INTRODUCTION

The purpose of this unique guide is to provide an array of supplementary activities which may be used by teachers to enrich their regular programs. The activities are centered around the subject of aviation and are appropriate for grades 2 - 6. They are related to the curriculum areas of Communication Arts, Science and Social Studies. In addition, special activities are directed towards health and career awareness in the field of aviation.

All of the activities are written as performance objectives and are related to various grade levels and subject areas. However, those who use the materials should feel free to adapt them to other grade levels or to the individual abilities of students.

HOW TO USE THIS GUIDE

Teachers will find this guide organized by subject areas and suggested grade level. The guide basically covers grades two through six. Teachers are encouraged to review the guide’s contents and to make adaptations if they wish to grade levels other than those designated.

Teachers will find it convenient to review and select those areas most appropriate for their grade levels. Having made selections of the material most appropriate and desirable for their students, teachers will want to make special note of materials needed for the selected units. The guide identifies agencies or sources from which the materials can be ordered. Planning and requesting, in advance of introducing the unit, will insure that it is available when needed.

This guide has been organized by:

- Subject Areas
- Grade Levels
- Learner Objectives
- Teacher Objectives
- Learning Activities, and
- Expected Outcomes.

These items have been found to be important features for good instructional planning. Teachers will find these helpful guides to use as they develop instructional units from the materials contained in this guide.
COMMUNICATION ARTS
Grades Two-Six

DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION
800 INDEPENDENCE AVENUE S.W.
WASHINGTON, D.C. 20591
OBJECTIVES

Students will participate in oral discussion of the airport, answering with cognitive and evaluative answers.

Students will write a four sentence paragraph describing how they felt about the trip to the airport and a minimum of three things they saw.

INSTRUCTIONAL PROCEDURES

Introduce unit by asking:

Cognitive Questions

1. "How many of you have been to an airport?" Record number of those who have and have not.
2. "What did you see at the airport?" Record information on chalkboard.
3. "Who did you see at the airport?" Again, record responses.

It is suggested that teachers may want to file these materials in folders or boxes coded accordingly.

The instructional objectives are developed for skills and information learners need at the various grade levels. Materials selected to motivate learners are aviation oriented. These selected materials are matched to each objective. The teacher will also find useful examples of questions to ask learners.

STUDENT ACTIVITIES

Students will relate any airport experience they may have had and orally describe what it looks like and the two most interesting experiences they had. These experiences can come from a small, local airport to a large metropolitan airport.

OUTCOMES

Overview of various student experiences.

Awareness of airports and their functions.

Opportunities to practice speaking skills.
OBJECTIVES
These questions are especially designed to elicit cognitive as well as evaluative answers from the students.

4. “If we were to visit the airport, what do you think we might see?”
   Again, record responses.

Affective Questions

1. “Why do you think we have airports?”
   Again, record responses.

2. “Are airports different or are they used for different things? What or how?”
   Again, record responses.

INSTRUCTIONAL PROCEDURES
Introduce students to the booklet A Trip To The Airport. Point out different language printed in the book; explain why this is important.

Depending on the class’ ability, have students listen as the story is read. Read the story orally in groups or read it individually.

STUDENT ACTIVITIES
Students are to respond to teacher’s questions with answers required.

Teachers may request that students identify where they visited an airport and if they were passengers.

Simple factual answers are not acceptable for these questions. Students must answer with thoughtful evaluative replies.

Students apply listening skills if teacher reads the story.

Students take turns reading parts of the story if they are assigned to reading groups.

Students should ask questions of the teacher as they come upon words and/ or story parts.

OUTCOMES
Awareness of different languages and their importance.

Awareness of what an airplane is like. Evaluation of listening skills.
Students will arrange vocabulary word list in alphabetical order using first letter of each word.

Following the story, review the story’s vocabulary. The teacher should review this vocabulary and select words from it that are most appropriate to the performance level of the class. Reference: A Trip To The Airport

The teacher can develop a word drill game from this vocabulary by copying it onto flashcards. Flash words to students asking them to spell them or define them.

Students will arrange words in alphabetical order either individually or by groups. Students may record words in a dictionary notebook with pages containing letters of the alphabet.

Students may select words for writing a story about the airport.

Teachers may require students to develop questions from the word list to ask on trip to the airport or to be asked of adults in their home.

Teachers may assign art activities from the word list or ask students to illustrate some of the words.

Illustrations of selected words from the list.

1.3
### OBJECTIVES

Students will record vocabulary list in alphabetical dictionary and copy definitions provided by teacher.

Students working in small groups will develop stories about pilots, flight attendants, mechanics and air traffic controllers. (Teachers are to record the stories.)

Students will role play the take-off, flight and landing of an airliner, playing the parts of pilot, co-pilot, air traffic controller, flight attendant or passenger.

Students will write single sentence stories using correct capitalization, punctuation, spelling and sentence structure about airport story or visit.

### INSTRUCTIONAL PROCEDURES

Rave students record vocabulary list in dictionaries; provide them with either notebooks or paper stapled together. Rave students label each page with a letter of the alphabet. Check to make sure students are recording words on correct pages; some teachers have found peer-to-peer checking a good technique.

Using chart paper, have students write group stories. Work with small groups and record the story for the students. Story subjects are:

- pilots
- flight attendants
- mechanics
- flight controllers

Teachers monitor students to make sure they are using basic procedures for simulated flight by students playing the parts of pilot, co-pilot, air traffic controller and flight attendant.

The teacher will review details of the airport visit and vocabulary for this objective. Students should be encouraged to use their own dictionaries. Encourage capable students to write longer stories. Successful completion of this objective will ready students for the lessons’ program objective.

### STUDENT ACTIVITIES

Students may also draw cards and provide definitions or draw numbers of cards and write a story using words on drawn cards.

Students will create airport story by dictating to the teacher; the teacher will record story on chart paper. Students will illustrate chart story and post it on the bulletin board.

Students using chart, stories or the booklet, A Trip To The Airport, will meet in small groups and select one of the five parts to play. They will practice and then present simulation to the class. Classmates will question or discuss their presentation following the program.

Students, individually, will write single sentence stories; they should use their student dictionaries.

Those finishing first may want to illustrate their stories or find pictures from magazines to cut out and match to their stories.

### OUTCOMES

Development of vocabulary dictionary.

Each student will write a paragraph using one of the vocabulary words.

Dictating story to teacher.

Illustrations to go with chart story.

Development of presentation to be given to class.

Evaluation of each presentation.

Completion of single sentence stories using the airport theme and vocabulary words.
COMMUNICATION ARTS

OBJECTIVES

Students will describe the five basic types of airports for transportation in the United States.

INSTRUCTIONAL PROCEDURES

Introduce students to the terms:
  - airport
  - airplanes
  - flights
  - transportation

Seek explanations or definitions of these compound words:
  - air - the earth’s immediate atmosphere
  - port - a seafaring term; a place where ships dock or tie up.
  - airport - a place where crafts that fly through the air land.

Introduce students to the words:
  - landing strip
  - commercial
  - private
  - helicopter
  - military

In five areas of the chalkboard, use the words for a heading. Ask: “How are all of these airports the same?” List likenesses such as place for airplanes to land. Ask students to then identify how each airport is different.

STUDENT ACTIVITIES

Students will organize an air transport dictionary; dictionary should be in three-ring binders to permit collection of pictures that help clarify terms to be recorded.

Students are to identify other compound words affiliated with air transportation.

Students are to collect or draw pictures that best describe the five types of airports.

Students will record words in their dictionaries.

Students will copy lists from chalkboard that tell how airports are the same and different.

Students will write short stories about airports; encourage creativity.

OUTCOMES

Students will be skilled in writing letters using simple business form to request information and will apply correct capitalization, spelling grammar and punctuation.

Students will be skilled in making a business telephone call as part of a group or individually.

Identification of corn bound words.

Recording words in a student aviation dictionary.

Compare and contrast airports or discuss similarities and differences.

</tbody>
</table>
## OBJECTIVES

Students will develop a simple writing outline about one aerospace hero/heroine of their choice.

## INSTRUCTIONAL PROCEDURES

Introduce outline by explaining that it is a planned writing outline. Provide example: "Let’s write a story about ourselves. Before starting, we should develop an outline."

### I. Important Facts About Yourself

- **Your name**
- **Your age**
- **One thing you like to do**

### II. Your Own History

- **Where you were born**
- **Date of your birth**
- **Other places you have lived**

### III. Introduce Your Family

- **Give the names of your mother and father**
- **Tell the names of any sisters or brothers**
- **Mention other relatives or pets**

The teacher may want to introduce outlining by writing only the major topics on the board and have students, as a class, develop a list of other things under each.

## STUDENT ACTIVITIES

Students will copy outline from the board. They will write simple sentences for each of the outline items.

**EXAMPLE:** My name is Jose Sanchez. I am nine years old. I like to play games with my friends.

Students will develop simple sentences about their friends, pets or a toy or bicycle that they like.

Each outline must be broken out to at least the two items under each major outline heading.

Students using aerospace personality series packets will develop a writing outline with at least three major headings and at least two subheadings under each.

## OUTCOMES

Students will be able to write a short story about aviation heroes or heroines requiring composing skills in outlining, paragraphing, with topic sentences and appropriate supportive sentences.

Outlining skills will be developed.
<table>
<thead>
<tr>
<th>OBJECTIVES</th>
<th>INSTRUCTIONAL PROCEDURES</th>
<th>STUDENT ACTIVITIES</th>
<th>OUTCOMES</th>
</tr>
</thead>
</table>
| Students will write topic sentences for paragraphs, each supported by two basic supportive sentences. | Example:  
1. Important Facts About Myself  
   A.  
   B.  
   C.  

| 11. Your Own History | A.  
B.  
C.  

| Provide students with packets about aerospace hero/heroines. Require that each develop an outline like the previous one about an aerospace hero/heroine. | Introduce students to topic sentences by writing examples on the chalkboard. Ask students what they would like to know about the subject introduced by topic sentences.  
Example:  "The roar of the red airplane’s motor could be heard in the early morning.”  
"The shock of the parachute opening signaled he was safe.”  
What else would you like to know about these sentences?  
Have students randomly select paragraph topic sentences from their reading books. Ask students what they think might be added to support sentences after students read them. Require, after discussion, students to read the total paragraphs from which they selected topic paragraphs | Students, when provided with topic sentences, will develop a completed paragraph by writing at least two supportive sentences.  
Topic sentences:  "She felt a little nervous about her first solo flight.”  
"The radio message warned of a storm in the plane’s flight path.”  
Students will critique each others paragraphs; they are to note topic sentences and determine if support sentences are good. Students may use aerospace personality series packets for this activity. | Development of an outline about aerospace heroes/heroine. Topic sentence skills  
Critiquing experience is to identify topic sentences. |
### RESOURCES AND MATERIALS

- **Aerospace Personality Series**
  - Amelia Earhart
  - General Daniel “Chappie” James, Jr.
  - Captain Eddie Rickenbacker
  - Wright Brothers

### ADDRESS:

Center For Aerospace Education Development  
Civil Air Patrol, National Headquarters (ED)  
Maxwell Air Force Base, Alabama 36112

### OBJECTIVES

Students using the Aerospace Personality Series will write fiction stories about their experiences with these famous people.

Students will identify one of three aerospace personalities and will write in five complete separate sentences about five factual personal items of that person.

### INSTRUCTIONAL PROCEDURES

Using materials from the packets introduce unit by developing three individual displays on the bulletin board.

Use the displays for class discussion. Make sure the class recognizes that both men and women make up the displays as well as different races.

Provide students with biography information about each personality displayed on the board.

Assign students to small reading groups for each personality. Require that they read as a group the vital information. Ask them to answer such questions as:

### STUDENT ACTIVITIES

Students will select a personality they want to know more about.

Students are to organize their groups by electing a:

- leader
- reporter
- recorder
- timer

### OUTCOMES

- Students will write fictional stories about aerospace heroes/heroines.
- Creative writing.
- Development of displays.
- Recognition of equality in aerospace personalities.
- Biographical collection of information.
- Forming and organization of small groups for discussion.
OBJECTIVES

1. When was the personality born?
2. How old would this person be now?
3. Do you know anyone that old?
4. What did this person’s parents do?
5. Do some of your parents do similar work?
6. Did this person’s parents have an effect on his life?
7. How and where did this person learn to fly?
8. What great contribution did this person make to aviation?

INSTRUCTIONAL PROCEDURES

Beneath each bulletin board display provide students with a biography and reading task cards. The teacher should be prepared to discuss information on the task cards for:

- AMELIA EARHART
  - Task Card Three
  - Task Card Four
  - Task Card Seven
  - Task Card Eight

- GENERAL DANIEL JAMES, JR.
  - Task Card Three
  - Task Card Five
  - Task Card Six
  - Task Card Seven

- EDDIE RICKENBACKER
  - Task Card Four
  - Task Card Five
  - Task Card Nine
  - Task Card Sixteen

- WRIGHT BROTHERS

STUDENT ACTIVITIES

Students will answer all questions in complete sentences by their groups.

Students will prepare answers into a report for the class. Students will be encouraged to add material beyond the questions asked to build an interest.

Each student will write a short biography about him or herself.

Each student will write an individual biography about one personality.

Students will select one of the following task cards and complete it as required.

Wright brothers

OUTCOMES

Writing a short biographical sketch of themselves.

A biographical sketch of a selected air hero/heroine.

Students will draw pictures of personalities, planes they flew and an important event in their lives.
<table>

# Grade Six
## Communication Arts

### Resources and Materials

Aerospace Personality Series
- Amelia Earhart
- General Daniel "Chappie" James, Jr.
- Captain Eddie Rickenbacker
- Wright Brothers

**Address:**
Center For Aerospace Education Development  
Civil Air Patrol, National Headquarters (ED)  
Maxwell Air Force Base, Alabama 36112

### Objectives

Students, through the use of Aerospace Personality Series will acquire basic skills in oral and written activities that will increase their skills in:
- Spelling
- Punctuation
- Capitalization
- Grammar and composing

### Instructional Procedures

Introduce students to the following:

Throughout the history of our country we have a list of personalities that have contributed to the advancement of our country. Some seventy years ago the first flight in a heavier-than-air machine was made. Since that date, the ranks of persons who have contributed to the use of aviation as an important invention in American history are long and interesting.

As a class, let us explore the meaning of these terms:
- Personalities
- Inventors
- Experimenters

What is a personality?
What is a famous personality?

### Student Activities

Students will write a brief description of their own personality in terms of biography. The description is to include:
- Place of birth
- Special likes
- Special skills
- Physical description
- Purposed future role

### Outcomes

Defining various important terms and phrases.
OBJECTIVES

Inventor: What is an inventor?
What is an invention?

Make a list of things that have been invented.

Instruct students in the use of outlining to organize their thoughts for writing.

Example:
A. Name of the invention
B. Person who invented
C. Why invention was made
D. What the invention has contributed to better living and the world.

Experimenter: These are persons who conduct experiments or tests to determine how well something functions under specific conditions. Aviation has a long list of many persons who have conducted flight experiments.

