This is a big leap for humanity, with SpaceX and the upcoming launch shows the success and innovation in the space industry. With spaceX we can proceed to make humanity sustainable and develop around space travel both for tourism, colonization and resourcing. With the upcoming launch will prove these machine are capable of delivering anything from and to earth. If we continue to develop and research the possibilites we can achieve anything. This will help stabilize the economy with supply chain issues and the uncertainty of how much material we have left on earth like copper, iron, gold, silver, all the necessary materials in today's society. With this we have the potential to set up oil rigs on planets that'll possibly have unknown material to earth even. With this leap in history I believe spaceX has the potential to orbit Pluto. Thank you and cheers to innovation and a sustainable future for generations to come.

The SpaceX Starship development programme down in Starbase, TX has for one changed my life dramatically since first discovering it over a year ago! It's allowed me to discover a community I've absolutely loved and adored since the moment i came across them! A good friend of mine recently moved down there to document history in its tracks and i will soon hopefully be following! The Starship programme has often given me reason to wake up in the morning when I otherwise don't feel like it. Space exploration gets me exited. A future as a multi planetary species and one among the stars sounds like fair good one to me. I believe SpaceX should be given approval to further test out the Starship system as their 20 years in the industry shows clear progress and success! If anyone can take us to the Moon, Mars and beyond... its SpaceX.

Kia Ora all the way from Aotearoa! I'm on both team Earth & team Mars + beyond. I understand & empathise with both sides but for me it's what if something happens to earth.. from within or outside of our beautiful rock we call home!? China and their non stop space/military programme scares me! That is the difference for me! Home is where the heart is & right now we only have 1 option! Time is of the essence and life is about timing and every moment counts! Let's not miss our moment! 🙏 Us as humans may only be a blink of the eye in the big scheme of things but if we don't become a multi-planetary species how can we bring other species with us if we haven't made it there yet!? Would putting more money and/or effort towards protecting the unnatural habitats of every creature on earth help as we will all need to adjust to life on the next best rock?? Kia Kaha & thank you for your time! Every moment & thought counts! 🔵🚀⚫🪐

I fully support the ongoing and expanding use of the SpaceX Boca Chica launch site for both testing and upcoming orbital launches. One must remember, we (The State of Texas and by proxy its residents) pitched this site to SpaceX as an ideal launch location on US soil. It seems strange to me that people object to the use of the land for the purpose we expressly offered to to them for sale. I am not, nor have I ever been, employed in the Space industry. I'm just a Texas resident who believes that if we sold land to a company for a specific use, we should let them use it

As one of your employers (only technically) I as that you let space x launch and retrieve their rockets in a safe and secure manner. I applaud the work you do with airlines and there safety and ask they you continue to do so in the area of rocketeering.. But please do not drown the morale of our people in red tape as we all watch to see the accomplishment of our dreams. Us old one (like myself) the continuation of a story started by Alan Shepard. For the young ones a new beginning to our place in the stars.. Carry on, continue to do your outstanding job. But so not get so caught up in the letter of the law that you forget about the spirit of the law. and that is to keep us safe as we move forward in our life in the skys. thank you George E Marshino

To the deciders of the orbital launch of SpaceX starship rocket pending your approval. I write in full support of this project. If my vote counts for anything then my vote is Yes! My reason is this. This world will benefit from the endeavours of Elon Musk and the starship project. The rapid inovation and research of things not yet done is something often feared yet also something we can't ignore. If Einstein or Newton were prevented from their great discoveries we may still be living in the dark ages. Instead, if Government and governing bodies stood behind these brilliant minds we perhaps would be further advanced in many fields of science. Who knows what discoveries can be made. Yes we need to consider the environment and the safety of people and that is fine. Let's just do it as quickly and efficiently as possible. Don't hold back because you don't have the manpower to thoroughly investigate. Get more people involved. Do whatever it takes. Don't be the ones responsible for tieing this thing up in red tape and litigations. Be cautious but be liberating at the same time. Thank you for listening. I wish you all the best in this critically impacting decision. Regards, Matt Fairman

I fully support SpaceX and its responsible use of the Texas coast for the advancement of manned spaceflight. SpaceX has been the only US company (including the US Govt) to move manned spaceflight forward. Meanwhile China is making massive headway. SpaceX will move Starship offshore soon but to reduce the inconvenience experienced by the local population. Economic gains have been achieved in the LRV as well and these gains must be added to the positive contribution SpaceX is making to the US and World space program. I strongly endorse approving the SpaceX application. Charles Thacker [redacted]

Please give spacex the opportunity to have this test. In the world, there's a single company who's thinking about every aspect of their products in order to improve life on earth. And that's space x. Im writing from Mexico, and I support this. As a resident from México's Borders. This will have a big positive impact not just on US economy, also in Mexico. Matamoro's borde is one of the most problematic places at mexico. The razón es simple, people don't have a reason to visit that place. That leads matamoro's residents to find criminal financial sources to subexist. Having a reason to visit border I'm order to watch launches will be positive to that region.

Dear FAA. We're on the brink of a huge leap as a species. What spaceX is doing in Boca Chica is something that for us, for our generation may be nothing more than a great technological spectacle. But it is something that the survival of mankind may depend upon generations from now. If we keep thinking as individuals in matters like this someday, it could be 50 or 5000 or 5 million years from now, we will inevitably fade away from existence without a trace except for all the inanimate, and relatively primitive, space faring devices we have sent to worlds beyond ours. This is important I, even though right now it just seems to be a great show or a billionaire's flight of fancy. This is our future and maybe this could be the start of catalyst events that will unite us as a species. The planet is fine for now, it has seen worst than us, and will probably be still here, waiting to be engulfed by a dying sun long after we are all gone, one way or another, by leaving by our own devices or by perishing by our own selfish nature. I really hope to witness the start of this new, innovative space age. Thank you.

On October 10th 2021 a loud explosion rocked Southern New Hampshire. While the cause remains unknown, experts suggest it was a bolide meteor. On February 15, 2013 asteroid 2012 DA14 passed inside the orbit of weather and communications satellites, the same day a meteor broke apart over Chelyabinsk, Russia, causing over 1,400 people to seek medical treatment. Earth may never be protected from a strike, but Starship's first orbital launch is one step toward ensuring life is...

As a government organization, the FAA has a responsibility to keep up with the change of pace in the space industry. A reform on regulatory approval of starship launches should be top priority, allowing for much shorter approval process, including bulk approvals. If the current approval system stays, the FAA is just as bad for the space industry as Jeff bezos with all of his frivolous lawsuits.

SpaceX starship program is working towards an orders of magnitude improvement in Spaceflight technology. This will be massively valuable to not just the United States, but for all of humanity. An orbital test flight is a major stepping stone in starships development program. It must go ahead as soon as is safely possible!

I (UK citizen) support the work of spaceX at Bocachica. In terms of overall good to the environment the quest for reusable rockets in place of the current very wastefull technologies are important. Testing of such vehicles by definition needs to be done in remote costal areas of which Bocachica is it obviously one if a limited few in the USA. Current tests have indicated that SpaceX can constrain damage to a very limited locations and times. Provided spaceX demonstrate they can continue this without significant damage I support them proceeding with tests. Mike M

Please grant exceptional regulatory approval for Starship's orbital launch attempts from November 2021 onwards. ---------- Spacex is a positive and collaborative organization which clearly cares about environmental sustainability, safety and financial responsibility. Understanding that some dimensions would need to be corrected from spacex and while working with them to ensure proper long-term environmental conditions, please grant exceptional regulatory approval for Starship's orbital launch attempts from next month onwards. Environmental sustainability, safety and financial responsibility matters. Innovation prototyping and test agility matters too. ---------- Please grant exceptional regulatory approval for Starship's orbital launch attempts from November 2021 onwards.

While I think this will be a historic rocket akin to the Saturn V for our generation, going forward with this launch would be the best move in my opinion. I realize that the launch processes, proposed construction and physical launching of the vehicle will effect the environment, wild life, alter the topography(future construction proposals) and surrounding communities in some way which *seems* to be mostly minimal. The only way to see for sure is to give it the green light and let then launch the five orbital missions that they're allowed per year then do another environmental assessment just to see what effect it has to the surrounding area and what needs to be changed for future launches. I think it's important to balance progress with environmental protection. I think that successful orbital launches is the only way we'll find out how it truly effects the surrounding environment and people that live in the immediate area. While I approve of the solar farm expansion I'm not too hot about the 4+acre power plant(instead perhaps they could do even more solar arrays with battery packs), that's going to be a hard sell comparatively to everything else. I personally am really excited to see this thing launch, land and be reused. Hopefully sometime I can actually see it in person.. especially The lunar variant for the HLS mission. I'm trying to be objective because it's good to be conscious of the environment and it's on a nature preserve but so is KSC and as far as I can tell it's all good so this should also be fine. I really want to see this succeed because it could and can change so many things and lead to an untold number of firsts and exciting frontiers that haven't been pushed since the Apollo program. Thanks. Can't wait to see it go up!!

Hi, I am emailing you in support of SpaceX's orbital launch of its Starship vehicle. Testing a vehicle of this magnitude sure does have its risks but the research and exploration it would make possible are entirely worth it. The Falcon 9 has proven to be very reliable and I think Starship will preform similarly over time. I am in total support of allowing SpaceX to launch their rocket! Thanks.

To Whom It May Concern, It is of great importance for the human species to become multi-planetary as soon as possible. To that end SpaceX is the only entity, private or public, within striking distance of achieving this goal. The Orbital Test Launches must immediately be allowed to occur. Thank you kindly, Matt W.

Please support this effort to expand the horizons of human civilization in any way you can. Environmental considerations should not prevent the testing; and there should be further support when launch frequency is ready to increase. (I am an experimental test pilot, and have appreciated FAA support on various developmental flight test programs; please continue to support the groundbreaking work being done by great engineers and scientist :-)

The United States has always recognized the value of space exploration. In recent years, privately owned companies have taken the helm in the industry and filled in the vacuum left by the end of the space shuttle era. Companies like SpaceX will be recognized for years to come for their achievements in furthering interplanetary exploration, but ONLY if the federal government is willing to back them up. The government has an extraordinary amount of power (one might even say too much) in seeing the success or demise of a company like SpaceX. This is a responsible company who needs the FAA to check off some bureaucratic check boxes so they can keep going on their way. Let's not let silly "policy" matters hinder our advancement as a human race any more. SpaceX is moving at lightning speed to get things done, and the federal government needs to move fast enough to keep up. We live in the most exciting era of space travel. Let's all join together and support those making this happen.

Dear FFA I am writing to you in response to the public hearing related to SpaceX operations in Boca Chica Texas. I know the area well and we as a family are visiting South Padre Island regularly. We love the beautiful beaches there and the relaxed atmosphere. The last time we went there we also visited Boca Chica itself to see the latest Space X developments. Having the SpaceX facility in that location brings a completely new dimension to that entire region and this can only be regarded as a very positive development for this area. We have been traveling there before SpaceX had a major presence and we see only minimal impact from the more recent build up. There are clearly some noise concerns during launches but given the interests and progress this facility represent both locally in the US and internationally these are minor issues and I strongly recommend that permission is granted for Starship launches. Also the SpaceX Starship project has the potential to firmly put the US ahead in Space technology and innovation so I ask for the permission to be granted as this will help the overall Starship program to progress as well as brining much needed investment and high tech well paying jobs to this less developed part of Texas. Thanks for providing the opportunity to comment and please reach out by e-mail if any more information is needed. Thanks and regards Eimund Liland [redacted]

Dear FAA, It is crucial for regulatory testing to commence on the starship program. While global catastrophes may threaten our every day life, we must expand the reaches of consciousness to preserve humanity. As the world shifts to combat the climate crisis, there will be many new companies and ways of dealing with these threats. Trapping humanity on one planet would not help preserve our species in an event of natural barrier's. Four our children's future and our own, we must let spacex continue to develop the starship program.

Message

The operations of spacex have proven crucial to the development of the space industry, hindering this companies progress will only hinder our evolution. From looking at other rocket launch pads, most of them have square miles of protected flora and fauna. Though the question now stands, would a big launch like starship with at one point 33 raptor engines cause any damage to the environment? Instead of reviewing how much damage can 33 engines cause one should look at the equipment used by spacex and currently constructed and development to diminish the damage from the energy. But it is well known that it is not 100% effective and loud noise is still caused for a few brief minutes untill the rocket is off the pad. So in the end there is always going to be a case of how much damage these few minute generate.Should spacex be banned from launches they will take their site elsewhere and the game will start all over. This only temporary displaces the problem but does not actually solve it. So better deal with this now and make sure that the sound and energy surprising mechanism is well supervised by the health and safety specialists, but not stop the progress of the whol space agency that will in the long run be more beneficial for a much bigger part of the public than the small place we are trying to protect from it.

Please approve Space X's Starship's first orbital launch attempt. Their progress has pushed NASA and American spaceflight back into the worldwide space leader, a space that is being heavily challenged by China's Moon and satellite advances. Like, he could just move to another country and launch anything he wants without approval. He's the richest person on the planet. I want to keep him pushing American agencies along with him.

Hello FAA reviewer, I am writing this to show my support to the SpaceX flight license for Boca Chica. While I am not near nor work for SpaceX, I feel that the work being done here is necessary for the advancement of humanity. As far as I know, previous notes from the FAA have put the environmental impact assessment at Boca Chica as safe and manageable levels for the work they are conducting and I feel that as of this moment that still remains true. The work at Boca Chica is extraordinary and is providing many jobs to the people of South Texas. The SpaceX crew work hard to further human advancement in space and I show my support in their endeavors. Thank you for your time and have a good day.

Distinguished Ladies and Gentlemen of The FAA and Congressional Oversight Committee on Commercial Space Exploration: As a proud citizen of our great United States of America and space enthusiast, I am composing this letter regarding the launching of SpaceX's - Starship. As we know SpaceX has been on the innovative curve in space exploration with the first vertical take - off and vertical propulsive landing spacecrafts ahead of our competitors. This is why Starship and it's mission must be given clearance to advance forward. We must remain vigilant and competitive - cutting edge in the area of Science and Space ahead of our competition. SpaceX has proven reliable and forthcoming to their commitments to personal agenda as well as supporting NASA within these last 19 years. In closing, we owe this advantage and forwardness to those brave men and women who have given the greatest sacrifice to country and honor. God Bless You All and God Bless America. Respectfully, Mary E. Weaver

I am writing to support SpaceX and the Starship program. With 97,000 miles of beach in the US SpaceX use of the boca chica area and access to the beach is minuscule and immaterial. How much more land is wasted for beach side condos and hotels which are much more destructive by far in aggregate compared to the much more important operations of SpaceX for the US and humanity.

Hi FAA, I strongly believe that SpaceX starship missions are the harbinger of a new space era that as space community we have been looking forward to and the public sentiment has never been pro-space like this since Apollo missions. I implore you to allow the upcoming launch of starship from BocaChica and reignite the flame of passion for space in young and coming generations. Ismet Kahraman [redacted]

While I understand that protection of the environment is important, as is the rights of local populations, there is plenty of precedent where the importance of a project outweighs the importance of those other factors. Making humanity multi-planetary is possibly the most important goal ever undertaken by anyone, and we should be supporting this with every means at our disposal. Please, give SpaceX, and by extension everyone who believes in their mission, the approval it needs to accomplish the goal of human interplanetary spaceflight.

To whom it may concern, I am writing to voice my support for allowing the launch of Starship next month. There are dangers to our planet that we have zero control over. What we do have control over is whether we want to command greater presence in the solar system. When you have a precious database you have to back it up. I think the FAA should be doing everything in their power to expedite SpaceX's mission to commercialize space, open up new resources and colonize other planets. We have an amazing visionary in Elon Musk and his forward-thinking companies. But we only have this man for as long as a human life lasts. We need to maximize his time and this means expediting his missions unless there is a dramatic reason not to. Please approve the Starship mission. Thank you for your time, Lucas M. Shepherd

Hello my name is Lang Xia. I am very excited to know that you guys are taking in public comments regarding SpaceX developments in Boca Chica. I do believe that Space exploration will open up new methods to solve many of the most challenging issues on Earth on a fundamental level. We have squandered many years to bureaucracy and lobbying, this is the chance to take everything back. We have to experiment with new methods, breaking new boundaries and going outside of our comfort zone. I do believe that SpaceX has made the whole space exploration field that was previously mysterious more approachable by broadcasting their testing flights and having their CEO Elon Musk being outspoken and communicative on social media. SpaceX is truly a once a generation type of company that proudly exemplifies everything that's great about the American value. It is not afraid of failure, it is brave in exploring the unknown and it is brutally efficient but it can not be its best without the support of the American government. SpaceX needs government help, Space fans need government help, the generation that will cement America's leading role in capturing the most resourceful frontier we will ever know needs government help. Please support SpaceX, let's make science fiction non fiction.

To support SpaceX, I am writing to FAA in request to please allow SpaceX to move forward with its Starship program development efforts representing not just the United States capabilities to expand Humanity into space but also all of the human race. Because if the US falters at this point, at the rate China is moving forward with its space program, the US will no longer be in the position to lead this planet/humanity to become a multi-planetary species. Regarding any environmental concerns, I strongly believe it is overblown. There may be some species of concern around Boca Chica, but nature will find a way around any minute disruptions SoaceX's activities may pose. But in the grand scheme of things, these "potential" disruptions are very very small compared to what is at risk, what Humanity and the US will lose if SpaceX is held back with its efforts. I am a retired Quality Assurance Engineer, so I completely get the importance of checks and balances FAA represents. However, FAA goals should be aligned with SpaceX's goals as to help them succeed with minimal risks (not zero) and not to stop them at their tracks at every issue that arises due to political pressures. What SpaceX is trying to achieve is far too important. Thank you for your time.

Hi FAA, I wanted to share my thoughts on SpaceX's space program being worked on in Boca Chica Texas. I have been to that community and have seen the work SpaceX is doing there. I think it is important for you to support their launches and program because of the benefits it will give to humanity and our planet as a whole. Both environmentally and socially their program is a boon to this planet. While there is the possibility of an environmental impact on that location it will have and already has had a positive social impact on that community. And while yes I understand it will have a negative impact on peoples desire to use the beach there, other beaches are available. But overall it will bring more to that community than it takes away. And as far as the scientific and technological impact it will have, it will bring so much more to the rest of us if you continue to support their growth there. We need to improve our space technology and move our species forward and this is a program that is trying to do that. Slowing it down is hurting humanity and we need to avoid doing that. We need to do what we can to help them improve our future prospects of what we can do as a species. Please give them approval so that we dont have to wait another 50 years to do something like going back to the moon.

Thank you for this opportunity to express my opinion as a US citizen and a supporter of the preservation and betterment of humanity and all life. I don't work in any related field and am not associated with SpaceX or it's contractors. In this historic moment in history, I express my overwhelming support for SpaceX. The outcome of this decision will set the course of space travel and the dominance of the United States of America's space program. I want us to continue the advantage we have established of putting man in the moon. If we fail to take this opportunity it is certain that China and others will beat us to it. Guessing what that result might bring is not favorable. There is not a better government or company to do the task than the USA and SpaceX. I support the most aggressive path forward taking the environmental concerns into consideration and all reasonable steps taken to mitigate harm. It is in everyone's interest to do this safely and quickly. Thank you, Michael Williams [redacted]

FAA, I'm a huge fan of Spacex and it's mission. I believe it's really important to become a spacefaring civilization as fast as possible. So when I see tax dollars being spent only to throw on the brakes just to impeded progress it becomes pretty frustrating. Please do whatever it takes to speed up the process so we can continue. Best Regards, Andrew Watson

Please let Space X continue their efforts for space travel, launches and providing great advanced technology manufacturing jobs. Space X is critical pre requisite to space travel and they should be given the highest priority level of support and assistance to delivering on their partnership obligations in research and science as well as their own mission making human civilisation multiplanetary. Other countries will do this if the USA do not support them so it is in the whole national interest that you ensure they thrive as a launch operator and remove any obstacles that may hinder the countries progress.

Subject: America Desperately Needs SpaceX, Please Fully Support and Approve of SpaceX Plans!

Hello FAA,

I am totally in support of SpaceX's Starbase effort, and I am asking you to support them fully as well.

I am very much an environmentalist as well, ever since I went door to door fundraising for a regional environmental group in my college years. I understand there may be some animal habitats that are harmed, and some local residents annoyed within a few mile radius of the SpaceX facilities. However, the massive benefit to American taxpayers, and to all citizens that benefit from massively reduced costs to everything in space is well worth it.

If protecting the environment is an increasingly large concern of the FAA, I strongly encourage you to focus on environmental issues that are of much larger scale. For instance, how about banning all airports from using forever chemicals that are poisoning people all over the United States?
https://www.theguardian.com/australia-news/2021/oct/22/pfas-forever-chemicals-contaminate-waterways-soil-wisconsin T

In the meantime, please give full approval to SpaceX's boca chica Starbase plans since the benefit to humanity and the United States is many orders of magnitude larger than the inconveniences of local animals or unsupportive residents within a few square miles.

Additionally, China is quickly outpacing the United States in many technological areas and Russia and even North Korea continue to make significant space advancements. Stopping SpaceX in their plans would clearly delight all communist authoritarian dictatorships around the world. Please see this much larger picture and let SpaceX advance their Starbase as they plan. America's Future will be so much better for it, and so much worse without it.

Thank you !

-Tom

From: Alfredo Apolloni [redacted]
Sent: Saturday, October 23, 2021 2:08 PM
To: SpaceXBocaChica
Subject: Comment in Favor of FONSI

I would like to make a comment in favor of the FAA making a finding of no significant environmental impact. I would like the FAA to move forward with all possible speed to allow continued testing, development and operation of SpaceX Starship and Super Heavy launch site in Boca Chica.

The analysis presented was comprehensive and showed minimal and manageable impacts.

The FAA's work to speedily approve continued testing, development and launches is of critical importance to our country and the world. Super Heavy and Starship have represent a significant positive environmental opportunity for reducing carbon emissions in launches and in the manufacturing of non reusable rockets. Also the importance to our countries space leadership and strategic security can not be measured as other nations race ahead in space.

Thank you,

--

Subject: Comment in Support of SpaceX Operations in Boca Chica

Dear Sir or Madame:

I am urging the FAA not to make the mistake of unreasonably delaying the ongoing progress that we are witnessing by SpaceX
in preparing the SN20 Starship prototype for orbital flights as part of the ultimate goal of developing commercial and possibly military space flights to the Moon and Mars.

The reasons are as follows:

1. HINDERING SPACEX OP-ERATIONS IN BOCA CHICA WOULD ADVERSELY AFFECT THE NATIONAL SECURITY INTEREST OF THE US.

a) The Chinese communist government (CCP) has made it abundantly clear that they seek to dominate space and are already making territorial claims to the Moon .

b) The Chinese space program is run entirely by the Chinese military so their intentions with regard to space are driven by militaristic goals primarily of which is to displace the US as the number one military power on earth.

c) The Chinese government has shown to have engaged in malign activities harmful to the US over the years and so it can be assumed that China seeks to dominate space with the intention of gaining military advantages in the event of war. In short Chinese intentions towards the US are not benign

d) The US must not allow China to leapfrog her and become dominant in space for the reasons above.

e) If the FAA requires a FONSI that would set back SPACEX months or even years which would only allow adversaries like China the leg up in the race for space so to speak and potentially allow her to gain dominance which is the her ultimate goal.

f) SPACEX which already receives billions of dollars in government contracts from NASA and the DOD is a very vital component in maintaining US dominance in space and must not be unreasonably hindered in their work at Boca Chica .

2. THE MAIN ISSUES THAT OPPONENTS RAISE NAMELY ROAD ACCESS AND WILDLIFE AS WELL AS NOISE CAN READILY BE ADDRESSED AND RESOLVED AS SPACEX HAS SHOWN THE WILLINGNESS TO WORK WITH ENVIRONMENTAL GROUPS AND WITH THE LOCAL COMMUNITY IN THE PAST

a} SPACEX certainly possesses the financial means and has expressed the desire to do what is possible to address the concerns of environmentalists and the local community so it is thus operating in complete good faith..

b If history has shown major rocket launches and space operations by NASA in Cape Canaveral, Florida since the 1960s a location of many wildlife species did not adversely affect the local wildlife population. In fact they continue to flourish.

c) There is no reason why SPACXEX in working with the local community and authorities cant assure that the local wildlife will not be disturbed.

3. THE OVERWHELMING SUPPORT SHOWN FOR SPACEX AT THE ZOOM MEETINGS SHOWS THAT THE OVERALL CONSENSUS IS TO ALLOW SPACEX TO CONTINUE TO WORK AT BOCA CHICA

For the foregoing reasons I implore the FAA on behalf of many that it not issue a FONSI which is not necessary and to grant an immediate license to SPACEX to continue its work at the BOCA CHICA facility..

Regards,,

Jeff Exposito

Subject: Environmental expertise of Starbase

Hello from Russia!

What the SpaceX team is doing at Starbase right now is extremely important to humanity. This project is followed by millions of people and continues to captivate schoolchildren, students from different countries and ordinary people. Thanks to this project, the poorest region in the United States began to flourish, people are coming there again. Undoubtedly, there will be harm to nature. However, it cannot be compared with the damage caused by factories, plants, oil fields, which are located literally everywhere.
Moreover, if Project Starship succeeds, we will have an amazing opportunity to preserve living beings on other planets, completely eliminating the possibility of extinction.

Thank you for reading the letter, see you on Mars!

Sent: Saturday, October 23, 2021 3:42 PM
To: SpaceXBocaChica
Subject: Environmental Impact studies for SpaceX, Boca Chica, Texas

Hello:
Concerning the Environmental Impact studies for SpaceX, Boca Chica, Texas facility;
My Name is Stevan Akerley, [redacted]

1. I am concerned about adverse environmental impact, and suggest we find ways to ***Proactively Mitigate*** any serious problems as quickly as possible, not just stall and delay (analysis paralysis).
2. We need to use the Environmental Impact lessons learned from other launch facilities, some are in wetlands, such as Kennedy Space Center/Cape Canaveral, Wallops Island, and others like Vandenberg, etc. to enable a satisfactory solution to this Environmental Impact Study.
3. We need to consider and address the concerns of the local populace, not just brush them aside with 'Eminent Domain'.
4. I believe that the Starship and Super Heavy Booster are ***Critical Assets*** for the future of human space exploration. For cis-lunar space commerce, developing the Moon, and then finally Mars.
5. The Starship and Super Heavy Launcher are reusable, and represent a significant enhancement to the U.S. ability to launch payload into space at a much lower cost and more frequently than previously possible.
6. This is particularly important in the historical context of the current disposable (wasteful) launch systems, which end up being very expensive, infrequent, and have delayed progress as a result.
7. There may be other launch facilities that can be utilized to launch Starship and Super Heavy Boosters from, so that not all of the launches need to be from Boca Chica, Texas. Off-shore based launches may also be possible.
8. It is important to realize that this endeavor will spin up a new and large commercial market for supplies and services that are revolutionary for Space Exploration and Earth/Human Benefit.
9. Other potentially unfriendly international competitors are watching for opportunity to seize our lead in this area of technical development.

Thank you for your time.

Sincerely,
Stevan Akerley

Subject: Flight Operations at Boca Chica

I support the range of flight operations proposed by SpaceX at the Boca Chica site.

I think the environmental impact will be small, because only a small part of a large ecosystem will be impacted.

I also foresee a huge positive impact on the local economies.

Finally, SpaceX operations are in the national interest:
* Our national prestige will be enhanced by these operations,
* Our national stock of scientific, technological, and intellectual property will be increased,
* Our military capabilities will be enhanced by using Starship to deliver large military detachments rapidly to any place on Earth, and
* Our military capabilities will be enhanced by the ability to occupy bases on the Moon and Mars.

Subject: Free SpaceX to fly

Let SpaceX's Starship FLY!

I feel you're (the FAA) being overly bureaucratic just because you have to show how powerful the FAA agency is.

Yes, rockets are dangerous but the human race really needs space development to save the planet by moving the pollution of mining, materials production and energy off the surface. You have to start somewhere and build up and until Elon Musk started his path we weren't going anywhere but expensive boondoggles. After development then safety will increase and costs will go down and many great things will become possible.
Solar power in space (beaming it back to Earth) is ultimately the way to go but it's going to take huge tonages at first to seed the effort which current rocketry just can't economically do. The sooner you free up the development the sooner we can start cleaning up the damage. It might take 40 or 60 or 80 years to get to the turning point of beginning to move polluting activities off Earth but you have to start somewhere and every year you delay means another year at the back end longer.

FYI - I'm one of those individuals who went down to Boca Chica for one of the test launches. I stayed in South Padre so I realize that although it's remote and undeveloped at Boca Chica a city is just a few miles away. SpaceX engineers think it's far enough to be safe so and they are the one's actually facing the liability and legal ramifications if they are wrong so let's give them the chance.
Note I used to hold a FAA A&P so I REALLY understand flight safety and responsibility and I'd sign off on this if I could.

And although you might hear from a very vocal minority about stuff like ecological damage (I heard the term "environmental racism" and just shook my head and did a facepalm) these are the same type of beings who didn't want anyone to come down out of the trees or try to start using fire when we were still primates when humans started to evolve. Don't listen to them, they are always those who see progress as inherently bad instead of seeing that solutions will be found and things actually do get better.

Expanding our countries access to space is critical to our society in many ways. As our global lead in manufacturing continues to dwindle we have maintained an edge in development of new technologies but we continue outsourcing so much of the production overseas that our deficit is reaching critical levels. For this reason alone what space x is doing deserves support from our countries leadership to continue with its ambitious plan to design, build and launch its revolutionary rockets here in the United States. They are employing thousands of Americans and inspiring the next generation of engineers and scientists. As the issue at hand is the environmental impact there are extra considerations that need to be acknowledged. Launching to space can only be safely done from certain locations. The site in Texas is one such location. As coastal areas are highly developed there are not many options for a new company to have the space required to develop and launch rockets in the U.S. that can use the proximity to the equator to achieve useful orbits. Our access to space has revolutionized our understanding of our planet and climate. Cheaper and more reliable access is going to continue to improve our ability to recognize and act to improve our impact on the surface. Of course maintaining a lead in space technologies is critical to national security in the common sense of national security, but also vital to global security. The dinosaurs would still be around if they had a well funded space program. Although easily dismissed as a small risk, asteroid impact is a real threat to our way of life and spacex's mission to lower cost and expand our presence in space will help protect our planet in the future. Please consider the extreme importance of what spacex is attempting to do and the geograpicly restricted options for their location in fulfilling that goal. Thank you Alec Reeves

My name is Helena. SpaceX development of Starship and Starbase is an ambitious and humbling endeavor, that represents hope for humanity. Our ability to conceive a future so some day we may have a choice to live in Mars or on Earth. That is a significant choice that is freeing in so many ways. I understand that such an immense project may bring millions of people, investors, and other powers to Boca Chica, Brownsville, Matamoros and surrounding towns. The area will most definitely be transformed into a SpacePort. And that invasion of people being both passionate and business based is more threatening to wildlife than Starship could ever be. The definition of the land that must be protected from the politics of interests must be enforced now. Starship, being one or a whole fleet, cannot affect the environment as much as people usually do. I am writing to the FAA in reference to the assessment done involving environmental concerns and I am a supporter of SpaceX extraordinary and stellar development. Personally, seeing Starship every day being worked on has helped me work on my own challenges and traumas. I wouldn't want Starbase and surrounding natural and populated areas to be obstructed with political and cinematic interests that detour the real purpose of its goals. Starship gives everyone an ability in the world to dream in universal terms. The surrounding nature and oceans isolate and insulate its core value: to get vehicles ready to travel to and from Mars! Helena

What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - $4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from $ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet

I am fully in favor of SpaceX and its attempt to launch Starship into Earth orbit as soon as possible. I believe that the SpaceX has taken into consideration all of the environmental issues in and around the Boca Chica launch site and I firmly believe they will continue to do so. Having lived in Florida near the Cape Launch site I see no difference between NASA launches and what SpaceX is trying to accomplish. From a scientific point of view I believe that space travel is the next frontier of discovery for mankind. Therefore SpaceX should be encouraged to develop New and better technologies for that endeavor. Thank you for the opportunity to comment on this subject.

It is obvious that the development of these new spaceX technologies will pollute the environment for the moment at Boca chica.. However, it is in the development of these new technologies that less polluting solutions will certainly be found in the long term for the future. With the starship, the future of commercial aviation will take a major new turn. Suborbital aviation represents the future of long-haul commercial aviation. This suborbital aviation will pollute less than the current one. Sometimes you have to accept to pollute more at a given time to make a bet on the future and be greener tomorrow. We must not see only short-term ecological interests.Maybe spaceX will be seen as a pioneer of ecological transition in several decades. Philippe QUEMERAIS France.

Thank you in advance for supporting elon musk, space x and just our “little” human race to “boldly go where no man has gone before”…to deny us humans the possibility of doing everything we can to ensure that in the longrun we, as a species manage to survive and who knows even thrive and prosper throughout the universe. With such little time that we have in our short lives any delay could prove to be costly to our own survival as a species and to the survival of every other species on this planet. Time is of the essence here. Let us not waste anymore time. Let’s do this together as one world, one people, as it should be. United we stand and together as one we shall succeed. To space (x) and beyond. 🌎 🚀 ✨

We have to test Starship/Super Heavy continually. Here is my initial thoughts on concerns/positives outlined in Draft Programmatic Environmental Assessment: Concerns raised by commenters about the project included the following: ● Potential impacts on protected species and habitat - well if they are protected, there shouldn't be an impact on them. Superheavy needs to be built with a water armor shield that protects the species and habitats within the water shield technology. ● Potential cumulative effects of the proposed project and other development projects in the Rio - If you build it, they will come. That should be Super Heavy's moto. So if SuperHeavy is built right, then other developments and projects will come after Grande Valley ● Closure of public areas such as local roads and Boca Chica Beach - well, the beach could be a water source for the shielding technology, so yes, there may be need to shut the beach down or put certain parameters around it. ● Level of environmental review (i.e., the appropriateness of an EA versus an EIS) - no comment. ● Potential impacts on airspace - airspace will be fine, its just space... either you're on board of superheavy, or not... its really that simple. ● Potential impacts on minority and low-income residents - curious to if minority and low-income residents can also benefit and this be a positive for them not a concern. Superheavy should be able to gain power from other units to launch the water shield, which then will protect the low income/ surrounding residents. ● Potential impacts on land of cultural importance - water shield base should protect any cultural importance ● Safety of launch operations given the proximity to nearby liquified natural gas facilities - this is a concern, as the Superheavy may drawn energy from all sources, which could definitely impact liquidities natural gas facilities. Shouldnt the carbon monoxide barrier be neutralized after launch, so the system itself stays intact, as well as outside systems? ● Degradation of the environment due to test and launch operations - no comment. Positive impacts raised by commenters included the following: ● Economic benefits to the regional economy - everyone in region prospers from successful launch cycles. ● Continued innovation and progress in commercial space transportation - infinite solutions can be designed from SuperHeavy/Starship ● Benefits of reusable launch vehicles - You dont have to rebuild once it is complete, since it is reusable, seems like a definite positive. ● Job creation - Infinite/Millions of jobs can be created from maintaining and fueling starship/superheavy. ● Ideal southerly location - Yes. Thank you for your time. Best wishes, AY

Message

Dear FAA I am writing to show my support for spacex and spacex facility in Boca Chica Texas. This facility and the work that Elon musk is doing there is critical, not only to the US interests of maintaining space dominance but also critical to humanity as well. I agree with Elon musk that humanity must become a multi planetary species if we are to survive. The work that he is doing at a Boca Chica launch site is critical to reach this goal. So I am writing to request that you were prove his launches. I have read the preliminary environmental impact study as well as his proposed mitigation procedures. And I believe they are adequate when put up against the needs of the United States and humanity as a whole. Thank you for your time.

I support Starship program from SpaceX even if I am not an US citizen. It is one of the 1st steps to make space travel affordable and this will lead to the development of a hole new industry not only in US, but in Europe also. Everything that SpaceX is developing and building in Boca Chica is inspiring a new generation of children to start a career in STEM and I think we need all the engineering and science possible to reduce the pollution of this planet and to assure our survival for the future, and Starship program can deliver the 1st steps.

I am in support of SpaceX Starship Super Heavy Project at the Boca Chica Launch Site. The first prime reason is for the good of all humankind to survive a one planet devastation. The second prime reason is for the good of the nation to be ahead of our near-peer nation. The third prime reason is to lower the cost of space access to stir innovation and generate new sources of economic and technological benefits. Please DO NOT place further restrictions on SpaceX and it will stifle the rate of innovation for the American people and the world. Thank you for your consideration. Tohn

I am a citizen of the United States who has been watching space x doing great work to get us back in to space and make it possible for the future of man kind to expand beyond our planet earth. The reasons for doing that are far more numerous that not doing it. We need men like elon musk to motivate us and show us it can be achieved. If the faa hinders that process they will be doing a great injustice to mankind's future.

Message

I am writing in support of SpaceX's sub orbital launch test that is planned for next month out of Boca Chica, Texas. I was very young when the Apollo program was launching missions. My mother would wake me up to watch history being made. From Apollo through the Space Shuttles, I've never missed what has been going on for further space exploration. What SpaceX is doing, both with the work they did with the Falcon rockets and now crewed missions with the Dragon capsules to the ISS (something that I never thought I'd see happen launched from US soil again) has inspired generations of people to look back towards the stars and to see what the next big leap will be. The leap is being tested soon in Boca Chica. And in order to continue to innovate and create space craft safe for human travel, they need to be able to test launch and refine their technology. Will we get to Mars in my lifetime? Only time will tell, but it's exciting to watch and the innovations that will come out of this testing can only improve the American space program. Please give permission to SpaceX for testing their sub-orbital launch next month. At least it will be more than an expensive joy ride for some rich people. It is innovative, it is forward thinking and it will shape the hopes and dreams of generations who were inspired by the earlier space programs by looking towards the future. Thank you, Elaine Mello [redacted]

If you look at the time it takes to build a subway line, a [redacted] a highway…etc it has increased dramatically over the past 100 years and the cost has sky rocketed outpacing inflation. We are slowing down as a country. Mired in red tape. SpaceX is pushing against this decline and showing us that we can still do great things and do them quickly. They should be given our full support. Greatness can be ours, we just need to choose it. Please support SpaceX in doing why is needed so they can move even faster.

Hello, I understand and welcome this opportunity to submit my comments on the orbital class launch of SpaceX's Starship(SN20) mated to Super Heavy(Booster 4). This is in accordance with our democracy which allows the public to express their opinions on events that will directly impact our livelihood. I am utilizing this chance to voice my support for this Orbital Launch. I understand both sides as well as the tense controversy around it, however, I feel that the FAA should permit the launch. The argument that says the launch facility shouldn't be located in Boca Chica, TX is something that I believe to be fairly short sighted. The current location is paramount to human safety. If there were complications with a launch the ship could be very simply dropped in the Gulf and swiftly be extracted from the body of water in conjunction with the U.S. Coast Guard. However, I do understand the geographical advantage of relocating to Tennessee but, I don't think it has as many benefits as the current location. The FAA was created as we needed the regulation of Aviated Vehicular Transport. At that time, to my knowledge, that did not include space vehicles. However, the FAA's role has changed, and for the better. There is no question we need governmental regulation on the launching of space vehicles. Without that, public health would be put in danger and worse, not even know when they were in danger. However, while Administrative Regulators are essential to preserving our democracy they were not created to impose a bottleneck in the operations of this in which will directly impact the American people as well as some peoples' jobs. I feel very strongly that this launch will be better for the development of America as a country and as a society. Giving people something to look forward to with this possible launch is not within the duties of the FAA, what is, is to ensure that operation that will in which "provide some happiness" to a lot of space enthusiasts is the safest operation possible. Safety, as always is the most crucial thing to discuss. I understand that some people involved in this launch have a lot of political controversy around them. I must say, COVID-19 killed a lot of people this past year and 8 months however, politics has taken lives also. Due to that our current President has seen that political focus as a major flaw in our prior administration and has now stressed we need to start putting politics aside. I agree with the President that politics must be put aside. Especially on this topic, if we allow politics to win again, we lose traction and inhibit innovation which will ultimately kill democracy. Had we inhibited innovation 60 years ago, I can't comfortably say we would still be here today. Again, I want to thank the FAA for this opportunity to produce my comments and opinion on this topic and I hope what I have said is take into deep consideration.

Please stop holding humanity back. Humans need to colonize space as fast as possible. we need bases and colonies across the solar system to survive as a species. We need fuel depots and hydroponic storage facilities throughout the solar system. we need an academy to certify people willing to leave earth and how to survive in space operate equipment in space and live in space. Regulations need to become more relaxed when it comes to the ecosystem and animals. Just build a sanctuary and keep progress moving forward. Humanity is vulnerable and regulators government corporations need to take this more seriously. Viruses asteroids pulsars natural disasters could destroy humanity at any given second. It's not about the money it's about our way of survival. Elon musk is on the right path you have the power to give SpaceX special privileges and support. Give the man what he needs so we can survive the future. Humanity has no escape plan and we need educated people educating others throughout our solar system before something bad happens and we have no insurance plan. Coronavirus brought the world to its knees and it's not even the worst. We need a thousand people in space living on a colony of Mars by 2028 to assure humanity's survival for the future. They need to have children education and values separate from Earth. Humanity without prejudice ,racial profiling and corruption. Thank you for reading our survival depends on you.

I fully support SpaceX moving forward with their planned testing of Starship at Boca Chia TX. Do not stand in the way of progress of SpaceX, allow them to keep their aggressive schedule, the next Mars transfer window is Aug 2022, SpaceX needs testing to finalize equipment to be tested for this window else an additional two years for the next transfer window. If FAA slows SpaceX testing schedule down your will be greatly slowing down USA lead in space development, China and CCP would greatly appreciate you slowing the USA space programs down. FAA needs to show that they support a strong USA space development program. Wayne Page Topeka KS Private US citizen, not affiliated with space industry USN retired

I started liking science and started getting excited for future innovation and advancement in technology. People think that SpaceX should not waste mone on space technology but this are the people don't understand the wide scope of innovation in space which is done by SpaceX which will make their life easy to live. Humanity have only explored very very tiny portion of space and we may find new substance, elements etc that can help to humanity. So for me SpaceX should be allowed to do their work but should be ordered to nullify their environment effect.

Writing in support of SpaceX launch license request. Space exploration / development has lead to great advances on earth. And the united states having the ability to deliver for so cheap payload to orbits. Will allow better satellites to protect against natural disasters and better monitoring of environmental damages across the us and worldwide. This is in addition to the USA staying ahead of other countries. Adding large economic development to the area.

I think SpaceX should be given an updated launch license as they are attempting to rapidly improve the situation on earth as starship can be used not only for their goals of getting humans to Mars but to launch bigger abs heavier earth observing satellites. While this will not come without environmental impact I firmly believe SpaceX is taking all necessary steps to mitigate any damage to the surrounding environment and really do have the best interests of the residents and wildlife at heart.

I believe that it is crucial to expand the scope of civilisation through the means of sustainable habitation on planets other than our Earth. Space Exploration Technologies Corp. (SpaceX) is the leader in the ideology above-mentioned which is of no suprise given this is the companies mission statement. "The Company was founded in 2002 to revolutionize space technology, with the ultimate goal of enabling people to live on other planets." It would likely more greatly benefit humanity as a whole to not dampen SpaceXs' progressions in any way compared alternatively to its potential hindrance on humanity in the short-term. Regards, Samuel Wink

Space Exploration Technologies is one of the few companies that aims to make the future better for all. I do understand that in order to make that happen we need to make some compromises such as allowing them to use the land around the Boco Chica, even if that means that the wildlife refuge might be disturbed. The benefit in this case outmatches the sacrifice that needs to be made. Exploring is in our DNA as humans, SpaceX is daring to take us where no one has ever been. Allow them to take us to new heights.

