Log.

2. Format the title and the column headings.

3. Sum the tallies.

4. List the entries in chronological order.

b. Should the log buffer for an AFSS become full (100,000 characters) before the LGOT, the data will be printed.

c. The In-Flight Contact Log printout shall be retained for 15 days.

16-6-6. TALLIES PRINTING

The tally print function shall print the tallies on the FP printer or to a personal computer (PC) assigned to collect the data once a day at the LOGT for the AFSS.

a. The Terminal Daily Tally and the Summary of Daily Tallies shall be printed or sent to a PC assigned to collect the data. The tallies for the Terminal Daily Tally are summed from the log entries for each of the terminal entries. The following type of logging shall be done by the system:

1. From the In-Flight Contact Log:

(a) Radio contacts.

(b) Aircraft contacted.

(c) Pilot briefs.

2. From the Preflight Briefing Log, pilot briefs.

3. From the Flight Plan Log:

(a) International.

(b) Military.

(c) Civil.

(d) IFR.

(e) VFR.

4. Flight services.

b. The tallies for the Summary of Daily Tallies are the sums of the terminal tallies for an AFSS plus any modifications to the tallies made by the Facility Supervisor's Terminal (FST). The tally section labeled "Aircraft Contacted – International," shall be omitted if there are no entries for the terminal and the AFSS. Tallies are printed or sent to a PC assigned to collect the data at the scheduled time, even if interim printing of logs has occurred due to a full buffer.

c. Use the Summary of Daily Tallies to complete FAA Form 7230-13.

REFERENCE-

Para 16-5-3, Distribution and Amendment.

d. The Summary of Daily Tallies printout or computer records shall be retained for 15 days.

16-6-7. FLIGHT PLAN PRINTING

The FP print function prints the fields associated with the flight plan when it is modified, is deleted, remains on the Proposed List longer than the Flight Plan Drop Interval (FPDI), or is the recycle of a Roger message (when acknowledging the last address of a flight plan.)

a. The data shall be formatted with a title indicating what action is being performed (modified or deleted) and which list is affected. The formatted data shall be printed on the flight movement printer at the affected AFSS. The printing will be done after completion of the transaction.

b. The FP printout shall be retained for 15 days.

16-6-8. DISABLED SYSTEM COMPONENT PRINTING

a. The Disabled System Component printing function shall print the Failed Component Message at the affected AFSS printer and on the DP printer for the AFSS COTC.

b. The Disabled System Component printout shall be retained for 15 days.

Part 5. TRAFFIC MANAGEMENT SYSTEM

Chapter 17. Traffic Management National, Center, and Terminal

Section 1. Organizational Missions

17-1-1. TRAFFIC MANAGEMENT SYSTEM MISSION

The Traffic Management System mission is to balance air traffic demand with system capacity to ensure the maximum efficient utilization of the National Airspace System (NAS). A safe, orderly, and expeditious flow of traffic while minimizing delays, is fostered through continued analysis, coordination, and dynamic utilization of TM initiatives and programs.

17-1-2. DAVID J. HURLEY AIR TRAFFIC CONTROL SYSTEM COMMAND CENTER (ATCSCC)

The ATCSCC monitors and manages the flow of air traffic throughout the NAS, producing a safe, orderly, and expeditious flow of traffic while minimizing delays.

17-1-3. TRAFFIC MANAGEMENT UNIT (TMU) MISSION

TMUs monitor and balance traffic flows within their areas of responsibility in accordance with TM directives.

Section 2. Organizational Responsibilities

17-2-1. AIR TRAFFIC TACTICAL OPERATIONS PROGRAM

System Operations shall:

- a. Develop national TM programs.
- b. Staff/manage the ATCSCC.
- c. Provide guidance and direction to the TM system concerning national TM programs and policies.
- d. Coordinate Service Area office requests for special procedures with appropriate headquarters divisions/services.
- e. Coordinate directly with designated Service Area office/facility TM representatives on plans, procedures, and operations that affect interfacility traffic flows.
- f. Ensure that all appropriate coordination has been accomplished prior to implementation of any new national TM program.
- g. Provide briefings to appropriate levels within the FAA and industry on current system status, present/future TM programs, etc.
- h. Maintain a close liaison with appropriate Service Area office and other FAA service offices on all TM programs.

17-2-2. SERVICE OPERATIONS AREA OFFICES

Service area offices shall:

- a. Designate a service area TM representative(s) who shall act as the focal point for other FAA offices and users on matters that pertain to TM.
- b. Provide guidance and direction to field facilities in the development and implementation of Service Area office TM programs.
- c. Periodically review and evaluate TM programs to assess their effectiveness and to ensure their compliance with Service Area office/national directives.
- d. Mediate Service Area office interfacility TM conflicts.

e. Determine which terminal facilities should be considered for the establishment of TMUs and forward the justification and the staffing requirements to Director of System Operations ATCSCC for final determination.

f. Provide the ATCSCC with advance notification of planned outages and runway closures that will impact the air traffic system (e.g., NAVAID/radar shutdowns, runway closures, equipment/computer malfunctions, and procedural changes). Additionally, provide in writing an impact statement that describes in detail the following items:

- 1. Description of outage/construction project.
- 2. Dates/times of project.
- 3. Impact. Describe projected impact in regard to the operation/facility. Specify the AAR under various conditions/scenarios, e.g., IFR/VFR.
- 4. Delays. What type of delays can be expected.
- 5. Traffic management initiatives. What type of initiatives can be expected.
- 6. Notification to users/facilities. Coordination/notification provided to users/facilities.
- 7. Any other pertinent information.

17-2-3. ATCSCC

The ATCSCC has been delegated the authority to direct the operation of the TM system. All TMUs shall assist the ATCSCC, as directed, to ensure system efficiency and effectiveness without compromising safety. The ATCSCC shall, in conjunction with local TMUs, users, weather information providers, and airway facilities, as appropriate:

- a. Implement national TM programs (i.e., NRP, MAR, etc.).
- b. Monitor and analyze system components and weather patterns for potential system impact.
- c. Be the focal point for regulating the daily TM functions.
- d. Determine when NAS capacity is or will likely be reduced to the extent that the implementation of a TM initiative is required.

e. Implement national TM initiatives, when necessary, to ensure the orderly flow of traffic throughout the NAS.

f. Recommend and approve TM alternatives when national initiatives are not appropriate.

g. Monitor TM initiatives issued throughout the system for effectiveness; take action to cancel or modify where appropriate.

h. Be the final approving authority regarding all interfacility TM initiatives.

NOTE–

Traffic Management Units continue to retain the latitude to tactically adjust the flow of traffic within their own facilities. These local actions include sector to sector mile-in-trail restrictions, local airport fix balancing, and other such adjustments required to balance flows within their area of responsibility.

i. Evaluate proposed TM initiatives to ensure appropriateness.

17-2-4. FIELD FACILITIES

All actions initiated by the TMU shall be in accordance with standard operating procedures, applicable directives, and approved TM position descriptions. The TMU is delegated the authority to direct traffic flows and implement approved TM initiatives in conjunction with, or as directed by the ATCSCC.

a. Air traffic facilities shall ensure that:

1. A TMU is established at ARTCCs and designated terminal facilities.

2. Delays are reported as specified in FAAO 7210.55, Operational Data Reporting Requirements.

3. The ATCSCC is provided with all formal agreements and directives that relate to interfacility TM programs, initiatives, and procedures.

4. National and local TM programs are maintained within the guidelines set forth by this order.

5. Requests for special procedures are coordinated with Service Area offices, assuring 90 days of lead time for evaluation and processing.

6. The ATCSCC is advised of all known component changes that could have a significant system

impact (e.g., NAVAID/radar shutdowns, runway closures, TELCO outages, computer malfunctions or outages, and procedural changes affecting key terminals and/or centers).

NOTE–

This information shall be provided to the ATCSCC as soon as the facility becomes aware of any event that may have a possible impact on NAS capacity. Example: LRR outage, runway closure, ILS outage, etc.

7. Actively coordinate and communicate traffic management actions with adjacent TMUs through the ATCSCC to optimize traffic flows throughout the NAS.

8. In conjunction with ATCSs, OSs, weather service providers, and the ATCSCC, develop, implement, monitor, and analyze TM programs, procedures, and initiatives that are specific to the facility's area of responsibility.

9. A full description of all TM actions/initiatives (e.g., ground delay programs, miles-in-trail (MIT)) is entered in the TMU log, including, but not limited to, start and stop times, facilities/operations affected, and justification.

10. As a minimum, the unit is operated during the hours necessary to encompass peak traffic periods and the associated time to complete the logging and the reporting requirements.

b. In ARTCC facilities TMUs shall:

1. In conjunction with terminal TMUs, develop arrival strategies and deliver arrival aircraft to achieve the Airport Arrival Rate (AAR).

2. Actively utilize the Traffic Situation Display (TSD) and the monitor and alert function of the ETMS to adjust traffic flows on a proactive basis.

3. Periodically analyze and review procedures to ensure effectiveness and adherence to programs/initiatives, and, when necessary, make adjustments. Cancel TM initiatives promptly when no longer needed.

4. Designate a TM representative as the primary interface between the Center Weather Service Unit (CWSU) and ATC operational personnel as described in FAAO 7210.38, Center Weather Service Unit (CWSU), as amended.

5. Establish an analysis function referred to in Chapter 17, Section 4, as amended.

6. Address approved local TM messages on ETMS to:

(a) The ATCSCC and the adjacent facilities concerned.

(b) Other ARTCCs whose terminals are expected to generate a significant amount of traffic for the affected area during the effective time of the message.

(c) Appropriate flight service stations/automated flight service stations/automated international flight service stations/international flight service stations (FSS)/(AFSS)/(AIFSS)/(IFSS).

c. In terminal facilities, TMUs shall:

1. Balance the arrival flow and the tower en route flow by coordinating with the appropriate ARTCC TMUs and/or adjoining terminal facility(s) to ensure that demand does not exceed current capabilities.

2. Through coordination with the tower and TRACON, establish AAR and assist the ARTCC and adjacent terminal facility(s) in the development of strategies to achieve the AAR.

3. Oversee departure fix balancing to ensure sector efficiency into the next facility's airspace.

4. Implement gate hold procedures as required to reduce airport surface congestion.

5. Coordinate with airport officials to ensure closures of runways, taxiways, and other airport facilities minimize operational impact.

6. Ensure optimum airspace/runway configurations.

7. Periodically analyze and review TM procedures to ensure effectiveness and adherence to programs/initiatives and, when necessary, make adjustments. Cancel TM initiatives promptly when no longer needed.

8. Notify the appropriate facilities concerning local TM initiatives.

NOTE–

The appropriate ARTCC TMU shall be the focal point for any interface concerning TM related issues, as well as the mediator between terminal facilities. The ARTCC TMU will then coordinate with the ATCSCC on behalf of the TRACON or the tower. Because of the unique situation of the New York TRACON having three centers, the New York TRACON shall coordinate directly with the ATCSCC and have the ATCSCC conference the appropriate ARTCCs. In those instances where the ARTCC TMU is unable to resolve disputes between multiple terminal facilities, the ATCSCC shall have the final decision making authority.

Section 3. Line of Authority

17-3-1. ATCSCC

a. Each national operations manager (NOM) is under the general supervision of the Manager of the ATCSCC. Each national traffic management officer (NTMO) is under the general supervision of the NOM. Each TM specialist (TMS) is under the general supervision of the NTMO.

b. In the absence of the NTMO, there will be designated a TM specialist-in-charge (TMSIC).

17-3-2. ARTCC

The TM Coordinator at ARTCC facilities (TMC) is under the general supervision of the supervisory TM coordinator (STMC). The supervisory TM coordinator-in-charge (STMCIC) oversees all TM initiatives and the day-to-day, shift-by-shift management of the operations (former AMIC duties). The STMCIC is under the general supervision of the air traffic

manager or the operations manager (OM). Operations supervisors may rotate through the STMC duties to ensure a more global view of the operation.

17-3-3. TERMINAL

a. The TM coordinator at terminal facilities (TMC) works under the general supervision of the STMC or TMCIC. Each STMC is under the general supervision of the operations manager. In the absence of a STMC, and when more than one TMC is assigned to a shift, there will be a designated TMCIC. The TMCIC will oversee all TM operations and the day-to-day, shift-by-shift management of the operations (former AMIC duties) remains with the Operations Manager/Supervisor.

b. In the TMCs absence or at those TRACONS and/or towers where TMCs are not authorized, the individual(s) designated to perform TM functions is the operations supervisor-in-charge (OSIC).

Section 4. Supplemental Duties

17-4-1. TELEPHONE CONFERENCES

a. The ATCSCC is involved in several daily telephone conferences (TELCONs). TELCONs are initiated and hosted by the ATCSCC for field facilities, the appropriate Vice Presidents, and the Chief Operating Officer. Supplemental conference capability is available through the FAA's Remote Transmitter Site and the Washington Operations Center.

b. TMUs/TMCs utilize TELCONs when the need arises to discuss, evaluate, or problem solve any issues. These conference calls should include the appropriate ARTCC TMU, adjacent terminal facilities/towers, the ATCSCC, and the service area TM branch or Service Area office responsible for TM.

c. TMUs/TMCs should actively participate in facility briefings and user meetings in order to promote, educate, and inform all concerned about the function, role, and responsibilities of TM.

17-4-2. SPECIAL INTEREST FLIGHTS

a. ATCSCC: The Office of International Aviation (AIA) will notify the ATCSCC of all approved scheduled and unscheduled special interest flights that plan to operate in U.S. airspace. AIA-101 will notify the affected ARTCCs. This notification will include the aircraft identification, type, route of flight, altitude requested, and the date/time group of the planned flight.

b. ARTCC: TMU personnel shall forward all problems concerning special interest flights to the ATCSCC for relay to the appropriate authorities. Incidents such as unscheduled landings, route diversions, unusual requests, etc., shall be reported to the ATCSCC.

17-4-3. ANALYSIS

a. The TMU analysis function or individuals assigned analysis functions shall be responsible for the collection and analysis of all available data as it pertains to traffic capacity, traffic flows, points of congestion, peak hours, etc. Specific areas of consideration include, but are not limited to:

1. Sector demand (by hours).
2. Sector flows (route/altitudes).
3. Sector loading points.
4. Sector traffic breakdown by category of user.
5. Normal initiatives necessary to prevent sector saturation.
6. Alternatives to prevent saturation and relieve congestion/conflicts.

NOTE-

Alternatives must take into consideration other facility/sector capabilities.

7. Total facility traffic count and potential user demand.
8. Sector staffing required to support potential user demand.
9. Location of delays (by sector and airport).
- b. Coordination with user organizations shall be effected, when appropriate.

17-4-4. OPERATIONS MANAGER (OM) SUPPORT

Facility TMUs shall maintain a working knowledge of the major related fields of air traffic operations/responsibilities to effectively support the STMCIC in dealing with special situations that may arise on a daily basis. Reference sources that identify these related areas are listed below.

a. Emergency plan: Numerous interfacility letters of agreement are normally located at the STMCIC complex concerning plans which have been established to provide continuity in the event of a disaster or emergency conditions that would limit air traffic service. Additionally, in these binders are instructions concerning security control of air traffic and air navigation aids, defense readiness, and physical security plans.

b. Accident procedures/bomb threats/search and rescue procedures:

1. FAAO 8020.11, Aircraft Accident and Incident Notification, Investigation, and Reporting.
2. Bomb threats.
3. National Search and Rescue Manual.

4. FAAO 1270.1, Freedom of Information Act Program.

c. EA activity: FAAO 7610.4, Special Military Operations.

d. Hijack situations:

1. FAAO 7610.4, Special Military Operations.

2. FAAO 7110.65, Air Traffic Control.

e. Suspect aircraft:

1. FAAO 1600.29, Law Enforcement Alert Message System.

2. FAAO 7110.52, Suspected Illegal Use of Aircraft.

3. FAAO 7110.67, Special Aircraft Operations by Law Enforcement/Military Organizations.

f. Special flight operations: FAAO 7110.65, Chapter 9, Special Flights.

g. FAAO 7210.38, Center Weather Service Unit (CWSU).

NOTE—

In order to provide the maximum TM services, TM personnel should be utilized to perform non-TM functions only as a last resort.

17-4-5. DIVERSION RECOVERY

a. A diversion is a flight that is required to land at other than its original destination for reasons beyond the control of the pilot/company, e.g., periods of significant weather. Diversion recovery is an initiative orchestrated by the ATCSCC and system users to minimize the impact of system disruption. Diversion recovery will be utilized during and after periods of significant weather or other phenomena that has adversely impacted the system resulting in flight diversions. The goal of the diversion recovery initiative is to ensure that flights which have already been penalized by having to divert to another airport, do not receive additional penalties or delays. Flights identified for diversion recovery shall receive priority handling over other flights from their point of departure.

b. Diversion flights are identified by having “DVRSN” in the Remarks section of the flight plan, or the user inputs the information into the Diversion

Recovery Tool (DRT). The following protocols will be utilized in diversion recovery procedures:

1. A flight on the DRT, as listed in TBL 17-4-1, is requesting priority. FAA facilities shall ensure the auto-detect feature is not activated on their DRT. FAA facilities shall view the “general aviation” and “comments” columns when utilizing the DRT.

2. “High” priority indicates the user’s preference within one company.

3. “Yes” priority indicates that special handling is requested for the flight.

4. The user submitted preferred priorities may be modified where necessary to maintain the efficiency of the system.

c. The ATCSCC shall:

1. Implement diversion recovery.

2. Transmit an advisory to inform both field facilities and users that a diversion recovery initiative has been implemented and the DRT has been activated.

3. Adjust the initiative as necessary to meet changing conditions.

4. Transmit an advisory when the DRT has been deactivated.

d. The ARTCCs shall:

1. Implement diversion recovery as directed by the ATCSCC.

2. Notify the ATCSCC if they do not intend to use the DRT. In such cases, the ATCSCC shall send the Center a general message with the information as stated in TBL 17-4-1, every 60 minutes until diversion recovery is no longer in effect.

3. Provide expeditious handling in returning to the system those flights identified by the ATCSCC/DRT as diversion flights.

4. Forward user diversion recovery requests to towers and TRACONS. (See TBL 17-4-1).

NOTE—

DVRSN will be placed in the remarks section of the flight plan by the user.

e. Towers and TRACONS shall:

1. Provide expeditious handling in returning to the system those flights identified by the ARTCC/DRT as diversion flights.

2. Notify the overlying ARTCC TMU if they will utilize the DRT.

TBL 17-4-1

User Recovery Priority Request Format

The following flights are requesting priority handling to their original destination. Please advise the appropriate FAA facilities of this request.								
ACID	Diverted To	ETD	CTD	DEST	DCNTR	ACNTR	PRIORITY	COMMENTS

Section 5. Coordination

17-5-1. COORDINATION

Coordinate through verbal and automated methods. At times, it may be required to utilize both methods to ensure complete communication and situational awareness.

17-5-2. COMMUNICATION

When time permits, utilize communication techniques that emphasize collaboration and consensus decision-making. Use tools that provide for common situational awareness to the extent possible.

17-5-3. DOCUMENTATION

The National Traffic Management Log (NTML) is utilized to record TM activities in the facility. It does not replace the facility log; however it may be utilized as the facility log when documented in a facility directive. Facilities with the NTML are required to make data entries. At non-NTML facilities, the first facility overlying the non-NTML facility is responsible for entering the NTML entries. This enables all facilities to be knowledgeable of conditions throughout the NAS.

17-5-4. RESPONSIBILITIES

a. Facilities must:

1. Communicate and coordinate events that may have an impact on the NAS.
2. Utilize the NTML to document events and TMs.
3. Designate a point-of-contact (POC).

b. The ATCSCC must:

1. Communicate directly with facility and service area representatives for a critique of operations and future plans for TM.
2. Coordinate directly with service area representatives on plans, procedures, and operations that affect inter-facility traffic flows.
3. Provide NTML to all Centers and designated terminals.
4. Consult with weather information providers to ensure the receipt of timely weather forecasts

(including the collaborative convective forecast), observed terminal weather sequences, and any weather data that may have a significant impact on the NAS.

5. Coordinate with the en route TMUs and terminals in the day-to-day operations of the NAS and resolve operational TM disagreements between facilities.

6. Conference affected Centers as needed when contacted by a terminal facility.

7. Initiate TELCONs with customers and facilities, as necessary, to obtain input and to provide operational information, as well as, other significant events affecting the NAS.

8. Subscribe to NTML entries pertinent to their position of operation.

c. ARTCC TMUs and designated terminals must:

1. Advise the ATCSCC of situations and conditions that may require implementation of TM initiatives, or are of national interest.
2. Present unresolved conflicts between adjacent TMUs to the ATCSCC for resolution.
3. Notify the ATCSCC if a significant change in capacity is expected or has occurred.
4. Be the focal point for coordination relating to any TM issues, initiatives, programs, or information. Data received from underlying facilities must be forwarded to the ATCSCC in a timely manner.

d. Terminal facilities must:

1. Coordinate with the appropriate ARTCC TMU and ensure that they are kept aware of situations and conditions that may require the implementation of TM initiatives.
2. Report any significant change in the capacity that is expected or has occurred.
3. Present TM conflicts to the ARTCC TMU.
4. Consult with the ATCSCC, the affected ARTCC, terminals, and customer organizations about the development and implementation of procedures, when appropriate.

17-5-5. EN ROUTE INTRA-FACILITY COORDINATION

a. The STMC must ensure that an operational briefing is conducted at least once during the day and

evening shifts. Participants must include, at a minimum, operational supervisors and other interested personnel designated by the facility management. Discussion at this meeting should include:

1. Planning TELCON checklist.
2. Operations Plan.
3. Topics pertinent to the facility.

b. Coordination between the TMU and Operations Supervisor (OS): In some facilities, the TM function may be performed by the OS or as designated by the air traffic manager. Timely coordination between the OS and TMU is paramount in not only implementing TM initiatives, but also in evaluating the effectiveness of any initiatives.

17-5-6. TERMINAL INTER-FACILITY COORDINATION

a. Coordination between tower and TRACON TMUs: Towers that are not collocated with a TRACON TMU must coordinate with the appropriate TMU where the TM function has been established. If the TM function has not been established, then the tower must coordinate with the appropriate en route TMU.

b. Coordination between the TMU and ATCSCC TMSs: Unusual circumstances or significant issues do not preclude the terminal TMU from contacting the ATCSCC directly.

c. Coordination between the TMU and the local NWS or CWSU must be completed as soon as practical at the beginning of each shift, and, as necessary, the TMU must obtain a weather briefing from the NWS.

d. Coordination between the TMU and the adjacent terminal: Timely coordination is imperative in order to manage the efficiency of the tower en route control (TEC) environment. Any TM initiatives imposed between two (2) or more adjacent terminals that could have an impact on the capacity of any airport, sector, or ARTCC must be coordinated with the appropriate ARTCC TMU.