Example: speed test
aerobatics
safety
long distance flights

STUDENT ACTIVITIES

Students will meet in small groups and select most interesting personality description among those written.

One person who has been selected will read his or her personality description to the class.

Students will write a definition of an inventor.
Students will look for names of persons who have made famous inventions.

Example: telephone ________________
radio ________________
steam engine ________________
cotton gin ________________
airplane ________________
hot air balloon ________________

Experiments: These are persons who conduct experiments or tests to determine how well something functions under specific conditions. Aviation has a long list of many persons who have conducted flight experiments.

Example: speed test
aerobatics
safety
long distance flights

OUTCOMES

Small group discussions and selection of a "more interesting" personality.

Predicting skills

Conducting experiments to illustrate various aerospace concepts.
OBJECTIVES

INTRODUCTION TO THE AEROSPACE PERSONALITY SERIES

STUDENT ACTIVITIES

OUTCOMES

INTRODUCTION TO THE AEROSPACE PERSONALITY SERIES

Select groups of students and have them make a bulletin board display for each personality. Invite students to become acquainted with each of the personalities displayed on the board.

Students are to compile detailed notes on their experiments.

Experiment: ________________________

Date: ____________ Time: ______

Description of the Experiment:

Experiment Results: ______________

Experimenter: _____________________

(student’s name)

Students will present experiments to class. Class will ask questions about each experiment reported.

Students are to become acquainted with each personality on the bulletin board. Each student must know at least three things about each personality. These items will be reported when questions are directed to the students by the teacher.

Conducting experiments to illustrate various aerospace concepts.

Speaking Presenting results of experiments, orally.
## Objectives

Stress that a biography must be clearly written with an emphasis on:

- good spelling
- good sentence structure, and
- good accurate punctuation
- proper capitalization
- good grammar

## Instructional Procedures

Organize students into correcting teams. Each team is to have a single responsibility. Teams for:

- spelling
- sentence
- punctuation
- capitalization
- grammar

Organize students into teams for each personality. These teams will review biographies written by students to check their accuracy for details regarding each personality.

## Student Activities

Students are to study each of the personalities and from memory write a biography about one of the personalities. Written reports are to be submitted to the correcting team. Biographies will be rewritten to correct any errors noted by the correction teams.

Students will submit their written biographies to the personality teams. Reports will be checked for accuracy and returned to students for correction. Students will read biographies to the class.

## Outcomes

- Essay writing skills and practice with mechanics of English
- Writing experiences using biographies as topics.
SCIENCE

Grades Two-Six
RESOURCES AND MATERIALS

Overhead Projector.
"The Main Parts of an Airplane", Diagram of an airplane, with unlabeled parts

Department of Transportation
Federal Aviation Administration
AGA-300
500 Independence Avenue, S. W.
Washington, D. C. 20591

OBJECTIVES

Students will explain the working functions of an airplane, basic seven parts when presented an unlabeled diagram of an airplane.

INSTRUCTIONAL PROCEDURES

Present an unlabeled diagram to students of an airplane.

Ask: (without reference to the diagram)

Affective Questions
1. "How do you control a bicycle?"
2. "How do you control a wagon when you’re pushed?"
3. "How does your mother/father control your car?"
5. "How many controls do you have on your bicycle?"

Review students’ answers to these questions, then ask:

1. "What do you know about airplanes?"
2. "How many directions can it go? The same as your bicycle?"

List the directions on the board:

<table>
<thead>
<tr>
<th>forward</th>
<th>left</th>
</tr>
</thead>
<tbody>
<tr>
<td>right</td>
<td>down</td>
</tr>
</tbody>
</table>

Students will demonstrate with hands turning directions of their bicycles or a car.

Students, using hands, will follow teacher through examples of an airplane turning and going up and down.

Ask students to compare with bicycle turning: one student playing the part of a bicycle; one an airplane.

Students will copy parts named on the diagram furnished by the teacher.

Peers and teachers will check for correct labeling and spelling.

OUTCOMES

Role playing by students
OBJECTIVES

Students will orally identify the seven basic parts of an airplane when presented an unlabeled diagram.

INSTRUCTIONAL PROCEDURES

Ask:

"How can this happen?"

After students have had an opportunity to guess or provide answers introduce them to the following vocabulary:

rudder
elevator
ailerons
propeller

Using diagram on the overhead projector, label each part; as each part is labeled write its function on the board. Require students to record these words and definitions in their dictionaries for later use.

Have class, in unison, repeat parts of diagram as you point. Be alert for incorrect answers and non-participants. Encourage students to use flashcards with parts named on them; suggest punctuation, spelling by pointing to part on unlabeled diagram.

Make sure students understand that the pilot controls the directional parts of the airplane.

Complete introduction of students to the remaining vocabulary words:

propeller
landing gear
wing
right wing aileron
left wing aileron

STUDENT ACTIVITIES

Students will draw diagram from memory and label parts.

Students will organize in small groups and label themselves with parts; when the word rudder is flashed, student labeled “rudder” will pronounce the word and say something like, “I help the airplane turn”.

The students could also respond to statements such as “I make the airplane go up and down”. The response would be to flash the word elevator or the student labeled “elevator” could stand, pronounce the word and spell it.

Students will place words in their dictionary, draw illustrations of each part or make a total diagram of aircraft and its parts to be included in the dictionary.

OUTCOMES

Development of diagrams showing major parts of an airplane.

Evaluate students to determine knowledge of airplane controls.

Addition of words to student dictionary.
RESOURCES AND MATERIALS

Demonstration lids for Aviation Education GA-7030
Department of Transportation
Federal Aviation Administration
AGA-300
800 Independence Avenue, S. W.
Washington, D. C. 20591

"How An Airplane Flies", ditto masters
Department of Transportation
Federal Aviation Administration
AGA-300
800 Independence Avenue, S. W.
Washington, D. C. 20591

GRADE THREE

SCIENCE

"How Airplanes Fly", FAA Film Catalog
Department of Transportation
Federal Aviation Administration
800 Independence Avenue, S. W.
Washington, D. C. 20591

Pilot's Handbook of Aeronautical Knowledge
Department of Transportation
Federal Aviation Administration
800 Independence Avenue, S. W.
Washington, D. C. 20591

OBJECTIVES

Students will conduct simple experiments to demonstrate the theory of flight.

Students will conduct simple experiments to prove the properties of air.

INSTRUCTIONAL PROCEDURES

Create an interest in the study of air by asking students questions that require thinking process.

1. "What do we use every day, but never see?"
2. "What is all around us but we cannot touch?"
3. "How do we know it is there?"
4. "Do you know some ways that we can prove air is something real and valuable to our lives?"

4. "How do we use it?"
5. "Do you know some ways that we can prove air is something real and valuable to our lives?"

Show pictures of wind blowing flags, trees; pictures of people leaning into wind.

STUDENT ACTIVITIES

Lead students to arrive at these answers:

1. Air, while invisible and can't be felt, is all around us.
2. Have students demonstrate that air can be felt:
   Blow breath on hands, fan air with stiff piece of paper on a classmate.

3. Require students to further check that air exists by feeling wind when riding a bicycle; when safe, ask for adult's permission to hold hand outside of the car window to feel the air; have students construct a crude wind indicator with a stick and piece of ribbon to determine wind direction or movement of the air we cannot see.

OUTCOMES

Introduction to the theory of flight.

Experiments regarding the properties of air.
OBJECTIVES

INSTRUCTIONAL PROCEDURES

AIR TAKES UP ROOM

1. Equipment:
   - Soda pop bottle
   - Small funnel
   - Soda straw
   - Modeling clay
   - Cupful of water

   Seal the funnel tightly into the neck of the bottle with modeling clay. Pour the cup of water into the funnel quickly. The water stays in the funnel because the air in the bottle cannot get out.

   Pass the straw through the funnel into the bottle. Suck out a mouthful of air. Some of the water goes down into the bottle, taking the place of the air sucked out.

2. Equipment:
   - Wide-necked bottle or jar with an air-tight lid
   - Soda straw
   - Modeling clay
   - Small Balloon
   - Thread

   Students should be encouraged to conduct these experiments (as supplies are available) at home for their families or friends.

   In some cases, equipment may be loaned to a student by the school.

STUDENT ACTIVITIES

Students will start a book of experiments. Students will follow a format described by the teacher.

Students will diagram experiments to be included in their books.

Students will develop glossary of important terms for their books.

Students will collect pictures from magazines or other places that add proof to experiments.

Students will look for air working outside of school. They may see windmills, wind-waves, etc. These will be shared with class.

OUTCOMES

Students will know that air takes up space.

Students will diagram experiments to be included in their books.

Students will develop glossary of important terms for their books.

Students will collect pictures from magazines or other places that add proof to experiments.

Students will look for air working outside of school. They may see windmills, wind-waves, etc. These will be shared with class.
Blow the balloon up just enough to fit very loosely in the bottle. Tie a thread around the neck of the balloon so the air will not escape. Drop the balloon into the bottle. Punch a hole in the lid and insert the straw; seal it with modeling clay. Screw the lid on the bottle. Suck some of the air out of the bottle through the straw and clamp your finger over the top of the straw to prevent air from rushing back into the bottle. The balloon gets larger because the air inside the balloon expands as the air pressure decreases in the bottle.

3. Equipment: Water glass
   Cork
   Large glass bowl
   Facial tissue

Fill the bowl about three-fourths full of water. Drop the cork on top of the water. Invert the glass over the cork and push to the bottom of the bowl. The cork goes to the bottom of the bowl under the glass. Air in the glass keeps the water out.
Remove the glass and the cork. Stuff facial tissue into the bottom of the glass. Invert the glass and push to the bottom of the bowl. The tissue does not get wet.

4. Equipment:

   2 water glasses
   Large dishpan or other container filled with water

Air, like water, is fluid—you can pour it. Place one glass into the container so that it fills with water. Place a second glass into the water upside down so that the air does not escape. Carefully tilt the air-filled glass under the water-filled glass. By doing this, you can pour the air up in bubbles. Each bubble is a little package of air made visible by being in the water. With a little practice you can keep pouring the air back and forth between the glasses without losing any of it.

5. Collect necessary materials and have students perform

- Experiment One
- Experiment Two
- Experiment Three
- Experiment Four

Each student will have the opportunity to conduct all four experiments.
**OBJECTIVES**

Students will demonstrate through experiments that air has weight.

---

**INSTRUCTIONAL PROCEDURES**

Keep in mind the ability level of your students. Teachers may want to conduct experiments as demonstrations; have students work in small groups conducting experiment; or allow students to experiment at learning stations individually. Prior to these experiments the teacher may want to instruct the class in techniques of keeping observation notes, students may keep a book of experiments and notes of observations.

**STUDENT ACTIVITIES**

**Example:**

**Problem:** Proving Air Has Body

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Materials Needed:**
- bottle
- funnel
- straw
- modeling clay
- water

**observation Notes:** (what took place or happened?)

1. I put funnel into top of bottle and stuck it with clay.
2. I poured water in the funnel.
3. The water stayed in the funnel; it went down slowly, the teacher said my clay wasn’t tight enough.
   or
4. I put the straw through the water into the bottle and the water went into the bottle.

The completion of these experiments should lead students to conclude that air has body.

**OUTCOMES**

- Development of scientific notebook.
- Writing observation notes.

Students will demonstrate through experiments that air has weight.

6. Using Demonstration Aids for Aviation Education either perform, have students perform, or experiment at learning station, the following experiments. (page 3)

   - Experiment Seven
   - Experiment Eight
   - Experiment Nine.

Students will record observations of experiments for air weight. While students work in small groups, or at learning stations, students are to report to the class their observations.

Students will know that air has weight.
AIR HAS WEIGHT

7. Equipment:
   Wooden dowel stock or tinker toy stick about a foot long
   String, 1 yard
   2 balloons exactly alike

   Blow up the balloons to the same size, and tie them at their necks with a piece of string. Tie one balloon to each end of the dowel stock. Attach another piece of string to the center of the dowel stock and suspend it from some convenient place. Balance the dowel stock. Prick one balloon with a pin. As the air rushes out, the pricked balloon shoots up and the heavier, air-filled one drops down.

8. Equipment:
   Football or basketball
   Good scale

   Squeeze all the air possible out of the ball; then weigh the ball. Blow the ball up again and weigh it. The inflated ball should weigh a few ounces more.
### OBJECTIVES

- Students will demonstrate through experiments that air has pressure.

### INSTRUCTIONAL PROCEDURES

#### Equipment:
- Wooden upright
- Rod about 4 feet long
- Pail
- Sand or gravel
- Deflated ball (basketball, volleyball, or soccer ball)
- Bicycle pump

Nail the rod at the center to the upright. Suspend deflated ball at one end and the pail at the other. Using the sand, balance the two. Inflate the ball, pumping as much air as the ball will take. Replace it.

The ball pulls down and unbalances the pail of sand, showing that air does have weight.

**Reference:** *Demonstration Aids for Aviation Education*

Have students perform:
- Experiment Ten
- Experiment Eleven
- Experiment Twelve
- Experiment Twenty-three

### STUDENT ACTIVITIES

- Students will record results of experiments in their science notebooks.

### OUTCOMES

- Students will know that air has pressure and moves.

#### 10. Equipment:
- Water glass
- Piece of thin, flat cardboard
Fill glass to the top with water. Place the cardboard over the glass. Carefully turn the glass upside down, holding cardboard tightly to the glass. Take your hand away from the cardboard. The cardboard stays in place against the glass. Tilt the glass or hold it sideways, and the cardboard still remains in place.

At A and B the upward and downward pressures balance, but at C the upward pressure of air is greater than the downward pressure of water and holds the cardboard in place.

11. Equipment:

Soda straw or glass tube

Put your finger over the top of a soda straw filled with water. Lift or tilt it. The water will not run out because your finger cuts off the air pressure on top, but air still presses up against the water at the bottom of the straw. Take your finger away, and the water runs out the straw.
12. Equipment:

Bottle or jar with a tight cap
Soda straw
Modeling clay

Fill the jar up to the cap with water. Punch a hole in the cap and insert the soda straw. Seal tightly around the straw with clay. Put the cap on tightly so that no air can get into the bottle. Now try to suck the water out of the bottle. No matter how hard you suck, the water will not flow through the straw. Release the cap on the bottle just enough to let in some air, and try to suck the water through the straw. Now as you suck through the straw, the air pressure is lowered inside the straw. Air pressing on the surface of the water in the bottle pushes it up through the straw as you suck through it.

![Diagram of a bottle and an elephant using a straw](image)

An elephant has a built-in straw, and he puts air pressure to work every time he takes a drink. He puts his trunk in water and breathes in to draw the air out of his trunk. As he does this the water fills his trunk.

13. Equipment:

Card     Fan     Soda straw
Cork     Thumb tack     Pan of water
## OBJECTIVES

Students will explain the functions of an airplane to make it fly using basic vocabulary.

## INSTRUCTIONAL PROCEDURES

Make a toy sailboat out of a card, cork and a the tack. Put in the sink or in a pan of water. Blow on it. Blow on it through a straw. Fan it with a fan.

Introduce the term wings. Using an unlabeled diagram of an airplane drawn on a wall chart, label only the wings.

