

Build An Unusual Paper Airplane

Have you ever seen a paper airplane like the one the girl above is flying? You can make it if you have these supplies.

Here are the materials you will need:

- ✓ One drinking straw
- ✓ Tape
- ✓ Two strips of paper cut to these sizes:
 - 1.5 cm wide x 9 cm long
 - 2 cm wide x 12 cm long

Instructions:

1. To make the plane, take one of the strips of paper and make a loop by overlapping the ends. The ends should overlap enough to form a pocket to slip the straw into. Tape each end of the paper in place. Repeat this step with the other strip of paper.
2. Next, slide the straw into the pocket of one of the paper loops. Slide the other end of the straw into the pocket of the other paper loop.
3. You are now ready to fly your plane! Experiment with your plane to see how its flight is affected by sliding the loops along the straw into different positions, or by flying the plane upside-down, and backwards.
