In brief, orbital space travel, especially with high payload is the most inspiring and endeavoring human effort. Failures, especially those with low collateral damage, and no human loss, are no longer seen as failures. Please support these missions aggressively to inspire investors and young people to come together and achieve great things. Please use media and communication channels to share information so the public is more informed and less lead to hive mind consensus. The American people believe in the scientists and leaders at governmental institutions.

The SpaceX Starship program is a revolutionary program that will push the boundaries of space exploration with the ever increasing advancement of technology. I urge the FAA to grant SpaceX their launch license for the Starship orbital launch attempt as it is in the best interest of mankind. SpaceX has installed many countermeasures for the environmental factors as well as training their staff members to protect the environment responsibly.

This is progress, evolution, creativity and drive to continue to push our species forward. Blocking spacex operations would be a huge mistake on the FAA's part - and would certainly only be temporary. Do the right thing, let these scientists and engineers continue to explore the boundaries of human potential. Spacex has incredible ethics and protocols in place to ensure the safety of the public and ecosystem

Please approve Space X for launches from Texas. Having lived and visited around the Florida space coast for a good part of my 71 years, I can attest to the benefits to the surrounding economy and ecology. There has never before been as much wildlife and the area is preserved beautifully. Space X has already provided great benefits to the South Texas economy and will continue to do so. At the same time the wildlife benefits from a well maintained clean environment. The nation as a whole needs a new space center and Boca Chica is the best choice. Please expedite complete approval of Space X Texas launches. Thank You, [REDACTED]

space exploration and u.s. dominance in space is CRITICAL to national security. do you think China cares about environmental studies??? please don't let China take the high-ground... support SpaceX, they are leading the way, reducing costs, improving efficiency and advancing technology. AND they are willing to spend the necessary funds to resolve all reasonable concerns, for the animals in the area and the environment. without SpaceX, where would the u.s. space program be??? please think "big-picture" before you act, we CANNOT afford to set SpaceX back and obstruct their progress for political optics. Sincerely, [REDACTED]

Hello, I think it's very important for all of us to imagine what it would have been like to live when the greatest minds of all time were alive. Imagine being alive and able to help Albert Einstein, Nikola Tesla, Sir Isaac Newton, Galileo, or many others who changed our world for the better. Right now we are watching, likely the greatest mind to have ever lived and do some of the most amazing work imaginable. Elon will go down in history as the greatest mind to have ever lived. Ask yourself, do you want to be a part of that history in helping him achieve human kind advancement or one of the few trying to put up road blocks? Think about the Apollo moon landing, if you were a part of that in any way you would be proudly telling your family for years. This is your chance to be a part of something even bigger. Do the right thing and help make the human species multi planetary in your own lifetime!

Dear FAA, When I first saw the Falcon 9 booster landing, while randomly browsing YouTube a few years back, I was entranced by the ingenuity and audacity of this sci-fiesque achievement. From that point on it has made my imagination run wild and encouraged me to dream big. The achievements of SpaceX's engineers and Elon Musks vision, helped me realize what I wanted to do in my life. Now 18, I recently enrolled at the [REDACTED] [REDACTED] to study Aerospace Engineering; in hopes I can help in any way possible to engineer and build ambitious projects; like the Starship, to help fulfil the daring goal of humanity colonizing the Moon and Mars. The achievements of SpaceX have shaped my life and my future career goals in ways I could never have dreamed. The Starship program gives me hope that one day humanity can travel to and even live on Mars. The companies greatest achievement is the number of young people it has inspired, including me, and will continue to inspire, with its daring projects. So this is my testimony of the amazing impact SpaceX has had on my life to dare dream big and work hard towards those dreams. This was my plea in the hopes the Starship program can be continued at its magnificent pace of innovation and humanity can one day walk on Mars! Thank you, [REDACTED] [REDACTED]

Good morning, I hope that this email reaches the correct party to give my input on the upcoming SpaceX orbital launch tests and future orbital launch capabilities in Boca Chica, Texas. To be brief, I believe the need for the SpaceX Starship program far outweighs the environmental impact that it may have on the area and the world, given the opportunity for future launch sites. This is a future the United States should, absolutely, allow them to develop with oversight, but limited impact to the schedule, keeping the US at the forefront of technological advancements. Sincerely, [REDACTED]

SpaceX has been instrumental and innovative in space science. With starship, this would drastically change how we access space. I totally understand why there could be some constraint when giving environmental clearance, but SpaceX has developed one of the cleanest rocket in the world. With plans to capture carbon dioxide from air to create fuel for the starship, this would allow spacex to reach net zero emission possible in a decade or so. With the advancement of starship, humans would be able to reach mars and beyond , which would allow us as humanity to explore and possibly get answer to who we are . Exploring and studying another planet might help us solving issues like global warming back on earth. Elon and SpaceX team has already made US proud with only commercial company to carry human to space. With starlink, Spacex would further provide connectivity around the globe with low latency. Starship would be instrumental for the same. With starship US would be decades ahead than any other country around the globe. Humanity's future would be centuries ahead with starship as the vehicle to space. With proper environmental review, we should allow spacex to go ahead with orbital launch without any further delay.

To the FAA — As all forms of innovation accelerate and interact to produce unknown consequences in every arena, isn't it utterly amazing that one company keeps America in the game more than any other? One company has restored wonder. One company innovates at breakneck speeds, and does it without a destructive cost plus mentality. The future is now. Let's make sure SpaceX receives approval and launches. Cheers, [REDACTED]

My name is [REDACTED] i live in [REDACTED] And im in SUPPORT of SpaceX Starship Launches from boca chica BUT Only on a severely limited basis and by that i mean TESTING & DEMONSTRATION out of there Texas Facilities known as Starbase due to the use of methane as fuel because methane is an environmentally sensitive compound that contributes to environmental damage that can be released if a Starship crashes or explodes as has happened several times with SN8 to SN11 SpaceX should be forced to recycle and contain ALL methane used in the Starship program and barred from releasing methane into the atmosphere unless equipment failures occur And that SpaceX should be forced to source there methane from a natural source instead of fossil fuel drilling I propose SpaceX be forced to build a methane digester to create and capture methane from live stock manure such as cow chicken pig and also human manure can be used to create methane and would help the environment Also beach access is important that is why i think SpaceX should be limited to testing and demonstration out of Boca Chica and that Cape Canaveral and at Sea launches should be for regular flights Thank you for your time

I support allowing SpaceX to move forward with the Boca Chica launch site in regards to the FAA's PEA. The developments and rapid progress that SpaceX has achieved, and continues to achieve, yield a broad array of benefits across multiple industries, communities, and nations. These achievements, like any daily action undertaken by people, have some cost on the environment. However, the environmental costs to Boca Chica and the surrounding area and its residents, as laid out in the draft PEA, are negligibly small when held against the benefits of the SpaceX achievements and plans. SpaceX should continue to work to minimize any environmental costs, but their test program should be allowed to continue with the next phase of orbital launches. Thank you for your time and consideration.

IBoca Chica is better suited for a spaceport than the Cape. Much less population close by. And once the wildlife gets used to it, it will not be much disturbed by the activities. Just like at the cape. Actually the spaceport will protect the surrounding area against exploitation. Of course there will be disturbances, but they seem to be minor in this sparsely populated area. This is a project that could alter history and I for my part are utterly inspired and supportive// [REDACTED]

As a commercial shrimper who has fished south Texas waters for 50yrs. Many think we don't care about wildlife, we made our living by carefully preserving our heritage. I realize Boca Chica & South Padre Island are sensitive nature zones, same was said off Cape Canaveral many years ago, use this as a benchmark. Cape Canaveral is still a thriving ecosystem just as South TX will be. Let @SpaceX Starbase have FAA approval for our future children. We must always move forward, humans have always been explorers, please don't slow them down. my Twitter account & phone number upon request if needed.

Dear sirs, In spite of the obvious necessity to protect wildlife and guarantee a sustainable future exercise of space operations, I feel that the impact of the current SpaceX Boca Chica launch facilities is both needed and comparatively negligible. In fact, it is necessary to quickly allow the expansion of humankind to outer space, in order to relieve the pressure on our planet in the medium term. SpaceX is uniquely placed to make headway in that direction, fully justifying a small measure of local ecological impact. Hoping that you can support SpaceX's endeavours. With kind regards, [REDACTED]

I am a strong supporter of SpaceX's development in Boca Chica. SpaceX is leading innovation in rocketry and spacecraft. Not only is SpaceX inspiring new generations to pursue much needed STEM careers, but they are also creating valuable jobs in Boca Chica and across the country. Please permit SpaceX to perform orbital launches from SpaceX's Boca Chica launch site. Such permission would allow SpaceX to develop technologies to go to the moon, mars and beyond. Environment and safety should be a concern that is examined thoroughly, and SpaceX should address all concerns that have evidential basis. Concerns that have no historically accepted context on other approved orbital launch sites should not withhold SpaceX from permission to perform orbital launches. So please, when examining the risks of environment and safety, please realize the great benefit that SpaceX brings to the Boca Chica area and do not allow unrealistic concerns create an undo burden on private industry.

For the sake of humanity and this great country, please grant all necessary FAA requirements related to SpaceX's Starship Orbital Test. If we ever hope to be a space fairing civilization, government regulations that only serve to slow progress under the guise of safety will make such goals next to impossible. The implications of a fully reusable rocket with the ability to put such a payload in orbit are HUGE.

Honestly, I'm just a simple person, I'm not related to the space industry, and I live in [REDACTED], not the Boca Chica area. But, I've been following SpaceX very closely for about 2 years now, so I thought I'd share a quick opinion. This truly isn't about a billionaire trying to go to space. If it was, he'd have already gone. This is about a company that is truly trying to develop the "Space Railroad" in our Solar System. What the railroad did for the United States in the late 1800s and early 1900s, SpaceX will do for our Solar System for generations to come. They don't appear to be trying to just blatantly destroy Boca Chica, they appear to be trying to take the best care they can, while accomplishing their goals. So, keep them accountable, and set reasonable limits on them, but, let them do what they need to in order to reach their goals. Don't say "no" just because you can. This is all in our best interests, and our children's, and our grand children's. I have my 1st grand child now, and I hope that she will be able to travel the solar system, thanks to SpaceX. Thank you for your time. I appreciate y'all and what you do to keep things in line.