## STUDENT ACTIVITIES

Students will draw simple diagram:

- lift
- gravity
- thrust
- drag

## OUTCOMES

Students will explain the functions of an airplane to make it fly using basic vocabulary.
### GRADE FOUR
### SCIENCE

#### RESOURCES AND MATERIALS

Teaching Science Through Discovery  
Arthur Carin and Robert E. Sund  
Charles E. Merrill Books, Inc.  
Columbus, Ohio

#### OBJECTIVES

Students will demonstrate through experiments that they understand the concept of air resistance and ways it can be used.

Students will demonstrate that the size and payload of a parachute determine its descent rate.

#### INSTRUCTIONAL PROCEDURES

Introduce the concept of air resistance to students through the following actions:

1. **Can we feel the air?**  
   Ask students to swing their hands rapidly from right to left.

2. **What are some other ways we can feel the air?**  
   - What happens when you ride your bicycle?
   - What happens when you run?
   - What happens when you hold your hand out the car window when taking a trip?

3. **Can you see the air move?**  
   - What are some ways we can see the air:
     - wind moving trees,
     - wind blowing leaves across the ground,
     - flags being moved by the wind
   
4. **How does the air help us?**  
   - Is wind air?
   - necessary for living

#### STUDENT ACTIVITIES

- Students will perform experiments to demonstrate ways air can be felt.
  - Example: make flags wave
  - .kick up dust during windy day
  - hold streamers of paper and run; note what happens
  - tie cloth streamers to bicycle and note what happens

- Students will collect pictures of wind action and/or working.

- Students will perform one or all of these experiments:
  - make a simple windmill
  - make a simple sailboat

#### OUTCOMES

- Students will review air and know that it moves and as it moves causes reactions.
- Students will participate in a series of wind experiments.
**OBJECTIVES**

What are some other ways?

- windmills to pump water
- wind pushes sailboats for recreation riding
- bicycles with the wind or air pushing us
- air helps fires burn that keep us warm

---

### INSTRUCTIONAL PROCEDURES

5. Prepare the class to conduct parachute experiments.

Gather cloth for parachute canopies, string for parachute risers, objects of equal weights for payloads. Assign students in groups of three to make parachutes. The teacher will expect students to make these observations:

- air fills the canopy
- air slows the descent by filling the canopy
- air as wind makes the parachute drift, bigger parachutes slow descent by holding more air

Conduct class discussion on how parachutes use the air to help mankind do different things important to our world.

---

### STUDENT ACTIVITIES

- place a jar over a burning candle and observe what happens
- make a list of things fire is used to help manufacture

Example:

<table>
<thead>
<tr>
<th>Steel</th>
<th>cars</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>airplanes</td>
</tr>
<tr>
<td></td>
<td>tractors</td>
</tr>
<tr>
<td></td>
<td>bicycles</td>
</tr>
<tr>
<td></td>
<td>ships</td>
</tr>
<tr>
<td></td>
<td>tools</td>
</tr>
</tbody>
</table>

Students working in groups will construct parachutes in the following sizes; each group should make a parachute of different sizes:

- 12" x 12"
- 15" x 15"
- 18" x 18"

Each group will provide for sections of string 15" in length.

Students will throw parachutes in the air and observe what happens when the same amount of weight is tied to each parachute.

Students will compile lists of ways parachutes are used.

<table>
<thead>
<tr>
<th>military</th>

<td></td>
</tr>
</tbody>
</table>

Students will collect and/or draw pictures of parachutes using the air.

---

### OUTCOMES
### OBJECTIVES
Fifth grade students will demonstrate through science experiments that they can identify how airplane control surfaces work.

### INSTRUCTIONAL PROCEDURES
Students should master the following terminology:
- controls
- control stick
- control column
- control cable
- elevator
- rudder
- rudder pedal
- aileron
- wing
- landing gear
- trim tab

Print these terms on flashcards and have students learn to spell them when they are flashed; alphabetize card deck; define the term when it is flashed.

### STUDENT ACTIVITIES
Students will develop diagrams labeling these parts on the diagram:
- fuselage
- landing gear
- propeller
- rudder
- elevator
- aileron
- cockpit or cabin
- wings
- motor

Students will define what functions each of these parts perform while the airplane is flying:
- elevator
- aileron
- rudder

Students will perform from the following experiments a demonstration of the function of the rudder.

**Materials needed:**
- bottle
- cork stopper
- tag board
- pin
- glue
- glass tube or straw

**Outcomes**
- Addition of aerospace words to dictionary
- Definitions of functions of airplane parts
- Conduct rudder experiments
OBJECTIVES

Introduce students to the terms:
- tail spin
- loop, inside loop, outside loop
- barrel roll
- dive
- climb
- bank
- drift

INSTRUCTIONAL PROCEDURES

The teacher should make an exploratory trip to the airport to identify experiences and resources that will prove valuable to the student.

Following field trip to airport, hold a "debriefing" session with the students about what they learned. List details on the board.

STUDENT ACTIVITIES

Students will adjust the control rudder and note in which direction the platform turns when air is blown through the glass or plastic tube.

Students will draw sequenced diagrams that illustrate these maneuvers:
- bank
- dive
- climb
- loop
- barrel roll

Illustrations must include set of controls to perform these functions.

Students will prepare questions they want to ask of airport guide. Each student will take pencil and paper to the airport to make a report when returning to the class. Students should also be prepared to ask for literature about airplanes and other materials they may find of interest at the airport.

OUTCOMES

Students will draw diagrams of airplane maneuvers and give illustrations of controls used.
<table>
<thead>
<tr>
<th>OBJECTIVES</th>
<th>INSTRUCTIONAL PROCEDURES</th>
<th>STUDENT ACTIVITIES</th>
<th>OUTCOMES</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Provide time for students to write reports about their experience at the airport</td>
<td>Each student will prepare a written report about what she/he found out about airplane controls during the airport visit. Every student will be prepared to read his/her report to the class if called upon to do so. Students will work in small groups to develop thank-you letters to persons at the airport who helped them.</td>
<td>Development of reports Report reading</td>
</tr>
</tbody>
</table>
Students will explain how weather and astronomy are important to flight.

Students will define a minimum of five basic weather terms.

Check and assure yourself that students thoroughly understand the term weather. To do this assign students to work in small groups to develop a definition of weather. Have students compare definitions and select the most appropriate definition.

Introduce students to these terms:
- typhoon
- hurricane
- Arctic weather
- tropical weather
- cloud formation
- thunder heads
- wind conditions
- temperature
- low pressure
- high pressure
- fog
- visibility
- limited weather conditions
- ceiling
- ground level
- unlimited

Students will work in small groups, defining the term weather.

Follow up for students will be the collection of pictures about weather that will be selected for display on the bulletin board.

Students will alphabetize the word list.

Students will seek definitions of each term and relate it to flight.

Students will answer the question:
"Why do pilots want to know the weather when flying?"

Students will make up weather reports and give reports as if they were reporting weather conditions.

Students will answer these questions:
"What happens to a flight schedule when head winds increase? When tail winds decrease? Increase?"

Learning about five basic weather terms

Knowing weather is important to air travel
### OBJECTIVES

Call the local weather station and alert them to student calls. Check on the kinds of questions students should ask.

Include:

- proposed flight time
- proposed destination
- proposed route

Make up a flight from your school to a destination approximately 500 miles from your school.

Students should understand that weather conditions can affect flight plans.

Example:

- increase flight time
- decrease flight time
- cancel flights
- increase fuel needs
- cancel landings
- alter flight plans

Students will define a maximum of five astronomy terms and relate each to navigation purposes for flight.

Introduce students to these astronomy vocabulary terms:

- constellations
- big dipper
- little dipper
- North Star
- Milky Way
- moon
- sun
- stars
- planets

### INSTRUCTIONAL PROCEDURES

Students working in small groups will organize questions about weather. One student will be selected from the group to call the local weather station to get current weather report. Each group will be scheduled to make one call during the week.

Example:

- Monday - Group One
- Tuesday - Group Two
- Wednesday - Group Three
- Thursday - Group Four
- Friday - Group Five

At the conclusion of each, students making calls will report weather to the class.

Students will write simulated flight plans for a proposed five hundred mile flight.

- take-off has limited ground visibility of one mile
- head winds of 20 knots will be encountered
- heavy thunder storms block the direct route to destination

Students will define the term astronomy using dictionaries and encyclopedias.

Students will write and draw appropriate pictures that describe and define:

- planets
- stars
- moon
- sun
- constellations
- North Star
- big dipper
- little dipper

2.20
As students become familiar with these terms introduce the word navigation.

Following understanding of navigation present how the heavens have helped the world’s people to navigate with special instruments.

Students should understand that navigation by heavenly bodies is an ancient science and while still used, instruments and radio have replaced them.

Students will write definitions of navigation and give example for the definition.

Using shoe boxes and flashlights, students will make projections of various astronomy formations on the classroom ceiling.

Example:

Students will learn how to locate the North Star using the Big Dipper’s outer bowl lip.

North Star

Ask students to find the North Star at home, at night and draw their own diagram.

Ability to find North Star
# GRADE TWO
## SOCIAL STUDIES

### RESOURCES AND MATERIALS
- Classroom map or airmap
- Overhead projector and transparency of classroom, school and playground map
- "The Compass Rose Game", GA-20-50
- "Some Aviation Workers", ditto masters
- Department of Transportation, Federal Aviation Administration, AGA-30O 800 Independence Avenue, S. W. Washington, D. C. 20591

### OBJECTIVES
- Students will explain the purpose of a map, follow directions on a simple school map; provide rationale for making maps to scale; read simple legends and directions.
- Students will, in their own words, explain the basis for a map; give at least one example.
- When given simple directions, students will find their way on a simple school and playground map.

### INSTRUCTIONAL PROCEDURES
- Introduce students to map unit by displaying simple map of the classroom; use an overhead projection or wall map.
  - Your map should include:
    - directions: north, south, east, west room doors and windows teacher and student desks tables -- don’t be overly detailed
    - Ask students if they recognize the diagram; ask: "What is this?" "Could it be useful?" "Useful to whom?" "Why?"
    - Ask students to name other diagrams with which they may be familiar, such as model cars, airplanes, dress patterns.
  - Start by giving students only simple direct route directions.
  - Example: From your desk, go to the pencil sharpener, turn right and go to teacher’s desk. Have students first trace the route on their maps, then have one student follow the route given while others observe.

### STUDENT ACTIVITIES
- All students are required to participate
- Students may bring samples of diagrams and maps. Those who do should explain the purpose of the diagram or map.
- Students working in groups will devise answer to, "Why do we have maps?"
- Students will make up simple directions for their peers to follow. This can be a group or individual exercise.

### OUTCOMES
- Map reading, map making.
- Student will know the usefulness of maps.
<table>

</thead>
<tbody>
<tr>
<td>Students will read simple legends on map and be able to locate items legend represents when given a school and playground map containing legends.</td>
<td>Make directions increasingly more difficult; never out-pace the ability of your students. Make sure they firmly understand what they are to do. Introduce simple legends to students: shaded areas for grass house or buildings road or paths bicycle rack playing fields water area The teacher should make as many legends as can be managed by the learning level of the class. Put legends on flashcards and have students name them as they are flashed. Post directions on the walls of classroom; north, south, east, west. Review earlier introduction of directions. Have all students stand; as you give directions, have them face in that direction. Some directions can include such things as turn to the direction in which the sun rises, sets, or if you have prevailing winds, ask them to face that direction. Assign students to draw maps of their homerooms. More accomplished students could be required to draw all rooms or their yard. Encourage students to label directions and use legends. Culminate this activity by asking students why maps are smaller than the real thing they show.</td>
<td>Students will bring and share examples of map legends. Have students create an imaginary map; have them place secret hiding places, dangerous areas, safe areas, sad areas, happy areas. Require that they use legends to note these areas.</td>
<td>Learning the use and being able to read legends on a map. Learning the cardinal points of north, south, east, west and why they are used.</td>
</tr>
<tr>
<td>Students will draw simple maps of their homerooms using simple legends and putting directions on map.</td>
<td></td>
<td>Students will draw maps and share them with the class. Students will again create imaginary maps. This time require rivers, lakes, mountains and oceans. Have students tell a story of how their map could be used.</td>

### GRADE THREE
### SOCIAL STUDIES

#### RESOURCES AND MATERIALS

- An Airport Trip, AGA-300-94
  - Department of Transportation
  - Federal Aviation Administration, AGA-300
  - 800 Independence Ave., S. W.
  - Washington, D. C. 20591

- Aircraft and Environment, AGA-300-104
  - Department of Transportation
  - Federal Aviation Administration, AGA-300 800 Independence Ave., S. W.
  - Washington, D. C. 20591

- Allward, Maurice, All Kinds of Airplanes
- Bushr, Walter, Freight Trains of the Sky
- Coombes, Charles, Skyhooks: the Story of Helicopters

#### OBJECTIVES

Students will describe how airplanes reduce the time of travel when compared to ground travel.

#### INSTRUCTIONAL PROCEDURES

Introduce students to travel methods by presenting such questions as:

"How many ways can we think of to travel?"

The list will most likely include:

- bus
- airplanes
- cars
- horses
- walking
- rockets
- bicycles
- motorcycles
- trucks
- elevator

Ask students to discard any of those that are not used for service to people. Then have them ranked from slowest to the fastest.

Discuss with class ways of traveling that are best for:

- going short distances such as to the store or barn
- going distances greater than a half mile, across town, to a nearby town
- going longer distances such as fifty to 200 miles
- going long distances such as 1,000 miles or further.

#### STUDENT ACTIVITIES

Students will collect pictures of the many different ways people travel. These pictures are to be shared with class and displayed on bulletin board.

Students will arrange ways of travel from the slowest to the fastest.

Students will collect pictures of:

- helicopters
- agriplanes
- medical airlift airplanes
- pleasure airplanes
- passenger airplanes
- freighters

Students will ask questions of visitors to the classroom about how they use airplanes in their businesses.

#### OUTCOMES

Students will describe how airplanes have brought people of the world together and how this has helped people.

Analyzing methods of travel; why some are best.

Begin picture file

Discussion of travel costs.

<td></td>
</tr>
<tr>
<td>Wright Brothers</td>
<td>Other</td>
</tr>
</tbody>
</table>

#### OBJECTIVES

Students will define a minimum of five geographic terms and use them in a simple story about flying around the world.

#### STUDENT ACTIVITIES

Introduce students to the following vocabulary:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>flight map</td>
<td>atmosphere</td>
</tr>
<tr>
<td>international</td>
<td>oxygen mask</td>
</tr>
<tr>
<td>world flights</td>
<td>sub-sonic</td>
</tr>
<tr>
<td>transcontinental</td>
<td>jet-streams</td>
</tr>
<tr>
<td>transoceanic</td>
<td>foreign</td>
</tr>
<tr>
<td>storm front</td>
<td>capitols</td>
</tr>
<tr>

<td>radio message</td>
</tr>
<tr>
<td>continents</td>
<td>borders</td>
</tr>
<tr>
<td>mountains</td>
<td>oceans</td>
</tr>
<tr>
<td>supersonic</td>
<td>altitude</td>
</tr>
</tbody>
</table>

These items may be placed on flashcards. Encourage teams of students to challenge others to dictionary games. Have each group select three to five flashcards; first team that finds an aviation definition for all their terms wins the game.