Hello, I have followed the development of the SpaceX launch facility in Boca Chica since the early days in 2014. I believe from all I have read about the local support and opposition that the vast majority of people there are ardent supporters. We can’t allow a vocal few to stand in the way of such an important project. The mission of the FAA is to regulate but also to nurture new technologies. Thanks

Hello. When you have a company as unique as Space X doing everything it can so that we can get to the moon and mars, it is essential that we also give them our support. “We” includes me, who’s writing you this email, and it includes you, the Federal Aviation Administration, who has the power to make these dreams of space exploration and space colonization a reality! We live in a rare time in history where there is mostly peace and where we can put resources in rocket technology. So let’s use this once in a lifetime opportunity and allow Space X to do the Starship launches it needs to do next month. Thanks :)

I support SpaceX launching from Boca chica TX. What they are doing is far more important for human kind than most of us can imagine. They are going to open up the solar system for human settlement and exploration with the capabilities of starship which will only help enable our long term survival and prosperity. We could eventually stop relying on the earth for natural resources that can be found in space with the capabilities that a vehicle like this will bring about. It's like going from a canoe to a ship. If starship was not allowed to proceed from Boca chica this would be a setback to the entire human civilization in a way. Evan Sagar

Please approve Space X for launches from Texas. Having lived and visited around the Florida space coast for a good part of my 71 years, I can attest to the benefits to the surrounding economy and ecology. There has never before been as much wildlife and the area is preserved beautifully. Space X has already provided great benefits to the South Texas economy and will continue to do so. At the same time the wildlife benefits from a well maintained clean environment. The nation as a whole needs a new space center and Boca Chica is the best choice. Please expedite complete approval of Space X Texas launches. Thank You, Daniel Suggs

To whom it may concern, The American people, it's taxpayers and the promise of a viable, innovative and progressive Space program have been held hostage for decades. For too long, politicians with no will or conviction along with Space industrial complex interested in profits over innovation and progress have seen to it that the US Space program has languished. As a US citizen, and taxpayer, I urge you to fully support SpaceX and it's Starship program. With your guidance and collaboration to ensure timely communication and safety protocols, the Untied States and the citizens of not just the US, but all of Earth can now move forward and witness the advent of our society's place amongst the cosmos. Thank you for your time and consideration in my request. Respectfully submitted, Keith Nance

It is important to humanity and the United States that spacex be able to continue at its rapid pace of innovation and FAA regulations assist SpaceX and Tesla to navigate through safety measures quickly. It is particularly important to help us maintain and grow our lead in rocketry and Sustainable green future over China and Russia.

I fully support SpaceX's mission to develop a reusable starship platform at Boca Chica. This effort further's humanity's reach to the stars and should be supported to the extent needed to make that happen. There will be environmental concerns anywhere that a company undertakes such an endeavor. This country needs to continue to foster growth to this goal or risk losing momentum to another country or worse lose global momentum to this goal completely. If this effort by SpaceX isn't successful it is a non zero chance that humanity will begin the slow decline in space that we have experienced since Apollo, that shouldn't be allowed to happen.

Good morning, I think that the work that is being done in Boca Chica, Texas is something that has never been done before, Elon wants to start with the tests because he wants the first human launch to Mars to be in 2024, the project may involve something pollution, but we cannot ignore the great importance that this entails, it is a very ambitious project with which it seeks to facilitate and lower the costs of absolutely all trips to space (it is more pollution to spend on getting all the components and extracting everything that is needed to build a rocket every time one and the other is discarded and so on an infinity of times, that more than a rocket that is completely reused EVERYTHING, over time it will contaminate much less than what it would contaminate to extract materials every time. discard one after another), all of us who support Elon are more, because we know that his intentions are good and just thinking that in the future we will be able to have a child or grandchild, I saw seeing on Mars or in the stars is something very inspiring, since we come from the stars and we will return to them, this is very inspiring for the entire Aerospace community, being Mexican I have not seen someone who is inspired by that, but at the moment When the starship is launched I know it will make world news and can inspire to fly and create innovative things to be a more intelligent and advanced civilization, please let the starship fly

Dear FAA, I am writing you in order to support SpaceX company and Elon Musk in their commitments. I believe that humanity's future relays on these first steps, we need to rise our voice and stay by their side. Heart by heart, and soul by soul. In this way, united we are stronger, but divided we can do so little. During all this 19 years since SpaceX started to operate we have seen that dreams become a reality with Elon Musk and his fantastic team. We have lived with them the success and also we have learnt by their side. I consider that this is a wonderful beginning of a road that needs to be explorated by science and us, the interested in space traveling. It would be a pity if this project that can go further on that way is cancelled. I consider that traveling to space is a logical step in our history as human beings. Since unmemorable times we have looked at the stars, now we have the opportunity to fly among them, and not jut that but to explore other planets. It is necessary for science and necessary for us and that can be possible just with SpaceX and Elon Musk. Please honorable court, grant them the necessary permission to keep going in this marvelous journey, because with them and Elon Musk impossible becomes possible. I contemplate that the environmental issues are very important for the company and its CEO. I am very proud to be alive at this time and see future right here with us. What started as a dream now is evaluated as a very viable reality, this is no longer science fiction, so that, I believe this project won't benefit just to human beings but to our mother Earth too. Please approve any and all issues related to their capacity of achieving that reality without harming our planet. I am excited for their work, I hope you take the right decision and I am proud to send my little contribution. Thank you for the opportunity of rising my voice. Go SpaceX and God bless you!

Name is Hayden marshall I fully support SpaceX It is Truly inspirational. Wildlife at Kennedy space center is flourishing so we see it isn't bad for wildlife. It is Better for all ends of the socioeconomic scale. More money invested into space is 10x back into our economy. SpaceXs safety record is impeccable. Spacex record of helping out the environment is proof they will do the right thing. Their starlink is suppling internet and connecting impoverished communities. This Project is much bigger than just boca chica. We have the power to pave the way to the moon and beyond. I ask that the FAA approves SpaceXs launch license. Thank you for your time.

This is Dr Swapnil here. You have my full support for SpaceX's Starship launch as well as expansion of Boca Chica Starbase site! People are concerned about environmental impact but let me get this straight: The most environmental impact is made by all those ICE cars spewing out toxic fumes , those unregulated factories which pollute our atmosphere! Space Exploration is essential for the survival of human race and we sure can set aside some land for that. Things don't happen magically. If our planet faces a cataclysmic event , human species can not be expected to suddenly send a few hundred to Mars . That happens in movies . We can do that only if there is EXISTING infrastructure to shuttle humans between Earth, Mars , Moon etc and spaceX's Starship is the founder mission. Not to mention that SpaceX Starship's endeavours will help us here back on Earth. Please , let them launch. ASAP

Dear FAA, It is my sincere request that SpaceX's Starship developmental program be allowed to continue towards a first orbital flight and further on with agreed launch cadence. As an answer to the opposition's concerns I would like to say that even if there might be sizeable inconvenience for a bunch of residents, that pales in comparison to the importance of having such a mission whose objective is to LITERALLY insure humanity as a whole. This cannot be understated. EVERY construction project has a group of people incurring some sort of loss but that doesn't reduce the need for undertaking them. Am making this request not as a space nerd or SpaceX fanboy, but as a fellow earthling - another human who shares that curiosity and thirst for exploration, which has always been the reason why mankind has been able to achieve what it used to dream of.

I'd like to take this opportunity to voice my support for SpaceX to continue operations in South Texas. I believe orbital launches are essential towards the goals of the moon and mars. The infrastructure is well underway and the impact can be mitigated as they were on the Florida coast at Cape Canaveral. Having recently visited to watch the falcon heavy nine launch in 2019 and seeing bald eagles roosting in trees on the property it seems to me that the environmental needs and the technological needs are not mutually exclusive. Please consider this a vote in favor of continuing the progress and allowing orbital lunches from Boca Chica. Thank you for your time

To the FAA Right now you have the power to truly advance your nations access to space on a scale no other country can match, a rocket that can place 150 tons into orbit will be a phenomenal achievement, with it's low cost and rapid reusability, the USA will be a global leader in space, putting astronauts back on the moon before china does is critical to you, the FAA, giving SpaceX the permit it needs, I dont live in the states, but i Implore you to please grant SpaceX the regulatory approval without further delay so we can get humanity to the moon, mars and beyond China is advancing fast, as it seeks global domination on earth through it's economy, so it will seek domination in space and it's fast paced space program is evidence of this. Please do not slow down the rapid progress that SpaceX is making, give them the support they need to make America truly the greatest democratic nation. Thank you Derek

Please conduct a full EIS for starbase operations in boca chica. The whole situation with starbase is accelerating towards an accident waiting to happen, it would be quite the scandal when reviewed that the FAA kept giving Elon what he wants. Also why do so many musk ventures always attract drug cartels and is the FAA aware of this? https://foxsanantonio.com/news/yami-investigates/where-space-exploration-meets-the-cartels-and-their-drug-trafficking https://www.theverge.com/2018/8/16/17704274/tesla-gigafactory-drug-trafficking-cover-up-sec-whistleblower https://techcrunch.com/2018/08/16/new-whistleblower-claims-against-tesla-allege-drug-trafficking-theft-and-phone-hacking-coverup/ https://metro.co.uk/2019/07/15/drug-smugglers-using-teslas-autopilot-dodge-police-pablo-escobars-brother-claims-10319181/

Hello, I fully support SpaceX's efforts in Boca Chica, Florida as they continue to support our country's efforts in spaceflight and exploration. They have demonstrated exemplary engineering prowess and a smart commitment to safety throughout their existence. They have successfully taken NASA astronauts to space and back. I feel they will adhere to environmental and ground/flight safety regulations and work with the FAA to ensure public safety. Florida coasts have long been a place where rocket science and development have taken place safely and securely. As SpaceX is doing new things to advance spaceflight significantly and rapidly, it is important that regulators work with them to advance this technology safely but not unreasonably stifle innovation and progress. It has been over 60 years since such rapid progress was made. Decades have passed since the Mercury, Gemini, and Apollo programs. Progress was slowed thanks to the cyclic winds of government change. Now we have private companies like SpaceX funded privately AND publicly through government contracts making rapid advancements like we saw 60 years ago. This is what has to happen to advance our civilization. Please support them and aid them in being safe but not stifle or destroy their progress. I fully support SpaceX's ambitions here as a private company in support of our governments ambitions in space and spaceflight. Public and private sector working together to ensure rapid development and advancement in space science.

Please allow SpaceX to futher conduct its regular and orbital flight tests from boca chica space port, it is of critical importance for the military, social, and economic development of the USA. The success of the starship program will dramatically lower the cost of access to space, giving the USA an edge in its operations in space where we have recently seen an increase in competition with foreign, not so friendly countries. It will also surely increase the revenue american companies get providing access to space to thrid parties, this in turn will create high level, well paid jobs for americans and nourish the USA economy. I'm sure there must be ways to encourage the development of the starship program and make it compatible with saving the local wildlife, I´m sure SpaceX will be happy to comply with any requests in this sense. SpaceX is leading the way to a new brighter future and should be encouraged to do so. God bless America! Nacho Bevilacqua

Spacex is building technology that can fundamentally change the future of the human race. The goal to make life multi-planetary is not motivated by profit or power. The Brownsville area, which currently has one of the lowest standards of living in America, will be significantly improved due to the SpaceX facility. America will be the leader in the space industry if this project is able to continue without delay. Do not let the communists in China and Russia control space.

Support for SpaceX We balance risk with reward in decisions from pipelines to having visitors on the beach. Risk: Methane rockets leave almost residue even in a spill. If it would explode a steel rocket is the least toxic rocket you can make. Reward: - American competitiveness - Inspiration = resurgence of STEM = prosperity - Massive expansion of regional economy This is as simple as it gets. I support SpaceX efforts & hope you do to.

USA and the whole westerns countries are now facing the rise of China. Hampering SpaceX progress will ultimately see China winning this race for space over the USA. It is now imperative that the American authorities specially the FAA allow SpaceX to move forward and keep a gape against China. Otherwise space is going to be one of many area where the rest of the world would be lead by China.

Message

Sir/Ma'am, I would like to express my excitement, anticipation and support for the ambitious projects being undertaken by SpaceX at Boca Chica Tx. Not only is this an exciting project to watch develop but, I also strongly believe it is in the sincere best interest of us all as a human race. Never before has space exploration garnered so much fascination and interest from the general public on a global scale. There are so many opportunities that have come to fruition from the developments at Boca Chica, from engineering marvels to school children participating in valuable STEM discussions. The testing and development of SpaceX's Starship and Super Heavy booster, as well the build of the launch site and ground support facilities, has advanced at a staggering pace. It is clear that the progress of this project is constantly ahead of any normal advancement and has inevitably shifted a lot of focus onto the regulatory aspect of launches in general and the launch site as a whole. Without advancements in the efficiency of regulatory approval and a hastening of your procedures to be able to provide that approval, it is a concern that the project will stall while 'paperwork' and 'policy' is dealt with in order to give the green light. The FAA has to become quicker at this process. No one is asking to give SpaceX free reign to do as they please, or to be exempt from regulation, only that your approval processes become more streamlined and more efficient to enable quicker turnaround of the Starship test and development. I strongly believe that this is in the interest of the entire global population. I thank you for your time to consider all the responses that you have received and I look forward to seeing the first orbital Starship launch from Boca Chica. Kindest regards, Martyn Clarkson

Dear FAA, What SpaceX is doing is monumental. Their drive for developing a fully reusable rocket is vital in the effort to make space exploration and travel realistic for the masses, and they are second to none as of now. Having their launch site in Boca is critical for that success as there are no other locations with an eastward ocean to fly over suitable for such an experimental operation without large costal populations in the immediate vicinity. Cape Canaveral would be too busy with other launch operations for them to iterate at their desired pace. I believe they will do their best to maintain a small environmental footprint for the coastal ecosystem as well. Please fast track their efforts and issue a FONSI to help them as well as NASA, America, and the world as a whole finally open up the sky to a new frontier of exploration in a reasonable time frame. Sincerely, Paul Ogle

I'm not from the United States but I have a lot of admiration for the innovations that this country makes. I am a SpaceX admirer and would be very happy to one day live in Texas as close as possible to the SpaceX launch facilities of course with all the security you should have. I don't think the environment will be affected by releases as they will be done mostly on release platforms that are under construction. So I think in the name of technological development and human survival that allow SpaceX to make its launches from Starbase, Boca Chica Texa.

Dear FAA authorities, Thanks for the opportunity to provide feedback on the proposal. After the landing of man on moon to retiring the last space shuttle, USA has gone from an era of beating Russia in space exploration to shameless reliance on Russian Soyuz spacecraft to get humans into orbit. SpaceX single handedly not only restored the American pride by flying Americans back from home soil to orbit, but working hard to take us back to Moon and ostensibly enough to Mars. This time, the Russians are replaced by Chinese and the competition is formidable. Without SpaceX and it's starship, the Americans will be sitting on the sidelines and beyond embarrassed watching Chinese conquer space. FAA has an opportunity to lead the American effort led by SpaceX and go into history as the pioneering organization which made all of this possible. The amount of innovation and the underlying hard work by SpaceX at Boca chica Texas to accomplish this is an extraordinary effort led by brilliant American minds. I sincerely hope that FAA recognizes the significance of this moment in the history of this great nation and catapult the effort by approving the SpaceX request to launch starships from Boca chica Texas.

I think that Starbase is the key to the multi planetary future of the human race. The Starship/Superheavy vehicle will allow us to step foot on Mars and do things previously impossible. If SpaceX get given a launch license and approval for launch, the future of humanity's presence in space will begin. Besides human spaceflight, the Starship vehicle will be capable of launching 100+ tons to LEO for a cheaper price than any other vehicle. Starship isn’t just going to revolutionise spaceflight but also earth to earth transportation. The possibility of delivering goods or transporting humans to the opposite side of the planet for the price of a first class plane ticket will be unlocked by Starship. I am personally in 100% support of SpaceX and I can’t see any reason Starship would damage the environment any more than any other vehicle. Starship is our future so please grant SpaceX a launch license.

Please extend all your support for SPACE-X to move forward in expanding Star Ship and Super Heavy testing, launches, and further committing to making us a space traveling people with more opportunities for us to learn about space. I had a dream once of being an engineer/astronaut. Instead I'm a roofing contractor. Now I'm 40 and without Elon Musk amd SpaceX we would not have the opportunity to dominate in having the most experienced engineers competent in making vehicles for space, travel through space, return to the moon and protecting the USA us from foreign space threats… Pt 1: What SpaceX has accomplished for SPACE-X a U.S. Based Private Space Company and us the USA us 1. Returned 80% of commercial satellite launches back to US - $4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from $ 1bill in annual revenues for satellite, engine purchase and human flight Pt 2 4. Created 1st reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first commercially viable high speed broadband LEO satellite internet Pt 3 What are the arguments against SpaceX: - maybe a few exological considerations but nothing worth slowing down the momentum Spade X has. - creating a noisy environment well tell that to the farmers who have the city slowly surround their property to one day be told they can no longer farm because the cows and pigs, etc smell… Who would benefit from SpaceX slowing down: - China - Russia - Iran - Saudi Arabia etc… Please extend ALL your support to SPACE-X the USA & World's LEADING SPACE company! Sincerely, Juston Preble A family name which has been here since 1636 in what is now know as the state of Maine before the USA us was constituted.

In support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than $15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. This came with a commitment by SpaceX to invest $85M in the local economy and create at least 300 jobs. In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commerical spaceport would look like. It seems the FAA has bowed to a vocal minority of activists, and the state of Texas has been oddly silent in the matter rather than fighting for their investment as one might expect. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties.

I hope that as a Canadian, my thoughts will not be immediately dismissed. As someone whose family has dealt with many environmental reviews on m=both the governmental and business development side. I think that space X should be allowed to proceed they are far enough away from population sources and their mission is critical enough that they are good to proceed. we must always look at the net benefit and in this case, there is no real case to say the net benefit is not drastically in favour of SpaceX.

Dear FAA, The success of SpaceX/Starship has the potential to put America in the front of China and other countries, along with the economy impact of being the leader in many new industries which we not yet grasp right now. For that to happen SpaceX needs to move fast, a few years delay can mean a permanent lost of opportunity. Some environmental impacts should be accepted while others should be solved by working together with SpaceX. Therefore, I support SpaceX be given permission to proceed immediately with the understanding they need to handle serious environmental concerns in coordination with FAA. Thank you. Iwan Jahja

The proposed federal actions to permit Space X Starship/Super Heavy launch and landing at Boca Chica are good to go forward with. This development of space flight allows the expansion of travel to solar and interplanetary space, and also larger payloads into Earth orbit and to the moon. The Boca Chica location is still a correct place for this. The local disruption to traffic during permitted activities according to the schedule would be no more hardship here than at other locations, and arguably this location causes less hardship than many other. It may make sense to work out solutions to local traffic, outside the scope of this discussion. Any debris from aborted missions can be managed in this region by cleanup and has less risk of impacting built structures than in most other regions. The PEA looks right. It names what's being done and will cover the development process in the first year of Starship upon Super Heavy launches. I would expect at some point there will be a need to perform more regular launches on perhaps a monthly basis, but at that point the risk will be much less than in the first flights. Also, I expect a longer term project of installing a deluge system will come up, again after the first year. I find agreement with this PEA and hope to see Starlink upon Super Heavy make orbital flight over the next year.

Hello, I am a high school senior from Michigan and I would like to give my full support behind Starship/Superheavy launching from Boca Chica Texas. I believe it is extremely important to the future of not only the spaceflight industry but all of humanity. Starship inspires me every day so that I may one day work in the space industry as a robotics engineer

Please let STARSHIP do it's orbital flight test. This advancement to a multiplanetary race is crucial for the survival of human kind. Our planet can only handle around 10 billion people before resources become very scarce. The starship program is crucial for humanities advancement for a better tomorrow and will allow for much cheaper space travel and the ability to put large shipments of supplies and much more into orbit for future space projects and research. It is crucial we realize the importance of such a vehicle for future space advancements. Thank you for listening. #LETSN20FLY!!!

From my perspective the FAA has been established to ensure public safety and such. That doesn't seem to be what we have seen in practice. The bureaucratic process has only stifled and slowed our transition to space. Allow the transition into a space faring species at a faster rate. I feel you won't have a say for much longer anyway. What happens when people build and test their rockets on a different planet or the moon. Not much you could say about it then, so please stop standing in the way of actual progress.

Dear Sir / Madam I would like you to know that my dream has always been to go where no one has ever gone before. On earth we have no new frontiers and space is the second one for us to explore. One day we will be able to achieve inter dimensional travel but we can't achieve that until we explore the second frontier. Space x is on the cusp of letting humanity achieve exploration of the second frontier, this will also give us the resources for planet earth to achieve technological superiority. I look forward to seeing the space x launch to help us forward our technological advancement. Kindest regards George seinet

ATTENTION! The Spater X pace is much faster than the NASA pace with all of the high price contractors. Do not delay SpaceX rocket development with bureaucracy. Expedite the review process, the prep for testing and all else needed to get Starship man rated. Do not delay it so artemis can get to the Moon first. Get with the SpaceX schedule, work a little harder if necessary. Thank you. From an engineer who went to the same Purdue University as the many astronauts!

Message

Please approve Elon Musk to launch rockets. It's for humanity and a leap into space. He's bringing jobs, money and people to prosper the Rio Grande Valley. We have a house on [redacted] and would gladly put up with the noise during his launches. Cape Canaveral is also surrounded by wetlands and it does not seem to have an effect to their wildlife. Regards Nicole Sutti

To whom it may concern, I am writing this in support of SpaceX and their mission to return Americans to the moon and to Mars. I truly believe that SpaceX, with Elon Musks leadership, have united and reinvigorating Americans interests and fascination with space. Their ingenuity and rapid development makes every other company look as it's standing still. This is what we need, to utilize technology, catch up for lost time, to not only keep America a leader, but to further our knowledge and discoveries of all things space. Please support SpaceX and it's mission, work collaboratively, to expedite their needs and ensure safety for all, because together we can do wonders. Thank you!

To whom it may it may concern, I love the FAA, just like I love the USA. The history of both entities has been a fascination of mine, and inspired me to make my own journey across the Atlantic to live and work here and eventually become a citizen of the US. I opted into this country because of its pioneering, trail blazing spirit. You can probably see where I'm going with this, but I believe Elon Musk and SpaceX are the latest holders of this very uniquely American torch. I understand and respect regulations. I just want to lodge my request - please do everything you can to allow the innovation to happen at the breakneck speed they're capable of. Thank you.
Liam Dillon

Message

To whom it may concern, It has come to my understanding that SpaceX will be attempting an orbital launch which requires the approval from the FAA. I hope that this process can be done as soon as possible so as not to delay humanitiy's technological progress to space colonization, and exploration. This launch would also aid in the advance of technology on earth, allowing us to learn and utilize many of the technologies used even if the launch were to fail. I do understand that safety is a huge concern and should definitely be observed, but I hope your team would go through with your necessary checks with haste. SpaceX, the American people, and the entire world's space community, all look forward to your good news. Warmest regards, Wesley

Dear FAA, I support the orbital launch test of SpaceX . What SpaceX has done in the past twenty years proves that there is potential for human to travel in space. If they succeed, humans do not need to fight against each other to occupy the limited resources in earth. Moreover, the environmental issues caused by human activities can be somewhat resolved by moving some factories to other planets. I also believe that SpaceX already did enough measures to protect the local environment since they have done many launch tests in Boca Chica in the past and they got experience and technique to resolve all the concerns.

Hi, I do not live in the US (Netherlands), but would like to express my full support for what SpaceX is doing at Boca Chica, TX. It is of utmost importance to the world, and not just the US, that the human kind gets access to space like the Starship system is offering. I understand that Boca Chica is close to protected areas, but that should be manageable, the more because SpaceX eventually will move to offshore platforms, Loek Frederiks Nijmegen, The Netherlands (space enthousiast)

For the record, I am a registered voter, taxpayer and combat veteran. I also am 100% in favor of the approval of SpaceX's permit for launch tests and orbital launches from Boca Chica, Texas. On a side not, I recommend that the FAA update and modernize your permitting processes for space development and testing. This is a new era of commercial outerspace development vs. the last century's Government controlled and dominated space development. Join the 21st century. Fred A. ANDERSEN (The real FAA)

Dear FAA-- I write in strong support of the Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas. With regard to the positive impacts of this action, this program represents an important piece of our national defense, economic vitality, and technological and innovation competitiveness. Locally, it will provide a source of hope for smart and educated young people to stay in the community after graduation, as well as hundreds of good paying direct jobs. Indirectly, it will support many others in the hospitality and leisure industries. The Draft PEA also details the negative impacts to the environment. It appears that all of these impacts can be mitigated with careful coordination between SpaceX and federal, state, and local authorities. I ask that the FAA issue a Final PEA in a timely manner. Best regards-- Daniel Schmelzer

I do NOT want SpaceX granted permission to launch their rocket. Launching rockets is destroying our environment, literally displacing people, and should be left to NASA. This is setting a dangerous precedent that anyone with a billion dollars can launch a rocket into space with limited government oversight. (Looking at you, EIS reevaluation tactic, instead of a new survey being completed). Please do not grant them the allowance to do so.

I fully support SpaceX and truly feel that they will do everything within their ability to minimize any negative environmental impact they could have. The good that has already and will come from humanity's exploration in space will by far outweigh any problems that may arise in my opinion. It is amazing what has already been accomplished and I can't wait to see what the future will bring for the continued exploration of space. Again SpaceX has my full support. Michael Marzigliano

Hello FAA, this is a message from Germany because we care, we care about this planets future a big part of that is the starship project from Spacex. They are making this planet better they provide us, my generation and the 7.5 billion other human beings a better future. They inspire young people to go into science to become a part of the next world changing project. To make that happen we need your support so please the make it possible, you have the power to make a difference. You guys are doing a great job and have shown in the past that you know how to make great projects like the upcoming orbital launch of starship reality. Thanks for caring. Your future human beings, who want to make this world a better place. Greetings from Germany Jerrit

I hold an FAA ATPL (H) and have been part of the aviation scene for over 20 years working for several of the worlds largest aircraft Operators based out of the U.S. I have witnessed SPACEX grow from nothing to something. SPACEX is not only good for BoCA CHICA, Brownsville, the State of Texas, the USA but for humanity in new ways to advance technology forward at a greater pace to explore ways on how it is possible to reduce CO2. Todays, tech advancements have slumped to a slow pace in comparison to what happened in the first 50 years of the 20'th century. The world needs this, there is nothing which is Space driven advancing as quick as SPACEX- it would be a major set back for the human race to not allow this to move forward. This world needs to be fixed and this is offering an opportunity to fix it- Advance tech outside of the norm, open the possibilities of new industry, create jobs, be the greatest nation on Earth- this is why the world looks up to the U.S, Regards Marcus Clemitson

Hello To whom it may concern I want to start off by saying Spacex is doing incredible job for America they are making America self sufficient in space industry which is a big goal and then they have other goals to achieve which are great goals like Starship which is a great vision for humanity by doing these kind of goals not only they are a great inspiration for many people they also discover and perfect a lot of new ideas and tools for space industry and if you guys really concern about environmental damage you guys need to go after Giant Industries and companies that really harm and pollute the environment not Spacex which should be applaud and supported . So I completely support them . Thank You

Strongly in support of spaceX and their Starbase operations in Boca Chica. No one wants to see the environment harmed or bird populations displaced. We need to build advanced rockets and launch facilities, these have to go somewhere. The exact same wildlife lives a few miles north on south padre island and no one seems to have a problem with hotels and trailer parks disrupting the environment there. As long as SpaceX is not reckless and takes reasonable steps to protect the environment they should be able to proceed. We need companies like spaceX to continue to push the limits of rocket technology so that we do not fall behind other countries (China). It would be a shame for the US to lose this modern space race due to some concerns of beach closures or birds being displaced.

Dear FAA, Thank you for all the services that provide for our country. The first orbital test flight of starship will be a historical event that many are anticipating. I endear you to allow SpaceX to move forward with the November launch. I work for an environmental engineering firm and I understand the need for environmental compliance. But, there has to be a balance and in this case we need to allow these tests to progress. If we fail to do this, we will stall our species path forward to colonizing the Moon and beyond.

I support allowing SpaceX to move forward with the Boca Chica launch site in regards to the FAAs PEA. The developments and rapid progress that SpaceX has achieved, and continues to achieve, yield a broad array of benefits across multiple industries, communities, and nations. These achievements, like any daily action undertaken by people, have some cost on the environment. However, the environmental costs to Boca Chica and the surrounding area and its residents, as laid out in the draft PEA, are negligibly small when held against the benefits of the SpaceX achievements and plans. SpaceX should continue to work to minimize any environmental costs, but their test program should be allowed to continue with the next phase of orbital launches. Thank you for your time and consideration.

I support the exploration of space and the licensing of SpaceX facility in Boca Chica in support of that goal. The benefits of space exploration are economic, nationally strategic and they give meaning and purpose to life. The benefits outweigh the politically motivated arguments financed by SpaceX competitor companies (e.g. Blue Origin). Don’t let competitors use the “not in my backyard” environmentalists argument to stifle innovation and the results of fairly conducted competition. The Nasa Artemis program depends on the Starship. It’s also necessary if we are going to maintain our position as a world leader against Communist China.

Hello, I would like to add my name to the list of people who wholeheartedly support the SpaceX Starship program at Boca Chica. As someone who has spent significant time in the Rio Grande Valley, I know that the area has struggled with poverty and a lack of economic growth for decades. SpaceX has completely turned that around and it will only continue to improve in the future. The economic impact betters the life of every resident and the children in the RGV area now have hope for a better future that they would never have without SpaceX. The program needs to be allowed to continue for them, their future, and the future of the community. I also believe that the SpaceX Starship program at Boca Chica is something that will bring our country together in ways not seen since the space race of the 1960s. In a time where we are a divided nation, we need something to help us come together and share a sense of national pride. Lastly, trust in the government has never been lower, but the FAA is an agency that the people still respect to do the right thing. For the betterment of the local community and for our nation, I ask you to allow SpaceX to continue it's Starship development program at Boca Chica. Thank You, Shaun

Dear FAA, I fully support SpaceX's activities in southern Texas at their Boca Chica site in addition to their plans for expansion. The drive that this company has inspires me along with millions of other people. The progress they have made in the past several years is unheard of, especially in the aerospace industry, and I cannot wait to see where the future leads. While I hope the FAA continues to ensure safe testing at the Boca Chic site, I also hope that they cooperate with SpaceX to help ensure that safety clearance is obtained in an expedited manner given the importance of the testing going on at that location. Once again, SpaceX has my support and I hope they have earned yours as well. Respectfully, Joseph Bridenstine, MD LT, MC, USN Student Naval Flight Surgeon

SpaceX is the company of the future. Environmental consciousness is the maine goal of the company, and it would just be impeding on progress to take any steps towards stopping manufacture and testing. Please do not stop the United States from leading the world in the newest space race. We can be among the stars in this generation of SpaceX continues at its current pace. Let’s help them reach this goal and pave a clear path towards humanities bright future.

The Starship development programme is crucial in ensuring the US and the West's dominance in space. China has announced major Mars plans and is moving full speed ahead, whereas NASA's SLS rocket faces delays. While I understand the short-term environmental concerns, long-term, the settlement of Space will alleviate massive pressure from Earth's ecosystem as manufacturing and mining operations happen off-world. It would be a shame to hinder this, and hold the US back. Adam S K.

Hi - Protecting our environment and slowing the effects of climate change are of the highest importance to me. However, I believe it's also critical we make humans a multi-planetary species as soon as possible, as our window to do so could be very small. SpaceX is the only company taking this matter seriously with the urgency we need. While I expect them to take every precaution to protect the surrounding area of the launch site and follow all regulations, we cannot allow them to be blocked by excessive bureaucracy. I hope the FAA can expedite any and all licenses / approvals needed to help us reach this critical goal. The US is in a great position to take the lead in this, but if we don't then another country surely will.

Hello, my name is Michele Vietti and I am a fifteen year old Italian. I am writing this email because I want to do my part in the future of humanity in space. About a year and six months ago I met Elon and SpaceX, my amazement at seeing a rocket being launched and then land was unprecedented. Now I'm studying computer science, but I'm learning the physics of rockets and their propulsion systems at the same time. By telling this story, I want to make you understand, to you who are reading: that the Starship project is not just a rocket, it represents the inspiration of millions of people for a better future for all of humanity. So I ask you to give Elon and all of SpaceX all permissions, so as not to stop this dream. TO THE MOON - TO MARS - AND BEYOND. Thanks for listening to me.

Dear FAA I am writing to show my support for spacex and spacex facility in Boca Chica Texas. This facility and the work that Elon musk is doing there is critical, not only to the US interests of maintaining space dominance but also critical to humanity as well. I agree with Elon musk that humanity must become a multi planetary species if we are to survive. The work that he is doing at a Boca Chica launch site is critical to reach this goal. So I am writing to request that you were prove his launches. I have read the preliminary environmental impact study as well as his proposed mitigation procedures. And I believe they are adequate when put up against the needs of the United States and humanity as a whole. Thank you for your time.

My name is Zach Turek. I am not a resident of Texas nor affiliated with any of the parties in question in any way - I am simply an onlooker - but as a citizen of the United States, I would like to express my full support for the prompt finalization of the current draft PEA and related launch licenses requested by SpaceX for the Boca Chica launch facility. I have reviewed the document, and having past experience with similar environmental reviews, the document is clearly incredibly thorough, comprehensive, and more than sufficient to identify any potential impacts, in addition to ways to responsibly mitigate them. As the document accurately notes, there will be impacts. The FAA well knows this is to be expected with any undertaking of any scale, whether the activity in question is constructing a shed in a backyard or a space launch facility, which necessarily must be located on a southerly coast. As the document also accurately notes, all of the impacts can and will be mitigated to a reasonable degree - again, it is quite literally impossible to walk out the front door without impacting the environment in some way. It is not feasible, realistic, nor beneficial to attempt to completely eliminate any impacts, but rather, the appropriate and responsible approach is to seek to mitigate such impacts wherever possible while moving forward, as currently proposed by the FAA. We need only to look to the launch complexes in Cape Canaveral to understand this can be accomplished responsibly. Perhaps the biggest tragedy of the past century is the United States' regression in space technology, advancement, and exploration. From 1972 to 2021, the United States has gone from having the ability to land humans on another celestial body to not being able to take humans beyond low-earth orbit. Here, our generation has a chance to undo this tragedy, which will have incredible implications for untold facets of research and technology advancement, exploration, national security, and national prestige, as well. That is not at all to say that the proposed action should be allowed to proceed without consideration for the surrounding environment, only that it is abundantly clear that the existing document already does so in excruciating detail. Perhaps the only tragedy that could be worse than the one outlined above would be if the progress being made today to revolutionize the United States' access and capability in space was delayed indefinitely or prevented altogether by excessive regulation, which would certainly be the case were an inappropriate and unnecessary EIS to be undertaken. We have an obligation to our environment, but to our nation as well. Progress must be allowed to proceed - and it can be done responsibly, as the FAA clearly understands based on the current draft PEA. I once again urge the FAA to promptly finalize the existing PEA and grant all necessary licenses required for progress to proceed with our generation's Apollo program. The tiered solution currently proposed by the FAA is absolutely the correct one in this case. It is imperative to our national interests as well as future generations to come, who will undoubtedly view this time in history as a defining moment, if we make the correct choices and actions now. Thank you for your important efforts and for your time.

Dear FAA I am writing to show my support for spacex and spacex facility in Boca Chica Texas. This facility and the work that Elon musk is doing there is critical, not only to the US interests of maintaining space dominance but also critical to humanity as well. I agree with Elon musk that humanity must become a multi planetary species if we are to survive. The work that he is doing at a Boca Chica launch site is critical to reach this goal. So I am writing to request that you were prove his launches. I have read the preliminary environmental impact study as well as his proposed mitigation procedures. And I believe they are adequate when put up against the needs of the United States and humanity as a whole. Thank you for your time.

Thank you for the opportunity to comment on the current draft Programmatic Environmental Assessment. I believe the draft PEA has done a good job of weighing the issues associated with the proposed SpaceX activities. I agree with the Proposed Action. The FAA should issue the relevant permits and licenses to allow SpaceX to proceed with its Starship/Super Heavy program at Boca Chica. Many potential impacts were reviewed and most found negligible. It would appear that the area of greatest concern to many parties is the possible impact on the surrounding habitat and wildlife. It is necessary for public safety that launch facilities be located away from population centers, which means wherever you put it you will always be displacing some habitat and wildlife. The Starship/Super Heavy program is groundbreaking and important to space development, which is a strategic segment of our economy and important to the future of mankind. Large sections of the Texas Gulf Coast are already set aside as wildlife refuges. I think we can risk some impact in this small area, and I am confident SpaceX will diligently implement the agreed on mitigation plans. I've been a civil engineer for over 40 years. I believe this program can go forward without jeopardizing the unique ecosystem of this area.

What SpaceX accomplished for US:- 1.Returned 80% of commercial satellite launches back to US - $4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from $ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet Elon announced Starship's first orbital launch attempt by next month, pending regulatory approval. Please extend ALL the support you can to US/World's LEADING SPACE company .

The advancements of SpaceX the last years and NASA's new commitment to Artemis have felt like a new era of technical innovation. Space exploration is not the most important thing for humanity in itself. Though I think it will be much beneficial to have sustainable habitats on the Moon and Mars, and that science done in space helps us with many problems on Earth, that is not what makes space travel crucial to humanity. Instead, I believe that the simple fact that spaceflight is inspiring, and cool, is its most valuable attribute. If the youth wake up in a world where people regularly go to the Moon thanks to technical marbles like the Saturn V or Starship, more will be inspired by science and engineering. Science shouldn't be presented as math formulas in a textbook, but as cool aspects of human society. Having a lot of educated and engaged engineers is crucial to the economy and welfare of any nation, and the world. That's why I think that it is important that SpaceX can continue the rapid development of fully reusable spacecraft.

Hello, Elon Musk is my idol and I completely believe and am invested in his vision of make humanity multi-planetary. Elon has been the only person to push for this as soon as possible, and once he is gone, I believe the venture or race to accomplish this will slow down drastically. We must move with speed in the present. Launching starship to orbit for the first time is a very important step in achieving his (and millions of others') vision.

SpaceX is attempting to make humanity multi-planetary. This is a very big deal. The earth will not always be habitable. Humanity must eventually go to the stars or go extinct. Obviously that is likely far, far in the future, millions of years in fact. But the technologies we develop in the attempt to settle the moon and mars may be vital to saving the earth from severe environmental degradation. Perhaps more importantly, the Chinese are close on SpaceX's heals. If we slow down SpaceX then the Chinese will soon dominate space. Do you really want to cede control of space to the Chinese? I wouldn't put it pass them to declare the moon and mars as Chinese territory once they start building permanent outposts. Texas has over 350 miles of coastline. We can afford to give up unfettered access to a tiny portion of that for such an important national interest. And by the way, the SLS is obsolete and nothing but pork. It will launch a handful of times at most. If we want America to lead in space then SpaceX is our only realistic hope.

SpaceX NEEDS to be approved for Starship launches. SpaceX is NOT the type of company that cuts corners, shown by their high mission success rate even for orbital missions. Their advancements are advancements for first, our entire country, and secondly, the world. SpaceX will be key for the United States to maintain a stable lead in space technologies and space travel. Once again, SpaceX must be approved because the advancement of the human race will be sped up quickly if they are. People's lives will improve through space discoveries like NASA has already done.

Dear FAA I am writing to show my support for spacex and spacex facility in Boca Chica Texas. This facility and the work that Elon musk is doing there is critical, not only to the US interests of maintaining space dominance but also critical to humanity as well. I agree with Elon musk that humanity must become a multi planetary species if we are to survive. The work that he is doing at a Boca Chica launch site is critical to reach this goal. So I am writing to request that you were prove his launches. I have read the preliminary environmental impact study as well as his proposed mitigation procedures. And I believe they are adequate when put up against the needs of the United States and humanity as a whole. Thank you for your time.

I am writing in support of rapid approval of SpaceX orbital missions of their Starship rocket from their Starbase facility in South Texas. As a Texan, I am very serious about preserving our environment. For example, I own a 5-acre property here in Texas that is a certified monarch butterfly waystation, as well as a certified wildlife refuge. And I am fully confident that SpaceX is also serious about our environment and will conscientiously minimize any disruption to the surrounding ecology on a continuing basis. Of course, the other factor that must be considered is the importance of SpaceX to America's competitive space position. The reality is that SpaceX is the only American organization that is delivering the type of innovations that will enable the United States to be competitive with China over the coming years. Hindering SpaceX's delivery of these innovations will clearly be to the detriment of US space interests, and this reality must be considered when also weighing any possible local or ecological impacts.

Dear Sir / Madam, I humbly add my voice of support for the approval of Evironmental Assessment for SpaceX. Although it is recognized by all that there will be some impact on the environment, the work being done by SpaceX will fundamentally change humanity forever when they succeed. The light of consciousness must be kept alight and protected, and developing the necessary technologies needed to extend humanity beyond this planet is the only way to achieve this. This can only be done through an audacious programme like StarShip. Please give SpaceX the approval they need. Kind Regards Michae Ocran, UK.

To whom this may concern - greetings from Australia. In order for western countries, lead by the United States of America, to maintain a long-held lead in human access to and the peaceful development of, near-Earth space, urgent action is required. We believe that SpaceX will provide the US and its allies an immense technological and economical lead in access to space in the near-term. It is our understanding that SpaceX's Boca Chica facilities are set amidst, or in close proximity to, a significant wildlife heritage/conservation region. It is prudent therefore to consider most deeply the impact (no pun intended) of their activities on this location. Having attempted to maintain a close awareness of SpaceX's activities, we believe that any conditions imposed under a licensing agreement will be met with integrity such as to maintain faithfulness with authorities and the American people. We support most earnestly, SpaceX's developments at Boca Chica and the Federal Aviation Administration's role in ensuring the very best possible outcomes for the people of the United States and for humanity's peaceful access to space.

Dear FAA, I don't believe there should be a need for regulation, when a company proves that it does the right things and cares about doing them safely. If the wright brothers had to follow regulation, I don't believe they would have ever created a flying machine. Maybe that would have been accomplished somewhere else first. Please let SpaceX do what they need to do, to accomplish a mission that would eventually be regulated by understanding the limitations that were found by venturing there. Very Respectfully, Kamal William Katul

To Whom It May Concern: I fully support SpaceX' first orbital launch with Starship. As selected by NASA for the HLS mission, this orbital launch will be a very important test to learn from to ensure our next human missions to the Moon and Mars are safe and successful. SpaceX mission is as grand as it is noble. As politics cloud our judgement for the urgency to stop climate change, SpaceX may be critical to extending the light of human consciousness beyond planet Earth which many take for granted. Thank you for your time and consideration in allowing SpaceX' Starship orbital launch. Best, Freddy

Good morning, Being an enthusiastic space/rockets fan, I request you to give SpaceX approvals for the orbital test of Starship (and speed up for future approvals also). The faster, the better for humanity to learn and adapt to becoming a space-facering civilization. Let's collaborate to expanding the scope and scale of human consciousness.

Hello FAA Decision Makers, Thank you for what you do to keep us safe and thank you for changing with the times. (Not easy these days.) I am a Native Texan born and raised and still live in Texas. I also have Native American lineage. Boca Chica like Florida is a great place to launch from. I 100% support SpaceX and Elon Musk who has shown love of the community. Jumped into action when the aquarium lost power and saved many sea turtles at one time. Host tours of school children. Making power and water for the site. Making fuel and LOX for Starship. Adopt a highway. Let's move forward with deliberate speed please. SpaceX and Elon Musk have shown they are thoughtful and compliant. Let's move forward with urgency. Thank you all, God bless America and God bless Texas! Kendall Winters [redacted]

Dear sir /mam As you are aware that Space X is not just a rocket company which sends a few rockets to orbit and come back just like some Rocket companies do. But Space X is Building the future in trying to make The life multiplanatary and Elon musk is a very visionary man trying to change the world.And space X is trying to build a starship which takes life to Mars and other planets.And it's Elon's and many other people's dream to see starship fly. So I would request to let space X "starship" fly as early as possible by atleat next month I.e Nov 2021. Would appreciate if you could approve the starship to fly as early as possible.

The rapid development of Starship in Boca Chica is incredibly important. If orbital launches can take place regularly there, it will bring in tourists and other supporting businesses, helping a poorer part of the country. The ambitious scale of this project makes it one of few projects that will transform spaceflight if it succeeds. The cost savings of a fully reusable, heavy lift vehicle will benefit the government due to cost reductions. That being said, SpaceX should continue to care for the natural environment around their site, offset their carbon emissions and never compromise safety.

I just sent an opinion regarding space exploration and started reading the PEA considerations. I just got to the map of where the launch site takes place and was alarmed that it is right beside Mexico. I have not read any further on in the PEA document but has Mexico been consulted about these launches on their doorstep or have their opinions and concerns not been addressed? Though security of the US has always been a prime consideration perhaps Mexico should have some strong opinion and be consulted and involved in all this.

SpaceX is single handily helping battle the mental health epidemic caused by the covid pandemic. They can no longer continue while the FAA are holding them back. Let me explain. Every day people wake up feeling there is no hope in the world. There is nothing in the long term future to be excited about. The only thing we have is SpaceX's StarShip program which offers daily updates and real promise and exciting events we can look forward to in the near term, mid term and long term. Each launch of the StarShip and Super Heavy Booster gets us closer to a new exciting world of multi planet civilisation. Without SpaceX there is no hope in our life times of achieving this life changing event. Please unblock SpaceX and allow them to get back to inspiring and helping alleviate the mass depression that is oppressing so many young people all around the world. Thank you for taking the time to listen to this serious and life changing message.