The mission of a interplanetary species is imperative. Although rocket launches do release pollutants this is a necessary evil for now. We have no other way to get to space except to burn volatile fuels, whether it is Blue Origen, SpaceX or UAL. SpaceX is the most advanced launch system currently available to go to space and Starship will advance the ability for humans and cargo to go to space exponentially. After the retirement of the space shuttle's we had to rely on Russia to go to space. Space is to important to leave to other countries. Please allow SpaceX to make this next Step in mankind's journey to the stars.

Hello, I am writing on behalf of my support of Elon Musk and His team at SpaceX. I, 111% approve of the upcoming orbital launch and anything related to space exploration and SpaceX overall mission. It is my belief that SpaceX and all of Elons companies are striving to engage humanity to start hoping and caring again and he is helping us look forward to the future.. Humanity needs this right. Humanity needs to look forward to something and have hopes and dreams and seeks towards the stars. Imagine new worlds beyond earth will open minds and hearts. It will uplift the hopeless, the weary and the dead inside. There are many of us that need this to live because hope is all we have. The world has forgotten how to see through the eyes of a child. Please see this through the eyes of your 11 year old self. The United States Government could really use positive press We need a come back!!! C'mon let's help guide humanity's evolution to the stars. Thank you for your consideration.

Message

I am writing as a taxpayer, voter and citizen of the United States to support SpaceX's orbital launch attempt of Starship in Boca Chica, Texas. As you are aware SpaceX has already revolutionized getting cargo to space safely and at dramatically reduced cost and increased pace. This orbital launch attempt is the next step to return humanity to the Moon and beyond. This is the future. I'm calling on the FAA to approve the orbital launch, the facilities at Boca Chica, and further developments there that ensure SpaceX's success for the benefit of humanity. Sincerely, — [REDACTED]

Spacex can reliably be trusted upon. These launches are so critical to so many areas of life.. We will all experience the best anywhere satellite service when starlink is done. No one of such caliber is helping so many people get excited about striving for a future amongst the stars quite like elon. Spacex is a motivational company that has displayed how theyre professional and safe as can be across all relative axis.. Please let them move as quick as possible in the direction of starship.. thank you.

SpaceX's actions in Boca Chica Texas for the Starship Program are extremely important to all of us as humans. Their actions are leading the way on the next generation of exploring space. The scientific knowledge and benefits that will be obtained through this process are incalculable. SpaceX is trying to take an industry that in the past would have taken billions of dollars, which historically came from government budgets and is making it so much more affordable through their innovation, which will enable so much more to be done. This is also sparking great competition across the planet. The new space race is a good thing, I personally support it entirely and is one of the biggest hopes I have for us as a species. I support SpaceX, and ask that you approve their Starship Program entirely! Thank you.

Dear FAA, America was built with hard work and innovation. Competition is a vital component in innovation, this why allowing private companies to develop space travel will push for the development better technology that will ensure that America will remain a leader in space exploration that will create many innovations that can be applied to existing problems such as pollution and energy need. Please grant the permission necessary for SpaceX to continue their development of space travel.

I've been in aviation all my life. Soloed 16th birthday, private 17th, and commercial 18th birthday. I have a passion for aviation and space exploration. I am [REDACTED] and remember sitting on the floor watching us take our first steps on the moon, then over the years being confused and sad that we stopped going, and that I could get a job working on the moon. I now also feel the urgency to become multi-planetary. As a friend of mine says, "Every philanthropic cause in history is rendered useless by one meteor." and I would add at this time, by one virus. Several knowledgeable people have pointed out what a small window of opportunity we NOW have to make that jump. I am still a bit of a hippy and always clean up more than my own area when camping, recycle at every chance I get, and have donated to endangered species. However, at this point in time, I feel the risk of losing an endangered animal or wildlife area weighs much less than losing the entire human race. I strongly feel that SpaceX has more than proven to be as, or more, responsible than any other large company. Please move your process faster. It appears SpaceX will be able to launch the first orbital test flight before the end of 2021 and I sincerely hope the FAA and other organizations are responsible enough to help them achieve that timetable. Thank you for your consideration. Sincerely, [REDACTED]

I support SpaceX continuing to operate and expand to orbital flight. The work they are doing in Boca Chica is vital to US space exploration, US dominance in space and the human expansion to a multi planetary society. I live in [REDACTED] and have visited Boca Chica twice to see the progress. I hope to some day see a launch. I would even consider moving to South Padre because of SpaceX. This is in contrast to many other Texas costal cities reliant on refineries which I would consider a reason to move out. In addition they are operating in the full view of the public with roadside and aerial photographers documenting their every move. Again this is in contrast to almost every other regulated industry that would be behind miles of security fence with nobody able to watch. Any mistake SpaceX makes will undoubtedly be documented and with their track record I am sure they would remedy it vs sweep it under the rug (such as oil drilling methane leaks). Please allow them to continue unhindered. Thank you, [REDACTED]

Dear ladies and gentlemen! The future of humanity is spacetravel. The perspective provided by SpaceX for the future will get increasingly important for our generation - we have to settle on moon, mars and beyond to give humanity a perspective. I think it is clear that SpaceX is closest to providing this perspective - Starship is crucial to all future operations and to driving down cost of space travel. Please soften regulations for testing, because otherwise the forward-pushing of humanity is being stopped. As mentioned, a working Starship is crucial for effective space travel and is also driving competition. Thank you! [REDACTED]

Please do whatever you can to expedite the Starship development - the biggest advance in space exploration in decades. It is essential for future human civilization, and to keep American at the forefront of space exploration. I have an MS in Space Science, and am convinced the Starship is an optimal architecture for the future.

Good evening, My name is [REDACTED], I am writing at this time in regards to the approval of space X's Starship flying orbital for the first time. I believe this is very important for the advance of the US space flight industry and capability, keeping the US ability and technology from falling behind other competitors. The future prospects of Starship will bring massive revenue to the country and give an invaluable capacity for human space flight and transportation of important equipment to other bodies in the solar system such as the moon and Mars. The benefits to humanity as a whole will surely be worth giving this opportunity and approval. Thank you very much and kindest regards, [REDACTED]

Impacts of space flight over the past 80 years are part of why SpaceX is making strides to develop reusable rockets and launch vehicles large enough to explore our solar system more efficiently. I plead that you take a macro approach when judging the impact of SpaceX's contributions to exploration, efficiency, and environmentalism. BocaChica is a single point on 197 million square miles of earth's surface. What it loses, the planet will gain 1000-fold in reduction of waste, resources, and pollution as more and more space exploration moves to a more sustainable model.

Please move fast as possible to give spacex their launch license and to finish the EIS. What they are doing is changing the trajectory of humanity for the better. When they can build a the biggest rocket of all time that is also rapidly reusable, something many thought would be impossible, In less time than it takes for the government agencies to get through the regulatory process, there is a problem. I know everyone is trying their best but it is time to become Trail Blazers and support spaceX fully. Please get creative and find ways to speed up the regulatory process and eliminate red tape. If humans can put a man on the moon I'm convinced we can get the paper work done in a timely manner while still being safe. This is the beginning of the future and the FAA has the privilege of being a small part of making it happen. Best, [REDACTED]

To whom it may concern: I am writing in support of the approval of SpaceX's proposed Starship orbital launches out of Boca Chica, Texas. The technological advancements the space industry has historically provided through increased exploration effects our everyday lives. Whether it be GPS, weather systems, communication systems, medicine, or other related sectors, space exploration ultimately has brought humanity significant innovations. More directly, the SpaceX plans to launch fully reusable vehicles to space from Boca Chica will provide humanity an architecture to travel farther than humans have ever gone before. Starlink satellites will provide an unprecedented level of connectivity to all parts of the globe! Overall, I believe SpaceX has demonstrated their ambitions toward these goals, while also working hard to be environmentally responsible neighbors. The Boca Chica area has continually been seeing more workers, families, and tourists as a result of SpaceX. SpaceX use of on-site renewable energy to offset some of the power needs of their facilities is commendable as well. The positives of approving SpaceX's current and future plans far outweighs the small negative impacts. Let's let them fly! Thanks [REDACTED]

It is very important that SpaceX be allowed to continue it's launches. The discoveries being made by SpaceX advance technology and will go a long way in finding solutions to issues such as climate change etc. SpaceX is doing what the US government alone cannot do....we can't even get an infrastructure bill passed because of obstructionist climate change deniers so they certainly will not allocate sufficient funding to space exploration. Let the important work of SpaceX continue!

In regards to the environmental impact of Space X's operations going forward, the long term ambition of Space X must be seen to be of utmost importance and cannot be hindered by any laws already in place. The scale of what they are trying to achieve is unprecedented and as thus nothing that exists already would be relevant. Any negative impact on the environment would be worth it to push Space X and their agenda forward.

Elon's intentions with the Starship program is not for selfish gain but for the benefit of all life & humanity on this planet. Animals do not have the ability to relocate life to another planet, mankind can help should a catastrophic event such as an asteroid or unforeseen global disaster threaten all life on the planet. It is of the upmost importance that we have the ability to be able to re-locate life to another planet. The sooner we are able to do this, the better, there is no time to lose as all life, plants, species currently will perish should a global killer event arise.