Organize students into two groups for a spelling bee. Flash cards to students for spelling. The team wins that has the most players standing at the end of the game.

Flash cards to students and have them write a definition for each. Call on various students to read their definitions.

Students will draw three cards and write a short one-paragraph story using the three words.

Students will develop topic sentence and write two supportive sentences.

Students will participate in class; they will assist in developing chalkboard list of ways to travel.

#### OUTCOMES

Students will be able to write a short story that explains how the world has been brought closer together by airflights.

Aerospace vocabulary development

3.7
OBJECTIVES

Students will explain why flying around the world is faster than traveling by land and sea.

INSTRUCTIONAL PROCEDURES

Open discussion with 'how we travel' as the topic. Make a list on the board.

Example:
walking  bicycles
running  boats
trains  balloons
automobiles  airplanes
rockets

Assign students to teams and have them reorganize list in order of slowest travel to fastest travel.

Ask students to time themselves:
walking to school
riding bicycle to school
riding the bus or automobile to school

Have students compare travel time by the Pilgrims' first trip to America and a modern airlift time.

Have students find out how long it took man to first sail around the earth and how long it takes a modern jet airplane to make the same trip.

Have students study air travel maps in Aerospace Personality Series packets.

Students participating as team members will reorganize chalkboard list as required by teacher assignment.

Students will compare various travel times in getting to school. Students will develop bar graph comparing times.

Example:

<table>
<thead>
<tr>
<th>Minutes</th>
<th>15</th>
<th>30</th>
<th>45</th>
<th>60</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Students will compute sailing time in months and weeks for Pilgrims to sail to America.

Students will use encyclopedia to discover who first sailed around the world and how long it took.

OUTCOMES

Students will explore modes of travel.

Development of various graphs:
bar
circle
line

Compare and contrast results and evaluate travel methods.

Film: "In Celebration of Flight" FAA Film Catalog
Department of Transportation
Federal Aviation Administration
800 Independence Avenue, S. W.
Washington, D. C. 20591

OBJECTIVES
Students will trace the history of the air mail services in the United States and match historical events to development of air mail.

GRADE FIVE

SOCIAL STUDIES

INSTRUCTIONAL PROCEDURES
Introduce students to this unit through discussion of the importance for rapid mail service. Discuss with students how mail services historically have been provided in the United States.

Areas to be covered:
- first parcel post
- transcontinental mail
- stage coach delivery
- pony express
- railroad service
- mail services by ship
- mail by truck

Concept of time in getting letter delivered should be emphasized.

STUDENT ACTIVITIES
Students will draw pictures of various ways mail has been delivered in the United States.

Students will develop chart illustrating how long it took and takes to deliver a letter:

Example:
- foot delivery (1790)
- stage coach (1850)
- pony express (1860)

OUTCOMES
Chart or graph development to make comparisons.
OBJECTIVES

Discuss with students why some mail needs to be delivered quickly.

Discuss with students air mail.

1. What is the fastest way to have a letter delivered?
2. When was the first air mail flight made? What was the distance traveled? What was the length of time?
3. When was the first transcontinental mail delivered? How long did it take? What was the distance?

Show film to students of the history of air mail.

1. How were the planes different?
2. How were conditions different for the pilots?
3. What dangers did these early air mail carrier pioneers face?

Discuss Lindbergh’s experiences as an air mail pilot.

INTRODUCTORY PROCEDURES

Introduce class to significant events that effected air mail services and match these to historical events in United States history:

- First airplane flight
- Construction of the Panama Canal
- Airplanes for watching military movements and carrying messages
- World War I first mail flights
- End of World War I

STUDENT ACTIVITIES

- railroad (1900)
- ship (1920)
- truck (1970)
- airplane (1975)

- Important family events, births, deaths, weddings, illness, loans of money, community disasters.

- Students will draw and/or collect pictures of air mail carriers.

OUTCOMES

- Each student will collect pictures.

- Students will trace on outline maps early air mail routes. They will make special note of flights by Charles Lindbergh.

- Class development of early mail route map

- Students are to use reference and library resources to identify:

  1. Dates of messages first carried by airplanes and an historical event in United States history that matches that date.
  2. The place and date of the first air mail service and a matching historical event in American history.

- Learning important mail flight milestones
<table>

### RESOURCES AND MATERIALS

**Aerospace Personality Series**
- Amelia Earhart
- Charles Lindbergh
- Billy Mitchell
- Captain Eddie Rickenbacker
- Wright Brothers
- Others

**Books:**
- Bishop, Richard, *From Kite to Kitty Hawk*
- Settle, Mary Lee, *The Story of Flight*
- Wallhouser, H. T., *Pioneers of Flight*
- McCague, James, *When Men First Flew*
- Fisher, Marguita O., *Jacqueline Cochran: First Lady of Flight*
- Davis, Burke, *Amelia Earhart*
- Dalgliesh, Alice, *Ride on the Wind*
- Glines, Carroll V., *The Wright Brothers, Pioneers of Power Flight*
- Deleeuw, Adele, *Lindbergh: Lone Eagle*

**Films:**
- FAA Film Catalog
  - "In Celebration of Flight"
  - "Kites to Capsules"
  - "History of Flight - The Wright Brothers, Parts I-V"

### OBJECTIVES

| Students | will match important international flights to world historical events. |

### INSTRUCTIONAL PROCEDURES

- Using appropriate materials from the **Aerospace Personality Series** packets.
- Develop a bulletin board interest center. Feature maps of flights made by the various personalities that have international implications.

### STUDENT ACTIVITIES

- Students of this age level are interested in exploration and adventurous accomplishments by courageous persons.
- Using the bulletin board as an interest center pose the problems to the class.

### OUTCOMES

- Students are to record the assigned problems. For each problem students will record:

- Knowledge of flight pioneers and accomplishments.

---

3.13

<td>6. Who first flew to Hawaii from the United States?</td>
<td>incidents in the flight</td>
<td>Students will be assigned to small groups for the purpose of selecting best written reports for bulletin board display. Students will apply a basic selection criteria:</td>
<td>Development of written reports</td>
</tr>
</tbody>
</table>

Arrange bulletin board display space to feature student developed reports and materials.

Using the information derived from the exploratory flights see, with the class, how these international flying ventures relate to solving world problems. Establish contrast of how these problems were met 100 years ago as to how they are presently dealt with.

Example: 100 years ago to travel from the United States to India with food would require how much travel time? Today how long would it take? Do you feel early flights by aviation pioneers helped us to solve distance problems? How?
OBJECTIVES

Use similar examples for health, shelter, clothing and education. List on the chalkboard these events for oral discussion:

- Berlin Crisis
- Shut Down of Suez Canal
- Food Shortages
- Cuban Missile Crisis
- Earthquakes in Asia
- Earthquakes in South America

Discuss what briefly was involved regarding each of these events.

- Where in our world did these events occur? Did they occur close to our country? How could we help relieve these situations? What role did the airplane play in these events?

STUDENT ACTIVITIES

Students will select one world topic and prepare an oral report to the class. Subject topics:

- How the Airplane was Used During the Berlin Crisis
- How the Airplane Meets World Food Needs
- Why the Airplane is Important During a Major Disaster (floods, earthquakes, volcanic eruptions)

Students should plan to use maps, charts, and pictures with their reports.

Students will use task cards from the Aerospace Personality Series for enrichment activities:

- Eddie Rickenbacker Task Card Seven
- Geography
- General Daniel James, Jr. Task Card Seventeen
- Geography
- Task Card Fifteen
- Social Studies

OUTCOMES

- neatness
- accuracy of data
- grammar
- accompanying materials, such as pictures, maps, etc.

Development of oral reports

<table>
<thead>
<tr>
<th>OBJECTIVES</th>
<th>INSTRUCTIONAL PROCEDURES</th>
<th>STUDENT ACTIVITIES</th>
<th>OUTCOMES</th>
</tr>
</thead>
</table>

This unit has been designed to bring information to the fifth and sixth grade student that will create an awareness of the various factors that can affect the health conditions of individuals. The material selected is basic; the terminology used is medical and teachers will find it desirable in some instances to spend time discussing each carefully. Each is followed by an activity; teachers and students may find value in learning about these basic medical factors.

Through discussion with the class, determine why it is important that healthy persons, in good condition, fly aircraft. Make sure the class is aware of some limiting factors that do not prevent people from flying.

Show the film, "Medical Facts for Pilots". Prior to film viewing, review its contents. Ask the students to look for these factors; following film...
**OBJECTIVES**

- Discuss each factor previously designated.
- Reshow film if necessary.

**INSTRUCTIONAL PROCEDURES**

List the following factors on the board:

- fatigue
- hypoxia
- alcohol
- drugs
- vertigo
- carbon monoxide
- vision
- middle ear
- panic
- scuba diving

Explain to the class that the students and yourself will determine how each of these factors are important to safe flying. Encourage students to keep notebooks.

**STUDENT ACTIVITIES**

- **Materials for student reading and review:**

  - **FATIGUE**

    Fatigue generally slows reaction times and causes foolish errors due to inattention. In addition to the most common cause of fatigue, insufficient rest and loss of sleep, the pressures of business, financial worries and family problems, can be important contributing factors. If your fatigue is marked prior to a given flight, don’t fly. To prevent fatigue effects during long flights, keep active with respect to making ground checks, radio-navigation position plotting, and remaining mentally active.

    **Experiment:**

    **Reaction Test**

    Using a yardstick have students drop it between the thumb and forefinger of a classmate; note the inch mark at which it is grasped. Do this three times to get an average.

**OUTCOMES**

- Discussion with class to determine factors important to flying
- Notebooks on safe flying factors
Now require students to exercise vigorously (push-ups, run). Immediately retest for reaction time. Do not allow subject to rest.

$$\frac{13'' + 12'' + 11''}{3} = 12'' \text{ average}$$

Did fatigue affect reaction time?

**HYPOXIA**

Hypoxia in simple terms is a lack of sufficient oxygen to keep the brain and other body tissues functioning properly. Wide individual variation occurs with respect to susceptibility to hypoxia. In addition to progressively insufficient oxygen at higher altitudes, anything interfering with the blood’s ability to carry oxygen can contribute to hypoxia (anemias, carbon monoxide, and certain drugs). Also, alcohol and various drugs decrease the brain’s tolerance to hypoxia.

Your body has no built-in alarm system to let you know when you are not getting enough oxygen. It is impossible to predict when or where hypoxia will occur during a given flight, or how it will manifest itself.

A major early symptom of hypoxia is an increased-sense of well-being (referred to as euphoria). This progresses to slowed reactions, impaired thinking ability, unusual fatigue, and a dull headache feeling.

The symptoms are slow but progressive, insidious in onset, and are most marked at altitudes.
Have students describe symptoms or explain the following terms associated with hypoxia. Encourage use of diagrams.

- euphoria
- drugs
- alcohol
- tobacco
- altitude

starting above ten thousand feet. Night vision, however, can be impaired starting at altitudes lower than ten thousand feet. Heavy smokers say also experience early symptoms of hypoxia at altitudes lower than is so with non-smokers.

If you observe the general rule of not flying above ten thousand feet without supplemental oxygen, you will not get into trouble.

---

ALCOHOL

Do you fly or drive while under the influence of alcohol? An excellent rule is to allow twenty-four hours between the last drink and take-off time. Even small amounts of alcohol in the system can adversely affect judgment and decision making abilities.

Remember that your body metabolizes alcohol at a fixed rate, and no amount of coffee or medication will alter this rate.

By all means, do not fly or drive with a hangover, or a "masked hangover" (symptoms suppressed by aspirin or other medication).
**OBJECTIVES**

Have small groups read and discuss this section. After a short period, conduct total-class questions and answer period. Have students write answers to these questions:

1. How long should a person wait after drinking alcohol before flying? Why?
2. What is a "masked hangover"?
3. Will the drinking of coffee reduce the effect of alcohol on the body? Why?

**INSTRUCTIONAL PROCEDURES**

Show film "Charlie", FAA Film Catalog as a summary.

Organize small group reading and discussion groups. Have each group develop a statement regarding safe flying and the use of drugs.

**STUDENT ACTIVITIES**

Self-education or taking medicine in any form when you are flying can be extremely hazardous. Even simple home or over-the-counter remedies and drugs such as aspirin, laxatives, tranquilizers and appetite suppressors, may seriously impair the judgment and coordination needed while flying. The safest rule is to take no medication while flying, except on the advice of your Aviation Medical Examiner. It should also be remembered that the condition for which the drug is required, may of itself be very hazardous to flying, even when the symptoms are suppressed by the drug.

Certain specific drugs which have been associated with aircraft accidents in the recent past are: Antihistamine (widely prescribed for hay fever and other allergies);

<table>
<thead>
<tr>
<th>OUTCOMES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will prepare written answers and note new vocabulary words in their notebooks.</td>
</tr>
<tr>
<td>Small groups will prepare written reports about flying and drugs.</td>
</tr>
</tbody>
</table>

**DRUGS**
Tranquilizers (prescribed for nervous conditions, hypertension, and other conditions); Reducing drugs (amphetamine and other appetite suppressing drugs can produce adverse effect on well-being which have an adverse effect on judgment); Barbiturates, nerve tonics or pills (prescribed for digestive and other disorders, barbiturates produce a marked suppression of mental alertness).

VERTIGO

The word itself is hard to define. To earth-bound individuals it usually means dizziness or swimming of the head. To a pilot it means, in simple terms, that he doesn’t know which end is up. In fact, vertigo during flight can have fatal consequences.

On the ground we know which way is up by the combined use of three senses:
1. Vision -- We can see where we are in relation to fixed objects.
2. Pressure -- Gravitational pull on tissues and joints tells us which way is down.
3. Special Parts In Our Inner Ear
   The otoliths tell us which way is down by gravitational pull.

It should be noted that accelerations of the body are detected by the fluid in the semicircular canals of the inner ear, and this tells us when we change position. However, in the absence of a visual reference, such as flying into a cloud or overcast, the accelerations...
can be confusing, especially since their forces can be misinterpreted as gravitational pulls on the muscles and otoliths. The result is often disorientation and vertigo (or dizziness).

All pilots should have an instructor pilot produce maneuvers which will produce the sensation of vertigo. Once experienced, later unanticipated incidents of vertigo can be overcome. Closing the eyes for a second or two ‘say help, as will watching the flight instruments, believing the., and controlling the airplane in accordance with the information presented on the instruments. All pilots should obtain the minimum training recommended by the FAA for altitude control of aircraft solely by reference to the gyroscopic instruments.

Pilots are susceptible to experiencing vertigo at night, and in any flight condition when outside visibility is reduced to the point that the horizon is obscured. An additional type of vertigo is known as flicker vertigo. Light, flickering at certain frequencies, from four to twenty times per second, can produce unpleasant and dangerous reactions in some persons. These reactions ‘say include nausea, dizziness, unconsciousness or even reactions similar to an epileptic fit. In a single engine propeller airplane, heading into the sun, the propeller ‘say cut the sun to give this flashing effect, particularly during landings when the engine is throttled back. These undesirable effects ‘say be avoided by not staring directly through the prop for mere than a moment, and by making frequent but small changes in RPM. The
Using a health chart of the ear, explain to students what has occurred during this experiment.