What's happening in Boca Chica is one of the most captivating and inspiring efforts I have ever followed along with. I genuinely got through the pandemic with the help of daily streams of progress from the growing Starbase complex - streams backdropped with, and complemented by, the beautiful herons, fields, waves and sunsets of the area. Starship and future spaceflight endeavors from Texas will pave the way for safe, accessible and sustainable operations beyond earth, from global satellite internet to civilian trips to space -- both of which can foster increased understanding, appreciation and respect for the planet we live in, and the delicate balance it requires to sustain that life. SpaceX and its sister companies are based on the principle of minimizing pollution and waste without sacrificing on innovation / ambition, and society as a whole will benefit from their efforts. Please consider these wider potential positive impacts, in conducting this and future reviews. There are a lot of folks like me who feel incredibly lucky to be alive in this time of renewed -- and accelerating -- innovation in spaceflight, and I for one think Texas is the perfect incubator for that to happen. Thanks! Chris Stanley (Security engineer from Arkansas)

Hello good afternoon I introduce myself, I am Jefferson Peñafiel, 18 years old and I unconditionally support the space x team I think that this launch should be carried out because it is an opportunity for the development of humanity, this will change the way of thinking of many causing them to be inspired and want to lead their lives Through a path of innovation, I know that the problem is concern for the environment and the disagreement of nearby residents and it is normal for them to do so if I am not mistaken, the disgusted people are of legal age and I can come to understand it .. they are from another generation different way of growing up creating an ideology characteristic of its generation, as a young person of the present and an adult of the future I am committed to leading a dignified life with technological advances that favor the development and health of humanity that is why we need this flight to be possible to inspire to people, the possible solutions that I propose in reference to the displeasure of the residents is that I agree to speak more Go well with them and convince them that it is for the better or to persuade them to try to buy their land ... and regarding the fauna and animal life that measures are implemented so as not to interfere with their habitat and if it is not possible to try to mobilize the species to another habitat. "What space x is doing is incredible and you know it" Thank you for reading it, sorry if it is difficult for you to understand something since to communicate I use a translator

"we don't choose to go to the moon because it is easy, but we are renewed as humanity through exploration" My name is moses and I am inspired by the hope of humanity's future through the activities taking place now to advance it. I'm an insurance professional by carrier, and one of the principal of our business is "insurable intrest without which we wouldn't exist. What spacex is doing is proving that humanity has indeed insurable interest and thas becoming multiplanetary citizens. Likewise there will be risks, which can be mitigated given the chance and right approach which they have demonstrated. The early merchants and traders did not seaze from trading due to the risks involved, instead they joined forces in creating risk averse measures and by doing so greatly improved humanity. I urge you to consider this as a one time chance that by all means should be treated as such and only. Warm regards Moses Wahinya Global citizen

Hello my name is David lax I study at one of the utc engineering colleges in the UK. And I have been so inspired by Spacex to the point I am willing to take the biggest risk of my life and move to American and try and get a job at this revolutionary company. I hope the orbital launch goes ahead along with so many of my friends and peers I am sorry if there has been any spelling mistakes in this because of my dyslexia all I will say is please help this launch go ahead Spacex is one of the only thing that gives me hope for us all to who is ever reading this thanks you for your time and thank you for letting me have hope for the future.

I am proud to be an American. Proud of American technological prowess and ingenuity!!! European, Russian and the Chinese, India, Japan and the World is watching us. Let's give them something to show for all that American prowess. Americans are excited and proud of our space program, the space and SpaceX!!! Star Base at Boca Chica, Texas will do it, will make us proud as Americans. Can wait to see Starship fly. Pride and joy will bring tears to my eyes!!! Let's GO!!!

To whom it may concern, There are very few times in human history where a small group of people or sometimes only one person can alter the course of humanity. Sometimes this is for the better, but not always. The efforts of SpaceX guided by the vision of Elon Musk to make life interplanetary is, in my view, the most profound of such a time in our history. For this reason alone, should the FAA assist SpaceX in any way possible. This does not mean that we blindly approve everything, but that we judge requests from SpaceX in light of their mission. That being said, for their initial request to continue to test and develop the Starship system, please grant them immediate approval for their requested test flight from Boca Chica, Texas. Warmest regards, R. Olaf van IJperen

Dear Sir/Madam: Our planet needs humans to advance their technology in order to save habitats. Just as property condemnation-purchases are necessary to promote the greater public good, BocaChica's continued development by SpaceX will advance our space faring technologies such that the greater public good is served. Any undue delay in approvals that may slow or hinder SpaceX progress may be judged by our progeny as short-sighted and tragic vis-a-vis both the future of our planet as well as humanity. Sincerely, George Viveiros Mendham, NJ

SpaceX is proven to be a responsible company that goes above and beyond what is necessary to address environmental concerns at Starbase in Boca Chica, Texas. Starbase puts safety first and meets all financial responsibilities. SpaceX is transparent in all that they do allowing cameras and videos of their operations. Starbase contributes to the financial prosperity of surrounding cities and schools and engages in supporting the communities cannot launch the Starship/Super Heavy . Denying Starbase FAA approval puts all the above mentioned at risk and also seriously jeopardizes the United States's place in space. SpaceX is critical to the future of America.

The proposed space flights from Boca Chica represent a major step forward in the use of space to help humanity. Please consider the cost-benefit trade when assessing the environmental study. If, as seems likely, SpaceX succeed in developing a reuseable launcher, then the expansion in the use of space - even just viewed through the narrow lens of earth observation satellites (eg Landsat) will have greater broad environmental benefits that any loss of amenity around the local launch area. sincerely, Craig Benson

Please approve SpaceX 's permit to persue their mission to allow the USA, and World to get ahead of the space race. Only by allowing Elon and his team to have their own space station, they can launch Spaceship and the super heavy booster, to set up first a station on the moon, and later on Mars. Also with the Boca Chica station approved they can regularly launch and advance new technologies and truly save humanity in the case of a future catastrophic event. As a private space station Elon has proofed that he can advance much faster than NASA can with budget restrains. Please help save humanity.

As a US citizen and taxpayer, I'm in favor of the FAA granting SpaceX the license to fly from Boca Chica. Their efforts and innovation can only help the US on many fronts. Any environmental concerns should be weighed against the benefits to taxpayers (competition for private space industry vs. costly NASA one-off launches) and the unforseen benefits that we don't even know of yet. I can only hope that anyone who argues against this approval gives the same effort in arguing against any & all gas/oil companies doing business in the region. Thanks, David

SpaceX has my full support in Boca Chica. To say that SpaceX presents a massive risk to the wildlife refuge is just false. NASA's Kennedy Space Center has been located on a wildlife refuge for many many years and it seems to a great synergy and has not negatively impacted the refuge.

I am in full support of SpaceX's Starbase operations in Boca Chica, Texas. SpaceX has proven themselves to be brilliant engineers in the aerospace industry while maintaining concern for environmental impact. SpaceX's mission of making humanity a multi-planetary species begins in Boca Chica and it is important to capitalize on this opportunity because there may not be another one.

Estimados Sra.FAA, De nuestra mayor consideración. Yo, Mauricio Fernández Ramírez de la Ciudad de Fray Bentos en Uruguay, apoyo fervientemente el desarrollo e innovación de nuevas tecnologías que está llevando adelante la empresa SpaceX en Boca Chica, por que consideró que nuestro futuro como humanidad es llegar más allá de nuestro Planeta Tierra y estamos obligados a salvar nuestro Planeta consiguiendo recursos fuera de nuestro Planeta y no seguir destruyéndola. Muchas Gracias. Saludos Cordiales. Mauricio

Starship will be the largest rocket in history and as a critical part of the Artemis program it will forever change our future. If we as a species want more footprints on the moon and a permanent presence as soon as possible, Starship needs to be able launch from Boca Chica as soon as the vehicle is ready. Environmental issues may be significant and of course if the rules set in place are broken spacex should face repercussions.

I am writing to submit my approval and encouragement of the Starbase facility in Boca Chica, TX. SpaceX has long been at the forefront of innovation and technology. Having a launch facility at Boca Chica further strengthens their ability to deliver payloads into orbit, and to also pave the way to multi-planet travel. The location of Starbase can serve as an amazing economic opportunity for the local towns. I fully believe SpaceX respects their local neighbors and will also put environmental conservation as a top priority. Thank you!

SpaceX's raptor engine burns methane in a revolutionary full cycle engine which provides an extremely efficient burn, but, you guys already know that. What's the hold up, every launch center in the history of space flight has a tremendous wildlife population due to the areas being classified as preserves. There is no reason to restrict these flights. Wildlife will thrive. If it's about emissions I can only imagine you will all start taking electric trains. Let her rip. Tired of the red tape and will cast my vote against anyone in the current administration involved in flight restrictions.

I wholeheartedly support Elon Musk's SpaceX Launch on the border of USA and Mexico. I urge the FAA to allow this important mission to succeed. Elon speaks for everyone on Earth when he talks about space exploration. His own personap determination to send humans to Mars put every world government to shame. There has been talk from all sides for decades if not centuries about humans on Mars. Elon just a man not a givernment is making that a reality, I urge the FAA to stand a side and allow Elon to Musk to write history. If USA does not allow this I am sure another country would be more than happy to host this historical lanuch to the moon. Please good people of FAA do not let Elon and USA fail miserably. I have taken all Environmental concerns whilst determining my position. We honestly have more chance of hurting the environment getting in our vehicles every day. Not to mention we all need to focus a little less on COVID19 and this would make a difference to the mental health of all humans on Earth. kind regards, Peter Krstevski

In support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than $15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. This came with a commitment by SpaceX to invest $85M in the local economy and create at least 300 jobs. In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commerical spaceport would look like. It seems the FAA has bowed to a vocal minority of activists, and the state of Texas has been oddly silent in the matter rather than fighting for their investment as one might expect. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties.

My name is David Turner. I've lived in Houston TX for 5 years, and I lived in the Rio Grande Valley for several years before that. When I lived in the Valley, I spent countless afternoons and evenings on Boca Chica beach, sitting around campfires and playing in the water. I am very excited to see all the work that SpaceX is doing in that area. They are turning what once felt like a no-man's land into the future of American progress. I am encouraged to see them bringing thousands of well-paying jobs to one of the poorest parts of the country. I fully support all of their plans for orbital launches from Boca Chica. I kindly request that the FAA do all that is in it's ability to facilitate SpaceX's work, and approve all of their launches. Thank you.

Hi, I'm a human being on earth that would appreciate your full support in supporting Elon Musks company, SpaceX. We need another planet with humanity on it to ensure Consciousness, just in case things don't work out on this beautiful planet earth. Plz help this company succeed in their missions, he's proven to be very good at rocketry, has achieved what most thought impossible. It would be a big shame if politicians got in the way of his work. He's safe & we need to trust this American company. He's also saved the American tax payer from giving money to Russia to get our astronauts to the space station. He's revolutionary & no one should try to hinder his progress. Thnx for understanding, let's make history

Hello and thank you for preforming this Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program. As SpaceX campaigns and plans to operate its program over the next several years. It should be kept in mind that the factory where the rockets are manufactured will serve as a way for the Cameron county residents and tourists to thrive off the economic boost and historical flagstaff of SpaceX designing and manufacturing the Starship launch vehicle and ultimately preserving human consciousness by giving humanity the chance again to become a multiplanetary species. I do realize the environmental and ecological impacts that a program like this can have in the surrounding area - however the long term plan is in place and should not impose the decision in real time as it stand. SpaceX is investing in Oil Rigs and ultimately wants to remove the need for ground based operations of Starship/Superheavy launches to help reduce the risk of nearby wildlife, people and infrastructure. As SpaceX continues to design and implement their rocket factory, this should not be a concern to the public, where SpaceX decides to turn dirt and build the next generation rocket is generally up to them, because the surrounding county will definitely be benefitting from this passionate endeavor by supplying jobs and economic stimulation to the area. For someone to believe that the launch operations pad and rocket ingress/egress area closest to the beach is a long term concern is simply mistaken. Since it is the closest to the production factory and allows for SpaceX to safely launch and deploy satellites/humans out eastbound over the Gulf of Mexico cannot be a better place to do so at this current time. The Starship program is bigger than Boca Chica and should be commemorated when it is a worldwide transportation system that is available for all of humanity. So I personally would urge the FAA to collect any environmental or beach closure concerns at this time but understand that these concerns do not outweigh the benefits of what this program will provide for the pride of the United States of America and our journey to explore among the stars. Thank you again for preforming this assessment and regulatory approval process and I can't wait to see the future with you! Best, Bradley Mars Meditation

To whom it may concern, As a pilot, a space enthusiast, and a concerned citizen, I believe that allowing SpaceX to conduct orbital launch testing at the Boca Chica launch facility is essential. I agree wholeheartedly with expanding our access to space, along with what it means for humanities future. We need to become a spacefaring species if we are to survive in the long term. The testing that SpaceX wants to conduct is extremely important to achieving this goal. I think it would drastically inhibit our growth and access to space, if you were to restrict or deny the tests SpaceX wants to conduct. This is also important because other countries will continue their reach out in to the stars, and we will be left behind. Thank you for your time. Best Regards, Tom Sargous

Message

Dear FAA, Fully valuing your efforts in following low and regulations in process of approving SpaceX's Starship test program, I kindly ask you to keep the "big picture" in mind: - The window of possibility for human to become a multiplanet civilization can close soon - We have competitors (Chine) brutality coping Starship in an political environment not just without FAA, but willing to accept casualties (dropping rocket stages near populated areas) Please, find the golden middle, where you allow _quick_ progress of the Starship program and safety of the locals. Thank you. Kind regards, Boris Brodski

I am sending this email in as I support SpaceX and their mission to make humanity a multi-planetery species. I feel that the advantages of the safety net for human survival as well as the benefits of eventually moving heavy industry into space far outweigh any temporary or shortsighted issues. The possibilities opened by granting humanity unfettered access to space are countless and with enough access we will eventually have enough minds working on enough issues to allow humanity to exist on ships and bases in the open voids between planets. SpaceX needs to be allowed to move forward for the betterment of all of humanity.

Dear FAA, The United States has been loosing ground technologically in Space to China. From the standpoint of both economic and military security the USA must accelerate our launch capability and lower the cost of launch as is the objective of SpaceX. It is recognized that there are always trade offs of environmental stats-quo vs development. Such trade offs exist in our daily lives if we are aware of them or not. What is important is that we are aware of the impacts that we have on the environment and identify what trade offs can be made to minimize the impact and even in some cases make positive impacts on the environment. It is not always a win-loose scenario. I urge the FAA to approve with expediency the SpaceX application and at the same time make sure that all responsible environmental resources be engaged to minimize impacts from SpaceX activity. It is encouraged that SpaceX fund reasonable environmental preservation activities both to mitigate impacts but also fund environmental activities outside the scope of mitigation to offset impacts of SpaceX activities at this site. Delay of approval would be detrimental to the security of the USA. All efforts should be made to expedite approval by actively engaging responsible environmental parties to initiate and perform their responsibilities.

Hello to you, I am Benoit ST-Jean, I live in Canada / Quebec. I am not a scientist, environmentalist or any other specialist. I do not represent any group or community. This email describes my personal opinion, based on the information to which I have been exposed, I do it of my own free will. Thank you very much for letting us have the chance to express ourselves about the activities of Space X. I have read the reports that you published during the public consultation in October 2021. I understand the importance of studies and impact on environments. We have the technologies to minimize the environmental impact. We are able to relocate species (plants, animals, etc.) from the regions which may be disturbed by the activities of space X. we have badly used the resources from here, we have the chance to start over again to colonize another planet with collective knowledge to avoid making the same mistakes again But it looks like we're missing out on Space X's ultimate goal, the survival of the human race. a scenario that is no longer subject to science fiction is that an asteroid hits our planet earth there is one in particular that gave birth to a certain fear in me: 2010 RF12 2010 RF12 was discovered on September 5, 2010, it a very small asteroid, its size is estimates to be 7 meters (23 feet) in diameter with a mass of around 500 tonnes., classified as near-Earth object of the Apollo group, that passed between Earth and the Moon on 8 September 2010 (three days after discovery), at 21:12 UTC, approaching Earth within 79,000 kilometers (49,000 mi) above Antarctica. a chance that this trajectory was not directly on us and a dimension to give a perspective of distance, the moon is at 384,400 kilometers (238,855 miles) from our blue planet. there are several methods under study to deflect asteroids that cross the path of our planet. the different solutions studied by space agencies depend on criteria, the size of the object that threatens the earth and the time they have in front of them to react. but still, these are only studies In September 2095, 2010 RF12 will be 33,000 km; 20,000 miles away from us and hope the course predictions are correct or will be to our advantage. 2095 seems to be a long way off but no matter who is reading my words, the days can be long sometimes but the years go by quickly, I even wonder where those years have gone !? In short we must be prepared for any eventuality at all times the people in this advance of the space conquest are not eternal, their vision, creation, method of doing are unique, they can be imitated but not equal, we must help them for the good of the human kind. Let's work together without compromising the time we have. Time is the only important currency

Dear FAA, SpaceX starship program will advance the species to the solar system, bring back fusion fuel from the moon, rare metals from asteroids and pave the way to save the planet in the long run. Denying or restricting any SpaceX flights will ensure the human species will be creating a self extinction event in a few decades if these rapid prototyping are not allowed to happen. Space and su-orbital traffic should be housed with NASA as the space administration and be granted the space port(s) restricted area authority as they will be able to focus on safety better then the FAA, time to become more efficient. Regards, From the Netherlands.

Good morning, I am writing in enthusiastic support of the FAA issuing an experimental permit and vehicle operator license to SpaceX in Boca Chica. SpaceX is doing incredibly important work for our national space program, advancement of commercial space endeavors, and revolutionizing the launch industry with its fully reusable Starship launch architecture. With its relatively remote location and southern latitude, Boca Chica is an ideal location for launch activities of this manner. Further, SpaceX's presence in Boca Chica has brought much in the way of economic development, well-paying jobs, and boosting tourism with frequent visits by space enthusiasts. While there will always be detractors no matter where such a launch site is developed, this location is as reasonable as one could expect to find, and SpaceX has been, and continues to look for ways to minimize disturbances as much as it can. Thank you for your consideration. Jonathan Dienhart

Dear Sirs, I am writing to you regarding the pending regulatory approval for the orbital launch of SpaceX' SN20 and Booster 4. The red tape appears to be really important this time and for us abroad it looks exaggerated compared to what happend before. We want this thing to fly and we don't understand what is the problem. If it explodes it will do it most probably over the ocean, and in the case it happens on the ground, it will make a ball of fire locally at Starbase, and what ? It's just some methane and oxygen taking fire, is it the end of the world ? This is the price to pay for progress. Please don't stop it with bureaucracy. Thank you very much, Erik Lambot (Liège, Belgium)

I strongly support SpaceX's operation at BoCa Chica. I agree there might be some minor environmental issues (which I believe SpaceX is willing to collaborate and working toward fulfilling), but given the impacts of the work that SpaceX is doing for the USA and the mankind, I strongly believe their effort should be appreciated and a launch license should be granted. T Hoang, Memphis TN

My name is Maxwell Emerick and I reside in Indiana. As an American citizen, I would like to voice my support of SpaceX in all of their efforts at the Boca Chica/Starbase facility. First, I think it is important to point out that the launch site will be a net positive for the local ecosystem, as it essentially creates an area of green "no-man's land" around the site in which nothing can be built, allowing the local wildlife to continue living in peace with only minor disturbance from launch operations. I also wish to voice my concerns that if the FAA further delays SpaceX's progress, the US may find itself falling behind other, less democratic nations such as China, which is not burdened by bureaucracy and is already on its way to developing a reusable launch system like Starship. The implications of China achieving full reusability and cheaper access to space before the US would be catastrophic to our position on the world stage in coming decades, and to our own security at home. I urge the FAA to move swiftly in their deliberation over SpaceX's launch license and activities at Starbase. If a meteor impact or major volcano eruption were to take place tomorrow, the light of human existence could be extinguished in the blink of an eye. Right now SpaceX's Starship stands as Earth's best chance of survival. We as Americans should be thankful and proud to have this monumental project happening in our country and we should all do everything in our power to speed it along. Thank you.

I approve of SpaceX Boca Chica launch complex and mission. Let’s not disrupt the recent great advancements getting the USA space program back on track. Let’s make sure the environmental impacts are next to zero with and without launch anomalies taken place. For example the plumes shall flow to areas of leas impact to the environment and wild life. Wind conditions must be monitored. No fluids shall be allowed to reach the beach and shall be contained by design.

I fully support the development of SpaceX at the Boca Chica launch facilities. I understand the need to protect and support the local wildlife and area but I believe that SpaceX will continue that role in making sure that the area is maintained even better than it has been in the past before they arrived. Please fast track this decision as you already have years of observation as to how they are treating the land which I understand has been both positive and cooperative. We want to see an orbital launch attempt this year. Just like Apollo 8 saved 1968, I believe that SpaceX can do the same thing for 2021! We all need a boost and I can think of nothing better than to see Amerca shine brightly in this endeavor. Thank you for your consideration and best regards.

I am in support of spacex launch facility in Boca Chica, Texas. I all honesty, this land and surroinding land should be given to them. The land can then be held as a wildlife sanctuary in tandem with launch facility. I have heard misinformation and just flat out lies from people opposed to spacex. In a time full of misinformation coming from our goverment and media, this needs to end. Space travel is dangerous and spacex has made great strides to make it safer for people and the environment including switching to clean burning methalox. Space travel will also be imperative to human longevity and survival. A small percentage of very few animals possibly dying is something that should not stop the progress of space flight. Especially with all the long term environmental benefits here on Earth that comes with human in space, from mining to technology advancments. Nothing about this facility, do I see posing any major risk to the surrounding area or any real inconvenience. As stated earlier, the land around Boca Chica should be given to spacex. This beach was nearly never used before spacex got there. Now, people are crying that access to something they never used before is hindered on occasion. However, another road can easily be built, which i am sure spacex will have no issue funding. Really, none of what i have heard so far are really that major of problems and just seems to me the pressure from outside opponents are holding up true progress of a company actually trying to accomplish things. Jeff Besos being one of the outside opponents. I see spacex being punished for being cheaper and faster than everyone else. The status quo in our country is broken and needs to be reverses asap. Punishing accomplishments and rewarding lackluster companies is wrong. The FAA has the power and the responsibility to start changing these issues. The tax payers deserve better and not having our money wasted. In conclusion, I am in full support of spacex and any company advancing space travel. It is so vital for humanity. I request that the FAA approve spacex test facility with no further EIA. It is not needed. Pure and simple. Start rewarding companies that deserve it. Spacex is already environmentally councious and I am sure will work well with all regulatory agencies. Thank you.
Brandon Dow

Re: Starship Orbital Launch This is probably our moon moment akin to President Kennedy energizing the nation with a better vision for humanity and for America. Request you to let SpaceX move forward with its orbital launch as it is the first step towards fully reusable rockets opening up Space for all of humanity. All launches carry a degree of risk but SpaceX has shown its ability to manage that prudently and is now regularly launching astronauts and civilians. This capability is also important for America to be on the fore front of the space race. Capabilities built here will be leveraged for NASA Artemis program. Please approve so we can unite for a better future for all Americans and humanity.

I strongly encourage the FAA allow SpaceX to call continue building and launch rockets that are the future of human space flight. If we hold back here in Boca Chica it will give China and other not so friendly countries the opportunity to catch up and pass us. 100% reusable rockets are the dream we tried with the shuttle. Starship could well make that dream a reality. We should as a nation do everything we can to make that dream happen.

I'm writing to encourage the FAA to clear the first orbital launch attempt for Starship as soon as possible. As an engineer and human, this is one of the most promising projects in history and it is the archetype of a project that deserves absolute focus and lightning speed on the part of our regulatory teams. Please make us proud of the work you do and clear this test program for flight. Thank you!

I strongly support the Spacex request for an FAA permit to launch and land the Starship at Boca Chica space facility. And I support the FAA in granting the permits. The positive impacts of Spacex efforts are numerous including: advancing USA leadership in space exploration and benefits to national security, regional economic benefits, jobs, reduced costs to launch cargo and humans to space. I support the work for an environmental assessment to help manage the natural resources in the Boca Chica area. We also notice the many environmental impact similarities with the CCSFS in Florida. Since the many launch sites in Florida are able to manage these impacts, then logically the impacts can be managed at Boca Chica and Spacex can continue the important rocket and spaceport development there. Regards, David

Dear FAA, Even though I am an european citizen I am writing this message to ask you to please support and provide approval for SpaceX activities. I fully trust their work and I truly believe that everything that they are doing will inspire many generations ahead. Regarding the authorization, this is definitely something that concern US. But considering the bigger picture, what this and further SpaceX development could mean for all us, it's definitely something that concerns the whole humankind. Please take in consideration this request! Thank you! Best regards, Diana Cristina V.

Message

I would implore the FAA to consider environmental impacts if SpaceX is not able to successfully develop their reusable Starship platform. Demand for space access and space systems is only going to increase. China has increased their activity, the ISS is coming towards its retirement and will need to be replaced, movies are being filmed in space, private travelers are making their way into space. 60 year old space technology expends all of the components involved in flight, usually into the ocean where those materials sit or wash up on shores polluting our oceans. Additionally, the fuels used by those old systems is harmful and even known to be carcinogenic. China's space activities usually result in rockets just falling directly onto the populations as was seen in a recent de-orbit where no one knew where the expendable component would end up. My fear is regarding what happens if SpaceX is not able to be successful? As demand increases and these old, wasteful, dangerous and harmful space launch methods will continue to ramp up as demand is increasing. We NEED SpaceX to successfully develop their fully reusable, methane/oxygen rockets for the sake of the environment. CO2 capture methods will also need to be developed as a way to generate methane directly from the CO2 in the atmosphere, as Musk has already put out a $100M prize for carbon capture technology advancements. Demand for access to space will not go away, and the SpaceX Starship program is currently the most environmentally and economically sound way for providing these services and meeting this demand. I understand this assessment is very localized to Boca Chica, but think of the havoc that will be wreaked on the environment all across the world by a growing space demand if SpaceX's Starship system is not able to be put in place. Thank you, Chad Cravens

Starships first orbital launch test and the testing campaign as a whole is very important for future generations. Going beyond Earth to explore Mars in order to make it habitable for humans is essential for life to exist in the future. This launch attempt is vital in making that dream a reality. After reading the FAA documents I think this launch is sustainable enough to go ahead and would love to see things progress in Starbase. With the environmental impact and the impact on the very few residents of Boca Chica village being minimal, I don't see why operations shouldn't go ahead. The proposed pull-off areas to transport vehicles and other such equipment will also help reduce any disruption caused on the road. I hope my opinions can help make this launch and the rest of the testing campaign possible.

Dear FAA, I understand your environmental concerns with the operations being carried out by SpaceX, as you should be. However the man running this operation is Elon Musk and he's also running the operation at Tesla. Tesla has pushed the world automotive industry to rethink and change their model, pushing the world towards greener forms of energy. Tesla has been so proficient at reducing their emissions that they make millions of dollars from selling their carbon credits. I'm highlighting these Tesla achievements because it should be considered when looking at SpaceX. Here we have the same man, representing AMERICA, leading us into the future. We should be supporting him at all cost. His ambitions is instilling desire and hope back into humanity. I honestly can keep on going on the reasons why you should allow SpaceX to operate, but it would be too long. Please let SN20 fly and let America lead the way into this modern space race. A Proud American Citizen, RUBY ALMONTE

Dear FAA I am writing to show my support for spacex and spacex facility in Boca Chica Texas. This facility and the work that Elon musk is doing there is critical, not only to the US interests of maintaining space dominance but also critical to humanity as well. I agree with Elon musk that humanity must become a multi planetary species if we are to survive. The work that he is doing at a Boca Chica launch site is critical to reach this goal. So I am writing to request that you were prove his launches. I have read the preliminary environmental impact study as well as his proposed mitigation procedures. And I believe they are adequate when put up against the needs of the United States and humanity as a whole. Thank you for your time.

To whom it concerns, regarding approval for Starship orbital launch testing, watching these Starship tests occur much more rapidly and efficiently has been an inspiration to many of us engineers working in aerospace on behalf of the US government. SpaceX shows us that hard work and good ideas can accomplish amazing things; even ideas from new engineers make an enormous difference in getting the work done within SpaceX. We have seen mostly reusable rocket launches start to become common and regular and now, with Starship and the Superheavy booster, we will see a 2-stage rocket that is both the most powerful rocket ever created, capable of getting humans to another planet and it's fully reusable. Now is the correct time for the US to show what we can do as it has become very divided and the people spearheading this effort only have so much time available on this planet to accomplish what they want to accomplish. Please examine the rules, regulating rocket launches, and determine what is the common sense thing to do instead of just accepting the way things have always been. Examine the process and plan put in place by SpaceX and see that it is very serious about safety and there are contingency plans to cover your concerns. Based on the competence displayed so far, I have no doubt in my mind that the points of concern are being diligently addressed. To reiterate, this launch is important for inspiring engineers in the field as well as prospective future engineers who only just discovered how cool going to space is. I hope the FAA feels the same way. Thanks for your consideration!

Starships orbital launch is a huge step in the right direction for humanity. As a civilization we should be focusing on space travel because. eventually things on this planet will not work out for us. Successfully getting to outer space with starship is a huge step in the right direction for the goal of mars and eventually that trip to mars will be looked at as a major historical event if we achieve becoming an interplanetary race.

Dear Sirs/Madams: I have read the "Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas," and have followed closely Spacex's development and operations at the Boca Chica facility. I concur with the EA recommendations, and I am convinced that Spacex will honor their obligations to be a responsible environmental steward. I support a finding of "No further action required," and request that the FAA expedite Spacex's request to conduct orbital launch operations at the Boca Chica facility. Thank you and best regards, Chris W. Thomson, P.E.

I believe SpaceX should be granted the launch permits due to a wide array of diverse reasons. They are making unprecedented progress on a space launch system and are poised for great success for their company, the United States, as well as humanity as a whole. They deserve to be regulated just like every other company by the FAA, but the benefits in this situation clearly outweigh any possible risks. Take a look at the wildlife surrounding Kennedy Space Center. In response to the beach closures, how many people actually visit that beach on a regular basis? And how many other beaches are in the area that they can go to? This would be stopping progress just for the sake of stopping progress. For the great of all of humanity, please let SpaceX continue their development of Starbase with no futher unnecessary delays. Thank you Glenn Hope

The goal of this is to improve NASA's ability to further their agenda in space and this should be allowed. There have always been failures with any type new space technologies. If we're are not allowing these tests to take place than there will be no more room for progress. Regardless of any inevitable failures these tests should be allowed to move forward as SpaceX has shown in the past they are more than capable of handling the issues when something does go wrong.

Hello, I am from Germany and I want to emphasize how important SpaceX is for the future of mankind. People all around follow SpaceX progress and how exactly it is treated by the US government. SpaceX is one of the few things that are still great about the US. Please do not mess it up. Really do not take any decision against SpaceX lightly. Weigh SpaceX very significant importance around the globe against the severity of local issues. The bar must indeed be extremely high for anything to get in SpaceX's way and not just convenience, lazyness and carelessness..

Please approve orbital launches of the Starship rocket. Starship may be a daunting project, but it has many benefits: 1. Providing the lowest cost-per-weight access to space ever seen on a rocket by far. 2. Bringing jobs and wealth to poor areas of south Texas. 3. Creating excitement and interest in STEM and aerospace across Texas and the U.S. 4. Allowing for full rocket reusability, the "holy grail" of rocket engineering. This is also a massive benefit to the environmental sustainability of a Starship - since it can be launched an indefinite number of times, it is more like an airplane for space than a rocket, and doesn't need to be remade every time it launches! 5. Giving people hope for the future. In hard times, people find hope in SpaceX. Starship is not just another rocket. It will forever change the way humanity accesses and views space. Please consider these things when making your decision. Thank you.

Hi, totally support the SpaceX project. Why? Getting the cost to orbit reduced, with the positive impacts for the US and humanity generally. Recognise we need to be careful of local impacts, but SpaceX can mitigate many of these. The positive impact on Brownsville should be taken into account. Texas Brownsville could be the new Cape Canaveral, to the stars. Don’t let the US lose this opportunity. Best regards, Richard Parlone

Greetings! I am officially placing my full support behind Spacex in their Boca Chica launch and manufacturing sites. Spacex has already demonstrated their dedication to the local environment. Their employees even rescued baby sea turtles last year. I am not swayed by some of the phone calls in your open sessions. Volume, cussing and being rude do not impress me. This was normal for the 1960's, but we have moved past that I hope. Thanks!

I think the FAA should let the orbital launch of spaceX take place. It's a great step for humanity to further our reaches into the cosmos. The more unnecessary regulatory pressure the less we innovate as a race and a country. America is the greatest country on earth.... let's push to keep it that way. I vote Yes for the approval of SPACEX orbital launch.

On July 20, 1969, Armstrong and Apollo 11 Lunar Module (LM) pilot Buzz Aldrin became the first people to land on the Moon, and the next day they spent two and a half hours outside the Lunar Module Eagle spacecraft while Michael Collins remained in lunar orbit in the Apollo Command Module Columbia. When Armstrong first stepped onto the lunar surface, he famously said: "That's one small step for [a] man, one giant leap for mankind." It's the US victory in the Space Race, by fulfilling a national goal proposed in 1961 by President John F. Kennedy "of landing a man on the Moon and returning him safely to the Earth" Here I stand by Mr favorite of the day , mr. Elon Musk and his fantastic voyager the SpaceX 's next GIANT STEP in creating not only a history in the space traveling but looking forward to an alternative destination for vacation. 🌷🙌

Hello, my name is Rodrigo Milenko Vergara Parada, Chilean, 32 years old. I am writing to give my full consent to support the missions that Space X is carrying out because I am aware of the great step that this represents for the future of humanity. Space X is in an early phase of drastically reducing one of our greatest risks on Earth, "human extinction." In my opinion, any project that increases the chances of going beyond what we have done so far is worth supporting, especially when it comes to working to save future generations. Although financing or supporting means that they affect my current lifestyle, I am willing to support the cause because my commitment will always be with humanity before my own interests, and I know that this is the greatest lesson that we can leave to the generations that continue. . including my 8 year old daughter who loves everything related to space and I know that one day she will understand the importance of these missions and those that come after. I apologize in advance for my English since I am using a translator, but I feel that nothing today should be an impediment to communicate, since it was precisely the lack of communication that has us today in these situations. I hope that in your regulations every time you need public opinion to approve these missions, you can first listen within yourself and think if it is really necessary to keep thinking about today and what will become of us in a couple of months, we are the The result of millions of evolutionary years, and I think that discarding support for these missions would be like spitting in the face of every human being who has sacrificed throughout history for a greater good without ever having been able to enjoy its own fruits. Long live freedom, life and let's start thinking about being admired as those ancestors who one day closed their eyes and opened their minds. 💔

Hello, I'm writing in support of issuance of one or more experimental permits and vehicle operator licenses to SpaceX. I am not a resident of the cities or counties close to the proposed launch area, but I have been closely following the development of the Starship/Super Heavy launch system for some time. I am convinced by the present information that it will be a valuable development in human space flight. Please issue the experimental permit/vehicle operator license to SpaceX. Thank you for your consideration. Regards, Lucian Knock

Good afternoon, Please grant spacex permission to test their starship vehicle for their orbital launch, it is the key to another planet , it will help us get back to the moon and go to mars, also it will advance technology since alot will have to be experimented to live on the moon and Mars. Please do the needful to help them speeden up the process to get the approval . God bless . Thankyou !!

Greetings, I'm writing this email to support what SpaceX is doing and planning to do in future. I'm constantly monitoring all the news regarding their work, and I think their work is very important for humanity, science and USA. They are creating great technologies in a very rapid pace, this is really helps drive the progress. I also like seeing how community is supporting them, how many news and videos are showing all the work they are doing daily. I think at this point they are not only creating great technology and making space more affordable (Their prices are helping NASA already) but they are also inspiring people, young and old. I'm living in Canada but I'm planning to visit Boca Chica just to see it with my own eyes. I'm sure there are a lot of people that would like to visit or move to Boca Chica now. It is possible that it will become a popular tourist attraction in the future! Best Regards, Andrii

I support Space x Research and development in Boca Chica for three reasons. 1) This development has the potential to be of greater importance than the Apollo program. A breakthrough in development of economical access to space will create new economies in travel (on earth and off), in off earth infrastructure (in earth orbit, on the Moon & Mars), and possibly off earth mining. 2) The development is inspiring and creates interest in STEM activities and learning that will continue indefinitely as this is a gateway into more and more development. It starts with affordable access, once achieved exponential development will naturally happen outside of space x as new opportunities are now within reach. Demand for STEM careers will explode and mankind will benefits in every aspect of daily life. 3) This development creates jobs and will continue to create more. At first in a few locations, but eventually it will expand across the country and the globe as these new economies are created. For instance Earth to Earth travel on Starship and the infrastructure needed. These jobs are not limited to STEM and include trades and other areas and diversity. Cameron county has already seen the impact and this is just the beginning. With all of this there should be great attention paid to safety and the environment. As supportive of the effort as I am, it is not worth it if short cuts devalue human life (I.e. preventable accidents). I also don’t think overlooking environmental impact is worth it. Boca Chica can be the baseline of how the environment is handled for all the future development described above. KSC is a great example and should be a successful lesson learned.

Dear FAA, I am an engineering student from the Netherlands. I keep up with the SpaceX Starship program a lot because it is the most exciting space/engineering project to follow anywhere from the planet. I hope SpaceX can keep on testing their rocket without many delays. SpaceX is working on the future of the human race and we should all support this project and I hope the FAA will support them as well by letting SpaceX test their rocket frequently. Best regards, [redacted]

The invest in the future at your facility will be remembered for generations. My daughter dreams of being an Astronaut directly as a result of the work by SpaceX. Their work there will have a massively positive impact on the economy and safeguard American interests in Space. SpaceX is conscious of the environmental impacts and is working to mitigate it. The number of oil rigs and refining oil plants in Texas pollute more per day the. spacex ever will. Please approve the continued innovation at Boca Chica! [redacted]

Hello, as an engineer and space industry supporter based in the UK, I've watched with great interest the SpaceX Starship program in Boca Chica, Texas. It's a revolutionary endeavour that has the potential to uplift all mankind, not just in the US. We all wish rocketry wasn't as noisy as it inevitably is, but physics is physics. The environmental impact of the airline industry is orders of magnitude worse yet still we fly. I urge the FAA and the people of south Texas to support this inspiring team effort by SpaceX to alter the course of our future. To lose this capability from the mainland would be a severe blow for the American economy and space industry in general. The stars beckon, let us rise to meet the challenge. [redacted]

Greetings To Whomever This Reaches, After reviewing the draft Brownsville, Texas Boca Chica Environmental Assessment for Space Exploration Technologies Corp. (SpaceX), I believe that SpaceX should be granted permission to continue their Starship Program, and should be granted a license to further allow testing of their prototype vehicles on-site. Despite the risks SpaceX takes, they are constantly improving their vehicles and developing them rapidly to make them safer and more reliable. They are aware of the impact and the dangers that which come with this 'rapid-prototyping', though they do know where there lines end, putting no humans in harms way at any given point in time. This time is crucial for the company to develop their vehicle for the missions they are expected to provide for. If SpaceX is granted this time to develop and prototype, they will eventually move towards more potential sites in the future, relieving the greater Brownsville Area of their constant developing and testing. Many people around the world are skeptical about the 'Starship' program, but there are even more that support SpaceX and their advantageous endeavors. I hope everyone working with the FAA can come to an agreement, and I hope both parties can see the importance of granting these permissions to SpaceX. Our future is in space, but that future is approaching faster than we could have ever imagined. Thank you for hearing us. May we come to an agreement soon! Best Wishes, [redacted]

I support SpaceX's Star Base operations at Boca Chica, Texas. It has been a valuable economic asset for the South Texas area & is enthusiastically welcomed by most of its residents, school districts & county governments. It also has national security implications in our country's quest in advancing our goals in space such as establishing a base on the moon & beyond. We cannot let China & Russia dominate us in this endeavor.

Let's go FAA! (Cheer) I'm writing in today in support of SpaceX at Boca Chica. Although I am not a resident of the area, I feel it is the duty of the American people in partnership with the FAA to support the space and rocket launch industry in it's incredibly complex and courageous efforts to keep America as the innovative and technological leader of the world. While there is much work to do to be successful, the FAA should do all it can to help make things as seamless as possible for SpaceX and companies alike. I support SpaceX's efforts in Boca Chica, as long safety is the number one priority.

I highly support the direction Spacex is going. Who else is aiming as far as Elon Musk? Elon Musk is trying to do the impossible and making tasks possible. Everyone is following and you need a leader like Spacex in the industry. NASA doesn't have a space program anymore and Elon is taking charge and changing not just the aerospace industry cutting costs and making space flight easier. But he's also leading the EV market and changing that industry. Make it possible for the company to do orbital space launches.

I don't think that there are substantial modifications to the program that was approved in the past years. Plus what SpaceX is trying to achieve with their new infrastructure is Full Reusability, that is more sustainable and safer for the environment. Hench i believe SpaceX should be allowed to proceed with tests and operations. The sooner the better for the environment and space explorations for a better future. Thank you for your consideration. I encourage the FAA to approve the SpaceX Starbase & Starship programs at Boca Chica. I have full confidence that Elon Musk and his company will work hard to protect the ecosystem of that area at the same time as they develop the launch complex infrastructure and vehicles. They have always been very green conscious. SpaceX will do for the Boca Chica area what NASA's Kennedy Space Center has done for Titusville, Florida for decades, The flora & fauna have not been adversely affected, nor has the local human population. KSC has provided jobs and much tourism for the local economy all while coexisting with the many plant & animal species. SpaceX will do the same for Boca Chica. It's a Win-Win-Win situation so I whole-heartedly encourage you to give SpaceX the green light. Thank you very much for your time and thoughtful consideration.

Starship is a clever and an advantage around the World. Getting things faster around the world? We need this, who would lose heart for that? If it will be possible to deliver aid/manufactured products/security/rescue missions/health facilities just to mention, in less than an hour, who would lose heart for that? If it will be possible to get an emergency doctor anywhere around the world in less than an hour, who would lose heart for that? and the list goes on... Well, let's write history, Elon has welcomed the whole world in this project and we cannot wait to see it succeed. Please grant SpaceX relevant approvals, they never disappoint. Best, [redacted]

Elon Musk can save the world, we never got enough of Tesla. But he has taken up the mantle, the fact he's doing it in your country is a blessing for you. Give him the freedom for all things that push boundaries and continue to inspire the next generation of Elon musks who can change the course of our future under the banner of the USA.

The value of space x's Starship program is beyond comprehension. This itself is humanities ticket to the future and the stars and with it, making life multiplanetary. The possible damaging of wildlife cannot compare to securing the longevity of humanity, if an asteroid hits earth everything will go extinct including those species at Boca Chica. If the Starship program progresses, even if an asteroid hits earth humanity and a few species may still survive. But this cant happen without the continued development of Starship. Also the future industrialisation of space led by Starship and its future versions will lead to environmental savings for our planet, much more than the impact they may have during development. We have also seen their commitment to protecting local species as seen by their training of employees to help with turtle hatching times and by the use of safe light colours during this time to not disrupt their breeding.

It's simple. Without SpaceX in Boca Chica, humanity will lose valuable time in making humans an interplanetary species. Valuable time that is needed before our planet is destroyed which too few people are concerned about. Hopefully mankind will act before it is too late, but we need a backup plan in case we don't. Therefore we need the plans of SpaceX being executed as soon as possible. Thank you!

To whom it may concern, SpaceX is a very important company that aims to change space exploration forever. In order to do that, bigger and bigger projects are necessary to overcome inherent load capacity limitations of smaller spacecraft. With that, a certain amount of risk is involved however, the benefits outweigh them. We have more to gain in the form of knowledge and expertise from allowing experimentation in this field by allowing SpaceX and others to advance us to the next stage of rocketry.