To whom it concerns at the FAA I suppose I qualify as a somewhat older person now in our great country. I do remember watching the first man walk on the moon on our black and white television. As you know, that was a long time ago. I have seen a few documentaries on the push for the United States to be the first country to put a man on the moon. It is truly inspiring to see what a group of motivated people can accomplish in a relatively short amount of time. I truly believe that may have been the last time that our country came together as one to accomplish a tremendous goal and actually did it. What we are witnessing right now in Boca Chica is an encore to getting a man on the moon. We have at our hands a very unique opportunity at this very moment and your decision will have a profound effect on the outcome of future events. We (I mean the United States) have an individual that has put together funding and a team of engineers and fabricators that has the goal and many believe the ability to put humans on Mars. Obviously that is no small feat, or somebody would have already done it. Why is it important to go to Mars? One reason is that I, and other people much smarter than me, believe that for the human race to succeed in the long run that we must become an inter-planetary species. Obviously Mars is the closest planet to us that has the available resources to make some sort of long term colony. Another maybe less obvious reason is I believe our country is at a crossroads, and needs something to be proud of, for lack of a better term. This is a project that the entire world is already watching every day. All you have to do is go to YouTube and there are many SpaceX channels put up by everyday people. From all over the world. I do believe that SpaceX is going to succeed on their mission of establishing human colonies on Mars. They have the resources and they have the drive. It would be truly sensational to see that being done from Boca Chica. The thing that I am afraid of is that if a roadblock of a few years is put up before a permit is granted, then very definitely SpaceX may move to a more friendly environment, meaning a different country. I would hate to see that happen. I do not want to watch a Starship lift off from Mexico or China. I think that this program will be a fantastic thing for people of the United States. Just as the Apollo program was. It just has to proceed in a timely manner for that to happen. I can say that I don't know all of the environmental effects of establishing a launch facility at Boca Chica, but I have read that there have not been significant negative effects from other similar facilities. Obviously if it is going to happen then it has to be built somewhere. And being in the construction industry for nearly all of my life , I can say that whatever is proposed there are always going to be people on either side of the issue. That is a given. I have never been to a city council or board meeting where everyone was on the same side. That would be too easy. Your job is to filter out the "crap" for lack of a better term, and decide what is the best for the people. Thank you for your time and be well. [REDACTED]

Hello, As a US citizen, taxpayer, and resident of the great state of Texas, I would like to voice support for SpaceX launches from Boca Chica, including the proposed orbital test flight of Starship and the Super Heavy booster. As you know, SpaceX has consistently innovated in the area of both commercial cargo and crewed spaceflight, and I believe presents the best opportunities to not only make regular human spaceflight viable and humanity multi-planetary but also to protect US interests in aviation and space flight and bolster both the state and federal economy. As we've seen by recent issues in other programs, the space industry needs modernization and competition from newer, more agile companies like SpaceX. SpaceX's processes represent what modern engineering looks like, and are well respected in the technology and engineering spaces, which I'm pleased to be in as a programmer and analyst. Therefore I also encourage the FAA to adopt more flexible processes to avoid having legacy regulation inhibiting the rapid innovation that new technologies allow for, harming both private commerce and public good.

Please approve the assessment. This is an important initiative, with long-term benefits to the United States and the world. The impacts to the environment are minor and I have confidence in SpaceX and Cameron county to minimize them to the greatest extent possible. Impacts to historical places and items may be incurred but the new history being made outweighs the value of these considerations. Safety concerns should diminish as the program matures. Thanks for your attention.

Being a deeply environmentally conscious individual I do believe that the benefits of SpaceX making progress at full speed to make humans multi-planetary species far outweighs the environmental impact in Boca Chica, TX, or anywhere else on the planet. It is one of the most pressing existential issues human kind has ever faced and is essential to our long-term survival. SpaceX team has a goal of making it possible and it is our duty to give them our full support. Our future literally depends on it. Every wasted day counts. [REDACTED]

I would like to express my support for the SpaceX operations at Boca Chica, TX. Their work is pushing civilization forward into an exciting frontier, and gives humanity hope that great things still lie ahead in our future. I ask that the FAA considers the benefits of their work for all of us, and maintains its regulations and safety protocols in a meaningful way - but not in a manner that extinguishes the innovation that propels us forward.

Changing the world as we know it will require comprise from all sides. For generations, industries have run businesses that ended up being terrible for the environment, with zero regard from the top down, for air quality or environmental stressors. Look at legacy auto or air travel which polluted for decades before anyone started to question it's irreversible effects on climate. For example, diesel still engulfs the air ways of unsuspecting highway drivers with dark plumes of disgusting toxins and fumes, where there seems to be no restrictions. Do we close beaches because of traffic because of them too? We must remember innovation requires big awkward first steps to progress to a more refined state, but we must give respect to the people at spacex for understanding and actively working to eliminate these factors, and working to propel us into the future of travel. Cape Canaveral is a national treasure. Lean into this and help make this work seamlessly with the public in Boca chica. They have much more to gain out of all of this. Is it any worse than living near a busy international airport? These are the things we must be realistic about in our pursuit for changing the world for better, opening up new ways of moving people and goods around this beautiful and precious blue ball.

I support SpaceX development, launches, and landings from Boca Chica, TX. The site is about as remote as possible in the continental USA, and they have proven to be responsible in adherence to regulations both in flight and with respect to the environment. We can not delay such an innovative USA company. Other nations will surpass our thin lead if the FAA or any other governmental agency drags their feet during the approval process. Please approve SpaceX's requests and plans in an expedited manner. Thank you, [REDACTED]

I wanted to express incredible support for what Elon Musk and the SpaceX team are doing. They are creating a second truly country-wide period of inspiration similar to the Moon landing efforts. Not only are they achieving great levels of innovation and pushing that industry to create jobs and new levels of expectations, but they inspire the next few generations of STEM students and will have a positively disruptive effect on our young population for years to come. Choose to enable our country to succeed, because you know other countries are doing why they can to beat us to the technology.

Hello, I believe SpaceX and Starship should be allowed to operate and continue. The progress that SpaceX is making with everything, especially Starship, is advancing human-kind by an exceptional amount. This is the future and we are living in it now, Starship is the future of our nation's pride and humanity's future on other planets. We can not let these opportunities fall out of our hands because of slow regulations. I understand the opponents side, however, this is a matter of Humanity's future, the benefits drastically outweigh the negatives. SpaceX is ready to test and launch, they need all the approval and quick allowance as soon as possible to continue making rapid progress. Our nation's pride will flourish and a new profitable economy will be born when we expand settlements on other planets. Please give them the green light to continue, this is the future for us. Thank you.

Thank you for this report. There are a number of serious tradeoffs when considering the expansion of SpaceX Starship program in Boca Chica. I believe however that the benefits of accelerating access to space far outweigh the negative impacts. Time is running out for humanity to solve serious global problems. Making space travel cheaper is an important step in making life sustainable on Earth.

Look at the chemicals that are to be used in high quantity. SpaceX is using methane not hydrazine. Hydrazine is toxic, methane is not. This speaks volumes to the possible spill of these chemicals in water ways. Sound would be another issue, that can be reasonably mitigated. I understand the beach access is another issue for others. I don't believe anybody argues the risks associated with launching the largest rocket known to mankind from Boca Chica. However the rewards far outweighs the risks. SpaceX continues to prove that they can solve seemingly impossible problems in rocket science, why couldn't they solve a few mitigation efforts? This country and this world need SpaceX to be successful here. A denial of this permit would be a travesty and a clear effort by governmental agency to politicize the progress of humankind. The importance of a speedy permit approval cannot be overstated. If it needs to have a few stipulations regarding mitigation efforts towards the risks, so be it. But please move quickly, what's at stake is too important to wait.

my name is [REDACTED] i am a computer systems engineer of mexican nationality, i am here to give my opinion and support to the spaceX company, i think it has shown a great advance in space technology and the usa should feel proud of having an enormous talent of elon musk .. what better USA than china. I prefer a thousand times that the United States advance to space first, because I will do the impossible. so in terms of the environment I don't think it is harmful for that. as technology advances that will remain in the background because by then technology will have advanced and perhaps contamination will no longer be an important issue .. greetings

Starship development at Boca Chica TX is not only to make humans multi planetary, it is the National pride for USA and big milestone for human history. Here are the reasons why FAA should support starship license asap. 1) only company in advanced stage to complete and test Lunar and Mars bound vehicles 2) tremendous economic opportunities for local residents in Boca Chica and surrounding areas. High Home values, employment opportunity for 10-15k local residents 3) Some of turtles and other impacted sea animals can be safely migrated to other areas. 4) To prevent windows breakdown and lessen impact of sound within 10 mile radius of starbase during starship launch, FAA can work with spacex either to buyout properties within the radius or provide mechanism to retrofit sound impact. 5) If FAA does not approve or recommend for full environmental review, this will be disastrous for our country and humanity to reach Mars and beyond in our lifetime. In addition, it will help China indirectly for them become first country to send human on Mars. Therefore, with strong urgency, I highly recommend FAA to approve full license to spacex. Remember there are lots of paid competitors parties who wants to see spacex slow and fail which is so doomsday for entire humanity to become space faring.

Hi, I can't think of anything more important than securing the future of humanity, as well as exploring the boundaries of space and trying to figure out the origins of life and thereby understanding ourselves. We will also improve the quality of life on Earth by transferring heavy manufacturing out of the Earth and on the moon, for example. We will also expand terrestrial economy to extraterrestrial economies and aiding to the discovery of new elements and materials that are discovered extraterrestrially. It is absolutely crucial that SpaceX get approval for Starship to not only go to Mars, but first the Moon. SpaceX already has NASA contracts in the development of the Gateway and ability to land on the moon without needing a separate lunar lander. This is of the utmost importance that SpaceX gets approval for Starship. Thanks, [REDACTED]

It is important to humanity and the United States that SpaceX be able to continue at its rapid pace of innovation and not be slowed down by regulation. It is particularly important to help us maintain and grow our lead in rocketry over China and Russia. The current administration is making it very obvious that there is a personal bias against Mr Musk and his companies(WHICH ARE AMERICAN) and it really needs to stop. It will only hurt our nation's progress and allow China and Russia to blow past us. STOP IT ALREADY

It doesn't take an in-depth study of history to discover that attempting to hinder progress is futile. SpaceX is a transformational company that continues to shatter the boundaries of what we once thought was possible. Yes, there are rules to follow; and yes, there are reasons for those rules. But allowing step-by-step progress with unmanned flight testing poses very minimal risk. I advocate for allowing SpaceX to pursue continued testing when ready, with minimal push back from the FAA. Please allow the United States, and the companies which represent its monetary system of Capitalism, to continue to make progress as we all work to develop the next generation of space travel. The future of the next great human revolution rests in your hands.

