CHAPTER 22. FIRST AID PROGRAM

2200. GENERAL. This chapter establishes the requirements for a Federal Aviation Administration (FAA) first aid program. The purpose is to ensure consistency of procedures to make certain that all FAA employees will receive prompt and appropriate emergency medical services if a job-related injury or illness occurs in FAA administrative or field settings. First aid may consist of attention to minor injuries, which require no further treatment or emergency help for the severely injured until professional medical personnel can take over. It may also include the use of cardiopulmonary resuscitation (CPR) in response to medical emergencies. Additional implementation guidance will be developed by responsible organizations to support this policy, and shall be followed.

2201. BACKGROUND. Management guidelines for provision of medical services and first aid are found in the U.S. Department of Labor, Occupational Safety and Health Administration’s (OSHA) standards 29 CFR 1910.151 and 29 CFR 1926.50. First aid programs must correspond to the occupational hazards which can reasonably be expected to occur in the workplace.

2202. SCOPE. This program applies to all FAA personnel. FAA contractors and sub-contractors must comply with the requirements of 29 CFR 1910.151 and 29 CFR 1926.50. These requirements should be emphasized in bid specifications and contract language.

2203. KEY FIRST AID PROGRAM ELEMENTS

a. General Requirements.

(1) Local emergency response systems shall be the primary source of emergency first aid.

   (a) If employees can be taken to an infirmary, clinic, or hospital, or if outside emergency assistance can arrive timely, the FAA is not required to train employees in first aid.

   (b) In the absence of professional medical care in near proximity to the workplace to be used for the treatment of all injured employees, a person or persons shall be adequately trained to render first aid.

   (c) If employees work in rural areas where there is no coverage by a local emergency medical response system (EMRS), the FAA must make provisions for acceptable emergency transportation. This could be any government or privately-owned vehicle (POV) that is available for use in an emergency situation to transport an injured employee to the nearest medical facility.

(2) If the facility or worksite is located where the local emergency medical response system can be utilized, employees of the facility shall be instructed in how to access the system, e.g., by dialing 9-911, to obtain an outside telephone line to summon emergency medical assistance.

(3) Where the eyes or body of any person may be exposed to injurious or corrosive materials, suitable facilities for quick drenching or flushing of the eyes and body shall be provided within the work area for immediate emergency use.

b. Equipment.

(1) Guidelines for first aid kit contents shall be obtained from the American National Standards Institute Z308.1, American National Standard, Minimum Requirements for Workplace First Aid Kits.
(2) The necessity for, and placement of, emergency shower and eyewash stations must be determined by the responsible program office. Refer to ANSI Z358.1, American National Standard for Emergency Eye Wash and Shower Equipment, for additional requirements.

c. Administrative Guidelines.

(1) Health Clinics and associated employee awareness programs will be administered by the Office of Aerospace Medicine (AAM). AAM personnel will provide medical evaluations and advice in support of this policy as indicated.

(2) Employee training called for by the requirements of this chapter will be obtained from nationally recognized organizations and training service vendors. The training will be funded and scheduled by the responsible program office. Training records will be maintained by the responsible program office.

(3) The Office of Environment and Energy (AEE) will provide periodic program evaluations.

(4) All incidents resulting in first aid treatment should be reported in the same manner as any other occupational injury or illness as described in Order 3900.19B, Chapter 7.