To whomever this may concern, I sincerely hope the FAA will begin working with SpaceX in the south of Texas to advance space flight for the United States of America through their orbital launches. If they continue to see more roadblocks and less cooperation I would not be surprised if they pack up and find a different country to operate from. I understand this is new and unexplored territory for a government agency to allow private orbital launches from private property rather than from a their government complexes, however, if commercial space is to succeed this is crucial. I hereby implore you to begin working with SpaceX, rather than against them.
Sincerely, [redacted]

[redacted] I am writing you to show my support for the Space Exploration Technologies Corp. aka SPACEX. Last year while in quarantine, I found a thick white envelope addressed to me, return address was from NASA, post marked from the 90's. I was taken back to my childhood and reminded of the time I was bold enough to write a letter to NASA and express my curiosity for the exploration of Space. In my 35 years of life, this passion has dwindled until the memory was lost. All the hopes and dreams I had imagined that would be here in our future had not come to fruition. That is until I began to follow the work of the company SPACEX. I was skeptical at first. Jaded by the false promises and wavering faith in the validity of space publicity. Administration promises with little to show to the public. Many times I found myself asking why we don't focus the problems here on Earth first, now I know that was a naïve perspective. We have had many crucial advancements come from the important science being done in our orbit and beyond. The very devices that we are using to communicate with today would not exist without our satellites and technological advancements made within space programs. It's easy to take for granted and under-appreciate the value the space sector has added to our lives. The state of the world now is far removed from our youth. In some ways, there is a glaring imbalance between our advancements and our ability to implement these technologies to solve the issues of today. SPACEX however, with trial and error and solid data, has been able to find a perfect balance of advancement and implementation with their incredible human talent and seemingly alien technology. They have proven time and again the efficacy of their technology and have single handedly reinvigorated the passion for space in hearts worldwide. After reading the entirety of the Federal Aviation Administration's Draft Programmatic Environmental Assessment for the SPACEX Starship/Super Heavy Launch Vehicle Program at the SPACEX Boca Chica Launch Site in Cameron County, Texas September 2021 (no quick task), I am more confident than ever that SPACEX is doing the most when it comes to having foresight and awareness for safety and control of their systems. They have taken great lengths to insure safety and to have the least amount of impact on the environment and surrounding lands of Starbase Texas. I do feel for the citizens of the community that have to deal with sound and traffic disruption. Yet I feel the benefits that SPACEX has been able to implement far out weigh the negatives. SPACEX is an essential part of the United States of America. They are leaders in the world of innovation with their rapid reusable rockets and it would be a tragedy to miss these opportunities over licensing. They have saved taxpayers incredible amounts of money while also adding services and providing more opportunities. I can only imagine how hard it must be to approve these licenses when the laws that were originally written don't fit what we see today. Which is why this is a perfect opportunity to rewrite policies to prepare us for how things will advance in our near future. Unfortunately America continues to be outpaced by other governments of the world. There are many reasons for this and not all of them have to do with our Space program but this in particular gives us a strong foothold; to being the stewards of advanced flight technologies. SPACEX inspires people and with enough ingenuity, we can officially become a multi planetary species within our lifetimes. As crazy as that may seem to say aloud. This has been a dream for millions of people throughout Earth and throughout time. We are a young species in the grand scheme of the universe and I can think of no greater accomplishment then going back to the moon, establishing a base, then to Mars, and beyond. Knowing that all of this hangs so delicately in the balance is devastating. What if this is as far as we get in history? That would be very sad because this is all possible. We must not rob our

future of the great opportunities that can be realized through the successful flights of the aptly named STARSHIP. SPACEX and the STARSHIP rocket represent hope for so many. The children within us all dreaming of possibilities. Thank you for opening up this discussion to the public and taking the time to collect our input. I know this is a heavy responsibility that no one expected or signed up for but we all have an opportunity to be a part of such a pivotal moment in history. A moment that will inspire generations of dreamers to come. We must take these small steps and giant leaps today and not let these special moments disappear. Ad Astra! Sincerely,

[redacted]

Hey, FAA employee. I'm from Europe, Hungary and I'm following the Starship program since the beginnings. I think this big of a program is once in a lifetime and a lot of people wants it to succeed. I hope the first orbital flight can happen as soon as possible, beacuse Elon and his workers are not joking, they wanna expend humans to other planets in the near future and that's only possible if they are not slowed down by you, FAA. So please take my oponion and give them the green light for launch as soon as they're finished with the first orbital prototype (BN4 and SN20). It would be mind blowing to see the launch of the biggest rocket ever made by humans.

The FAA has a difficult decision to make in this matter. The placement of every airport, much less spaceport, is a compromise between, first, those who wish to see the environment and local lifestyles left as they are and, second, those who wish to see development locally and more widely. I visited Boca Chica a few months ago. It is a beautiful area. And yet my eyes were drawn to the shiny rockets pointing upward, and sometimes flying, into the sky. In the end, your decision will come down to protecting the present vs. enabling the future. Every airport not built protected the static present, while every airport opened enabled a future of change and progress. It has been said: “The universe is probably littered with the one-planet graves of cultures which made the sensible economic decision that there’s no good reason to go into space -- each discovered, studied, and remembered by the ones who made the irrational decision” Make the irrational decision! Sincerely, [redacted]

I have been following SpaceX since they first landed a flacon 9 booster back in 2015. Their constant drive and push to break the mould of traditional space flight is awe inspiring and had encouraged me to take a larger interest into space and space flight. Their development to a fully reusable heavy launch vehicle is crucial to more economically friendly and sustainable space exploration. Not only in reducing cost to orbit but also by reducing the waste in orbit. The starship system is a crucial step in allowing mankind to explore space and boldly go into the solar system. Full Send

Although I live in Alaska and am only minimally aware of the specific issues associated with SpaceX operations at Boca Chica, I have followed SpaceX for many years and have found the company sensitive to protecting the environment while changing the course of human history in a positive manner as well as inventing new technologies that will have enormous benefits for the environment and the quality of life for all life forms on the planet. The goals of SpaceX are unlike any other similar "for profit" organization in that it has created a business model that not only benefits the firm financially but also benefits for all lifeforms on the planet now by creating technologies that will create a cleaner environment for today and more importantly, for those who will follow us. For the great benefit of all life on this planet today and in the future, please allow SpaceX to proceed with making a better future for all. Thank you.

The starship program is critical for human survival. Seeing humans with a city on Mars and a base on the moon is one of the most important things for me. $10/kg to orbit will open space to normal people and the starship form factor is the only way this can be accomplished. Save starship.

Hi Team, I hope you're well. We support Elon Musk's venture to our orbit, we hope you do too, we see Elon having this amazing vision in making life multi-planet. We also still encourage however as well as saving the little resource he needs to make this happen for the journey we need whilst establishing this, to also focus on our current planet Earth, if you need me or anyone in my team to show or do any acts of support, do let us know as we're curious as to how we can help this planet as well as our future for the human species in other planets in the future. Kindest of Regards!

I feel space x are doing amazing things for the nation and the world. I understand this is early in this program and rapid prototyping can seem destructive and could been as an impact to the environment of boca chica. I fully believe space x will do all they can to mitigate any possible damage to environment and local area. I believe big changes are needed in regards to launch providers and prototype launch and testing. Freedom to test and evaluate but also push the envelope is needed with safety being a obvious consideration.

I have been a Texas resident for over 30 years and have frequented both South Padre Island and Boca Chica Beach. I have also followed SpaceX in the news and have driven through their complex on the way to Boca Chica Beach. I consider myself environmentally sensitive. So far, SpaceX has been a positive impact on the Lower Rio Grande Valley National Wildlife Refuge. Before SpaceX arrived, the beach area was filthy. The reduced traffic to the beach due to SpaceX road closures has had a positive impact on the beach area. SpaceX has also sponsored clean up campaigns for the area. They have also assisted with sea turtles when the serious freeze occurred throughout Texas last February. They have been a good corporate citizen in the area. I trust that the FAA will do a thorough job of noise impact on wildlife and anomaly debris field when comparing the SuperHeavy/Starship with the already approved Falcon Heavy launches and suborbital hops from their Boca Chica facility. I assume this can be modeled. One needs to compare how the noise has been somewhat reduced due to SpaceX's purchase of the gun range and halting the constant daytime firearms discharges. My preference is that the FAA approves a one-time orbital test launch license sooner than later so that actual measures of noise from the vehicle can be measured and compared to Falcon Heavy launches at Kennedy Space Center which are already approved. Then, with actual data in hand, a more intelligent decision can be made regarding an EA versus an EIS.

Greetings FAA, I wanted to take to time to submit this email in regards to the pending approval for SpaceX SN20 orbital launch. I'd first like to thank the FAA for allowing this kind of public support, as I feel this allows myself to provide a cog in the machine that is the future of space flight. I'd like to vouch for SpaceX and their Starship Program. This is not only for personal entertainment, nor is it about the success of one company or another. This is a combined effort to further progress our species. I am young, therefore I have a chance, an opportunity if you will, to witness this chapter in history. I'll glady do my part in hopes that the FAA will do their's. - [redacted]

I think the concerns about environmental damage and marine life damage are unnecessary because SpaceX doesn't necessarily launch a starship every day. The noise level during a launch, which was mentioned in the 151-page disc, is 85 decibels in the farthest space, which I personally don't find terrible, since some aircraft, whether military, cargo or civilian, are often louder. Furthermore, I think it is right and important that a company like SpaceX, rockets weiteretwickelt, tested and launched to find a way to come back to the moon. Because only through testing and development can new technology and methods be developed to make space travel safer, more efficient and more environmentally friendly. Nice Greetings from cologne germany [redacted]

I am emailing you as a citizen of the United States and as a supporter of private space enterprises as it can be viewed by many as “The New Frontier”. New jobs can open and the possibilities are endless. With the possible mining of astroids worth more national debt who knows what could happen. Know I understand this is just about the Starship20 orbital test flight. And though many say it could hurt out environment but, this is a dying planet. There’s planets out there with billions of more years left than the earth in the “ goldilocks zone“ and does it really a good idea to wait until the last second to pack our back and leave Mother Earth? No. Now it may seem silly but look at movies like Christopher Nolan’s “Interstellar” In the movie they waited until the end of the earths life where they could send out a team of people looking for a new planet. What Musk is doing is future-proofing putting the technology there that could help an entire generation of people explore the galaxy not just one team. So you say it hurts the environment… the human footprint has been cemented already, this planet is dying, and we can try our best to save it while it’s here. But we owe it to our grandchildren and their grandchildren to explore and to expand our knowledge making it the best earth/galaxy possible.

PLEASE 🙏😟😟😟😟😟 Approve SpaceX STARSHIP's first Orbital launch next month! SpaceX has been the only thing getting me and my kid's through this Pandemic nightmare!! It has given me hope and inspiration to live a fulfilling life, because if Elon Musk can dedicate his entire life to the advancement of civilization in the Cosmos- I can go back to school and get a degree so I can advance my families financial security and my happiness. SpaceX has been working extremely hard to make sure STARSHIP operates successfully. Seeing Starship take off is not only inspirational- but yet another "GOOoooAL" for humanity!

I write in support of the expedient approval of the Starship/Superheavy program under the Draft PEA. I believe the reasonable outcome is a finding of no significant impact. Damage to the natural environment by residential development, eg the ongoing growth of Port Isabel and South Padre Island, have much more significant impact on the natural environment and have never faced anywhere near the scrutiny and review that the SpaceX development has. Severely reducing urban sprawl would be a much better use of the federal jurisdiction of the environment.

Let's go to Mars. Elon Musk and SpaceX are a world changer for the good of the environment and humankind. Elon Musk will find a way. Which means if you give him any paths he'll find a way. If you feel like there's some negative done to the environment. Give him a path that Requires him to buy a large acreage of land and restore it or preserve it for wildlife as a requirement for the land he's using industrially in Boca chica. But please don't stop a human kind changer especially when all his desires are ones that a large number of people also desire which is a better environment and space exploration. [redacted]

I follow spacex on youtube everyday, have for many years. I think what Elon Musk is doing is probably the most important thing humanity can do. Extinction of the human species is a highly probable future event be it from war, disease,asteroid strike or many other sources.We need an insurance policy,a moon or planet to ensure our long term survival. we may avoid major war conquer disease & possibly deflect an asteroid or two one day but eventually an extinction level event will likely occur. we can't predict when any of these things will happen with the exception of an asteroid strike why take a chance. We have in development a very promising spaceship which in time i believe can give humanity that edge to overcome these threats. Starship can also possibly give the United States superiority in space. It has inherit military application we should not ignore. Delaying starship too long could be a possible treat to our national security. Countries such as China Russia North Korea & others are developing technologies that could one day deny us access to space if we're not diligent. I think it is important that we allow spacex to continue it's development of starship unimpeded as possible. we need the most advanced tech. if we are to continue as a species & if we want to remain the number 1 nation on earth. Thank You!

Screw your stupid political policies, just let elon [redacted] launch from boca chica you plebs. If you screw elon over, we'll never make it to mars... The fact your organization has the nerve to question this gives me no hope in humanity. The environmental impact on this is temporary because elon is testing to make sure the rocket will be flyable and safe for human flight to mars. At least involve NASA in this matter because they'll tell you the same thing. This whole matter with the concerns are wasted time and energy. Nobody cares about the fears we are aware of, just send us to mars.

SpaceX should be able to proceed with as many launches as they see fit, no question. As the single most innovative and inspiring organization on planet earth, and most importantly America, it would be extremely disappointing to see them slowed down by bureaucracy and process. They have a proven track record of safety and success, and their mission is in the best interest of our people and our country. They are the only organization pushing the envelope and democratizing access to space. Please don’t get in the way, there are far better things to be spending our taxpayer dollars on than impeding progress on important technology.

Dear FAA While others may make tech,enviro etc comments, I believe that if you slow SpaceX down, the results for the world will be absolutely fire. It is absolutely true that China is doing everything they can (including environmental destruction) to gain the "high ground" with major tech in order to control that high ground and everyone on earth. 100 tons to low earth orbit. What would it look like for China and it's immoral despots to have 100 tons of "control" in orbit? (Times 10 or 100?)The only other option is to make space available to all of humanity. Having that space used by all by democratizing it for everyone is the only play that will work against ANY despots. That option is SpaceX and Starship. Please do not play buracratic games with humanity's future. Please let SpaceX free reign to advance humanity's future. Thank you.

Dear FAA review team, We live in California and have been following the development of this facility since it began. As many others have already communicated, we are passionate about protecting our resources in and around the United States. We are out of proponents of protecting our parks and natural reserves. Having said that, we won hundred percent support the development that has taken place at Starbase with space x. The technology and infrastructure being explored here place is pivotal and unique in our lifetime. It has been decades since we have been inspired to reach beyond our own internal squabbles toward something more meaningful and impactful. Please approve and allow this once in a lifetime inspirational and unifying effort to continue. Thank you. [redacted]

Hi. My only comment or opinion on the possible environmental concerns surrounding the proposed SpaceX Boca Chica launch site would be to model the spaceport's environmental impact after the partnership NASA has at Kennedy with the Canaveral Sea Shore and other protected areas, as well as what the Air Force has at Vandenberg with the wildlife protections there. It is obviously quite possible to have very active space ports go hand-in-hand with environmental protections, so I'd ask you please keep that working model in mind with regard to environmental impacts at Boca Chica and work towards a solution that allows for launches. Thanks!

Dear FAA administration, I am a teenager/young adult from Uzbekistan, who have seen the commitment of the great nation also known as the United States to the development of the whole humanity. Innovations driven by ambitious individuals with a glorious purpose - to make this world better. The space industry, which is the only way to virtually unlimited resources and potential land for living, can be a solution for the problems we are facing today. Neither as an individual, nor as a nation, but as a whole mankind. The progress which can be made in this industry can potentially end strategic battles over mineral resources, over gold, uranium, lithium, and others, which we are only starting to need en masse. The innovations will also help us to make our own home better, like zips invented during space race. Moreover, further developments, such as cultivating plants in extreme conditions may become a key to end global starvation or new technologies for water extraction or purification can end water shortages in all over the world! I am very excited about the progress brilliant people are doing in the United States, and hope that no bureaucracy will limit this mind-blowing pace of it. Thank you.

It is important to humanity and the United States that SpaceX be able to continue at its rapid pace of innovation and not be slowed down by regulation. We can not afford to lose the momentum gained in this new space race that was lost at the end of the USSR/United State race of the 60's and early 70s. Test agility is important in order to keep this pace, and make humanity a multi planetary species, which can also lead to a greater impact to the environment in the long term. While working with spacex to ensure long-term environmental sustainability, safety and financial responsibility conditions, please grant exceptional regulatory approval for Starship's orbital launch attempts from November 2021 onwards.

Hi, The only acceptable, responsible position for the FAA to take on SpaceX is to complete the authorization. SpaceX, and Elon Musk personally, spend more effort in environmental control and mitigation than just about any person or corporation in the world. SpaceX spent precious resources to rescue and protect sea turtles hurt by the unusual winter weather, and provided electric power generators to local critical resources when the power grid collapsed. Environmental and safety concerns are VISIBLY critical for SpaceX, and they take all reasonable precautions. Indeed, they take more precautions than NASA did when Shuttle Columbia was damaged prior to reentry. They take it seriously enough that they've even changed the propellant for Starship, to be more sustainable. The very goal is sustainability and to enable off-world resource collection and mining. Without that, all of the lofty goals of "saving the planet" will be for naught. Please complete the SpaceX authorization and please stop playing politics with humanity's future. Sincerely, Jessica Schlenker

Hello, Please consider letting SpaceX make their historic orbital flight test for Starship SN20. I believe it is in SpaceX's interest to make their tests safe for everyone and I also believe the people of Boca Chica are mostly happy about SpaceX being there and giving them jobs and hope. Maybe a reform or subdivision (space subdivision maybe) of the FAA are in order if you want to support (and not get in the way of) companies like SpaceX. In summary: Don't be dicks haha Thank you very much for your time and consideration. Have a great day!

To whom it may concern: I am a current resident in Texas and want to show my support of the great work that SpaceX has done in its company history. I currently work in the energy industry near Houston and work to promote the iterative design process which SpaceX uses, it shows how quickly companies can work through issues and greatly speeds up progress. I truly hope that the US government and the FAA continues to fully support this American company which I feel is necessary to keep ahead of other competing companies which are fully supported by their respective governments. By hindering their progress unnecessarily I feel that this is not something we should be doing as this will make it easier for them to shift to another country which does support their work. Thanks for reading my comments and feel free to contact me at any time as I can expand on my thinking! Thanks, Micah Moore

You must allow spacex to proceed as fast as possible with Starship development. The impact this program can have on the world is unmeasurably positive. Many don’t understand the true implications of it.

With Starbase and Starship program, SpaceX gives hope to the whole world. As a teenager living in Turkey, SpaceX will change my life forever. They changed the lives of many people for the best. As "Journey through the Space Age," we're asking the FAA to give SpaceX the authorization it needs to begin flying the Starship into orbit. SpaceX will make life multiplanetary.

Please allow SpaceX to launch the starship super heavy as soon as possible. It’s critical for humanity to be able to be a multi planetary race. Also, it’s critical to continue with the development to complete NASA plants to reach the moon. The starship should be ready to launch next month, lots of work has been completed to have the Government stop progress. Thank you for your attention to this matter.

Hello there, I found you by chance. I have a very good project. It is not possible for me to reach Elon Musk. I wrote a 9-series children's book series set in space. The adventures of Koala Dudu looking for his family on the planets respectively. the finale ends in the world. I want to write the finale on a rocket in space thanks to you. This is an event that has never been done before. and when Elon Musk reveals it, it will gain $ 12 billion in stock market value in the world, according to my calculations. I am night to world history too. and if we were to fall for the sales of books, toys, clothing and cartoon-animation. 4-5 billion dollars will be obtained in this way. all it takes is for Elon to launch me with a rocket. I even risked death for this project .. I am also from Turkey. a great signature to prove to the world that it is a non-racist national company. I wrote from the translator, I apologize if there is an error. Best regards.

Hello FAA, I believe that this spacex boca chica project is very important. It is an essential base in order to make life multiplanetary and help ensure the future of civilization. Spacex is moving the boundaries forward and I believe that this is a very important project. Please allow spacex to continue pushing the boundaries forward! Allowing starbase to grow and expand is essential.

Hello, I am writing to you for the purpose of letting the Starship rockets take flight. Elon Musk is one of the greatest pioneers in rocket technology and space exploration. Without him, our technology on exploring space and the cost doing it, would be drastically different. It’s very important to authorize his test flight because the plan to go to mars is very important. We have discovered incredible things in space, such as medicines, technologies, and scientific laws/properties. We need him to become a more advanced society. Thank you.

We definitely need SpaceX and Starbase to continue. This will help make the US the undisputed leader in space. Unfortunately many people are way too short sighted when they say “to just work on earth problems” or “space is a waste of time”. For those living in the local areas that don’t like SpaceX there, you can be well compensated and move to an even better area with a beach. This is a good cause. Much better than forcing people to move due to a new mall or another road. Do the right thing and allow one of the most innovative companies continue.

American manufacturing and innovation is critical to maintaining an edge as we move forward into a more and more competitive world. The starship launch system represents the best of both of these. However, it can't come at the cost of human safety or the environment. SpaceX should do everything in their power to minimize their impact on the local ecology, as well as ensuring their launches are safe for the public. I am incredibly excited to see the progression of this launch vehicle, and the FAA will play a huge part in the coming months. I appreciate the oversight that the FAA provides to the program, and I believe they should see that SpaceX follows the rules. I would also love to see 33 American built Raptor engines pushing the largest rocket ever built into the sky from American soil. Godspeed Starship, thank you FAA. -Cole

Elon and his companies have done more for the environment than most others. I'm pretty certain that they will take all measures to minimize environmental impact. It's important for US and the world for SpaceX to maintain its rapid innovation and development, to remain competitive with Russia and China. We need to select which projects are allowed to cause an environmental impact, and this seems to be important enough as it pushes US and the world forward.

I support the launching of SpaceX starship from BocaChica beach in the US. The FAA should grant a full license to SpaceX for it's. operations. This is a golden opportunity to have mankind explore the universe and ensure survival of our species. As with all NASA spaceflights in the past alot of the technology we have now is because of what NASA was been able to do with going to space. Imagine the technology and human advances we can make with the potential that this SpaceX Starship program will open for us. The FAA's decision to Allow for all SpaceX operations to be fully realised both benefits mankind and moves the human species into exciting and uncharted territory. We get to explore and we get to improve humanity as a whole. There is no reason too good back. Let's go!!

I think it is very important that SpaceX be allowed to develop their next generation launch vehicle as fast as possible. With global warming getting worse each year without realistic ways to stop it so far, it is critical that life becomes multi planetary. The FAA has conducted reviews of the operations in Boca Chica before and SpaceX has been compliant with their requirements. Delay until the Spring or even relocation of testing would be a disaster, and completely unnecessary. SpaceX, NASA, and America as a whole will benefit from a rapid resumption of testing. Not only is SpaceX developing this launch vehicle to go to Mars and beyond, but also to go to the moon. How can SpaceX be expected to reach the goal of developing a lunar lander and going back to the moon by 2024 with all of these ridiculous regulatory delays? NASA is counting on them and they won't get there in time if the FAA continues to interfere with their progress. Lastly, the operations in Boca Chica directly contribute to a rejuvenated sense of excitement for space travel in America. Elon Musk and his team have inspired a new generation of people interested in all things space flight. Which will in turn increase the advancement of humanity. Please allow SpaceX to resume their activities.

I am a UK citizen but concerned about world impacting issues in the USA. Can the FAA not hinder Spacex's progress on Starship development in any manner that is not absolutely needed or in any way that defers to archaic rules that were designed a long time ago various things were expected to be different from the world we live in today. These launches should be felicitated not hindered in unnecessary ways. The world is watching. Yours faithfully Dean S Clark-Peasey Bsc (Hon), Ma (Sci ed.), BD

I write to voice my support for the SpaceX Starship program in South Texas. While all launch sites/operations have some environmental impact, the benefits in this case significantly outweigh the negative impacts. SpaceX should obey all laws and continue to work collaboratively with the local community. Efforts should be made to modify the highways to mitigate road closures. I urge you to evaluate the bigger picture when considering this environmental assessment. Thank you

Dear FAA, the development of the starship program is incredibly important for the human race. Elon and his crew of Americans have been working on perfecting this ship for years and this is the opportunity for them to test the durability of the starship and superheavy. In 1969, in the middle of the space race. Americans built the largest and most powerful rocket in the world. That sent three Americans to the moon to show that United States was able to put humans on the moon. This is the same concept 50 some odd years later. Elon is going to put the first humans on the surface of Mars and send humans back to the surface of the moon. So please I ask of you one thing. Let's bring back the pride that America had back on that day in 1969. Let Elon send his starship prototype to orbit for the inspiration that it will bring to America once again.

Allow spacex to make it's flight. This man can do wonders for the people of this planet and has already done alot. What if we are hit by an asteroid and wiped out in an instant? Maybe his vision to Mars and his hurry to get there is because he knows something the rest of us don't? Space is a chance, as Nasa should know. What if the launch to the moon was put off because of regulations? What if we were last?

I think the spacex launch and "starbase" facility should be allowed because of the major technical advantages it could make on our society. If declining this offer if sends out a message to future generations about what the world and FAA true goal is. Of course it should be as safe as possible, but there should by limits to that. not every great achievement was done to perfection, there will be mistakes and that is why you have to learn to deal and fix the mistakes to learn. teach the future generations that failing is ok and let them watch the progression of engineering and inspire them. thanks

SpaceX inspires people all around the country and planet. His goals are to achieve the greatest good for the greatest amount of people and I support that. Regulatory time is the only thing limiting him from moving humanity forward. It is important to have regulation but if there was an expidited form of that then humanity could be pushed forward faster. As for the environment, he is one of the biggest environmentalists that I've ever known and demonstrates this with Tesla. I know SpaceX will do their due dillegence when it comes to the environment aswell

Good day to whoever is reading this. It's hard to argue that there is any other company which comes even close to doing such bold and innovative moves as SpaceX does. During the COVID-19 lockdown, the Starship program was one of the very few things I could be happy about and look forward to almost daily. SpaceX's goal to make humankind a multi planetary species, and it's pace and transparency, is amazing and inspiring. With Starship it seems within arm's reach. Even though they reach for such great goals, their track record shows that they do everything they can to do it with the utmost respect to safety. Greetings and thanks for reading. Greg

Hi, my name is Aaron Walker and I'm from [redacted], I have emailed before I believe, and I just wanted to update my statement. So having listened to both FAA hearings for starship/superheavy, I wanted to say that I'm fully on spacex side, and I do believe that the launch license should be granted, an environmental review has already been made but with falcon rocket, but what's the difference, if they both explode they will still do very little damage to the environment. Furthermore, having listened to people moaning about the luxury, that is going to the beach, I believe that you the FAA, spacex and Cameron county needs to work together to close highway 4, as it's quite clear that the only reason people care about "beach access" is because they don't like spacex, people need to grow up, get with the times, and let spacex do their thing. If you are not going to issue a license, then why let spacex waste their time, money and resources? And not to mention peoples hopes. So yeah I think you should do your job, but also going fast, these processes shouldn't take months and months nor should it take weeks and weeks, the max this should take is maybe 2 weeks. Thank you, kind regards, Aaron

Hello, I would like to say upfront that I did not read the report, so I do not know all that is impacted by the developments of the SpaceX program at Boca Chica. I would like nonetheless to state that I strongly believe in the mission of SpaceX in bringing men to Mars. Most of all I believe they bring good to the world, to the United States and to Boca Chica, in the form of dreams, hope and pride, technological advantages and economic opportunities. I strongly believe that SpaceX is not principally motivated by profit, in which case I would not be so enthusiastic. I'm a strong defender of the environnement and am happy to know that an independent organization like you will supervise. However, I believe no project of that size is perfect and that what SpaceX offers the world is worth a lot, and has to be taken into consideration. It is not a usual business enterprise. It is an opportunity to dream together led by today's most brilliant engineers and hard working people. I support SpaceX and believe that it should be allowed to go on with their Starship program at Boca Chica.

Greetings. I adress you not as a Texan or American but as a denizen of Earth, as what is being undertaken in Boca Chica permits no smaller scope. Millions of years ago life left the ocean and ventured on to land. Becoming a space fairing civilization is if anything more vital and pivotal. We, all earthlings are islanders on this planet. Sooner or later, one way or another we will all die on this rock, if we do not learn to navigate the ocean of space. The technology, resources and drive to do this are all here now being built before our eyes by SpaceX. This opportunity may not happen again. To impede them in this effort for the sake of a road to a desolate beach, or some scared off birds, would be a crime our descendants will judge harshly. I urge you to conclude this review quickly and issue whatever permits SpaceX requires to achieve this breakthrough for all humanity. Thank you.

JFK told America we will put a man on the moon. America came together and through hard work we as Americans made that happen. There was no review by government agencies. We had a mission to do and we did it! By standing in the way of this review, American progress and bringing the country together is in the balance. We can deny SpaceX and just let the Chinese or Russians do it however I believe what brought our country together before was let's put a man on the moon! I ask you to not stand in the way of this but approve this for the sake of our country

Dear FAA I am writing to show my support for spacex and spacex facility in Boca Chica Texas. This facility and the work that Elon musk is doing there is critical, not only to the US interests of maintaining space dominance but also critical to humanity as well. I agree with Elon musk that humanity must become a multi planetary species if we are to survive. The work that he is doing at a Boca Chica launch site is critical to reach this goal. So I am writing to request that you were prove his launches. I have read the preliminary environmental impact study as well as his proposed mitigation procedures. And I believe they are adequate when put up against the needs of the United States and humanity as a whole. Thank you for your time.

Hi, Thank you for allowing the public to comment on this topic. SpaceX the company has been truly awe-inspiring for me. I watch every launch with my son, and the excitement that surrounds each launch never seems to wain. There are so many things happening to our planet and world that can turn anyone into a pessimist; SpaceX's vision of reaching Mars and Beyond brings an ounce of hope that's very much needed. Society as a whole will benefit from this. Our understanding of the universe and our place within it will grow if SpaceX's vision comes to light. That will have immense benefits to humanity that we can't even begin to comprehend. Please allow innovation and the future to win. As long as SpaceX follows FAA rules and addresses environmental concerns, I believe they should be allowed to further test Starship so that one day the dream of landing on the surface of another planet comes true. Thank you!

I follow spacex on youtube everyday, have for many years. I think what Elon Musk is doing is probably the most important thing humanity can do. Extinction of the human species is a highly probable future event be it from war, disease,asteroid strike or many other sources.We need an insurance policy,a moon or planet to ensure our long term survival. we may avoid major war conquer disease & possibly deflect an asteroid or two one day but eventually an extinction level event will likely occur. we can't predict when any of these things will happen with the exception of an asteroid strike why take a chance. We have in development a very promising spaceship which in time i believe can give humanity that edge to overcome these threats. Starship can also possibly give the United States superiority in space. It has inherit military application we should not ignore. Delaying starship too long could be a possible treat to our national security. Countries such as China Russia North Korea & others are developing technologies that could one day deny us access to space if we're not diligent. I think it is important that we allow spacex to continue it's development of starship unimpeded as possible. we need the most advanced tech. if we are to continue as a species & if we want remain the number 1 nation on earth. Thank You!

Please approve the SpaceX Starship orbital launch attempt. As a former WA Air Guardsman, I understand the impact and importance of proper regulation and enforcement in our air space. I strongly believe that proper regulation of rocket launches is an important part of this picture. However, it is also very clear that we want to improve the safety and security of our air space without impeding the technological revolution happening in aerospace. This means do the work faster and don’t sacrifice quality. Embrace the power of AND. USA faces a lot of problems right now, let’s get ahead where we can. Thank you for your work. John Kupko

I frequently vacation in the Boca Chica/South Padre Island/Brownsville area. I've had the good fortune of watching SpaceX build up their facilities through the past couple of years. I have been both impressed an amazed at how professional of an operation Starbase has become. Further, I have seen first hand how the interaction between SpaceX and the community has been strong and beneficial to the area. Having also been present during road closures, static fires, and general construction, I also understand how SpaceX's operation can impact the local community and environment. However, having also lived near the Space Coast in Florida, this is an environment I personally trust both the FAA and SpaceX to continue to care for while also promoting safe, reusable, and innovative space technology which will benefit humanity far into the future. I strongly support SpaceX's operation in Boca Chica. Given the FAA's strong capability evidenced by their constant focus on safety in aviation and SpaceX's broad experience with launch operations in already existing launch sites, I believe as a tourist that the impact to the environment I visit will be mitigated by SpaceX's plans and concern for advancing humanity safely into space. I have seen this mitigation already in place and fully trust that, under the continuous regulatory supervision of the FAA, SpaceX will continue to care for the local environment while supporting its mission.

Things can move fairly fast in technology. Often faster than regulations can keep up with. Space flight has hitherto been expensive and difficult. With SpaceX and their bold technical expertise and advancements we are witnessing a rewriting of what may be possible in the near future. I believe it is vital not only to the United States, but to the world that they receive every accommodation possible to conduct their operations with Starship & Superheavy booster development and flights. Obviously safety concerns must be considered seriously, it may even require updating the regulations. Great effort had to be made to get Apollo to the moon and back again. The journey to that point was full of both success and failure. Something very special, unique and historic is happening at Bocachica. It would be an engineering, technical and scientific tragedy if orbital operations were impeded unnecessarily or forbidden. There is a golden opportunity here which does not come around often, we are fortunate to see it in our lifetime. Please accommodate SpaceX as they develop the next age of travel and exploration.

Given that SpaceX does not utilize kerosene based fuel for the Starship, and that the footprint at Boca Chica for their launch operations is a small percentage of that at the Kennedy Space Center, the level of concern for environmental damage should be lower than the existing threat in Florida. There have been too many accidents with RP-1 and hypergolic fuels at KFC and Cape Canaveral to mention in one email, and yet the alligators and bald eagles do not prevent operations. Throughout the centuries the Cape has been occupied by native people, Spaniards, the French, the British, and American homesteaders, but no historians are allowed to stall space operations because of it. In fact, the homesteaders were physically moved out when the government turned the area into a space center. Houses were relocated. Apartments bulldozed, and people compensated, though not for two to three times the value of their property as with the small number of residents at Boca Chica. I am all for due process and fair analysis of environmental impact. But when no due cause is provided, nor reasonable established precedent given, then I begin to suspect political interference. I certainly hope this isn't the case. At a time when our nation is facing stiff competition from governments who demonstrate a lack of concern for human rights and sovereignty, it would be tragic to hand over the high ground of space simply because we couldn't get out of our own way. The FAA should be the conduit to space, not the gatekeeper. Expedite this process! Thank you. Richard Nabstedt

Hi from Canada The importance and success from SpaceEx is so big that it doesn't have borders. This is calling for the USA, keep the gods things in your country that goes to bring innovation on the new technological future, we got a very hard copy/concurrence from China and Russia. My origins is from Portugal if at 600/500 years ago we find the Americas/Brazil and the way to go to India we open the world to the world. Now is time to USA open the way to the Universe, please, the People wants that, but the big corporations no. FAA serve the people or the corporations? Innovation and Nature can coexist in an order political way lets find that path but we need to be interplanetary species. You need to believe in someone that change the automobile industry better internet without the antennas and use methane for the rockets not kerosene and others toxic products. Thanks from Canada

I would like to submit my comment in regulars to the environmental impact that Spacex has on Boca Chica. I perceive that Spacex is very mindful of the environment. Musk is one of the only billionaires who really puts their money where their mouth is when it comes to creating sustainable energy. Last year we saw Spacex help the local turtle population during the big freeze. It is my opinion that allowing Spacex to resume development and launches at Boca Chica will be an enormous benefit to America and will help us win this new space race that we have apparently entered with China. I overwhelmingly support Spacex and I hope the FAA will allow Spacex to continue launch operations. Thank you Derek Baker

Good day, about 3 years ago Spacex started construction and development for a launch facility in the Boca Chica area of Brownsville Tx. Until that time many of the people that seem to be against this succeeding are only concerned about environmental impacts or any effects on the area. Quite honestly if you polled these raising issue I imagine most hadn't even heard of the Brownsville/Boca Chica area. It is absolutely ludicrous that many outsiders are allowed to voice their opinions and are even listened too. The fact that Spacex has brought in thousands of jobs and bolstered the local economy should be commended. The fact that the FAA is even considering denying any and all related permitting or approvals is unbelievable. Why is it that outsiders are even being listened too and not the folks in Texas. We want this facility to thrive and further push forward US space exploration! We are very appreciative to Spacex for having the confidence in the state of Texas to meet their needs for a interplanetary launch facility. Please approve any and all applications and or permitting to Spacex. Thank you

Dear FAA Please expedite the approval for SpaceX Starship orbital launch. I am very confident SpaceX's engineers have taken into consideration all environmental issues fully, as they have shown in the past. SpaceX is clearly reducing 10X or more the environmental costs traditional one time use rockets would have incurred. The inconvenience to local communities re noise and road closures etc. has to be weighed vs the greater good to the economic benefits to the region and the US as a whole. We appreciate your service , Andre Tchen - [redacted]

Dear Stephen Dickson, D.B.A Federal Aviation Administrator, After listening to town hall meeting pros and cons concerning Brownsville, Texas, its citizenry and their relationship with SpaceX, as a woman of God, heir and beneficiary to this land, I have decided to to make this statement in regards to my personal position on the matter. I consider myself to be an environmentalist and also a promoter of technological advancement. I believe the combination of these two mindsets can work in unison for the advancement of the human race, whilst ensuring the safety and health of our Earth. As a professional in the science of nursing, a [redacted], I have a soft spot for animals, humans and nature generally, and appreciate the need for continued research in technology for new medical advancements. I feel that the SpaceX mission and values coincide with my own. Currently, I am involved in missionary work in the Brownsville area and have spent quite a lot of time on Boca Chica Beach, near SpaceX. I have not been inconvenienced by any of the road closures, as they are truthfully far and few between. Actually, very few people visit Boca Chica Beach, perhaps due to the fact that it's quite primitive without bathroom facilities, lifeguards, etc.. However there are several beaches nearby more suited for human visitors with these services available. I enjoy the solitude and presence of nature that Boca Chica Beach provides. I am an avid bird watcher. It is my understanding that the preservation of the wildlife preserve is a cause of concern for environmentalists. Personally, I have seen no signs of distress from the birds and other wildlife on or near Boca Chica Beach. The wildlife appears to be quite happy and plentiful. I do understand that the rocket launches at SpaceX may offer a slight disturbance to nearby wildlife, however, these launches are not that frequent and nature will adapt, just as it has in the past in regards to many other industries and the development thereof. The technological advancements that SpaceX, Starlink, SolarCity, The Boring Company, Neuralink and Tesla are developing are 'second to none' and extremely important to continue both for the human race and the environment. Elon Musk and SpaceX have provided more substance to the communities of Boca Chica, Brownsville and Texas than anyone else in recent history, donating $20M to the City of Brownsville for renovation and another $10M to Brownsville local school district, establishing thousands of above average paying positions for the people of Brownsville and surrounding areas through SpaceX employment, as well as building the enormous Tesla Giga factory in Austin, Texas. It is quite clear to me that these addition made by Elon Musk and his corporations are for the benefit of our Earth and our people. The successful track record and ability of SpaceX also effectively correlates to the mission of the Federal Aviation Administration, “Our continued mission is to provide the safest, most efficient aerospace system in the world.” I believe with SpaceX this mission has been realized. With continued support from the F.A.A., and the inventive nature of Elon Musk and his team of researchers and engineers, the possibilities for the future are endless. That is exciting!! When we evaluate the long term benefits versus risk, clearly we can see that the long term benefits of these combined technologies greatly outweigh any short term risks or personal sacrifices that will be made. Best Regards, Ami-Dawn: Randall, a living woman

SpaceX's Starship orbital test is of instrumental importance in further democratizing access to space and enabling greater use of space resources for the benefit of all humanity. SpaceX has repeatedly demonstrated their ability to engage in high-risk test activities without putting the safety of employees or the public at risk, and I believe this strong track record of safety in very complex test activities stands as evidence that they are ready to conduct an orbital test of Starship. I do not believe it is in the best interest of the United States, or the world, for the FAA to continue delaying the orbital flight test of Starship.

Over the years, SpaceX has shown they can make things happen. Please, not only let them launch the Starship orbital test, but try to make the process less tedious for the launches that will follow. There are no other companies trying to make us interplanetary. Let's see the colonisation of Mars during our lifetime, let's make history.

Roelof de boer [redacted] October 23 2021 Dear Mr James r repcheck Good morning I'm here to write you today about my support for Elon Musk and his star ship / Starbase I'm a bigg fan of his work and can't wait to see his rocket launch. I also want to state a concern, I understand that the regulations are very necessary and needed for a save enviornment in all concepts of environmental nature human safety etc, but I also feel that it takes to long in a sense to a different safety related aspect to human kind that we are on a time line of a certain expiration date of the earth with climate change as being one of the treats out there of manny! I won't get to deep in to it all but I just wanted state that concern and that space exploration should only be delayed to the bare minimum time possible so we as humanity don't exceed this time line. That will be all keep up the good work Best regards Roelof de boer.

Hello, I think that what spacex is doing right now is a major step for the evolution of the human race and being able to explore again. You should approve them for what they are able to complete because this is our only way to make it back into space again. Elon has taken many considerations when making the starship and he found a place in the middle of nowhere, unlike kennedy space center??, and he is doing as best as he can to minimize his environmental effect and the FAA should grant him this approval. Please do this for my future as a student and soon to be adult.

Starship is one of, if not the most important vehicle that we as humans are working. Starship isn't just about making life interplanetary. It's also about open up space to advance manufacturing and tourism. The possibilities are endless. Regulation is important throughout this whole process. However regulation should not be a blocking factor when it comes to process. Spacex needs the space and time to work on starship at the pace that they are working on. Even NASA has had a look at starship and considered it a viable option.

Dear FAA, I've been quite invested in the recent development and achievements made by the SpaceX team and what the concept of a multiplanetary species might do for the survival of humanity. The Starship concept has proven to work on its own but needs Super heavy to enter rapid testing in order to verify it for flight and most importantly human flight. In order to achieve this ambitious goal I ask for your understanding that 5 launches a year are not sufficient for the speed at which development has been going. I hope this email finds you well and is able to represent an alternative view on the situation. Kind regards Patrick Sibbald

I fully support everything SpaceX is trying to achieve in its entirety. From the Falcon 9 launches all the way to Starship 20s orbital launch test. We as humanity have not done anything remotely noteworthy in space since the original moon landings. We need to explore the options of becoming multiplanetary, it is not a case of do or do not, it is a case of 'when'. It is inevitable. Out of all the companies currently in space industry, SpaceX is leading the way by leaps and bounds. Others are doing the same but Elons company is about achieving what is currently not possible, others are merely doing it for space tourism. Let them (SpaceX) do this, NASA will not be able to do this for decades, maybe centuries due to the limited funding and time it takes public industry to get through the ever growing red tape. I support SpaceX for everything they are trying to achieve in Boca Chica and everywhere else. For the sake of humanity. Let's progress! Daniel Medley

As someone who has had a keen interest in the space program since I was a small child in the 70s, the work being done at Boca Chica is incredibly exciting. I'm also an avid hiker/climber who lives next to a National Forest, and I'm deeply concerned about the natural world. The Boca Chica facility is tiny, and I think the impacts are minor, and can be controlled. I looked at google maps, and a handful of parking lots at Kennedy Space Center cover more ground than the entire Starbase facility. I've visited South Padre a few times (we have an artist friend there), and the hotels have a large impact on the beaches and they seem to be no problem. We need a future where humans are exploring the solar system, and the only place for launch facilities is coastal areas that face East, ideally at lower latitudes.

I am writing to provide my support for SpaceX. I request that the review of SpaceX and their mission be reviewed with a new lens and willingness to make needed changes to support the goal of progress in the space program that I believe will better humanity and our future. I ask that the FAA be willing to look at things in a new way and make adjustments where needed that are within reason. I would like to request prior rules be assessed, reviewed and streamlined as you make changes to advance humanities space exploration goals. In order to meet our goals to better humanity as a whole via the launch of rockets with enough frequency to develop a settlement on Mars and achieve other ambitious space goals, you must seek out ways to modify or remove barriers within reason that are for the greater good.

To Whom It May Concern, I myself am a very vocal supporter of SpaceX. I am very excited and intrigued by their Starship program. I spend countless hours watching the streams and following their progress. I agree with their goal to make humanity a multiplanetary species. Despite this I do not believe that it would be appropriate for the FAA to approve of the Starship + Super Heavy launch license without conducting a more thorough EIS. Mr. Musk talks extensively about the threat of humanities extinction due to mass extinction events. He says that a footprint on Mars would prevent this. But the fact is that no one can predict when this event will occur. It could be tomorrow, it could be next year, it could be decades from now. The threat of a POSSIBLE event like this can not override the regulation processes we have in effect. IF there was a meteor currently hurdling towards Earth at this very moment and we knew we had to get off the planet now then yes by all means approve this immediately. There should be no holding back a project like this in the face of imminent doom. Fortunately, or maybe unfortunately, we have no signs of imminent doom. Making the approval of this project based on the notion that it can save humanity from an unknown threat dangerous. The FAA has a responsibility to follow the regulations and guidelines that they have put in place. They should not make exceptions. The rules are in place for a reason. The EIS conducted by SpaceX was for the Falcon 9 and Falcon Heavy system. An entirely different launch system, with entirely different risks and effects. The current plans for Starship don't fall anywhere close to what was outlined in the old Environmental Impact Statement. An Environmental Assessment is simply not adequate for a project of this scope. SpaceX should not be given an exception. They should have to follow the appropriate rules and conduct a full Environmental Impact Statement.