17-5-7. NATIONAL TRAFFIC MANAGEMENT LOG (NTML)

a. Facility personnel must enter data in a timely manner on the appropriate template and verbally

coordinated when required. Timely is construed to mean that it would be useful to someone looking at the data in current time. If workload conditions or the situation prohibits entering the data in a timely manner, the information should be recorded by a subsequent or delayed entry or on the appropriate form. Substantive changes in the contents or remarks or additional explanatory information should be accomplished by a subsequent or delayed entry.

b. The data in NTML will be subject to FAA security provisions for Internet technology. Facilities must use the NTML in preference to other methods. The NTML is an automated FAA Form 7230-4, Daily Record of Facility Operation, and will record the operating initials and facility for all log entries. Operating initials are removed at the end of six months in accordance with FAA Order 1350.15, Records Organization, Transfer, and Destruction Standards.

c. The NTML automatically closes and reopens a new log each day; it automatically records the operating initials of the person previously signed on. Carryover items may be entered by the specialist or automatically be entered by the software based on the end/date/time group. Closing and opening logs are concurrent with each local day; however, the entries are made utilizing Coordinated Universal Time.

d. When it is necessary to amend a previous entry, the original entry may be corrected through normal computer entries; however, the database will be automatically marked and the information must be retrievable by the system administrator.

17-5-8. NTML FACILITY CONFIGURATION REQUIREMENTS

At least one TMU position in each facility must:

- a.** Subscribe to DCC for TMIs affecting your facility.
- b.** Subscribe to underlying facilities for the following information:
 1. Runway configurations.
 2. Delays.
 3. Deicing.
 4. Other.
- c.** Enable notification of proposed restrictions.

17-5-9. NTML DATA ENTRIES

a. The following information is required to be entered into NTML:

1. Sign on/off times and initials.
 2. Entries for equipment (E) and quality assurance review (Q), if they cause a TMI or result in a TMI.
 3. Traffic Management Initiatives initiated by your facility.
 4. Constraints in your area of responsibility that may impact the NAS and forward to the ATCSCC.
 5. Arrival, departure, and en route delay status, as appropriate.
 6. Icing/De-icing/Anti-icing.
- b. Aviation System Performance Metrics (ASPM) Air Traffic identified airports must include the following additional information:

1. Runway configurations (specify runway numbers) used between 0700 and 2259 local, the time period they were in effect, and their associated Airport Arrival Rate (AAR) and Airport Departure Rate (ADR), type of approach (optional if the information is entered on the ASPM web page).
2. Actual arrival and departure counts for each hour for each airport, starting at 0700 and ending at 2259 local (optional if the information is entered on the ASPM web page).
- c. The information for subpara b above applies to any airport in a Ground Delay Program.

17-5-10. NTML PROCEDURES

- a. Facilities must enter, review, and respond to data in the NTML, as appropriate.
- b. TMI data must be entered utilizing the appropriate template and verbally coordinated with the appropriate facility. Appropriate template means the one best suited for the type of event, such as a ground stop, delays, etc. The "Miscellaneous" templates must not be used if another template is appropriate. The Justification, Remarks, and Text fields must not contain any information that can be entered in other fields on the template.

NOTE-

Causal information entered in the "Restriction" template is disseminated to many other software programs for monitoring the status of the NAS.

- c. Facilities must verbally contact other facilities when necessary to accomplish a task if electronic

coordination has not been completed or is inappropriate to the situation, e.g., emergencies, classified information.

17-5-11. PROCESSING RESTRICTIONS FOR FACILITIES WITH NTML

- a. Restrictions that require ATCSCC review and approval:

1. Enter the restriction/modification in NTML, and then call the ATCSCC to coordinate.
2. The ATCSCC initiates a conference regarding the restriction/modification and the originating facility coordinates with all affected facilities. If an amendment is necessary, the ATCSCC amends the restriction while on the conference.

3. After the restriction/modification is coordinated, the restriction or modification will be approved and sent to all affected facilities.

- b. Restrictions/modifications that do not require ATCSCC review and approval will be entered by the originating facility in the NTML and followed up by verbal coordination with the affected facilities.

- c. Restrictions/modifications associated with reroutes:

1. Restrictions will be discussed during the development of the reroute.
2. Any facility requiring a restriction in conjunction with a reroute must enter the initiative into the RSTN template with the SVR WX RERTE button enabled. Modifications to previously approved restrictions with a reroute must be verbally coordinated through the ATCSCC Severe Weather Unit prior to submitting in NTML.

17-5-12. DELAY REPORTING

- a. Verbally notify the ATCSCC through the appropriate protocol, of any arrival, departure, or en route delay reaching or expected to reach 15 minutes except for Expect Departure Clearance Time (EDCT) delays created by ground delay programs or ground stops issued by the ATCSCC. The verbal notification must include the number of aircraft actually in delay, the projected maximum delay, and the number of aircraft expected to encounter delays. The facility must verbally notify the ATCSCC and impacted facilities when delays fall below 15 minutes.

- b. Facilities must update their delay status through the NTML. Facilities that do not have NTML must

verbally report the delay increments in 15-minute increments to the overlying facility. The first facility with NTML must enter the delay information.

c. When notified that a facility is in a 15-minute delay situation, the ATCSCC and all impacted facilities, must subscribe to the delay report through the NTML until the facility verbally notifies the

ATCSCC/impacted facilities that they are no longer in delays of 15 minutes or more.

d. Facilities must verbally notify the ATCSCC, through the appropriate protocol, when delays reach or are anticipated to reach 90 minutes, except for EDCT delays as a result of a GDP. The facility manager must be notified when delays reach 90 minutes, except for delays as a result of a GDP.

Section 6. Traffic Management Initiatives

17-6-1. GENERAL

a. Traffic Management Initiatives (TMIs) are techniques used to manage demand with capacity in the NAS.

1. Properly coordinated and implemented TMIs are an important tool in the air traffic system. These initiatives contribute to the safe and orderly movement of air traffic.

2. Any TMI creates an impact on customers. It is imperative to consider this impact and implement only those initiatives necessary to maintain system integrity.

b. Dynamic TMIs are those imposed on an as needed basis to manage fluctuations in traffic demands.

17-6-2. BACKGROUND

Some TMIs may also be considered “control instructions” or procedures; the difference is determined by the magnitude of the event, the coordination process, and the length of time it is implemented. TMIs may also be referred to as “restrictions,” especially in conjunction with miles-in-trail.

17-6-3. POLICY

To maintain the integrity of the air traffic system, facility TM personnel must employ the least restrictive methods available to minimize delays.

17-6-4. TYPES OF TMIs

a. Altitude.

1. Utilized to segregate different flows of traffic, or to distribute the number of aircraft requesting access to a specified geographic region.

2. Colloquialisms:

(a) Tunneling– Term to indicate traffic will be descended prior to the normal descent point at the arrival airport to remain clear of an airspace situation; e.g., holding.

(b) Capping– Term to indicate aircraft will be cleared to an altitude lower than their requested

altitude until they are clear of a particular airspace. Capping may apply to the initial segment of the flight or for the entire flight.

3. Low Altitude Arrival/Departure Routing (LAADR). A set of routings with altitude expectations for usage in times of severe weather constraints on the system. LAADR may apply to the departure or the arrival phase of flight. LAADR requires a written agreement with the customers prior to implementing.

b. Miles-in-trail (MIT). The number of miles required between aircraft that meet a specific criteria. The criteria may be separation, airport, fix, altitude, sector, or route specific. MIT are used to apportion traffic into manageable flows, as well as, provide space for additional traffic (merging or departing) to enter the flow of traffic.

c. Minutes-in-trail (MINIT). The number of minutes required between successive aircraft. It is normally used in a non-radar environment, or when transitioning to a non-radar environment, or additional spacing is required due to aircraft deviating around weather.

d. Fix balancing. Assigning an aircraft a fix other than in the filed flight plan in the arrival or departure phase of flight to equitably distribute demand.

e. Airborne holding. Planned holding of aircraft may be utilized. This is normally done when the operating environment supports holding and the weather conditions are expected to improve shortly; this ensures aircraft are available to fill the capacity at the airport.

f. Sequencing Programs. These programs are designed to achieve a specified interval between aircraft; they may be software generated or determined by TM personnel. Different types of programs accommodate different phases of flight.

1. Departure Sequencing Program (DSP)– Assigns a departure time to achieve a constant flow of traffic over a common point. Normally, this involves departures from multiple airports.

2. En route Sequencing Program (ESP)– Assigns a departure time that will facilitate integration in the en route stream.

3. Arrival Sequencing Program (ASP)– Assigns fix crossing times to aircraft destined to the same airport.

4. Center TRACON Automation System Traffic Management Advisor (CTAS–TMA)– Assigns meter fix/arc crossing times to aircraft to manage airport arrival demand.

g. Reroutes:

1. Reroutes are ATC routings other than the filed flight plan. They are issued to:

(a) Ensure aircraft operate with the “flow” of traffic.

(b) Remain clear of special use airspace.

(c) Avoid congested airspace.

(d) Avoid areas of known weather or where aircraft are deviating or refusing to fly.

2. Operators should file new flight plans when they are more than 45 minutes from departure.

3. Sources for route information:

(a) Airport/Facility Directory.

(b) Preferential Route Information in facilities.

(c) Route Management Tool.

(d) North American Route Notice.

(e) Federal Air Regulations.

(f) Notices to Airmen.

(g) Advisories issued by ATCSCC. (These are listed on the Operational Information System.

4. More information on routes is contained in Section 15, Alternative Routings, Section 16, Route Advisories, and Section 18, National Playbook.

h. Ground Delay Programs. (See Section 8, Ground Delay Programs.)

i. Ground Stops. (See Section 9, Ground Stop(s).)

17–6–5. EXCEPTION

The above list is not all-inclusive and does not preclude the innovation and application of other procedures that will result in improved customer service.

17–6–6. TMI DATA

The efficiency of the NAS is enhanced when all participants have access to the same data. Utilization of shared technology, (e.g., Flow Evaluation Area) enhances the coordination process.

17–6–7. TMI APPROVAL AUTHORITY

a. The ATCSCC is the approval authority for all en route and designated terminals inter-facility TMIs, except as identified in subparagraph (b) below and MIT restrictions of ten (10) miles or less. TMIs that are expected to result in reportable delays must be coordinated through the ATCSCC. Reportable delays are delays of 15–minutes or more as defined in FAA Order 7210.55, Operational Data Reporting Requirements.

NOTE–

New York TRACON is a designated terminal and others may be included at the direction of System Operations.

b. The Center/TRACON is responsible for TMI within their area of jurisdiction (underlying terminals) that do not cause reportable delays.

17–6–8. PROCESSING TMI

a. The initiating facility must identify the need for a TMI, explore alternatives, and prepare a justification.

b. The initiating facility must be prepared to discuss the proposal at the request of the ATCSCC and /or the receiving facility prior to implementation during the joint review process.

c. Facilities must continuously monitor and evaluate the TMI, and make adjustments as necessary, including cancellation.

d. Facilities must conduct post event analysis on the TMI, and document any known negative impacts/feedback.

17–6–9. FIELD FACILITY RESPONSIBILITIES FOR TMI

a. Evaluate capacity and demand. The assessment must include the evaluation of all data required to make an informed decision. The data may include Flow Evaluation Areas (FEA)/Flow Constrained Areas (FCA), traffic counts and lists from the Enhanced Traffic Management System, and coordination with impacted facilities.

b. Consider internal options prior to requesting inter-facility TMIs.

c. When inter-facility TMIs are appropriate, coordinate verbally with the ATCSCC and provide the following information, if requested:

1. A detailed and specific identification of the problem; e.g., FEA.

2. Intra-facility actions taken/considered.

3. A detailed explanation of the assistance required, including options available.

4. Identification of potential system impacts.

d. Document the TMI in the NTML. Severe weather MIT coordinated through the ATCSCC must be entered in the NTML utilizing the “severe weather” feature by the facility requesting the MIT.

17-6-10. ATCSCC RESPONSIBILITIES FOR TMI

a. Advise facilities of system impacts. The impacts will be determined by conferencing impacted facilities, as necessary, and may require sharing FEAs/FCAs.

1. If a MIT restriction is modified while on the conference, the ATCSCC will modify the restriction in the NTML while on the conference.

2. Once the restriction is coordinated, the restriction or modified restriction will be approved and sent to all relevant facilities.

b. Issue a decision regarding the request. For negative responses, document the rationale in disproving the request.

c. Issue advisories, as appropriate.

d. Monitor TMI pertinent to the position of operation.

e. Maintain a database of MIT TMI for historical and statistical analysis.

17-6-11. TMI WITHIN A CENTER’S AREA OF JURISDICTION

Facilities must coordinate TMI with impacted facilities and enter the information in the NTML.

17-6-12. MIT TMI OF 10 OR LESS

TMI may be coordinated consistent with the following procedures:

a. The requesting facility verbally notifies the providing facility in a timely manner.

b. The TMI must not exceed four (4) hours.

c. The TMI is documented in the NTML, including justification and any negative impacts associated with the TMI.

d. If the facilities cannot reach agreement, the restriction request is forwarded to the ATCSCC for resolution.

e. The ATCSCC may terminate these procedures at any time by notifying the impacted facilities.

17-6-13. ENROUTING SEQUENCING PROGRAM (ESP) IMPLEMENTATION

ESP assigns a departure time that will facilitate integration into an en route stream. Runway configuration and departure procedures must be considered for accurate projections. The TMU must:

a. Enter TM messages (FT, FE, etc.) to produce strips and automatically acquire full data blocks on departures, arrivals, and overflight traffic specifying the appropriate destination.

b. Inform appropriate sectors and ATCTs that ESP will be in effect (time) for aircraft destined to specified airports and routes.

c. Regulate VFR services to ensure that delays are distributed equally, especially if a ground delay program is in effect for a primary airport.

d. If an aircraft does not depart within the designated departure window, the appropriate sector and/or ATCT must contact the TMU to obtain a new release time.

Section 7. Monitor Alert Parameter

17-7-1. PURPOSE

The Monitor Alert Parameter (MAP) establishes a numerical trigger value to provide notification to facility personnel, through the MA function of the ETMS, that sector/airport efficiency may be degraded during specific periods of time. The efficiency of a functional position or airport in providing air traffic services is a shared responsibility of the TM team. That team consists of the ATCS(s), OS(s), and the TMU. These entities must monitor, assess and act on sector/airport loading issues to ensure that these NAS elements operate efficiently. The ability of a functional position or airport to provide air traffic services may be affected by a variety of factors (i.e., NAVAIDs, meteorological conditions, communications capabilities, etc.); therefore MAP is a dynamic value which will be adjusted to reflect the capabilities of the functional position or airport.

17-7-2. IMPLEMENTATION PROCEDURES

MAP values are established and will be assigned for air traffic functional positions, within the MA function of ETMS as follows:

Average Sector Flight Time	MAP VALUE
3 min.	5
4 min.	7
5 min.	8
6 min.	10
7 min.	12
8 min.	13
9 min.	15
10 min.	17
11 min.	18
12 min. or greater	18

a. Average sector flight time will be calculated using data indicating functional position operations for a consecutive Monday through Friday, 7:00 AM – 7:00 PM local time frame.

NOTE–

This does not apply to combined sectors MA values.

b. MAP values for combined sectors may exceed the baseline value by more than three. Normal sector combinations and associated MAP values shall be forwarded to the manager ATCSCC.

c. Baseline MAP values may be adjusted ± 3 . Adjustments of more than ± 3 requires concurrence of the TMU and representatives of the area of specialization (recommended members include SUPCOM, NATCA, and OM). Adjustments to the baseline values will be documented, including rationale, and maintained by the TMU.

d. The MAP value will be dynamically adjusted to reflect the ability of the functional position to provide air traffic service. During periods of reduced efficiency the MAP will be dynamically adjusted downward and conversely, when efficiency is improved, the MAP will be adjusted upward, but not to exceed the baseline or documented, adjusted value.

17-7-3. RESPONSIBILITIES

Facility TMUs shall:

a. Monitor all adapted sectors and airports within their area of jurisdiction for alerts generated by the MA function of the ETMS.

b. Maintain communications with areas of specialization to determine functional position constraints and adjust MAP values to indicate the functional position capabilities.

c. Set the MA look ahead value at least one hour into the future with 1.5 hours to 2.5 hours being the recommended time frame.

NOTE–

The recommendation to set the look ahead value to between 1.5 and 2.5 hours is for preplanning purposes. Action taken to address an alert should take place approximately 1 hour prior to the alerted time frame. This activity will allow for a further review and evaluation of the ETMS data. A key in the analysis process is the determination of the duration of the alert. TM initiatives should be primarily for those time frames when the MAP value will be equaled or exceeded for a sustained period of time (usually greater than 5 minutes).

d. Respond to alerts by:

1. Analyzing data for the alerted time frame to develop expected impact and recommendations to address the alert.

2. For red alerts – notify the affected area of the alert, indicating the expected impact and recommended action.

3. For yellow alerts – notify the affected area of the alert when analysis indicates that the ability of the sector to provide efficient air traffic services will be degraded due to abnormal operations.

e. Maintain an operational log of red alerts and retain for 15 days the following information:

1. Date and time of alert.

2. Results of analysis including expected impact and recommendation to address.

3. Time area notified.

4. Action, if any, to be taken.

5. Functional position configuration (i.e., sector combine status, staffing).

6. The time period(s), by facility, during which an alert notification(s) has/have been suspended.

17-7-4. ANALYSIS REQUIREMENTS

a. Facilities will produce, utilizing the Off Line Aircraft Management Program or equivalent program, a 15 minute summary sector activity report for each red alert and each yellow alert conforming to subpara 17-7-3d3.

b. Alerts generated by the MA function of the ETMS will be further evaluated by post event analysis. The focus of this analysis will be towards assessing the effectiveness and impact, both to the sector and the user, of action taken or not taken as a result of a documented alert. A one minute sector summary report will be utilized to assist in the impact analysis of the alerted time frame.

c. When a pattern of alerts is established (i.e., same sector, same time frame, on a daily basis or require-

ment for additional resources to manage on a routine basis) which requires recurring TM initiatives for resolution, additional analysis will be conducted. The analysis should result in recommendations to address the identified constraint and may include sector design adjustment, flow dispersion, or user operations adjustment. Should the local facility not be able to implement resolution recommendations due to external factors (i.e., lack of equipment, nonconcurrence from other facilities), the local facility will elevate the issue to the responsible Service Area office.

17-7-5. RESOLVING RECURRING SECTOR LOADING ISSUES

The elevation of a recurring sector loading issue to the regional level indicates that the local facility requires additional assistance in resolving the issue. The appropriate Service Area office will allocate necessary resources to address the sector loading issue and will ensure that:

a. The local facility forwards a staff study to the Service Area office outlining activities taken to resolve the recurring sector loading problem, solutions explored, and recommendations for resolution. The report will also contain specific initiatives the facility is employing to currently manage the sector.

b. The originating facility Service Area office will develop an action plan to address the identified problem and will:

1. Notify ATCSCC of any continuing TM initiatives being implemented to resolve the sector loading problem.

2. Dedicate resources within the division to evaluate the facility's findings.

3. Serve as the focal point for coordinating inter-facility activity as appropriate.

4. Coordinate with appropriate FAA Headquarters service units for assistance as necessary.

5. Forward to the manager ATCSCC, within 60 days of receiving the facility's report, a copy of the draft action plan and associated milestones.

Section 8. Ground Delay Programs

17-8-1. POLICY

Ground Delay Programs (GDP) shall be applied to all aircraft departing airports in the contiguous U.S., as well as, from select Canadian airports. Aircraft that have been assigned an EDCT in a GDP should not be subject to additional delay. Exceptions to this policy are miles-in-trail and departure/en route spacing initiatives that have been approved by the ATCSCC.

■ GDP procedures do not apply to facilities in Alaska.

17-8-2. GENERAL

A GDP is a TM process administered by the ATCSCC; when aircraft are held on the ground in order to manage capacity and demand at a specific location, by assigning arrival slots. The purpose of the program is to support the TM mission and limit airborne holding. It is a flexible program and may be implemented in various forms depending upon the needs of the air traffic system. The EDCT is calculated based on the estimated time en route and the arrival slot. It is important for aircraft to depart as close as possible to the EDCT to ensure accurate delivery of aircraft to the impacted location. GDPs provide for equitable assignment of delays to all system users.

17-8-3. BACKGROUND

In the past, GDPs were issued manually, followed by software called Groverjack. These systems were based on the Official Airline Guide data, and did not take into account dynamic changes the system users made to their schedule. The Flight Schedule Monitor (FSM) was developed through the collaborative decision making process with system users to provide a dynamic method of implementing and managing GDPs. System users submit schedule changes to FSM, which keeps a current up-to-the-minute schedule of flights. The Flight Schedule Analyzer (FSA) is used to monitor and review the effectiveness of GDPs.

17-8-4. DEFINITIONS

a. GDP Parameters. Aircraft departing within a defined geographical area are initially assigned delay in the GDP. This area is developed using the FSM,

and may consist of one or more ARTCCs and one or more Canadian airports. All departure aircraft will receive an EDCT to the GDP airport.

b. Delay Assignment (DAS). A method for assigning delays to aircraft based on the GDP parameters. The delay assignment is calculated in 15-minute increments and appears as a table in ETMS.

c. General Aviation Airport Program (GAAP). A method for assigning delays to aircraft based on arrival slot availability at the airport.

17-8-5. VARIABLES IN GDPs

GDPs may be modified and affected due to changing conditions. Some of those variables include, but are not limited to, GDP Adjustments, Diversion Recovery, and User Options.

a. GDP Adjustments. The ATCSCC may make revisions and compressions to the GDP as conditions at the airport or within the airspace change.

b. Diversion Recovery. During periods where there are a large number of diverted flights, the GDP may be adjusted to provide priority for the recovery of aircraft diversions over nondiverted flights.

c. User Options. Users are permitted to exchange and substitute Controlled Times of Arrival (CTA) congruent with CDM agreements concerning substitutions.

