

Index

A

Abnormal engine instrument indication.....	17-13
Absence of propeller	
Drag	15-7
Effect	15-6
Slipstream.....	15-6
Academic material (knowledge and risk management).....	4-20
Prevention through ADM and risk management.....	4-21
Prevention through proportional counter-response.....	4-21
Recovery.....	4-22
Accelerated stalls	4-10
Accelerate-go distance	12-9
Accelerate-stop distance	12-9
After-landing.....	2-18
After-landing roll	13-6
Airframe and systems	16-5
Airplane-based UPRT.....	4-22
Airplane configuration.....	17-4
Airplane equipment and lighting	10-4
Airport and navigation lighting aids	10-5
Airport traffic patterns and operations	7-2
All-attitude/all-envelope flight training methods.....	4-23
All-engine service ceiling of multiengine airplanes	12-9
Alternator/generator.....	12-7
Angle of attack.....	4-2, 13-2
Anti-icing/deicing	12-8
Approach.....	17-5
Approach and landing.....	10-8, 16-12
Night emergencies.....	10-9
Approaches to stalls (impending stalls), power-on or power-off.....	4-8
Attitude and sink rate control.....	17-4
Attitude flying.....	3-4

B

Ballooning during round out.....	8-30
Bank control.....	3-5
Basic safety concepts	17-2

Before start and starting engine	16-10
Before-takeoff check.....	2-17
Avionics	2-18
Electrical system.....	2-17
Engine operation.....	2-17
Flight controls	2-17
Flight instruments.....	2-18
Fuel system.....	2-17
Takeoff briefing.....	2-18
Trim.....	2-17
Vacuum system	2-18
Bouncing during touchdown.....	8-31
Brakes	2-8

C

Cabin fire	17-8
Captain's briefing.....	15-22
Cascade reversers.....	15-16
Chandelle	9-5
Climb gradient	12-9
Climbs and climbing turns.....	3-16
Climbing turns.....	3-18
Establishing a climb	3-17
Best angle of climb (V_X).....	3-16
Best rate of climb (V_Y)	3-16
Normal climb.....	3-16
Combustion heater	12-6
Constant radius during turning flight.....	6-4
Construction	16-5
Aluminum.....	16-5
Composite.....	16-5
Steel tube and fabric.....	16-5
Continuous ignition.....	15-4
Controllable-pitch propeller.....	11-4
Blade angle control.....	11-7
Climb	11-6
Constant-speed propeller.....	11-4
Constant-speed propeller operation.....	11-7
Cruise	11-6

Fixed-pitch propellers.....	11-4	Forced landing	17-2
Governing range.....	11-7	Precautionary landing.....	17-2
Takeoff	11-6	Emergency situations.....	17-1
Control touch	1-1	Engine and propeller.....	2-9
Coordinated flight.....	4-2	Engine failure	
Coordination	1-1	After lift-off.....	12-19
Correcting drift during straight-and-level flight	6-3	After takeoff	12-21
Cross-control stall.....	4-11	After takeoff (single-engine).....	17-6
Crosswind after-landing roll	13-7	During flight.....	12-22
Crosswind approach and landing	8-14, 12-16	Engine fire.....	17-8
Crosswind after-landing roll.....	8-16	Engine inoperative approach and landing.....	12-23
Crosswind final approach.....	8-14	Engine inoperative flight principles.....	12-23
Crab method.....	8-14	Engines.....	16-6
Wing-low (sideslip) method	8-15	Engine shutdown.....	2-19
Crosswind round out (flare)	8-15	Engine starting	2-12
Crosswind touchdown	8-15	Environmental factors.....	4-18
Maximum safe crosswind velocities	8-17	Exhaust gas temperature (EGT).....	15-3
Crosswind takeoff.....	5-6, 13-4	F	
Initial climb	5-8	False start	14-9
Lift-off.....	5-8	Faulty approaches and landings	8-27
Takeoff roll.....	5-6	Feathering	12-3, 12-4
Cruise	16-11	Flap effectiveness.....	11-3
D		Flight control malfunction/failure.....	17-9
Defining an airplane upset	4-2	Asymmetric (split) flap	17-9
Descents and descending turns	3-19	Landing gear malfunction	17-10
Descent at minimum safe airspeed.....	3-19	Loss of elevator control.....	17-9
Emergency descent.....	3-20	Total flap failure.....	17-9
Partial power descent.....	3-19	Flight director/autopilot	12-6
Directional control	13-3	Flight environment.....	16-7
Door opening in-flight	17-13	Flight standards service.....	1-5
Drag devices.....	15-14	Floating during round out	8-30
Drift and ground track control	6-3	Forward slip	8-12
E		Four fundamentals	3-2
Effect and use of the flight controls		Climbs	3-2
Feel of the airplane.....	3-4	Descents.....	3-2
Electrical fires	17-8	Straight-and-level flight	3-2
Elementary eights.....	6-11	Turns.....	3-2
Eights across a road.....	6-13	Fowler flap.....	11-3
Eights along a road	6-11	Fuel and oil	2-6
Eights around pylons.....	6-13	Fuel crossfeed	12-6, 12-22
Eights-on-pylons	6-14	Fuel heaters	15-4
Elevator trim stall.....	4-12	Full stalls	
Emergencies.....	16-12	Power-off.....	4-8
Emergency approaches and landings (simulated).....	8-26	Power-on	4-9
Emergency descents.....	17-6	Function of flaps	11-2
Emergency landings.....	17-2	Fundamentals of stall recovery	4-7
Psychological hazards	17-2	G	
Types of emergency landings.....	17-2	Gas turbine engine	14-2
Ditching	17-2	Glides	3-20