I'm from the UK and watching SpaceX and other space companies in the US achieve incredible technological feats is the only reminder I see that the US is still the global powerhouse it once was. It sends a message to every other country on Earth that the technological might of the US is still unparalleled. Let this one project go, and you risk yet another industry fall into the hands of Chinese supremacy. SpaceX inspires millions across the globe. Don't be the ones to hinder that inspiration and admiration. US can rise from its own ashes.

Sehr geehrte Damen und Herren, Ich habe volles Vertrauen in die Arbeit von Herrn Musk und seinem Team. Die Welt verändert sich Tag für Tag. Wir sollten neue Ideen mit bestem Wissen und Gewissen den Platz zur Forschung und Entwicklung bieten. Menschen wie Elon Musk sind hier her gekommen um neue innovative smarte Ideen einen weiteren Schritt für die Menschheit zu setzen. Ich bin dankbar dafür und stehe voll hinter dieser Idee. Es wäre mir eine Ehre eines Tages dort zu stehen und mir diesen neuen großen Schritt aus der Nähe anzusehen. Ich glaube an großes und freue mich auch wenn nur per Internet einen Hauch von Magie in dieser neuen Zeit mitzuerleben. Eines liegt mir trotz der tollen Entwicklung am Herzen. Die Menschen in Bocca Chica haben auch Träume. Das sollte nicht vergessen werden. Ich freue mich auf weitere Entwicklungen und davon auch hoffe bald wieder zu lesen. Kleine Schritte große Hoffnung 🌐 Mit Besten Grüßen [REDACTED]

Translation: Honorable Ladies and Gentlemen. I have full trust in the work of Mr. Musk and his team. The world changes day by day. With the best knowledge and a conscience, we should offer/foster a place for research of new ideas for such research and development. People like Elon Musk came here with new innovative smarts to set in motion further step for mankind. I am thankful for this and stand fully behind this idea. One day, it would be an honor for me to stand in close proximity of this great new step. I believe in big things and am happy, even if only via the internet, to experience/witness a hint of magic in this new time. Despite this awesome development, one thing ways on my heart. The people in Boca Chica also have dreams. That should not be forgotten. I look forward to further developments and hope to read about them soon. Small Steps! - Great Hope! With best wishes. I'm writing to show my support for approving SpaceX's starship launch plans. As a technologist I support the innovation and the drive to advance our access to space. As a resident of Texas the support that SpaceX has shown the business community is outstanding. The FAA has a long history of showing it's support for new innovations in air and space advancement and has recognized that sometimes allowances need to be made to test these advancements before the completion of precise controls and regulations. Please allow SpaceX to continue to test the Starship platform as they have shown a track record of both safety and improvement for all mankind.

I'm writing this message to extend my excitement towards Space X and the starship program. With out the work they are doing my life would feel hopeless. I do not want to see the Chinese lead in aeronautical technology. Please I'm asking you to give full and total support to the people who want to see the starships fly. It's becoming clear that perhaps the FAA is working to slow down space x and let the Chinese government catch up. Please don't allow America to fall into second place. I think the FAA should have someone or multiple people take on a permanent residence at starbase Texas and help accelerate the success of the American space programs.

To whom it may concern, I am writing to voice my support for allowing the launch of Starship next month. There are dangers to our planet that we have zero control over. What we do have control over is whether we want to command greater presence in the solar system. When you have a precious database you have to back it up. I think the FAA should be doing everything in their power to expedite SpaceX's mission to commercialize space, open up new resources and colonize other planets. We have an amazing visionary in Elon Musk and his forward-thinking companies. But we only have this man for as long as a human life lasts. We need to maximize his time and this means expediting his missions unless there is a dramatic reason not to. Please approve the Starship mission. Thank you for your time, [REDACTED]

Vote yes: High probability America and all humanity benefits. Vote no: Russia and Chinese space programs get time to catch up, America falls behind again. 50 years they're writing books about Elon and citing all the people who were obtuse obstacles. He's smarter than me and you and possibly almost everyone. Let him achieve greatness. Einstein would have benefited from more bureaucracy said no one ever.

I truly think that SpaceX is one of America's most valuable company's and if they are hindered in any way by stupid company's like Blue Origin and Amazon we might lose SpaceX's loyalty to America. Let SpaceX operate freely in Boca chica. What they are developing could be the iPhone to the BlackBerry and revolutionizes the way we live and operate in space. Ps. Jeff who?

To whom it may concern: I am software engineer in the Seattle area. I am writing in response to your invitation for public comment on the Programmatic Environment Assessment currently underway for the SpaceX facilities in Boca Chica, TX. I have followed SpaceX's activities with great interest and enthusiasm since 2013, when they were beginning in earnest to make progress toward the landing and re-use of orbital boosters. These advances will and in fact are already greatly reducing the cost of transporting cargo to space, which will accelerate internet availability, satellite earth studies, and space observation. I am proud to say that I was able to witness in person the first re-use of a landed orbital booster. I wish to express my enthusiastic support for the motion to grant SpaceX permission to continue building and launching from Boca Chica. Respectfully yours, [REDACTED]

In my opinion, it is extremely important to humanity and the United States that SpaceX be able to continue at its rapid pace of innovation and not be slowed down by regulation. It is particularly important to help us maintain and grow our lead in rocketry over China and Russia. Starship Super Heavy's flight and every other flight after that will enable us to rapidly develop new technology for not just space exploration, but also for use on earth. Please take this email as support for SpaceX and their development of Starship, Super Heavy, and their orbital launches.

I believe SpaceX's overall goal of making life interplanetary and the rate of innovation that it accompanies, will open many new opportunities for both the global job market and the global economy. If SpaceX does have a risk of an environmental impact, I believe they have the right people in the right places to mitigate any risk exposed. They should be allowed to proceed.

SpaceX has been instrumental and innovative in space science. With starship, this would drastically change how we access space. I totally understand why there could be some constraint when giving environmental clearance, but SpaceX has developed one of the cleanest rocket in the world. With plans to capture carbon dioxide from air to create fuel for the starship, this would allow spacex to reach net zero emission possible in a decade or so. With the advancement of starship, humans would be able to reach mars and beyond , which would allow us as humanity to explore and possibly get answer to who we are . Exploring and studying another planet might help us solving issues like global warming back on earth. Elon and SpaceX team has already made US proud with only commercial company to carry human to space. With starlink, Spacex would further provide connectivity around the globe with low latency. Starship would be instrumental for the same. With starship US would be decades ahead than any other country around the globe. Humanity's future would be centuries ahead with starship as the vehicle to space. With proper environmental review, we as humanity should allow spacex to go ahead with orbital launch without any further delay. Thank you for your time. We as human should not be blocking any innovation.

I'm a huge environmentalists, but recognize that it's of strategic importance to the United States that we have more than one Eastern-facing launch site. The Boca Chica location is our best hope for a location other than Florida, helping mitigate risks posed by Atlantic storms. SpaceX can afford to accommodate wildlife by establishing nearby sanctuaries and paying to relocate the few citizens living within the danger zone.

Out of all of the risks taken, this would be one we should all take, as a people. This will be the future of our species. A spacefaring civilisation and a multi planetary species. I think it's important. I think have lost their minds a little in the last decade. Caught up in the internet with things like fashion, gender, race and war. We as humans are explorers and seekers. We all seek the same answers. This orbital launch vehicle is going to be the doorway to exploring other planets to find out the number one mysterious questions we all ask deep down; 'Are we alone and where did we come from?' This will make history. Yet again. I believe this orbital launch test should be something we ALL put FIRST! Above weapons testing, above product testing, above chemical testing on innocent wildlife above many other inhuman conditions we as a species test for the better of ourselves. We should get back to it and focus on the mission. Humans have lost the way. We need to explore. Yours sincerely,
A random observer and traveller from Australia, [REDACTED]

SpaceX's Starship is our species' next giant leap and this time we're going further than the Moon! Safety is the most important factor, but we're racing against time here. Everything has its side effects, but so far SpaceX has proven that they are here to make things better, not worse. Please give SpaceX the approval to make our species multiplanetary! Thank you!

Hello FAA, My name is [REDACTED]. I currently frequent Boca Chica and the greater South Padre Island / Brownsville area for kite surfing, enjoying the beach, space tourism, and working remotely. I understand there are concerns about the impact of SpaceX's operations. As an avid fan and user of public beaches, I appreciate concerns of beach users regarding closures. However, the importance and impact of SpaceX's operations far exceed the inconvenience of a closed beach. There are many other beaches available in the area. Furthermore, SpaceX brings important benefits to the local community that far outweighs any impacts on the beach accessibility. I hope the FAA grants SpaceX permits needed for orbital launches. Thank you, [REDACTED]

SpaceX has demonstrated what a group of committed individuals can do to revolutionize an entire industry and work on things that benefits all of humanity. They are lead by an able leader and it is important that they have the support to keep the momentum going. While regulations are important to check the misuse of space and resources shared by all of humanity, it is also important that such regulations do not slow down aspects that at the outset benefit humanity in the long run. SpaceX's mission is clear since they began and they have amply demonstrated their seriousness and competence in achieving that mission. FAA should be proactive in evaluating and supporting their mission than slowing down based on regulations that might be unjustified based on all that they have demonstrated in the shortest time of their existence. We should all lend our support to SpaceX.

SpaceX has been instrumental and innovative in space science. With starship, this would drastically change how we access space. I totally understand why there could be some constraint when giving environmental clearance, but SpaceX has developed one of the cleanest rocket in the world. With plans to capture carbon dioxide from air to create fuel for the starship, this would allow spacex to reach net zero emission possible in a decade or so. With the advancement of starship, humans would be able to reach mars and beyond , which would allow us as humanity to explore and possibly get answer to who we are . Exploring and studying another planet might help us solving issues like global warming back on earth. Elon and SpaceX team has already made US proud with only commercial company to carry human to space. With starlink, Spacex would further provide connectivity around the globe with low latency. Starship would be instrumental for the same. With starship US would be decades ahead than any other country around the globe. Humanity's future would be centuries ahead with starship as the vehicle to space. With proper environmental review, we as humanity should allow spacex to go ahead with orbital launch without any further delay

Dear Ladies and Gentlemen, I`m a german physics engineer who`s currently working as a cargo pilot for DHL. Living in a country which in my opinion slows down technological progress massively due to a much to restrictive safety and wildlife protection culture, I hope you evaluate the pro and cont`s of the "Starship Project" very progress minded. I can tell you especially young people here in Germany (two of them in my family) are very motivated because of the the "SpaceX Projects" especially that in BocaChica. From these motivations the younger generations all over the world will benefit in ways which are not immediately obvious. I'm looking forward to a new exiting future started in BocaChica. Kind Regards Frederic Tittel

I support allowing SpaceX to move forward with the Boca Chica launch site in regards to the FAA's PEA. The developments and rapid progress that SpaceX has achieved, and continues to achieve, yield a broad array of benefits across multiple industries, communities, and nations. These achievements, like any daily action undertaken by people, have some cost on the environment. However, the environmental costs to Boca Chica and the surrounding area and its residents, as laid out in the draft PEA, are negligibly small when held against the benefits of the SpaceX achievements and plans. SpaceX should continue to work to minimize any environmental costs, but their test program should be allowed to continue with the next phase of orbital launches. Thank you for your time and consideration.