17-8-6. ATCSCC PROCEDURES

Upon receipt of information that traffic flows have been or are expected to be impacted and that significant delays will result, the ATCSCC must:

a. Conference affected facilities and system users, as appropriate, to determine AARs and review system demand and other known or anticipated factors.

b. Determine when implementation of a GDP is appropriate and the flow rate to be used. Consideration will be given to the impact on other air traffic control facilities and user groups.

c. Transmit an ATCSCC advisory providing information to air traffic control facilities and user groups about the implementation, revision, compression, and cancellation of a GDP. Except for the cancellation

of a GDP, the ATCSCC advisory shall include the following items:

1. Airport.
 2. Delay Assignment Mode.
 3. Aggregate Demand List (ADL) Time.
 4. Program Type. (Optional)
 5. Arrivals Estimated For.
 6. Program Rate.
 7. Flights Included.
 8. Scope.
 9. Additional Facilities Included.
 10. Exempt Facilities.
 11. Canadian Airports Included. (When applicable.)
 12. Delay Assignment Table Applies To. (Optional.)
 13. Maximum Delay or Delay Limit. (As appropriate).
 14. Average Delay. (Optional).
 15. Reason.
 16. Remarks.
- d. Transmit the DAS table to ARTCC TMUs via ETMS and the NADIN circuits, if appropriate.
- e. Transmit EDCTs to ARTCCs and linked system users.

NOTE—

A CT message is automatically transferred to the ARTCC's HOST computers by the ETMS and appears on flight progress strips as an EDCT. In the event of a communication failure between the ETMS and the NAS computer, the CT message can be manually entered by the ARTCC TMC with ATCSCC approval.

f. Input ATCSCC coordinated modifications to EDCT into FSM.

NOTE—

Modifications may be made through ETMS.

g. Continually monitor, adjust, and cancel GDPs, as appropriate, and transmit an ATCSCC advisory as necessary.

h. Provide an EDCT or DAS when requested by an ARTCC.

i. Coordinate with affected facilities to ensure the GDP is adequately managing the demand.

j. Obtain arrival and departure counts from affected facilities, as appropriate.

k. Utilize the TSD and FSM to monitor traffic flow patterns, obtain estimated arrival counts, or obtain airborne delay estimates.

l. When appropriate and workload permitting, utilize FSA to monitor the GDP.

17-8-7. ARTCC PROCEDURES

The ARTCC TMU must:

a. Issue a General Information message (GI) to all towers and AFSSs/FSSs advising of the GDP. In some instances, verbal notification, in addition to a GI, may enhance the dissemination of information.

b. Issue EDCT information to non-FDEP/FDIO equipped towers and other users in sufficient time for proper planning and control actions. This does not include non-FDEP towers that are satellites of TRACON/RAPCON facilities. The TRACON/RAPCON is responsible for satellite EDCTs.

c. Evaluate the Delay Assignment Mode and assign EDCTs, as appropriate.

1. For DAS, assign an EDCT using the DAS table to aircraft that do not receive an EDCT and are destined to an affected airport within their ARTCC boundaries. Contact the ATCSCC for aircraft destined to an airport outside their ARTCC boundaries.

2. For GAAP, contact the ATCSCC for an EDCT for aircraft that do not receive an EDCT.

d. Keep the ATCSCC apprised of cancellations and diversions to or from the affected airport.

e. Relay information to the ATCSCC when advised by a terminal facility about EDCT issues.

f. Request a revised EDCT from the ATCSCC when notified by the terminal facility that a flight will be unable to depart within EDCT parameters as defined in FAAO 7110.65, Air Traffic Control.

g. Advise the appropriate terminal facility or controller after receiving a revised EDCT from the ATCSCC.

h. Utilize FSM to obtain information about the GDP, and may utilize FSA to monitor the GDP.

17-8-8. TERMINAL PROCEDURES

The Terminal TMU must:

a. Utilize FSM, if available, to obtain EDCT information.

b. Obtain from the ARTCC TMU and apply the appropriate delay to:

1. Airfile aircraft destined to the affected airport.

2. Any other flight not assigned an EDCT.

c. Ensure that internal flight plans are entered into the HOST computer in order to receive an equitable delay.

d. Ensure the EDCT is included in the flight clearance when a GDP is in effect. If an EDCT is not received and a GDP is in effect, contact the ARTCC TMU for an EDCT.

e. Issue EDCT information to non-FDEP/FDIO equipped towers and other users in sufficient time for proper planning and control actions.

f. To the extent possible, plan ground movement of aircraft destined to the affected airport so that flights will meet the parameters in FAAO 7110.65, Air Traffic Control. If unable, advise the ATCSCC, through the appropriate protocol.

g. Ensure aircraft with an EDCT that are in a Ground Stop are not released without the approval of the issuing authority for the Ground Stop.

h. When a GDP is in effect for the local airport, forward the total number of hourly arrivals and departures to the ATCSCC, through the appropriate protocol, as soon as possible after each hour in order that timely GDP adjustments may be made.

i. Coordinate closely with the appropriate ARTCC TMU on conditions affecting current or projected arrival rates.

NOTE-

Terminal facilities may utilize FSM to obtain information concerning the GDP, including EDCTs, and may utilize FSA to monitor the GDP.

17-8-9. AMENDING EDCTs

a. All requests to amend EDCTs earlier than the current EDCT must be coordinated with the ATCSCC.

b. Facilities without FSM should contact their overlying facility to request a new EDCT.

c. Modifications to EDCTs for a time later than the current EDCT must be processed in accordance with the following guidelines:

1. The pilot/operator must be in contact with ATC.

2. Facilities with FSM may utilize the EDCT Change Request (ECR) tool to assign a new EDCT utilizing the Slot Credit Substitution (SCS) method, followed by the unlimited delay option, when available.

3. If the time generated by ECR is not acceptable (normally two hours of additional delay or longer), the facility must contact the ATCSCC through the appropriate protocol, for a new EDCT.

d. All EDCTs amendments not obtained using the ECR tool must be coordinated via the appropriate protocol.

17-8-10. CANCELLATION PROCEDURES

a. When conditions no longer warrant ground delays, the ATCSCC shall:

1. Conference all affected facilities and system users, as appropriate, to develop an operational plan for release of ground delayed traffic into the system.

2. Transmit an ATCSCC advisory stating the GDP has been cancelled. The advisory shall include the following items:

(a) Airport.

(b) ADL Time.

(c) Reason.

(d) Remarks.

3. Purge flights from the ETMS.

b. The ARTCC TMU and the Terminal TMU shall:

1. Issue cancellation information to underlying facilities, using normal communication methods, in sufficient time for proper planning and control actions.

2. Notify facility personnel, as appropriate, of the cancellation.

17-8-11. DOCUMENTATION

a. The ATCSCC shall document all pertinent information related to the GDP in their position logs,

including, but not limited to, the start and stop times and the reason for the GDP.

b. The ARTCC TMU and the Terminal TMU shall document all pertinent information related to the GDP.

17-8-12. USER OPTIONS

When a GDP is in effect, system users may exercise options other than ground delays. Users shall coordinate options directly with the ATCSCC.

a. Intermediate landing. The flight should land at the intermediate airport to provide the delay necessary for the flight to arrive at the CTA. An intermediate landing airport within the arrival ARTCC should not be accepted without coordination and approval from the ATCSCC.

b. Substitution of flights.

1. Users are permitted to exchange and substitute CTAs congruent with CDM agreements concerning substitutions. The ATCSCC may deny substitution requests when:

(a) AARs are varying rapidly.

(b) Workload necessitates.

(c) Deemed appropriate by the NOM/NTMO.

2. The ATCSCC shall:

(a) Ensure that when flights are traded, the delay factor is equal to the original delay factor after the trade/substitution has been completed.

(b) Document substitutions.

(c) Transmit an ATCSCC advisory when substitutions are suspended and include an estimated time when substitutions will resume.

17-8-13. VFR FLIGHTS

a. VFR flights requesting an IFR clearance to a GDP airport should be handled as follows:

1. DAS. Assign a delay from the DAS table.

2. GAAP. Call the ATCSCC for a time.

b. Aircraft requesting to remain VFR will be at the discretion of the terminal facility with the GDP, if they can be accommodated without additional delay to IFR aircraft, except in unusual circumstances, e.g., emergency, lifeguard.

Section 9. Ground Stop(s)

17-9-1. POLICY

Ground stop(s) (GS) override all other traffic management initiatives. Aircraft must not be released from a GS without the approval of the originator of the GS.

17-9-2. GENERAL

The GS is a process that requires aircraft that meet a specific criteria to remain on the ground. The criteria may be airport specific, airspace specific, or equipment specific; for example, all departures to San Francisco, or all departures entering Yorktown sector, or all Category I and II aircraft going to Charlotte. GSs normally occur with little or no warning. Since GSs are one of the most restrictive methods of traffic management, alternative initiatives shall be explored and implemented if appropriate. GSs should be used:

- a. In severely reduced capacity situations (below most user arrival minimums, airport/runway closed for snow removal, or aircraft accidents/incidents);
- b. To preclude extended periods of airborne holding;
- c. To preclude sector/center reaching near saturation levels or airport grid lock;
- d. In the event a facility is unable or partially unable to perform ATC services due to unforeseen circumstances;
- e. When routings are unavailable due to severe weather; and
- f. When routings are unavailable due to catastrophic events.

NOTE-

Helicopters are exempt from ground stops based on weather unless specifically included by the ARTCC facility when requesting the ground stop.

17-9-3. LOCAL GROUND STOP(S)

The local facility may initiate a local GS when conditions are not expected to last more than 30 minutes. The local GS is implemented when the facilities impacted are wholly contained within the

local facility's area of responsibility. Local GSs must not be extended without prior approval of the ATCSCC.

a. The ARTCC TMU must:

- 1. Explore and implement alternative initiatives prior to implementing a local GS, if feasible.
- 2. Notify the ATCSCC if a local GS is expected to reach 15 minutes. This notification must be in accordance with para 17-5-12, DELAY REPORTING, and accomplished within 15 minutes of the initiation of the GS.

- 3. Issue GS information to underlying facilities, using normal communication methods, in sufficient time for proper planning.

b. The Terminal facility must:

- 1. Explore and implement alternative initiatives prior to implementing a local GS, if feasible.
- 2. Issue GS information to underlying facilities, using normal communication methods, in sufficient time for proper planning.
- 3. Notify the appropriate TMU when a local GS is expected to reach 15 minutes. This notification must be in accordance with para 17-5-12, DELAY REPORTING, and accomplished within 15 minutes of the initiation of the GS.

NOTE-

When appropriate, the ATCSCC may issue an ATCSCC advisory for a local GS.

17-9-4. NATIONAL GROUND STOP(S)

Prior to implementing a national GS, less restrictive traffic management initiatives must be evaluated. Upon receipt of information that an immediate constraint is needed to manage a condition:

a. The ATCSCC must:

- 1. Time permitting, conference affected facilities and system users, as appropriate, to implement a national GS.
- 2. When appropriate, utilize Flight Schedule Monitor (FSM) to implement a national GS, except when deemed impractical.

NOTE–

FSM does not allow for the implementation of category specific GSs, for example, GS for single airline flights or GS for all Cat I and II flights. In these cases the use of the FSM GS is not practical.

3. Transmit an ATCSCC advisory providing information to air traffic facilities and user groups about the implementation or modification of a national GS. The ATCSCC advisory shall include the following items:

- (a) Airport.
- (b) Facilities Included.
- (c) Expect Update Time.
- (d) Reason.
- (e) Probability of Extension.
- (f) Remarks. (Optional)

4. Continually monitor, adjust, and cancel national GSs, as appropriate, and transmit an ATCSCC advisory as necessary.

5. Coordinate with the affected facilities to ensure the GS is managing the condition.

b. The ARTCC TMU must:

1. Explore and implement alternative initiatives prior to requesting a national GS, if feasible.

2. Issue GS information to underlying facilities, using normal communication methods, in sufficient time for proper planning.

3. Coordinate closely with the ATCSCC on conditions affecting capacity.

c. The Terminal facilities must:

1. Issue GS information to underlying facilities, using normal communication methods, in sufficient time for proper planning.

2. Coordinate closely with the appropriate TMU on conditions affecting the national GS.

3. Request release of aircraft through the appropriate protocol.

17–9–5. CANCELLATION PROCEDURES

a. The ATCSCC must:

1. Time permitting, conference affected facilities and system users, as appropriate, to develop an operational plan to release nationally ground stopped traffic.

2. Transmit an ATCSCC advisory when a national GS has been cancelled.

3. Transmit an ATCSCC advisory to cancel an ATCSCC issued local GS advisory.

4. The advisory must include the following items:

- (a) Airport.
- (b) Facilities Released.

b. The ARTCC TMU and the Terminal facilities must:

1. Issue cancellation information to underlying facilities, using normal communication methods, in sufficient time for proper planning and control actions.

2. Notify facility personnel, as appropriate, of the cancellation.

3. Notify the ATCSCC if a local GS was coordinated with the ATCSCC.

17–9–6. DOCUMENTATION

a. The ATCSCC shall document all pertinent information related to the GS in their position logs, including, but not limited to, the start and stop times, the affected facilities, and the reason for the GS.

b. The ARTCC TMU and the Terminal facilities must document all pertinent information related to the GS in their position logs.

Section 10. Special Traffic Management Programs

17-10-1. SPECIAL EVENT PROGRAMS

Special procedures may be established for a location to accommodate abnormally large traffic demands (Indianapolis 500 Race, Kentucky Derby, fly-ins) or a significant reduction in airport capacity for an extended period (airport runway/taxiway closures for airport construction). These special procedures may remain in effect until the event is over or local TM procedures can handle the situation.

17-10-2. COORDINATION

Documentation to justify special procedures shall be submitted by the facilities to the En Route and Oceanic Operations Service Area Office and Terminal Operations Area Office 90 days in advance, with a copy to the appropriate Manager, Tactical Operations. The service area office shall review and forward the request to the ATCSCC for coordination and approval 60 days in advance.

a. Documentation shall include the following as a minimum:

- 1.** The reason for implementing special procedures and a statement of system impact. Include the total number of additional flights expected.
- 2.** Airport(s)/sector(s) to be controlled.
- 3.** Capacity restraints by user category (five air carrier, three air taxi, seven general aviation, three military) per hour per airport.
- 4.** Hours capacity must be controlled specified in both local time and in UTC (e.g., 0900–1859 EST, 1400–2359Z or, 0900–1859 EDT, 1300–2259Z).
- 5.** Type of flight to be controlled (e.g., unscheduled, arrivals, departures, IFR, VFR).
- 6.** Days of the week and dates (e.g., Thursday, May 7 through Monday, May 11 or Friday, May 22 and Sunday, May 24).
- 7.** A draft copy of the associated NOTAM and temporary flight restrictions. (Electronic mailing preferred).
- 8.** IFR/VFR capacity at each airport/sector.
- 9.** Resource cost estimate including staffing and telephone requirements.

10. The number of slots to be allocated per airport, or group of airports, per time increment (e.g., ten arrivals every fifteen minutes or forty aircraft every sixty minutes).

11. Coordination accomplished with impacted facilities and any unresolved issues.

b. The service area office shall forward the NOTAM to System Operations Airspace Aeronautical Information Management/Publications, for publication no later than 28 days prior to the publication date. Cutoff submittal dates and publication dates are printed inside the front cover of the monthly NOTAM Flight Information Publication.

NOTE—

The toll-free number/web address to obtain a STMP slot are:

- 1. Touch-tone interface:** 1-800-875-9755.
- 2. Web interface:** www.fly.faa.gov.
- 3. Trouble number:** 1-703-904-4452.

17-10-3. IMPLEMENTATION

a. Special TM programs shall be managed by the ATCSCC or the affected ARTCC. The ATCSCC shall transmit an advisory containing the reason for the program, airport(s)/sector(s) involved, dates and times the program will be in effect, telephone numbers to be used, and any special instructions, as appropriate. The affected ARTCC shall monitor special TM programs to ensure that the demand to the center/terminal facilities is equal to the capacity.

b. The ATCSCC will disseminate a password and instructions for facility STMP reports. Detailed instructions can be found on the web site for the web interface, or in the Aeronautical Information Manual for the touch-tone interface.

17-10-4. AIRPORT RESERVATION OFFICE

a. The Airport Reservations Office (ARO) has been established to monitor the operation and allocation of reservations for the “other” category (nonscheduled flights) of the high density rule required by 14 CFR Part 93, subpart K. This office receives and processes all IFR requests for nonscheduled operations at designated high density traffic

airports (HDTA), and allocates reservations on a “first come, first serve” basis determined by the time the request is received at the ARO. Standby lists are not maintained.

b. The HDTAs are: John F. Kennedy International Airport, LaGuardia Airport, and Ronald Reagan Washington National Airport. Reservations for John F. Kennedy International Airport are required between 3 p.m. and 7:59 p.m. local time. Reservations for LaGuardia Airport and Ronald Reagan Washington National Airport are required between

6 a.m. and 11:59 p.m. local time. Requests for IFR reservations will be accepted starting 72 hours prior to the proposed time of operation at the affected airport.

NOTE–

The telephone numbers/Internet Address to obtain an HDTA reservation are:

- 1.** *Touch-tone:* 1–800–875–9694 or (703) 707–0568.
- 2.** *Web Interface:* <http://fly.faa.gov/ecvrs>.
- 3.** *Trouble number:* 1–703–904–4452.

Section 11. Severe Weather Management

17-11-1. GENERAL

a. The AT system is most susceptible to thunderstorm activity between April and October on a national basis. Thunderstorms create a major disruption to the normal and organized movement of air traffic and significantly increase the workload in an impacted facility. To meet this challenge, System Operations has charged the ATCSCC to set aside a cadre of TMSs to deal directly and independently with severe weather problem areas. To accomplish this task, the ATCSCC established severe weather management teams.

b. When the potential for severe weather exists which will cause a disruption to normal traffic movements, the ATCSCC severe weather management specialists will implement procedures designed to optimize the use of the available airspace. Strategic planning is an integral part of severe weather management and the responsibility of all involved.

c. Facilities will be called upon to favor and accept traffic that is not normally routed through their area. In the interest of a balanced flow and to minimize delays, we expect air traffic facilities to accept this alternate flow. All facilities are expected to participate and cooperate when called upon. A properly developed, coordinated, and implemented plan will result in the better use of available airspace.

17-11-2. DUTIES AND RESPONSIBILITIES

The ATCSCC shall be the final approving authority for alternate routes and initiatives that transcend center or terminal boundaries.

a. The ATCSCC severe weather management supervisor shall:

1. Be responsible for severe weather management operations.
2. Ensure coordination is completed to develop severe weather strategies.

NOTE-

ATCSCC NTMOs shall be responsible for the implementation of TM initiatives in support of severe weather management.

3. Conduct special weather TELCONs, when appropriate.

4. Conduct a daily severe weather operations critique with ATCSCC severe weather management specialists, affected facilities, and system users, as appropriate.

b. The ATCSCC severe weather management specialist shall:

1. Coordinate with appropriate facilities and users to determine the need for developing alternate routes and initiatives to avoid severe weather.

2. Coordinate alternate routes with all affected facilities.

3. Transmit advisories defining severe weather areas and alternate routes.

4. Conference all affected facilities and system users to apprise them of weather conditions that will impact the NAS.

c. Facility TMUs shall coordinate directly with the ATCSCC severe weather specialist for matters pertaining to severe weather.

Section 12. Severe Weather Avoidance Plan (SWAP)

17-12-1. GENERAL

SWAPs are formalized programs that are of considerable value in areas that are particularly susceptible to severe weather. Plans that are properly developed, coordinated, and implemented can reduce coordination and TM restrictions associated with rerouting aircraft around areas of severe weather; therefore, resulting in better utilization of available airspace.

17-12-2. DUTIES AND RESPONSIBILITY

a. Air traffic facilities shall:

1. Favor and accept traffic flows that are not normally routed through their area.

2. Monitor, evaluate, and adjust programs to ensure maximum effectiveness.

3. Record, collect, and package each day's severe weather management information including delay information, charts, and advisories.

4. Record two or more aircraft identifications:

(a) When flights deviate and it will result in closure of that route.

(b) When flights elect not to depart and/or land due to the current weather conditions.

5. Solicit pathfinders to reopen routes, when appropriate.

6. When requested, forward flight information to the ATCSCC.

b. ATCSCC severe weather management specialist shall:

1. Obtain a severe weather analysis from weather information providers and discuss the findings with the appropriate TMU.

2. Conference all affected facilities and system users to apprise them of forecast severe weather conditions and the routes or areas that will be impacted.

3. Formulate a dynamic severe weather operational plan. Coordinate TM initiatives and alternate routes with all affected facilities.

4. Use, to the extent possible, the following options in the following order when developing an operational plan:

(a) Expanded miles-in-trail initiatives.

(b) Reroutes.

(c) Ground delay programs.

5. Transmit advisories describing the existing or forecast weather conditions, the operational plan, alternate routes, or cancellation thereof.

6. Be the final approving authority for traffic flows and reroutes.

c. The ARTCC TMU shall:

1. Coordinate with the ATCSCC when implementing SWAP procedures that affect other ARTCCs. If possible, this coordination should be completed at least 2 hours prior to expected implementation.

2. Notify affected facilities within their area of responsibility when SWAP is expected to be implemented, including initiatives, reroutes, and affected times.

3. Furnish the sector or facility issuing the revised clearance a route of flight to a point where the new route connects with the filed route.

4. Notify the ATCSCC and affected facilities within their area of responsibility when normal routings can be resumed.

Section 13. Preferred IFR Routes Program

17-13-1. GENERAL

a. This section identifies responsibilities and establishes procedures for the development, revision, and cancellation of preferred IFR routes in the NAS. The objective of preferred routes is the expeditious movement of traffic during heavy demand periods and the reduction of TM initiatives and coordination. User acceptance will be greatly enhanced by the prompt cancellation of unnecessary routes and the prompt and thorough coordination of new or revised routes.

b. Preferred IFR routes should be established only when traffic density and safety makes such routes necessary for the expeditious movement of air traffic. Except for the short climb or descent segments between the terminal and the en route structure, preferred routes shall be developed using designated airways/routes as depicted on en route charts. Preferred routes are normally established between two terminal areas, but routes may also be established between a terminal and an en route fix, an en route fix and a terminal, or two en route fixes.

c. The impact of airspace actions on preferred IFR routes must be considered. Retention of the most user desirable route(s), consistent with TM requirements, must also be considered.

d. Comments concerning problems or recommendations to improve the preferred IFR route program are encouraged and should be forwarded to the ATCSCC.

17-13-2. RESPONSIBILITIES

a. ARTCCs shall be responsible for:

1. Identifying, developing, coordinating, and establishing preferred routes, as needed, in accordance with the provisions of this section. The originating ARTCC is responsible for ensuring the accuracy of the submitted route (e.g., checking for typographical errors) and for route connectivity and compatibility with NAS processing.

2. Maintaining and verifying route validity and accuracy by establishing, revising, and canceling preferred routes as operational needs dictate.

3. Identifying a single office of responsibility for their preferred IFR routes program. This office shall act as the office of primary responsibility (OPR) for the facility and shall be the focal point for coordination with the appropriate En Route and Oceanic Operations Service Area Office.

b. En Route and Oceanic Operations Service Area offices shall be responsible for:

1. Reviewing proposed routes to ensure that NAVAID identifications, airway designations, route connectivity and fix names are correct.