Dear FAA, As a patriotic American, naturally, I would like to see MY nation lead the space race because, 5-10,000 years from now, our Earth will most likely be what old Babylon is to us today, one of the places where 'it all began'. And we don't want our future space conquerors to be speaking Chinese or Russian. But that's one likely future is we block daring innovation and crazy adventure expand our horizons the way crazy explorers of old - think of Columbus or Magellan - expanded the boundaries of the 'old' world. SpaceX is not spending government money and, if they don't do something useful, will disappear. Your only task here is to ALLOW them to do what our government lost the will of doing ever since the end of Apollo, which is travel more than 2-300 miles off our Earth's surface. So, please, do not block our dreams because the alternative would be for us to live like rats, scavenging whatever is left on Earth, unable to see past the tips of our noses and unable dream about anything other than our next meal. Please, let SpaceX fly. Thank you!!!

Thank you for keeping the skies above us safe, both that when we are up there we are safe, and when we are down here below the flying things, we are safe. I want to express my support for the most expeditious processing and approval of SpaceX's regulatory approval for test launches in Boca Chica, TX. My reason for imploring you is that; Life is a race. It would not be if our lives had no end, unfortunately they do. We are racing against both other countries as well as future known and unknown threats to humanity as we are currently reliant on one, contiguous biosphere. This technology gives us a chance to stay well in front of other countries and to make the latter threats less existential. Keeping the skies safe is very important, as is the flourishing of American Businesses along with the resilience of the human species; the balancing of these considerations is in your hands. God speed and please grant approval asap

Restrict the flight on November 1st, bc all your checks aren't any useful. You may check till the end of the world, you may do your job professionally... but the world needs space, not your checks. The world needs much more then your job. It needs space travells. Nor you, nor the greatness of your job. Adventures weren't ever safe

Dear FAA, Please provide expeditious approvals both for SpaceX's development of Spaceport and the imminent, first launch and orbital test flight, of Starship. While my late father, [redacted] contributed sufficiently to America's rocketry and space programs that a crater on the Moon's far side is named for him, my best hope to visit that crater ("before this decade is out") is through the efforts of those extraordinary men and women who constitute SpaceX; they in turn are dependent upon your timely regulatory consideration and approvals, which again I encourage you to expeditiously provide. Regards, Karl N. Golovin [redacted]

Hi! I hope the FAA will approve the Starship's orbital test flight. While protecting the environment is crucial for mankind, so is the advancement of space exploration. Truly, just a few thousand trucks hauling cargo all over the world, running for 8 hours will generate more pollution than the Starship's flight. Hope we will all enjoy SpaceX's success as soon as possible.

LET ELON DO WHAT IS NECESSARY TO ENSURE HUMAN SURVIVAL. We are a growing breed and over population is at its highest it's ever been. People are actually dying because of no food, shelter, clothing, etc. We need to source better individuals to prepare our children for the future with the correct tools in hand. If you think our children deserve anything less than the best you are WRONG. Our children are our future! Teach them to succeed and they will thrive, failure to teach our children the correct means of survival can cost them their future. People are only relative to what they are used to- Elon is new, people aren't used to it, yet they flock to him… This phenomenon occurs naturally when an individuals does something selfless for others creating what some call "paying it forward". This is an easy concept to hold onto if you picture your children as those we are paying all of our hard work forward to, those of which will one day rule this Galaxy… and it may all be just because of someone like Elon Musk striving to help mankind excel. I explore you to allow Elon Musk what ever he needs to help him push mankind forward. A quote from my favorite movie! (Meet the Robinsons): KEEP MOVING FORWARD! #WeMuskExcel

I support the FAA and the need for you to do your sure diligence of the activities of SpaceX. I know that starting a new (insert whatever) business is big deal. Even more so in the case of SpaceX. Yes there will be emissions. Yes there will be noise. What I want is a fair comparison to how the fossil fuel industry currently runs. The environmental impact of old wells, powerplants, and active wells doing fracking. We finally have a chance to break the cycle of massive companies bleeding the taxpayers of resources. Have a chance to move humanity forward. There will be a cost to it but I firmly believe that cost is worth it to break through 20 year old barriers and enter a new age. Please be fair and please take into account the benefit of allowing SpaceX to go forward.

Please let SpaceX proceed with its launch next week. We choose to go to Mars. We choose to go to Mars...We choose to go to Mars in this decade and do the other things, not because they are easy, but because they are hard; because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept, one we are unwilling to postpone, and one we intend to win, and the others, too.

Hello Ms Stacey Zee, Please consider my communication in the support of the development of the SpaceX Starship/Super Heavy Program. While all actions performed by man come with environmental impact, the key question here is the trade-off in the overall advancement of our species. In this case, the benefits both short-term and long-term of this program far outweigh the environmental impact. Thank you for your consideration. Kind Regards, Elijah Karanja

In order to continue pushing human development further we must extend life beyond earth. Our very own solar has so much potential for new discoveries and observations just waiting to be explored. In order to make these discoveries we must first be able to get there and SpaceX's Starship in my opinion gives us the best viable means of arriving at these new destinations. To not let them test their vehicle would stall the ongoing process of human development.

I am requesting FAA to let spacex do its work, there are only few space organizations like spacex who are making rockets cost affective , I think its not fair to involve in private space companies projects because they are the one who developing space sector with govt bodies like nasa and reducing the cost to send crew or cargo into space . Literally I have so many reasons to support spaceX . SO MY FINAL REQUEST IS PLEASE LET SPACEX TO DO ITS PROJECTS WITH OUT ANY DISRUPTUNCE,if you stop spaceX from doing the projects like starship there will definitely so many space companies who will make the same and you cant shut all those companies from doing their work that may be even nasa .

I am writing in support of allowing Spacex to proceed with orbital launch testing of Starship. Spacex is developing technology that will propel the United States far ahead in space technology and the FAA should facilitate its progress by allowing orbital testing. For the sake of progress in space technology and for US national security, please allow Spacex to proceed.

To begin with, I have to say I am not Boca Chica resident. What is more, I am not even US resident. So why am I writing this if SpaceX's problem doesn't concern me? Well, it does. It does concern everyone who lives or will live on the planet Earth. I strongly believe we should not harm people that have no business in harming us. Also, I must admit that I am not a fan of SpaceX. They have made lots of mistakes, but the thing is that they learned a lot from those mistakes.

I believe that you should do everything in your power to let space x, continue to build and test orbital starship. The world needs a few more companies like space x. To keep pushing the limits on what can be done. I understand people will be concerned about the environmental impact, if this is the case find ways with Space X to mitigate theses effects.

I believe that SpaceX should be allowed to provide greater mission capability to NASA, Department of Defense, and commercial customers. SpaceX's activities have to continue to fulfill U.S. expectation that space transportation costs will be reduced. This will allow constant exploration, development, and use of space. SpaceX is bringing humanity farther than ever before and making us stronger than ever before. We should see what it really represents and I think we should run with them towards a better place, full of possibilities. Our eyes should be on the future, because future is our hope and we are the hope of the future.

i feel as if the launch of starship will benefit the human race for reasons such as; humans being a multi-planetary species. although we have many problems of earth, such as climate change, the inevitable extinction of the human race is a great factor all should consider. the chance of a global extinction of humans is very high, having humans on 2 different planets will make that chance go from over 60% to nearly 0%. this great decrease is one of the key reasons that the launch of the starship launch vehicle should go ahead.

To whom it may concern: As a Texan, American, and a citizen of Earth, I fully support the mission that SpaceX is trying to accomplish in all of their locations across the country, but I ESPECIALLY support their Starship Program at their Starbase Facility near Boca Chica, TX. SpaceX's plan of rapid reusability of a complete rocket is pivotal for the next step in mankind's quest for meaningful, manned space colonization. Testing is a key component of ensuring the Starship Program is safe for all, especially of those courageous enough to push the boundaries of humankind's existence. Therefore, I ask and implore that you to approve and expedite all requested SpaceX test flights of both the sub-orbital and orbital variety in the near and distant future. This will not only help to ensure the success of the Starship Program, but also ensure that America stays at the forefront of aerospace design and production. This will ensure that the USA leads the world in all issues space related. We do not want China or any of our other enemies or rivals catching up to America or surpassing us in any of these areas. Thank you for taking time to read my email and consider my opinion. A concerned Texan, American, and Earthling, Jake Keas

Dear FAA, I think You should let Spacex do their thing, because they will change our future in a good manner. Spacex tries their best, not to harm the enviroment and not to distract people's lives via loud noises etc. Boca Chica village could be the first fully-functional spaceport with multiple launches a day, but without Your approval Spacex couldn't thest their Starship prototypes. That sets them back really much, and without frequent testing and developing, it will be very hard, if not impossible, to put people on Mars and Moon. Please let Spacex and Elon Musk do their best at making life multy-planetary. László Kecskeméthy

I support spacex and there starbase i see no concerns for environment if they are still planning a carbon capture system for sucking carbon out of the air when launching rockets at the moment they take human safety serious there testing is fast and proven to be reliable an correspondent when it comes to letting the people know whats going on and road closure system is working an most importantly they have clever minds that can usually predict the outcome of situations and work on it till it looks 100% and innovate after very quickly they are a talented team once starship is refined and better the more refined the faa process will be down the road best thing to do we are on the verge of unlocking the key to sustaining the human life even if it is in another planet its what are future children wanna see

The future of human space travel is being advanced in Texas. It is important for all of humanity that we do this. I believe that some of the environmental concerns raised are important and need consideration but most of them are not in good faith. There is no amount of environmental impact studies that would satisfy many of the people attempting to stop this launch. These are people who would allow nothing built anywhere if they were allowed to impose their world view.

Good morning, my name is Josias, I am from Matamoros, Tamaulipas, Mexico. My family and I always watched the launchings from SpaceX on their live videos, and if we were lucky we could see the trail of the prototipes. The reason of why I say this, is because we all are excited about the development of technology in rockets and we hope they can help humans to reach the stars, I know that the authorization of an orbital test is complicated because they must analyze every aspect of the enviromental impact it could have on the people. It is neccesary to continue developing the techology as soon as possible. Thank you very much.

I am a young man studying engineering. Really care about nature and my fader is a marine biologist professor working on taking care of ocean species. We have talked about the starship development and its impact on the environment and believe strongly that we should favor the development into the future. It will have some negative impacts on the area, that's just obvious, but it will also inspire a generation to dream big and make people look forword to the future. I also believe the Starship program will help nature in fare more ways than it will harm nature. New technologies will be developed, and it will eventually allow new kinds of research that will be extremely valuable. I have followed Elon for years, and if you know him, you know that this is a man who cares, he really cares! He cares about the environment, just look at Tesla. If you see the SpaceX team doing unreasonable things that negatively affects the environment, than just let them know, he will take action to change if the feedback is reasonable. Please let the starship program continue. And not just that, also believe in it and support it he way you can!

Hi & to all concerned... I'm a huge space fan... I'm also a UK resident. I watch from afar the magic SpaceX , Tesla and the best of the umbrella of Elon Musk. I really do understand the concerns regarding the environment surrounding the launch site. REALLY.....If you spent as much time addressing problems outside of this , the world would be a better place. Space X is doing nothing more than trying to advance mankind...The organisation isn't chopping trees down, mining fossil fuels and basically finding ways to make money at the cost of the planet. (Ok Lithium).....The environmental impact to the region surrounding 'Starbase' in the bigger picture is negligible and nothing that can't be solved, given willing partners. I've looked into becoming an American Citizen (I'm a English Passport Holder) just so I could and would work for space X. I Hope he FAA see's reason & champions Space X and Not the negative. Kind Regards Alistair Roe

The Boca Chica endeavours give jobs locally and hope for mankind globally. Please work with Elon, contain damage to the environment as much as possible. One does not exclude the other. Even if he can't get us to Mars and beyond in his lifetime, he is laying the groundwork for mankind to venture out to space in the future.

Hey, I'm an engineering student from Finland and I thought I'd write a short motivational letter on the behalf of SpaceX and it's unorthodox flight tests for the Starship. US used to be the gold standard when I was little. Everyone talked about how well things were on the "other side of the Ocean" and all coolest technological or scientific advances were something US had it's hands in. And don't even get me started on the film industry and how far ahead you guys were. Now, of course a part of this was childhood naivety but also much of it wasn't as US had flourished for a long time. However, in the eyes of the world (as seen from an outsider from Europe), due to a myriad of different things, the reputation of US has been in a steady decline. What was once seen as the gold standard, everyday inches closer to becoming a pale shadow of that. I, for one, hate witnessing this. One of the remaining cornerstones of admiration towards the US (especially from an engineering point of view), is its ability to nurture innovation unlike any other country or union. For example, EU acts like it does, but actually drowns most ambitious projects in a sea of regulatory bureaucracy and red tape. For me personally, and many others I know, this second wave of the space race is a culmination of that ability to harbor innovation and thus the essence of why the US is truly a great nation. I love waking up every morning to the idea that another amazing development in space technology may have occurred in the US since no other country can come even close. Please keep allowing innovation to flourish. Believe it or not, the rest of the world is rooting for you especially in that regard. All the best, Atte

Nothing is more critical to the survival of the human race then becoming a multi-planetary/lunar/space-faring civilization. A single large asteroid, a novel virus, world wars, nuclear mayhem, environmental destruction, or unknown cataclysmic event could end the ride we known as life on earth pretty quickly. Standing in the way of diversifying humanity's planetary portfolio is illogical and unwise. Please allow efforts that enable this great progress, benefitting all of humanity, to proceed with greatest urgency. Sincerely, David R Bendersky

Dear FAA, In this ever changing world we must change with it. Visionary companies like SpaceX keep us at the forefront of that chance pushing our technology our economy and our human spirit forward. I believe that as a society we must do whatever is in our power to allow them to continue to be the stewards for responsible change that they have shown themselves to be. This is why we must allow them to push forward with Starship's first orbital launch attempt. This will be another major step forward for American aerospace and humanity's advancement to the stars. Thank you, Landon Besherse

Hello, good afternoon (different translator) I am Jefferson Peñafiel 18 years old and I unconditionally support the space x team I think this launch should be done because it is an opportunity for the development of humanity this will change the way of thinking of many making them inspired and want to lead their lives on a path of innovation I know that the problem is the concern of the environment and the disagreement of the nearby residents and it is normal to do so if I am not mistaken people are displeased are of age and I can get it to understand ... they are of another generation different way of growing up creating an ideology characteristic of their generation, I as a young person of the present and adult of the future I commit myself to lead a dignified life with technological advances that favor the development and health of humanity that is why we need this flight to be possible to inspire people, the possible solutions that I propose in reference to the displeasure of the dwellers is that an agreement is made to talk very well with them and convince them that it is for the best or persuade them to try to buy their land. ... and about the fauna and animal life that measures are implemented so as not to interfere in their habitat and if it is not possible to try to move the species to another habitat. "What space x is doing is unbelievable and you know it". Thank you for reading it, sorry if it is difficult to understand something because I use a translator to communicate.

Dear Sir/Madam, I'd like to express my very strong support for SpaceX' work on Starship in Boca Chica, as substantiated here: National Security: It is imperative that America own space. SpaceX has since founding already demonstrated strong ability to consistently and safely launch a variety of cargo and human beings, which speaks well for their ability to innovate towards breakthrough technology. International inspiration: I watch livestreams of both SpaceX launches and progress in Boca Chica on a weekly basis, and the international attention coming from people of all ages is astounding and inspiring. Continued progress would contribute extraordinary toward international appreciation of Space itself, and America's role. Opportunities in Space: The opportunities we can already imagine in Space are extraordinary. Let alone those yet unimagined! We currently think of "the" ISS as an extraordinary accomplishment. What if we could have a dozen space stations? An operational Starship would enable that and much, much more.

It seems that in the starship everything is ready, the team in charge has worked hard, overcome any eventuality. I know there are people who think that what they are doing in SpaceX It is not important, they say the same about those who write poetry, but there are those who believe that it is, the exploration of outer space and poetry take us on an inner journey, Kubrick gave us a compendium of that, this important piece of space exploration needs to fulfill its period of deep testing, please allow the plume write another line from this Jules Verne book in which we live. Thank you for allowing us to be a part of this.

I'm writing in support of SpaceX development, testing and production at the Boca Chica launch site. The location of the launch site chosen is potentially the least environmentally and safety-sensitive location possible in all of the USA. While no location would be 100% perfect, after research, I believe this location is extremely ideal and approval should be granted without delay. We as a country and as a species cannot afford to delay progress and discovery in space, and SpaceX's Starship program is the most accelerated and effective program of this kind that we may ever get the chance to realize. Thank you for your consideration.

I am requesting FAA to let spacex do its work, there are only few space organizations like spacex who are making rockets cost affective , I think its not fair to involve in private space companies projects because they are the one who developing space sector with govt bodies like nasa and reducing the cost to send crew or cargo into space . Literally I have so many reasons to support spaceX . SO MY FINAL REQUEST IS PLEASE LET SPACEX TO DO ITS PROJECTS WITH OUT ANY DISRUPTUNCE,if you stop spaceX from doing the projects like starship there will definitely so many space companies who will make the same and you cant shut all those companies from doing their work that may be even nasa .

This should not even be a question. Elon Musk is a Hero, A God , A Robot. I understand people may be against him because he is a robot but he Loves Humans and wants to see Humans be a multi planetarium species. The truth is the world will not last forever and it is important for Elon to do his work. We should all be protecting this man and moving him forward. Its exciting in these times. The world is crazy and its getting more crazy. The only thing that fuels human nature is exploration and war. I am sick of hearing about war because the only place that brings anyone is into the ground. Lets send it to space, let the man work, let us watch in aww. I have been around for 33 years and this stuff is exciting, it needs to happen. It saves the planet in the long run and that is a fact. #IsupportElon, # ElonisET, #dogefather, #dogecointothemoon # Letoursaviorsave, #Starship/SuperHeavy.... Do good everyday

SpaceX and starship brings me hope, I've loved watching them test starship and would love to see it fly soon, I believe the space x team is inspiring and so amazing that I wouldn't see why it couldn't launch. Having such a tourist attraction would be amazing for the local area and I know when I get the chance I would love the visit I hope you find this helpful. I've only recently found the love of space still being very young and I rlly rlly hope I can watch this insane rocket grow and get bigger even the thought of telling my own children in 10 or so years that I was here when it was being built would be such a special moment, and when this thing lands on Mars the amount of proudness to know I've watched it would be overwhelming, I hope starship can launch soon, I've adored watching it so far

Please allow SpaceX and Elon to continue with his mission. This company has did so much for the US and the space industry. What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - $4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from $ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet

Hello, my name is Shawn Brice. I'm a commercial producer at KNDU in Kennewick, WA and a proud registered Democrat. For decades we have been looking up at the stars waiting for this country to gain its reputation back in space exploration and now we're losing track and time behind others such as China because our elected officials and people in government are prioritizing political opinions above the benefit of all humanity. Allowing SpaceX to launch in November is imperative to helping Earth, America and most importantly, humanity forward into the future. I understanding the sentiment that we need to protect Earth before allowing humanity into space, but there is one key point people are missing who hold that viewpoint. Expanding access to space will benefit the planet. Allowing industries to gain a foothold in deep space will eventually stop mining here on Earth. -According to Forbes, two asteroids already found in the Kyper belt would exceed current global reserves in precious metals, this has the potential to stop all mining here on earth and the only people in the way is the FAA. (https://www.forbes.com/sites/jamiecartereurope/2021/10/19/the-age-of-space-mining-just-got-closer-as-scientists-discover-two-asteroids-whose-precious-metals-would-exceed-global-reserves/?sh=1608408c713b). I would like your agency to take space exploration seriously if you want to help the planet like you say. If you don't want to help us help the planet this will effect my vote. I will vote in any person ready to reorganize the FAA to allow SpaceX to launch as they have safely in the past. Put your anti-billionaire sentiment behind you and do what's right for humanity. Thank you.

I fully support the activities SpaceX are conducting in Boca Chica. They are a revolutionary company who in time will change the world as we know it for the better. The environmental impact there would be very minimal and I know SpaceX would do whatever they can to protect it. They are doing amazing things, please let them continue. Sincerely SpaceX supporter.

I completely am in favor of granting SpaceX license to test and fly from the Boca Chica site. It is critical to the advancement of space exploration as we have seen that our legacy space companies are no longer competitive with the rest of the world. The U.S. needs to be the leader in these and other technologies.

Hello Ms Stacey Zee, Please consider my communication in the support of the development of the SpaceX Starship/Super Heavy Program. While all actions performed by man come with environmental impact, the key question here is the trade-off in the overall advancement of our species. In this case, the benefits both short-term and long-term of this program far outweigh the environmental impact. Regards, Kristine Caingat

Dear Sir/Madame, An orbital launch has the potential to be dangerous to nearby populations. However, there is clear evidence that none of the previous SpaceX launches have had poor outcomes to the health and safety of the population. On the contrary, this company has provided hope and happiness to thousands of people around the world. It has developed technology no one has dared to develop before. These are exciting times to be alive and to be able to witness the process of trial and error of a spaceship that will transport your children and grandchildren to the stars is unbelievable. I do appreciate there are logistical and health safety concerns about the upcoming launch but you have had the time to sort them out. If SpaceX can build a mecazila in 5 months you should be able to analyse all available data to either approve or disapprove the orbital launch. Now that you ask the public to give their opinion, I sincerely hope you will come to a conclusion soon. You cannot tell me that granting FAA approval takes longer than revolutionising an entire technological field, especially rocket science…. Please do listen to what the public wants, and they want to be able to see the SN20 stacked on the super heavy booster 4 launching into the atmosphere and landing in Hawai next month! Thank you. Carolina Gomes

For the future of humanity, making life multiplanetary is a critical task. With the environmental impact of our lives and the ongoing will of some to destroy our planet for their profits, saving our earth will maybe be impossible. Starship plays an important role in succeeding this multiplanetary task. It is the most promising project of bringing the first humans on mars and opening up a chance for an exiting and bright future for us and the upcoming generations. In the past tests of several starship versions SpaceX showed their ability of improving their rockets very fast, going large steps forward every launch and finally succeeding. Only with the approval of the next level of testing marking orbital flights as fast as possible, we can continue going the path of not only an exiting project but an exiting and hopeful future. SpaceX has shown their abilities of successfully launching rockets every week in some timespans and their ability of successfully completing and learning from tests. They WILL succeed. But they'll need the permission. My hopes are high that you'll give the approval. Greetings from Germany, exited for our future, Adrian Treiber

To whom it may concern, Starship's launch cannot be delayed. Please expedite the FAA processing and approval of the launch. I have reviewed the 151 page Draft PEA which SpaceX has thoroughly outlined and would like to highlight the importance of (1.3) Purpose and Need. The fact that ship wrecks are considered cultural sites at Boca Chica and is being considered as a potential reason for why this launch cannot happen is very concerning to me. The magnitude of importance in preserving a ship wreck does not compare to the importance of this launch. There will soon be no cultural sites to protect in the near future if this launch does not happen. The importance of this launch for the rest of the world should be considered and should be held with a greater weight in approving this launch compared to holding a greater weight on the concerns of the local people at Boca Chica. The SpaceX launch site will be a new cultural site that will be of greater importance than the said ship wrecks for Boca Chica. We cannot delay the processing of this SpaceX launch request.

Hello, My Name is Amit Weitzman, I am an 18-year-old aspiring engineer. I want to comment on why the SpaceX environmental assessment was sufficient to grant a launch license for Starship in Boca Chica. I will comment both on the natural and human environmental factors discussed in the assessment as well as factors discussed in the public hearing. In terms of the natural environment, the effects were thoroughly explored in the FAA's recent environmental assessment as well as the older 2014 environmental impact statement. While the latter statement was referring to a Falcon-9 launch facility in Boca Chica, that document supports the newer environmental assessment, reducing the added value of another EIS in the same place. Additionally, in reference to the statement of a commenter on the public hearing, we have existing evidence that busy launch and development sites can coexist peacefully with the natural environment around them. An example of that is Cape Canaveral, which has tens of launch pads with over 100 launches just since Jan 2021. The natural environment there (both fauna and flora) not only survives these environments but actually flourishes due to the isolation and protection of the sites. There is no reason to believe that an active launch site in Boca Chica will 'wipe out' the natural environment when existing launch sites have proven that the opposite is true. In terms of the human factors, a concern raised in the public hearings was the noise generated by the development and testing process of Starship. The environmental assessment made noise calculations and assessed that there will be no major impacts to properties or people and that the sound levels are safe to the surrounding population. Some commenters raised concerns over the noise. These complaints referred to the sound being a nuisance rather than unsafe, comparable to the sound of fireworks. Noise complaints arise when any production-based industry settles in a new area, after which the population adapts to the environment. In the case of Starship, not only is the noise not dangerous, but many people actually like the noise, and seek it out, as it is a part of the whole experience of witnessing the marvelous sight of a craft launching into space. The area is in fact littered with microphones set up by internet media outlets as the sound and video are sought by tens of thousands around the world following the development of Starship. The sound is safe for the population, not heard at a volume higher than usual events such as firework shows, and is actually having a positive social impact on many locals, and even more around the country and the world. In addition, local commenters on the public hearing have made it clear that the development of Starship had positive economic effects on the area, notably Brownsville, South Padre Island, and Port Isabel. With increased business, jobs, tourism, and immigration in order to be close to, and or aid the development of SpaceX. There is a large number of people patiently waiting for their opportunity to move to Texas and be a part of this huge project, with many people already having done so. These people will range from aerospace engineers all the way to wait-staff and will fill the economy of the area with new life. I am a member of a large, international community that spans all ages, backgrounds, races, religions, and political views, with our common factor being our desire to see and be a part of the development of a new, and exciting human era, in which we explore the cosmos and make the stars our home. To conclude, the FAA is a professional regulatory body that has a responsibility to the environment as it rightly should. And both in terms of the human environment and the natural environment, the benefits massively outweigh the costs and for that reason, I think a launch license should be granted to SpaceX in Boca Chica, TX.

Dear Administrators, I don't believe my voice means much to You as I'm not American and do not live in North America, but I think it is still worth writing. SpaceX, Tesla and every other of Elon Musk's endeavours filled my life with hope for better future. As is probably true for millions of people around the globe. Please don't slow it down or sink it based on people's opinions. Because my liking of their designs - is my opinion, but the potential for them to make life better is a fact. If there are real concerns about safety, sure, do as You need to. But please, don't base Your decisions on someone's financial benefit or on someone's poorly formed beliefs. Base your decisions on the truth, on logic, on science and benefits for us all. Hopeful Polish, German and EU citizen, Alex Hluchnik

I am writing in regard to the Boca Chica Space Launch facility in South Texas and more accurately to the Starship program being hosted there. There have been mane times in human history when a technology has been discovered or engineered that has forever altered how we as human live, often for the better. Some notable examples would be the harnessing of fire, the invention of the wheel, the creation of explosives, and the engineering of powered human flight. Indeed, the Apollo program and the subsequent STS program were meant to continue that chain of advancement, but these programs faltered under the weight of bureaucracies and politics. And so while we have had great advancements in computers and medicine in the past 50 or so years, we have not seen anything of significance in human space flight. The Starship program promises to break us out of that rut. There are many legitimate concerns about the impact of the launch facility and the super heavy launches originating from there. There will undoubtedly be impacts to the local flora and fauna. These concerns should be closely reviewed, but with a shrewed eye for overblown or fake concerns that are being used as an instrument to hold back innovation out of fear of change or fear of some dark future being invented by those who for some reason despise Elon Musk. There is a bright future for humanity in space. Indeed, the development of Starship opens up possibilities that will help end (or at least mitigate) global climate, famine, and poverty not just in the United States, but across the planet. Other space faring organizations are already looking at Starship and asking if Elon can do it, why not them? Barring some natural or human made catastrophe, Starship or something like it will happen. The question is whether the US government will drive the Starship program into the ground with end bureaucratic red tape or if it will work as a partner with SpaceX to help bring this dream to fruition. I ask that you decide to let Starship fly.

Hello, I would like to give my consent of approval for SpaceX's ambitions here in Texas and on Earth. I think it's vitally important for the future of western civilization for SpaceX and Elon Musk to work toward their goal against efficient and appropriate regulation. Unless these environmental concerns are planetary in scope and severity, let's dismiss them as trivial and as a misdirection in respect for the greater good of civilization. Thanks, Payton (Austin resident and Tesla engineer)

Mr. Steve Dickson Administrator Federal Aviation Administrator 800 Independence Ave SW Washington, DC 20591 Sent via email to SpaceXBocaChica@icf.com Re: SpaceX's Draft Programmatic Environmental Assessment (PEA) for the Starship/Super Heavy program at Boca Chica Beach in Brownsville, Cameron County, Texas. Dear Mr. Dickson, I am writing this letter in response to the invitation by FAA to the public to share our thoughts on SpaceX's Draft Programmatic Environmental Assessment (PEA) for the Starship/Super Heavy program at Boca Chica Beach in Brownsville, Cameron County, Texas. I wholeheartedly support SpaceX's mission and request FAA to issue SpaceX the experimental permit and a vehicle operator license from the FAA to operate Starship/Super Heavy and let SpaceX to continue their work in South Texas without any delay considering the following: America's National Interests: We should look at the big picture here. SpaceX's activities align with the National Interests of the United States of America. SpaceX is the most important contractor of the Defense Department and NASA. The rocket technology and other technologies that are being developed by SpaceX are vitally important for the Space Force of the United States and the national security. Therefore all SpaceX's activities must be fully approved and allowed to proceed. National Security: SpaceX has made American human flights to the outer space and ISS from America's soil possible and ended America's dependence on Russia for human space flights in the record short time. SpaceX is the company that the Defense Department and NASA rely on for most important missions. FAA should treat SpaceX in the same way as Department of Defense and NASA. The environmental impact is minimized: The SpaceX's site is located in the southernmost tip of the U.S.A. and is practically in the water of the Gulf of Mexico. If you draw a big circle around the site, you will see that the site is 90% surrounded by the Gulf of Mexico waters and the uninhabited land of Mexico, and only about 10% of the circle is the land of Texas. This is the optimal location for any enterprise that wants to minimize the environmental impact. You cannot get a better location in continental U.S.A. for minimizing the environmental impact. Image of America: SpaceX represents the essence of America's pioneering spirit and America's soul. SpaceX also represents a hope for America to keep being a shining light for all of mankind as the entire world admires SpaceX. SpaceX keeps America a number one in the world in Space Exploration. It is important that other countries look up to America and not look down upon her. Balance: I love Earth, Nature, Texas and Texans, and I also love human space exploration by SpaceX and I love America. I see that it is necessary for us to have a balanced approach. I would like to ask FAA to weigh not only the needs of a few local residents but also the needs of the entire country in the areas of America's National Interests, America's National Image in the world, America's National Security, America's leadership in space flight technology and space exploration. SpaceX is the only company America relies on when America competes with other countries in areas of Defense and Space. By this letter, we request FAA to issue SpaceX all the necessary licenses and permits. Thank you for your attention to this public comment. Sincerely, Zhanar "Janna" Suleimenova Independent Exploration Geophysicist Texas resident for 23 years Currently in California [redacted]

We are in a great power competition. The country needs to take some risks. People like Elon Musk, the engineers at SpaceX, and all of the support from NASA have been doing their part to keep us in the game. Asking the FAA to step up and support this country. Not doing so could lead some very unpleasant characters taking leadership in space. Humbly asking the decision makers at the FAA to work closely with SpaceX to prioritize and accelerate their testing schedule.

To FAA, As a young U.S. Citizen I am in full support for the orbital flight that SpaceX is going to attempt. The company in itself has provided an opportunity of economical boom and provided new jobs in the aerospace industry. Any attempt in slowing down SpaceX will cause the Unified States to lose it's leading edge as a technology leader and miss on new job opportunities in space exploration. Other countries are pushing their people to go to space, why can't the U.S.? As well new generation of young Americans will have a bright future in working in specialize STEM fields providing a new source of income for themselves and for the country. Again I am in FULL support of SpaceX and their attempts in their first orbital flight! Sincerely, Jesbaam Sanchez

Please do not hold back innovation. This is the most ambitious private space objective ever attempted. From a stand point of inspiration (me going back to engineering school) and from what this will mean for humanity and the public good. Aviation and space exploration isn't for fun but the pursuit of pushing the limit, learning from failure and taking those learnings to improve society. Space and aviation has impacted people in ways they never take the time to realize. The FAA needs to have a dedicated team that looks to adapt policy to the rapidly pace of innovation. Appreciate all that you do.

> This is our chance! We will go down in history for this moment, please!! It's not about ego's, billionaires or corporations, the world has held its breath for this very moment, there is very great risk, you have a huge task on your shoulders (one that I wouldn't want) but it's momentous, even world changing. We can change everything, for the better if we only try! My personal opinion is we should - I hope you and everyone else agrees that this is the future, we can finally look forward to something we build for future generations that spans worlds not just lifetimes. This is really important to the future of mankind - PLEASE HELP US. Andrew F

Hello and thank you for preforming this Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program. As SpaceX campaigns and plans to operate its program over the next several years. It should be kept in mind that the factory where the rockets are manufactured will serve as a way for the Cameron county residents and tourists to thrive off the economic boost and historical flagstaff of SpaceX designing and manufacturing the Starship launch vehicle and ultimately preserving human consciousness by giving humanity the chance again to become a multiplanetary species. I do realize the environmental and ecological impacts that a program like this can have in the surrounding area - however the long term plan is in place and should not impose the decision in real time as it stand. SpaceX is investing in Oil Rigs and ultimately wants to remove the need for ground based operations of Starship/Superheavy launches to help reduce the risk of nearby wildlife, people and infrastructure. As SpaceX continues to design and implement their rocket factory, this should not be a concern to the public, where SpaceX decides to turn dirt and build the next generation rocket is generally up to them, because the surrounding county will definitely be benefitting from this passionate endeavor by supplying jobs and economic stimulation to the area. For someone to believe that the launch operations pad and rocket ingress/egress area closest to the beach is a long term concern is simply mistaken. Since it is the closest to the production factory and allows for SpaceX to safely launch and deploy satellites/humans out eastbound over the Gulf of Mexico cannot be a better place to do so at this current time. The Starship program is bigger than Boca Chica and should be commemorated when it is a worldwide transportation system that is available for all of humanity. So I personally would urge the FAA to collect any environmental or beach closure concerns at this time but understand that these concerns outweigh the benefits of what this program will provide for the pride of the United States of America and our journey to explore among the stars. Thank you again for preforming this assessment and regulatory approval process and I can't wait to see the future with you! Best, Bradley Mars Meditation

To whom it may concern, My name is Isaac and I am writing this email to express my support for the company SpaceX. During your process of reviewing and checking SpaceX's proposal to make an orbital launch, I would think another thing to consider is their ethicality towards the whole Starship program. It's true that they might have some of the best engineers writing the best and almost perfect proposals, but there's always going to be that extra thing that might change someone's decision. When the committee gets together to make the final decision, my only suggestion is for you to consider that pros and cons of giving them permission and not giving them permission, but at the end, I think a lot of people know that if we want to have a prosper in outer space, baby steps are needed and this launch will be part of it. Thank you for your time! Best regards, Isaac

Urgent to follow up on what is critical to resolve so the project can move on! Timing is extremely important. It's difficult for the human brain to keep up with how fast technology continues to expand! We are in a race for civilization to move forward, as history is already written for future generations to live in a world where technology is the forefront. Let's not slow progress. Change is important in our evolution. I would like to see this change be developed in America and not by other competitors outside our nation. Please take what the people say to heart! SpaceX is requesting a go light to stay on schedule. As a professional, you must understand how timetables are critical! The world is moving fast and it is our duty to adjust to keep up! Thank you for reading and I do hope all the feedback received is taken seriously!

To whom it may concern. The future, our future is to be looked at with inspiration, not fear and trepidation. 700 years ago or so, Christopher Columbus set out in hope of finding new fertile lands. People thought him mad, strange, better stay local. Staying local would have meant? Maybe no FAA! His quest turned out to be considered a turning point, in world history. Space X with it's demands on resiliance and belief, seeks your approval. As with the church back in Columbus's time, they were blind to see what was in the future, educated people, set in their old ways. Best having what we know, not seeking what we don't. Exploring far off places, is to benefit? All. With it will come commercial, economic, social, and political changes, hopefully for the better. That won't be down to the FAA. If it is safe, then with speed, hope and our future, let it spread inspiration. America at the forefront.

Dear American colleagues of the FAA. I am Giulio Conversano, Engineering Manager of National and Intercontinental Communication Networks. I am writing to you from the Air Control Center in Ciampino (Rome), Italy. We at ENAV (National Flight Assistance Authority) have always been committed to innovating the skies. Our mission is not only to control air traffic or provide services for air navigation, but also to represent the focal point for aeronautical engineering and unmanned aerial flight. We believe that what SpaceX is building in Boca Chica represents a fundamental step for the sustainability of long-term space flights and we believe that any effort made in the direction of reducing launch costs and reusing vehicles is an effort that must be sustained. . For this reason, we support you in the choice you have to make regarding SpaceX. We all at ENAV hope that this message can represent for you like a NOTAM from us to you, from men of the air to men of the air, to the stars and beyond. Thanks for your attention and greetings from Italy.

Good Morning, As a fellow Brownsville native, I encourage innovation including space exploration. Yes there are some environmental concerns, which can affect wildlife, for example, sea turtles which I've personally gone to rescue during the winter season at Boca Chica beach and SPI. However, there is no evidence that SpaceX operations in Starbase,TX have affected wild life. The people who are the most concert are the fisherman aka (Boca Chica Beach Legends) which is a large group of people who like to enjoy their time by fishing. The sad part is they don't really care about he environment. I've also participated in beach cleanups in the past because nobody like seeing shattered bottles and plastic bottles laying on the floor and thinking how wildlife can easily get caught or hurt with it all. I'm sure you all are considering all this already just thought I'd remind you all again. Thank you for your time and let SpaceX do what's needed for the Future of mankind. God Bless.

I am a 50 year old American that grew up in the era of the Space Shuttle. The emergence of the private space exploration industry is the next chapter in US space history. The FAA and all other US Government agencies should not only approve this specific request for the SpaceX launch complex in South Texas but should be ACTIVELY looking for all opportunities to promote and support similar efforts. As a agency charged with upholding American aeronautical and taxpayer interests - it is your duty to NOT be a hinderance to progress in this rapidly expanding area of flight technology development. Imagine if the Wright brothers had been faced with the insane level of bureaucratic entanglements!?! Approve this launch license! Regards, Derek Witt

Please allow SpaceX and Elon to continue with his mission. This company has did so much for the US and the space industry. What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - $4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from $ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet

Good afternoon, I hope all is well. What SpaceX and other private companies, as well as their governmental counterparts, are doing is a an inevitable and crucial effort for humankind and our future as a species. Whereas prudence and caution is well advised in general, standing in the way of progress is not so. SpaceX has shown time and again their commitment to both the environment, diversity, inclusion, and care. To halt them now is as meaningless as trying to stop the tide. Political agendas must not be allowed to interfere with the future of Earth and our solar system. I hope my small voice contributes positively towards allowing SpaceX and others to continue their noble quest. Best regards, Harald Norway

the thing spacex is trying to do, is larger than just not being able to go to the boca chica beach quite as often as before. the environmental inpact would not be that great i would assume as long as fuel or chemicals from the facility don't spill outside the facility barriers.

> As a lifelong Texan who has travelled throughout the the State on business in the early 2000's from west Texas to the panhandle all the way down to Brownsville…I was always struck by the austere beauty of Boca Chica and the promise for recognition of it's unique attributes. I totally support the upcoming SpaceX flight… please grant the regulatory approval needed as it is the future of Boca Chica and of the younger generation at issue. Thank you!

In order for humans to take the next giant leap for mankind we have to use a next generation space ship which is currently being developed in Boca Chica Texas by SpaceX. Testing of the Starship rocket is crucial in order to make this next step into the stars possible. Allowing Starship to launch from this launch site is necessary to make life multi planetary. If we have the ability to reach Mars and put people on another planet we should do what it takes to do so.

Dear American government, As a french man that lived in the USA for a bit, I must say that you made some of my dreams come true, and if you were to do it again it would be more than appreciated. You have the opportunity to do it again if you let SpaceX conduct their test, they are doing great work of making humanity believe in something bigger, and in a brighter future not only for the US but for the world. I believe they can make a difference in how the world look at the US, and I mean that I a good way! Thank you for reading through this text. Respectfully, Charles GRENIER--CHALUT-NATAL

I understand that there are environmental concerns, but please do not overly interfere with SpaceX. Space exploration has historically been very beneficial for the environment in the medium to long-term, as it dramatically increases our knowledge of our climate, ecosystem, and technology. Let's also not forget that Elon's other projects, like Tesla, directly benefit the environment in the short, medium and long terms. It is clear that Elon Musk, and SpaceX, are dedicated to sustainability and benefiting mankind as a whole. Please allow him to create the exciting and promising future he strives for. Thank you. Steven Hodgen

Dear FFA I am writing to you in response to the public hearing related to SpaceX operations in Boca Chica Texas. I know the area well and we as a family are visiting South Padre Island regularly. We love the beautiful beaches there and the relaxed atmosphere. The last time we went there we also visited Boca Chica itself to see the latest Space X developments. Having the SpaceX facility in that location brings a completely new dimension to that entire region and this can only be regarded as a very positive development for this area. We have been traveling there before SpaceX had a major presence and we see only minimal impact from the more recent build up. There are clearly some noise concerns during launches but given the interests and progress this facility represent both locally in the US and internationally these are minor issues and I strongly recommend that permission is granted for Starship launches. Also the SpaceX Starship project has the potential to firmly put the US ahead in Space technology and innovation so I ask for the permission to be granted as this will help the overall Starship program to progress as well as brining much needed investment and high tech well paying jobs to this less developed part of Texas. Thanks for providing the opportunity to comment and please reach out by e-mail if any more information is needed. Thanks and regards Eimund Liland [redacted]

Please allow SpaceX and Elon to continue with his mission. This company has did so much for the US and the space industry. What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - $4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from $ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet

Dear S. M. Dickson, You(all of you) wasted 20 years of time for nothing. Be like the real America, your story show that you have it. Embrace the values that got you there. I know and you know these values all say you have to support him. Learn from your history, you have lost all your precious people for similar reasons. Musk loves his country, trust him. I'm watching in amazement from Turkey why you haven't done it until now. I cant believe! If Musk was a Russian citizen, Russia would have already given permission for his projects. Give him the permission he deserves as soon as possible. Remember your history, you are from military background, you are air force. Learn from the mistakes of your ancestors. Don't be England, be America! Use the authority of your position, be fair, and do justice to your high honors. Regards..

What spacex is doing, if successful, will be a revolution for spaceflight and consequently for humanity, we cannot even imagine what benefits this will bring us, both phisical innovations and inspiration to lots of people who will do great things. That's why the FAA should do an enviromental review and then let spacex continue its activity in Boca Chica.

SpaceX's Boca Chica Starbase may sit on a nature reserve but that shouldn't stop launches happening. Cape Canaveral and Kennedy Space Centre sit on the same type of nature reserve so I don't know why launches shouldn't be aloud here. With there only being 3 orbital flights a year on this proposal, the sound will barely affect nature and the environment in any way

SpaceX is bringing new technologies improvements to space exploration. Reusable rockets are more environment friendly than actual dispensable rockets, needing less natural resources to be made. Bigger rockets can make science go further, sending bigger and better space telescopes, sending more complex rovers and machines to other planets.

Everyone wants this to happen. The Apollo era inspired a lot of young engineers, like myself, to think further at what it seemed impossible. Think about the time it took americans to reach the moon from the first steps of aviantion, from the Wright brothers to the Neil Armstrong setting foot on the surface of the Moon. This was made possible only with the fast paced R&D of Apollo. The Starship plan gained a lot of momentum which cannot be lost in order to make the same progress, from new rapidly reusable rockets to Mars and beyond.

What spaceX is trying to do currently is fiction becoming reality and has the potential to take humanity to the next level. Any major technological change will have its minor things which people do not like but it is inevitable. We would still be in Stone Age and won't be driving our cars If we only think about negative impact. SpaceX is a responsible company and am confident will do its best to minimize any impact this would have. Please let Starbase take us to the next level.

We are sitting in Scotland U.K., watching America become great again, amazing to watch guys like Elon musk change the world and give people hope again. Really praying the FAA supports Space X in its next endeavour. Let's all reach for the stars and give us something to look forward to. [redacted] Scotland U.K.

My opinion about Starship is that it should fly next month. So the company spaceX can collect more Data about Problems and can fix Them faster and easilier. When they have the right solutions they can development more and better variations of Starship.

Starship is very cool and is a very big step for mankind in the field of space exploration. Starship has the ability to carry lots of payload this is very important for moon bases. Secondly, starship is a very renewable rocket which saves money. Thirdly, the effects on pollution the rocket will cause is very minimal. So what reason is there to not approve of the coolest rocket created

Hello, To whom it may concern. I am here to ask you as a Citizen of the free western world 🌎 to allow SpaceX do their missions within the regulatory scheme you have, As an American Citizen I demand you allow SpaceX accomplish their lunches or all space missions and needs, Let Our American space prosperity mouve forward, it is very upsetting and produces public anger when you try to implement Bureaucratic and communist viewers rules, I am just a simple American citizen asking you the authoritarian to not block our will to Conquer Solar System we want to see United States of America us back in space and over the solar system, I acknowledge the extreme dangers but I want you to remember nothing comes without loss. Let SpaceX accomplish their mission, space is God's yard not personally ours we are just users of that tiny time frame. We The People.