Vertigo

Using an office-type swivel chair have one student sit in the chair. Use two students to turn the chair; his not important. Have seated student place head on shoulder during spinning. At command "stop" have student in chair attempt to focus eyes on moving object; ruler, watch, etc. Have all students carefully note what takes place. Use care that the student does not fall from chair. Students 'say also want to use the dropping yard stick to test the subject, or ask the subject to touch his nose with finger, or touch forefingers together when hands are held about a foot from his face. Ask the subject how he felt after the experiment.

Carbon monoxide is a colorless, odorless, tasteless product of an internal combustion engine and is always present in exhaust fumes. Even minute quantities of carbon monoxide breathed over a long period of time, 'say lead to dire consequences.
For biochemical reasons, carbon monoxide has a greater ability to combine with the hemoglobin of the blood than oxygen. Furthermore, once carbon monoxide is absorbed in the blood, it sticks "like glue" to the hemoglobin and actually prevents the oxygen from attaching to the hemoglobin.

Most heaters in light aircraft work on air flowing over the manifold. So if you have to use the heater, be wary if you smell exhaust fumes. The onset of symptoms is insidious with "blurred thinking"—a possible feeling of uneasiness and subsequent dizziness.

Later, headache occurs. Immediately shut off the heater, open the air ventilators, descend to lower altitudes, and land at the nearest airfield. Consult an Aviation Medical Examiner. It "say take several days to fully recover and clear the body of the carbon monoxide.

Have students describe the symptoms of carbon monoxide poisoning, how it can be prevented.

VISION

On the ground, reduced or impaired vision can sometimes be dangerous depending on where you are and what you are doing. In flying it is always dangerous.

On the ground or in the air, a number of factors such as hypoxia, carbon monoxide, alcohol, drugs, fatigue, or even bright sunlight can affect your vision. In the air these effects are critical.
<table>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Some good specific rules are: Make use of sunglasses on bright days to avoid eye fatigue; during night flights, use red covers on the flashlights to avoid destroying any dark adaptations; remember that drugs, alcohol, heavy smoking and the other factors mentioned above, have early effects on visual acuity.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>MIDDLE EAR DISCOMFORT OR PAIN</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Certain persons (whether pilots or passengers) have difficulty balancing the air loads on the ear drum while descending. This is particularly troublesome if a head cold or throat inflammation keeps the eustachian tube from opening properly. If this trouble occurs during descent, try swallowing, yawning, or holding the nose and mouth shut, forcibly exhaling. If no relief occurs, climb back up a few thousand feet to relieve the pressure on the outer drum. Then descend again, using these measures. A more gradual descent may be tried, and it may be necessary to go through several climbs and descents to “stair-step” down. If a nasal inhaler is available, it may afford relief. If trouble persists several hours after landing, consult your Aviation Medical Examiner.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Note: If you find yourself airborne with a head cold, you may possibly avoid trouble by using an inhaler kept as part of the flight kit.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Have students read and discuss factors that may result when ear discomfort or pain are present.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
PANIC

The development of panic in inexperienced pilots is a process which can get into a vicious circle with itself and lead to unwise and precipitous actions. If lost, or in some other predicament, forcibly take stock of yourself, and do not allow panic to mushroom. Panic can be controlled. Remember, Prevent Panic to Think Straight Fear is a normal protective reaction, and occurs in normal individuals. Fear progression to panic, is an abnormal development.

SCUBA DIVING

You may use your plane to fly to a sea resort or lake for a day’s scuba diving, and then fly home, all within a few hours time. This can be dangerous, particularly if you have been diving to depths for any length of time.

Under the increased pressure of the water, excess nitrogen is absorbed into your system. If sufficient time has not lapsed prior to take-off for your system to rid itself of this excess gas, you may experience the bends at altitudes under 10,000 feet where most light planes fly.

**Film Catalog**
National Aeronautics and Space Administration
800 Independence Avenue, S. W.
Washington, D. C. 20591

**OBJECTIVES**

Teachers using this section of the handbook will find it useful in aerospace activities for fifth and sixth grade students. The unit is designed with objectives for the students and learning and instructional activities. This unit covers each of the following areas:

- Airport Careers
- Pilots and Flight Engineers
- Airline Careers
- Agricultural Aviation
- Aviation Maintenance
- Aircraft Manufacturing Occupations

### INSTRUCTIONAL PROCEDURES

**Airport Careers**

An airport can be a cleared grassy strip of level land or an elaborate complex of thousands of ground, runways, roadways, buildings, parking lots, equipment, and services with the number of employees equal to that of a small city. Several thousand of the nation’s approximately 13,000 airports are attended (that is, they offer at least a minimum of daylight service) and they range in service from one providing just aviation gasoline and a coke vending machine to one offering thousands of items and by the airlines and operators of general aviation aircraft.

### STUDENT ACTIVITIES

**Students in grades five and six:**

Upon completion of this unit, they will be able to identify a minimum of five aerospace occupations and list a minimum of five required work skills for each when asked to write a descriptive paragraph of the job.

### OUTCOMES

**Students will list five aerospace occupations**
<table>
<thead>
<tr>
<th>OBJECTIVES</th>
<th>INSTRUCTIONAL PROCEDURES</th>
<th>STUDENT ACTIVITIES</th>
<th>OUTCOMES</th>
</tr>
</thead>
</table>
| Students will be able to identify from a list of 20 careers those that are airport careers with 100% accuracy. | Airports may be privately owned by a single operator who carries on all the functions of the airport with or without assistants, or by a group of private investors. Or an airport may be owned or operated by a city, county, regional or inter-state governmental authority. | **Review with students the functions of an airport:**  
• take-offs  
• landings  
• housing  
• fuel  
• food  
• sending freight/mail  
• receiving freight/mail  
• passenger service  
• recreational  
• business  
• military  
• training  
• air traffic control  
• aircraft maintenance  
Interest students in polling others to determine the knowledge level about airport activities. From this base of knowledge about airport functions, introduce students to airport workers. | **Students are to engage in brainstorming type session to identify many purposes and/or functions of an airport.**  
Students may start scrapbooks to collect pictures of various airport activities and functions, pictures should be captioned and classified by students. Students, under the direction of teacher, should develop a series of questions regarding the airport - these questions are to be organized into a series for polling others (students and adults) to determine the level of knowledge people have about airports. | **Development of career scrapbooks** |
| | | Assign students to complete the list by researching through the encyclopedia or other sources the types of workers employed at the airport. | **Students will research and identify types of workers found at the airport.**  
Under the direction of the teacher, student will verify their list, remove and/or add names of workers. | |
| | | Students may associate the position of airport direction with something familiar such as the school principal -- someone who is in charge and has decision-making responsibilities. Start with school principal's position. | **A small group of students may interview principal and report back to class on the types of responsibilities a school principal has.** | **Interview of school principal** |
"What does our school principal do?"
"Can we make a list of the principal’s responsibilities?"

Record student responses, cue them to additional responsibilities they may not perceive.

Introduce the airport manager as a person with somewhat similar responsibilities. A good technique to use is to have two columns on the board, under principal list his responsibilities, in the second column under airport director list responsibilities for airport manager. Encourage students to compare lists.

AIRPORT DIRECTOR

Airports are usually operated by a director or manager responsible either to the owners of the airport or to the local government authorities. The airport Director has been described as a "mixture of aviation expert, real estate operator, construction engineer, electronics wizard, management genius, and politician." The director is involved in such activities as the following:

1. Making and enforcing airport rules and regulations.
2. Planning and supervising maintenance programs.
3. Negotiating leases with airport tenants, such as airport repair stations, terminal concessionaires, and airlines.
4. Surveying future needs of the airport and making recommendations.
5. Keeping records and making required reports.
6. Setting up the airport budget.
7. Promoting the use of the airport.
8. Training and supervising employees responsible to the Airport Director.

Students will write letters to directors of large and small airports. Each letter selected for sending should contain specifically the kinds of information students or class expects.

Students could include class list of brainstorming functions they think the airport manager performs; ask the manager to verify these as his/her responsibilities by return mail or telephone. Students should review business letter writing procedures, correct grammar, punctuation and spelling.

Students will answer questions either during class discussion, in small groups, or as individuals. Answers may be written or provided as an oral exercise.

1. Why is it necessary that someone make and enforce rules and regulations?

Students should thoroughly understand what a rule and regulation is, what is meant by enforcement.

OUTCOMES

Letter writing skills

Students will understand the concept of supervision and authority.
### OBJECTIVES
Depending upon the size of the airport, the director may or may not have one or more assistants such as an assistant director, engineer, controller, personnel officer, maintenance superintendent, and supporting office workers, such as secretaries, typists, and clerks.

### INSTRUCTIONAL PROCEDURES

<table>

<td>6. Explain why using a budget is important. What is a budget? Does your family use a budget? Why? Encourage students, if they receive an allowance or earn money, to plan the spending of their money by using a budget.</td>
<td>7. Is it important that someone promote the use of the airport? What is meant by promote? How might you promote the use of the local airport? What things would be important to know about for using the airport? Have students make up a promotion brochure; this would be a good group activity. Have students plan radio and television commercials; present them to the class.</td>
<td></td>
</tr>
</tbody>
</table>
Students will accurately describe the working conditions of a large and small airport director by writing five descriptive sentences of his/her working conditions.

The director works in an office usually in the terminal building at the airport, has regular office hours except in times of emergencies, and may be required to travel to settle agreements with airline tenants or to confer with state and federal officials. If she or he operates a very small airport, this person may work long hours in the aircraft repair station, giving flying lessons, and managing charter flights. In such cases, much of the time is spent outdoors. In many cases, the Airport Director is a part of the local government and would be involved in official meetings and community projects, especially those concerned with aviation.

INSTRUCTIONAL PROCEDURES

The director works in an office usually in the terminal building at the airport, has regular office hours except in times of emergencies, and may be required to travel to settle agreements with airline tenants or to confer with state and federal officials. If she or he operates a very small airport, this person may work long hours in the aircraft repair station, giving flying lessons, and managing charter flights. In such cases, much of the time is spent outdoors. In many cases, the Airport Director is a part of the local government and would be involved in official meetings and community projects, especially those concerned with aviation.

STUDENT ACTIVITIES

8. Why would an airport conduct an employee training program?
   Can you think of a reason why employees need supervision?

Students must first understand that skilled people work at airports; many secure jobs that require training.

Students should explore the meaning of supervision. Students should model for the class good techniques to use in supervision; how to get people to work effectively in their jobs, such as:

Compliments, recognizing good work Providing advise in a constructive way Recognizing employees, greeting them by first name

Students, in brainstorming sessions, will list what they feel are the conditions under which an airport director works. Have students write letters to both small and large airport directors seeking additional information. Have students read "Airport Careers", Aviation Careers Series, Department of Transportation, Federal Aviation Administration, AGA-300, 800 Independence Avenue, S. W., Washington, D. C. 29591.

Have students develop flyers advertising for airport directors. Have student write a letter of application, individually. Appoint a student screening committee and select best letters of application; have students review 8 factors that describe nature of work before screening letters. Require students to develop a list of criteria that they will use to screen applicants.
OBJECTIVES

Students will identify from a list of twenty states the ten having the most opportunities to work as an airport director.

Students will be able to trace progressive steps that lead to the position of director by developing a chart or diagram.

INSTRUCTIONAL PROCEDURES

Unless the operator is a private owner and is self-employed, the job of an airport director is not an entry level job, but is open to those with experience and training. An airport Director may progress by moving to an assistant director’s job or director’s job at a larger airport and/or may also move upward to a commissioner of airports or a state-level job concerned with state regulation of airports. Job opportunities are often involved in political activities and appointments frequently are made on that basis, especially if the job does not come under civil service regulations.

STUDENT ACTIVITIES

Students will study the following vocabulary:

- opportunities
- advancement
- entry level job
- experience
- training
- progress
- assistant director
- commissions
- political appointments
- civil service regulations

Students, through class discussion, will evolve definitions of the above list. First, refer to dictionaries; second, have students orally express definitions in class discussion. Evolve appropriate definition associated with aviation. Students will develop progression line for becoming airport director.

1. Training - what, how much
2. Experiences - what, where
3. Assistant positions - doing what
4. Director

OUTCOMES
OBJECTIVES
Students in grades five and six will identify a minimum of five airline careers, describe the nature of the work, job entry requirements and the approximate beginning salary without error.

INSTRUCTIONAL PROCEDURES
The teacher will introduce this career awareness unit by using the following list of careers other than pilots, co-pilots, flight engineers, flight attendants, and mechanics that are available through airlines and airports. Students will find this list of twenty-six careers interesting as well as informative regarding airline and airport operations.

STUDENT ACTIVITIES
Students will develop a notebook for recording special types of information about airline careers. The notebook should be well organized for quick reference purposes.

OUTCOMES
Identification of an array of air related careers.
Development of notebook of careers
Ramp Planner  
Auto Mechanic Engineer  
Airline Training (Instructor)  
Professional Airline Personnel  
Administrative Personnel

Prior to starting this unit introduce students to the following vocabulary. This is a general or basic vocabulary common to each of the twenty-six careers.

<table>
<thead>
<tr>
<th>education achievement level</th>
<th>skills</th>
<th>personal characteristics</th>
<th>salaries</th>
<th>working conditions</th>
<th>opportunities for advancement</th>
<th>nature of the job</th>
<th>requirements</th>
<th>airline industry</th>
<th>shift work</th>
<th>high school diploma</th>
</tr>
</thead>
</table>

Students should be familiar with this basic working vocabulary prior to introduction to the individual airline careers.

Provide students with the names and addresses of airlines; have each write a business letter to the airline of their choice seeking the types of jobs available to them through airlines, requirements, working conditions, salary and where most of these jobs are available. Encourage good letter writing techniques, tell students future employers are interested in neatness, correct spelling and good grammar.

The notebook may contain additional data students feel will be helpful, they may collect pictures of occupations, file letters of information or application in the notebook.

Students will record basic vocabulary and write definitions in their career notebooks.

Students will list data they feel is important and should be included in a notebook.

Each student will write a letter.
Students will identify from five job descriptions the one of the flight dispatcher.

**OBJECTIVES**

**INSTRUCTIONAL PROCEDURES**

Don’t wait for answers to letters; continue with this career awareness unit.

Ask: What do you think a Flight Dispatcher does? Is this an important job?

Make sure students know the meaning of the word: dispatcher.

Introduce students to the following vocabulary before proceeding further:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>cooperation</td>
<td>operation cost</td>
</tr>
<tr>
<td>flight plan</td>
<td>enroute</td>
</tr>
<tr>
<td>destination</td>
<td>destination weather</td>
</tr>
<tr>
<td>schedule</td>
<td>winds aloft</td>
</tr>
<tr>
<td>maximum</td>
<td>alternate destinations</td>
</tr>
<tr>
<td>payload</td>
<td>fuel required</td>
</tr>
<tr>
<td>traffic flow</td>
<td>altitude</td>
</tr>
<tr>
<td>go-between</td>
<td>aircraft characteristics</td>
</tr>
</tbody>
</table>

**STUDENT ACTIVITIES**

Students will be prepared to compare information they get back from letters with that given to them in class through this unit.