Elon Musk and the people at SpaceX is one thing the people of this country, and around the world, are watching that gives us hope during these times. Especially for those who are in complete lockdown and have nothing else. Please dont delay this launch. Millions across the world have been looking forward to this. And the U.S needs to stay ahead of China in something. Thank you.

To Whom it concerns: I'm writing to support the efforts of SpaceX in BocaChica, TX. I am impressed by the commitment SpaceX has shown in making their footprint in the world as minimal environmentally as possible, while maximizing their contributions to our nation and the advancement of science. Many people have clamored about the effects on the nesting turtles in the area and other wildlife being reason to not allow SpaceX to fly from Starbase, but it is disingenuous to argue this. Even with the heightened activity of construction in the launch site and production area, wildlife has thrived. Watch any of the live stream video feeds from enthusiasts and you regularly see a tremendous variety of birds. As well, Florida has been a working experiment for years now regarding the effects of the space industry on the surrounding wildlife in those refuges. By far, an average farm has a much larger effect on migrating birds given modern farming practices. While I do not believe SpaceX should be given free reign to do absolutely anything, I do think they should be encouraged to pursue their activities with appropriate monitoring and be held to account for mishaps and mitigations. Thank you for considering my thoughts on this matter. Tom Wolf

It's time to approve this stuff guys. It was always known throughout science fiction that corporate entities would be the ones to have a grip hold on space exploration and as slow as government moves about it we should definitely allow it to happen if we went to have A foothold in space. Competitors like China are not far behind and will jump ahead if we don't start doing this.

To whom it may concern. I believe in Space X and I also believe many other Americans do, especially the young generations. The amount of technological advancements we made from the original space missions and the scientific data, produced an explosion of engineering minded individuals. Which I believe sparked the technical/computer market. Space X and other programs have a real chance at giving the younger generations something to look up to and we can all grow another era together with the advancements that will be achieved with your help we can all make a better tomorrow. Thank you for your time and consideration, the future needs us to spark the next generation.

Dear FAA: I appreciate all that you have done to further aviation safety. Your legacy has protected my father and grandfather, both commercial pilots, through the last many decades. You have also protected the lives of millions on important journeys large and small. Whether it be for a critical business meeting, to see loved ones, or just to broaden ones scope and experience of consciousness on this planet -- you have been there. What spaceX is aiming to do is on a level of inspiration we haven't seen since the 60s. Their mission alone is important, but the knock-on relevance of inspiring the young to aim higher is of intangible significance. I understand your mission, but please weigh the benefits that are unquantifiable in the immediate future and those far beyond for humanity when doing risk assessments, particularly on unnamed missions. Please support their endeavours and let's go to the stars! Respectfully Submitted Jarrod D Currin

Hello, I've been following both Tesla and especially SpaceX since 2006 when the first Falcon 1 launched from Kwajalein. Elon Musk has his flaws and I'm sure he's incredibly irritating to the regulatory agencies, who have a critically important job to do. Nonetheless, SpaceX and Tesla have together overcome the inertia of two giant industries, automotive and aerospace, more than any other manufacturer. If we're to mitigate climate change we need all the things SpaceX does, including cheaper launch to put instrumentation in orbit to monitor our planet. Climate change mitigation is about knowledge as much as anything and satellites are knowledge. Denying or significantly delaying the efforts of SpaceX in Boca Chica will have a significant impact on the cost of launch to LEO, which will impact our ability to monitor our planet. And that will have an impact on our climate far greater than the local impact in Boca Chica. Thank you for your time and consideration, Dave Pomerantz

Space X should be granted permission to conduct further tests and launch their starship without further delay. Your organization will be on the wrong side of history for this please cease and desist. It's great to see an American company innovate, grow, and inspire more than our own government can since they now safely carry American astronauts to the ISS. Please allow Space X to continue operations it is despicable that they are being red tapped because another company is butt hurt this isn't how you should operate.

Elon Musk employs thousands of employees in Boca Chica Texas and he helped the town to be succesful. Without him, thousands of employees will have no jobs and not just the fact that he employs thousands of jobs, but he also donates a lot of money in the community. If you are worried about the SpaceX ruining the environment, ban airplanes because they released so much more CO2 and other chemical in the air. This is the most revolutionary rocket out there and you're driving away innovation. I know there will be a lot of hateful comments such as wildfire, Elon Musk is a scam, and etc and I can assure you that that is not the case. Kennedy Space Center is more prone to wildfire and there are more animals surrounding the cape cannaveral launch site. Do not drive away innovation from your country, the USA. This is the first time in the history of humanity that something like this will happen. It might not happen right away because of explosions, but that is alright. Please approve SpaceX for their orbital launch. If airplanes can fly (that emits more CO2 in the air according to studies, like 99% more than rockets) then so should Starship and Superheavy. Negative comments comes from older generations because they are not used to innovation anymore. Kids and teens are the ones who like this to happen because they are the future of this generation. If you saw the tweets from SpaceX Boca Chica, you know that even the kids had a field trip in SpaceX Starbase and they loved every single second of it. Thank you and Godbless.

I am writing to support SpaceX's testing of their Starship & Booster prototypes and eventual operation of final Starship & Booster from Boca Chica, TX. I understand that your agency is holding up their progress while approving this PEA/EIR: https://www.faa.gov/space/stakeholder_engagement/spacex_starship/media/Draft_PEA_for_SpaceX_Starship_Super_Heavy_at_Boca_Chica.pdf I was raised and educated in public schools to believe that America is about leading the way, to space and in many other things. I've watched for decades as all of federal agencies have operated strikingly slower and less efficiently than the public sector, with NASA, in particular, languishing, particularly since the repeated shuttle disasters. Then, out of nowhere, SpaceX comes along and begins racing ahead of the old NASA contractors who have clearly misspent so much of our taxpayer dollars. We're finally in space again! America is ferrying around astronauts to the space station, and for less money than before, and with Starship and Booster we'll be headed back to moon, Mars, and eventually beyond. Do not stand in their way, or the American people will be very, very unhappy.

Dear FAA, Starship and the Boca Chica based Starbase is the next major step for mankind and I really hope you support them in any kind and force you can. This rocket is the most ambitious and promising way to explore space, planets and more in our solar system. Please let them test and proceed with their Starbase. Greetings from germany Kai Krech

This is a new era. History is changing before our eyes in seemingly countless ways. What once could only be accomplished by government power and oversight is more and more happening by commercial enterprises the size of many world governments. Just as the pursuit of space led to life-changing advancements on earth fifty years ago, today we stand at the precipice of countless new unknowns that can benefit life on earth. SpaceX has proven to be one of the most advanced space companies in the world. And they are bringing to the table one of the most innovative rocket systems the world has ever seen. This next step for Starship must be supported for the sake of the future of all space systems. We must go to space. We must go to the moon and beyond. SpaceX represents the enormity of new ideas and invention that will get us there, back, and there again. The next step in their development must be supported - wisely, yet with our eyes set on the future. Robert Griffith

The Starship when operational will radically change the capabilities of the United States both in the defense sector and in the civilian sector. The payload to orbit or to planetary surface capabilities will allow for mega-constellations of satellites that would be immensely valuable to the DoD as well as civilian operations such as aviation, meteorology, climate monitoring and internet service providers. The payload will also save NASA billions as well as increase the type of infrastructure and mission goals realistically available to the Agency even if reusability is not achieved. If reusability is achieved then the cost of space infrastructure becomes affordable even to the private sector. The Starship program has already revitalized the surrounding economy and has given opportunity to a place where it was scarce. This program will be a net benefit to the area and with Starship using methane and Oxygen for fuel there should be a very minimal impact on the environment especially compared to the oil industry or the space coast which operate in similar environments. The environmentally focused actions the starship program makes available will create a net positive impact regionally and globally. This program will maintain US dominance of the world economically, technologically and militarily. This program will also insure that the United States has stewardship over the incoming expansion and colonization of space. The operation of this program is crucial to the prosperity of this country and its allies and thus SHOULD NOT be delayed or halted for any reason. Thank You.

I am a strong supporter of SpaceX's development in Boca Chica. SpaceX is leading innovation in rocketry and spacecraft. Not only is SpaceX inspiring new generations to pursue much needed STEM careers, but they are also creating valuable jobs in Boca Chica and across the country. Please permit SpaceX to perform orbital launches from SpaceX's Boca Chica launch site. Such permission would allow SpaceX to develop technologies to go to the moon, mars and beyond. Environment and safety should be a concern that is examined thoroughly, and SpaceX should address all concerns that have evidential basis. Concerns that have no historically accepted context on other approved orbital launch sites should not withhold SpaceX from permission to perform orbital launches. So please, when examining the risks of environment and safety, please realize the great benefit that SpaceX brings to the Boca Chica area and do not allow unrealistic concerns create an undo burden on private industry.

I have been a SpaceX fan for the past few years. Ever since I heard about Starship. I've always been into the universe and space. Finally a man is making everyone's dreams come true. NASA couldn't do it. We are capable of exploring the cosmos. Finally. We are a species that has the ability to leave our home planet. That's probably a rare thing in the universe. So we should take advantage of it. Starship has given me hope again. A reason to live. I battle depression and I am in recovery, and SpaceX gives me hope to continue on the right path. Please grant them the opportunity to launch from Starbase. I believe the environmental impact is minimal. Especially compared to what humans have been doing everywhere else. At least Starbase is built with the environment in mind. What SpaceX is doing is not some small thing. It is historic. Will be remembered for thousands of years if they can succeed. And I do believe deep down Elon Musk means well. This isn't for his benefit. It's for the benefit of mankind.