Message

The FAA previously approved the use of Boca Chica for a space port. It knew at that time that rockets make noise and exhaust. It knew or should have known that Space-X would ramp up the rate of launches and the size and type of engines as it developed the rockets. The sudden shutdown of launch activity smells more of political expediency than it does of environmental concerns. Reality is that Space-X is now, and in the foreseeable future, a major nonpublic industrial launch service. Whether it is from Boca Chica or from sea and land launch facilities in another country completely depends on you bureaucrats. We are watching.

Message

I support SpaceX's full use of the Boca Chica, TX location (Known as Starbase) for orbital launches. The vast majority of the local residents support it and the country as a whole supports it. While there is a minor environmental impact, however, the overall contribution to the human race far out weights this concern. SpaceX has shown that it wishes to be sensitive to this issue and will reduce the impact where possible. Please approve SpaceX's use of this facility.

SpaceX's Starship (and their other programs) are crucial to the advancement of US space technology, and technological advancement in general. They have demonstrated multiple times in the the past that they are committed to helping the environment, and have even went so far as going out of their way to save sea turtles in distress. They are an invaluable net positive for the advancement of all humankind, and it would be a great disservice to our nation if they were hindered in any way. Please insure that they receive the proper regulatory approval immediately. Thanks in advance for your consideration, and any help you may be able to render to SpaceX. [redacted]

Elon Musk's Starbase project is a true advancement to our civilization. We will be able to expand on what he is building to being new markets in travel and exploration. We will have the power to branch out and truly understand the universe and it's environment, at no cost to us. This is a big step for us as far as exploration goes. I hope to see other planets and get them inhabited. This may be what we need to become the greatest civilization of humans to have these capabilities.

Rocket development and deployment is possible in a few places in the United States. Boca Chica is one of these few sites. Based on how Spacex is developing its Boca Chica site, I believe they are being respectful of the environment and those who live there. Their site operation is at least as good as Cape Canaveral in these matters. The pollution at Boca Chica is far less than Cape Canaveral since Spacex only uses methane/oxygen fuel and not solid rocket boosters. Lastly, their work is extremely important to the advancement of space exploration in a way that can not be duplicated by a government model (not just the USA but all governments). Regulation is necessary but should not prohibit reasonable enterprises like Spacex from proceeding with their rocket developement.

To Whom it May Concern, I strongly support approval for SpaceX to continue with their development of new orbital spacecraft in Boca China. The world faces many problems. We cannot stay as we are. Solution requires change. Among the most important changes will surely be relief for limited planetary resources through access to the vaster resources beyond our planet. Our planet is finite, and we have already exceed its ability to support us long term. The potential environmental benefits of liberation from environmental costs to our planet incomparably must exceed any local costs it may be necessary to occur in the short term.

In my opinion it would be a shame to let starship and spacex fail. I understand, that environmental issues have to be solved, but I believe that spacex will be careful with this topic and try to make their launches as environmentaly clean as possible. Earlier this year they helped endangered turtles near the launchsite and I believe they will do the same thing with other animals as well. Even tho there are problems on earth that have to be solved, it doesn’t mean, that we can’t do anything else like help extend human live to other planets and I think spacex and starship play a big role in this topic.

My name is [redacted] and I live in New York. Despite not residing in the state of Texas or Brownsville area, as a citizen of the United States, I believe Starship will undeniably have a key role to play with regards to US national security. The ability to rapidly deploy cargo and perhaps people throughout both earth and cislunar space will be a critical component to maintaining US space leadership in the face of intense competition with the Chinese Communist Party. With regards to the environment, it has been shown that rockets and endangered species can co-exist with the Florida space coast and conservation efforts. SpaceX may need to do more with sound suppression with a water deluge system and the liquid natural gas plant Cleaner burning than other fossil fuels, the combustion of natural gas produces negligible amounts of sulfur, mercury, and particulates. Burning natural gas does produce nitrogen oxides (NOx), which are precursors to smog, but at lower levels than gasoline and diesel used for motor vehicles. I believe the emissions can be managed and the benefits insurmountable. I ask if you (FAA) to not impede this progress

SpaceX is leading the way for the next generation of space enthusiast. Thanks goodness, because if were waiting on ULA we'd be stranded at the launch tower. Please do not prohibit SpaceX Boca Chica progress! Its imperative for our society and our race to explore possibilities, and that's just what SpaceX is doing!

I support SpaceX and the development of the launch complex in Texas. America needs a several options as space once again opens up to both government and private launches and exploration. Environmental concerns are overstated. Simply look to Florida's where launches have been happening for many decades, using much less environmentallly friendly propellant, and it is not the ecological disaster feared about Texas. America needs this launch site and to support SpaceX in its site development.

SpaceX are bringing rocket engineering into the 21th Century, far too long we have been wasting resources with single use rockets to space, if it were not for spacex, this industry would not have or be progressing in any way. No other company has pushed the boundaries and encouraged so many new start ups to emerge and brought the industry into the public view. We should be encouraging spacex to move forward and not slow them down.

I've been aware of SpaceX since Mr. Musk came to CU Boulder to speak in 2011. He captivated the auditorium not with flamboyant science fiction and pleadings for imagination, but with solid numbers about the many trips required for intrastellar colonization; how a constraint of supplies and fear of massive rocket refuse meant it was only feasible with reusable rockets. Cornering the argument for such a large enterprise by a dose of reality was intellectually honest, authentic, and respectful. That he then executed against that problem was inspiring, drawing comparisons to the generational identity of NASA employees working on the first moon missions. It is not just a job to work for SpaceX, it is a mission to expand humanity's collective belief about what is possible. I write now to support SpaceX and their SuperHeavy launch, hoping the FAA will see this launch as a next step on a long, benevolent trip to inspire and lift.

Technology developed by SpaceX has already benefitted other industries such as automotive, increasing the ability of the US to complete in world markets. Being no greater of a burden than that at other US launch sites, it is worth the burden to gain the competitive technology advantages of continued development and launch activity at Boca Chica.

I request FAA to allow SpaceX to operate from Boca Chica. This would be very critical for our next trip to Moon and beyond. Over the last decade SpaceX has made our country proud, and we are no more dependent on Russia to send our astronauts to the international space station. The safety standards have been impressive. This company is one of the greatest assets, and we should let them continue to innovate, and hopefully one day make humans a multi planetary species. Sincerely, Vishal Rana

To whom it may concern at the FAA, Thank you for the opportunity to provide my comments and inputs of strong support for the approval of SpaceX's ability to test, launch and operate Starship from Boca Chica, Texas. Here are a few comments in support of approving this launch attempt: • This program is part of a vital need to restore the United States manned space program and launch capabilities, while also greatly advancing the state of the art and providing capabilities unmatched by any other provider. • SpaceX has successfully operated in Florida (Cape Canaveral), California (Vandenberg AFB), and both the central and south Texas areas for years, proving they are able to do so safely, with great care for the environment, the population, and the community. • NASA, the US military, and multiple commercial users would benefit tremendously from this approval for SpaceX to continue development and operations, including multiple test launches … it would do grave harm to the United States if this were not approved. I strongly encourage you to consider the larger, very positive impact for both present-day and future manned spaceflight by granting approval. • It has been over 50 years since the United States last sent astronauts (or anyone) to the moon and the recent NASA commitment to return and set up permanent operations hinges strongly on the development, testing, and operation of Starship. It would be a national travesty if the FAA were to disrupt these efforts. For these reasons, I strongly support this action! As an Illinois resident, and concerned United States citizen, I appreciate the opportunity to provide my unqualified sentiment of support for SpaceX to continue construction, testing, launches and operations of the Starship and related programs. Thank you for your consideration!

Sorry for not the best english. I think spaceX Is doing their best, to save humanity and also to save our Planet, as seen a lot of times. If they decided that the Plan should go like this, i think they tought about Good and bad things, you can never overcome the bad ones, and i think they've done their best to not destroy a forest letting their Rocket Land there, but near (lot of km) and in the Sea. Plus, if the Plan goes well the ship Will Land in the Ocean, if It doesent go well (likely as they Say) the ship Will be burned in the atmosphere and never touch the ground. Of curse there are others scenario but pretty unlikely... And of curse there are a lot more things to discuss that i didnt mention (and you did) that are questionably. But i trust them, they Always proved themself, they love what they do and they love THIS Planet, they know there Is no goal of Mars or other purposes if we destroy Earth.

I've been following this debate closely. In my mind, it can be "boiled" down to one single premise. What is the most important to our country? (Even if there really is an environmental impact……which I highly doubt.) Space-X is transforming the space industry, including NASA. It's efforts have already greatly reduced the cost to access space and is continuing to do so at a fast pace. It is literally the envy of the world. To stand in the way without just cause, would be a travesty. Thanks for your consideration, [redacted]

My name is [redacted], elon and his team at spacex are the reasons I've been soaked in space exploration and just space in general lately. And also what we use to get into space It amazes me that we're so close to something that we've been aiming at for decades yet so far at the same time. My father thought he would never see something like this in his lifetime not for another 100 years at least. Going to be absolutely amazing to see this with my dad knowing that there's a possible chance that sometime in the next few decades that either me or my kids will be able to go to Mars. I do ask that you'd let the super heavy launch happen, not just for me and my Dad but for everyone else including Elon and his team. This will give everyone so much more motivation to do more.

I am in support of the continued development of the Space X facility in Boca Chica. After reviewing the information about environmental, wildlife, and archaeological studies, it appears that all reasonable efforts have been made to reduce the impact of further development as much as possible.The use of this location as a construction and development site will continue to bring more economic development to the gulf coast of Texas while limiting the risk to population centers. Having an active space launch facility such as this one will continue to inspire others to seek out the future, no matter the size of the challenge. This project has energized many people around the world during a difficult time, while placing the United States at the forefront of space exploration once again.

Starship and booster orbital flight should be approved. Together, they will greatly increase tonnage to orbit and unlock further human space exploration - something this generation sorely lacks, especially after such promising development decades ago. My three daughters (7, 3 and 6 mos) deserve to live in a world where exploration into the unknown is a given. With local support from Boca China, Starship is poised to make a difference for everyone.

To whom it may concern, I urge the FAA to find that the original EA will suffice and allow SpaceX to start super heavy testing and launches as soon as possible. SpaceX has been responsible environmental partner and works well with the county and local residence. Beyond that however, I fear significant delays will harm SpaceX financially and not allow them to complete design and testing of super heavy, which is currently required by NASA and the DOD. Also, it's in our national interest to decentralize orbital launch complexes. SpaceX has reignited interest in human space travel and made crewed flight possible again from us soil. Please don't let red tape and political concerns stop the momentum and innovation of SpaceX. Regards, [redacted]

If space exploration is revived in this country it is because Spacex has made an amazing breakthrough in rocket technology. Spacex made regular humans to reach space which humanity didn't think would achieve in short span. I urge FAA to appreciate the fact Spacex has facilitated in thinking beyond possible and help in their endeavors. Thanks.

I strongly believe in space-x is doing a good thing. Life needs to be multi-planetary for the human race to continue, not only that the technology that is being developed for everyone is a huge step forward. Not only the amount of people that spaceX employs is great for the economy. I understand the concerns of people in the surrounding area but spaceX has been very open to meeting with residents and listening to them and their concerns. I guess my question is if the current area is not a good spot, where is??

I support SpaceX and their plans at Boca Chica. The importance of what SpaceX is doing at Boca Chica cannot be overstated. If SpaceX is successful, they could start a new chapter in the story of humanity. A chapter where we propagate life and consciousness through our solar system. And maybe save our homeworld along the way. I, like many others, follow the events taking place in Boca Chica daily, and I am delighted at every sign of progress. And one cannot help but appreciate that the US system of governance has managed to facilitate the creation and success of such an ambitious company, with such far-reaching goals. And hope that continues. That is not to say that local concerns are of no importance, but some negative impact must be tolerated, as the positives are potentially so great. I have read the draft PEA and I see no reason why SpaceX should not be granted the relevant permits and licenses. I envy those who live close to the site, and for the first time in my life I hope to visit Texas. Sincerely, [redacted]

The Space X Boca Chica site should continue its great work, the work they are doing is inspiring the future of the county and world from engineers to everyone in between. They should consider building a site for the environment, something like a nature preserve or community park that embraces the nature as well as allow for people to watch the launches.

Hello, my name is [redacted] and I'm one of the many who wants to see starship fly. We want to see a future for ourselves and many people around the world believe this rocket will take us to space, the moon, mars and beyond mars itself one day. I believe in a future where we are multi planetary and would like to see starship experimental rocket fly because if it doesn't fly it just sets back innovation for Americas future and the peoples future. So if you please don't mind but allow the launch of this rocket this month for many of us are wanting a future in space.

Honoured FAA committee! I, like thousands of other people in America and around the world, look forward to seeing the next generation of rockets lift off into space. But while development of these rockets increases in speed and scale, regulatory approval does not. The underlying reasons for this are clear to me, but it still saddens me to have technological progress stopped at such late point. This is why I hope that testing of rockets such as spacex's starship and super heavy can proceed as fast as possible, with assessments created well in advance before launches are even technically possible. In summary, even for this launch alone, fast regulatory approval would be in everyone's best interest, and I hope it can be done. Thank you.

Please allow SpaceX to launch from Texas. Our country needs to remain dominant in space exploration. we cannot allow the Chinese nor Russians to get ahead of us. Also for almost 20 years SpaceX has been a rocket company surely you guys have come to know what type of company it is since you have worked with them for so many years. So I implore you please approve of space. The good of the many out way the good of the few.

To whom it may concern. Whilst I may only be a Canadian Military veteran I did serve alongside American and allied soldiers in Afghanistan. I think it would be irresponsible to our species to not approve nearly anything SpaceX wants to do with regards to orbital launch. They have a proven track record and have among them the greatest minds and engineers the world may have or may ever know. With respect perhaps they could assemble a higher authority as it pertains to orbital and space travel and leave the FAA out of it entirely? I'm not suggesting necessarily that the FAA be left out of this process however, there would need to be a meeting of the minds on all fronts with q common goal in mind. Thank you in advance for your time sir/ma'am. [redacted].

I fully support Elon Musk and spacex. Restricting their progress will allow china and Russia to rapidly gain ground in the space race. Imagine restricting the wright brothers. I am 100% confident Elon and his team want nothing other than safe environmental policies around the boca chica facility and will cooperate fully with federal and local authorities. We must not let bad environmental regulations slow the progress of spacex. Let's not forget his other company is an electric car company. 3rd and most importantly it is imperative that the US federal government and FAA adapt quickly to the new era of rockets. New regulations separating aviation from rocketry is vital. Slowing down this innovative space boom will also allow the rest of the world to catch up rapidly. The FAA does a wonderful job with aviation regulations. Let's adapt what we have learned and make rocketry just as good! Godspeed

As I am unfamiliar with the specific environmental concerns in that area as well as the liable responsibilities presumably already determined, and writing this as a citizen of Canada I will keep my comments very general. The progress SpaceX has made and is attempting to make in space exploration is a much needed and long missing inspiration to the world, aside from being a necessary advancement to sustain our existence indefinitely. I truly hope you delay this advancement for the least amount of time possible to find the best solutions to factual concerns of the neighbouring public that rival in importance with the advancement of humanity being witnessed globally. Thank You, [redacted]

Hello my name is [redacted], I am originally from Mexico and for more than a year I have followed the steps of the great projects of Spacex and Elon Musk, I am currently studying environmental engineering is why I have experience in things related to the environment and the alternatives that day by day are created to reach a sustainable world. According to the document that I read previously I realize that there are many aspects that are encompassed in terms of spacecraft launches especially when it comes to pollution. As a student of such an important career I can say that the planned suborbital launch of the Starship will not generate more damage if it is a single flight, in the world there are natural things as well as human activities that generate much more pollution than a suborbital or space launch. The three years that I have been researching about pollution issues inside and outside our world, I thought of a project that tries to make fuel from CO2 collected from the atmosphere, in the same way with the help of the correct filtration methods such as the cyclone method can filter the greenhouse gases derived from human activities, a certain percentage of greenhouse gases are naturally in the atmosphere, that is why I share with you a way that space and suborbital travel are not affected by the regulations in terms of pollution and sustainability. If this email reaches Elon Musk, I want him to know that I am in the best disposition to work with him in the project I mentioned above if he allows it, I am committed to humanity to improve and leave a better future for the generations that come after us. Below I leave the means by which he can contact me: Email address: [redacted] Thank you very much for allowing me to send this email Greetings from Moroleon, Guanajuato, Mexico [redacted]

I support SpaceX's efforts. Stop holding innovation, particularly HIS innovations, back! Otherwise, you'll be stuck with the Jeff Bezoses of the world who will offer subpar solutions and lawsuits when they can't compete. NASA lost its ability to get us to space. The government willingly pushed for private companies to step to the plate. Well, they have. And, now, you have the far and above leader in Space, SpaceX. Don't squander that opportunity. Don't do what the United States has done in so many areas, which is to pretend inferior garbage is good enough. Look at China. They already are better than us in AI and hacking. They're about to overtake us in economy size. Don't continue to allow America to add to the things it's number two at. Grow up!

Spacex has huge potential, every company starts with trial and error, spacex is no exception, you cannot grow a company without trial and error, and therefore I believe spacex should be allowed to have more leeway to extend their testing processes and preceded with orbital flight sooner than later. Spacex has a huge fan base full of space enthusiasts, restricting what they could do can make these enthusiasts unhappy.

Spacex is inspiring humanity by reaching for the stars. It is for the greater good that we let them continue at their own pace. I have visited their facility several times I have stayed for weeks until a launch was completed. It helps the surrounding cities and breaths life into Brownsville. I can’t figure out why people are so upset Spacex is there. They haven’t halted anything but a mere road closure for beach access (a beach that a local space enthusiast told me no one cared about before spacex was there) that only lasts a few hours at most. As Spacex improves on their technology it will only become safer and safer for their test program to develop and cause less environmental damage if any.

I would like to voice my support for the SpaceX operation at Boca Chica Village in Texas. SpaceX has brought tremendous change to the space flight industry. Reusable flight vehicles have become commonplace rather than a novelty. As history has shown, advances in space technology have great spin-off benefits for the everyday person. Our quest to reach the Moon in the 1960s brought fire-retardant paints and fabrics, advances in communications, computing and medicine, and a host of other benefits across many industries. A robust space industry benefits us all. In the Brownsville area, the economic impact has been noted by many others. A declining community has been reinvigorated thanks to SpaceX. But environmental concerns also play a big part in allowing SpaceX to operate its Starbase facility. Our ecosystem is more resilient than many want to believe. Animals that may initially be afraid of certain activities return when they become comfortable with the activities. Kennedy Space Center has operated successfully for decades in a wildlife preserve, and I think SpaceX can be a friend to the local ecosystem. I urge the FAA to deliver a Finding Of No Significant Impact and allow SpaceX to move forward with its operations in Boca Chica. Thank you.

In a time, when our world is beset by strife and discord. An opportunity arises to sooth and alleviate it, even if it be a temporary reprieve. This is about the future, Americas future, the future of our species, and direction in which We choose to take it. Destiny and Providence, have always bestowed upon the United States of America. The Courage and the Strength to Lead, to go Boldly Go forth, when others would not. The United States of America and Americans choose to go back to the Moon, and onward to Mars. And this orbital launch by SpaceX, is the first baby step on the path of Maturity for entire species! Semper Supra!

Please pass the regulatory approval for the first orbital launch attempt of Starship, by SpaceX. This ship could be our ticket to Mars someday. The sooner we are willing to take these risks for the future of humanity, the sooner we can begin making humans a multi-planetary species. The benefits of this far exceed any potential negative outcome of these initial rocket launches as we work to improve our presence in space.

Please allow this to happen. If spacex succeeds in their mission this could lead to the biggest economic boom Texas has ever seen. As a Houston resident (born and raised) I love that the space industry is coming to texas in full force. Being brought up in “space city” makes this extra close to many of us. If spacex isn’t allowed to do what they want in Boca chica they will find a way to do it somewhere else. That would be a major loss. Not only will the growth of this company based in Boca chica bring jobs and wealth to the area but tourism will explode there as well. Not to mention musk will likely use his other companies to boost the area’s infrastructure as well. It isn’t a coincidence that Tesla and the boring company are now conveniently located within driving range of Boca Chica. Losing out on this opportunity would be a major slight on your own community and a dampener on the inspiration of millions and millions of people around the world.

I'm a private pilot and I have an issue with the restrictions placed on Space X base in Texas. The purpose of the FAA is to ensure the safety of our airspace. If a test does not risk any safety then why would you put unnecessary requirements on them. Just because NASA would move so slow doesn't mean that you have to force others to work at the same pace. We have an opportunity right now with Elon Musk that might never happen again.

Dear FAA, it's getting harder and harder to get something done. This is because people have more time to protest, for example. A simple example: In the past it was possible to build a motorway or a railway without too many problems. If such a plan were now on the table, it would be greatly delayed or even canceled because there is a lawn in the way where a rare orchid grows. This orchid species will one day, along with all other species of organisms, become extinct when the sun becomes a red giant. But we can do something about this: Bring this orchid, together with the other species, to other (artificial) planets where they can evolve further to the needs on that planet. the longer we wait to explore the universe, the less likely we are to achieve this outcome. Let's plant a tree on Mars, Jens from Belgium

Wanted to voice my support of SpaceX's efforts in Boca Chica. Approval of Starship launches from the Boca Chica site is incredibly important for maintaining US superiority in space and this new spacecraft may be one of the most transformative craft in the history of space flight. Granting SpaceX the ability to launch from the site with further reusable spacecraft technology, which is clearly the future of space flight and the most environmentally friendly path to sustainable presence in space. This is a big moment for the future of the US space program in general, so please consider approval of SpaceX's application.

To whom it may concern, I am writing to express my opinion on the approval for Space X's first orbital launch window next month regarding Starship. Elon Musk is not just revolutionizing the space flight industry for U.S. institutions and companies but also civilians right before our very eyes. He inspires me to do and be better everyday and strive to achieve my goals in the hopes of one day experiencing space travel. Approval for Space X would be another accomplishment that will continue to inspire thousands if not millions of more Americans just like me. I hope to continue to see great strides in this industry by this specific company given they meet all safety, technical, and ethical standards of course. Thank you for taking the time to read my email on this matter and hope you have a great day.

Message

Dear FAA I, and many others, would gladly show full support of the continuation all of Spacex's future missions. Spacex is s result of a man named Elon Musk who is a 1 in a 7 billion chance of a human being. And he created Spacex to pave a path way for the future of humanity in space. And everyone needs to show full support for this seeing as it will benefit all of humanity. This opportunity only going to happen once, and that is now. If we don't get to mars or thr moon again soon then the window for getting humans off the earth will disappear. Humanity needs something like this to believe in, that one day we could be walking on another planet. We will have explorers again. The last time someone discovered new land was more than 200 years ago, so there are no explorers or pioneers for that sort of thing anymore, but this will reignite that sort of sense of adventure in everyone's minds. If all goes to plan successfully it will be amazing. Right now Elon and all of his helpers and everyone working with him right now are legends in the making. It time to blast off to another planet again for the first time since 1972. I'm showing full support along with all the other billions of humans on this planet. Kind regards [redacted]

> We. Want. Starship/Super Heavy. To launch. My family, my friends, and myself, all of which are residents of Texas, want to see Starship launch. We know the risks and possibilities of what a launch could do, and I support the agenda and purpose of what SpaceX is trying to accomplish, but it's not just about their goals. It's about giving people hope, and showing people what we as humans can accomplish and broaden our horizons to something more, something greater than ourselves. To inspire a new generation and show what we can accomplish. Let SpaceX launch!

With motivation to keep the United States in a dominant position with respect to rockets, space vehicles and ultimately the capabilities to once again land humans on the moon and beyond, I support moving forward with FAA approvals for SpaceX's planned Starship orbital trials. There may be immense data and insights gained from these initial trials which the FAA may use to work with SpaceX on potential impacts to the local area, community and environment for use in developing controls and safeguards for the further rapid development cadence of Starship and it's missions. Thank you, [redacted]

To whom it may concern: In these modern times we live in, extraordinary events will occur in quick succession. As it pertains to space travel, the FAA will be directly involved in every historical feat to come. It is our duty as explorers, scientists, and doctors to do our due diligence to advance the human race unfettered. The FAA should not be a roadblock to achievement but a cog in the machine of advancement. SpaceX must fly. We must push beyond the clouds and do so aggressively. Let us not be pacified but energized. Let’s light this candle. Your obedient servant, R. Hull

Hello! I wanted to express a strong support for what SpaceX is doing in Boca Chica. Since SpaceX is reusing it's rockets, it's definitely more environmentally friendly than any other space company by not throwing away stages of rocket back to Earth. The scope and attraction of the project will bring a lot of wealth and prosperity to the region. I hope that you can do the Environmental Assessment faster and they can start building the future.

I strongly believe that Starbase is one of the best things that could have happened to Boca Chica and Cameron County. The county itself is one of the poorest in the Country and with the new Development by SpaceX it has added over 2000 jobs to the area. For those who oppose its environmental impact I believe aren't informed about how little rockets actually pollute especially the ones SpaceX develops. SpaceX does not use hypergolic chemicals which would have a negative impact on the environment but still those chemicals hardly do anything to the environment. Admittedly I am no expert on the subject however as someone who enjoys Space Exploration this is one of the few things I feel is worth fighting for. The things that go on at Starbase inspire me and millions of others, it gives me hope and makes me even happier to be alive at this time. The moon landing of 1969 was one of the few events in human history that brought humanity together, I think the events that go on at Starbase will stimulate a whole new generation to reach out to the moon and to the planets beyond. Space is the one place where no matter what is going down here on Earth, peace is achieved up there. It's time that humanity take its next step to achieving the goal of making our species multi-planetary. The things that go on at Starbase while farfetched could very well bring peace and hope to all Mankind.

I support the development of the Starship and Super Heavy Booster in Boca Chica, TX. As a graduate of engineering, I understand the potential impacts a rocket program could have on the environment. SpaceX seems committed to the mitigation of risks, and development of systems to protect the surrounding wetlands, property and community. Growing up I had the shuttle program to be excited about. The falcon rocket and dragon capsules have brought excitement to Space again. The partnership between, NASA, SpaceX, the FAA, and all other governing entities is the most important relationship happening in modern times. If the government cannot support private business in the U.S. we will fall behind on the world stage. We should be doing more!

Please grant approval for SpaceX to continue to operate from Boca Chica. We were long term residents of Texas before moving to Alabama. We've spent winters in our RV in the Rio Grande Valley and visited South Padre Island many times over the past 30 years. This past August we visited South Padre Island and drive over to check out SpaceX at Boca Chica. We were very impressed with the future spaceport and clearly SpaceX is a good steward of the environment - far better than the extreme, packed development of condos, hotels, housing developments, businesses, etc on South Padre Island itself - which we all love. In our opinion, SpaceX is very, very beneficial for the area and should be encouraged and supported to achieve their goals. [redacted]

Faa should loosen strictness in case of space x new launchings . Space x is competing ownslef with other giant international sapce rivals and doing great in this matter of view faa must give space x more chances for its flights to orbits . New flow flow combustion system of space x is reducing the fuel consumption and still is working on those projects super heavy ,falcons ,raftor engines many more are running and more are on the way to make to space if faa demotivated space x how can they do good of you suppress them ? So faa should take decisions more precisely and more fair and must give space x permission . Thanks

Dear Sirs/Mdms, I wish to voice my support for the launch of Starship. I appreciate the importance of the decisions that you must make, but I also appreciate the significance of the advancement of human space flight. As a country we should remove, relax or ease as many administrative hurdles as would be prudent to take advantage of the head start that SpaceX is giving us. This is a unique opportunity at a significant time in history. I understand that your responsibilities are not inconsequential but, having worked in government, I also know there are things that you can do to facilitate the process and that would be in the best interest of the United States. Warmest regards, [redacted]

Hello, Life in earth have been several times been almost extinct several times in earth's history. We haven't found life in thousand of planets. So life is a strange phenomenon. Elon Musk & scientists are aware of such danger. We now have the chance to become a multiplanetary specie. In the future we don't know. Because chances come and go. Sometimes forever. Please, get involved in easing the purpose of developing a new economy, new engineering, and developing our dreams. For the humanity, please collaborate with Space-X & Elon Musk

Hi FAAA, As I understand approving the SPACEX expansion is a great step to the exploration of space/mankind. There are many ways to curb/curtail the endangerment of spices and other issues being pointed out but definitely not this expansion. So, I strongly support this SPACEX expansion and FAAA should approve the same at the earliest possible. Thanks -- Ravi Abbineni

It would be a monumental mistake to the progress of humankind to let this opportunity to have a company like SpaceX not get the regulatory approval to continue testing their starship launch vehicles. The spark of imagination this company instills in people across the country, and notably the younger generation, is what we need to meet the future demand of technological innovation. Everyone wants our young generations to be better than previous generations. This is the future. Any attempt to delay the innovation of any space exploration companies will put a damper on what we all believe to be possible through education. Think of how many jobs SpaceX has created and will create to further support development and production of these incredible space vehicles. The future belongs to the people, and the government red tape will turn a lot of people off of possible career paths. You want more people glued to their phones watching tiktoks or do you want more people getting involved in creating innovative technologies that will benefit our human race?

Starship will be an incredibly helpful spacecraft for the continued exploration of the moon, mars, and beyond. In order to get to that point testing must be completed, therefore orbital starship launches should be permitted at the Boca Chica launch site. As SpaceX is already taking measures to conserve native wildlife, I don't see it being much of an issue.

Development that works with rapid iteration until success works well in programming and it is absolutely needed to use a similar technique to make our journey through the stars possible. The space X schedule seems agressive and it is compared to what's been done in the past in the space sector. A sector that has been frozen since 50 years because it was only accessible through a few governments that didn't need to go to space. Space X already achieved a lot that seemed impossible 10 years ago, and to keep pushing boundaries, it needs to test and succeed rapidly as the concurrence is starting to close the gap.

Please proceed with plans to grant additional permits so SpaceX can continue developing and testing Starship. The risks and trade off of temporary location access are necessary to advance the inspirational goals of space travel. And I am confident they also will continue to make responsible efforts to address any impacts they have on the area and not abuse the privileges granted to them.

To whom it may concern, I'm sending this message to the FAA, to voice my overwhelming support, for the ambitious progress that SpaceX is attempting to make in accelerating Mankind's presence in space. It is difficult enough for such Visionaries as Elon Musk, to try to achieve such a noble Quest, without being burdened by the additional obstructions that can be created arbitrarily and unjustly to delay a project whose day has long been overdue. Please try to see the merits of this ambition, and do everything possible to assist bring it to its fruition, as opposed to derailing it to the point of failure.

I am supporting the proposal by SpaceX to launch orbital spaceships at the coast at Boca Chica Texas I have a UC degree in Environmental Studies and have conducted Environmental Impact reviews. I find the low frequency of launches and the low natural population of species presents acceptable low risk of impacts. There is high likelihood of effective remediation of the grounds after use if need be. This coastal site has frequent natural renewal so long term no impact. [redacted]

While I am no expert on the environmental effects of rocket launches, I am a great fan of what SpaceX is doing and find their work on Starship inspiring. Starship truly is America's best hope of returning to the moon and going on to colonize Mars, and offers the only realistic path to maintaining America's leadership in space instead of ceding it to China. Environmental protections have their place, but the FAA must also balance that against the strategic and national security priorities of maintaining America's lead in space and ensuring that when humanity does become a multi-planetary species, it does so under American leadership, spreading American values of freedom and democracy beyond Earth. These overarching concerns outweigh any minor concerns about impacts on wetlands, endangered species, or disruption to the local community. The FAA must keep in mind the big picture here and not lose sight of the forest for the trees. Even so, the impacts of the Boca Chica launch site are likely to be minimal. Wildlife thrive around the Cape Canaveral launch center in Florida, and greatly benefit from the exclusion zone around it, which is managed as a wildlife refuge. That precedent shows there is no reason SpaceX's launch site cannot coexist with the wildlife refuge surrounding it, and shows they in fact will go well together. As an attorney who has participated in other unrelated NEPA processes, I know that the most commonly litigated point is whether an EA or an EIS is required. In this process, those calling for a full EIS are doing so only to delay and hinder the import work SpaceX is doing, and their reasons are disingenuous and without real basis. The FAA has already done a full EIS on the Boca Chica launch site, so another one should not be required simply to approve launching a bigger rocket. The FAA should ignore calls for a full EIS, and should instead issue a mitigated FONSI at the end of this process with an EA that tiers to the original EIS. I also urge the FAA to do everything in its power to expedite this process, including granting a provisional launch license for the first few orbital launches prior to completion of the EA and FONSI. Bureaucratic processes such as this should not be allowed to hold back SpaceX's progress on Starship as they move forward into orbital testing. And the FAA should certainly not allow minor environmental concerns and local NIMBYism to thwart the greatest leap forward in the American space program since Apollo. I urge you to approve SpaceX's launch license for its Boca Chica facility with all haste. Thank you for your consideration. [redacted]

Message

Hello, SpaceX's Starship development program in starbase, Texas got my interest from the early days when development was just at the beginning and there were only a few small pieces of engineering there. As I followed the progress over the last few years, I probably started to know very much about the advantages and disadvantages about this program (especially when it comes to the days where SpaceX bought the homes of the local residents). I regularly check out what people living nearby the production/launch site think about this development on social media, and as far as I can tell, nearly everyone has become a huge supporter of SpaceX's development. The environmental impact of SpaceX is not just about the nature around, but also much more about the public and the thoughts the whole world has while thinking about it. Boca Chica and Brownsville have become way more known during the last years due to SpaceX, especially local jobs and vacation businesses improved a lot and the place is growing more and more for the benefit of the people who are living there. Additionally, SpaceX is improving the environmental impact of space travel over all. Starship will be the first all-reusable spacecraft at all, which already makes a huge benefit, furthermore the fuel they are using (methane) is planned to be manufactured carbon-neutral in long-term (by collecting carbon out of the atmosphere and using it to make the fuel). While space exploration keeps getting more and more important for the whole human species (in terms of weather forecasting, satellite internet services, positioning systems and much more), it is extremely important that space business is done as environmentally friendly as possible, which is exactly what SpaceX tries to do with its Boca Chica launch and production site. In my personal surrounding (friends, family, colleges), everyone knows SpaceX and supports the company and is interested in what they will achieve for the whole humanity in the future. In fact, SpaceX has even transformed my own life. Right now, I am studying aerospace engineering. This is only because SpaceX started my interest in space when the first landed the falcon heavy first stages. I was incredibly stunned by how they are able to achieve something which is so complex. Around half of the aerospace engineering students I know started their interest just because of SpaceX. Therefore, a lot of us would have chosen a different path in our life if this company would not have changed the space industry. Therefore, to put it in a nutshell, I greatly support their work and I truly appreciate what they are doing in Boca Chica. I hope they will be able to achieve their goals for the benefit of all of us, which requires great support and work together with the FAA. Despite me being sure that this will be the case, I want to give my best that this development keeps going into the right direction. Therefore, thank you a lot for reading my thoughts about SpaceX's environmental impacts. If you want to know any further details, please let me know and send me a mail, I would be glad if I could answer as much as possible. Yours sincerely, [redacted]

I heavily urge the FAA to approve SpaceX's environmental assessment at Boca Chica. The Starship development program is essential to the survival of the human species, and any delay would greatly raise the risk of the extinction of humans if some catastrophe were to strike Earth. After reviewing the report, I have concluded that there is no undue harm to the environment from the Starship development program, and voice my support for approval.

Build Back Better, Make America Great Again, & Manifest Destiny all have the same thing in common. It is about a better more progressed future in The United States of America. NOTHING moves people more and brings more money into everybody's pockets than expanding our nation's influence. Why not expand to Mars, the Moon, and beyond?? Science Fiction is always our future. Scientific progress is our future. If we are to make it to Mars and the Moon then we NEED this orbital launch with the Starship. If a Science fiction future is not interesting than maybe a military base on the Moon is..What if the USA was able to launch missiles, watch other nations, and dominate space and the air of Earth from the Moon? Point is Elon Musk wants to go to Mars and others want to as well, with what authority would the Federal Government stop him? He owns SpaceX and the Starships. This is only a power grab from the Federal Government and they have no reason for concern, it is safe, does not invade privacy, and the you have no right to prevent SpaceX from lift off. Thank you for the consideration of my thoughts and others, as this is your job that I hired you for.

SpaceX's mission to create reusable rockets is paramount to the success of space exploration. The Starship orbital launch is the next big step in that process. The success of the Falcon 9 demonstrates the company's attention to detail and safety while also proving that relative to their competition, SpaceX is clearly the company to get the job done right. Prompt regulatory approval will also keep the program on track for NASA's Artemis program, which I am very much looking forward to.

The starship will not only be a monument to human achievement and ingenuity but it will be the linchpin in building infrastructure in low earth orbit and around the moon for continuing human exploration and expansion. Seeing as it is fully reusable it will be crucial in building and maintaining a moon base, bigger and better orbital labs, and helping other businesses venture into LEO. Please move ahead with starship. I remember when I was little and wanted to be an astronaut, to take a stroll on the moon. I wanted that more then anything. When I found out we had no plans to venture out of LEO in the near future it absolutely crushed all enthusiasm and drive I had to achieve that dream. I believe by going forward with the project other kids won't have their dreams stamped out before they can truly begin. Thank you for your time reading this message have a pleasant day!!

Dear FAA, I think you should grant spacex their lisence to launch a fully stacked starship to orbit asap. Starship is the next generation of orbital rockets and is the holy grail of rocketry. As far as affecting the climate goes, yes starship will release quite an amount of carbon dioxide and water vapour but that will be only until their propellant production plant will be functional. They will use the CO2 and H20 from the atmosphere itself to make liquid methane and oxygen. So in a few years the rocket fill become eco friendly as well as it will not be emitting any extra CO2 in the atmosphere. Hoping that you consider all the facts and help starship get to orbit probably by this year. Peace out.

Hello FAA - I strongly support Space Operations in Boca Chica. The facts are: 1) There are hundreds of miles of empty beaches and coastal marshlands both north and south of the launch site. While the areas south of the launch site are controlled by Mexico, certainly there is plenty of wildlife habitat there. In addition current Mexican law makes development of that coastline difficult. 2) The City of Brownsville, and the three-county area here, is one of the poorest in the nation. These high-paying engineering jobs, along with increased construction activities, increased tourism activities and increased educational opportunities, greatly improve the lives of the local population. Currently people graduating with engineering degrees from The University of Texas Rio Grande Valley have to get jobs in Dallas or Houston - it would be nice to keep those new engineers around here. 3) The enthusiasm for space down here is very high. We have the Harlingen Airport calling itself a space center with United Launch Alliance operating a facility there. There are billboards around town with space messages. The Brownsville Airport was recently expanded. And even in McAllen, which is an hour away from Brownsville, positive enthusiasm is felt. I strongly support Space Operations out of Boca Chica/Brownsville and I hope they can begin as soon as possible. Thanks - [redacted]

SpaceX is critically important for United States' economy, national security, and climate. Through Tesla, Elon Musk has accomplished more than anyone to improve air quality throughout the United States. This unique opportunity for SpaceX to expand science and research beyond Earth is the most important work in the world today. A Starbase General Plan that promotes efficient and advanced real estate development of medium-high rise condominiums and apartments will be very important for SpaceX employees, customers, clients, visitors, and the community and economy of Cameron County & Brownsville, Texas. Elon musk will develop the most advanced and efficient buildings in the world! SpaceX & Tesla to the Moon!

Hi, enabling Spacex to continue with Starship is imperative to both to residents of Texas, the US and the wider global community. Spacex has done more to drive forward access to Space at much reduced rate than any other company. They have demonstrated a desire to excel and push the boundaries, whilst being supportive of the local environment. The local community and the uS will gain far more, by supporting their efforts, as opposed to holding it up for no real reason other than to hamstring them. Regards [redacted]

The space x programme is one of the most important human level initiatives currently under way on this planet. Governments have failed to make any difference to our position as a multi-planetary species and it is left up to those with inspirational views to take us beyond this earths atmosphere - I was one when man landed on the moon and at 53 I would have expected to see man on Mars years ago - if not - at least - some permanent base upon the moon. It is essential for the future of humankind to work together to ensure that our species survives. Believe that living - as a species - to live on other planets will help us to protect THIS planet. Space - x need to be able to launch and test freely if this is going to happen. They have the will and the vision to do this - please do not let it be hampered by a piece of paper … Regards [redacted]

[redacted] Beach. I have also followed SpaceX in the news and have driven through their complex on the way to Boca Chica Beach. I consider myself environmentally sensitive. So far, SpaceX has been a positive impact on the Lower Rio Grande Valley National Wildlife Refuge. Before SpaceX arrived, the beach area was filthy. The reduced traffic to the beach due to SpaceX road closures has had a positive impact on the beach area. SpaceX has also sponsored clean up campaigns for the area. They have also assisted with sea turtles when the serious freeze occurred throughout Texas last February. They have been a good corporate citizen in the area. I trust that the FAA will do a thorough job of noise impact on wildlife and anomaly debris field when comparing the SuperHeavy/Starship with the already approved Falcon Heavy launches and suborbital hops from their Boca Chica facility. I assume this can be modeled. One needs to compare how the noise has been somewhat reduced due to SpaceX's purchase of the gun range and halting the constant daytime firearms discharges. My preference is that the FAA approves a one-time orbital test launch license sooner than later so that actual measures of noise from the vehicle can be measured and compared to Falcon Heavy launches at Kennedy Space Center which are already approved. Then, with actual data in hand, a more intelligent decision can be made regarding an EA versus an EIS.

We stand on a magnificent threshold!!! Let's blow our winds into the bursting sails of SpaceX and encourage the FAA to allow the magic to happen. Let's as a race embrace and inspire to the remarkable transformation we're witnessing first hand from inspiration to completion. Elon Musk and SpaceX clearly dare to dream and they inspires magnificent from those within they're brilliance. If NOW isn't the time to embrace a magnificent call to action based on the clear truths of physics, then when in the history of mankind?

In this time of complexities and struggles, it's essential that we push forward and continue exploring in order to bettering humanity. SpaceX is doing just that. Add to this the geopolitical dimension of space exploration, including our over-reliance for over a decade on other nation-states at a steep cost in order to help the United States achieve our objectives in space (e.g., transporting astronauts and supplies to the ISS), and it's easy to determine that full support of SpaceX, including Starship/Super Heavy missions, is imperative as well as cost-effective leadership. Although I've not visited Starbase or Boca Chica, I've closely followed it (especially during my time with Foreign Policy/National Security at the Council on Foreign Relations) and have been amazed at the community that's developed in the region. The development of the area has put a once relatively unknown United States town on the map, generated jobs for residents, and brought in high-quality individuals for other positions. Cost-benefit and a proper risk analysis would put aside concerns around debris recovery, the integration tower and other launch-related constructions in concert with local road closures in Boca Chica, among other issues. I have little doubt that SpaceX and the Boca Chica community can and will work together to ensure environmental, community and business needs are safely and reasonably met. As a citizen of this great nation and caring individual, I ask that the FAA grant full approval to SpaceX and Starship/Super Heavy. Thank you, [redacted]

As a person living outside the USA, I have been observing the construction of Starbase and the Starship program with great excitement. I urge the FAA to perform its duties and approve this program. There is so much for the US to gain from a once in a generation program like Starship, both economically and scientifically. I believe everyone knows this applies to the local area of Boca Chica as well. As a foreigner I had never heard of this town or its county before,but it's now top 3 in a bucket list of places in the USA I want to visit because of Starbase.Alas, I'm not even sure whether my opinion will be considered because I'm not living in the US, but the possibility of Starship losing FAA approval has spurred me to act, and do anything to ensure this miraculous, highly promising program can go ahead without delay.

I follow SpaceX's activities at Boca Chica daily and with enthusiasm! As an employee of Northrop Grumman I suppose SpaceX is a competitor but SpaceX is important to all of us! They keep resetting/reinventing the bar! Competition is good for our company and it is good for our country. Northrop Grumman and the likes of Boeing and Lockheed have sat back on their fat laurels for too long. Its time for them to become lean and learn how to complete again!