Students will start notebook section labeled “Flight Dispatcher”. Students will include the following basic information under the headings of:

- Nature of Work
- Working Conditions
- Approximate Salary
- Opportunities for Advancement
- Job Entry Requirements

Prior to class discussion small student groups may want to meet and discuss: What kind of a person would make a good Flight Dispatcher?

Each group could develop a list from this question of personal characteristics for the job.

**OUTCOMES**

Students will respond to these problems by making a decision as a Flight Dispatcher would. A cargo of cattle have been dispatch-
She or he keeps all personnel concerned with the flight informed as to the status of the flight, and must be familiar with navigation facilities over airline routes and at airports and with take-off, cruising, and landing characteristics of all types of aircraft operated by the airline. Flight Dispatchers must also take periodic flights to observe flight routes, conditions, and airports, riding in the cockpit with the flight crew.

Review the term Working Conditions, then assign:

**Working Conditions**

He or she works indoors at the airport in the airline operations office. She or he uses slide rules, weather charts and information, loading reports, and hand computers. A forty-hour week with shift work is normal. The Flight Dispatcher frequently works under pressure, especially when flying weather is bad. He or she must make many rapid decisions concerning safety, flight regulations, and the economy of operations. This employee is surrounded by teletype machines, telephones, and intercom systems in a noisy, busy atmosphere. If the Flight Dispatcher works for a small airline, she or he also carries on the duties of a meteorologist and schedule coordinator.

Working Conditions will be read by the students. This would be a good small group’s activity. Have each group develop a list of conditions. Have them rank their list in order of importance.

Check students to verify that they comprehend these terms:

from New York to San Francisco, the plane has ample fuel aboard for the flight. The flight is to pass by Chicago on its way to the West Coast.

Problem: Heavy thunderstorms and winds surround the Chicago and Great Lakes area -- this will delay the flight to San Francisco; weather to the south appears normal, but will take a little longer. What do you advise?

San Francisco has heavy rains and erratic winds. Sacramento weather is moderate rains, 15 mile per hour south winds. What do you advise?

Students should consider a number of factors in making these decisions.

ground shipping arrangements
clients’ ground schedule feed and water for cattle
safety above all else

Encourage students to add to this list. Lists should be recorded in career notebooks.

Role playing of various people in occupations
OBJECTIVES

INSTRUCTIONAL PROCEDURES

slide rule
weather chart
loading report
hand computers
shift work
pressure
rapid decisions
meteorologist
schedule coordinator

Introduce: Wages

Wages are from $16,000 to $24,000 per year, depending upon the size of the airline.

Assign the following for reading:

Opportunities for Advancement

Flight dispatchers have moved up into this position from jobs as former dispatch clerks, junior flight dispatchers, radio operators, meteorologists, or station managers. Large airlines employ senior dispatchers who specialize in coordinating the economic factors of every flight. Promotion is from within. Experience as an airline dispatcher may be used in qualifying for a job as an air traffic controller with the Federal Aviation Administration or as an airport director.

Introduce:

Requirements to Enter the Job

A college degree with a major in air transportation or meteorology is acceptable preparation. One must have good vision, hearing, enunciation, and an FAA dispatcher’s license. He or she must know thoroughly the Civil Air Regulations and airline operations based on years of experience in airline communications or meteorology.

Students are to compute salaries by:

| month | \( \frac{16,000}{12} = 1,333 \) |
| week  | \( \frac{16,000}{2} = 8,000 \) |
| day   | \( \frac{16,000}{24} = 667 \) |
| hour  | \( \frac{16,000}{3,600} = \frac{40}{9} \) |

Students to answer:

Why do people want job advancement?
Compile a list of these reasons. Encourage all students to participate. Record information in student notebook.

Have small groups of students work together to compile requirements for getting a flight dispatcher job. Would any of the following be important?

- personality
- physical conditions
- good reader
- good listener
- speaks well, clearly
- likes geography
- likes math

STUDENT ACTIVITIES OUTCOMES

Students are to compute salaries by:

- month
- week
- day
- hour

Assign the following for reading:

Have small groups of students work together to compile requirements for getting a flight dispatcher job. Would any of the following be important?

- personality
- physical conditions
- good reader
- good listener
- speaks well, clearly
- likes geography
- likes math

OUTCOMES

5.12
OBJECTIVES

Student will describe two basic things that the meteorologist does to the satisfaction of the teacher.

INSTRUCTIONAL PROCEDURES

Ask: Why do jobs have requirements? Do all jobs have the same requirements? How are many the same? How are many different?

What school subjects would help you get a job as flight dispatcher?

Introduce the following vocabulary:

- weather
- analyzes
- reports
- operations office weather facsimile machines
- teletype weather charts meteorological data

Attempt to secure a weather report, teletype printout and weather charts. Display these things on a portion of the bulletin board.

Assign the following for reading and discussion:

**METEOROLOGIST**

The Meteorologist analyzes weather data and prepares weather reports for the flight dispatcher, pilots, and other airline personnel concerned with weather information. The meteorologist assists the flight dispatcher in preparing flight plans.

**Working Conditions**

The meteorologist works indoors at the airport in the airline operations office, uses weather facsimile machines, teletype machine, weather charts, and other meteorological data. Shift work is required and the normal work week consists of forty hours.

STUDENT ACTIVITIES

What else?

Make sure this information is recorded in the notebook.

Some students may want to establish a weather station; if so, have them keep records of:

- daily wind direction
- wind speed; fast, moderate, low
- daily weather conditions; cloudy, rain, snow

Students will listen to morning radio weather reports and decide if it’s a good day to fly to:

- Memphis
- New York
- Miami
- Chicago
- Washington, D. C.
- San Francisco
- Los Angeles
- Kansas City
- Seattle

Students will plan flight a day ahead of weather report; listen to report and decide if it’s safe to make the flight.

Students will compare working conditions and salary to flight dispatcher. They will note the likenesses and differences. Students will compute wages on a monthly, weekly, basis for both low and high salary.

Students will compare job entry requirements with flight dispatcher and note any differences.

OUTCOMES

- Development of a weather station
- Describe advantages and disadvantages of Meteorologist’s job.
### OBJECTIVES

Students will identify a minimum of five job responsibilities of the schedule coordinator.

### INSTRUCTIONAL PROCEDURES

**Wages**

Wages are from $14,000 to $22,000 per year, depending upon the size of the airline.

**Requirements for the Job**

A college degree with a major in meteorology is required. Meteorology training can be obtained with the military services, especially as a meteorological technician.

**SCHEDULE COORDINATOR**

**Nature of the Work**

The Schedule Coordinator keeps track of the whereabouts of aircraft and crews; receives and relays reports of delays due to weather and mechanical problems; notifies all concerned regarding delays or changes; and gives orders for substitution of aircraft when required. He or she works with diversions of flights to alternate airports, weather factors affecting air traffic, seating arrangements of planes, turn-arounds, estimated time of arrival, and unscheduled stops. She or he also works out aircraft availability, taking into consideration servicing and maintenance requirements with time frequencies varying from 24 to 48,000 hours. The Schedule Coordinator handles crew scheduling considering sick calls, vacations, days off, used-up flight hours, "dead-heading", types of aircraft for which crew is trained, and seniority bids or choices of flights selected by crew members. All this work is in the interest of maintaining on-time, efficient service for passengers and shippers of air freight.

### STUDENT ACTIVITIES

Students will note any differences in this job as presented and the one they may receive from the airline in answer to their earlier letter.

Students, having read "Nature of Work" for the schedule coordinator will list questions they have about this job.

Students are to record vocabulary in their notebooks, they should now have a section entitled "Schedule Coordinator".
OBJECTIVES

Be sure students know the meaning of:

receives and relays
delays
notifies
substitution
diversions
alternate
turn-arounds
estimated time
unscheduled stops
"dead-heading"

INSTRUCTIONAL PROCEDURES

Students will role play the role of schedule coordinator and respond to:

bad weather report,
pilot calls in sick,
unscheduled stop must be made

STUDENT ACTIVITIES

Have students add to the above list that which might create problems for the schedule coordinator.

Students will answer in their notebooks (individual work)

Working Conditions

The employee works indoors at the airport in the airline operations office. He or she is in a busy atmosphere, surrounded by banks of phones, teletype machines, computers, and charts, at times working under pressure. She or he works cooperatively with colleagues. A forty-hour work week, with shift work, is normal.

Wages

Annual wages are from $14,000 to $18,000, depending upon the size of the airline.

Opportunities for Advancement

The Schedule Coordinator starts as a clerk with responsibilities in one or two areas but may advance to assistant, senior, and then chief of schedule control. He or she may also work up to position in dispatcher’s office as general dispatch clerk or an operators planner.

OUTCOMES

Role playing of selected job.

Students will analyze working conditions

Students will discuss their answers in class -- encourage students to change answers if they feel differently after the class discussion.
OBJECTIVES

The student will describe tasks that the teletypist must perform.

Requirements to Enter the Job

A college degree with a major in air transport operations is acceptable preparation.

Assign students to the reading of Station Manager or Agent.

Nature of the Work

The Station Manager or Agent is responsible for all flight and ground operations for the airline at a particular airport -- aircraft handling, passenger services, and air cargo operations. At a small station, he or she may perform many of these services himself such as selling tickets, making public announcement, checking the baggage, moving portable stairs, preparing passenger and air cargo manifests, operating teletype machine, etc.

Working Conditions

He or she works in an office at the airport, and may sometimes work outdoors depending upon the size of the airport and the staff. Shift work is required during a forty-hour week.

Wages

Annual wages are from $18,000 to $30,000 depending upon the size of the airline.

Student should know these terms:

- teletypist
- teletype machine
- send/receiving
- relaying
- filing

INSTRUCTIONAL PROCEDURES

Requirements to Enter the Job

A college degree with a major in air transport operations is acceptable preparation.

Assign students to the reading of Station Manager or Agent.

Nature of the Work

The Station Manager or Agent is responsible for all flight and ground operations for the airline at a particular airport -- aircraft handling, passenger services, and air cargo operations. At a small station, he or she may perform many of these services himself such as selling tickets, making public announcement, checking the baggage, moving portable stairs, preparing passenger and air cargo manifests, operating teletype machine, etc.

Annual wages are from $18,000 to $30,000 depending upon the size of the airline.

Student should know these terms:

- teletypist
- teletype machine
- send/receiving
- relaying
- filing

STUDENT ACTIVITIES

STUDENT ACTIVITIES OUTCOMES

Students are to record all vocabulary terms they do not know the definitions of; these words or terms are to be recorded in their notebooks.

Students are to answer:

"How does this job pay compared to each of the others we have studied so far? How much?"

Flight Dispatcher?
Meteorologist?
Schedule Coordinator?

Students will make a table for their notebooks.

<table>
<thead>
<tr>
<th>Station Manager</th>
<th>Flight Dispatcher</th>
<th>Meteorologist</th>
<th>Schedule Coordinator</th>
</tr>
</thead>
<tbody>
<tr>
<td>$18,000</td>
<td>$16,000</td>
<td>$14,000</td>
<td>$14,000</td>
</tr>
<tr>
<td>-7,000</td>
<td>-4,000</td>
<td>-4,000</td>
<td></td>
</tr>
</tbody>
</table>

Students are to write a short paper describing why they feel salaries are different.

How would you prepare yourself for this job?

Student will record terms for teletypist in his notebook and note definitions as related to this job.

Students will write a brief story about the teletypist using the five vocabulary words associated with the job. Story should include type of messages received and where they are sent, how they are filed.

The student will describe tasks that the teletypist must perform.
### OBJECTIVES

Students will describe at least three tasks the reservation agent provides for potential passengers.

### INSTRUCTIONAL PROCEDURES

**Have students read and discuss teletypist.**

**Nature of Work**

The teletypist operates teletype machines, sending messages, receiving them, and relaying them to proper departments and to other stations on the airline’s routes, and files messages as required.

**Working Conditions**

This employee works indoors at the airport in the airline’s operations office or in other offices where teletype machines are used. Shift work is required during a forty-hour work week.

**Wages**

Wages are from $7,000 to $11,000 per year, depending upon the size of the airline.

**Opportunities for Advancement**

She or he may advance to a supervisory position.

**Requirements to Enter the Job**

A high school graduate is preferred. Additional training in teletype operations and procedures at schools offering such courses is preferred. The minimum typing speed is 40 words per minute. The teletypist needs to know codes and symbols used in airline communications.

**Have students read:**

**RESERVATION AGENT**

**Nature of the Work**

The Reservations Agent handles telephone inquiries about complex flight schedules,

**STUDENT ACTIVITIES**

What is an average salary for a teletypist by the month?

($7,000) - 12

Students will start notebook section for Reservation Agent. Have students identify vocabulary list for their notebooks; each definition should be accompanied by an example.

### OUTCOMES

Students will describe at least three tasks the reservation agent provides for potential passengers.
fares, and connecting flights, and reserves seats and cargo space for customers. He or she operates computerized reservations equipment, keeps records of reservations, and must be able to recommend services which fit customer’s requirements and be familiar with routes and schedules of other airlines.

**Working Conditions**

She or he works indoors at the airport in the airline operations office. Shift work is required during a forty-hour work week. Work is interesting as no two calls are the same and many challenges occur as the employee works out the passengers travel requirements.

**Wages**

Wages are from $822 to $1,124 per month, depending upon the size of the airline.

**Opportunities for Advancement**

He or she may advance to supervisor, monitoring employees’ handling of inquiries, or to training positions. She or he may also be assigned to handle “executive accounts” or firms with special “vacation packages” offered “by the airline -- jobs reserved for the more experienced and higher paid agents. The employee may transfer to a job of ticket agent. Reservations work is a principal route to a management position for the persistent worker, as turnover due to shift work, is high and promotion opportunities are frequently available.

**Requirements to Enter the Job**

Requirements include: high school graduation, 18 to 20 minimum years of age, with additional one or two year’s training in airline operations at schools offering such courses, or experience in public telephone contact work preferred. Airlines offer on-the-job training. Accuracy and speed on the job are essential. A good telephone voice, English usage, and the ability to “project” oneself over the phone are necessary. Air cargo reservations agents may be required to have some experience in shipping operations.
<table>
<thead>
<tr>
<th>OBJECTIVES</th>
<th>INSTRUCTIONAL PROCEDURES</th>

<th>OUTCOMES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will describe the role of a ticket agent in terms of what she or he does.</td>
<td>Check and make sure students can explain meanings of: reservation inquiries complex schedules fares connecting flights requirements computerized recommend routes</td>
<td>Students will describe what is expected of a reservation agent when promoted to supervisor; they should tell how this is different from the reservation agent.</td>
<td>Have students collect airline schedules and plan a cross country flight. Plans should include departure time, layovers, arrival time.</td>
</tr>
<tr>
<td>Teach students to use airline schedules.</td>
<td>Have students first discuss what they think a ticket agent does. List these things on the chalkboard.</td>
<td>Assign students to read: TICKET AGENT</td>
<td>Students will start a notebook section for Ticket Agent.</td>
</tr>
<tr>
<td>Students will read Ticket Agent and compare chalkboard list to terms contained in narrative.</td>
<td>Students will compare yearly salary for this position.</td>
<td>Students will list advancement opportunities for this position.</td>
<td></td>
</tr>
</tbody>
</table>

**TICKET AGENT**

**Nature of the Work**

The Ticket Agent answers inquiries about flight schedules and fares, verifies reservations by phone, figures fares, writes tickets, handles cash payments or credit card sales. The Ticket Agent may check in passenger’s baggage, if the agent works at the airport terminal ticket counter. She or he uses telephone and reservations computer equipment.