Hello, My name is Ricardo from [REDACTED]. I love nature and I'm worried about invading nature environment. But this is not about individuals, some animals, birds, trees or a certain ecosystem. This is about the survival of the whole living forms in Earth and expanding the humanity converting a desert like planet like Mars in a place where life can thrive and reduce pressure over the Earth ecosystems. It's about being able to gather resources outside the earth, without harming any earth ecosystem. Please collaborate with Space-X & Elon Musk. I don't think there will be another person like Elon Musk in many centuries. He can be wrong in certain details, like any other person, but the whole picture is worth our support. I haven't seen a major opportunity in anybody in this world as I've seen in Elon Musk. He reunites characteristics that makes him a unique person in this world. And I'm not sure we will find another one capable as him in the next centuries. Please support Elon Musk as much as possible.

I wanted to extend my approval of the recent efforts of SpaceX to develop new methods of space travel and to bring new advancements in practical orbital transportation. While these efforts come with some impact to the environment around the operating base, these effects can be mitigated with time. If this campaign is successful, the benefits will far outreach the short term local incidents. If resources are used at a small percentage of the total cost to address these concerns, then most honest concerns would be resolved. Thank you for your time.

Allowing spacex to launch the starship program is absolutely vital to the future success of the United States and humanity's long term survival. This is not hyperbole. Starship is the only current 100 percent reusable rocket spacecraft system that makes colonization of the solar system possible. Without starship and it's successors, humanity will never establish sustainable colonies off world. With over population and dwindling resources on Earth (or a dinosaur-era extinction comet strike) inevitable, space colonization is the best way to ensure America remains the world's technological innovator (and not an adversary) and also leads humanity to the stars and long term survival.

Please do your best to not stand in the way of progress! Safety and environmental impacts are important but if we want the US to remain as tech leaders of the world, we need to make dramatic steps forward. The US taking the lead is also the only way we can ensure those concerns are addressed. China certainly won't address them! I highly encourage you to work to get SpaceX whatever they need to push our abilities forward. It is perhaps the most important thing for the future of the US's leadership position in the world.

Hello I support SpaceX in Boca Chica and hope you can expedite their flight approvals so that they can get on with getting humans to Mars. Getting humans to Mars is necessary for the long term survival of our species, so looking at it this way, you are responsible for not just the safety of people on the ground, but also every future human who may or may not exist, depending on whether we can expand to other planets, or eventually die as a species here on Earth. With this in mind, please be as fast as possible, granting permits to SpaceX. Thanks Tim

Ask SpaceX to be a good citizen. Ask them to pay for ecological and preservation of the historical and ecological resources. Ask them to fund a trust for the preservation and maintenance of the site, to account for possible disasters. And then approve the environmental review. Make it clear they should take ownership of the environmental preservation, and when they're back in a year asking for another permit, approve that if they held up their end of the bargain.

Thank you for allowing, and please continue to support SpaceX launches in south TX. As a TX resident I love having SpaceX as a community member and local business. Yes at time the beach closures can be an inconvenience but IMO this is far less intrusive than other make it seem. Additionally, I feel the safety zone could likely be minimized allowing some south beach access even during launches. The previous exclusion zones have been exceptionally massive including areas way farther away than any debris could even potentially go. If some beach access was restored via modifying the exclusion zone, I feel all parties can be accommodated.

Dear FAA, I hope you are well. As many time is been stated from Mr. Elon Musk and his team, nothing is impossible in this life! I'm writing this email with the hope of my support to Mr. Musk and his team to realise their Starship's project. Hope this email will reach your heart and you will appreciate the hard work made from this team. Regards, Remo Donatoni

Please allow SpaceX to resume launch activities at Boca Chica, Texas. Their rocket development has done and will continue to do immeasurable good for the country. Furthermore, the launch system being developed (starship and Super heavy) are being designed to run on Methane with the goal of running in the entire operation on carbon neutral fuel.

SpaceX and other rocket exploration companies need to push the boundaries of what is possible. It's been a common occurrence with nation states but now capitalism/ democracy / human curiosity are winning out. Yet again America is at the forefront of innovation, what nation state has a working reusable booster? It's a working model and they should be allowed to continue pushing the limits. I believe SpaceX, specifically Boca Chica should be allowed to erect a space port. Elected officials should embrace such a move as it only opens up a new industry both for consumers and workers. Americans may not have been the first ones to invent flight but we're on track to be the first ones to commercialize space. Preventing them from doing so will only stifle Innovation and further help China steal our IP and yet another industry. Please approve whatever SpaceX / any other rocket company needs, this industry MUST succeed. Thank you, Phillip Camera

Shut up and let Starlink proceed! Starlink should be permitted to continue with no obstacles, working hard getting there first is not a problem for other people to worry about, they just need to work harder! If the government isn't going to provide everyone with free high speed internet so every individual has the same access then Starlink would be our second best option.

I don't work for SpaceX, nor do I have any financial interest in SpaceX. I do however have a love for all things space and aviation related. They are one of the few companies that is actually innovating in aerospace and I'd love to see the Starship program move ahead quickly. Therefore I urge the FAA to grant them approval for launches from Boca Chica as soon as is possible.

Please consider approving this site for the starship program and spacex in general. While I understand that there are concerns about beach access, realistically there are hundreds of miles of coastline citizens can enjoy if they so choose. Gentrification is another voiced concern, and I agree this will likely happen (as in many suddenly popular US locations), but the many benefits to the US and our species to me outweigh these small inconveniences.

I am writing today to show my support for SpaceX as regards the environmental review of the Boca Chica launch site for Starship/Super Heavy. SpaceX has and continues to disrupt the space launch industry, revolutionizing the reuse of first stage boosters and pushing the way to make humans truly interplanetary. You MUST do whatever it takes to support them, not hinder them. With that being said, I urge you to fast track their environmental impact approval, so they can get on with their groundbreaking work. Sincerely, Christopher Hastings

SpaceX's mission is to explore the unknowns while providing thousands with the opportunity to do something that only a few in this world thought was possible/get to do - building the largest rocket in the world and exploring the universe. SpaceX has provided this area with plentiful opportunity and inspiration. To derail such mission due to the environmental impacts it may cause is not worth the actual impact it will have on this area and the future of our civilization. If the environmental impacts are slated to be grievous, then a plan should be put into place to counter act the effects, Instead of shutting down the future and prosperity in this minuscule part of the world.

My children, 11, 7, and 5, watch SpaceX with rapt attention. Some or all of them may pursue science in their later studies. We should do everything to encourage this, including allowing SpaceX to continue its work with Starship, which may one day eclipse Apollo in significance. Thank you, Angelo DeSantis

I am writing in support of SpaceX and the Starship/SuperHeavy development and testing in Boca Chica. My father was involved in the Saturn V S2 development and testing at Stennis, and I have avidly followed NASA my whole life. I remember the S1 test firings being audible, and felt, from my home 60 miles away, so I understand local concerns. From the perspective of maximizing the National benefit, this program will eventually deliver a reusable space system with incredible LEO capabilities. SpaceX has demonstrated the “traditional” paradigms of engineering development are inefficient and have become a form of corporate welfare. I feel that SpaceX’s commitment to taking responsibility for mitigation of damage or harm to the environment and residents should be a model for other companies to follow, and that they should be supported in continuing this exciting effort. Thank you for your attention. Sincerely, Brent Negrete

The feature of planet Earth is important. A situation may arise that requires very quick and nimble action to save Earth and everything on her from a space based threat. Slowing someone down so a preferred someone can catch up is not nore should it ever be an option. Protection of Earth's environment is always welcome and very much important. Protecting preferred slow moving older companies is not something the government should ever be involved with. Please don't slow down SpaceX's march for Earth's protection for political reasons, make them responsible for their physical actions not for politcal actions.

A new space race is underway in America being led by private organizations like SpaceX. It is obvious in the past few years SpaceX, has reignited that burning passion in the younger generation to go and explore beyond Earth. Not only are they constantly innovating, they provide great coverage and detail about upcoming mission that further boosts the publics opinion on this new Space race. As a student pursuing Aerospace engineering and a space enthusiast , I ask that SpaceX is permitted to launch from their site at Boca Chica post FAA PEA. I do think the PEA is important, but at the same time their are innovating and providing services are a rate their competition cannot compete with. Best, Rodolfo

While I don't encourage minimizing safety, transforming the bureaucracy to meet the pace of the exponential technologies you are attempting to regulate requires you to think outside the box to create approaches to your job that meets the requirements of the technologies you're trying to regulate. Failing to do that will render you irrelevant.