To whom it may concern, SpaceX has brought wonder and inspiration back to the public. After the end of NASA's shuttle program, that wonderment was lost. SpaceX is a much-needed program for us a collective. They have revolutionized space travel. They are the first to make rapidly reusable rockets. The overall cost of making and flying these rockets are significantly cheaper and more reliable than what NASA has accomplished. Not only are they reusable, they are autonomous and can land both out in the water on a droneship and on land. Having that kind of flexibility is huge when it comes to the variability of missions they take. Also, their mission statement being about making humans a multiplanetary species – while sounding unbelievable at first – grows more plausible by the hour. As the FAA is likely aware of by now, SpaceX continues to make steady progress into their Starship program, which is designed to take humanity to the moon, Mars, and beyond. They've already done multiple suborbital flight tests and have made progress on their orbital launch integration tower. They are making visible progress to traveling long distance out into space. They mean what they say. And at this point, it would take considerable effort to disbelieve them. SpaceX is making history here. They could take humanity to places that could change the course of our species forever. I say we let them take the wheel on this. Thank you for your time, [redacted]

Elon musk has shown his ability to accelerate humanity time and time again, just on that merit I think you should grant him his approval. This is what my most humblest appeal to the federal aviation administration.He has the support of the space force General John Raymond, the Air Force general CQ Brown and I can go on. Anthony from New York ,the new frontier is in your hands and I'm confident the F.A.A. Will do the right thing.Thank You ATL

I believe it's is in the interest of Federal Aviation commission to allow SpaceX to conduct their test flight of the starship super heavy vehicle by the end of 2021 or for the first quarter of 2022. I believe SpaceX has shown the appropriate conduct and precautions surrounding the environment of Boca Chica TX. SpaceX has donated money to the institutes surrounding cameron county and has been cooperative in working with the local residents surrounding Brownsville to support the test flights of the starship vehicle. Which is why i advocate for the test flight, and why i believe you should as well. Thank you for your time!

I am writing in support of not only SpaceX's orbital test flight, but in support of the SpaceX objectives in total. SpaceX is the primary innovator in space exploration and transport and we as a nation and as a species must continue to push forward into this new frontier. True, some may negatively impacted, but the local economy as a whole benefits tremendously from SpaceX's investment. Please don't allow bureaucracy or small minded individuals impede this important progress for our nation and our species a a whole. Sincerely [redacted]

I feel SpaceX is doing something great in cooperation with NASA to reinstall space travel in a new generation that needs something to look forward to. As far a environment goes I can't see SpaceX doing any more damage then breaking ships, US aircraft carriers etc. Oil platforms with several platforms stretched across sensitive wetlands! I've lived in Florida for 52 years and have several personal friends that have retired from aerospace manufacturing! Thank you for listening and don't let a few negative Nancy's spoil the party!😎

Please allow SpaceX to test and launch their new orbital platform (Starship & Booster). It is a testament to human ingenuity and has the power to inspire generations to come. If you choose not to let SpaceX go forward with this test/operations you will be harming the future of the human race. All precautionary measures will be taken and SpaceX has a strong launch track record. So again please let SpaceX launch, don’t deflate a entire generations dreams and aspirations to become a space faring race. This is the future and a federal agency should not stand in the way of that.

There is always a trade off with any progress. Spacex has proved that they are good stewards neighbors. Whether it is saving turtles during a hurricane, Solar energy to offset there footprint, or local investment in communities and schools. I strongly support the approval of their launch facility. Regards, [redacted]

Message

Testing new rocket technology is both vital to the U.S. leadership in the world, and to the future of humanity. We must not halt the progression of any technology that only has potential to create new industry for the United States. There will be a new space race. Nuclear fission is only an attainable goal if we put the U.S. private sector, and the workforce of America behind a concentrated effort to develop affordable and efficient space travel. This is also a matter of American moral. In recent, China has unveiled spectacular missile technology, and the people of our nation are beginning to acquire a cynical outlook for the future. I am a senior high school student, and I affirm that it should be our obligation to avoid hindering our advances before it is too late. So I am writing this message in support of the private initiatives of Spacex, to create more opportunities for people of all classes and creeds. To bring our understanding of the universe to new levels, never before imagined. And to have our nation prepared for endeavors of future exploits, which will very well become vital in the coming future. So I urge you to approve the rocket tests flights that Spacex must complete, to bring this future to reality. It is true that for many of us, space exploration represents hope. I believe that my generation rests in a sensitive position of particular talents, brought by our changing world, and the rapid nature of our modern culture. And it is my belief that the opportunities we are presented with, could aid to the benefit of future carriers that those within my generation could see success from. Finally, with the grim outlook of the world nowadays, our very survival may be on the line, should we procrastinate. Thank you for taking the time to read this message.

Our nation had grown through the innovation provided through our capitalist society. Private advances in technology have proved decade after decade, century after century that the USA is and will forever be the leading the advancement of the human race. As we now look to expand our species throughout the system, we must do everything we can to support, not hinder, the advancement to the next steps in our future. Please do everything you can to allow us to move forward with the licensure of the spaceport in Texas. This will be a moment that history will not soon forget as our government once again shows it's main purpose, the protection of it's citizens ability to have life, liberty and to pursue happiness.

As a private individual I support space exploration. We have learned so much about our own solar system from the many robot rockets which have explored space. It is just a matter of time until humans travel back to the moon and the most difficult journey to Mars. Emissions for all this should be considered but there is so many trivial events on earth wasting the planet already that space travel will teach us much and is a highly very difficult achievement. Personally I was married to a man with Asperger's syndrome for 17 years with three children. They are high functioning in technology, science physics etc, but as far as family and human affairs are concerned they are nil. When humans travel back to space this is a highly significant factor and requires experts who understand all the ins and outs of humans and society as well as the great risks astronauts will take. Elon Musk is not suited to this role at all, and his great ability in astrophysics, electric cars and solar power may mask the issues he is ignorant in, the very humans who will travel back to space. There definitely needs to be a separation from Elon and the astronauts. He sticks to the technical and some other experts take on the huge human tasks of all the rest. Travelling, camps on the moon and mars and all the many other human factors. AS people can come across as very balanced and educated but this only relates to the academic side of things. AS has only been on the radar for a short time and my family has been adversely affected by my x husband's condition. He is a very advanced mathematician; he can be something one day and something completely different the next and when he walks away he has no responsibility or anything else.

Sir/Ma'am Please expediate the Space X paperwork, as a fellow aviator, surface to 41K, its amazing the work and space advancement that the SpaceX team accomplishes. This is motivating to the countless engineer's, aviators, and dreamer that see America as a leading force once again in the technology/space race. Thank you for your time, God Bless Michael Petruska, B-757 pilot

I write in support of the expedient approval of the Starship/Superheavy program under the Draft PEA. I believe the reasonable outcome is a finding of no significant impact. Damage to the natural environment by residential development, eg the ongoing growth of Port Isabel and South Padre Island, have much more significant impact on the natural environment and have never faced anywhere near the scrutiny and review that the SpaceX development has. Severely reducing urban sprawl would be a much better use of the federal jurisdiction of the environment.

I would like to voice my support of Space Exploration and what they are doing in Texas. I believe what Space X is doing is vital to our species and to the future of humans. I believe that with oversight, Space X has good intentions and will honor our current planet and the area around Boca Chica as well as advance our presence in space. When looking at how beautifully Kennedy Space Center has preserve the wildlife in the area I have high hopes for Space X. I can't imagine how much fewer wildlife species would be in the area of KSP if it were just open beaches and not a thriving space port. In conclusion, I think that Space X has the best intentions in mind for both the local land and area as well as the ability to invest and protect the local ecosystem. Please review and grant space X the required permits for testing and flying of their Starship and Superheavy boosters. Thank you, [redacted]

Message

Hello FAA please give spacex the freedoms of launching. The wonderful things that Mr. Musk Is doing is unheard of and beyond extraordinary and you know it. What happened if the Wright Brothers were regulated? Do we really want to get in the way of progress? Do we want to go hinder the evolution of human beings in terms of colonizing other planets? I think we all know the answers in our hearts. Sincerely, [redacted]

Good afternoon, I am a resident of Ohio, but have been to the Boca Chica site for a visit. I am a retired Naval Aviator and have been a part of aviation all my life. What SpaceX is doing at the Starship site is revolutionary and will require a lot of changes in regulatory procedures. We must adapt to the future… to advance as a civilization. SpaceX has my full support. Thank you for your time. [redacted]

To whom it may concern, I want to show my public support for the efforts of SpaceX in endeavouring to propel humanity forward, not only Americans. The environmental review is certainly important and it's wonderful to see the time, care, and attention to detail being put in place. So I think there is a great ability and chance now for SpaceX to continue with the test launches and hopefully proper launches all while following regulatory guidelines. The future is greatest when we can all work together to make it so.

I am requesting the FAA support the application by SpaceX regarding the 'starbase' facility. The success of SpaceX's efforts at starbase can serve as a 'rallying cry' for other efforts to reach beyond our planet. Efforts by government regulatory agencies and corporate competitors to retard that effort can, likewise, have a chilling effect on our ability to develop a robust space industry. Exploration cannot always be accomplished in sterile 100% "safe" environment. Sometimes risk is necessary to succeed. The early exploration of our planet was not accomplished without great personal risk. Space is no different and, just like that early exploration, it is absolutely vital that it be done. I am asking that the FAA support the efforts of SpaceX by approving both this application and the future development of the starship program. Thank you.

The United States has been a hub of innovation and technology for two centuries. This included the first landing on the moon, and other stunning and incredible space feats that has become a huge part of the pride that Americans are able to take in their nation. Tragically, due to the fear of failure and largely inefficient cost structure, the United States space program has become a shadow of it's former self. Spacex, with it's focus on efficiency, and it's culture of failing first in order to attain the impossible, provides a chance to make America great again within the realm of space travel. My hope and dream is for Spacex to achieve this goal to help put Americans back on the map again for space exploration. Please allow Spacex to move as fast as is safely possible in pushing humans forward toward the goals of expansion of space travel, exploration, and eventually interplanetary colonization!

I fully support the Starbase project and want to see it's license granted as quickly as possible. There's nothing more important than saving the light of consciousness and this is our only hope of making that happen. Geopolitics, global warming, and countless other factors have made this work all the more important. SpaceX has what it takes to bring this to fruition, it just needs the FAA to put their faith in this too for it be a reality.

When I was young I was told that we were "born too late to explore the world and born too early to explore the stars" not any more. We are in the 2nd golden era of space travel. We will have humans walking upon Mars in 2026 because of this decision. To follow in the footsteps of American heroes like Armstrong. Innovation has been difficult, it requires an extremely quick and knowledgeable mind, some luck and some genius. There have been too many private space companies but here is SpaceX, putting American astronauts into space with vehicles they've developed. Their next generation: Starship will change the space industry forever, inspire millions of people into engineering but most of all it'll place a faith into the American people and the people of the world: That we can come together and create great things, that nothing is impossible and we can reach the stars. Please help lift that dream. Let your children dream of the stars again. Let innovation happen. We need it.

Message

In this time of complexities and struggles, it's essential that we push forward and continue exploring in order to bettering humanity. SpaceX is doing just that. Add to this the geopolitical dimension of space exploration, including our over-reliance for over a decade on other nation-states at a steep cost in order to help the United States achieve our objectives in space (e.g., transporting astronauts and supplies to the ISS), and it's easy to determine that full support of SpaceX, including Starship/Super Heavy missions, is imperative as well as cost-effective leadership. Although I've not visited Starbase or Boca Chica, I've closely followed it (especially during my time with Foreign Policy/National Security at the Council on Foreign Relations) and have been amazed at the community that's developed in the region. The development of the area has put a once relatively unknown United States town on the map, generated jobs for residents, and brought in high-quality individuals for other positions. Cost-benefit and a proper risk analysis would put aside concerns around debris recovery, the integration tower and other launch-related constructions in concert with local road closures in Boca Chica, among other issues. I have little doubt that SpaceX and the Boca Chica community can and will work together to ensure environmental, community and business needs are safely and reasonably met. As a citizen of this great nation and caring individual, I ask that the FAA grant full approval to SpaceX and Starship/Super Heavy. [redacted]

Estimados Sra.FAA, De nuestra mayor consideración. Yo, Diego Fernández Rodríguez de la Ciudad de Fray Bentos en Uruguay, apoyo fervientemente el desarrollo e innovación de nuevas tecnologías que está llevando adelante la empresa SpaceX en Boca Chica, por que consideró que nuestro futuro como humanidad es llegar más allá de nuestro Planeta Tierra y estamos obligados a salvar nuestro Planeta consiguiendo recursos fuera de nuestro Planeta y no seguir destruyéndola. Muchas Gracias. Saludos Cordiales. [redacted]

Translation: Dear Ms. FAA, Of our greatest consideration. I, Diego Fernández Rodríguez from the City of Fray Bentos in Uruguay, fervently support the development and innovation of new technologies that the company SpaceX is carrying out in Boca Chica, because I consider that our future as humanity is to reach beyond our Planet Earth and we are obliged to save our Planet by getting resources outside of our Planet and not continue destroying it. Thank you very much. Best regards. Diego

I believe SpaceX should be allowed to do what is necessary to evolve and make new technology that will benefit not space but everyone on earth. SpaceX is taking huge strides in advancing everything, from rockets to transport to engineering. SpaceX provides a dream that young people like my self want to be a part of. Something we all get excited about! It's not just for SpaceX, its for the new generation and the new ones to come. We need to be able to succeed before we succeed to then succeed. The only way of doing this is to work closely work with SpaceX and help provide and sort of things they need to go through in order for them to reach there goals! We are going to the moon in 2024. This will not happen with continued setbacks from goverment. SpaceX is trying to push forward to get Americans back on the moon, with american made equipment made in America. This is a big time for America and I fully support anything SpaceX wishes to do in Texas and I think the FAA should fully support and help develop its infrastructure, its guidelines and its processes not to just help SpaceX. But the new industry. Commerical Space! Thank you.

Hello, please consider this email a letter of support for the SpaceX facility and continued progress to launch, which can include landing, Starship/Super Heavy from its facility in Boca Chica. These are bold and ambitious plans, outpacing the government's ability and tolerance for "failure" which in unmanned flights, generates massive data which is always a success. SpaceX requires the ability and flexibility to test these vehicles, and I offer my support to them.

Thank you for listening to the public. It is critical that we take full advantage of SpaceX's willingness to push the envelope. I believe the FAA has a responsibility to perform their duties fairly and not simply give SpaceX a free pass, however, it is important that the FAA meets the pace demanded by SpaceX. Who knows when we will have another company so willing to take on these financial risks? They continue to be a bargain for the American taxpayer, and that will only improve with starship. Please meet the challenge of working at the pace SpaceX requires. Do not let people, who's antibillionaire bias clouds their judgement, push you into ignoring the great opportunity SpaceX provides.

There is no denying that the SpaceX facility in Boca Chica has made and lasting impact on the area. Those looking for a quiet, remote place to relax and enjoy nature might be disappointed by the rocket launches, beach closures, and dramatic shift to the area that SpaceX has brought. Yet, there are countless other areas in the country where the same conditions that made boca chica popular for a small set of people exist. There is not however, to my knowledge, any other place in the world where more progress is being made to open up space to the masses and realize the very real benefits this will have for everyone. What SpaceX is doing is unprecedented and whatever negative effects it has on the environment, will be made up 1000 fold if what they are planning to do succeeds. I am 100% in support of SpaceX and their continue development in the Boca Chica area and I implore the FAA to take a long term view when making any decisions

Space x needs to continue full speed ahead. I am an ecologist and I believe the habit to the south is plenty protected, not to mention the vast protected land in Mexico across the river. The launching of a rocket capable of carrying 100+ ton of payload will further our capability to take care of our home land. In my opinion it is not the Federal governments place to stop Space x due to environmental concerns. Thank you for your work keeping our skys safe.

Hello I am writing to show my support for Space Xs orbital flight. I feel that the work Space X has done so far has been massive in such a short time and this orbital flight is an important development in Elon Musk's vision of a colony on Mars. The work that Space X does is very important for the growth of humanity and I share in this vision to make humanity a multiplanet species. You must allow this flight to go ahead for the betterment of mankind. Sophie Barrie

I follow SpaceX's activities at Boca Chica daily and with enthusiasm! As an employee of Northrop Grumman I suppose SpaceX is a competitor but SpaceX is important to all of us! They keep resetting/reinventing the bar! Competition is good for our company and it is good for our country. Northrop Grumman and the likes of Boeing and Lockheed have sat back on their fat laurels for too long. Its time for them to become lean and learn how to complete again!

I fully support the development of the Starship program in Boca Chica. In addition to important, cost effective exploration of the solar system, I believe this is vital to our national security. With the development of a rapidly reusable heavy transport system, we will have the ability to transport up to 100 tons of cargo and eventually personnel to anywhere on this planet in less than an hour and a half. That is a real world, Earth utility that will save lives, defend our interests, and allow for very rapid humanitarian assistance. Those benefits should tip the scale in favor of moving this program forward as rapidly as possible. Russia and China would love to beat us to that. Therefore, I strongly urge the FAA to allow the Starship program to proceed. Thank you, Jerry Corley Fort Smith, AR

What happened to the world after Columbus discovered the Americas? All the civilizations changed, the world itself became later a 'round planet' orbiting the sun. Starbase, TX is the place where mankind's ships to the unknown are being developed from scratch. Imagine how the world will change when we conquer the unknown and become an interplanetary species. Let that thought sink in.

Good Morning from Australia! I wanted to sit and write this email to get all my thoughts out in the open. I'm hopeful that SpaceX will be able and allowed to continue their operations in Boca Chica TX, watching this from afar has given me so much hope that we can finally cross the bridge and make sure that humans aren't so dependent on one planet to live on. We do far more destructive things on a daily basis than allow development and testing of a fully reusable transport system. The fact that this venture is privately funded also is a huge plus, we're not dependent on government money and sometimes costly delays, like the ones that Boeing and the Starliner are unfortunately facing. As far as I can tell SpaceX are trying to be as conscious of their impact on the local environment, but as is the nature of humans being humans, there will be some disturbance. But I ask, if SpaceX can't operate out of Boca, where can they? With limited knowledge of the Brownsville area, I'm seeing a town that was struggling to support itself and residents. Now there are many people that have migrated to the area to work, which brings in skills and money to the area, I can't see how that's a bad thing? I like to think of America as an Australian ally, so I seeing an all American company being on the cutting edge of this field is great. If the USA doesn't do it, I can imagine that it will likely fall into the hands of China or Russia, which I feel like we don't have as good of a relationship with and that is concerning. In closing, please consider letting development and testing continue for SpaceX in Southern Texas, for the good of humankind. Jamie B Adelaide, Australia.

SpaceX has been an inspiration for me since the first time I heard about them. I'm an engineering student and have been following SpaceX since they were trying out booster landings with the Grasshopper program back in 2012-13. Then they went on to land their first booster back in 2015. Teams at SpaceX did that with utmost discipline towards the environment and have been very thorough since then. I would like to give a recent example... Back in February when the winter storm caused power outages in Texas, an organisation- Sea Turtles Inc. (non profit organization) of South Padre Island with the goal of protecting the endangered sea turtles went out of power and we're in desperate need of help to continue keeping the sea turtles warm. SpaceX helped them by delivering power generator to keep the sea turtles alive. A news report read around 4500 turtles were saved and some turtles were more than a century old. This was just an example of how environment oriented SpaceX is. I truly believe the environmental assessment done by SpaceX for their launch operations from Boca Chica, Texas is done by keeping the environment first and the launch license should be provided for the same. Teams at Boca have been working very hard, now more than ever before to achieve the goal of making life interplanetary and the FAA should as well assist SpaceX in the same. Thank you

We should look at the big picture here. SpaceX's activities align with the national interests of the United States, SpaceX is the most important contractor of the Department of Defense and NASA, and the rocket technology that is being developed by SpaceX is very important for the national security, and therefore SpaceX's activities must be fully approved and allowed to proceed. Thank you.

Dear Federal Aviation Administration, I would like to express my deep support as well as some arguments in favour of approving SpaceX high-environmental impact operations in Boca Chica "Starbase". My arguments for SpaceX support are: 1. Vibration, noice and heat pollution produced by a single orbital Starship and its booster sea level failure (explosion) is equal to less than 40 kg TNT explosion[1,2]. While one average lightning strike equals to ~250kg TNT equivalent (1e9 Jouls)[3]. Thus, complete failure equals ~1/6th impact of average lightning strike, while having similar noice pollution. 2. Boca Chica area has one of the highest lightning strike densities in the world, with 58 events per km2/per year. Thus, 10 starship and its booster explosions per year would increase noice, vibration and heat pollution by 2.8% 3. 2.8% increase in noice, heat and vibration pollution is not expected, but likely worst case scenario as unintended failure frequency is expected to decrease by 90% every year reaching extremely low probabilities by 2024 where first crewed missions to Moon are aimed to occur. There are other risks to environment and lifestyle of local residents, which i'm not aware of and would be delighted to analyse in detail. However, based on my current perception, i favour SpaceX plans strongly and would like to kindly ask for fast FAA environmental approval process. Kind regards Raimonds Reščenko [1] https://en.wikipedia.org/wiki/TNT_equivalent [2] https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&ved=2ahUKEwi13J_b4-DzAhXZCRAIHQPXDIMQFnoECBYQAQ&url=https%3A%2F%2Fwww.raco.cat%2Findex.php%2Fafinidad%2Farticle%2Fdownload%2F279547%2F367263%2F0&usg=AOvVaw3nIrAf3IKYQFiXMbKlRgMU [3] https://www.exchangeutility.co.uk/news/ever-wondered-how-much-electricity-is-generated-by-lightning/ [4] https://weather.com/safety/thunderstorms/news/2018-05-07-world-lightning-strikes-map-vaisala-2013-2017

Let Starship fly, it's the greatest thing since Apollo and should be support by all and cheered for the resourcefulness and innovation given to America. Any objections are just people trying to get the attention they crave but do not deserve, Before the great climate change disaster, we should make sure humans will not go extinct like the dinosaurs because we are an inter-planetary species.

SpaceX launch activities pose no threat to people or property in Boca Chica or South Padre Island. The company has also taken pains to safeguard local fauna, including nesting turtles. The proposed limited launch schedule for orbital tests of the Starship system will not significantly disrupt other human activity in the area. Lastly, the company's presence represents enormous economic growth potential for south Texas. I urge you to approve orbital tests immediately.

Hi, guys. I wanna talk now with your inner kid in your heart. What was your dream in a childhood? Mine was to fly, to see other planets, to make world peaceful and universally worldwide. You just must understand, that Starbase is Elon's childhood dream, dream to bring people to Mars, moon and beyond. He is good engineer and i know, he is reliable and very careful chief with testing rockets. I trust him. I am sure, you must let us to start new testing as soon as it possible. It is our life - space flights and Mars missions. Please!

You should give SpaceX the green light to test their system, if it works it will put the US back on the map for space exploration, and prove to the world that we are a leap away from becoming multi-planetary in a century or sooner. This test will give hope for humanity's longevity, and show the intuitive/innovative nature of SpaceX, they almost always bid lower than every other space exploration company, and always deliver. Let them show us how it is done, and done right.

Thank you for taking the time to hear us citizens and our side. I have been following the space industry and SpaceX for a long time. I believe SpaceX will do what ever it takes to do the right thing when it comes to all aspects of the environment. Whether it is sound, traffic, animals, or doing what is best for the city and area. I live in Southern California home of a ton of Aerospace companies for 80 years or more now. LA and the surrounding areas were very small then and Aerospace was a big reason for the growth in the area. Cameron County and Brownsville TX are the top 3 poorest if not the poorest city and county in the country. They may not know it, but they need SpaceX. It might be a little noisy and it might have more cars and people visit, but that is what growth and prosperity comes with. The city of Inglewood is a very poor area on LA. It was home to the Lakers and Kings in The Forum. The people around it hated it. The traffic and noise. They were thrilled when they left and went to a run down sketchy part of downtown LA. That part of LA is now cleaned up and thriving. Meanwhile Inglewood got worse and worse! Then 20 years later the Rams wanted to move to Inglewood and build a football stadium. Were the citizens of Inglewood against it? NNNOOO! They welcomed them with open arms! They needed help, they need the fans, they needed money coming in. Now the city is going to have a Super Bowl, College Football Championship, The soccer World Cup, and the Olympics! And they just broke ground across the street to open the new arena for the Clippers. Moral of the story, Brownsville and the county need to be carful in what they wish for by stopping or slowing SpaceX. I would also say that to all government agencies purposely slowing the growth of SpaceX too. SpaceX will be saving the government billions every year with their low cost reusable, environmentally flown rocket and company. Thank you, Daniel Dickinson

SpaceX is certainly out of place in the Las Palomas National wildlife refuge and less than 6 miles from vacation central on the lower laguna madre . Meanwhile Jeff Bezos blue Origin is in the vast wastelands of west Texas with little to no collateral damage. The environmental impacts along with the quality of life and population is at risk for substantial harm and dangers . The directive is obvious, SPACEX DOES NOT BELONG AND SHOULD NOT BE ALLOWED TO OPERATE, CONSTRUCT , OR CAUSE HARM OR COLLATERAL DAMAGE IN ITS PRESENT LOCATION AT BOCA CHICA . I owned a hime on Long Island just 5.3 miles across the bay from spacex launch pad, the explosions from testing took away our quality of life and caused great fears of death and destruction causing my family to sell our home as it was simply too close to danger . SPACEX WILL FORVER CHANGE FOR THE WORSE THE LAST PARADISE IN TEXAS , AND ITS BEING ALLOWED BY CONGRESS. SHUT SPACEX DOWN AND FORCE SPACEX OUT OF THE LAS PALOMAS NATIONAL WILDLIFE REFUGE AND AWAY FROM POPULATED AREAS THAT HAVE SENSITIVE ECCO SYSTEMS. DO NOT ALLOW SPACEX TO CONTINUE AS IT IS EVIDENT THAT THE DAMGES ARE GREATER THAN THE OBJECTIVE . David Flake port Isabel Texas business owner .

I live in Spokane, WA and I am considering moving to Brownsville, TX to be close to Starbase. I think what SpaceX is doing in Boca Chica is the most inspiring thing that I've ever seen in my 34 years and I hope the FAA will support them 100%. Thank you.

To whom it may concern I would really like to adress my opinion upon SpaceX's Starship programm. After following and studying the events at Boca Chica from the very beginning and also reading through the whole FAA-Document, I think that I've gained quite some impressions. I've also gotten some wind about the protest against the plans from SpaceX. I really have to say that these people are absolutely narrow minded and just unable to see the bigger picture. If SpaceX succeeds, which looks quite likely at this point, this will literally change the world for the better and catapult the USA back to the top of the world. It's the same people complaining here about SpaceX, that would somewhere else complain about wind energy. Every human with a decent sense for logic sees, that the benefits from these technological improvements overweight the negatives. It would be incredible sad if humanity would fail to become a multiplanetary species, because you guys from the FAA let yourself get manipulated by these narrow minded people. Respectfully yours Marvin Fachtner

Respected Sir, I support this project fully. This is the only effort of its kind to make human race and more importantly anything living on earth to get a chance to survive over dangerous life extinguishing events. It is not if but when is the question. The quicker we develop technologies to go to another planet, the better for our survival and of our future generations. There will be ecological impacts in this effort but they can be managed correctly with all scientific knowledge and experience we as a scientific communities can help happen. One thing we should not do is to delay this process. Even with current rate of development, we can complete this mission in our life time. So no delay in the process is acceptable. Please approve SpaceX's application to allow them to continue test launches.

Starbase and SpaceX are critical to the future of mankind and the United States economy. Continue to allow its operation and expansion. It will end up being one of the best decisions of the decade for a governing body. Also, continue to do anything you can to speed up regulatory approvals of new hardware, flight plans, and logistical moves. It would be great if the slowest moving system were engineering problem solving rather than regulatory approval. 24/7 regulatory review 3 shifts daily seems appropriate.

I know that spaceX and other companies have surprised everyone with the amount of development and how fast they have been able to create this new technology. However, with the current law spaceX and other companies still can't do everything they can to advance space travel. If you were to make a new law saying (for example) you are aloud to have multiple launches of a rocket in 3 hours. Passenger travel is very important and I think that rocket travel is the future and SpaceX has already proved that and it's your job to provide the possibility for them.

What SpaceX is attempting to do is a major step forward for humankind. They are not only preparing us for a future where an asteroid impact won't kill off the entire race but they are lowering the cost of space for science and exploration and thus will be saving the taxpayers of this country tremendously and allowing us to maintain a lead over countries who might seek to militarize space. I'm sure there are some in the Boca chica area who would rather this not happen but honestly this is a much bigger deal than them. There are many many miles of coast in Texas for those who don't want this in their backyard. The needs of the many outweigh the needs of the few. This will create new jobs in their area and help a poor and underserved community grow prosperous. Wildlife should be considered of course but there are certainly ways that they can coexist... There are plenty of other areas outside of the few square miles of the launch site where they can continue to thrive. This is an opportunity that we as a nation cannot allow to be hindered.

Hi there, My Name is Erick and through this email I would like to express my support towards SpaceX's Starship program in Boca Chica, Texas. As with every single thing in life, there is always a negative and positive side to anything. I believe SpaceX's Starship program will bring a massive positive impact to the community around Boca Chica, Texas State, and even to the United State of America. It will allow the US to be the leader again in the Space Race and benefit humanity. As for Environmental impact, I believe that nature will be able to adapt with the increasing activities in those area. Nature is not weak, they find way to survive. Thank you Regards Erick

I support SpaceX's efforts to test the Starship and ultimately send it to the moon and beyond. It is a unique development in the history of space exploration and reflects a considerable amount of technical expertise and effort. I am an engineer, lawyer and private pilot who applied for the astronaut program (unsuccessfully) in the 1970s. But I remain a steadfast supporter of NASA and of the ultimate commercialization of space. Thank you for your consideration.

I believe the work of Elon Musk and Space X is essential to our country. The FAA should allow the program to continue unhindered in an effort to further rapid advancements in technology. The FAA has an opportunity to be a part of the solution and should do all things possible to assist in the progress of the starship project. The starship project and its rapid development has the ability to create a safer and more sustainable use of the public airspace. Please approve the starship process.

We need to move this forward. This is the next step for main kind. We can regulate everything to death. We can find habitats that will get destroyed by anything we do on earth. Let us get off earth so we can find ways to save what we can before we destroy it all. Once we get out of the earth's atmosphere we will be able to find better ways to do this. Something has to give. This is a start. Go SpaceX.

Every thing has an environment impact not only SpaceX rocket and Starship. The car we drive to the beef(THE WORST) we enjoy so much. I'm confused to where this concerns are coming from as other companies/rockets/aircraft seems to get away with almost everything and adding to that the site used to be an oil/gas production site but that didn't seems to impact environment(wired).I would love to see Starship do it's orbital flight test next month(November 2021) and would highly recommend FAA to grant them the required license.

We must proceed with orbital testing of the Starship and Super heavy booster in Boca Chica, TX. This rocket will change the lives of and impact millions of people around the world because of it's mass to orbit and rapid reusability bringing cost of mass to orchid did drastically. For humanity to survive it requires space exploration and starship with super heavy is a major leap forward in humanitys survival. Sorry heavy and starship must move forward and take the next step to orbit. It is for humanity sake.

Please approve SpaceX's environmental assessment without delay. I understand that there are environmental risks, but going to Mars is so important. We have no backup for humanity. Right now Teflon is in every human body on the planet. If we had a settlement on Mars, we would have a group of people without it in their system. The next dangerous chemical released could mean the end of life on this planet. Humanity needs a backup plan. A small amount of methane released seems inconsequential by comparison. In addition, it is my recommendation to the FAA to advise SpaceX to switch to carbon neutral biomethane as an optional alternative. Thank you for your expedited service and hard work through this process at the FAA. Lastly, I would prefer my personal identifiable information withheld if at all possible.

I cannot think of a more worthwhile endeavor that to explore our universe by sending humans into space. SpaceX deserves the support of the FAA in clearing the way for development of the technology needed to accomplish that goal. I understand that this imposes some inconvenience to a few local residents and that it raises concerns by others for the possible impact on the environment surrounding and including the Boca Chica site but I see nothing in the environmental impact study that indicates an impact more significant that any medium sized airport and the potential for a global positive impact is enormous with the eventual movement of manufacturing and material processing operations off-planet. I'm sure that when all things are considered the FAA will find a net positive impact and approve the "plan". My regards.

SpaceX and all of Elon Musk's business genuinely try to do the right thing. They place what is good for the environment and humanity above profits. They leave the world cleaner than they found it. Elon is literally trying to save humanity. If successful, SpaceX will make a save a backup copy of life as we know it, someplace other than earth. The local schools honored SpaceX. That alone speaks volumes. The laws of Physics present enough challenges. Please remove as many regulatory barriers as possible, so SpaceX can succeed in Elon's life time. For example: I understand there is a decent amount of trash on the beach from locals. If SpaceX is given full control over the highway 4 and the beach: SpaceX will undoubtedly make Boca Chica Beach cleaner and nicer for locals and add amenities such as bathrooms. Involvement and cost of local authorities would be reduced for every road closure. Regarding local historical sites, the future StarBase Visitors Center will contain sections on the local history and over time be visited by millions more people. Thank you, Jeffrey C. Tallcott [redacted]

Space-X has done so much for space travel as a whole and has a broad vision for the future. Elon Musk is an incredible visionary and is not scared to try and try again. This is evident by his entire career, from Falcon-1 all the way through dragon, and look how incredible the Dragon spacecraft is and how well it performs. That being said, all regulatory requirements need to be strictly followed when human lives are at stake. Space-X needs to perfect the heat shield on Starship as it is an incredibly vital part of the spacecraft. That being said, the only way to fully test the craft and the heat shield to its limits is to perform multiple orbital tests. Starship is meant to enter Earth's atmosphere from Mars' orbit which will require testing at an extraordinary level. The more testing and launches that are allowed, ultimately the safer Starship will be. I fully support Space-X and Elon Musk. To the future of humanity and Space exploration!

Please approve and do not obstruct the immediate SpaceX plans to expand technology for needed space exploration and ordinary sub orbital travel. All immediate and temporary disadvantages should be quantified, waived and eventually monitored and controlled, to progressively ensure future minimal environmental impact, during the operational phases. Thanks for the opportunity, Fausto Mendoza

Hello friends, I've recently heard you might appreciate public feedback on whether or not to approve Elon Musk's SpaceX biggest ever rocket launch. I'd like to take a moment to thank you for watching it for our safety, 1st off, and secondly to voice my support for space exploration and the space age that we have the amazing opportunity to kick-off. I feel that essentially EVERYTHING on Earth depends on our ability to become a Class 1 Space Faring Civilization, focusing on asteroid mining and taking care of our fellow human and simply seeing the Universe in a more Long-term viewpoint, leasing beginner the "caveman's" ideas that we must steal from our neighbor in order to have enough for ourselves. So, for today, I ask that you do EVERYTHING in your power to ensure that this is the result. Thank you very much again, for your time, Joel Thompson [redacted]

I'm not sure why FAA is not approving the SpaceX launch of Starship? What's the hold up? We really need to be a spacefaring, multi-planetary civilization and the USA needs to be leading that effort. SpaceX is keeping us in that lead. No one's even close. Not even China nor Russia. Every other company, whether Blue Origin or Virgin Galactic or anyone else can also do the same, but there's no need to hold up SpaceX because of their objections. I really hope you make the right decision and make it fast. Show us how government can work for the good of all the people.

Hi, The only acceptable, responsible position for the FAA to take on SpaceX is to complete the authorization. SpaceX, and Elon Musk personally, spend more effort in environmental control and mitigation than just about any person or corporation in the world. SpaceX spent precious resources to rescue and protect sea turtles hurt by the unusual winter weather, and provided electric power generators to local critical resources when the power grid collapsed. Environmental and safety concerns are VISIBLY critical for SpaceX, and they take all reasonable precautions. Indeed, they take more precautions than NASA did when Shuttle Columbia was damaged prior to reentry. They take it seriously enough that they've even changed the propellant for Starship, to be more sustainable. The very goal is sustainability and to enable off-world resource collection and mining. Without that, all of the lofty goals of "saving the planet" will be for naught. Please complete the SpaceX authorization and please stop playing politics with humanity's future. Sincerely, Jessica Schlenker

With consideration of environmental risks and wildlife safety plans understanding prediction of consequences as best as we can, i would like to highlight the fact that time (measured in days, not months or years) is most critical than ever if the US wants to retain a wish to lead the technology and space fields. The US has lost roughly all other industries and sectors, technology and space explorations should be kept close and supported, now more than ever. We understand it isn't the '60s anymore, but we should remind ourselves that any delays to space exploration operations will only help facilitate other countries to turn these projects into reality before us, and i can't stress enough that every single day matters. God speed.

I was a boy in my teens during NASA's Mercury/Gemini/Apollo era and I watched live TV coverage of Neil and Buzz landing on the moon. I was a proud young man but this event brought me to tears of joy at this great accomplishment. The spirit of Apollo gave me great hope for an exciting future, and it inspired me to become a college graduate. The Apollo era passed unfortunately without new missions to the moon or Mars as did my excitement for the future. But now, the spirit of Apollo and the urgency of Apollo has returned thanks to the big ideas of SpaceX and the building of Starbase in BocaChica. SpaceX is inspiring countless young people and students to study science & engineering so they can be a part of a dream where humanity is multi-planetary. SpaceX has sparked the dreams of a generation, and the hopes of an old man that I may yet make it to space. The hopes and dreams of a generation, and the future of our species are far more important than a minor environmental impact to BocaChica that the construction, testing and launching of Starship and Superheavy may cause. Please do not allow special interest groups or competitors to SpaceX exaggerate the impact of operations to BocaChica. Please understand the importance of this work to humanity and to the dreams of our younger generation. Larry Owens

FAA, I am writing this note in support of the operations space X has in Boca Chica, Tx. I've been down to the Boca Chica / Brownsville area and seen first hand the benefits that Space X has brought an otherwise low income area of southern Texas. Space X will end up operating this program somewhere and the Brownsville area may as well be the ones to benefit from it. Whatever local wildlife impact there is, Space X has already shown they will help minimize it. I ask that they be given approval to move to the next phase of development of the Starship program. Thanks, Brandon Bulla

As someone who grew up on South Padre Island and graduated from PIHS I would like to state my opinion on SpaceX's activity. SpaceX has brought life to the community that I have never seen before. They have brought thousands of jobs to the area, inspire the next generation, they have been good for the environment as well, and were tantamount to saving the sea turtles last winter. Having high paying jobs for well educated people is the only way to prevent "brain drain" and the RGV desperately needs that. It's also important to remember that when the roads people are complaining about are roads that were in horrible disrepair before SpaceX improved them, and that many of the people who complain are never on those roads to begin with. I have been on those roads. I love going to Boca Chica Beach, and I love watching the activity going on at the SpaceX facilities. I have never had an issue with access. Please. Do not believe people who refuse change or improvement of any kind that claim safety or environmental concerns that are just factually false. Let Boca Chica and the RGV pave the way forward for humanity.

Space X is amazing and doing far far more good for the environment and the world than harm. You have to break a few eggs to make a cake! The EPA has done more harm in allowing wolf hunts and other endangered animals not getting the protection they need. Space X is at least doing the right thing and protecting the environment and animals as much as possible. Please approve this project!

To whom it may concern, I think that spacex should get the go ahead to launch starship for its first orbital flight because it is the only way to get to the next stage of space flight, this is a big step for man kind and a big bit of history that is going to be made. I'm thinking of my children and how this is going to shape their futures and the futures of the children and younger generations all over the world, space X strive to make that next stage of space flight possible and for humans to go further than we have gone before, so to be able to do this they need to be able to put starship up for its first ever orbital flight. Please let this happen not for just space X but for everyone in the world and all those young growing minds that will grow up to do great things

To whom it may concern, My name is Christian Miller and I am an American citizen living in Indiana. I am writing today to voice my support for the Starbase Facility in Boca Chica, Texas. I have long been an activist for environmental protection as well as space flight. As for the question of whether Starbase should be allowed to expand and begin launching orbital class rockets over environmental concerns, I would answer that the history of the environmental movement is the history of spaceflight. For those who have heard the voices of Apollo 8 astronauts when they captured the first images of “Earth Rise”, you too know the immediate impact this had on the public’s view of our world and our place in it. This was followed by the founding of Doctors Without Borders, the EPA, and stunning new climate research satellites. Our place in the Universe shrunk and we began to realize how fragile our planet is. You cannot be for environmental protection while limiting human advances in aerospace technology. It took us seeing the Earth from a new perspective to realize how fragile she is. Let us bring this investigation to speedy end and not waste any more time. The facts are this, SpaceX is building the future of space travel in Boca Chica and people of all kinds and all places are rooting for them, including myself. Thank you -Christian Miller

I am not associated with any organization and speaking for myself Devan Morgan. Please allow SpaceX to continue their program without any further delays. We don't know how long we have on this planet and delaying this could remove humanity from existence. As long as we have a super large rocket system we're able to protect earth from future asteroids and or continue the consciousness of humanity. I would consider doing another environmental if it was any other company besides SpaceX. They've proven themselves many times over. SpaceX has the proven technology in the Falcon 9 rocket and have taken humans to space. The Boca Chica ecosystem will benefit from the road closures and protected areas caused from the blast zone. There has been numerous studies conducted at Cape Canaveral which suggest that rocket launches do not impact the surrounding environment. As a Pilot I have faith that the FAA will make the right choice to approve SpaceX in launching their rockets. Continueing to delay Spacex is hindering American technology advancements and making life multiplanetary. Kind regards, Devan Morgan

We live in very exciting times where space exploration is being done by private sectors rather than government funded. As such the approach has changed and is much more current than big organisations that are mired in legacy processes. So an open mind for alternate approaches should be considered. Worst case do you want to lose the momentum or motivation?

I support SpaceX launching from Boca Chica. They have launched numerous times from Florida and Vandenburg and with the exception of the Amos accident have proven that they are capable of producing rockets that work well including the ability to return to launch site or drone ship. SpaceX's launches from Boca Chica may be experimental and during the testing phase of Starship they have had a number of explosions but again they have demonstrated that they can identify and address the issues and the last test flight landed successfully.

We need to move this forward. This is the next step for main kind. We can regulate everything to death. We can find habitats that will get destroyed by anything we do on earth. Let us get off earth so we can find ways to save what we can before we destroy it all. Once we get out of the earth's atmosphere we will be able to find better ways to do this. Something has to give. This is a start. Go SpaceX.

Spacex es una empresa que nos da esa oportunidad, nuevamante de creeer en la propia humanidad. En tiempos dificiles, creer que se puede llegar mas lejos, es soñar en un futuro para nuestros hijos. No cambiar es fracasar una y otra vez, quedarnos sentados es lo peor que podremos hacer como especie. "EL QUE NO ARRIESGA NO GANA". Todos los avances tecnologicos como nuevos materiales, y la reutilizacion donde la nasa no podia hacer mucho, spacex con paciencia y conviccion logro nuevos metodos. Tambien lograr en poco tiempo que la gente se emocione y perderle ese miedo al espacio "con responsabilidad". Apoyo a Spacex en Boca Chica.

Translation: Spacex is a company that gives us that opportunity, once again, to believe in humanity itself. In difficult times, believing that you can go further is dreaming of a future for our children. Not to change is to fail over and over again, sitting still is the worst thing we can do as a species. "NOTHING VENTURED NOTHING GAINED". All the technological advances such as new materials, and reuse where NASA could not do much, Spacex with patience and conviction achieved new methods. Also achieve in a short time that people get excited and lose that fear of space "responsibly". I support Spacex in Boca Chica.

SpaceX's Starship program is the next big thing since the Apollo Era. From school kids to PhDs are getting inspired by SpaceX's ambition to make humanity multi-planetary and the effort they put in engineering world's most advanced, powerful, more importantly 100% reusable rockets. The positive outcomes of allowing SpaceX to launch it's Starship and SuperHeavy from Boca Chica village easily overweighs the minor effects it will have. SpaceX has been following a very strict safety culture in testing their prototypes since beginning. I truly believe SpaceX should be granted appropriate licenses to launch their vehicle (Orbital/Suborbital) from Boca Chica village. Godspeed.

Dear Sir/Madam We are on the brink of some of the most fantastic advances in space flight since the days of Apollo, only now it is affordable for not only Spacex but also for NASA and all Americans and all space enthusiasts all over the world. Spacex is trying to do what many people consider to be impossible - to land humans on the moon AND SUSTAIN THEM THERE. This is something that we could not do sustainably back in the 1970's with the huge costs of expendable Saturn 5 rockets. But Spacex is attempting to reuse the large Super Heavy/Starship vehicle combination to do just this. And they need our support. Spacex has been trying to do this sustainably and responsibly in a way that maintains the delicate Boca Chica marine environment. I feel that with constructive guidance, both the aggressive Super Heavy/Starship development program and the Gulf of Mexico shoreline ecosystem can move forward in a sustainable manner. But it will take a teamwork approach from both sides - Spacex and a reasonable environmental coalition to make this happen. If we give Spacex a reasonable plan to follow, I believe we can make this dream of cost effective space flight and a green Gulf coast ecosystem a reality. Steve Powers

To whom it may concern: SpaceX in Boca Chica is important and vital for America's success in the space frontier and important for us here on Earth. Not only is China building a space station, exploring the moon and Mars, they have launched a hypersonic missile around the world that the US, much less any other country could defend against. We need to support all successful and innovative endeavors to push the US to the forefront in the space race, such as SpaceX. If we come in behind, then China will win and be able to dictate the terms of space exploration and here on earth. Because they are not stopping from innovating and building new techniques and methods that can be used on earth and in space. Time is of the essence and we as a country need to support home grown companies, innovation, new technologies, and methods. We need to support our SpaceX, especially if we want our country to be successful and to be the best. This is good not only for our country, but for the world. Thank you so much for your time and for all your hard work. Please support SpaceX.