Gliding turns.....	3-21
Go-around	12-18
Rejected landings	8-12
Attitude.....	8-13
Configuration	8-13
Ground effect.....	8-14
Power.....	8-13
Ground loop	8-34, 13-8
Ground operation	12-12

H

Hand propping	2-13
Hard landing.....	8-33
High final approach.....	8-28
High-performance airplane	11-1
High round out.....	8-29
Human factors.....	4-18
Diversion of attention.....	4-18
IMC	4-18
Sensory overload/deprivation.....	4-18
Spatial disorientation.....	4-19
Startle response.....	4-19
Surprise response.....	4-19
Task saturation	4-18
VMC to IMC	4-18
Hydraulic pump	11-11
Hydroplaning	8-35
Dynamic hydroplaning	8-35
Reverted rubber hydroplaning.....	8-35
Viscous hydroplaning.....	8-36

I

Inadvertent VFR flight into IMC	17-15
Attitude control.....	17-16
Climbs	17-17
Combined maneuvers	17-17
Descents.....	17-17
Maintaining airplane control	17-15
Recognition	17-15
Transition to visual flight	17-18
Turns.....	17-16
In-flight fire.....	17-7
Initial climb.....	15-24
Inside of the airplane.....	16-8
Instrumentation	16-6
Integrated flight instruction.....	3-5
Intentional slips.....	8-11
Intentional spins	4-16
Interstage turbine temperature (ITT)	15-4

J

Jet airplane approach and landing	15-25
Approach speed	15-27
Glidepath control.....	15-28
Landing requirements.....	15-25
Landing speeds.....	15-25
Approach climb	15-26
Landing climb.....	15-26
V _{REF}	15-25
V _{SO}	15-25
Stabilized approach	15-27
The flare	15-28
Touchdown and rollout	15-29
Jet engine basics.....	15-2
Jet engine efficiency	15-6
Jet engine ignition.....	15-4

L

Landing	13-5, 14-10
Landing gear	2-8, 13-2
Instability.....	13-2
Landing gear control selected up, single-engine climb performance adequate	12-20
Checklist.....	12-21
Climb	12-21
Configuration	12-21
Control.....	12-20
Landing gear control selected up, single-engine climb performance inadequate.....	12-20
Landing gear down	12-19
Late or rapid round out	8-30
Lazy eight.....	9-6
Level off and cruise	12-14
Level turns	3-10
Establishing a turn	3-13
Medium turns.....	3-11
Shallow turns	3-11
Steep turns	3-11
Turn radius	3-12
Liftoff.....	13-4
Rotation	5-2
Light sport airplane (LSA) background.....	16-2
Loss of control in-flight (LOC-I).....	4-1
Low final approach	8-27
Low speed flight	15-10
LSA maintenance.....	16-5
LSA synopsis	16-3