2. Reviewing all preferred routes at least annually and revise or cancel routes as necessary.

3. Serving as the focal point for coordination with the ATCSCC and System Operations Airspace and Aeronautical Information Management.

c. The ATCSCC shall be responsible for:

1. Managing the national preferred IFR routes program.

2. Operating as the OPR at the national level.

3. Providing operational review of submitted preferred routes to examine the routes for operational impact.

4. Acting as the approving authority for preferred IFR routes.

d. The NFDC shall be responsible for:

1. Entering the route in the national database.

2. Forwarding errors noted during the validation to the ATCSCC for resolution.

3. Publishing the route as an add-on page to the National Flight Data Digest (NFDD).

17-13-3. DEVELOPMENT PROCEDURES

Routes and route segments shall be defined by any combination of the following:

- a. Type and number of the airway, jet route, or RNAV route (e.g., V43, J54).

- b. NAVAID identifier, intersection name, or fix name codes (e.g., ARD, BELLE).

- c. NAVAID radial/distance (e.g., ARD201113).

d. NAVAID radial (e.g., ARD201).

e. Portion of routes not necessary to comply with the preferred route objective should be contained within brackets []. Any routing between the fixes inside the brackets is normally at the pilot's discretion. The first fix after the right-hand bracket is where the preferred portion of the route actually begins.

EXAMPLE—

[DFW GVE] GVE J37 J55 PVD V139 HTM BOS

f. When developing or reviewing preferred routes, considerations should include:

1. Terminal/en route traffic flow patterns and traffic density.

2. Radar coverage.

3. Beginning and termination fixes of DPs/STARs and correlation with the DP/STAR program.

4. North American Route (NAR) System.

5. Special use airspace.

6. Computer-adapted preferential arrival routes, preferential departure routes, and preferential departure/arrival routes.

7. Lead time requirements for publication in the AFD, DOD flip, en route high/low altitude charts, area charts, DP/STAR charts, instrument approach procedure charts, and other flight planning publications.

8. NAVAID identifiers and name codes shall be used in preferred route descriptions, except that intersection/fix names shall be spelled out in the AFD, pending assignment of five letter name codes.

9. NAVAID radials or radial distance fixes shall not be used to avoid airway/jet route rule making actions. NAVAID radials are used only where necessary. Radial/distance fixes shall be used only for expediency pending assignment of intersection or fix name code by the NFDC. Route descriptions in the AFD should be compatible with the computer description, except as previously specified. When it is necessary to use NAVAID radials or radial/distance fixes to describe direct route segments, use one of the following:

NOTE—

The originator is responsible for verifying computer adaptation and NAS compatibility before using the above techniques.

10. All preferred IFR routes shall have specified effective times of operation based on need. Effective times must be published in the AFD and, in the case of single direction routes, on en route charts as appropriate.

11. Low altitude preferred IFR routes shall have inclusive altitudes. Minimum obstruction clearance altitude, minimum en route altitude, and minimum reception altitude shall be considered when establishing inclusive altitudes.

12. Define points of transition from one airway/route structure to another by using NAVAIDs/fixes which are common to both structures and depicted on en route charts for both structures. When describing high altitude preferred routes, victor airways may be used to define climbing/descending segments provided that such usage does not exceed the service limitations of the NAVAID.

13. Low frequency nondirectional beacons shall not be used except when absolutely necessary or when international routes enter/depart the NAS (e.g., routes in Alaska or oceanic control areas).

14. Single-direction routes may be established in the high altitude stratum to enhance safety and expedite air traffic. The routes may begin or end at any fix within the en route structure and need not serve a specific terminal area. Single-direction routes serving terminal/en route needs shall be depicted on en route charts and those routes serving a terminal area shall be listed in the AFD and may also be depicted on en route charts.

17-13-4. COORDINATION PROCEDURES

a. General: The coordination process accomplishes two things. First, it informs users/facilities/Service Area offices that a preferred route is being established or revised and solicits input. Second, it provides users, facilities, service area offices, and publishers with timely information so that the necessary actions can be initiated and accomplished within established schedules. Except for editorial corrections, proposed preferred routes shall be fully coordinated well in advance of planned publication dates.

b. User coordination: Users shall be allowed at least 30 days to review and comment on proposed preferred routes. Coordination should be through:

1. Designated user representatives.

2. Designated organization or association representatives when users are members.

3. FAA/user meetings.

4. The ATCSCC for user organizations at the national level.

c. Interfacility coordination:

1. The originating ARTCC shall be defined as follows:

(a) New routes: The ARTCC identifying the need to establish a new preferred IFR route.

(b) Existing routes: The ARTCC identifying the need to change or delete a preferred IFR route.

(c) When establishment, change, or deletion of a preferred route is proposed by a facility other than an ARTCC, the requesting facility shall coordinate with the host ARTCC. The host ARTCC shall assume responsibility as the originator.

2. The originating ARTCC shall:

(a) Coordinate with all affected ATC facilities and users at the local level.

(b) Forward the completed data to the En Route and Oceanic Operations Service Area office and Terminal Operations Service Area office.

3. Each Service Area office shall:

(a) Resolve differences between its ATC facilities.

(b) Coordinate with the users at the Service Area office level.

(c) Forward the completed data to the ATCSCC.

d. The originating Service Area office shall forward unresolvable controversial proposals, with all comments and objections, to ATCSCC for resolution. Proposals which are approved will be sent for processing. Disapprovals will be returned to the Service Area office originating the proposal.

1. The ATCSCC shall:

(a) Complete coordination with the users at the national level.

(b) After the 30 day coordination forward completed preferred IFR routes to System Operations

Airspace and Aeronautical Information Management for publication.

17-13-5. PROCESSING AND PUBLICATION

a. The airspace information cutoff dates listed in the AFD are the last date that preferred routes may be received by the NFDC to assure publication on the planned effective date. The following procedures shall apply:

1. Plan "effective" dates to coincide with the issue date of the AFD.

2. Send approved preferred routes to the ATCSCC at least 15 weeks prior to the desired effective date. Include the desired effective date. Effective dates must coincide with the 56-day charting cycle due to airway changes affecting preferred routes.

3. ATCSCC shall forward approved preferred routes to arrive at the NFDC at least 9 weeks prior to the desired effective date.

NOTE-

The importance of adequate lead time cannot be overemphasized. Experience has shown that early submission for publication reduces errors, workload, and printing costs. In the case of major or lengthy changes, additional lead time may be necessary. Facilities should coordinate with the ATCSCC to determine if the requested effective date can be met.

b. Preferred routes shall be submitted to the NFDC on standard 8.5 by 11 (inches) white bond paper, camera ready, to be included in the NFDD. To facilitate editing and processing, it is recommended that the preferred route text be submitted as an electronic mail attachment. The specific format for preferred routes is noted in examples 1, 2, and 3 below. For those submissions not covered by example, the originator should contact NFDC for guidance.

c. The following three examples show the formats for the submission of preferred IFR route data. The first shows the addition of new routes, the second shows the modification of existing routes, and the third shows the deletion of existing routes. Compliance is mandatory to eliminate the possibility of error in publication.

EXAMPLE–

1. Adding new routes, use this format:

SPECIAL USE AIRSPACE	
LOW ALTITUDE PREFERRED ROUTES (or other applicable section)	
NORTHEAST U.S.	EFFECTIVE HOURS
(applicable A/FD)	UTC
Effective April 28, 1994, the following routes are added:	
BALTIMORE TO NORFOLK	
NEW: (70–170 INCL., NON– JET)	1100–0300
V93 PXT V16 V33 V286 STEIN	
OR	
(70–170), JETS) DAILY	1100–0300
V33 V286 STEIN	
BALTIMORE TO ROCHESTER	
NEW: V31 ROC154 CHESY	1100–0300

EXAMPLE–

2. Deleting existing routes, use this format:

SPECIAL USE AIRSPACE	
LOW ALTITUDE PREFERRED ROUTES (or other applicable section)	
NORTHEAST U.S.	EFFECTIVE HOURS
(applicable A/FD)	UTC
Effective April 28, 1994, the following routes are deleted:	
BALTIMORE TO NORFOLK	
BALTIMORE TO ROCHESTER	

NOTE–

Multiple routes are considered a set and the entire set must be deleted to be shown as in this example. If only one route of the set is deleted, use the modified format in example 3.

EXAMPLE–

3. Modifying existing routes, use this format:

SPECIAL USE AIRSPACE	
LOW ALTITUDE PREFERRED ROUTES (or other applicable section)	
NORTHEAST U.S.	EFFECTIVE HOURS
(applicable A/FD)	UTC
Effective April 28, 1994, the following routes are modified:	
BALTIMORE TO NORFOLK	
OLD: (70–170 INCL., NON–JET)	1100–0300
V87 PXT V6 V73 V286 STEIN	
OR	
(70–170), JETS) DAILY	1100–0300
V33 V286 STEIN	
BALTIMORE TO ROCHESTER	
V81 ROC154 CHESY	1100–0300
Note – Notice that in the routes from Baltimore to Norfolk, there are two available routes and that only the first route changed. The two routes are considered a set and the entire set must be submitted, even if only one route is being changed.	

Section 14. North American Route Program

17-14-1. PURPOSE

The North American Route Program (NRP) provides the users of the NAS greater flexibility in flight plan filing at or above 29,000 feet (FL290).

17-14-2. RESPONSIBILITIES

a. The David J. Hurley Air Traffic Control System Command Center (ATCSCC) shall:

1. Have the authority to suspend and/or modify NRP operations for specific geographical areas or airport(s). Suspensions may be implemented for severe weather reroutes, special events, or as traffic/equipment conditions warrant.

2. Conduct special user teleconferences and transmit ATCSCC advisories whenever a provision of the NRP will not be available to the user community for more than one hour.

3. Be the final approving authority for all TM initiated restrictions to NRP flights outside of 200 NM from point of departure or destination.

b. ARTCC TMUs shall:

1. Avoid issuing route and/or altitude changes for aircraft which display the remarks "NRP" except when due to strategic, meteorological or other dynamic conditions.

2. Coordinate with ATCSCC prior to implementing any restriction to NRP flights beyond 200 NM from point of departure or destination.

17-14-3. PROCEDURES

a. Continually monitor sector activity and utilize available resources to identify potential sector or airport overloads. Where appropriate, the traffic management specialists, supervisors, air traffic control specialists, and the ATCSCC shall implement coordinated activities to ensure traffic flows are consistent with the ability of a functional position or airport to provide efficient air traffic services.

b. "NRP" shall be retained in the remarks section of the flight plan if the aircraft is moved due to weather, traffic, or other tactical reasons. In these situations, every effort will be made to ensure the

aircraft is returned to the original filed flight plan/altitude as soon as conditions warrant.

c. Traffic management specialists shall not enter "NRP" in the remarks section of a flight plan unless prior coordination concerning this particular flight is accomplished with the ATCSCC or as prescribed by international NRP flight operations procedures.

d. The en route facility within which an international flight entering the conterminous United States requests to participate in the NRP shall enter "NRP" in the remarks section of the flight plan.

17-14-4. REPORTING REQUIREMENTS

Reports of unusual or unsatisfactory events attributable to NRP traffic should be forwarded to the System Operations ATCSCC via facsimile at (703) 904-4459 or telephone at (703) 708-5106. Reports shall include, at a minimum: aircraft call sign, type, altitude, route of flight, affected sectors, brief description of event, description of impact, and any actions taken.

17-14-5. USER REQUIREMENTS

a. International operators filing through Canadian airspace, at or east of Sault St. Marie (SSM), to destinations within the conterminous United States will be required to file over one of the following inland fixes to be eligible to participate in the NRP: SSM, TAFY, EBONY, ALLEX, BRADD, TOPPS, TUSKY, YXU, and QUBIS.

b. International operators filing through Canadian airspace, west of SSM, to destinations within the conterminous United States may utilize any inland navigational fix west of SSM within 30 NM north of the common Canada/United States airspace geographical boundary to be eligible to participate in the NRP.

c. Flights shall be filed and flown via any instrument departure procedure (DP), standard terminal arrival route (STAR) for the departure/arrival airport respectively, or published preferred IFR routes, for at least that portion of flight which is within 200 NM from the point of departure (egress) or destination (ingress). If the procedure(s) above do not extend to 200 NM, published airways may be

used for the remainder of the 200 NM. If procedure(s) above do not exist, published airways may be used for the entire 200 NM.

d. Operators that file a flight plan which conforms to a published preferred IFR route shall not enter “NRP” in the remarks section of that flight plan.

e. Operators shall ensure that the route of flight contains no less than one waypoint, in the FRD format, or NAVAID, per each ARTCC that a direct route segment traverses and these waypoints or NAVAIDs must be located within 200 NM of the

preceding ARTCC’s boundary. Additional route description fixes for each turning point in the route shall be defined.

f. Operators shall ensure that the route of flight avoids active restricted areas and prohibited areas by at least 3 NM unless permission has been obtained from the using agency to operate in that airspace and the appropriate air traffic control facility is advised.

g. Operators shall ensure that “NRP” is entered in the remarks section of the flight plan for each flight participating in the NRP program.

Section 15. Alternative Routings

17-15-1. PURPOSE

This section prescribes policies and guidelines for Coded Departure Route(s) (CDR).

17-15-2. DEFINITION

The CDR program is a combination of coded air traffic routings and refined coordination procedures designed to mitigate the potential adverse impact to the FAA and users during periods of severe weather or other events that impact the NAS.

17-15-3. POLICY

Abbreviated clearances shall only be used with CDRs at locations covered by a Memorandum of Agreement between the user and the FAA that specifies detailed procedures.

17-15-4. RESPONSIBILITIES

a. The ATCSCC shall:

1. Manage the national CDR program.
2. Operate as Office of Primary Interest (OPI) at the national level.
3. Conduct a review of the submitted CDRs and facilitate necessary corrections.
4. Notify activation/deactivation of CDR usage through the ATCSCC Advisory System.

b. The National Flight Data Center shall:

1. Forward to the ATCSCC Point of Contact (POC) any changes to published navigational database, (i.e., DPs/STARs, NAVAIDs, preferred routes, etc.) contained in the National Flight Data Digest(s) (NFDD) that are effective for the subsequent chart date. This data shall be provided at least 45 days before the chart date.

2. Error check all submitted route elements and forward errors noted during the validation to the ATCSCC for resolution.

c. ARTCCs shall:

1. Identify, develop, coordinate, and establish CDRs, as needed, in accordance with this section.

2. Supply a POC for the ATCSCC to contact regarding CDRs.

3. Validate their CDRs prior to inclusion in the national database. The validation of a CDR is considered complete when all facilities affected by that CDR have been provided a 30-day opportunity to reply to the proposed route, or each impacted facility has been contacted and approved the route.

4. Ensure published CDRs in the national database are limited to 10 per city pair.

5. Notify the originating facility when a CDR is unsatisfactory and provide an alternative routing, if appropriate.

6. Ensure HOST Stereo Flight Plans utilized for CDRs and CDRs published in the operational database are identical.

7. Report unusable, inaccurate, or unsatisfactory CDRs to the ATCSCC POC or via Planning Team (PT) feedback form available on the ATCSCC web page. Reports shall include the CDR designator, affected sectors, and specific description of the impact, and, if appropriate, suggestion for modification.

8. Facilitate the coordination necessary for the usage of abbreviated clearances, when requested.

- d. The terminal facilities shall coordinate with their host ARTCC for all matters pertaining to CDRs.

17-15-5. CDR DATA FORMAT

All Centers shall develop and update CDRs in accordance with the following:

- a. Eight-Character Designator. All facilities shall use the eight character naming convention. The eight character name must comply as follows:

1. Characters one through three are the three-letter ID of the origination airport.

2. Characters four through six are the three-letter ID for the destination airport.

3. Characters seven and eight are reserved for local adaptation and may be any two alphanumeric characters other than O or I.

NOTE-

O and I shall not be used to preclude confusion with numbers zero and one. (Examples of the naming convention are: ATLLAX9N, BOSLAX01, and EWRSFOGR).

b. CDRs shall be developed under the concept that aircraft with basic navigation capabilities (/A) will be able to navigate them.

c. All CDRs shall have current procedure numbers (DP/STAR) included as a part of the route string.

NOTE–

Examples of acceptable procedure numbers are: LGC8, OTT5, and SWEED5. Examples of unacceptable procedure numbers are: MINKS#, MINKS STAR, MINKS%.

d. All CDR route strings shall tie into normal arrival routings into the destination airport.

e. Approved database format:

1. Route string data shall include only upper-case characters (A–Z) or numbers with spaces separating each element (J48 ODF MACEY2 ATL).

2. No dots, dashes, asterisks, plus signs, or placeholders are to be included. While these elements may be used in the HOST environment, most flight planning systems will not accept them.

3. No leading zeroes are permitted in victor or jet airways (J12 is permitted, J012 is not).

f. CDRs for each location shall be published via the national CDR database. Updates to the CDR database will coincide with the normal 56–day chart updates. There are two segments of the CDR database. The operational database is a read–only record of all the current CDRs. The staging database is read–only to users but amendable by FAA facilities. The staging database replaces the operational database on each chart date.

g. CDRs shall be processed in accordance with the following timelines:

1. All changes must be entered into the staging database at least 36 days prior to each chart date. The

staging database is closed to changes 35 days prior to each chart date.

NOTE–

The timeline for the staging database is available under the Options drop–down menu. In addition to the drop–down menu, the status of the staging database is given at each login to the CDR database.

2. 30–35 Days Prior to the Chart Date. During this period, the staging database is checked for errors. Any errors are forwarded to the POC designated at each facility for correction. If the error cannot be corrected immediately, the route involved will be deleted from the database for that cycle. Once the error is corrected, the route may be reentered for a future date.

NOTE–

30 days prior to the Chart Date the staging database is available to FAA and users for downloading or updating of their files.

3. On each chart date, the staging database replaces the operational database and a mirror copy becomes the new staging database. The staging database is available for changes until it is locked 35 days prior to the next chart date, and the cycle starts over.

17–15–6. PROCEDURES

a. Facilities shall notify ATCSCC when implementing and terminating CDRs in accordance with para 17–14–2, Duties and Responsibility.

b. The ATCSCC shall issue an advisory in accordance with para 17–13–2, Duties and Responsibilities, when facilities are implementing or terminating CDRs.

c. Facilities shall make real–time reports of unusable or inaccurate CDRs through the Severe Weather Specialist for follow–up by the ATCSCC POC.

Section 16. Route Advisories

17-16-1. PURPOSE

This section prescribes policies and guidelines for issuing Route Advisories.

17-16-2. POLICY

In accordance with Federal Air Regulations, all operators have the right of refusal of a specific route and may elect an alternative. Alternatives include, but are not limited to, ground delay, diversion to another airport, or request to stay on the filed route.

17-16-3. EXPLANATION OF TERMS

a. Required (RQD): System stakeholders must take action to comply with the advisory.

b. Recommended (RMD): System stakeholders should consider Traffic Management Initiatives (TMI) specified in the advisory.

c. Planned (PLN): Traffic management initiatives that may be implemented.

d. For Your Information (FYI): Advisories requiring no action.

e. User Preferred Trajectory (UPT): The route that the user requests based on existing conditions.

f. System stakeholders: A group of interdependent NAS users and FAA air traffic facilities.

17-16-4. ROUTE ADVISORY MESSAGES

a. All route advisories must specify whether an action is RQD, RMD, PLN, FYI.

b. The following information will be included in a route advisory:

1. Header: Includes the DCC advisory number, category of route, and action. A “/FL” indicates that a flight list is attached to the advisory.

2. Name: Descriptive of the situation to the extent possible.

3. Constrained Area: Impacted area referenced by the advisory.

4. Reason: Causal factors for the advisory.

5. Include Traffic: Factors identifying specific flows of traffic in the route.

6. Facilities Included: May indicate the specific facilities or use the phrase “multiple facilities;” a minus sign (–) indicates to omit that facility’s traffic from the route.

7. Flight Status: Will indicate all, airborne, or nonairborne.

8. Valid: Time frame for the route will be specified.

9. Probability of Extension: High, medium, low, or none will be stated.

10. Remarks: Further clarifying information.

11. Associated Restrictions: Traffic management restrictions to be implemented in conjunction with the route, e.g., miles in trail. ALT RSTN indicates that there is an altitude restriction associated with the advisory.

12. Modifications: Amendments to the standard Playbook routing.

13. Route: A specific route, route options, or user preferred trajectory around the area may be indicated. When UPT is indicated, an additional route(s) shall be listed. This route becomes the “default” route.

14. Footer: Date/time group for Flight Service Station information.

c. Categories of route advisories and possible actions are listed in the table below:

TBL 17-16-1

Categories of Route Advisories and Possible Actions

ROUTE CATEGORY	REQUIRED RQD	RECOMMENDED RMD	PLANNED PLN	INFORMATION FYI
1. Route	✓	✓	✓	✓
2. Playbook	✓	✓	✓	
3. CDR	✓	✓	✓	
4. Special Operations	✓			
5. NRP Suspensions	✓			
6. VACAPES (VS)		✓	✓	
7. NAT	✓			
8. Shuttle Activity	✓	✓	✓	
9. FCA	✓			
10. FEA		✓	✓	✓
11. Informational		✓	✓	✓
12. Miscellaneous		✓	✓	✓

17-16-5. RESPONSIBILITIES**a. The ATCSCC must:**

1. Be the final approval authority for all routes that traverse multiple center or terminal boundaries.

2. Coordinate routes with impacted facilities prior to implementing the route.

3. Verbally notify all impacted en route facilities of the implementation, modification, or cancellation of routes as the situation dictates.

4. Document and disseminate coordinated routes through an advisory with a flight list, if appropriate.

5. Implement, modify, and/or cancel routes.

b. Field Facilities must:

1. Remain cognizant of operational areas of interest in the National Airspace System (NAS) including local adaptations that affect route changes; e.g., Preferential Arrival Routes and Preferential Arrival Departure Routes, and forward any issues that may require modification to normal traffic flows within their area of jurisdiction when national support may be required.

2. Coordinate routes with facilities within their area of jurisdiction.

NOTE-

Normally the ATCSCC coordinates with en route facilities, en route facilities coordinate with terminals.

3. Participate in the PT TELCON as appropriate.

4. Implement the required routes for flights less than 45 minutes from departure or airborne. The departure Center is responsible for ensuring that proposed flights are on the proper route, and airborne traffic is the responsibility of the Center with track control and communications when the advisory is received.

5. Forward user requests to deviate from required routes to the ATCSCC, if they traverse more than one Center.

c. NAS users should:

1. Amend flight plans to the published route when aircraft are 45 minutes or more from departure;

2. Forward requests to the ATCSCC Tactical Customer Advocate (TCA) when an aircraft is on the ground and is requesting to deviate from a published route.

