NAVIGATION REFERENCE SYSTEM (NRS)

NRS is a system of waypoints used in point to point navigation based on latitude and longitude which are depicted on high altitude en route charts. The format of the naming convention for use in the northern hemisphere is two letters, followed by two numbers, followed by a single letter.

These NRS waypoints are identical to “RNAV” waypoints and are arranged in a distinct grid pattern. The naming convention format is defined as follows:

1. First character identifies the International Civil Aviation Organization (ICAO) Flight Information Region designator. For the 48 contiguous United States that character is “K”.
2. The second character represents the Air Route Traffic Control Center airspace in which the fix is located.

B	Boston	N	New York	W	Washington
J	Jacksonville	C	Cleveland	I	Indianapolis
T	Atlanta	R	Miami	H	Houston
F	Fort Worth	K	Kansas City	G	Chicago
P	Minneapolis	D	Denver	A	Albuquerque
U	Salt Lake City	L	Los Angeles	S	Seattle
3. The third and fourth characters represent the latitude increment. Waypoints are situated along lines of latitude that occur every 10'. Two digits, between *01* and *90*, identify the latitude of each waypoint.
4. The fifth character identifies the longitude identifier. The NRS longitude identifiers circle the globe from west to east beginning with the letter *A* at the prime meridian (0°). The letters repeat every 26°.