SpaceX is doing more for humanity than any of us can realize. We've had it so good, but our future literally depends on their successes! Each step SpaceX takes is a Win for us all! Please give them full launch clearance & open a road fir them to pass; please allow them unrestricted launches from here forward. Our Economy, our environment, Our very future depends on it. Yours In Humanity's Future, Chris Merritt

I live in the Dallas metroplex, so I am not close to Boca Chica, however I'd like to express my support SpaceX and the work they are doing in Boca Chica. I am inspired by SpaceX and the Starship they are building and believe that Starship will thoroughly revolutionize space travel when it is fully realized. It would be a travesty for the FAA to stand in the way of such an outcome. Regarding the environmental impact, I believe that wildlife and rockets can and do co-exist very well together. As Kennedy Space Center and Cape Canaveral Air Force Station has shown, you can have rockets launching and at the same time have wildlife thrive. In fact, the the Florida example, if KSC and CCAFS had not been there, there would be much less wildlife there currently because the location would be developed. The rocket launch pads actually keep other development at a distance and therefore allow for wildlife to thrive. I believe the same will happen for Boca Chica. Thank you for your consideration, Nathan Schemm

Hello, It's my humble request to let the SpaceX orbital test proceed forward. If this doesn't happen, there will be a huge - huge dip in all the progress there has been made in the Space industry. We people, including you, are always looking for further incredible things made by humanity and a practical StarShip to Mars is one of those fear that will mark a change in the era from a human society stuck to earth to an Interplanetary species. All these tests are worth it if they show results and achieve there goals. Wishing FAA holds true to their future visions and understand that under their administration - this will be a birth of a new era for humanity, Thanks

I support Space X efforts in Texas. This is “re-shoring” of the space industry back to the USA and away from foreign competitors in Russia and other places. I see no mitigation is needed to carry out this orbital flight. This is the next step in human colonization of Mars and beyond. I request and recommend full approval and no mitigation measures.

In the 1950s and 60s NASA developed technology for the moon landings that we are still benefitting from today. SpaceX must be allowed to drive that same innovation from Starbase for a new generation. While we should do all we can to protect our resources here, we should not allow a small number of those resources to prevent us from making life multi-planetary.

To Whom It May Concern: I will keep this simple, though there may be impacts from what SpaceX is doing the good far outweighs the bad. We had a space race with chemicals in the 60s that were far worse as compared today and we were okay with that. We need programs like SpaceX to push the envelope so we can do more and better for this earth. For that reason, I support their efforts and would like them to continue. Joshua Weber

Speaking for my whole family we look to what SpaceX is doing in Bocca Chica with admiration and hope for the future. It is inspirational to see what is happening. One only needs to look to all the very successful daily YouTube videos posted to see that what is happing is incredible. Thousands of views and "likes" daily from multiple sources. The trade off between the use of an environmentally sensitive area versus the gain is worth the gain. The risk to humans and property is worth the risks. The exploration and exploitation of space is the future of mankind and the USA must be the leader. Please support SpaceX

I fully support SpaceX Starship launch from Boca Chica. SpaceX has demonstrated ingenuity and has experience complying with goals. It is the company that has launched more rockets since its beginning of 2002. Town people support SpaceX being located there. It has brought business, employment, tourism.

The Star-Base of SpaceX was selected at this far land Boca Chica, the edge of Texas, the most south State in US, why? The decision to minimize and avoid any possible impact to the environment or any living soils in major cities was so obviously clever. You, whoever are, have no excuses to stop their development by any means. The adventure into space is the most important heritage from our pioneers' development of America's Continent. Who in our history has stopped them from building our country U.S.A? Are you going to be the first one? To stop the future of humanity? Please, do the right decision to let Starship fly into the future.

To the members within the FAA. I truly hope you understand how important your role is right now to shape the history of humanity. Starship test launches are a critical step for SpaceX. If SpaceX is ultimately successful in their mission to make the human species multi-planetary, it will be looked at for many centuries as one of the most significant successes ever achieved by Human beings. The innovation and technology discovered along the journey will transform our lives in ways we can’t even behind to comprehend. I wish all the members within the FAA Godspeed! Best Regards Zack Nilser

It is paramount to humanity and for the advancement of the United States that SpaceX be granted full support to continue its rapid pace of innovation and not be restrained by cumbersome regulations that have proved to be counterproductive to growth and prosperity. It is particularly important for government to embrace the same confident spirit which SpaceX exemplifies. The future depends on it. Thank you in advance for your support.

I would like to speak in favor of immediate approval of SpaceX flight testing of Starship at Starbase Texas. This program is vital to our nation's efforts to return to the moon, and eventually beyond. As such it also carries the responsibility for our exploration, inspiration, national pride, and even national defense implications. I am not implying that safety procedures should be scrapped or ignored. The regulatory agencies involved in monitoring SpaceX projects do need to adjust their expectations while monitoring a private company who uses iterative development techniques. The company has done everything possible to isolate their base and plan for down range safety. Development time is at a premium and unnecessary delays have to be eliminated. Please do your part in making the United States the leader in space technology that we all expect it to be.

I support the speedy review (and hopefully approval - if there is not something truely disasterous). Many times these programs get held up by something that is so small that requires some big long investigation (which then still often ends up not a big deal). The speed of review makes a big difference in the cadence of these programs. The difference in a few week or multiple month review does matter in the long run because it compounds by the number of reviews and years of the program - so it could cause a multi-year delay in the grand scheme of the decade long program.

I am in support of what SpaceX is doing and i believe in their mission statement. I fully support launches and continued testing and development if the Starship program. Overall, I am less supportive if the outdated methods and extremely slow response that the FAA has towards space flight. Imagine if you treated airlines the same way, very few people would ever be able to fly in a plane. I do support a dedicated office for the FAA in south Texas, but if its just to further delay our space faring future, than obviously and once again the country has bern betrayed by the Bureaucracy. Summary: Let Starship fly! Thank you, Steven Taylor

SpaceX has made astounding achievements within the realm of Spaceflight in recent history. I am nearly graduated university with my bachelors of science in aerospace engineering, and the kind of technical feats that this team has achieved have been nothing short of magical. If regulatory approval is the only hurdle left for SpaceX to be to entity to make humanity multi planetary, and this approval is not passed by February 1st, then your organization would be bringing shame to the accomplishments of this company and the human race in its entirety.

Please allow SpaceX to launch from Boca Chica. Humanity should be a multi planetary species, at minimum think of it as a species-level backup plan. In time they could move to launching from sea - but for now, halting their progress slows our species' progress.

It's is of utmost importance that you approve Starship and other launches from Boca Chica TX. There is no better remote spot in the continental US to do this from and the advantages for future generations far out weigh any local concerns there could possibly be. Please approve ASAP. Thank you,, Bryan Holden

I will start by mentioning how I feel about this boca chica space x project. Excited to be alive at this moment in time, what they have achieved. It's been unbelievable, Have made a 45 year old men get excited about space, waiting for a progress update everyday, (via you tube). With all this said. All agencies, including local agencies should work together to see how they can help space X. Space X is doing this with a focus on humanity, I'm mentioning this not to throw money at space x but to find ways to help them achieve those goals. Road closures? Find ways to help either by expanding existing roads or creating alternate roads, this will ease the burden of closures to residents. The environmental impact is going to be there, I imagine SpaceX thought hard to get a place that works for this kind of endeavor. Unfortunately the surroundings will be affected, this project is in a location where even though there are residents, the amount of residents is far less than in a city. I read space x tried to buy properties around space x facility to have as few residents as possible and minimize the danger them. Factors as being close to a body of water minimizes danger to residents. Rockets launches are noisy and as in all issues one solution for noise and debris danger is distance. Ecologically changes will happen but have you done a study to have space x at another location in the continental US, a better one with less impact on so many factors. Weighting the pros and cons I think we should keep moving forward and have this launch, but perform as many tests as needed to avoid dangerous situations.

Dear FAA. While we all understand you are doing your best to keep SpaceX competitive. You are also giving advantages to China and on top of this, you kill dreams and inspirations for millions of people. Elon proved he can do rapid prototyping and something goes wrong the flight can be terminated anyway. I'm sure there are bright people at FAA, people who are inspired by aviation. Let Elon launch and find a way to do this on his schedule! America should be an example of innovation and how we come together to overcome red tape.

I have been watching the progress on the StarBase space port/ manufacturing facility since it beginning via various YouTube programs and have been inspired by the advancing achievements of the Spacex corporation towards the goals of creating and facilitating the ability for humanity to become a space fairings species. The facilities at Bocca Chica represent a small area of our planet that is set aside for this endeavor. It has been and continues to be funded and developed for the advancement of space exploration and humanities enhancement and in my opinion every effort should be made to support the goals of this private enterprise in its Noble work.

In my opinion, i think SpaceX is changing the future of humanity, but we need to take care of the planet first. If SpaceX doesn't complete all the procedures of the FAA we need to do something else to fix that (Launching Starships on the ocean). And at the end SpaceX is a private company, they can do whatever they want with it. I really love watching the launches and it inspires me, but i want to preserve the life of the planet; like i said before that if SpaceX complete all the procedures of the FAA and the enviroment things soo... let's go to space, Mars, Moon and beyond!❤️🌎

I write in strong support of regulatory approval for the upcoming SpaceX launch attempt. The company is leading the way in establishing a permanent human presence in space, and as an American company, this will be an American presence. Our regulatory process should not stand in the way of human achievement in its rawest form, and SpaceX efforts have and will bring down costs across the board (including for the USG). Thank you, Colin Probert Centreville, VA

I support SpaceX and their plans for expansion at Boca Chica as well as support their ability to perform safe experimental Starship test flights. The current standard of evaluation and scrutiny does not line up with the proven success record of SpaceX activities in the past. SpaceX should work closely with the FAA to form new practices and the FAA should acknowledge that SpaceX, while moving rapidly in development, is still safe for employees and the surrounding environment. Please accept this as my official endorsement and support of SpaceX activities at Boca Chica, TX. Thank you, Clifford DuCharme

The environmental concerns the FAA provides are excellent guidelines that demonstrate that anyone willing to participate in this sector must understand that protecting the environment is as important as the mission itself. The innovation SpaceX provides is as important as Formula 1 vehicles. Most technology advancements derive from this sector. The FAA should consider that extreme rules that do nit evolve with the evolution of technology deems as step backwards in exponential technology growth.

Hope you are all safe and well! I would like you to note that i fully support SpaceX and their Mission to put human beings on Mars as soon as possible. To this end I would respectfully ask that they are given clearance to launch their starship space rocket as soon as possible as a matter of urgency for the whole of humanity! I trust this message will be received in good faith and I wish you all the very best.

To whom it may concern, We are on the verge of a very real, very important, space age. I hope my letter doesn't matter in this opportunity for Spacex to do their orbital launch for the fact that you already know how important this is not only to them, but to our species. Every human needs this. Give them the opportunity to get us into the future. Anthony Derschon

To Whom it concerns, As you have heard from numerous enthusiasts of human space exploration I will not reiterate what many have already said. Simply that I support the efforts by any privately held company to push the envelope of what is possible and to also abide by ALL regulations local, state and federal while doing so. We do not want to hinder progress with red tape however nor do we want to take an 'at all costs' approach. I believe the federal government also would like to maintain the technological advantage of these space systems originating in the US and so do not think there are any bad actors deliberately trying to slow the process. SpaceX and Elon Musk have a large number of vocal supporters and while I do count myself among them please take all necessary time to assure the public and the world that moving with great pace can also mean developing access to space and protecting the environment. With the environmental mitigations laid out here I support SpaceX for Starship Operations at Boca Chica, Texas. Best Regards, John Young

From my limited view point it seems hoomans on planet earth are doomed. Either through natural processes (asteroids, volcanism, earthquakes, global warming, pandemics…. List goes on and on) or through hoomans and their raunchy unpredictable behaviors. Becoming a multi-planetary species increases our chances of a longer-termed existence. SpaceX has made amazing progress towards becoming just that, a multi-planetary species.

I'm in full support of this mission! In order to push humanity forward and into the depths of space, where no human has ever ventured before, we must be willing to take risks. SpaceX has already proven to be an extremely trustworthy company and (knock on wood) safety has always come first for their team, anyone on board going to space, and those down on the ground. They sent 4 civilians into space for god sake!! The more we delay this the more we delay the inevitable.

Dear FAA, I understand that approvals and procedures takes time, and your organisation is there to make our Aerospace safer, but please realise that SpaceX is trying to develop the leading frontier of rocketry and humans in space, please consider to make things faster as time is slowly rushing by, and we need to get the starship running and in it's best enginnered condition, and it's very important to make life interplanetary. Please, allow spaceX to perform it's test. ~ sincerely, Citizen

I understand the difficulties a Super-Heavy-Lift Launch vehicle can suppose to the envieonment but we are forgotting that SpaceX has successfully reached all good environmental conditions. As early as possible would be great to see the first orbital prototype of a Starship, at least before the end of the year, that's my personal suggestion. We need to work really quickly if we want to make life multiplanetary on this decade and this orbital flight will be a big step towards it. Correlation is not an argument, but none of the suborbital prototypes exploded unexpectedly in the air and judging by their rapid iteration process I am very confident SpaceX know what thery're doing.

I am in positive favor for the SpaceX Starship Starbase construction. I am also in positive favor of all Starship test and launch activities at the Boca Chica launch site in Cameron County, Texas. I have read the related DPEA and believe that the environmental impact of planned SpaceX activities will be reasonable and acceptable. This program and activities is very important for the long-term growth and survival of all life on Earth. It is a scientific truth that we do not know with full 100% certainty that life on Earth or even Earth itself will not be destroyed by some cataclysmic event in the next year. We must support and continue all reasonable efforts to expand humanity to be self-sustainable in space stations and on other celestial bodies. Sincerely, Rodney Topp Age: [redacted] City, State: [redacted] Occupation: [redacted]

As a resident of Austin, Texas I have seen the economic benefits in the form of jobs and commerce, from the building of the tesla factory here in Austin. It is my opinion that, Tesla and Spacex CEO Elon Musk has the best intentions not only for the people of Texas and US, but the environment as well. The new technologies gained from a space program as well as the jobs greatly out weigh the environmental impact, which Musk works to limit. SpaceX has my full support to continue Operations in BacoChica TX.

I approve of SpaceX testing & launching the new starships. There is no company in the world doing what they are doing & we should be blessed to have such a company like this right now. & 1 more thing.. I think you guys need to give them 100% control of what they are doing. They don't need you inspecting everything they do. They won't build or launch something that is a risk to it's employees or citizens of the world. They are 1000x smarter then 99.9% of people that work for FAA. If they want to test fly something let them! The more you hold them back the longer it takes to make Humans multiplanetary. Just saying, Thanks! Go SpaceX!

I'm following the development of SpaceX revolution in space exploration – developing a fully reusable orbital space craft - from Germany. I'm in awe of the perseverance and scope of the project. No less than the existence of human consciousness is the long term implication of this pinnacle of billions of years of evolution and technological developments of the past 100 years. We can't for-see what extinction events might happen on earth and threats are not just external as the astroids that whipped out the dinosaurs but also self-made in regards to climate change resulting wars for changing resources, or a threat of nuclear warfare as last with the Cold War no less than 50years ago. In short spaceX BocaChica development is a first real approach of a "life bot" to threats posed to all of humanity on earth, by striving to making human consciousness multi planetary. And even in the absence of achieving this goal, the development and path forward has brought forth many technological advancements for example in material science and organizational processes that are already used by other humans here on earth. And even more will surely follow on the path ahead. Even though i have no say in any of the relevant jurisdictions, i plea as "a human on earth" for the further development of spaceX activities in south Texas. Best regards, Lukas Grebe

Don’t delay! Constructively engage. Any environmental or nuisance concerns will be fully addressed by Mr. Musk, all of whose companies have been established to do public good (in a capitalist country, profitability being a necessary precondition for success of those public missions). Don’t forgo any of the benefits that will accrue to our nation’s space program from Mr. Musk’s burning desire to enable humans to become a multi-planet species. He has consistently managed his companies to mutually benefit each other and their public missions (eg, SpaceX’s improved aluminum alloy for large EV car assembly castings). These companies are the best examples of corporate social responsibility in America. Please resolve any issues with SpaceX in a way that doesn’t delay the mission.

FAA, After reading the draft environmental assessment , Spacex should be allowed to continue their operations in Boca Chica, TX. Spacex goes to great lengths to comply with existing regulations and present little threat to the ecological and biological environment. Although there are some impacts that have been identified, the benefit of this venture is absolutely vital for the human species. Spacex should be granted more annual launches in order to speed the process of innovation. Spacex represents the first attempt at fully reusable rockets which will have tremendously beneficial impacts on the human species and economy. They will drastically reduce the cost of launching satellites which will open the market to new and innovative companies that will lower the cost for lower income and middle income families for technology that is more and more used in our everyday. Initially this will be global internet, but will extend to small satellite technology. Additionally, this venture allows humanity to establish a colony which can provide a safeguard to human species in case of natural or man made disaster. Spacex will also be able frantically lower the cost to remove space debris which has becoming increasing problematic. FAA should allow free market principles and allow this private Company to achieve its goals. It is highly concerning that entrenched Companies are unfairly leveraging “red tape” to undermine Spacex’s goals because they are unable to compete. Blue Origin, Boeing, and United Launch Alliance represent a real danger to the private space industry. They are only interested their profit whereas Spacex is truly concerned about making life multiplanetary. Elon Musk is improving humanities aspirations for a better future. I cannot overstate this fact. One hopes that even a bureaucratic organization like the FAA can understand this company’s value. Instead, the FAA should better resource space operations in order to keep up with this industry.

I support SpaceX's operations at the Boca Chica launch site including launching and landing the Starship/Super Heavy. The importance of the Starship/Super Heavy launch site at Boca Chica cannot be overstated. This is about our civilization taking a giant leap towards a a prosperous future where humanity can reap the virtually infinite resources of our Solar System to fuel the betterment of humanity. That is just how revolutionary of a vehicle Starship/Super Heavy is! Take a look at Cape Canaveral and see how the Kennedy Space Center actually benefited the immediate surroundings instead of doing the opposite. SpaceX and Elon Must have more than enough resources to deliver these same benefits to Boca Chica and more! So please give SpaceX the license to launch Starship/Super Heavy from the Boca Chica launch site!

It is critical for humanity and the United States that SpaceX continue to innovate at a quick pace without being bogged down by regulations. It's especially critical to assist us in maintaining and expanding our rocketry lead over China and Russia. This is not possible without the consent of the FAA. As a result, everyone is hoping for a positive response from the FAA. Thanks.

Hello! I hope you are doing fine and well. My name is Sasha Reuland and like many others, I've anticipated all of SpaceX, especially the development of Starship and Super Heavy. Therefor I would like to send in my personal support and motivation for the FAA in order for orbital tests to happen as soon as possible. This development is essential for the expansion of technology, consciousness and human life. It affects all beings on this world. The faster we get Starship in action, the sooner we can implement such technology. This is essential due to starship missions for Mars only having specific windows in 3 years. Therefor we want all development to rapidly ready up before these launch windows. 3 years on the scale of global warming and over population is a massive time window which we can not afford to lose. Especially not over dated guidelines and paperwork. Much love and support for anyone reading this and taking my / our support in consideration. Kind regards, Sasha Reuland

Hi, I am writing from Canada to voice my support for SpaceX and their drive to advance the future of spaceflight. SpaceX has altered the course of what spaceflight looks like during the past number of years, with a vision for the future of bringing the cost of access to space down, returning people to the moon, colonizing Mars, and doing all that with sustainability in mind. Rocket reuse has been a central focus in achieving this sustainability, no matter what the scale of the rocket may be. SpaceX achieved this with the Falcon 9 rocket, which has proven its reliability for transportation of crew dragon to the ISS, as well as cargo dragon, and fairing-deployed payloads for other customers. Now, SpaceX is ready to prove their next generation spacecraft and rocket, the Starship and SuperHeavy. Given their past performances, I truly believe that they will achieve their goals. No end-to-end success is expected on the first attempt at anything new, so everything learned from the first flight of SuperHeavy will be applied to the second launch attempt, and the third launch attempt, so that by the fourth, one could reasonably expect a spectacular success that opens the door to crewed configuration. Do not let the “expectation of failure” stop progress. Failure is part of learning, and SpaceX won’t risk lives until all that can be learned has been applied to the crewed version. Please allow SpaceX to conduct the necessary test flights at the pace that they’re requesting. For all they’ve achieved, they’ve earned the right to proceed towards their next goals. Elon Musk has felt concerned about the FAA processes potentially getting in the way of progress, so perhaps he needs an olive branch extended to him to show him that you have faith in his endeavours. Maybe give him a hug. Seriously though, I trust that you know what you are doing, for without regulation, there would be a lot more chaos that could grow to uncontrollable proportions. What I’m asking is that you allow for the advancement of spaceflight in a transformative way, that breaks tradition of the “old way of doing things” and grants room for the progress that is needed to truly advance human spaceflight into a new era. An era of sustainable affordability, unprecedented safety, rapid reusability, and inter-agency harmony. Sincerely, Fred Vermeer Hamilton, [redacted]

Hello, I believe that the FAA should do a full review like it always does and make a decision based on the review. If the starship and other items included in the launch don't pass then ground the operation, if it does give the green light. This is one of the most important and exciting events in space travel and could change everything forever. Please do all you can to do a quick and clean review. Thank you

Allowing SpaceX to continue with the proposed test would be ideal. After thoroughly reviewing the material, it is clear that SpaceX has every intention to perform a safe and successful flight. Cooperation between both entities will allow civilization to further advance.

Hello FAA, I support the development of a fully reusable spacecraft, which will enable cheaper and therefore more space activities. There will be no big mars or moon colonies without a fully reusable spacecraft, so it is in the interest of all humans to develop such a system. This will be achieved much quicker with the help of the construction and launch facility in Boca Chica Texas. The enormous benefits for the whole world outways every possible negative local effect and furthermore creates lots of jobs in the erea. Yours sincerely, J. Pieper

Dear FAA, I message you because I want to support SpaceX's endeavour in Boca Chica. Mr. Musk and SpaceX are already going to space with their falcon rockets. Not for fun but as a highly valued partner in a striving industry. In a very short time SpaceX accomplished what took others much longer and they even made the thing reusable. I say give them Boca Chica as a Launch facility. Imagine 50 years from now we still haven't achieved what we dreamed of in the 1960's because some folks are concerned about a bird. Please help that we can move forward as humanity because we desperately need it right now. Please help that we have something to look up to, something that can inspire billions of people worldwide and bring us closer together. Kind regards Mathias Wachtel [redacted]

There have been several times when people have built great things that have had a significant impact on the environment. SpaceX has picked a location that minimizes the impact for what they have to accomplish. It is not cheap to ship parts and talent. Elon is motivated and has delivered vast improvements and savings. MADE IN AMERICA China''s space program is expanding fast. Humanity has the technology to start colleting the resources of our solar system. If China establishes a system before America, do you think they will share? With a large space presence, do you think they will claim Mars as China's alone? This is a national security issue. Our leaders should double the amount of launches in the permit and ask spaceX what they can do to help fill all those launches. There will be issues as SpaceX grows. I'm certain that America can resolve whatever comes next. SpaceX and Elon are not the enemy and this Starship program is America''s fighting chance to lead in this field of technology. I approve of the SpaceX launch base in Boca Chica, TX.

I believe that granting use of a private commercial launch site or allowing ability for a private company to launch large satellite constellations beyond federal government control is a long term grave mistake. This is especially difficult to understand when the entity involved has in the past and continues to flagrantly violate FAA and other federal agencies orders and regulations. Other countries may take this as an open license to do what they want with regards to space, or worse see these as comparable intercontinental ballistic missile launch sites and equipment - in flagrant disregard for such treaties. This can be compared with Gerald Bull's development of gun systems or Khan's development of nuclear facilities. Launch facilities and all launches should be kept under the supervision of the FAA and NASA. Launch tests, facilities and equipment should be seen for its potential as military hardware. Development of an independent commercial launch capability should be seen as similar to a U.S. military contractor developing weapon systems for and financing their own private army. This is just my opinion. Thanks and have a wonderful day. Dan Roddy

I am in support of SpaceX continuing to use the site in Boca Chica for continued research and development of the Starship program and other related projects. What the company is trying to achieve is monumental and worth giving all consideration for helping it move forward in a timely manner. I see the Boca Chica site going the same way Cape Canaveral has, protecting and increasing the wildlife in the area while allowing for rocket launches to take off in areas that aren't detrimental to humans. If the agency requires SpaceX to follow a similar model of wildlife preservation observed at other launch sites, I think the continual buildup of the site and testing of rockets will be a good thing for the area overall. Please allow SpaceX to continue with it's mission, it will be worth it. David Carr

My opinion is that: they should approve the first orbital mission of the Starship, since being its final and most important test, it would be the beginning of a space age through the starship system that is completely reusable and reduces the space debris that end up at sea, in addition, SpaceX has made sure that each mission it performs is as safe as possible.

The proposed Starship first orbital flight is incredibly important (as are all our space related endeavors). As a nation we are literally falling behind the Chinese in space and technology generally. They are racing forward. We must stop preventing our best minds from advancing our presence in space & growing our technology or we will be at great risk and economically disadvantaged. Please stop the madness. Reasonable safety measures of course should be taken and SpaceX would heartily agree but please do not continue to slow progress. We need to accelerate our efforts not shackle them.

I want to give SpaceX my full support to operate in Boca Chica and launch as many launches as they seems necessary. SpaceX is currently America's only ace in the sleeve to access rest of the solar system within present peoples lifetimes. This is one of the most important things besides climate change to address, and FAA has the responsibility to understand what this means for all our hopes and dreams for the future. People need aspiration and hope for the tomorrow. Cape Canaveral launch site has been a godsend for the local wildlife. This same can happen in Boca Chica too, and I'm sure if there is any harm, SpaceX will mitigate that for any reasonable way. This can't be a road barrier and we need to move haste with this. China isn't waiting and is already copying SpaceX's designs for the starship!

I am in support of SpaceX getting full FAA approval to launch from south Texas. I believe that any potential negative factors are far far outweighed by the gains to humanity and mankind as a whole. Lack of approval would mean a setback to innovation that this planet can’t afford. Furthermore if it won’t be approved in TX it likely wouldn’t be approved anywhere in the US and that would further stifle vital growth and a future as a space fairing species that survives the potentially inevitable future .

I've been following the Starship program since its inception. Compared to other developments in spaceflight that have occurred in the same timeframe, there is no competition. The Starship program is the most awe-inspiring and important rocket system that has ever been developed. A two-stage, fully reusable rocket alone presents incredible opportunity to reduce the cost of spaceflight, both cargo and passenger-wise. Re-usability is at the very heart of the global push for climate action, and nowadays it seems reckless not to pursue this goal. The second stage of Starship has already been proven to be sustainable, with two successful landings using an entirely new flight profile. Despite the anomalies in 4 of the 5 flights, the rocket engines for landing have proven to be effective at their goal of pushing down the cost of methane-powered engines in the long run. The first stage of Starship, whilst risky with the number of engines, is also simple enough for money concerns to not warrant as much nervousness. The ground support systems that are in development are also revolutionary. In essence, the entire SpaceX Starship program has shown more revolution and masterful design options in 2021 alone than many other programs have shown in their entire history. Provided FAA approval is granted, the possibilities for small companies and large, government-owned systems, such as NASA, branch out in many previously impossible directions. Already SpaceX is working on HLS, an opportunity for humans to return to the surface of the Moon, in an affordable and re-usable manner. The mass-to-orbit potential also means that smaller companies have far cheaper, and possibly even sub-$1m options to get their equipment into space on bulk ride-share programs, further increasing the openness of space travel. Overall, the SpaceX Starship program presents a true step forward, and a tremendous opportunity for spaceflight and travel in general. The adaptability of the craft, along with its relative cheap cost per launch means that there will no longer be the need for complex launch systems and varying launch vehicles per mission, as the Starship program offers the same compatibility as other craft, for a fraction of the cost and multiple times the amount of maximum payload weight or quantity. I personally see the Starship program as the future of space, not just for modern-day satellite launches or manned missions, but for options that were previously not even possible, such as deep-space vessels that were previously only possible in orbit around Earth, or even continuous and sustainable missions to other planets, including the soon-possible manned missions into deep space and onto the planet Mars. SpaceX is providing the means to do all of this and so more within a relatively short time scale of only a few years, with the correct level of funding and permission. No longer will space be restrictive and stagnated due to vehicle constraints or cost. It will be open and usable to almost any group that has a passion for the unknown, and that, I believe, is the future that humanity needs.

Please allow SpaceX the opportunity to explore and put us one step closer to Mars. We want Mars we want Mars, and to be able to afford a mission with $Dogecoin at the end of it all to allow humanity to feel united as a community throughout our journey and education through space! Elon has shown immense leadership, hard work, and being for the people. What better person and company than him and SpaceX

Hello, As a resident of Texas, SpaceX operations in Boca Chica will be an incredible addition to the state, our country, and ultimately mankind. Their accomplishments in engineering will spark wonder and inspire generations to come to push our understanding of what is possible. The impact on the community in the long term will be exceptionally positive with the increased attention. An influx of capital from tourism, a very large number of permanent full-time jobs, and investment in the community will increase the local Department of Fish and Game's revenue to better monitor and maintain the regions nature Preserves. The claims that SpaceX operations will adversely impact the region discount the tremendous amount of positive attention and investment that would not otherwise be interested. SpaceX must be allowed to continue operations and be afforded the appropriate permits and licenses. The lives of billions and billions to come will directly benefit if a SpaceX is successful. Respectfully, Alexander F. Daniels [redacted]

Good day, FAA! My name is Marina, I live in Dnipro, Ukraine, and I express my sincerest concern about Starship, as this is not only my opinion, but opinion of many others, who support this great spacecraft, that Starship is the result of the global spacecraft making experience which started more than 60 years ago. As you are aware that it is intended to bring us to Moon, Mars and beyond, making us multiplanetary species, it's no doubt that it is vital in our days and days to come, as experience and success of making starships brings more spaceships and starship and interstellarships, which will work better, envorinmentally friendly and environment will adapt to them. So it is my pleasure and happiness to use this opportunity to support Starship and ask you to give permission to Starship Orbital Flights and Starship Deep Space Flights. Best regards, Marina

I believe space exploration will benefit the world and create more awareness for human beings. It will change the way we think and change the way we treat each other. This is the first step that we can take to be a multi planetary species. We have to take the required steps so that we can continue to innovate and motivate all the generations to come.

I want to give SpaceX my full support to operate in Boca Chica and launch as many launches as they seems necessary. SpaceX is currently America's only ace in the sleeve to access rest of the solar system within present peoples lifetimes. This is one of the most important things besides climate change to address, and FAA has the responsibility to understand what this means for all our hopes and dreams for the future. People need aspiration and hope for the tomorrow. Cape Canaveral launch site has been a godsend for the local wildlife. This same can happen in Boca Chica too, and I'm sure if there is any harm, SpaceX will mitigate that for any reasonable way. This can't be a road barrier and we need to move haste with this. China isn't waiting and is already copying SpaceX's designs for the starship!

SpaceX has brought more innovation and excitement to the Rio Grande Valley in the past few years than anyone ever has. As a student in the local university, myself and many others in the STEM field are ecstatic over spaceX and see it as an opportunity to be part of something greater. So many locals here want to see this, want their kids to be part of this. Growing up in the Rio Grande valley it's sad to see most communities here are very close minded and corrupted. The older crowd are too content with their old ways and actively prevent any new endevours from developing in these small communities. I'm not the only one that will tell you that. It's important for companies like SpaceX to come in and shake things up because most people my age who aren't interested in aerospace leave the Rio Grande valley for another STEM opportunity. There's relatively nothing for STEM here besides SpaceX. Putting a stunt on their massive innovations would only harm the community as you drive more people away. Let them innovate and let us shoot for the stars!

What SpaceX is doing just brings a hope for the good future of humanity. I understand there are some cons of the Starship project and numerous orbital flights but if we compare it to the airline industry in terms of pollution, then a couple launches per day won't seem that big of a deal. And once it's all fully operational, this will be beneficial for humanity and we can't forget the efforts put by Elon Musk to help the environment in numerous ways. I'm fully supporting SpaceX with what they are doing and would want to see them succeed with rapid re use and lauch capability in order to secure humanity's presence in this mysterious yet wonderful universe.

Space X has done a phenomenal job developing a plan of action to accelerate human ability for space travel. Their report even includes emissions…they're not doing this for a profit. They're doing this because of a common vision shared by millions of Americans and hundreds of millions of humans that see the future of space.

Boca Chica Texas has secured an amazing and prosperous future for its residence and will draw capital and talent to the regions for years to come. This town will be the gateway for global equality of knowledge as the build out of Starbase enables Starlink to flourish. Starlink will not only help Americans with knowledge and opportunities, but also will expand to a global scale that I don't feel is properly represented. Enabling America to compete in a fledgling space economy that is just getting started. I feel the new space race will dwarf anything we have witnessed in the past as opportunities that have not even been dreamt of come to fruition. Please know that Spacex will enable Boca Chica residence to rise with the tide of prosperity. I feel SpaceX will uphold EPA requirements and be a good citizen. I plant to visit Boca Chica in the near future and spend my money and time there. Bringing my children to inspire them to dream big. There are few towns that can claim that type of inspirational theme. Please try to imagine what the title of the gateway to space will mean in the next 10 to 20 years. Please approve the plans SpaceX has outlined. I beg you as an American and as a global citizen. Thank you. Matt Thomas

To whom it may concern, I believe that it is in the best interest of the United States Government and the people of the united states that the FAA prioritizes the approval of SpaceX's orbital launch of the Starship system. If we, as a country, are to come out ahead in this new commercial space race then approval for such flights needs to be done at a faster cadence. I say this as an eco-sustainability advocate. If we are to protect the biodiversity of our planet yet grow our population it is no longer sustainable to limit ourselves to one world, in the long term. Therefore, it is imperative we strive to improve our rocket technology so that it is fully reusable and capable of taking us to other planets within our solar system. Best Regards, Carl Hoopingarner II

[redacted] Hi, I'm JOSE LUIS RIVERA NEGRON , I'm a builder that homes out of contcret to start building in mrs and the moon . The FAA should ,approve for ELON MUSK for is plans that he project build and the starship sea lander rig is still in construction, please Approve the license to Elon musk so we can watch it fly high into space and at the ocean lander, and watch starship and booters land there and starlinks to happen it's been so far to long that we never step foot on the moon and Mars is a must with out Question you only need of 2 of 3 landing perfect and sending up to approve it , ,. Why? So hard for FAA to do so you FAA give people like Jeff beszo he is not a builder riockets he don't know where to start and how to finish one he like to stealing from them from saying that he Jeff beszo did it , not true Jeff steal all Elon musk plans and project from everyone else around him ....

Hi FAA, Please consider allowing SpaceX to launch their Starship prototype in the month of November 2021 for their first orbital flight. SpaceX will be very careful & no humans will be harmed. The flight may not be 100% successful, but allowing SpaceX to do so earlier rather than later will expedite the development of re-usable rockets — a technology that will enable us to be a multi-planetary species. Think about your kids. WWJD. Sincerely, Donovan New

We are in a life-and-death struggle with China over the future of space, we need our government, and in this case the FAA to be advocates for that. There are other considerations of course which over the course of time SpaceX has address please approve this ASAP for the launch of the starship next month!

Hello FAA, I sincerely think that SpaceX is doing a very good job environmentally on keeping the surroundings of Starbase in check. Boca Chica is a little troubled by the fact that the natural habitat of many species is being disrupted but from our perspective, it seems that Starbase has had no adverse effect on the wildlife in Boca Chica and I am absolutely sure that if that were true, SpaceX would be taking the necessary measures to protect the wildlife. I feel that SpaceX does want to aim for the stars but also understands the preciousness of our own planet, and from a viewers standpoint, all is well. Sincerely, Shaurya Sunildas

Message

Good day FAA, I would like to voice my concerns in lieu of Space X launches. I am aware there are several who oppose launches due to possible harm to endangered species. We as humans are endangered species. There are so many possibilities that will certainly happen to us as humans, it's just a matter of when. Throughout the millions of years planet earth has been in existence, many species have died out, and many species have evolved. Earth and nature has a way of taking care of itself, proven fact. For example, as its happen in the past as mentioned, massive volcanic eruptions that cloak the earth for decades with the effect of harsh cold winters resulting in diminished plant growth and causing famines on a global scale. Also inevitably being struck with a sizeable meteor or comet that will have the same effect. And lastly the threat of global nuclear war producing nuclear winters and causing contaminated radiation fallout all over the entire earth. By not moving forward in allowing Space X launches, we jeopardize the existence of our own species. At a minimum, allowing and approving launches provides us with a lot of scientific data to colonize on other planets and provide the existence of humans and other numerous plant and animal species to thrive on. Please take my letter with careful consideration to approve space launches that will further the development of scientific studies and advancement of future life for us, our children and for the sake of mankind's prolonged existence...thank you kindly

Dear sir/madam, My name is Rukshan Wijenayake, and I would like to comment on SpaceX plan for Starship launches from BocaChica, Texas. This week I have listened to many residents and environmentalists complain about the noise pollution and wildlife. This I believe is shortsighted and possibly motivated by a desire to sabotage SpaceX by competitors. The world is changing with temperatures climbing, deadly pandemics and war and tensions breaking out in many other parts of the world including China, a nuclear super power. As such, we are at a critical point where if we do not become a multiplanteary species right now, our species may very well become extinct. Therefore, I urge you to please help SpaceX with their plan to colonize Mars, remove all of this unnecessary procedures you put them through before each launch and finally give them the freedom to test these rockets quickly, so that they can save the human race. This is not about a few selfish people complaining about beach access, this is about humanity itself. Please think about our future generations and give SpaceX the licenses to continue with their plans without delay. Thank you for reading. From a concerned Global Citizen. Yours Sincerely, Rukshan Wijenayake

To whom it may concern, I thought it proper to write to the FAA today, in order to voice my support for what SpaceX is building and attempting to accomplish at their Starbase facility in Boca Chica Texas. Our greatest achievements as a nation and as a species have come due to chasing the nearly impossible. What SpaceX is attempting to do here is at the same level of importance in technological achievement as that of the landing on the moon or many of the technological advancements of the last world war. However, unlike those two examples the testing of starship and superheavy rockets are not being conducted in order to kill other nations' populations in a war or win a pissing contest with another nation, but instead to lift up all of humanity, to push our species beyond this pale blue marble, to ensure that mankind is safeguarded from an ignominious extinction. When considering this, what is the true environmental impact of testing? Do we, as Americans, begrudge the radioactive fallout of the Trinity test site in order to end World War II? Can we not say that our lives as Americans are better because we sacrificed some land to have hydroelectric dams across our nation? Progress and technological advancement demand sacrifice and if a patch of dirt is all we have to pay for it than we are getting off cheaply. The Trinity test site will no longer be radioactive one day. The land behind those dams can be drained and rendered habitable once more. The environment given time will heal itself, and given our desire or necessity mankind can even speed that process up. I ask that you please consider this when determining the environmental impact of SpaceX's testing. Thank You for Your consideration, Caleb John Peters

Consciousness is an extremely rare and precious thing in our universe. By becoming multi-planetary which is essentially SpaceX's ultimate goal, we can preserve that consciousness. The window of opportunity in which consciousness will still be alive is very short compared to the grand scheme of things in our vast universe. Let's make that investment to preserve humanity before we can't do anything about it.

It is my fervent belief that the expeditious testing of the SpaceX Starship-Super Heavy launch system is in the vital national interest. SpaceX has repeatedly proven its commitment to safety and has undergone extensive FAA approvals already. As an American citizen and believer in the regulatory mission of the FAA, I urge you to permit the launch of this spacecraft as soon as practicable, preferably within the next month or two. Thank you for your consideration, Peter Belkin

I support the launch for next month. Space X is trying to make history. Attemping to make our world expand beyond our imagination. How amazing is it that we will live to see real progress on exploring actual human beings living on another planet. With earth becoming over populated this is a chance to see if we can find "another earth". We need to know that us humans can go other places besides different countries. Just think, we may some day be able to say to our families and friends "taking a vacation to mars this holiday".

SpaceX and their work in the development of Starship, I believe, is pivotal for the future of our society. Thanks to the work of Elon Musk and the team of SpaceX, we will see a whole new generation of young people on excited about STEM. The 1960s created a whole generation of scientists, technicians and engineers that propelled technology into what we have today. I cannot wait to see what this next generation will achieve when inspired by this next few decades of space exploration.

SpaceX is a vital part of keeping the technology of the USA ahead of increasingly aggressive adversaries. Stifling the activity of SpaceX would therefore be dangerous for our country. The activity of SpaceX at Boca Chica seems to be essentially non-polluting in terms of chemicals, with the main issue being sound, which is intermittent or occasional. The purported negative effects of such sound seem to be speculative, not demonstrated, and not supported by scientific evidence or reference. The record of other space launch facilities seems to be that they have little or no negative environmental consequences beyond the bounds of their launch pads, and may be one of the most desirable commercial land uses from an environmental perspective. Please approve SpaceX to proceed.

I'd like to take this opportunity to voice my support for SpaceX to continue operations in South Texas. I believe orbital launches are essential towards the goals of the moon and mars. The infrastructure is well underway and the impact can be mitigated as they were on the Florida coast at Cape Canaveral. Having recently visited to watch the falcon heavy nine launch in 2019 and seeing bald eagles roosting in trees on the property it seems to me that the environmental needs and the technological needs are not mutually exclusive. Please consider this a vote in favor of continuing the progress and allowing orbital lunches from Boca Chica. Thank you for your time

Hello, my name is Eric Snapat, and I live in Burleson, Texas. I am a huge fan of Spacex, Tesla, and of course Elon Musk. I believe in the progress and good work that Spacex is doing and cherish their contribution to the space industry, which enables the USA to advance faster than other traditional companies (I'm looking at you ULA). Spacex is a world leader in innovation and have enabled us to not have to rely on the Russians to use their Soyuz rocket. Please allow Spacex to continue innovating and allow their continual development of Starship in South Texas. I one day want to visit their facility (if I can convince my wife for us to drive down there as I live near Ft Worth Tx). Anyhow, thanks for your time and again, please allow Spacex to continue their awesome upward trajectory of technological innovation within the space industry. Thanks, Eric snapat.

I can’t speak for the flight safety aspects of Starship, that is your professional arena. But I reasonably believe that SpaceX have taken the necessary steps to minimise all local environmental impacts. This is not to say that there should be no regulation at all, but scope and range should be given to a production that will or might better the human race and Earth. So there should be some leeway and expectation that to be in a better place environmentally, it might cost us some environmental impact.

Do your best to keep it safe but don't impede SpaceX too much! What we are witnessing is extraordinary ;)

Dear Sirs/Madams; Please approve the incredible effort to make the U.S.A THE Leader in the current race into space. The ongoing development of the USA space strategy through the highly motivated and proven Industrial leader that is SpaceX will be Americas' most shining accomplishment this century. Your can't win a race if you don't back your best and brightest effort. Please consider this request at Boca Chica through the eyes of our future generations. Thank you. Greg Brown

We need space x to succeed where NASA has failed. I understand the risks to the surrounding areas but it seems like steps are being taken to mitigate any damages.

Hi FAA. I would just like to email you to let you know that i support the starship program that you are currently reviewing. I think any environmental concerns that you find with starship can be remedied quite easy, and you could even make the argument that it will be worth it for what starship and space x are trying to achieve. I'm a nobody with no affiliation to space x or even a us citizen, but please let space x continue and grant them permission to fly not for space x or me or money or anything but for humanity and its future in the solar system and beyond. Many Thanks Adam Jones Tank watcher

Hi, We need SpaceX to conduct tests asap. Mankind has to be multiplanetary. We can make it happen with our supports. The US needs an other spaceport In addition to KSC. BocaChica is the perfect place to proceed with orbital tests. The environmental concerns on a tiny part of Texas must not be a brake to space explorations because the impact is low. Don’t wait for months. Do it now, allow SpaceX and thousands of workers make us dream as the world needs dreams today. Thx

Hello, As a proud American I wholeheartedly support Starship's first orbital launch attempt. SpaceX's innovations have returned 80% of commercial satellite launches back to US and returned the US capability of human space flight. The orbital launch will no doubt provide additional benefits to the United States and society as a whole. Sincerely, Anthony Marchi