17-16-6. PROCEDURES

a. System stakeholders must forward information to be considered in route planning and route implementation when capable.

b. Time permitting, the ATCSCC consolidates the information for inclusion into the PT TELCON, or initiates tactical action, as required.

c. The ATCSCC coordinates routes with impacted facilities and issues advisories.

d. The ATCSCC verbally advises all impacted Centers that a route advisory has been issued, modified, or cancelled.

e. Field facilities and users review advisories and dynamic lists, and take appropriate action.

f. Field facilities issue routes to users if flight plans do not reflect the required routes as stated in the advisory.

g. If a route is cancelled, field facilities leave the aircraft on the existing route at the time of the cancellation of the route, unless a new route pertinent to the aircraft is issued.

h. NAS users forward requests to the ATCSCC TCA for flights that request to be exempted from required routes. The TCA completes the coordination and provides a determination on the request to the appropriate party(ies).

i. Routes are implemented, modified, and cancelled as needed.

Section 17. Operations Plan

17-17-1. PURPOSE

Establishes the process, structure and responsibilities for developing, managing and implementing a daily strategic plan for air traffic operations in the National Airspace System (NAS).

17-17-2. DEFINITION

a. The Operations Plan (OP): The OP is a plan for management of the NAS. The OP is a collaboratively developed plan. The OP is derived by the Planning Team (PT) after collaboration with the FAA and user weather forecasters, FAA Air Route Traffic Control Center (ARTCC) Operations Manager (OM) or designee, other FAA field facility management personnel, airline planners, Air Traffic Control System Command Center (ATCSCC) personnel, international facilities, military, and general aviation system users.

b. Trigger: A specific event that causes a specific traffic management initiative (TMI) to be implemented.

1. A trigger is for planning purposes and is intended to reduce coordination when implementing the specified TMI.

2. All en route facilities impacted by the TMI must be contacted prior to implementing the TMI in response to the trigger.

3. En route facilities must relay TMIs to affected terminal facilities within their area of jurisdiction.

4. All triggers will be identified by “IF, THEN” clauses in the OP.

EXAMPLE–

IF thunderstorms develop as forecast on J96, THEN ZKC will initiate the ORD BDF1 Playbook route.

c. The OP will specify:

1. Terminal constraints: facilities where delays are expected to be 15 minutes or greater.

2. En route constraints: facilities where expanded miles-in-trail, deviations, and tactical re-routes may be required.

17-17-3. RESPONSIBILITIES

a. ARTCC OM or their designee shall:

1. Participate via the Planning Telephone Conference (TELCON) in the formulation and development of the OP when stated on the previous OP, or requested later by the ATCSCC, or issues within the facility arise that may require inclusion in the OP.

2. Provide input on:

(a) Equipment outages having an operational impact;

(b) Internal initiatives;

(c) Terminal constraints;

(d) Route closure/recovery information;

(e) Anticipated Traffic Management Initiatives (TMI) necessary to manage the system; or

(f) Other issues which may impact operations (i.e., staffing, special events, etc.). See FIG 17-17-1, Operational Planning TELCON Checklist.

3. Brief and direct facility Operational Supervisors, Traffic Management Supervisors, Traffic Management Units, and operational personnel on the implementation of the OP and gather additional information for the next TELCON.

4. Coordinate with and provide direction to underlying facilities on the implementation of the OP.

5. Monitor and assess the OP, notifying the ATCSCC of problems that may impact the OP.

6. Provide operational feedback for use in post-operational evaluation of the OP.

b. The ATCSCC shall:

1. Maintain the Planning Team (PT) TELCON Bridge.

2. Maintain a web page for publicizing the OP to aviation systems users.

c. The ATCSCC National Operations Manager (NOM) shall:

1. Direct the facility National Traffic Management Officer (NTMO), ATCSCC operational units, and personnel on implementation of the OP.

2. Coordinate with and provide direction to FAA facilities on implementation of the OP.

d. The ATCSCC PT shall:

1. Lead the PT in development of the OP.

2. Record participation of FAA and non-FAA entities in PT TELCONs.

3. Formulate the OP through coordination with PT members using the OP Timeline.

4. Brief the NOM, NTMO, and other ATCSCC operational elements on the OP.

5. Post the OP on the ATCSCC web site and issue as a numbered advisory.

6. Document agreed upon triggers in the OP.

e. The Terminal Facility Management shall:

1. When notified by the ARTCC OM/ARTCC designee or ATCSCC PT, participate in PT TELCONs.

2. Brief and direct facility operational personnel on actions required by the OP.

3. Monitor and assess the OP, notifying the ATCSCC of problems that may impact the OP.

17-17-4. PROCEDURES

a. The PT is composed of FAA and user weather forecasters, FAA ARTCC's OM, other FAA field facility management personnel, airline strategic planners, ATCSCC personnel, international facilities, and military and general aviation system users.

b. The ATCSCC has been delegated the authority to direct the operation of the PT TELCONs for the FAA.

1. The ATCSCC will notify those FAA facilities required to participate as part of the PT TELCON.

2. Military, international, and general aviation entities will be included as necessary.

c. The PT collaborates on the formation of the OP. The OP is normally developed for the hour beginning after the TELCON commences and the subsequent six (6) hours. The OP is updated, amended, and evaluated on a recurring basis through a dedicated TELCON Phone Bridge at the ATCSCC.

d. Collaborative Convective Forecast Product (CCFP): The CCFP is the consolidated input of ARTCC Weather Service Unit (CWSU), Aviation Weather Center (AWC) personnel, ATCSCC Weather Unit (DCCWU) personnel, and airline meteorologists. The CCFP is the primary weather product used by the PT in developing the OP.

e. OP Timeline (all times local/eastern): The OP Timeline provides a method for group decision-making and collaboration in dealing with system constraints. Modification of the timeline, participation, and scheduling is done at the discretion of the PT and as directed by the ATCSCC.

1. 5:00 a.m. – National Weather TELCON: ATCSCC PT monitors the weather TELCON, receives midnight operational briefing, and collaborates with select FAA facilities and users for the next amendment.

2. 6:00 a.m. – Amendment to the OP is published on the ATCSCC web page and through an ATCSCC numbered advisory.

3. 6:00–7:00 a.m. – Individual team entities conduct an assessment of operation in preparation for the OP TELCON. The ATCSCC identifies and notifies FAA facilities required to participate in the PT TELCON.

4. 7:15 a.m. – Planning TELCON conducted: The OP is developed by the PT.

5. 8:00 a.m. – The OP is published on the ATCSCC web site and via numbered advisory.

6. 8:00–9:00 a.m. – Individual team entities conduct an assessment of operation in preparation for the OP TELCON.

7. 9:15 a.m. – Planning TELCON conducted: The OP is developed by the PT.

NOTE–

TELCON/planning cycle repeats every 2 hours or as conditions warrant. The time intervals may be varied; however, each OP and associated advisory will state the time for the next TELCON.

Section 18. National Playbook

17-18-1. PURPOSE

The National Playbook is a collection of Severe Weather Avoidance Plan (SWAP) routes that have been pre-validated and coordinated with impacted ARTCCs. The National Playbook is designed to mitigate the potential adverse impact to the FAA and users during periods of severe weather or other events that affect coordination of routes. These events include, but are not limited to, convective weather, military operations, communications, and other situations.

17-18-2. POLICY

Facilities and the ATCSCC shall use National Playbook routes in preference to ad hoc routes. National Playbook routes shall only be used after collaboration and coordination between the ATCSCC Severe Weather Unit and the Traffic Management Unit(s) of affected air traffic facilities.

17-18-3. DEFINITION

The National Playbook is a traffic management tool developed to give the ATCSCC, other FAA facilities, and system users a common product for various route scenarios. The purpose of the National Playbook is to aid in expediting route coordination during those periods of constraint on the NAS. The National Playbook contains the most common scenarios that occur during each severe-weather season and each includes the resource or flow impacted, facilities included, and specific routes for each facility involved. Each scenario in the National Playbook includes a graphical presentation and has been validated by the individual facilities involved in that scenario. The National Playbook is available on the ATCSCC web site.

17-18-4. RESPONSIBILITIES

a. The ATCSCC shall:

1. Manage the National Playbook program.
2. Operate as OPI at the national level.
3. As a minimum, conduct a yearly review of the National Playbook routes and procedures.

4. Facilitate the validation process for additions, modifications, updates, and corrections.

5. Notify of activation/deactivation of National Playbook route usage through the ATCSCC Advisory System

6. Maintain a listing of all National Playbook routes on the ATCSCC web page.

b. The NFDC shall forward to the ATCSCC point of contact (POC) any changes to published navigational database, (i.e., DPs/STARs, NAVAIDs, preferred routes, etc.) contained in the National Flight Data Digests (NFDD) that are effective for the subsequent chart date. This data shall be provided at least 45 days before the chart date.

c. The En Route and Oceanic Operations Service Area and Terminal Operations Service Area offices shall:

1. Ensure facilities submit data as required.
2. Resolve discrepancies and issues identified.
3. Submit suggestions for improving the process, when applicable.

d. The ARTCCs shall:

1. Identify, develop, and coordinate National Playbook routes as needed, in accordance with this section.
2. Supply a POC for the ATCSCC to contact regarding National Playbook routes.
3. Participate in the validation process of National Playbook routes impacting their facility. The validation of a National Playbook route is considered complete when all facilities affected by that route have confirmed the route as acceptable by responding in writing to the ATCSCC. Validation may also be accomplished by responding through the National Playbook automation tool, where it is available.

4. Report unusable, inaccurate or unsatisfactory route data contained in the National Playbook to the ATCSCC. Reports shall include the National Playbook designation and specific description of the data error and, if appropriate, suggestion for modification.

5. Recommend improvements in the process, if applicable.

e. Terminal Facilities shall coordinate with their host ARTCC for all matters pertaining to National Playbook.

17-18-5. NATIONAL PLAYBOOK DATA FORMAT

a. All Centers shall develop and update the National Playbook in accordance with the following:

1. National Playbook routes shall be developed under the concept that aircraft with basic navigation capabilities (/A) will be able to navigate them unless otherwise designated.

2. All National Playbook routes that specify the use of an arrival and departure procedure shall have that procedure number (DP/STAR) included as part of the route string.

NOTE-

Examples of acceptable procedure numbers are: LGC8, OTT5, and SWEED5. Examples of unacceptable procedure numbers are: MINKS#, MINKS STAR, and MINKS %.

3. Approved database format:

(a) Route string data shall include only uppercase characters (A-Z) or numbers with spaces separating each element; for example: J48 ODF MACEY2 ATL.

(b) No dots, dashes, asterisks, plus signs, or placeholders are to be included.

(c) No leading zeroes are permitted in victor or jet airways (J12 is permitted, J012 is not).

b. National Playbook routes will be published on the ATCSCC web site. Updates to the National Playbook will coincide with the normal 56-day chart updates.

c. Changes to the National Playbook shall be processed in accordance with the following timelines:

1. All changes must be submitted to the ATCSCC POC at least 35 days prior to each chart date.

2. All National Playbook additions, modifications, or other changes must be validated at least

35 days prior to each chart date to be eligible for inclusion in that update.

NOTE-

1. *The deadline for submitting changes for the next update to the National Playbook is stated on page 2 of the National Playbook currently in effect.*

2. *Seven days prior to the chart date a preview version of the National Playbook will be made available to FAA facilities via the ATCSCC web site.*

17-18-6. PROCEDURES

a. National Playbook routes are considered active when the ATCSCC Severe Weather Unit has completed coordination with all impacted facilities. An ATCSCC numbered advisory will be sent by the Severe Weather Unit describing the route being used.

b. National Playbook routes may be modified tactically to achieve an operational advantage. The ATCSCC Severe Weather Unit will coordinate these changes verbally with all impacted facilities and insure that the published advisory contains the modification(s).

c. Facilities shall monitor and provide real-time reports of the impact and continued need for the use of the National Playbook route(s) through the Severe Weather Specialist.

d. A National Playbook route is no longer active when the expiration time stated on the advisory has been reached without an extension coordinated or a decision to cancel the route has been reached. If the route is cancelled prior to the expiration time, the ATCSCC Severe Weather Unit will coordinate with all impacted facilities and publish an advisory stating that the route has been cancelled.

e. If there are circumstances that prevent the use of a National Playbook route, then the air traffic facility involved shall inform the ATCSCC Severe Weather Unit. The Severe Weather Unit will coordinate this information with the Planning Team (PT). It is the responsibility of the impacted facility and the ATCSCC to ensure the route is not utilized until the circumstance(s) preventing its use is corrected or the route is deleted.

Section 19. Aviation System Performance Metrics

17-19-1. PURPOSE

The Aviation System Performance Metrics (ASPM) is designed to enable select facilities to input data directly onto an ATCSCC web page for data analysis.

17-19-2. POLICY

The data collected will be subject to FAA security provisions for internet technology. All data is factual. The ATCSCC will incorporate this information into the national log program. Any information submitted to the ATCSCC through this method does not need to be faxed to the ATCSCC.

17-19-3. RESPONSIBILITIES

a. The ATCSCC shall:

1. Provide a FAA, ATCSCC data entry web page(s) for facilities identified in TBL 17-19-1, Aviation System Performance Metrics Air Traffic Control Towers.

2. Transmit the data to other FAA offices for analysis.

b. Air traffic facilities listed in TBL 17-19-1 shall:

1. Enter the data for the current day on the web page accurately by 2359 local Pacific Time (0659 or 0759 Coordinated Universal Time (UTC)), as appropriate. The following data is required:

(a) Runway configurations (specifying runway numbers) used between 0700 and 2259 local, the time periods they were in effect, and their associated Airport Arrival Rate (AAR) and Airport Departure Rate (ADR).

(b) Actual arrival and departure counts for each hour, starting at 0700 and ending at 2259.

NOTE-

The information between 2100 and 2259 may be estimated; traffic count for these hours will be based on estimates and proposals, or historical traffic counts.

2. Correct estimated entries, if applicable, on the following day.

3. Investigate and resolve issues pertaining to their web page.

4. Submit suggestions for improvement to the Terminal Operations Area Office, when applicable. ■

17-19-4. PROCEDURES

a. Field facilities shall enter the data into the ATCSCC supplied web page according to the directions provided by the ATCSCC.

b. The ATCSCC consolidates the information and forwards it to the appropriate FAA headquarters office.

c. Field facilities can use these procedures on a “real-time” basis with prior coordination with the ATCSCC. A phone call to commence and terminate the “real-time” usage is mandatory.

17-19-5. REVIEWING DATA

The web site of www.apo.data.faa.gov will be utilized to display the information outlined herein and may be viewed after receiving a user identification and password from the Office of Aviation Policy and Plans, Planning Analysis Division, APO-130. ■

Section 20. Traffic Management (TM) Support of Non-Reduced Vertical Separation Minima (RVSM) Aircraft

17-20-1. PURPOSE

This section prescribes policies and guidelines for Traffic Management (TM) support of Non-Reduced Vertical Separation Minima (RVSM) Aircraft.

17-20-2. POLICY

In accordance with 14 CFR Section 91.180, domestic RVSM airspace (FL 290-410) is exclusionary airspace. With only limited exceptions, all operators and individual aircraft must have received RVSM authorization from the Federal Aviation Administration (FAA) to operate at RVSM altitudes. If an aircraft or its operator has not been authorized for RVSM operation, the aircraft is referred to as a "non-RVSM" aircraft. Excepted non-RVSM aircraft are granted access to RVSM altitudes on a workload permitting basis. Priority in RVSM airspace is afforded to RVSM compliant flights, then file-and-fly flights.

17-20-3. DEFINITIONS

a. File-and-Fly. Operators of excepted non-RVSM flights requesting access to or through RVSM airspace will file a flight plan. This flight plan serves as the notification to the FAA of the operator's intent to request access to or through RVSM airspace.

b. STORM Flight. A non-RVSM exception designated by the Department of Defense (DOD) for special consideration via the DOD Priority Mission website.

c. Entry Facility. Facility where an aircraft penetrates RVSM airspace designated for U.S. air traffic control.

d. RVSM Facility. Air Traffic facility that provides air traffic services in RVSM airspace.

17-20-4. EXCEPTED FLIGHTS

Under the authority granted in 14 CFR Section 91.180, the Administrator has determined that the following groups of non-RVSM aircraft may enter RVSM airspace subject to FAA approval and clearance:

a. Department of Defense aircraft;

b. Foreign State (government) aircraft;

c. Active air ambulance utilizing "Lifeguard" call sign;

d. Flights conducted for aircraft certification and development flights for RVSM.

17-20-5. OPERATOR ACCESS OPTIONS

Operators of excepted non-RVSM aircraft requesting access to DRVSM airspace have the following options available to them:

a. Letter of Agreement/Memorandum of Understanding (LOA/MOU). Comply with a LOA/MOU for operations within a single or adjacent RVSM facility.

b. File-and-Fly. File a flight plan and make the initial request to access RVSM airspace by requesting an ATC clearance.

NOTE-

Non-RVSM aircraft not listed under excepted flights may climb/descend through RVSM airspace without leveling off, subject to FAA approval and clearance.

c. DOD. Enter STORM flights on the DOD Priority Mission website. For STORM flights that are within 60 minutes of departure notify the departure RVSM facility via telephone, in addition to entering the flight into the DOD Priority Mission website.

NOTE-

Special consideration will be afforded a STORM flight; however, accommodation of any non-RVSM exception flight is workload permitting.

17-20-6. DUTIES AND RESPONSIBILITIES

Traffic Management Units (TMU) in facilities with RVSM airspace must:

a. Monitor, assess, and act on the information in the Traffic Situation Display (TSD) to evaluate the facility's ability to manage non-RVSM aircraft;

b. Coordinate calls from DOD operators of STORM flights that will depart within 60 minutes, with the appropriate area supervisor/controller-in-charge. Obtain and coordinate the following information:

1. Call sign.
2. Origination point.
3. Proposed departure time.
4. Number of aircraft in formation, when applicable.

c. For a non-RVSM exception flight inbound to the U.S., the TMU at the entry facility receives the request for access to RVSM airspace directly from an international point of contact (POC). The TMU must coordinate the information received from the international POC with the appropriate operational supervisor/controller-in-charge in a timely manner.

Part 6. REGULATORY INFORMATION

Chapter 18. Waivers, Authorizations, and Exemptions

Section 1. Waivers and Authorizations

18-1-1. PURPOSE

This section prescribes policy and guidelines for the grant or denial of a Certificate of Waiver or Authorization from Title 14, Code of Federal Regulations (14 CFR).

18-1-2. POLICY

a. FAAO 1100.5, FAA Organization – Field, delegates to the Service Operations Service Area Directors and Flight Standards Division Managers the Administrator's authority to grant or deny a Certificate of Waiver or Authorization (FAA Form 7711-1), and permits the redelegation of this authority. Further, redelegation of the authority to grant or deny waivers or authorizations shall be consistent with the functional areas of responsibility as described in FAA's Rulemaking Manual, and may be limited if deemed appropriate.

b. Applications for a Certificate of Waiver or Authorization acted upon by an En Route and Oceanic Operations Service Area or Terminal Operations Service Area office will normally be processed in accordance with guidelines and standards contained herein, unless found to be in the best interest of the agency to deviate from them.

c. Applications for waiver or authorization that require both Air Traffic Organization and Flight Standards technical considerations shall be handled jointly.

d. The grant of a Certificate of Waiver or Authorization constitutes relief from the specific regulations stated, to the degree and for the period of time specified in the certificate, and does not waive any state law or local ordinance. Should the proposed operations conflict with any state law or local ordinance, or require permission of local authorities or property owners, it is the applicant's responsibility to resolve the matter.

18-1-3. RESPONSIBILITIES

a. Air traffic, as designated by the Service Area Director, is responsible for the grant or denial of Certificate of Waiver or Authorization, except for those sections assigned to Flight Standards (detailed in subpara b).

b. Flight Standards, as designated by the Administrator, and described in FAA's Rulemaking Manual, is responsible for providing advice with respect to the qualification of civil pilots, airworthiness of civil aircraft, and the safety of persons and property on the ground. Additionally, Flight Standards has the responsibility for the grant or denial of Certificate of Waiver or Authorization from the following sections of 14 CFR:

1. Section 91.119, Minimum safe altitudes: General;
2. Section 91.175, Takeoff and landing under IFR;
3. Section 91.209, Aircraft lights;
4. Section 91.303, Aerobatic flight;
5. Any section listed in 91.905 as appropriate for aerobatic demonstrations and other aviation events.
6. Section 105.15, jumps over or into congested areas or open air assembly of persons, as appropriate for aerobatic demonstrations and other aviation events.

c. Certificate Holder, compliance with the provisions of a waiver is the responsibility of the holder who shall be thoroughly informed regarding the waiver and those actions required of them by any special provisions. The holder shall be advised that it is their responsibility to ensure that all persons participating in the operation are briefed on the waiver.

18-1-4. PROCESSING CERTIFICATE OF WAIVER OR AUTHORIZATION (FAA FORM 7711-2) REQUESTS

a. Requests for a Certificate of Waiver or Authorization (FAA Form 7711-2) may be accepted by any FAA facility and forwarded, if necessary, to the appropriate office having waiver authority. Those offices making the determination of whether an application should be processed by higher authority may forward the request to the appropriate Service Area Director for action. Those requests that are forwarded to FAA Washington Headquarters for processing shall include all pertinent facts, background information, recommendation(s), as well as the basis and reasons for requesting Headquarters action.

b. Requests shall be coordinated with all concerned FAA elements, prior to approval, by the office that is most convenient to the applicant and having waiver authority, even though the proposed operation will be conducted within or extended into other jurisdictional areas. This procedure is intended to establish one office as the agency contact for an applicant and will preclude the need for the petitioner to deal with the FAA at various locations.

18-1-5. PROCESSING CERTIFICATE OF WAIVER OR AUTHORIZATION RENEWAL OR AMENDMENT REQUESTS

a. A renewal request should be made by means of a new application. However, a request by another method is acceptable if its substance is essentially the same as the previous application or when, in the judgment of the waiver or authorization office, the request is sufficiently similar that new considerations are not required.

b. An existing waiver or authorization may be amended either by reissuance or by letter.