M		
Mach buffet boundaries	15-9	
Maneuvering by reference to ground objects.....	6-2	
Minimum equipment list and configuration deviation list.....	15-18	
Multiengine training considerations	12-28	
N		
Night illusions.....	10-3	
Black-hole approach.....	10-3	
Visual autokinesis	10-3	
Night vision.....	10-2	
Noise abatement.....	5-13	
Normal and crosswind takeoff and climb	12-13	
Normal approach and landing.....	8-2, 12-14	
After-landing roll.....	8-8	
Base leg	8-2	
Final approach	8-3	
Estimating height and movement	8-5	
Use of flaps	8-4	
Round out (flare)	8-6	
Stabilized approach concept.....	8-9	
Touchdown.....	8-7	
Normal takeoff.....	5-3	
Initial climb	5-5	
Lift-off.....	5-4	
Takeoff roll.....	5-3, 13-3	
Nose baggage compartment.....	12-7	
O		
Operating the jet engine	15-3	
Operational considerations.....	14-9	
Operation of systems.....	12-3	
Orientation and navigation.....	10-7	
Outer wing surfaces	2-5	
Outside of the airplane.....	16-9	
P		
Parking	2-19	
Performance and limitations	12-9	
Pilot equipment	10-4	
Pilot sensations in jet flying.....	15-17	
Pitch and power.....	3-23	
Pitch control	3-5	
Plain (hinge) flap.....	11-3	
Porpoising	8-32	
Post-flight.....	2-19, 16-12	
Securing and servicing	2-19	
Power control.....	3-5	
Power-off accuracy approaches	8-22	
90° Power-off approach	8-22	
180° Power-off approach	8-23	
Preflight.....	16-7	
Preflight assessment of the aircraft	2-2	
Preparation and preflight.....	10-6	
Pre-takeoff procedures	15-20	
Prior to takeoff	5-2	
Propellers	12-3	
Propeller synchronization	12-6	
R		
Recovery from overspeed conditions.....	15-9	
Rectangular course.....	6-6	
Rejected takeoff	12-19, 15-22	
Rejected takeoff/engine failure	5-12	
Retractable landing gear	11-11	
Controls and position indicators.....	11-11	
Emergency gear extension systems.....	11-12	
Landing gear safety devices	11-11	
Landing gear systems	11-11	
Electrical landing gear retraction system.....	11-11	
Hydraulic landing gear retraction system.....	11-11	
Operational procedures.....	11-12	
Approach and landing.....	11-15	
Preflight	11-12	
Takeoff and climb.....	11-13	
Reverse thrust and beta range operations.....	14-7	
Risk and resource management	2-9, 2-10	
Identifying the hazard.....	2-10	
Resource management.....	2-11	
Aeronautical decision-making (ADM)	2-11	
Flight deck resource management.....	2-11	
Situational awareness	2-11	
Task management.....	2-11	
Risk	2-10	
Risk assessment	2-10	
Role of the FAA.....	1-2	
Role of the flight instructor.....	1-7	
Role of the pilot examiner.....	1-6	
Roles of FSTDs and airplanes in UPRT	4-22	
Rotation and lift-off	15-24	
S		
Safety considerations	7-5	
Secondary stall	4-10	
Setting power	15-4	
Short-field approach and landing.....	8-18, 12-17	
Short-field landing	13-7	
Short-field takeoff.....	13-4	
Short-field takeoff and climb	12-17	
Short field takeoff and maximum performance climb	5-10	