To whom it may concern, I just turned 20, and will be graduating with my bachelors in spring of 22, information systems; I am emailing you this to explain my newly found perspective, and hopefully to shed some light on the severity of this decision. I'd like to start with a question: What does SpaceX stand for? (to you) To me, SpaceX is a source of inspiration for many, including myself. I had no interest in rockets or space exploration, and a few years ago someone had mentioned that SpaceX "landed a rocket", and I told them "So what, anybody can do that". Little did I know they would have been perfecting that process, and by time I gave any amount of attention they will had sent people to the ISS. That's when I first realized that SpaceX is not just a rocket manufacturer. Soon after, I started looking into SpaceX and discovered about their Falcon 9 Rocket. After a couple searches, I watched my first Falcon 9 launch and landing. This is when I became a fan of SpaceX! They want to allow an Avenue for space exploration, and they want to do it affordably! Next I would like to ask this: What do we have to lose? If we don't allow SpaceX to follow through with this concept, somebody else will. For example, Russia and China have confirmed their interest in the concept, and a Chinese official even claimed they will be starting on development in the years to come. If we don't do it, they will, and we will fall behind the rest of the world. China or Russia being the first to set foot on Mars, or being the first to create a permanent moon base. I couldn't think of anything else more sobering than that. Not to mention how they may use that technology against us if war was ever to break out! Next question: What do we have to gain? What discoveries/breakthroughs will SpaceX and others utilizing SpaceX uncover by allowing them to continue with their Starship Project? If this works, which I whole heartedly believe it will, we could see ourselves on the moon or Mars within the next Century! This truly is the next frontier! Finally, I would like to ask you this: Are the rocket fumes really even toxic? Of course they are, and yes, it does involve methane, which is a greenhouse gas. However, methane is a very unstable greenhouse gas, which means it dissipates much easier than carbon dioxide does. I believe SpaceX cares about the habitat around the facility, but expansion is necessary if we are ever going to succeed. In conclusion, Curiosity didn't kill the cat... complacency did. Curiously without complacency results in adversity, and adversity promotes growth. If we allow short-term problems to preventing us to grow, we will never leave this planet, atleast America won't. All the inspiration and hope borne through the achievements of SpaceX and other companies who will inevitably arise similar SpaceX will be lost, and we will have to watch as other countries take our spot as the one of innovation and invention! Are we going to let this opportunity pass us up? Thank you, Joshua Kraayvanger

FAA Team, I'm writing in support of SpaceX and their request to continue developing and testing the HLS supporting Starship launch system. As with any great effort, there are some necessary side effects. I'm confident that SpaceX is doing everything reasonably possible to mitigate the negative risks associated with the first orbital launch attempt. This is a case where benefits far outweigh any possible negative impacts. Please grant SpaceX permission to proceed and support their efforts. Thank you

Regarding the efforts of SpaceX at Boca Chica and their greater projects in general, I believe this is a pivotal time for our country, and the FAA. While I am usually supportive of it's overall purpose, do not construe the old paradigm used for traditional aerospace programs to be relevant to the development of interplanetary transport. Basically, get out of the way of progress - stay in your lane. Work quickly in your assessments and open your mind to new technology - you will find SpaceX has the same goals of safe success. And stop listening to political influences - especially those of unsuccessful alternate vendors. Focus on the scope of the FAA's mission, and stay out of the way of progress..

Some of the best technological advancements in history came from the Apollo era when NASA was inspiring people of all ages to solve all types of problems. That inspiration has since flamed out. SpaceX has reignited that inspiration in many people, specifically in the younger generation. These newly inspired people are the ones that will solve humanities biggest problems. This is especially important when the problems that need solved are bigger and more challenging than ever, both in space and here on Earth. The Starship program is SpaceX's biggest source of inspiration as it encourages everyone to look towards a brighter future. The main reason for this is because SpaceX is building the future in a public area and allowing everyone to see. The marshlands they are building on in south Texas are comparable to the marshlands Kennedy Space Center was built on in Florida. Using KSC as an example, it can be seen that when the launch site is finished being constructed the effects on the environment in the area are negligible, even as many large rockets are launched from the area, as long certain concerns are mitigated. When it comes to mitigating concerns, SpaceX has proven on multiple occasions to do all the work necessary to make sure their rocket operations have a limited impact. One notable example is when applying to land rockets at Vandenberg AFB SpaceX did all the necessary studies and tests to make sure that the seal population was not disturbed during migrating season. In conclusion, SpaceX is a responsible launch provider that is building the future while inspiring hundreds of people to solve the problems that will make tomorrow better than today. Thank you, - TJ Reynolds

The Starship program is critical to national security, specifically the ability to launch and maintain large fleets of satellites. The head of the Space Force has repeatedly stated they intend to develop large fleets of satellites, and this requires a significant improvement in launch capability that only Starship can accomplish. Delaying the program has the potential to cause far more damage than any crash can inflict.

As a local resident to the SpaceX facility in Boca Chica, I just wanted to voice my support for their rocket launch / orbital test flight. SpaceX is one of a very small list of companies that will help us stay ahead of China if regulators will allow it. Many regulators have great intentions however they stifle innovation and progress with overbearing rules. Please encourage companies who are trying to further mankind in a positive manner by giving them enough leniency to allow them to prosper. I understand you have a heavy burden that I likely couldn't truly understand. With the changes that are happening in air/space travel you have to attempt to maintain a certain level of safety. Bad things will happen, it's a certainty of life that we cannot avoid, and I applaud your attempts to limit the numbers of bad things. Thank you for your time, Ben Upton

One of the biggest reasons I have been a huge supporter of SpaceX over the past 19 years is because of how they were able to bring the excitement and interest back into space exploration and rocket development. I was not alive for the moon launches but my family has told me how proud and united the country was, and I really feel like our country needs that again at a time like this. The amount of kids now interested in space exploration and development has exploded since the success of the falcon 9, just imagine how much interest starship will bring to the market. Young engineers, scientists, biologists, physicists ect will have their interest peak from seeing this new style of rocket. Please approve SpaceX for orbital launch! But always hold your standards, the FAA has an extremely important job and is fundamental to the success of this launch! Have a great day!

To whom it may concern: I am writing to offer my heartfelt support for the Starship to take flight. This rocket is a very important piece of World and American history. The work Elon's team and Space X have completed during the pandemic is unprecedented. As a team, they have displayed the capability and ability to unite and bring people together in the hardest circumstances! As a society we demand instant gratification. Communication can be sent via email, social media, tweet, or phone call. Education, science, technology, and modern medicine have allowed the quality of life of Americans to flourish. Space X has helped countless people to accomplish goals. What would be the best thing for upcoming generations of innovators? I believe further Space exploration will provide motivation for us to further unite and fulfill the desire of the human spirit to flourish. This team has the talent, technical skill, intellect, and charm to make it a successful reality! After a very difficult time in history, Starship will unite as we overcome challenge, sickness, death, and financial hardship. Starship will act as a "force in time" to serve as a testament to grace and forgiveness needed during the pandemic. This will also help heal those who have broken hearts and have lost loved ones. I believe the essence of this rocket is truly beautiful. Elon and Space X are not only capable to safely accomplish this-they have put in blood, sweat, and tears to accomplish a safe beginning for these flights! Also, it takes a real man to design such a "cute" rocket while safely accomplishing space exploration and the goal of uniting all. Love ❤️ Brittany

Hello - I am an enthusiastic observer of SpaceX's activities over the past several years, and also a longtime taxpayer. Please expedite the environmental impact study of their Starship operations so they may continue pushing the boundaries of human travels. It's high time we make up for years of stagnant space exploration. Thank you.

Please approve the SpaceX Boca Chica proposal as soon as possible. SpaceX is pushing technology forward at a pace that is necessary for the future success of America. If NASA did what SpaceX is doing it would take 20+ years. Let's not lose out on the amazing work being done at Boca Chica by slowing it down unnecessarily. This is the future of aviation for the world. Please don't slow the progress because of Federal Administration.

To whom it may concern, I strongly believe the Boca Chica expansion should undergo a full environmental impact study before any future launches. The current installation has already strayed from the original EIS and with the addition of heavy chemical processing equipment (de-ethanizer, natural gas pipeline or extraction, 250 MW power plant) there is no reasonable assumption that the original EIS is still valid. Additionally, the larger rockets will generate greater noise, larger plumes, and larger debris in the event of a catastrophic failure. In my line of work, we are required to identify the worst case event and mitigations. As they say, it's not rocket science. The PEA as written is lacking in sufficient detail on the infrastructure of the spaceport, omits inconvenient facts, and is built on the assumption that no one will read beyond "rockets". As a career engineer in the chemicals world, I can assure you these details are critical to the safe, environmentally friendly, and efficient operation of any facility. I'm not opposed to progress and not opposed to Mr. Musk's aspirations, however while he's thinking about how to breathe on Mars, I'm concerned about how we'll do it on Earth. Thank you for your time and consideration. J.S.

To the FAA personnel, While there may be reservations from the environmental concerns solicited from the public, I would argue that the work SpaceX has done, merits the experimental permits and/or license for suborbital and orbital launches that SpaceX is requesting for the Starship/Super Heavy experimental vehicles. Over the years, SpaceX has conducted numerous test launches from Boca Chica and have taken efforts to be good stewards to the land. In addition, they have and continue to reinvent an area that has seen much decline over the years. SpaceX and Elon Musk did not have to act when faced with the swarm of sea turtles seeking refuge from freezing weather in 2020, but they did — aiding to save the turtles. This small step proves that SpaceX can be conscientious of the natural environment and the ecosystems surrounding their operations. When it comes to the economic impact of the Boca China facility, SpaceX has a lot to offer. Where there haven't been local job opportunities for Boca Chica residents in the past, they now have more opportunities to find local work without having an 80 minute commute to and from Brownsville. SpaceX and the Boca Chica facility are only expected to grow in the years to come. Boca Chica has the potential to become a thriving spaceport for passengers and cargo. Whether or not that happens (pending future FAA approval), SpaceX will still bring jobs and opportunities. Concerning FAA approval and the Environment Impact Assessment (EIA): if the FAA granted approval for Falcon/Falcon Heavy launches from the Boca Chica facility in 2014, surely they can do so for the Starship/Super Heavy experimental vehicles. This land was intended for rocket launches, the only difference now is that SpaceX is requesting to launch what is arguably the largest and most powerful rocket since the Saturn V. Which brings me to my final point. SpaceX and the company's Starship/Super Heavy experimental vehicles are the pinnacle of American exceptionalism in the 21st century. Nothing like this has been achieved since the days of the Apollo program. SpaceX has revolutionized space travel — reducing launch costs while creating safe and advanced vehicles that make space travel more manageable and accessible. The country has much to benefit from SpaceX succeeding with Starship. Starship has the potential to open doors for rapid transit opportunities which benefit the public, provide a platform for more effective logistics, and improve national security. In conclusion, SpaceX will have a large and positive impact on the region and I urge the FAA to permit and license SpaceX's Boca Chica facility for its Starship/Super Heavy experimental vehicles. Thanks for your time, Enoch Wu

Nothing is more critical to the survival of the human race then becoming a multi-planetary/lunar/space-faring civilization. A single large asteroid, a novel virus, world wars, nuclear mayhem, environmental destruction, or unknown cataclysmic event could end the ride we known as life on earth pretty quickly. Standing in the way of diversifying humanity's planetary portfolio is illogical and unwise. Please allow efforts that enable this great progress, benefitting all of humanity, to proceed with greatest urgency. Sincerely, David R Bendersky

Dear Reader, I am contacting you today as a U.S. citizen to express my strong desire that you approve SpaceX's requests for further flight testing of the Starship spaceflight system as soon as possible. While safety is clearly a concern, and space is a difficult and inherently dangerous goal, no project since Apollo has had such potential for positive improvement of the human condition as this. Even current safety programs in air traffic cannot guarantee that no planes crash, so lack of 100% safety cannot be used as an excuse to hinder these efforts. SpaceX has shown very clear diligence in these regards as witnessed by the fact that they currently manufacture the only functional human rated orbital launch system in the U.S. In my well considered opinion (over 50 years of consideration since Apollo) impeding these efforts unnecessarily may ultimately amount to extinction for the human species or worse. Thank you for your time and consideration. Sincerely, Floyd Thomas Goodwin [REDACTED]

I run the science department at a school in London, England. For the first time I can remember, our pupils have a hero not in a sports or music star but in a scientist (engineer, really) in Elon Musk. He is inspiring, and the Tesla and SpaceX stories are inspiring - I get excited questions about Starship all the time. The adventure, the scale, the environmental progress (not just Tesla - when the system is mature, Starlink will synthesise fuel from carbon dioxide in the air: it will be a net greenhouse gas reducer!) are exciting the next generation - please do everything you can to help get this off the ground (pun intended!).