18-1-6. ISSUANCE OF CERTIFICATE OF WAIVER OR AUTHORIZATION (FAA FORM 7711-1)

Waivers and authorizations shall be completed in accordance with the following instructions and shall be signed only by the appropriate authority (see FIG 18-1-1 and Example). The FAA Form 7711-1 should be:

a. Issued to an organization, whenever possible, in preference to an individual but indicate name and title of the individual acting for the organization.

b. Specify the operations that are permitted by the waiver or authorization.

c. Define the area and specify altitudes at which they may be conducted.

d. Specify the regulation, or portion thereof waived by numerical and letter reference as well as title. This section is left blank for authorizations (e.g., unmanned air vehicle operations, etc.).

e. Specify the effective and expiration dates, including hours of operation. The specific dates and hours of operation shall allow sufficient time for the accomplishment of the operation and, if appropriate, an alternate date to cover cancellations that might be necessary due to adverse weather conditions. Except for waivers or authorizations issued by Flight Standards, waivers or authorizations shall not be made effective for more than 12 calendar months. Waivers or authorizations issued by Flight Standards may be made effective for 24 calendar months in accordance with Flight Standards policy. If a longer duration is requested, or the operation is of national importance, advise the proponent to petition for an exemption utilizing 14 CFR Section 11.63, How and to whom do I submit my petition for rulemaking or petition for exemption.

f. Restrict the waiver or authorization to the extent required by the operation. Further, any special provisions that are required to provide for an adequate level of flight safety and the protection of persons and property on the surface (e.g., limitations, location, time periods, type aircraft) shall be specified and included as part of the waiver or authorization.

18-1-7. RETENTION OF CERTIFICATES OF WAIVER OR AUTHORIZATION

The issuing office shall retain one copy of each waiver, authorization or denial, along with supporting data, for at least one year after the date of denial or expiration, as appropriate. Significant or unusual waivers or authorizations may be retained for longer periods.

18-1-8. WAIVER, AUTHORIZATION OR DENIAL PROCEDURE

The applicant shall be advised in writing of the waiver or authorization approval or denial, and, if appropriate, what is required to obtain reconsideration.

a. Applicant: The original waiver, authorization or denial, and a copy of the application shall be forwarded to the applicant.

b. Issuing Office: The original of the application and a copy of the waiver, authorization or denial shall be retained by the issuing office.

c. Washington Headquarters: Except for waivers or authorizations issued by Flight Standards Service, forward copies of waivers, authorizations or written denials to the Washington Headquarters, System Operations Airspace and Aeronautical Information Management.

d. Other Distribution: Other than as specified above and as necessary to satisfy Service Area office needs, distribution shall be limited to those offices that have a need for the information.

18-1-9. CANCELLATION OF WAIVERS AND AUTHORIZATIONS

A waiver or authorization may be canceled at any time by the Administrator, the person authorized to grant the waiver or authorization, or the representative designated to monitor a specific operation. As a general rule, a waiver or authorization should be canceled when it is no longer required or there is an abuse of its provisions or unforeseen safety factors develop. Failure to comply with the waiver or authorization is cause for cancellation. Cancellation procedures, as applicable, shall be used as follows:

a. Notify the holder immediately.

b. Verify and document the basis for the cancellation.

c. Notify the appropriate Service Area office, as well as the issuing office.

d. Provide the holder with written notice of cancellation, or written confirmation of a verbal cancellation, with copies to appropriate offices.

e. Take any other action deemed necessary.

FIG 18-1-1
FAA Form 7711-1

DEPARTMENT OF TRANSPORTATION FEDERAL AVIATION ADMINISTRATION	
<h2 style="margin: 0;">CERTIFICATE OF WAIVER OR AUTHORIZATION</h2>	
ISSUED TO	(self-explanatory)
ADDRESS	(self-explanatory)
<p>This certificate is issued for the operations specifically described hereinafter. No person shall conduct any operation pursuant to the authority of this certificate except in accordance with the standard and special provisions contained in this certificate, and such other requirements of the Federal Aviation Regulations not specifically waived by this certificate.</p>	
OPERATIONS AUTHORIZED	
<p style="text-align: center;">(Indicate in detail all operations authorized. Use a separate sheet of paper if necessary.)</p>	
LIST OF WAIVED REGULATIONS BY SECTION AND TITLE	
<p style="text-align: center;">(This section not used for Unmanned Air Vehicle authorizations.)</p>	
STANDARD PROVISIONS	
<ol style="list-style-type: none"> 1. A copy of the application made for this certificate shall be attached to and become a part hereof. 2. This certificate shall be presented for inspection upon the request of any authorized representative of the Administrator of the Federal Aviation Administration, or of any State or municipal official charged with the duty of enforcing local laws or regulations. 3. The holder of this certificate shall be responsible for the strict observance of the terms and provisions contained herein. 4. This certificate is nontransferable. 	
<p>Note: - This certificate constitutes a waiver of those Federal rules or regulations specifically referred to above. It does not constitute a waiver of any State law or local ordinance.</p>	
SPECIAL PROVISIONS	
<p>Special Provisions Nos. <u>1</u> to <u>4</u>, inclusive, are set forth on the reverse side hereof.</p>	
<p>This certificate is effective from <u>(Beginning date/time)</u> to <u>(Ending date/time)</u>, inclusive, and is subject to cancellation at any time upon notice by the Administrator or his authorized representative.</p>

FAA Form 7711-1 (7-74)

*1975 - G.P.O. - 1703-M/674-862/199

EXAMPLE OF SPECIAL PROVISIONS

These special provisions are for suggested use only. You will need to modify them or develop new ones depending on the proponent and the operating conditions.

1. Contact the [name of FAA facility] at [telephone number], not less than 24 hours or more than 48 hours prior to conducting any [name of event], for the purpose of issuing a Notice to Airmen.
2. Contact the [name] Air Route Traffic Control Center at [telephone number], prior to and immediately after [name of event], for the purpose of providing real time notice of operations.
3. All persons connected with this [name of event] shall be familiar with this waiver and its special provisions, as well as part 101, [specific section of 14 CFR].
4. [Any other special provision(s) as required].

Section 2. Elimination of Fixed-Wing Special Visual Flight Rules Operations

18-2-1. PURPOSE

This section prescribes policy and guidance for the elimination of fixed-wing special visual flight rules (SVFR) operations within Class B and Class C airspace areas.

18-2-2. POLICY

Fixed-wing SVFR operations may interfere with the safe, orderly and expeditious flow of aircraft operating under instrument flight rules (IFR) within certain high activity airspace areas (Class B, or C airspace areas only). To preclude such adverse effect, it may be necessary to eliminate SVFR operations within those affected airspace areas.

NOTE-

Section 3, Appendix D to Part 91 of 14 CFR lists the locations wherein fixed-wing SVFR operations are prohibited.

18-2-3. RESPONSIBILITIES

a. Each Service Area office shall conduct periodic reviews of terminal areas to determine when fixed-wing SVFR operations should be eliminated or restored in the specific airspace areas.

b. Each Service Area office shall forward the names of the airspace surface areas recommended for elimination/restoration of fixed-wing SVFR operations, with detailed justification, to the System Operations Airspace and Aeronautical Information Management for review.

Section 3. Current Authorizations and Exemptions from Title 14, Code of Federal Regulations

18-3-1. AUTHORIZATIONS AND EXEMPTIONS FROM TITLE 14, CODE OF FEDERAL REGULATIONS (14 CFR)

Authorizations and exemptions from specified sections of 14 CFR have been granted to specified Departments, Agencies, and certain aircraft operators to permit accomplishment of their assigned missions (i.e., to conduct inflight identification, surveillance, and pursuit operations) subject to specified conditions and limitations.

18-3-2. AUTHORIZATION AND EXEMPTION REQUESTS

Requests for updated summaries of all current air traffic control authorizations and exemptions from 14 CFR processed by System Operations Airspace and Aeronautical Information Management should be made through the Service Area office.

Section 4. Parachute Jump Operations

18-4-1. NONEMERGENCY PARACHUTE JUMP OPERATIONS

a. All concerned personnel shall familiarize themselves with 14 CFR Part 105, and obtain the required information required by Section 105.25 when processing requests for authorization or notification of nonemergency parachute jumps.

b. When operational/procedural needs require or when warranted by high density air traffic or constrained airspace, negotiate letters of agreement that designate areas of ongoing jump activity as permanent jump sites. Letters of agreement should contain:

1. The description and the location of the jump zone(s) and the conditions of use.

2. The activity schedules.

3. The maximum jump altitudes, common jump altitudes and common parachute opening altitudes (all altitudes should be expressed in feet above mean seal level).

4. The communication frequencies to be used by the jump aircraft.

5. Jump aircraft call signs.

6. Jump aircraft climb and descent areas.

7. Notification procedures.

8. Assigned transponder code when appropriate.

9. Any other items pertinent to the needs of the ATC system and the users.

c. Where ongoing jump sites are established, NOTAM information shall be submitted for publication in the AFD.

d. To the extent possible, advise parachute jumping organizations or responsible individuals of known high traffic density areas or other airspace where sport parachuting may adversely impact system efficiency, such as IFR departure/arrival routes, Federal airways, VFR flyways, military training routes, etc.

e. A record of the jump operations shall be maintained in the facility files for 15 days. The records shall contain at least a copy of the NOTAM, reason(s) for cancellation (if applicable), name of the person(s) effecting coordination, and instructions or conditions imposed on the jump operation.

f. Upon request, air traffic facilities shall furnish whatever information might be available concerning parachute jumps to the U.S. Coast Guard.

Section 5. Moored Balloons, Kites, Unmanned Rockets, and Unmanned Free Balloons/Objects

18-5-1. MOORED BALLOONS, KITES, UNMANNED ROCKETS, AND UNMANNED FREE BALLOONS/OBJECTS

Apply the following guidelines to moored balloon, kite, unmanned rocket, or unmanned free balloon flights conducted in accordance with Part 101 of 14 CFR:

a. Facilities receiving moored balloon, kite, unmanned rocket, or unmanned free balloon information shall ensure that appropriate notices include the information required by 14 CFR Sections 101.15, 101.37, and 101.39.

b. Notice information shall be forwarded to affected air traffic facility/s. Also, air traffic facilities shall forward notices received to the appropriate AFSS/FSS for dissemination as a NOTAM.

c. Handle unmanned free balloon operations below 2,000 feet above the surface in Class B, Class C, Class D or Class E airspace areas requiring ATC authorization as follows:

1. Authorize the request if the operation is not expected to impact the normally expected movement of traffic.

2. Coordinate with other affected facilities before authorizing the flight.

d. Request the operator of unmanned free balloon flights to forward position reports at any time they are needed to assist in flight following.

NOTE-

Operators are required only to notify the nearest FAA ATC facility if a balloon position report is not recorded for 2 hours. Other position reports are forwarded only as requested by ATC.

18-5-2. DERELICT BALLOONS/OBJECTS

Take the following actions when a moored balloon/object is reported to have escaped from its moorings and may pose a hazard to air navigation, the operator of an unmanned free balloon advises that a position report has not been recorded for a 2-hour period, or the balloon's/object's flight cannot be terminated as planned:

a. Determine from the operator the last known and the present estimated position of the balloon/object as well as the time duration that the balloon/object is estimated to stay aloft. Also obtain other information from the operator such as the operator's access to a chase plane, hazardous material onboard, balloon/object coloring, special lighting, etc.

b. Attempt to locate and flight follow the derelict balloon/object.

c. Determine if the balloon's/object's flight can be terminated by the operator. If the balloon's/object's flight can be terminated, inform the operator of any known air traffic that might be a factor.

d. If the balloon's/object's flight cannot be terminated:

1. Advise the operator that the balloon/object is declared to be a derelict and as such is a potential hazard to air navigation.

2. Notify the ATCSCC, the regional Operations Center, and all affected facilities of the derelict. The ATCSCC will serve as the focal point for the collection and dissemination of further information.

3. Provide the ATCSCC with revised position or altitude information.

4. If required, assistance in locating and tracking the balloon may be requested from the National Military Command Center (NMCC), NORAD, or other agencies with surveillance capabilities through the ATCSCC. If appropriate, the ATCSCC will advise the NMCC that the derelict balloon is a current or potential hazard to air traffic. If the balloon cannot be located or flight followed, it poses at least a potential hazard.

NOTE-

The final decision to destroy the derelict balloon is the responsibility of the appropriate NORAD Commander.

e. Record and handle the derelict balloon as a Miscellaneous Incident.

REFERENCE-

FAAO 7110.65, Para 9-7-2, DERELICT BALLOONS.

Chapter 19. Temporary Flight Restrictions

Section 1. General Information

19-1-1. PURPOSE

This section prescribes guidelines and procedures regarding the use and issuance of regulatory temporary flight restrictions (TFRs).

19-1-2. AUTHORITY

a. The FAA Administrator has sole and exclusive authority over the navigable airspace of the United States. The Administrator has broad authority under Section 40103 of Title 49 of the United States Code (U.S.C.) to regulate, control, and develop plans for the use of the navigable airspace and to formulate policy for navigable airspace. See also 49 U.S.C. Section 40101(d).

b. Title 14 of the Code of Federal Regulations (14 CFR) parts 91 and 99 contain regulations addressing temporary flight restrictions.

19-1-3. REASONS FOR ISSUING A TFR

While not all inclusive, a TFR may be issued for the following reasons: toxic gas leaks or spills; fumes from flammable agents which, if fanned by rotor or propeller wash, could endanger persons or property on the surface or in other aircraft; volcanic eruptions that could endanger airborne aircraft and occupants; hijacking incidents that may endanger persons or property on the surface, or airborne aircraft and occupants; aircraft accident/incident sites; aviation or ground resources engaged in wildfire suppression; aircraft relief activities following a disaster; aerial demonstrations or major sporting events; or reasons of national security.

19-1-4. TYPES OF TFRs

TFRs are issued under the following regulations:

a. Section 91.137, Temporary Flight Restrictions in the Vicinity of Disaster/Hazard Areas.

b. Section 91.138, Temporary Flight Restrictions in National Disaster Areas in the State of Hawaii.

c. Section 91.139, Emergency Air Traffic Rules.

d. Section 91.141, Flight Restrictions in the Proximity of the Presidential and Other Parties.

e. Section 91.143, Flight Limitation in the Proximity of Space Flight Operations.

f. Section 91.145, Management of Aircraft Operations in the Vicinity of Aerial Demonstrations and Major Sporting Events.

g. Section 99.7, Special Security Instructions.

19-1-5. TFR INFORMATION

a. Educational information regarding TFRs can be found in 14 CFR parts 91 and 99; Advisory Circular 91-63C, Temporary Flight Restrictions; and the Aeronautical Information Manual.

b. National Airspace System (NAS) users or other interested parties should contact the nearest flight service station for TFR information. Additionally, you can find TFR information on automated briefings, Notice to Airmen (NOTAM) publications, and on the Internet at <http://www.faa.gov>. The FAA also distributes TFR information to aviation user groups and requests these groups to further disseminate the information to their members.

19-1-6. ENTITIES REQUESTING TFRs

A TFR may be requested by various entities, including: military commands; federal security/intelligence agencies; regional directors of the Office of Emergency Planning, Civil Defense State Directors; civil authorities directing or coordinating organized relief air operations (e.g., Office of Emergency Planning; law enforcement agencies; U.S. Forest Service; state aeronautical agencies); State Governors; FAA Flight Standards District Office, aviation event organizers or sporting event officials.

19-1-7. ISSUING TFRs

FAA Headquarters or the ATO Service Area Managers (or designee) having jurisdiction over the area concerned may issue a TFR

19-1-8. TFRs OUTSIDE OF THE UNITED STATES AND ITS TERRITORIES

TFRs are only implemented for sovereign U.S. airspace and its territories. If restrictions are located

in an area that extends beyond the 12-mile coastal limit or a U.S border, the NOTAM will contain language limiting the restriction to the airspace of the U.S., and its territories and possessions. However, the FAA may issue an advisory of any hazard or dangerous information outside of the sovereign U.S. airspace and its territories via the NOTAM System to inform affected users.

19-1-9. FACTORS FOR CONSIDERING TFR RESTRICTIONS

Direct any questions or concerns regarding TFRs to the ATO Service Area Managers having management

jurisdiction over the TFR area. You may also contact System Operations Airspace and Aeronautical Information Management, FAA Headquarters, Washington, D.C., at (202) 267-8783.

19-1-10. TFR QUESTIONS

Direct any questions or concerns regarding TFRs to the ATO Service Area Managers having management jurisdiction over the TFR area. You may also contact System Operations Airspace and Aeronautical Information Management, FAA Headquarters, Washington, D.C., at (202) 267-8783.

Section 2. Temporary Flight Restrictions in the Vicinity of Disaster/Hazard Areas (14 CFR Section 91.137)

19-2-1. PURPOSE

This section prescribes guidelines and procedures regarding the management of aircraft operations in the vicinity of disaster/hazard areas in accordance with 14 CFR Section 91.137. TFRs issued under this section are for disaster/hazard situations that warrant regulatory measures to restrict flight operations for a specified amount of airspace, on a temporary basis, in order to provide protection of persons or property in the air or on the ground.

19-2-2. RATIONALE

The rationale for designating a TFR in accordance with 14 CFR Section 91.137 is to:

- a. Protect persons and property on the surface or in the air from an existing or imminent hazard associated with an incident on the surface when the presence of low flying aircraft would magnify, alter, spread, or compound that hazard.
- b. Provide a safe environment for the operation of disaster relief aircraft.
- c. Prevent an unsafe congestion of sightseeing and other aircraft above an incident or event that may generate a high degree of public interest.

NOTE-

This provision applies only to disaster/hazard incidents of limited duration that would attract an unsafe congestion of sightseeing aircraft.

19-2-3. EXCEPTIONS

The exceptions for designating a TFR in accordance with 14 CFR Section 91.137 are:

- a. Except for hijacking situations, a TFR of this type may be issued by FAA Headquarters; the ATO Service Area Managers (or their designee) having jurisdiction over the area concerned.
- b. The respective Manager of Terminal or En Route and Oceanic Service Area Operations (or their designee) having jurisdiction over the area of concern, in consultation with the Transportation Security Administration, will establish a TFR to address hijacking situations.

c. TFR areas are only implemented for sovereign U.S. airspace and its territories. If restrictions are located in an area that extends beyond the 12-mile coastal limit or a U.S. border, the NOTAM will contain language limiting the restriction to the airspace of the U.S., and its territories and possessions. However, an advisory of any hazard or dangerous information outside of the sovereign U.S. airspace and its territories would be issued via the NOTAM System to inform affected users.

d. Flight restrictions in the proximity of the President, Vice President and other parties shall be in accordance with FAAO 2100.6 and Chapter 6 of this order.

19-2-4. REQUESTING AUTHORITIES

A TFR under 14 CFR Section 91.137 may be requested by various entities, including military commands; regional directors of the Office of Emergency Planning; Civil Defense State Directors; civil authorities directing or coordinating air operations associated with disaster relief; civil authorities directing or coordinating organized relief air operations (including representatives of the Office of Emergency Planning, U.S. Forest Service, and state aeronautical agencies); and law enforcement agencies.

19-2-5. SITUATIONS FOR RESTRICTIONS

Situations that may warrant a TFR in accordance with 14 CFR Section 91.137 include, but are not limited to the following:

- a. 14 CFR Section 91.137(a)(1): toxic gas leaks or spills; flammable agents, or fumes which if fanned by rotor or propeller wash, could endanger persons or property on the surface, or if entered by an aircraft could endanger persons or property in the air; volcanic eruptions that could endanger airborne aircraft and occupants; nuclear accident or incident; and hijackings.
- b. 14 CFR Section 91.137(a)(2): aviation or ground resources engaged in wildfire suppression; and aircraft relief activities following a disaster (e.g., earthquake, tidal wave, flood, etc.).

c. 14 CFR Section 91.137(a)(3): disaster/hazard incidents of limited duration that would attract an unsafe congestion of sightseeing aircraft, such as aircraft accident sites.

19-2-6. CAVEATS TO RESTRICTIONS

a. Section 91.137(a)(1). Restrictions issued in accordance with this Section prohibit all aircraft from operating in the designated area unless that aircraft is participating in the disaster/hazard relief activities and is being operated under the direction of the official in charge of on-scene emergency response activities.

b. Section 91.137(a)(2). Restrictions issued in accordance with this Section prohibit all aircraft from operating in the designated area unless at least one of the following conditions are met:

1. The aircraft is participating in hazard relief activities and is being operated under the direction of the official in charge of on-scene emergency response activities.

2. The aircraft is carrying law enforcement officials.

3. The aircraft is operating under an ATC approved IFR flight plan.

NOTE-

Coordination with the official in charge of on-scene emergency response activities is required prior to ATC allowing any IFR or VFR aircraft to enter into the TFR area.

4. The operation is conducted directly to or from an airport within the area, or is necessitated by the impracticability of VFR flight above or around the area due to weather or terrain. Notification must be given to the ATC/AFSS/FSS facility that was specified in the NOTAM for coordination with the official in charge of on-scene emergency response activities. Also, the operation does not hamper or endanger relief activities and is not conducted for observing the disaster.

5. The aircraft is carrying properly accredited news representatives, and prior to entering the area, a flight plan is filed with the ATC/AFSS/FSS facility specified in the NOTAM and the operation is conducted above the altitude used by the disaster relief aircraft, unless otherwise authorized by the official in charge of on-scene emergency response activities.

c. Section 91.137(a)(3). Restrictions issued in accordance with this Section prohibit all aircraft from operating in the designated area unless at least one of the following conditions are met:

1. The operation is conducted directly to or from an airport within the area, or is necessitated by the impracticability of VFR flight above or around the area due to weather or terrain, and the operation is not conducted for the purpose of observing the incident or event. Notification must be given to the ATC/FSS facility that was specified in the NOTAM for coordination with the official in charge of the activity.

2. The aircraft is operating under an ATC approved IFR flight plan.

3. The aircraft is carrying incident or event personnel, or law enforcement officials.

4. The aircraft is carrying properly accredited news representatives and, prior to entering that area, a flight plan is filed with the appropriate FSS or ATC facility specified in the NOTAM.

19-2-7. RESPONSIBILITIES

Air traffic facilities shall coordinate their efforts to the maximum extent possible in rendering assistance to the agency conducting the relief activity, the pilots engaged in airborne relief operations, and the official-in-charge of on scene emergency response activities in accordance the following:

a. ATO Service Area Manager personnel shall:

1. The regional ATO Service Area Managers (or their designee) is responsible for reviewing all flight restrictions in their jurisdiction issued in accordance with 14 CFR 91.137 at least every 30 days.

2. Coordinate with affected air traffic facilities, event personnel, and local authorities when applicable.

3. Coordinate with the Transportation Security Administration when hijacking situations are involved.

b. The facility air traffic manager, or their designee, having jurisdiction over the area concerned shall:

1. Accept requests for and if warranted, establish TFRs in accordance with the provisions of 14 CFR Sections 91.137(a)(1) and 91.137(a)(2).

2. Inform all affected facilities of the TFR; including location, altitude and effective times.

3. When possible, reroute IFR traffic around the TFR, unless prior approval is obtained from the on-scene coordinator.

4. Maintain a chronological log of all TFR related actions on FAA Form 7230-4, Daily Record of Facility Operation Log, to include:

(a) The name and the organization of the person requesting the TFR.

(b) A brief description of the situation.

(c) The estimated duration of the restrictions.