**Working Conditions**

He or she works at downtown or hotel airline ticket offices during business hours. Shift work is necessary, if employed at airport counters. The employee must wear a uniform.
OBJECTIVES

Students, when provided with job descriptions for ground attendant, skycap, air freight/cargo agent, passenger service agent, sales representative and district manager, will correctly match the position to the description.

INSTRUCTIONAL PROCEDURES

Wages

Wages are from $822 to $1,124 per month, plus additional pay for late shift work.

Opportunities for Advancement

She or he may advance to the job of passenger service agent or station agent, chief of the ticket office, or to a job on the instructional staff. He or she may also join the staff as Sales Representative. Superior employees are often considered for junior management training.

Requirements to Enter the Job

The minimum age varies from 18 to 20 years. Graduation from high school is a minimum requirement; however, two years of college is preferred, or the equivalent experience in dealing with the public. On-the-job training is offered. Good grooming, respect for accuracy, pleasant, courteous manner, and legible handwriting, are important. Foreign language ability may be required by an international airline.

Prepare flashcards for the following titles:

- ground attendant
- skycap
- air freight/cargo agent
- passenger service agent
- sales representative
- district sales manager

As the cards are flashed to students, require responses to all, some or one of the following:

STUDENT ACTIVITIES

At this point have students organize into small groups; each group is to identify requirements for job entrance in terms of education, age, experience, and the things they feel would be required. (English, math, geography, science) for each of these positions.

Flight Dispatcher
Meteorologist
Schedule Coordinator
Station Manager or Agent
Teletypist
Reservation Agent
Ticket Agent

Have each student write a brief report about the position they feel they would best qualify for when they leave school in terms of how well they are doing in school and things they like to do.

Students will construct bar graph to compare monthly wages for each job position.

Example:

<table>
<thead>
<tr>
<th>Position</th>
<th>200</th>
<th>500</th>
<th>750</th>
<th>1000</th>
<th>1250</th>
<th>1500</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sales Rep.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>$1,000</td>

</tbody>
</table>

5.20
OBJECTIVES

Students with 100% accuracy will identify the duties and responsibilities of these ramp personnel.

Interior of the aircraft
Exterior of the aircraft
Baggage and cargo handlers
Aircraft fueler
Driver

INSTRUCTIONAL PROCEDURES

Prior to making assignments or carrying out instructional activities, review the following terms:

ramp
service person
interior
exterior
baggage/cargo
fuel

On the chalkboard under the headings of 'Ramp Servicepersons and subheadings of aircraft interior, aircraft exterior, baggage/cargo handlers, aircraft fueler, driver, brainstorm with class as to what duties might be listed with each of these categories.

Have students modify each list after reading:

RAMP SERVICEPERSON, INTERIOR

Nature of the Work

The Ramp Serviceperson (Interior of the Aircraft) cleans the cabins between trips. He or she vacuums the floor, picks up trash, washes lavatories and buffets, replaces headrests and pillow covers, folds blankets, refills seat packets, refills drinking water supply and cleans the cockpit windows.

STUDENT ACTIVITIES

Students will report on other ways airlines use charts to operate their business.

Put names of the five positions on the board -- pass out to students, broken into groups, single copy of the positions. Do a class analysis. Compare the positions under each listed on the chalkboard by:

Nature of Work
Working Conditions
Wages
Opportunities for Advancement
Job Entrance Requirements

Students are to start a section for each of these positions in their notebooks and record vocabulary in the glossary.

Students will develop charts for each position that include education requirements, age, salary, experience.

Students will compute average daily, weekly, monthly and yearly salary for each position; use 8 hours for a day, 40 hours for a week, 20 days for a month. Students will develop a line graph comparing hourly salaries.

OUTCOMES
WORKING CONDITIONS

She or he works at a fast pace with cleaning equipment and supplies in cramped space with a team of workers. He or she must complete the job often within 10 or 15 minutes allowed before the plane must be ready to load passengers. This is shift work. Worker must wear a uniform.

WAGES

Wages currently are $5.25 per hour, with extra pay for late afternoon and night shifts.

RAMP SERVICEPERSON, EXTERIOR

NATURE OF THE WORK

The Ramp Serviceperson (Exterior of the Aircraft) works on the exterior surfaces of the aircraft. He or she washes, polishes, touches up paint, and de-ices surfaces. She or he also works with chemicals to prevent corrosion of surfaces.

WORKING CONDITIONS

He or she uses sponges, brushes, mops, and hoses. Employee works on scaffolding or in special lift equipment to reach high places. The worker usually works in a hangar but may sometimes be required to work outdoors. The heaviest work schedules occur during night hours when most aircraft are not in service. Shift work is required and work is done frequently under pressure of time. Worker must wear a uniform.
Wages

Wages currently are $5.25 per hour, with extra pay for late afternoon and night shifts.

RAMP SERVICEPERSON,
BAGGAGE/CARGO

Nature of the Work

The Baggage and Air Cargo Handler loads and unloads baggage, air mail, air express, and air cargo shipments. He or she drives baggage tow-carts, operates conveyors, fork lifts, fork trucks, and other baggage and air freight handling equipment. She or he operates machinery to sort and route baggage and air cargo to and from various flights.

Working Conditions

Ramp Serviceperson works outdoors on noisy, crowded ramps, in all kinds of weather, and does much lifting and moving of baggage, mail sacks, and air express shipments and pushing and positioning of air cargo. Shift work is required and one must wear a uniform.

Wages

Wages start at $5.93 per hour and after six months could increase to up to $6.20 per hour.

RAMP SERVICEPERSON, AIRCRAFT
FUELER

Nature of the Work

The Aircraft Fueler operates the fueling equipment. This employee may drive a fuel truck, filling the truck with aviation fuel and delivering it to the aircraft. The Aircraft Fueler operates fuel hose and pumps.
OBJECTIVES

INSTRUCTIONAL PROCEDURES

STUDENT ACTIVITIES

OUTCOMES

Working Conditions

Employee works outdoors with potentially hazardous aviation gasoline and kerosene in all kinds of weather. Shift work is required and one must wear a uniform. Employee may be required to climb and walk on wings of aircraft to reach fuel tank openings. Aircraft fuelers must observe strict safety rules.

RAMP SERVICEPERSON, DRIVER

Nature of the Work

Includes drivers of food trucks, mobile stairs, employees’ buses, messenger cars, conveyors, cleaning equipment, aircraft air conditioning and power carts, etc.

These employees drive equipment to the aircraft and operate machinery, loading and off-loading food containers, galley units, and other kinds of equipment. They attach and detach ground air conditioning and power carts, move stairs, or drive employees’ buses between airline facilities at the airport. They are usually on a regular work schedule.

Working Conditions

They wear uniforms and shift work is required. They work outdoors on noisy ramps in all weather conditions. They must use extreme care in positioning equipment near aircraft.

Opportunities for Advancement - For Ramp Servicepersons

Depending upon the size of the airline and safe travel agreements with employees’ unions, ramp servicepersons may become leaders and

Each student will write a letter to their local airlines seeking salaries for one of the five positions. Students will develop charts that list job as one of indoors, out-of-doors, shift work, dangerous, and special skills.

Students will include all information in their notebooks. Each student will write a brief report telling why each of these positions is important to comfort.
supervisors of crews in their own work areas -- fuelers, cleaners, baggage and air cargo handlers, etc. Or they may start at the lowest paying job such as cleaners, and work up to higher paying jobs, such as baggage handlers, drivers and aircraft fuelers. With experience at a variety of ramp service jobs, workers with administrative abilities may be promoted to the job of a ramp planner.

Requirements to Enter the Job: For Ramp Servicepersons

High school diploma is required, and a minimum age of 18 to 21 years. Employees who drive trucks, buses, fork trucks, towing tractors, and similar equipment must have a driver’s license and often a chauffeur’s license as well. Good physical health and strength are required for baggage and air cargo handlers. On-the-job training is given when new equipment is put into service or when better methods of accomplishing a job are developed.

Teach students how to footnote reference materials; encourage use of printed materials for their report.

Assign students to read:

CABIN MAINTENANCE MECHANIC

Nature of the Work

The Cabin Maintenance Mechanic cleans and paints interiors of aircraft during periodic major overhaul; removes and installs carpets, seats, curtains, and bulkheads; and re-upholsters seats. He or she overhauls and cleans electrical equipment in cabins, such as lights, buffets, and coffeemakers.
### OBJECTIVES

**Working Conditions**
She or he works in hangar shops using sewing machines for stitching upholstery and curtains. Worker uses tools associated with upholstery, rug laying, installation of seats, electrical maintenance of cabin service equipment, and sheet metal work. He or she works under pressure of time. Shift work is necessary and uniforms may be required.

**Wages**
Wages start at $7.11 per hour and after eighteen months could go up to $7.64 per hour.

**Opportunities for Advancement**
Employee may advance to leader, assistant supervisor or cabin maintenance, and then to supervisor.

**Requirements to Enter the Job**
High school graduation is required. Work is often upholstery shops, sewing seat covers and curtains. Technical or vocational school training in the various mechanical skills is usually required. Worker may specialize in one kind of job.

### FOOD SERVICE EMPLOYEES

**Nature of the Work**
The Food Service Employees prepare and cook food, following set recipes. They arrange silverware and dishes on serving trays and food items on serving dishes. They place food in either hot or refrigerated containers for pick up and delivery to the aircraft. They receive and clean soiled dishes.

**Working Conditions**
They work in a flight kitchen at the airport. Work must be completed according to flight

### STUDENT ACTIVITIES

**STUDENT ACTIVITIES OUTCOMES**

Students will determine how these jobs prevent accidents, provide comfort. Tell why they are important to airlines and passengers.

Notebooks should include a description of these jobs. Students will list all vocabulary they do not understand and write questions for things that are not clear to them.

Students will compare these jobs and classify them by salary, indoor-outdoor, skills needed.

Students should answer the question, “Where can you get skills to qualify for one of these jobs?”

5.26
schedules. The kitchen is a busy, noisy place. Shift work is required and uniforms must be worn.

Wages

Wages are from $3.93 per hour, plus extra pay for late afternoon and night shifts. For example: Food Service Porters start at $3.93 per hour, Food Service Assistants at $4.87 per hour, Entry Level Cooks at $5.82 and within 18 months could be increased to $6.13 per hour, and Bakers start at $5.59 per hour and after six months could be increased to $5.81 per hour.

Opportunities for Advancement

They may advance to position of pantry worker, steward chef, supervisor, chief chef, assistant buyer, or commissary chief, depending upon the type of beginning job.

Requirements to Enter the Job

High school graduation is required. Minimum age of 18 to 20 years. All workers must have health certificates and respect for cleanliness and good housekeeping procedures. Chefs and cooks must have previous experience in food preparation. On-the-job training is given for all other kitchen workers.

AUTO MECHANIC

Nature of the Work

The Auto Mechanic services and repairs ground service equipment, such as portable stairs, fuel and food trucks, towing tractors and employee buses.

Working Conditions

He or she works indoors in a garage or outdoors on the ramp, when required. She or he performs the duties usually associated with an auto mechanic. The normal work week is forty hours.
RAMP PLANNER

Nature of the Work

The Ramp Planner keeps track of arriving aircraft and dispatches service units -- cleaners, fuelers, baggage handlers, food service trucks, etc. They must know flight schedules.

Working Conditions

He or she works indoors at the airport. She or he uses charts, telephones, and teletype machines. Shift work is necessary. They work with a team of planners.

Wages

Wages are from $9,000 to $14,000 per year.

Opportunities for Advancement

Workers may advance to junior positions on the flight operations management staff or on the administration staff of an airport director.

Requirements to Enter the Job

High school diploma is required. Minimum age is 20 to 25 years. Experience as a ramp serviceperson is usually required. This is not an entrance level job.

Check students comprehension of vocabulary terms found in these three sections:

- maintenance
- periodic
- overhaul
- under pressure
- set recipes
- flight schedules
- flight kitchen
- portable
- planner
- dispatcher

5.28
OBJECTIVES

Students will match from a mixed list of 10 skills each to the correct position of engineer and/or airline instructor.

*Words used prior to this section.

INSTRUCTIONAL PROCEDURES

Develop flashcards with the following skills listed on each.

designing
reading blue prints or plans decorating
equipment design
maintain
talk clearly
plan lessons
curriculum developer
use training aids

Flash these cards to students seeking correct response as to their definitions.

Classify cards by positions:

Airline Engineer
Airline Instructor

Have students read:

AIRLINE ENGINEER

Nature of the Work

In line with the engineering specialty, the engineer works closely with aircraft manufacturers during the development of new models of airliners, to make sure the requirements of the airline are met to performance, cabin plan, interior decorations, extra equipment, etc. He or she also designs improvements to aircraft and to methods of servicing and overhauling them.

STUDENT ACTIVITIES

OUTCOMES

Students are to record these two positions in notebooks.

Following drill, students are to record terms in sections of notebooks reserved for Airline Engineer and Airline instructor.
OBJECTIVES

INSTRUCTIONAL PROCEDURES

STUDENT ACTIVITIES

OUTCOMES

Working Conditions

She or he works mainly indoors in an office, but duties often take him or her to hangars and maintenance shops for consultations and inspections. Engineers may travel frequently to aircraft manufacturing plants for consultation. They may be required to live in the area where the aircraft are being constructed; then they would travel to the airline headquarters.

Wages

Starting wages are from $12,000 to $15,000 per year.

Opportunities for Advancement

He or she may be advanced to a job directing the work of junior engineers or might work up to a top job of Vice President for Engineering or Maintenance.

Requirements to Enter the Job

A college degree with a major in an engineering field related to air transportation is required. Previous experience and a graduate degree are preferred.

AIRLINE TRAINING(INSTRUCTORS)

Nature of the Work

An important factor in maintaining the airlines’ excellent safety record is their considerable training effort. Several thousand people are employed to help keep the proficiency of flight crews and ground personnel engaged in direct contact with the airplane, powerplants, and flight techniques.

Students will compare two highest salaries to determine who earns the highest pay.

<table>
<thead>
<tr>
<th>Occupation</th>
<th>Salary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Airline Engineer</td>
<td>$21,500 each year</td>
</tr>
<tr>
<td>Airline Instructor</td>
<td>$2,500 x 12 - ? each year</td>
</tr>
</tbody>
</table>
**OBJECTIVES**

Students will identify from a list of jobs those that classify as administrative personnel and those as professional airline personnel.