Initial climb	5-11	Power-on stalls (takeoff and departure)	12-27
Lift-off	5-10	Spin awareness	12-28
Takeoff roll.....	5-10	Stall training.....	4-8
Sideslip.....	8-11	Standard airport traffic patterns	7-2
Single-engine service ceiling	12-9	Base leg	7-4
Slotted flap.....	11-3	Crosswind leg	7-4
Slow acceleration of the jet engine	15-6	Departure leg	7-4
Slow final approach	8-28	Downwind leg	7-4
Slow flight.....	4-3, 12-26	Entry leg	7-3
Maneuvering in slow flight	4-4	Starting, taxiing, and runup.....	10-6
Soft-field approach and landing.....	8-21	Steep spiral.....	9-4
Soft-field landing	13-8	Steep turns.....	9-2
Soft-field takeoff.....	13-4	Straight-and-level flight	3-6
Soft/rough-field takeoff and climb.....	5-11	Level flight	3-8
Initial climb	5-12	Straight flight.....	3-7
Lift-off.....	5-12	S-turns across a road	6-8
Sources of flight training	1-8	Systems malfunctions	17-11
Airman certification standards (ACS).....	1-10	Electrical system.....	17-11
Flight safety practices.....	1-11	Pitot-static system	17-12
Collision avoidance	1-11		
Positive transfer of controls	1-15	T	
Runway incursion avoidance	1-12	Takeoff and climb.....	10-7, 16-11
Stall awareness.....	1-12	Takeoff and departure	14-10
Use of checklists	1-13	Takeoff checks	2-18
Practical test standards (PTS).....	1-10	Takeoff roll	15-21
Speed margins.....	15-7	Ground roll	5-2
Speed sense	1-1	Takeoffs	14-10
Spin awareness.....	4-13, 12-28	Taxi	16-10
Spin procedures.....	4-14	Taxiing	2-14, 13-2
Developed phase.....	4-15	Terrain selection.....	17-4
Entry phase.....	4-14	Terrain types	17-5
Incipient phase.....	4-14	Confined areas	17-5
Recovery phase.....	4-15	Trees (forest)	17-5
Spiral dive	4-23	Water (ditching) and snow	17-6
Split flap.....	11-3	Thrust reversers.....	15-15
Sport pilot certificate.....	16-3	Thrust to thrust lever relationship.....	15-5
Stabilized approach.....	14-10	Timing.....	1-1
Stall characteristics	4-6	Tires	2-8
Stall recognition	4-5	Touchdown	13-5
Angle of attack indicators	4-6	Crosswinds	13-6
Feel	4-5	Three-point landing	13-5
Hearing	4-6	Wheel landing.....	13-6
Kinesthesia.....	4-6	Touchdown in a drift or crab	8-34
Vision.....	4-6	Tracking over and parallel to a straight line	6-6
Stalls.....	4-5, 12-26, 15-11	Training considerations.....	14-11
Accelerated approach to stall	12-27	Flight training.....	14-12
Engine inoperative—loss of directional control demonstration	12-28	Ground training	14-12
Full stall.....	4-5, 12-27	Training for night flight	10-6
Impending stall	4-5	Transition training.....	11-16
Power-off stalls (approach and landing)	12-26	Transition training considerations.....	16-4
		Flight instructors	16-4

Flight school	16-4
Trim control	3-5, 3-10
Turbine inlet temperature (TIT).....	15-4
Turbine outlet temperature (TOT)	15-4
Turbocharging.....	11-8
Ground boosting versus altitude turbocharging	11-9
Heat management	11-10
Operating characteristics	11-9
Turbocharger failure.....	11-10
Low manifold pressure	11-11
Over-boost condition	11-10
Turboprop airplane electrical systems	14-8
Turboprop engines	14-2
Turboprop engine types	14-3
Fixed shaft	14-3
Split shaft/free turbine engine	14-5
Turbulent air approach and landing	8-18

U

Unusual attitudes versus upsets	4-17
Upset prevention and recovery	4-17
Upset prevention and recovery training (UPRT).....	4-19
Use of power	8-29

V

V_1	15-23
Maximum V_1	15-23
Minimum V_1	15-23
Reduced V_1	15-23
Variation of thrust with RPM	15-5
Visibility	13-3
Visual inspection of the aircraft.....	2-2
Visual preflight assessment.....	2-3
V-speeds.....	12-2, 15-20
V_{LOF}	12-2
V_{MC}	12-2
V_R	12-2
V_{REF}	12-2
V_{SSE}	12-2
V_X	12-2
V_{XSE}	12-2
V_Y	12-2
V_{YSE}	12-2

W

Weather considerations.....	16-6
Weathervaning	13-3
Weight and balance.....	12-11
Basic empty weight	12-11
Empty weight	12-11
Maximum landing weight	12-12
Ramp weight	12-12
Standard empty weight.....	12-11
Zero fuel weight	12-11
Weight and balance requirements related to spins.....	4-17
Wheel barrowing.....	8-33
Wing rising after touchdown	8-35

Y

Yaw damper	12-7
------------------	------