(d) The name of the agency responsible for on-scene emergency activities and the telephone or other communications contact.

(e) A description of the location of the affected area.

(f) Obtain a signed, written request from the individual requesting the TFR, which states the reason for the restriction.

5. Designate the AFSS/FSS nearest the incident site as the “coordination facility.”

6. Act as liaison between the emergency control authorities and the designated FSS if adequate communications cannot be established between them.

7. Issue flight restrictions, NOTAM and appropriate cancellation in a timely manner.

c. The AFSS/FSS shall serve, if assistance is required, as a primary “communication facility,” for communications between the emergency control authorities and the affected aircraft.

d. All air traffic facilities shall:

1. To the maximum extent possible, render assistance to the agency requesting the TFR.

2. Disseminate TFR information to all affected pilots in the area by all possible means (i.e., NOTAM, AOPA website, etc.).

19-2-8. MESSAGE CONTENT

TFR NOTAMs shall comply with procedures detailed in FAAO 7930.2, Notices to Airmen (NOTAMS).

19-2-9. REVISIONS AND CANCELLATIONS

a. When restrictions are necessary beyond the published termination date/time, the ARTCC shall ensure that a revised NOTAM and an appropriate cancellation are issued.

b. When the ARTCC within whose area the restrictions are established receives information from the ATO Service Area Managers or the agency that requested the restrictions that the restrictions are no longer required, the ARTCC shall take action to cancel them. If the information is received by another facility, that facility shall notify the ARTCC, which will take appropriate action.

c. When the ARTCC within whose area the restrictions are established receives information from the ATO Service Area Managers (or requesting agency) that the restrictions are no longer required, the ARTCC shall take action to cancel them. If the information is received by another facility, that facility shall notify the ARTCC.

d. When it is obvious that the restrictions are no longer required but no information to that effect has been received, the ARTCC shall take action to ascertain the status of the restrictions from the ATO Service Area Managers or the agency that requested the restrictions, and if appropriate, cancel them.

Section 3. Temporary Flight Restrictions in National Disaster Areas in the State of Hawaii (Section 91.138)

19-3-1. PURPOSE

TFRs issued in accordance with 14 CFR Section 91.138 address a determination that an inhabited area within a declared national disaster area in the State of Hawaii needs protection for humanitarian reasons.

19-3-2. REQUESTING AUTHORITIES

The Governor of the State of Hawaii or the Governor's designee may request a TFR under 14 CFR 91.138.

19-3-3. DEGREE OF RESTRICTIONS

The TFR will specify the extent and duration necessary to protect persons and property on the surface. Restrictions issued under this section prohibit all aircraft from operating in the designated area unless at least one of the following conditions is met:

a. Authorization is obtained from the official in charge of associated emergency or disaster relief response activities, and the aircraft is operated under the conditions of that authorization.

b. The aircraft is carrying law enforcement officials.

c. The aircraft is carrying persons involved in an emergency or a legitimate scientific purpose.

d. The aircraft is carrying properly accredited newsmen, and before entering the area, a flight plan is filed with the appropriate FAA or ATC facility specified in the NOTAM, and the operation is conducted in compliance with the conditions and restrictions established by the official in charge of on-scene emergency response activities.

e. The aircraft is operating in accordance with an ATC clearance or instruction.

19-3-4. DURATION OF RESTRICTIONS

A NOTAM issued under this section is effective for 90 days or until the national disaster area designation is terminated, whichever comes first, or otherwise terminated by notice or extended at the request of the Governor of the State of Hawaii or the Governor's designee.

Section 4. Emergency Air Traffic Rules (14 CFR Section 91.139)

19-4-1. PURPOSE

TFRs issued in accordance with 14 CFR Section 91.139 utilize NOTAMs to advise of the issuance and operations under emergency air traffic rules and regulations.

19-4-2. REQUESTING AUTHORITIES

Whenever the Administrator determines that an emergency condition exists, or will exist, relating to the FAA's ability to operate the air traffic control system and during which normal flight operations under this chapter cannot be conducted consistent with the required levels of safety and efficiency:

a. The Administrator issues an immediately effective air traffic rule or regulation in response to that emergency condition.

b. The Administrator or the Associate Administrator for Air Traffic may utilize the NOTAM system to provide notification of the issuance of the rule or regulation.

19-4-3. DEGREE OF RESTRICTIONS

a. NOTAMs issued communicate information concerning the rules and regulations that govern flight operation, the use of navigation facilities, and designation of that airspace in which the rules and regulations apply.

b. When a NOTAM has been issued under this section, no person may operate an aircraft, or other device governed by the regulation concerned, within the designated airspace except in accordance with the authorizations, terms and conditions prescribed in the regulation covered by the NOTAM.

Section 5. Flight Restrictions in the Proximity of the Presidential and Other Parties (14 CFR Section 91.141)

19-5-1. PURPOSE

TFRs issued in accordance with 14 CFR Section 91.141 address air security with respect to airspace over presidential and other parties.

19-5-2. REQUESTING AUTHORITIES

a. A TFR under 14 CFR Section 91.141 may be requested by the Washington headquarters office of the U.S. Government agency responsible for the protection of the person concerned. This agency will contact FAA Headquarters in accordance with estab-

lished procedures and request the necessary regulatory action.

b. The ATO Director of System Operations Security (or their designee) can issue a TFR under this section.

19-5-3. DEGREE OF RESTRICTIONS

No person may operate an aircraft over or in the vicinity of any area to be visited or traveled by the President, the Vice President, or other public figures contrary to the restrictions established by the FAA and published in a NOTAM.

Section 6. Flight Limitation in the Proximity of Space Flight Operations (14 CFR Section 91.143)

19-6-1. PURPOSE

TFRs issued in accordance with 14 CFR Section 91.143 address space flight operations.

19-6-2. REQUESTING AUTHORITIES

FAA Headquarters or the Manager of Terminal or En Route and Oceanic Service Area Operations (or their designee) having control jurisdiction over the af-

ected airspace can issue a TFR under 14 CFR Section 91.143.

19-6-3. DEGREE OF RESTRICTIONS

No person may operate an aircraft of U.S. registry, or pilot an aircraft under the authority of an airman certificate issued by the FAA within areas designated in a NOTAM for space flight operations except when authorized by ATC, or the proponent for the flight operation.

Section 7. Management of Aircraft Operations in the Vicinity of Aerial Demonstrations and Major Sporting Events (14 CFR Section 91.145)

19-7-1. PURPOSE

This section prescribes guidelines and procedures in accordance with 14 CFR Section 91.145, Management of Aircraft Operations in the Vicinity of Aerial Demonstrations and Major Sporting Events. Additionally, this section provides guidance on the processing of sponsor requests for these types of operations.

19-7-2. POLICY

a. Situations that may warrant a TFR under this section include, but are not limited to: military and civilian aerial demonstrations or major sporting events of limited duration to protect persons or property on the surface or in the air, to maintain air safety and efficiency, or to prevent the unsafe congestion of aircraft in the vicinity of an aerial demonstration or major sporting event.

b. All ATC regulatory actions to be considered for events of this type that will require an interpretation of, or exemption from, 14 CFR, shall be forwarded to System Operations Airspace and Aeronautical Information Management, at least 90-days in advance of the event.

c. All nonregulatory avenues (e.g., drafting and dissemination of procedural information, temporary control tower, etc.) shall be exhausted before considering regulatory restrictions.

d. Restrictions issued under this section prohibit the operation of any aircraft or device, or any activity within the designated airspace area except in accordance with the authorizations, terms, and conditions of the TFR published in the NOTAM, unless otherwise authorized by: (1) Air Traffic Control; or (2) A Certificate of Waiver or Authorization FAA Form 7711-1 issued for the aerial demonstration by Flight Standards.

e. Any procedural matters developed for the management of aircraft operations in the vicinity of aerial demonstrations and major sporting events that will require a procedural interpretation or waiver,

shall be forwarded to the Director of Terminal Operations at least 90-days in advance.

NOTE-

ATC must coordinate with the official responsible for the aerial demonstration prior to authorizing VFR or IFR aircraft to operate within the restricted airspace.

f. The ATCSCC is responsible for ensuring the balance of NAS demand with system capacity. As such, all efforts that address the management of aircraft operations in the NAS shall be coordinated, prior to being finalized, with the ATCSCC to ensure that the planned operation would not overtly impact the system.

19-7-3. RESPONSIBILITIES

a. The Airspace and Rules Manager, System Operations Airspace and Aeronautical Information Management, oversees all regulatory actions issued under 14 CFR Section 91.145. Send TFR request information at least 45 days in advance of an aerial demonstration or major sporting event.

b. The Manager of Airspace Procedures oversees all procedures used in managing aircraft operations in the vicinity of aerial demonstrations and sporting events (refer to Chapter 18 of this order for additional guidelines regarding waiver and authorization responsibilities).

c. The regional ATO Service Area Managers (or their designee) is responsible for the grant or denial of Certificate of Waiver or Authorization (FAA Form 7711-1) for the following Sections/parts of 14 CFR:

1. Section 91.117, Aircraft Speed.
2. Section 91.126, operating on or in the vicinity of an airport in Class G airspace.
3. Sections 91.131, 130, 129, 127 Operations in Class B, C, D, and E airspace areas respectively.
4. Section 91.135, Operations in Class A Airspace.
5. Part 101, Moored Balloons, Kites, Unmanned Rockets, and Unmanned Free Balloons.
6. Part 103, Ultralight Vehicles.

7. Part 105, Parachute Operations (except those Sections delegated to Flight Standards, refer to 19-7-3d).

d. Flight Standards (AFS) is responsible for ensuring the qualification of civil pilots, airworthiness of civil aircraft participating in these events; as well as the safety of persons and property on the ground affected by these events. In addition, AFS has the responsibility for the grant or denial of Certificate of Waiver or Authorization from the following Sections of 14 CFR:

1. Section 91.119, Minimum Safe Altitudes.
2. Section 91.175, Takeoff and Landing Under IFR.
3. Section 91.209, Aircraft Lights.
4. Section 91.303, Aerobatic Flight, Authorizing Industrial and Agricultural Support Operations.
5. Any Section listed in Section 91.905 as appropriate for aerobatic demonstrations and other aviation events.
6. Section 105.15, Jumps Over or into Congested Areas or Open Air Assembly of Persons, as Appropriate for Aerobatic Demonstrations and Other Aviation Events.

NOTE—

Applications for waiver or authorization that require both Air Traffic and Flight Standards technical considerations shall be handled jointly. Additionally, a copy of all such waivers shall be sent to the affected ATC facility(s) having control jurisdiction over the affected airspace and the regional (530) manager. Requests for a TFR, waiver, or authorization for an aviation event requires coordination with the appropriate ATC facility and the regional ATO Service Area Managers.

19-7-4. RELATED DOCUMENTS

- a.** 14 CFR Section 91.145, Management of Aircraft Operations in the Vicinity of Aerial Demonstrations and Major Sporting Events.
- b.** Advisory Circular 91-63, Temporary Flight Restrictions.
- c.** Advisory Circular 91-45, Waivers: Aviation Events contains information to assist prospective sponsors and other interested parties in planning and conducting an aviation event.

d. FAAO 8700.1, General Aviation Operations Inspector's Handbook contains information pertaining to the issuance of a Certificate of Waiver or Authorization.

19-7-5. COORDINATION

Air traffic facilities receiving requests for flight restrictions in accordance with 14 CFR Section 91.145 shall maintain a chronological log of all related actions.

a. Facilities receiving these types of requests shall obtain the following information from the notifying agency/office:

1. Name and organization of the person requesting the waiver.
2. A brief description of the event/activity.
3. The estimated duration of the restrictions (e.g., start date/time and termination date/time).
4. The name/telephone number, or other communications arrangements, of the on-scene official that would respond to any required coordination during the event. In addition, the name of the agent responsible for any on-scene emergency activities, if different from the above.
5. A description of the affected area, and any requested airspace area, by reference to prominent geographical features depicted on aeronautical charts, or by geographical coordinates and fixes when the latter is available.
6. A signed, written request from the individual requesting the waiver, which states the reason for the restriction.

b. Sporting Events.

1. Requests for sporting event restrictions shall be forwarded to the appropriate regional ATO Service Area Managers for action.
2. The regional ATO Service Area Managers will review the request, and if it meets the criteria in accordance with 14 CFR Section 91.145, forward the their recommendation and all applicable information (including the signed, written request from the originator) to the Airspace and Rules Manager at least 30-days prior to the event.
3. If the TFR is not approved as requested, the Airspace and Rules Manager shall inform the regional ATO Service Area Managers, indicating the basis

for the disapproval. The regional ATO Service Area Managers shall inform the requestor of the disapproval and any available alternatives.

c. Aerial Demonstrations. Any request for a TFR, waiver, or authorization for an aviation event requires coordination with the appropriate ATC facility and the regional ATO Service Area Managers at least 90 days prior to the event.

- 1.** The NOTAM request and sample NOTAM must be submitted by the FSDO to the responsible ATC facility at least 90 days in advance of the aviation event. The NOTAM must reflect the dates, times, lateral and vertical limits of the airspace specified on the Certificate of Waiver or Authorization Application (FAA Form 7711-1).

- 2.** The ATC facility coordinates the request with the regional ATO Service Area Managers.

- 3.** The regional ATO Service Area Managers will review the request, and if it meets the criteria in accordance with 14 CFR Section 91.145, forward their recommendation and all applicable information (including the signed, written request from the originator) to the Airspace and Rules Manager at least 30-days prior to the event.

- 4.** If approved by the Airspace and Rules Manager, the NOTAM will be forwarded to the U.S. NOTAM Office for publication. If at all possible, other means will be utilized to disseminate the information. (Class II publication, Airport/Facility Directory, AOPA website, etc.)

- 5.** If the TFR is not approved as requested, the Airspace and Rules Manager shall inform the regional ATO Service Area Managers, indicating the basis for the disapproval. The Regional ATO Service Area Managers shall inform the requestor of the disapproval and any available alternatives.

19-7-6. SPECIAL TRAFFIC MANAGEMENT PROGRAM GUIDELINES

Each regional ATO Service Area Manager is responsible for the drafting of special traffic management plans for the management of aircraft operations in the vicinity of aerial demonstrations and major sporting events. Accordingly, the ATO Service Area Managers, in concert with the affected facility personnel, shall:

- a.** Consider the following when developing procedures for managing aircraft operations in the vicinity of aerial demonstrations and open-air assembly major sporting events:

- 1.** Refer to Chapter 17, Traffic Management National, Center, and Terminal, of this order for additional guidelines regarding special traffic management programs.

- 2.** Consideration should be given to the number and types of aircraft involved in the operation (e.g., non-radio equipped aircraft).

- 3.** Procedures should specify the minimum airspace/altitude requirements to manage aircraft operations in the vicinity of the event.

- 4.** Determine whether the event warrants the use of a temporary control tower.

- b.** Coordinate the proposed procedures with the ATO Airspace and Rules Manager, as appropriate, and forward the information to the ATO Publications.

- c.** Airspace and Rules Manager will disseminate the procedures to affected airspace users via:

- 1.** The Notices to Airmen publication. If this publication is used, the required information shall be sent to ATO Publications for processing, at least 60-days in advance of the event.

- 2.** The NOTAM will be forwarded to the U.S. NOTAM Office for publication no later than 5 days prior to the event.

19-7-7. PROCESS FOR TFRs

- a.** When recommending the use of Section 91.145 to manage aircraft operations in the vicinity of aerial demonstrations, the following guidelines should be used:

- 1.** Aerial demonstrations and sporting events occurring within Class B airspace areas should be handled through existing procedures, without additional restrictions. However, each situation is unique and should be addressed as such.

- 2.** At times it may be necessary to issue restrictions to protect airspace not contained within regulated airspace. For an aerial demonstration, if any segment of the requested airspace is outside of regulated airspace, a restriction may be issued if the following criteria are met:

(a) Military aircraft are conducting aerobatic demonstrations.

(b) Civilian aircraft that operate in excess of 200 knots are conducting aerobatic demonstrations.

(c) Parachute demonstration teams are performing.

NOTE–

A Class D NOTAM (advisory NOTAM) will be issued for any aerial demonstration that does not require a TFR.

b. Restrictions issued by the Airspace and Rules Manager are regulatory actions, and all restrictions issued must consider the impact on nonparticipating aircraft operations. Accordingly, restrictions for aerial demonstrations will normally be limited to a 5 nautical mile radius from the center of the demonstration, at an altitude equal to aircraft performance, but will be no greater than the minimum airspace necessary for the management of aircraft operations in the vicinity of the specified area. Flight management restrictions for major sporting events should be implemented 1 hour before until 1 hour after each event, limited to a 1 nautical mile radius from the center of the event and 2,500 feet above the surface. Traffic management plans are to include marshalling aircraft (e.g., blimps, banner towing aircraft, media) on the periphery of these events.

19–7–8. REVISIONS AND CANCELLATIONS

a. When restrictions are necessary beyond the

published termination date/time, the regional ATO Service Area Managers shall advise the Airspace and Rules Manager to ensure that a revised NOTAM and an appropriate cancellation are issued.

b. When it is obvious that the restrictions are no longer required, but no information to that effect has been received, the regional ATO Service Area Managers shall take action to ascertain the status of the restrictions from the agency/person that requested the restrictions.

c. For an Aerial Demonstration– The event organizer should submit two separate requests:

1. One to the ATO Service Area Managers, at least 45 days prior to the event.

2. An application for a certificate of waiver or authorization (FAA Form 7711–2) for the restriction to the appropriate Flight Standards District Office, 90 days before the event for a civilian aerial demonstration and 120 days before the event for a military aerial demonstration.

d. For a Major Sporting Event– Submit the TFR request to the ATO Service Area Managers at least 45 days in advance of the major sporting event. The ATO Service Area Managers will assess the need for a TFR and forward their recommendation to the Airspace and Rules Manager. The Airspace and Rules Manager will determine whether a TFR is necessary and issue the TFR accordingly.

Section 8. Special Security Instructions (14 CFR Section 99.7)

19-8-1. PURPOSE

In accordance with 14 CFR Section 99.7, the FAA, in consult with the Department of Defense or other Federal security/intelligence agencies, may issue special security instructions to address situations determined to be detrimental to the interests of national defense.

19-8-2. REQUESTING AUTHORITIES

a. The Department of Defense, or other Federal security/intelligence agency may request a TFR under 14 CFR Section 99.7.

b. The Airspace and Rules Manager oversees TFR information issued in under this section.

19-8-3. DEGREE OF RESTRICTIONS

Each person operating an aircraft in an Air Defense Identification Zone (ADIZ) or Defense Area shall (in

addition to applicable parts of 14 CFR part 99) must comply with special security instructions issued by the Administrator in the interest of national security, under agreement between the FAA and the Department of Defense, or other Federal security/intelligence agencies.

19-8-4. DEFINITIONS

a. *Area Defense Identification Zone (ADIZ)*– An area of airspace over land or water in which the ready identification, location, and control of civil aircraft is required in the interest of national security.

b. *Defense Area*– Unless designated as an ADIZ, a Defense Area is any airspace of the U.S., or its territories, in which the control of aircraft is required for reasons of national security.

Appendix 3. Air Carrier Aircraft for Air Traffic Activity Operations Count

For traffic count purposes, an air carrier aircraft is considered to be an aircraft capable of carrying more than 60 passengers. All of the following model types, when accompanied by a Federal Aviation Administration authorized three-letter company designator, shall be counted as air carrier operations in all Air Traffic Activity Reports. This applies even though the aircraft is conducting air freight operations. Any recommended changes to this list shall be forwarded to Air Traffic Classification, for action. No changes shall be made to the following list without specific approval of ATO Workforce Services, Air Traffic Classification Division.

Designator	Model	Designator	Model
A306	A-300B4-600	B721	727-100 (C-22)
A30B	A-300B2/4-1/2/100/200, A-300C4-200	B722	727-200
A310	A-310 (CC-150 Polaris)	B72Q	727 Stage 3 (US ONLY)

CHAPTER 17 SECTION 20	TRAFFIC MANAGEMENT (TM) SUPPORT OF NON-REDUCED VERTICAL SEPARATION MINIMA (RVSM) AIRCRAFT	15

1. PARAGRAPH NUMBER AND TITLE: 1-1-7. SAFETY MANAGEMENT SYSTEM (SMS)

2. BACKGROUND: The Air Traffic Organization (ATO) has developed, and is implementing the Safety Management System (SMS) to ensure a formalized and proactive approach to system safety through risk management. Safety oversight is provided to the ATO by the Air Traffic Safety Oversight Service within the office of the Associate Administrator for Regulation and Certification in accordance with FAAO 1100.161, Air Traffic Safety Oversight.

3. CHANGE:**OLD**

Add

Add

NEW**1-1-7. SAFETY MANAGEMENT SYSTEM (SMS)**

Every employee is responsible to ensure the safety of equipment and procedures used in the provision of services within the National Airspace System (NAS). Risk assessment techniques and mitigations, as appropriate, are intended for implementation of any planned safety significant changes within the NAS, as directed by FAA Order 1100.161, Air Traffic Safety Oversight. Direction regarding the Safety Management System (SMS) and its application can be found in the FAA Safety Management System Manual and FAA Order 1100.161. The Safety Management System will be implemented through a period of transitional activities. (Additional information pertaining to these requirements and processes can be obtained by contacting the service area offices.)

4. OPERATIONAL IMPACT: SMS will require additional action by the specialist. Once training is received, the specialist will be required to implement SMS to any future changes to the NAS.

1. PARAGRAPH NUMBER AND TITLE:

2-10-6. BROADCAST DENSITY ALTITUDE ADVISORY

14-1-4. TELEPHONE LISTINGS

14-4-1. STATION BROADCASTS

14-4-2. COORDINATE WITH WEATHER SERVICE FORECAST OFFICE (WSFO)

14-4-3. COMMERCIAL BROADCAST STATIONS

14-4-4. REDUCING RECORDED WEATHER INFORMATION SERVICES

2. BACKGROUND: Except for Alaska, TWEB Broadcasts will no longer be a function of AFSS under the A-76 study.

3. CHANGE:**OLD****2-10-6. BROADCAST DENSITY ALTITUDE ADVISORY**

Terminal and AFSS/FSS facilities at airports with field elevations of 2,000 feet MSL or higher shall broadcast a density altitude advisory to departing general aviation (GA) aircraft whenever the temperature reaches a certain level. These broadcasts shall be made on ground control (GC), clearance delivery (CD), airport advisory, transcribed weather broadcast (TWEB), or automatic terminal information service (ATIS) as appropriate. Use the following table to determine broadcast applicability: (See TBL 2-10-1.)