**INSTRUCTIONAL PROCEDURES**

Typical training jobs are Ground School Instructor, Flight Attendant Instructor, and Flight Simulator/Duplicator Operator. The instructors direct the pre-service and in-service training programs of the airline. For example, they make certain that the pilots keep up their instrument flying proficiency rating. Flight simulators or duplicators must be supervised by an instructor. Educators are also employed as curriculum/program developers. Technical support is provided by crafts-workers who develop training aids for use by the instructors in the airlines' classrooms.

**Wages**

Starting salaries are from about $900 to $2,500 per month, depending upon the task performed.

**Opportunities for Advancement**

Instructors may become supervisors of instructor and may advance to executive positions in the training department.

**Requirements to Enter the Job**

Instructors can qualify, in some instances, on basis of two years of airline employment, plus supervised teaching experiences in a specialty. Those who instruct by means of a simulated trail device are required to understand how to maintain and repair the device used.

Orally discuss value of each of the jobs to the people using airlines.

Have students read:

**ADMINISTRATIVE PERSONNEL**

In addition to the jobs described in the foregoing, airlines employ thousands of receptionists, typists, secretaries, steno-graphers, mail and file clerks, and computer personnel, as well as people in managerial

**STUDENT ACTIVITIES**

Students will record in notebooks positions under Administrative Personnel and Professional Airline Personnel.

Students will list names of people they know who do similar jobs found under Airline Personnel: like teachers.

**OUTCOMES**

Students will select three jobs they are interested in and write the advantages and disadvantages of each.

positions such as training, public relations, publications, finance, personnel, and other kinds of work associated with business and industry. Salaries paid are generally above the average paid by industry and business.

Then assign them to make a list of employers under this classification, at least seven.
# RESOURCES AND MATERIALS

"Agricultural Aviation," GA-300-129  
Department of Transportation  
Federal Aviation Administration, AGA-300  
800 Independence Avenue, S.W. Washington, D.C. 20591

## OBJECTIVES

Students will describe the importance of agricultural aviation to the farming industry of the United States in terms of saving time, money and overcoming adverse insects and weather conditions.

Students will identify from a list of ten career tasks, five that directly relate to the agriculture pilot.

<table>
<thead>
<tr>
<th>STUDENT ACTIVITIES</th>
<th>OUTCOMES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students need to be introduced to special terms associated with agriculture aviation.</td>
<td>Students will collect pictures of farming operations that relate to the introductory vocabulary list. Emphasis should be on agricultural aviation activities. Students are to caption pictures using the vocabulary list.</td>
</tr>
<tr>
<td>agriculture herbicides insecticides aerial surveys retardant solo obstacles tire-wheel aircraft operator defoliants</td>
<td></td>
</tr>
</tbody>
</table>

## NATURE OF THE WORK

The agricultural pilot flies, specially designed aircraft (including helicopters) to apply herbicides, insecticides, seeds and fertilizers on crops, orchards, forests, fields and swamps. He or she may also make aerial surveys of cattle and crops or fight forest fires by dumping fire retardant materials. The agricultural pilot usually flies solo, accurately.

## INSTRUCTIONAL PROCEDURES

Assign students to small reading teams, have them read: Nature of the Work.
dispensing materials with a fully loaded aircraft approximately three to five feet off the ground, zooming in on a field close to farm buildings, with trees and electrical lines as obstacles in his path and landing aircraft heavily loaded.

Agricultural aviation requires good flying ability in a tail-wheel type aircraft the type most used by the agricultural aviation industry. This type of flying can be rough work with long hours and seasons lasting from about a five-month period to all year. This is not a "nine-to-five" type of job.

One agricultural operator (Belle Glade, Florida) operates seven days a week, twelve months a year. He explains that he operates in an area of Florida which readily breeds a number of pests that are detrimental to the vegetables grown there. "Down here, when something has to be sprayed, it must be done immediately. Hours can be critical. We have a unique situation with very high stresses on our vegetable crops from a disease point of view." He does what he calls "conventional type agricultural work" on winter vegetables throughout the everglades area beginning in August and running through the following June. His second business area is mosquito work which begins in April and runs through December. In this field, there is no slack period.

Another agricultural operator, in Arvin, California, indicates: "I run five aircraft (450 h.p. Stearmans) and my business provides service to approximately 100,000 acres of California farmland each year. The main work centers on cotton, potatoes, carrots, tomatoes, onions, and
garlic. Like most operators in my area, I seed and fertilize as well as apply insecticides, herbicides and defoliants. I also run a couple of around rigs for some herbicide work in early winter and spring on cotton and potatoes. I guess you could call me an average size California operator.”

A Colorado agricultural operation logs 500 to 600 flying hours annually and covers anywhere from 50,000 to 125,000 acres per year. Jobs range from little four to five acre patches to one-mile square fields.

An agricultural aviation operation in Georgia starts fertilizing and applying herbicides early in the spring and works steadily until the first frost defoliating cotton. Most of his work is of a preventive nature done on a regular schedule of every five days on cotton and every ten to fourteen days on peanuts.

Another agricultural operator points out that the success of his business is, in large measure, attributed to the diversified farming done in his area (East Prairie, Missouri). His flying starts in mid-February and continues as late as Thanksgiving, seeding wheat. In addition to wheat, he services cotton, sorghum, corn, alfalfa, and beans.

Students are to participate in small reading teams. Their task is to make a list of questions about things they did not understand in the narrative given the; make a group report about the things agricultural pilots do and conclude with why they feel this is to be valuable to all people.

Students will identify these as aviation agricultural tasks:
### OBJECTIVES

Upon completion of the reading assignment, let students use the narrative material for reference. Ask them to define these terms during class discussion:

- low level
- regular pattern obstacles
- still air
- take-offs
- seasonal
- southern areas
- northern areas
- operator
- application
- favorable locations
- poisonous liquids
- toxic materials
- exposure
- indigestion
- applicator
- novice

### INSTRUCTIONAL PROCEDURES

Assign students to write a short story about the agricultural pilot. Ask them to write a story in first person narrative. Encourage the use of descriptive and colorful words. Have students contribute to list of words on the board before starting.

Example:
- roar of the engine
- zoomed over the trees
- banked tightly
- climbed steeply
- held the plane steady or level

### STUDENT ACTIVITIES

- flying specially designed aircraft,
- low level flying,
- surveying livestock and crops,
- fighting forest fires,
- apply special chemicals from the air,
- planting crops from the air
- or make a VTR of agricultural flying in a local area

Students will write first person stories about flying and working as an agricultural pilot.

Students working in groups will screen their stories and select the best for display on the bulletin board. Criteria for selection:

- interesting,
- well written,
- accurate regarding pilot’s tasks

### OUTCOMES

Creative writing

Students will develop narrative stories of agricultural pilots
<table>

</thead>
</table>
| Students will be able to list three factors that are indicators of a promising future for agriculture aviation. | Introduce students to these concepts. | Students will cite data from: OUTLOOK FOR THE FUTURE. According to production experts, the cost of food would be two or three times higher without the use of pesticides. W. C. Shaw of the U.S. Department of Agriculture indicates that if pesticides use was withdrawn "instead of spending 17 percent of family income on food, we would be forced to devote 30 to 40 percent of our income, and perhaps even more, to provide current food needs." Dr. Fred Whittemore of the Environmental Protection Agency stated: "Pesticides are going to be required for more crops and most purposes in the foreseeable future. There is no economically possible substitute for them in many instances. And they are required as long as you and I are around. But we've got to use them in such a manner that we will not cause adverse environmental effects."

In July of 1974, F. Farrell Higbee, Executive Director of the National Agricultural Aviation Association, indicated that "many operations report a 250 percent increase in dollar volume. This is partly due to inflation, scarcity, and other increased operating costs. But with over 40 million new acres in production, it is no wonder we are seeing rapid growth."

About 5,000 agricultural aircraft logged 1,038,570 flight hours in 1967 seeding, sowing, dusting, or spraying one acre out of every six under cultivation. The hourly figure had risen to 1,869,000 by 1973. | Students will study trends and make predictions. |
Many agricultural aviation operators now have from $20,000 to $75,000 invested in each aircraft. They need pilots who can handle agricultural aircraft. A national survey of the industry showed a need of over 400 new agricultural pilots yearly. Currently, finding professional agricultural pilots is a problem, particularly for a small operator. It will be a bigger problem in the future because many agricultural pilots have been military-trained pilots from the World War II era and they are retiring.

Agricultural aviation has a great future. Each year more farmers are realizing that the agricultural aircraft can do the job more quickly, just as effectively, and at less cost than they can with their own ground rigs. This is especially true when they consider the initial cost and maintenance of equipment which has limited use.

Among the factors spurring on increase in aerial application are:

1. A diminishing supply of farm labor.
2. Farms are getting bigger and few farmers have all their land in one place. They own a block of land here, and rent an acreage there. That fact makes it hard to cover crops efficiently with group equipment.
3. Better aircraft and better pilots are producing better results than in past years.
4. Effective crop protection materials have been developed that were unheard of several years ago. For example, "benlate" (benomyl fungicide) has been the biggest peanut yield booster ever developed. It just about eliminates leafspot, a foliage disease that has plagued peanut growers for years.
A career in agricultural aviation is available to young pilots who have the initiative to take advantage of the situation. The opportunity is present to grow as a pilot and a business person in an industry that is a cornerstone of an efficient and effective U.S. agriculture.

Example: Agricultural aviation is a growing industry as 400 new pilots are trained every year for this purpose. If the trend continues for ten years some 4,000 pilots will be flying agricultural planes. As older pilots retire from flying, agricultural airplanes it can be predicted that new pilots must be trained for this purpose.

If aviation flying hours continue to grow every six years at a rate of 830,430 it can be forecast that six years from now the hours will raise from a rate of 1,869,000 to 2,699,430 hours.

By studying: Outlook for the Future and General Information have each student make one trend statement, one prediction and one prediction. Students will support each with data from provided materials.

GENERAL INFORMATION

American agriculture is the most productive in the world. It has reached a productivity level where one farm worker is producing food for 54 other persons. While comprising only five percent of the total population, farmers produce enough food for all Americans and many people in other-countries as well.
Agricultural aviation started in 1911 in Germany and was first practiced in the United States in 1921. In 1941 the Entomological Society of America listed 11 airplane dusting and spraying companies in the United States. In 1945, 48 companies were listed. In 1947, 306 businesses were operating airplane and autogiro dusting and spraying services in 32 states and the District of Columbia. In 1974, the number of agricultural operators in the U.S. had grown to 3,300.

In the U.S. there are now more than 25,000 people employed in the agricultural flying industry, which operates 8,000 aircraft. Agricultural operators fertilize and apply pesticides to more than 150 cultural million acres of farm-land each year. Ninety percent of the U.S. rice crop is seeded by air. For example, in some southern areas the major crop is rice, a crop that is almost totally dependent on agricultural aviation for its production. Rice cultivation requires several applications by agricultural aircraft. Not only are planes used to plant the crop, but they also are used to fertilize and to apply herbicides. In addition, two or three insecticide applications must be made, depending on whatever insect problems develop.

Agricultural aviation is an indispensable tool in farming operations, covering more and more acreage effectively and at lower cost. It provides seeding, fertilizing, fungicide, herbicide, and insecticide functions to help the farmer. The flexibility of aerial application includes coverage of rugged terrain at an affordable price, reclaiming grazing land from sagebrush, and avoiding grain shatter and soil compaction losses. Aerial application can
accomplish more in one hour than a tractor can in a day, while consuming one-third the fuel. It is more efficient because it provides greater penetration and coverage while requiring less chemical per acre. It provides service when fields are too wet and crops too large for ground equipment to function. When flown by a careful and experienced pilot, the mechanical distribution of the material and the plant coverage are excelled by no other machine.

Women play an important role in this industry. Women in agricultural aviation participate in everything from flying to operating radios, to teaching courses in agricultural aviation, and to public relations activities.

The agricultural aviation industry has grown swiftly. Special aircraft and equipment have been built just for aerial application. The agricultural operator can easily have $300,000 tied up in an operation.

Chemicals have been produced in such varieties and numbers that the operator has to be an agricultural expert just to know how to use each one correctly.

For many years there was little cooperation between one aerial application company and another. The competition was keen and often not of the highest order. Soon state associations were formed to bring professionals into the industry and then, on a national level, the National Agricultural Aviation Association (NAAA) was formed. Today, the NAAA represents all agricultural aviation operators and all agricultural pilots.
The Federal Aviation Administration (Aviation Toxicology Laboratory of the Civil Aeromedical Institute, Oklahoma City, Oklahoma) provides emergency advice to agricultural aviators concerning pesticide poisoning, diagnosis and treatment.

During a ten-year period from the early 1960s to the early 1970s, use of persistent insecticides in the malaria eradication program in India reduced the number of deaths each year from malaria from 750,000 to 1,500. In Ceylon a similar program reduced the death figure from 2.8 million in 1946 to 110 in 1961.

Some years ago, a German author wrote a book on crop protection and said that the annual world crop loss due to insect pests and diseased wheat totaled $70,347,000,000 or 33.8 percent of the total value of the crop. Agricultural aviation is a tool to help reduce such losses. Control of pests for a viable agriculture and the environment is mandatory. Both for the present and the foreseeable future, pesticides properly managed and used for this purpose are essential.

World-wide, during recent years the number of agricultural aircraft increased to 21,000, treating an area of 372 million acres annually. In most countries in the western world and the communist world, agricultural and forestry aviation have become a national practice.
OBJECTIVES

INSTRUCTIONAL PROCEDURES

STUDENT ACTIVITIES

OUTCOMES

Share trends, predictions and forecasts by dittoing into a classroom booklet. You may want to title the book something like this:

Window on the Future

Instruct students on how to write a business letter. Provide list of agencies for students to write to:

1. McCarty Flying Service, Inc.
   P.O. Box 2492
   West Helena, Arkansas 72390

2. California Agricultural Aeronautics, Inc.
   P.O. Box 749
   Hanford, California 93230

3. Emery Aviation
   Route 4
   Box 173
   Greeley, Colorado 80631

4. B & M Flyers, Inc.
   Box 395AA, RD #4
   Dover, Delaware 19901

5. Indian River Flying Service
   P.O. Box 772
   Vero Beach, Florida 32960

6. Ayres Ag Pilot Training
   P.O. Box 3090
   Albany, Georgia 31706

7. Commander Air Service
   P.O. Box 3090
   Albany, Georgia 30706

8. Glynnaire Aviation, Inc.
   P.O. Box 177
   Statesboro, Georgia 30458

Students should emphasize how the world populations will benefit from these trends, predictions and forecasts.

Students will write business letters to selected agricultural aviation agencies.

Formulation of questions for flying agencies
9. Idaho Falls Aviation, Inc.
   Red Baron Flying Service
   P. O. Box 497
   Idaho Falls, Idaho 83401

10. Solomon Valley Air Service
    Hill City, Kansas 67642

11. Mayfield Skyways
    P. O. Box 199
    Mayfield, Kentucky 42066

12. Opelousas Flying Service of
    Louisiana, Inc.
    P. O. Box 83