NEW**2-10-6. BROADCAST DENSITY ALTITUDE ADVISORY**

Terminal and AFSS/FSS facilities at airports with field elevations of 2,000 feet MSL or higher shall broadcast a density altitude advisory to departing general aviation (GA) aircraft whenever the temperature reaches a certain level. These broadcasts shall be made on ground control (GC), clearance delivery (CD), airport advisory, transcribed weather broadcast (TWEB, **Alaska only**), or automatic terminal information service (ATIS) as appropriate. Use the following table to determine broadcast applicability: (See TBL 2-10-1.)

OLD**14-1-4. TELEPHONE LISTINGS**

AFSS/FSS AT managers shall insure that appropriate telephone numbers are properly listed in telephone directories (including yellow pages when applicable) and in the Airport/Facility Directory. Include TEL-TWEB, and Fast File in the local directories, and insure that Foreign Exchange, Enterprise, etc., are listed in the directories of the areas which they serve. Numbers should always be listed under the subheading Flight Service Station under United States Government, Department of Transportation, Federal Aviation Administration. When possible, list the primary pilot weather briefing number under the Frequently Requested Numbers section at the beginning of United States Government listings.

OLD**14-4-1. STATION BROADCASTS**

Facility AT managers shall select the specific reports to be included in the Scheduled Weather Broadcast (SWB) and the Transcribed Weather Broadcast (TWEB). Include in each type broadcast a sufficient number of reports to serve the users' needs. The selection of the reports and any proposed changes shall be coordinated with known users of the station broadcast. In addition, facility AT managers at TWEB transcribing locations shall coordinate with facility AT managers at remote outlets to ensure adequate service to the users in all areas covered by the TWEB facility. The reports should be broadcast in clockwise order, beginning with the report nearest to but east of true north from the broadcast station. Changes may be implemented immediately unless prior ATD approval is required.

Add

OLD**14-4-2. COORDINATE WITH WEATHER SERVICE FORECAST OFFICE (WSFO)****OLD****14-4-3. COMMERCIAL BROADCAST STATIONS**

Title through f

Add

NEW**14-1-4. TELEPHONE LISTINGS**

AFSS/FSS air traffic managers shall insure that appropriate telephone numbers are properly listed in telephone directories (including yellow pages when applicable) and in the Airport/Facility Directory. Include TEL-TWEB (Alaska only), and Fast File in the local directories, and insure that Foreign Exchange, Enterprise, etc., are listed in the directories of the areas which they serve. Numbers should always be listed under the subheading Flight Service Station under United States Government, Department of Transportation, Federal Aviation Administration. When possible, list the primary pilot weather briefing number under the Frequently Requested Numbers section at the beginning of United States Government listings.

NEW**14-4-1. STATION BROADCASTS**

Facility air traffic managers shall select the specific reports to be included in the Scheduled Weather Broadcast (SWB) and the Transcribed Weather Broadcast (TWEB). Include in each type broadcast a sufficient number of reports to serve the users' needs. The selection of the reports and any proposed changes shall be coordinated with known users of the station broadcast. In addition, facility air traffic managers at TWEB transcribing locations shall coordinate with facility air traffic managers at remote outlets to ensure adequate service to the users in all areas covered by the TWEB facility. The reports should be broadcast in clockwise order, beginning with the report nearest to but east of true north from the broadcast station. Changes may be implemented immediately unless prior Flight Services Operations Area Office approval is required.

NOTE-

TWEB procedures apply only to FSS and AFSS facilities in Alaska.

NEW**14-4-2. COORDINATE WITH WEATHER SERVICE FORECAST OFFICE (WSFO) (ALASKA ONLY)****NEW****14-4-3. COMMERCIAL BROADCAST STATIONS**

No Change

NOTE-

TWEB procedures apply only to FSS and AFSS facilities in Alaska.

OLD**14-4-4. REDUCING RECORDED WEATHER INFORMATION SERVICES**

Recorded weather services are TWEB, TWEB VOR, and TIBS. These services are very valuable and cost effective when utilized by the aviation community. The following guidelines will assist facility managers when adjusting services.

NEW**14-4-4. REDUCING RECORDED WEATHER INFORMATION SERVICES**

Recorded weather services are TWEB (Alaska only) and TIBS. These services are very valuable and cost effective when utilized by the aviation community. The following guidelines will assist facility managers when adjusting services.

c. Non-RVSM exception aircraft may access RVSM airspace in one of the following ways:

1. LOA/MOU: Complies with a Letter of Agreement (LOA)/Memorandum of Understanding (MOU) for operations within a single or adjacent ARTCCs.

2. File-and-Fly: Files a flight plan and makes the initial request to access RVSM airspace by requesting an ATC clearance.

d. Facilities with RVSM airspace must:

1. Provide guidance in the facility Standard Operating Procedures (SOP) for managing non-RVSM flights.

2. Where available, display the Center Monitor on the Traffic Situation Display (TSD) in each area and the Traffic Management Unit (TMU). This will aid in the coordination and decision making process for approving non-RVSM flights.

e. A non-RVSM exception designated by the DOD for special consideration via the DOD Priority Mission website shall be referred to as a STORM flight.

OLD**6-9-3. OPERATIONS MANAGER-IN-CHARGE RESPONSIBILITIES**

NEW**6-9-4. OPERATIONS SUPERVISOR-IN-CHARGE/CONTROLLER-IN-CHARGE RESPONSIBILITIES**

No Change

b. Ensure sector personnel have been properly briefed regarding any known non-RVSM aircraft in or projected to be in sectors under his/her area of responsibility, including DOD STORM flight status.

No Change

e. Non-RVSM Exception Flights Outbound from the U.S. The operational supervisor/CIC from the last area to have communications and operational control of the aircraft in the facility where an aircraft departs RVSM airspace designated for U.S. air traffic control, or exit facility, shall coordinate with the international point-of-contact in a timely manner.

f. For non-RVSM exception aircraft that will enter Canadian Controlled Airspace, the operational supervisor/CIC from the last area to have communications and operational control of the aircraft in the exit facility shall coordinate with the National Operations Center (NOC) in a timely manner.

g. Verify DOD STORM flight status via the DOD Priority Mission website whenever a DOD exception aircraft requests accommodation, and whenever notified by a controller that a DOD exception’s request for accommodation was denied.

h. Give special consideration to DOD STORM flights when determining whether an exception aircraft can be accommodated in your area.

i. Ensure coordination is accomplished to inform sectors when an inbound flight is a DOD STORM flight. This procedure applies to coordination in U.S. airspace only.

j. Ensure controllers at applicable sectors have their DSR MDM properly aligned to display the RVSM indicator depicting those aircraft that are non-RVSM.

OLD**6-9-5. NON-RVSM OPERATOR
COORDINATION REQUIREMENTS****a**

b. DoD, Lifeguard, aircraft operated by manufacturers for certification and development, and Foreign State aircraft will be handled on a workload permitting basis. Operators of these aircraft may pre-coordinate with the local ARTCC wherein the flight will operate. Should the needs of the flight involve more than two ARTCCs, the operator will contact the ATCSCC for assistance with the coordination process.

c. The ATCSCC, TMU, and the operational supervisors/controllers-in-charge shall ensure coordination is accomplished to provide continuity of service to the aircraft.

NEW**6-9-5. NON-RVSM REQUIREMENTS**

No Change

b. DoD, Lifeguard, aircraft operated by manufacturers for certification and development, and Foreign State exception aircraft will be accommodated in RVSM airspace on a workload permitting basis.

c. Non-RVSM Exception Flights Inbound to U.S. The TMU at the facility where an aircraft penetrates RVSM airspace designated for U.S. air traffic control, or entry facility, receives the coordination from an international point-of-contact advising of an inbound non-RVSM exception. The TMU shall coordinate with the operational supervisor/CIC in a timely manner.

4. OPERATIONAL IMPACT: None.**1. PARAGRAPH NUMBER AND TITLE:** 10-1-12. PRECISION OBSTACLE FREE ZONE (POFZ)

2. BACKGROUND: The Precision Obstacle Free Zone (POFZ) is an FAA Airport Obstructions Standards Committee (AOSC) initiative (Decision Document #01b, 18 Dec 2003) to protect the area of short final during very low ceilings (<250 feet) or visibilities (< 3/4 Statue Mile or <4000 feet RVR). This provides guidance to the tower facility manager to work with the Airport Division and Flight Standards to evaluate POFZ areas and affects on the movement areas. Together with these offices, they will determine the need to reposition ILS hold lines and signage for these new areas. AAS has published three documents that address POFZ: AC 150/5300-13, Airport Design, Change 8; AC 150/5340-1H, Standards for Airport Markings, Change 2; and AC 150/5340-18D, Standards for Airport Sign Systems. This initiative will go into effect on 1 Jan 2007.

3. CHANGE:**OLD**

Add

Add

NEW**10-1-12. PRECISION OBSTACLE FREE ZONE (POFZ)**

Coordinate with the Airport Division and Flight Standards to determine if precision approach operations are impacted by the POFZ. ILS hold lines will need to be relocated if aircraft (vertical surfaces) or vehicles fall within the POFZ

4. OPERATIONAL IMPACT: May reduce airport capacity due to increased taxi times from new hold lines to runway, especially during periods of low visibility weather.

1. PARAGRAPH NUMBER AND TITLE: 10-4-7. PRECISION RUNWAY MONITOR-SIMULTANEOUS OFFSET INSTRUMENT APPROACHES

2. BACKGROUND: The Federal Aviation Administration (FAA) has established guidelines for the development and implementation of flight procedures for conducting Simultaneous Offset Instrument Approaches (SOIAs). A corresponding change to Order 7110.65, Air Traffic Control, establishes air traffic control (ATC) procedures for SOIAs. In response to an operational need request by the appropriate service area office to the Acting Director of Terminal Safety and Operations Support, the Flight Standards Service (AFS) will conduct an FAA terminal instrument procedures safety assessment. Based on the safety assessment findings, SOIA operations will be conducted in accordance with the procedures contained in Order 7110.65, as supplemented by site-specific procedures specified in an authorization issued by the Terminal Safety and Operations Support Office in coordination with AFS.

3. CHANGE:

OLD

Add

Add

Add

Add

NEW

10-4-7. PRECISION RUNWAY MONITOR-SIMULTANEOUS OFFSET INSTRUMENT APPROACHES

a. Precision Runway Monitor-Simultaneous Offset Instrument Approaches (PRM-SOIA) may be conducted at airports with dual parallel runways with centerlines separated by at least 750 feet and less than 3,000 feet, with one straight-in Instrument Landing System (ILS)/Microwave Landing System (MLS) and one Localizer Directional Aid (LDA), offset by 2.5 to 3.0 degrees using a PRM system with a 1.0 second radar update system in accordance with the provisions of an authorization issued by the Director of Terminal Safety and Operations Support in coordination with AFS. A high-resolution color monitor with alert algorithms, such as a final monitor aid (FMA) shall be required.

b. Notification procedures for pilots unable to accept an ILS PRM or LDA PRM approach clearance have been established in accordance with Advisory Circular 90-98, Simultaneous Closely Spaced Parallel Operations Airports Using Precision Runway Monitor Systems.

c. Closely monitor weather activity that could impact the final approach course. Weather conditions in the vicinity of either final approach course may dictate a change of the approach in use. (See para 10-1-6, Selecting Active Runways, subpara b Note.)

Add

d. All turn-ons and final approaches are monitored by radar. Since the primary responsibility for navigation rests with the pilot, instructions from the controller are limited to those necessary to ensure separation between aircraft and to prevent aircraft from penetrating the NTZ. Information and instructions are issued, as necessary, to contain the aircraft's flight path within the Normal Operating Zone (NOZ). Aircraft which are observed approaching the No Transgression Zone (NTZ) are instructed to alter course left or right, as appropriate, to return to the desired course. Unless altitude separation is assured between aircraft, immediate action must be taken by the controller monitoring the adjacent parallel approach course to require the aircraft in potential conflict to alter its flight path to avoid the deviating aircraft.

Add

e. Missed approach procedures are established with climbs on diverging courses. To reduce the possibility of error, the missed approach procedure for a single runway operation should be revised, as necessary, to be identical with that of the PRM-SOIA operation.

Add

f. The following requirements shall be met for conducting PRM-SOIA:

1. All PRM, FMA, ILS, LDA with glideslope, distance measuring equipment, and communications frequencies must be fully operational.

2. The common NOZ and NTZ lines between the final approach course centerlines shall be depicted on the radar video map. The NTZ shall be 2,000 feet wide and centered an equal distance from the final approach centerlines. The remaining spaces between the final approach courses are the NOZs associated with each course.

3. Establish monitor positions for each final approach course that have override transmit and receive capability on the appropriate control tower frequencies. A check of the override capability at each monitor position shall be completed before monitoring begins. Monitor displays shall be located in such proximity to permit direct verbal coordination between monitor controllers. A single display may be used for two monitor positions.

4. Facility directives shall define the position responsible for providing the minimum applicable longitudinal separation between aircraft on the same final approach course.

Add

g. Dual local control positions, while not mandatory, are desirable.

Add

h. Where possible, establish standard breakout procedures for each simultaneous operation. If traffic patterns and airspace permit, the standard breakout altitude should be the same as the missed approach altitude.

Add

i. Wake turbulence requirements between aircraft on adjacent final approach courses inside the LDA MAP are as follows (standard in-trail wake separation shall be applied between aircraft on the same approach course):

1. When runways are at least 2,500 feet apart, there are no wake turbulence requirements between aircraft on adjacent final approach courses.

2. For runways less than 2,500 feet apart, whenever the ceiling is greater than or equal to 500 feet above the MVA, wake vortex spacing between aircraft on adjacent final approach courses need not be applied.

3. For runways less than 2,500 feet apart, whenever the ceiling is less than 500 feet above the MVA, wake vortex spacing between aircraft on adjacent final approach courses as described in FAAO 7110.65, Air Traffic Control, para 5-5-4, Minima, shall be applied unless acceptable mitigating techniques and operational procedures are approved by the Director of Terminal Safety and Operations Support pursuant to an AFS safety assessment. A request for a safety assessment must be submitted to the Terminal Safety and Operations Support Office through the service area office manager. The wake turbulence mitigation techniques employed will be based on each airport's specific runway geometry and meteorological conditions and implemented through local facility directives.

4. All applicable wake turbulence advisories must be issued.

Add

j. A local implementation team shall be established at each facility conducting PRM-SOIA. The team should be comprised of representatives from the local airport sponsor and other aviation organizations. The team will monitor local operational integrity issues and report/refer issues for national consideration as appropriate.

Add

k. For any new proposal to conduct PRM-SOIA, an operational need must be identified by the ATC facility manager, validated by the service area office manager, and forwarded to the Terminal Safety and Operations Support Office for appropriate action. The statement of operational need should identify any required site specific procedures.

10-4-7 and 10-4-8

Renumbered 10-4-8 and 10-4-9

4. OPERATIONAL IMPACT: None.

1. PARAGRAPH NUMBER AND TITLE: Chapter 10. Terminal Operations, Services, and Equipment, Section 7. Airport Arrival Rate (AAR)

2. BACKGROUND: A workgroup was formed to determine national standards for determining airport arrival rates. This section incorporates recommendations from the workgroup to set AARs.

3. CHANGE:**OLD****Chapter 10. Terminal Operations, Services, and Equipment**

Add

Add

Add

NEW**Chapter 10. Terminal Operations, Services, and Equipment****Section 7. Airport Arrival Rate (AAR)****10-7-1. PURPOSE****To establish standards for determining the airport arrival rate (AAR).****OLD**

Add

Add

NEW**10-7-2. POLICY****Airport runways are assets of the National Airspace System (NAS). System-wide standards for AARs enable the Air Traffic Organization (ATO) to manage these assets in the most efficient manner.****OLD**

Add

Add

NEW**10-7-3. DEFINITIONS****a. AAR: A dynamic parameter specifying the number of arrival aircraft that an airport, in conjunction with terminal airspace, can accept under specific conditions throughout any consecutive sixty (60) minute period.**

Add

b. Airport Primary Runway Configuration: An airport runway configuration which handles three (3) percent or more of the annual operations.**OLD**

Add

Add

NEW**10-7-4. RESPONSIBILITIES****a. System Operations Services is responsible for the development, establishment, and implementation of AARs at select airports in the NAS.**

Add

b. The Managers, Tactical Operations (MTOs) in collaboration with Terminal Facility Managers must:**1. Identify the airport primary runway configurations for airport(s) identified by System Operations Services.****2. Establish optimal AARs for airport(s) using the method detailed in para 10-7-5.****3. Review and validate the airport primary runway configurations and associated AARs in February of each year, or at more frequent intervals if required.****NOTE-****In the event consensus cannot be reached between facilities, the MTO will make the final determination.**

- Add c. MTOs must ensure that the data is entered in the National Traffic Management Log (NTML) under the runway template.
- Add d. Consistent with para 10-1-6, Selecting Active Runways, Terminal Facility Managers must ensure efficiency at airport(s) within their jurisdiction consistent with the goals outlined in the Administrator's Flight Plan.
- Add **10-7-5. CALCULATING AARs**
- Add a. Calculate optimal AAR values for each airport runway configuration for the following weather conditions:
1. Visual Meteorological Conditions (VMC)– Weather allows vectoring for a visual approach.
 2. Marginal VMC– Weather does not allow vectoring for a visual approach, but visual separation on final is possible.
 3. Instrument Meteorological Conditions (IMC)– Visual approaches and visual separation on final are not possible.
 4. Low IMC– Weather dictates Category II or III operations, or 2.5 miles-in-trail (MIT) on final is not available.
- Add b. Calculate the maximum runway arrival capacity for each runway using the following methodology:
1. Determine the average ground speed crossing the runway threshold and the spacing interval required between successive arrivals.
 2. Divide the ground speed by the spacing interval or use TBL 10-7-1, Maximum Runway Capacity, to determine the maximum runway arrival capacity.
- FORMULA:**
Ground Speed in knots at threshold / Spacing Interval at runway threshold in miles
- NOTE–**
When the maximum runway arrival capacity is a fraction, round down to the next whole number.
- EXAMPLE–**
1. 130 / 3.25 = 40 Runway capacity = 40
2. 125 / 3.0 = 41.66 Runway capacity = 41

Add

*TBL 10-7-1***MAXIMUM RUNWAY CAPACITY**

<u>Threshold Ground Speed</u>	<u>Miles Between Aircraft</u>									
	<u>2.5</u>	<u>3</u>	<u>3.5</u>	<u>4</u>	<u>4.5</u>	<u>5</u>	<u>6</u>	<u>7</u>	<u>8</u>	<u>10</u>
<u>130 Knots</u>	<u>52</u>	<u>43</u>	<u>37</u>	<u>32</u>	<u>28</u>	<u>26</u>	<u>21</u>	<u>18</u>	<u>16</u>	<u>13</u>

Add

Add

Add

NEW

Chapter 17. Traffic Management National, Center, and Terminal

Section 20. Traffic Management (TM) Support of Non-Reduced Vertical Separation Minima (RVSM) Aircraft

17-20-1. PURPOSE

This section prescribes policies and guidelines for Traffic Management (TM) support of Non-Reduced Vertical Separation Minima (RVSM) Aircraft.

OLD

Add

Add

NEW**17-20-2. POLICY**

In accordance with 14 CFR Section 91.180, domestic RVSM airspace (FL 290-410) is exclusionary airspace. With only limited exceptions, all operators and individual aircraft must have received RVSM authorization from the Federal Aviation Administration (FAA) to operate at RVSM altitudes. If an aircraft or its operator has not been authorized for RVSM operation, the aircraft is referred to as a “non-RVSM” aircraft. Excepted non-RVSM aircraft are granted access to RVSM altitudes on a workload permitting basis. Priority in RVSM airspace is afforded to RVSM compliant flights, then file-and-fly flights.

OLD

Add

Add

NEW**17-20-3. DEFINITIONS**

a. File-and-Fly. Operators of excepted non-RVSM flights requesting access to or through RVSM airspace will file a flight plan. This flight plan serves as the notification to the FAA of the operator’s intent to request access to or through RVSM airspace.

Add

b. STORM Flight. A non-RVSM exception designated by the Department of Defense (DOD) for special consideration via the DOD Priority Mission website.

Add

c. Entry Facility. Facility where an aircraft penetrates RVSM airspace designated for U.S. air traffic control.

Add

d. RVSM Facility. Air Traffic facility that provides air traffic services in RVSM airspace.

Add

17-20-4. EXCEPTED FLIGHTS

Add

Under the authority granted in 14 CFR Section 91.180, the Administrator has determined that the following groups of non-RVSM aircraft may enter RVSM airspace subject to FAA approval and clearance:

Add

a. Department of Defense aircraft;

Add

b. Foreign State (government) aircraft;

Add

c. Active air ambulance utilizing “Lifeguard” call sign;

Add

d. Flights conducted for aircraft certification and development flights for RVSM.

OLD

Add

Add

NEW**17-20-5. OPERATOR ACCESS OPTIONS**

Operators of excepted non-RVSM aircraft requesting access to DRVSM airspace have the following options available to them:

Add	<u>a. Letter of Agreement/Memorandum of Understanding (LOA/MOU). Comply with a LOA/MOU for operations within a single or adjacent RVSM facility.</u>
Add	<u>b. File-and-Fly. File a flight plan and make the initial request to access RVSM airspace by requesting an ATC clearance.</u>
Add	<u>NOTE—</u> <u>Non-RVSM aircraft not listed under excepted flights may climb/descend through RVSM airspace without leveling off, subject to FAA approval and clearance.</u>
Add	<u>c. DOD. Enter STORM flights on the DOD Priority Mission website. For STORM flights that are within 60 minutes of departure notify the departure RVSM facility via telephone, in addition to entering the flight into the DOD Priority Mission website.</u>
Add	<u>NOTE—</u> <u>Special consideration will be afforded a STORM flight; however, accommodation of any non-RVSM exception flight is workload permitting.</u>
<u>OLD</u>	<u>NEW</u>
Add	<u>17-20-6. DUTIES AND RESPONSIBILITIES</u>
Add	<u>Traffic Management Units (TMU) in facilities with RVSM airspace must:</u>
Add	<u>a. Monitor, assess, and act on the information in the Traffic Situation Display (TSD) to evaluate the facility's ability to manage non-RVSM aircraft;</u>
Add	<u>b. Coordinate calls from DOD operators of STORM flights that will depart within 60 minutes, with the appropriate area supervisor/controller-in-charge. Obtain and coordinate the following information:</u> <u>1. Call sign.</u> <u>2. Origination point.</u> <u>3. Proposed departure time.</u> <u>4. Number of aircraft in formation, when applicable.</u>
Add	<u>c. For a non-RVSM exception flight inbound to the U.S., the TMU at the entry facility receives the request for access to RVSM airspace directly from an international point of contact (POC). The TMU must coordinate the information received from the international POC with the appropriate operational supervisor/controller-in-charge in a timely manner.</u>

4. OPERATIONAL IMPACT: Minor.