I strongly support the launch of the starship into orbit. The faster Elon Musk's plan to look for other planets on which mankind could expand as a species, the better! We are already 7 billion and instead of all succumbing to pandemics, which are actually the side effects of globalization, it is much better to colonize other planets so that people can enjoy life in places other than Earth! May future generations have a chance at multiplanetary life and ensure the perpetuation of the human species! Support SpaceX, Elon Musk and his team! 🤖🌍

In support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than \$15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. This came with a commitment by SpaceX to invest \$85M in the local economy and create at least 300 jobs. In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commercial spaceport would look like. It seems the FAA has bowed to a vocal minority of activists, and the state of Texas has been oddly silent in the matter rather than fighting for their investment as one might expect. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties. Sincerely, Charles W Jarvis 3rd

Please allow SpaceX to go ahead with it's Starship orbital launch. I believe that this is the necessary next step in America's ability to return to the moon, establish a permanent presence there, and hopefully move on from there to Mars and further space exploration. I believe that SpaceX has shown it's thoroughness and competence with the numerous missions it has completed to send Astronauts and supplies to the ISS, and they will continue to advance space flight professionally and dependably with their new equipment.

I am sending this email in support of the Starship development program at Boca Chica, and also to say that I support orbital launches from SpaceX's private spaceport. The program is critical for the United States to continue to be world leaders in space flight. Delaying the Starship program would mean other countries get the necessary time and opportunity to take humans back to the Moon and beyond, instead of the United States claiming this glory. SpaceX has also shown great care for the environment especially from their support for local wildlife after the winter storm hit Texas early in the year. Even though the development pace is somewhat unorthodox we should work with them to NOT delay the Starship orbital launch attempt any later than 2021, if possible. SpaceX in recent years has displayed what the best talent in American engineering can accomplish to put us far ahead of the rest of the world, it would be foolish to delay the progress of orbital launch and allow other countries to catch up in their technology. Furthermore, I truly believe that the development and exposure that SpaceX has brought to the area has been beneficial and will only continue to be exponentially beneficial in years to come. It will bring economic wealth to the county, and huge growth in tourism, especially as we move out of the pandemic. The economic and infrastructure development upside cannot be overstated. If we (The United States of America) can complete the orbital launch attempt NET the end of this year, it would put America on pace to hit it's Moon landing goals for this decade. We cannot allow other countries to display dominance over us in arguably the great technical and engineering race in modern history. Thank you for your time. God Bless the United States of America

To whom it may concern, I implore you to grant FAA regulatory approval to SpaceX Boca Chica Texas, to allow this "Once in a generation" company to proceed with testing and development of it's space fairing systems. It's imperative that development be allowed to continue without costly delays that may see the system cease to be developed. The economic benefits to the local communities also far out weight any detrimental affects brought about by SpaceX's development of the region. Progress of space capable systems cannot be so risk adverse that the urgent nature of this development be stalled. SpaceX has on many occasions demonstrated through support of local institutions it's willingness to mitigate it's impact on the environment. Lastly I'd like to point to international pressures from China who are launching at a much more significant cadence that any other space industry competitor including SpaceX. China has and is continuing to build a strong presence in orbit and beyond with it's own space station. Holding up the development of SpaceX's Super Heavy / Starship system in Boca Chica hands China a huge advantage in what is a very real space race. Thank you for allowing my submission. Kind regards, Gary Bruce

Space X has made tireless efforts to increase efficiency and eco friendly rockets we have seen clean burning fuel and also many successful missions with NASA transporting astronauts to the space station. The positives of Space X's work is extremely substantial. Their mission helps to better our scientific knowledge of space and close proximity to the Moon and Mars. This could also increase resources by what can be extracted. Many new technologies that are beneficial need to be made/ assembled in 0 gravity with space X's launches and collaboration with other companies this can be achieved. The reusable rocket and booster decreases debris in the atmosphere many other companies across the still have more debris left and many failed launches. Space X analyses it's rockets constantly to decrease problems in safety, efficiency and environment; this testing decreases waste and failed launches overall far more than other competitors. Space X's continued collaboration with the FAA, traffic control and natural wildlife regulators helps to provide research to improve safety of wildlife, residential areas and regulations in space flight that is important as the industry is increasing. The collaboration shows respect the impact space X has on environment and public far more than many other companies. The resources used to make the rockets, buildings and research centres is costly to acquire and the cancelled launches will waste much more resources than if they were used. Space X has been a credit to America, a milestone in space flight, scientific research and environmental solutions and an inspiration to us all.

My name is Billie Jo Parent and I live in Pennsylvania. I have lived in Pennsylvania for 46 years and have never traveled to state of Texas. I speak on behalf of myself only. My comments are in support of SpaceX's missions and in hopes that the FAA grants the permits and/or licenses SpaceX is requesting for said missions. I am confident that the FAA will acknowledge SpaceX's mitigations for any environmental impacts as SpaceX has made their intentions quite clear they are working to improve the surrounding environment and wildlife that rests among and around their Boca Chica Launch Site. I would like to state for the FAA's consideration, the implication that to further progress the state of humanity, wildlife, earth and space, in a positive, constructive manner that will lead to preservation of life moving forward, there will be a need to make adjustments to regulations as well as have an understanding that there may be negative impacts although not intended. SpaceX has provided a tremendous opportunity to further advance in science, and I am grateful to be living in this era to experience this. I support having an agency regulate all aspects of science based studies and fully expect that SpaceX will cooperate with the regulations set forth by said agencies. I have been fortunate to witness a positive worldwide influence to the latest advances in Space technology that SpaceX has provided to humanity thus far, and I am honored that it is an American based company which has employed a multicultural environment within. The rate at which SpaceX is expanding also has had a positive impact on job creations. I do believe SpaceX will assist our NASA programs through lessening the funding costs with the use of SpaceX's reusable space vehicles. I would also like to note for consideration, it is imperative for America to maintain space dominance to maintain humanity's safety and ultimately preserve it. I look forward to a positive response from the FAA in awarding SpaceX the permits and/or licenses they are requesting to achieve their successful mission. Sincerely, Billie Jo Leah Parent

Hello, I think Starship is the most important space vehicle in development at this time. Everything possible should be done to expedite its success. I think the FAA should immediately provide the launch licenses SpaceX seeks. The sooner it flies the better. We'll get back to the Moon sooner and the ability to launch and return payloads and ultimately people to orbit will be exponentially improved. I watch the developments a Boca Chica almost every day. From all I've seen SpaceX is acting responsibly, and acts morally. Its activity there and the economic improvements it will bring to the area seem to me a win-win for all concerned. Thank you, Peter Smith.

I know that rockets, fuel farms, sometimes explosions make a lot of pollution but also I am a fan of the space program specially of starship and I know that some animals probably live there, some people say that the beach is always closed when they go and a lot of bad things, but also it is important to develop space technology and learn more about space and the best option at the time is the starship program in terms of cost and efficiency. The damage that it can cause a explosion and pollution to the planet I know that is big but in boca chica at least that I know, the only especies of animals that live a lot there are some tipos of birds and insects, also there is no a forest near so a explosion will cause more damage whit the methane. About the sonic boom I don't think that it really affects a lot it's only for a second and local people is evacuated, in animal it can affect but I don't think that it can kill animal, it can probably cause some damage but not permanent. In general I think That space x can continue whit its proyect there, there will always be people that think different but I think most will like to see the starship in air, the local people need to evacuate but it that is a problem Elon musk I think that can make a treat whit them, and all have a solution, this program is very important for humanity and the good thinks that it can do is more that that bad thing. Finally it is reusable so in difference as other rockets it, so that's an important point for the environment.

Let the tests begin... Starship could and i think will be one of the most revolutionary pieces of history to ever hit centre stage in the aerospace industry and your really robbing us all of the possibilities that could come from a successful orbital flight. Ive also reads the FAA environmental assessment and other bits and pieces and think the starship program will be the united states greatest aerospace and propulsion asset and accomplishment even though SPACE X is privately funded it's an American company and is known widely as an American agency. Long story short do some actual good and let them prove their technology or at least learn from it rapidly.

Hello FAA, I read the report, personally i think reports, simulations and numbers are one thing, but the proof is always in the pudding. So this test launch is a great opportunity to actually measure sound levels at indicated distances and thresholds. It's also a great moment to put up camera's and observe wildlife reactions. And if they flee their possible return (?) A test is a test is a test, so use it to test ! And to do so, give SpaceX the chance to test their vehicle and launch Spaceship. ps. do not expect any replies from emails send to the email used to send this message. It's specifically for things like this (and likely spam sources). With kind regards from me

Please help SpaceX as much as you can while they test their new vehicles. I believe that SpaceX is an incredible company that is innovating and advancing the technology of space travel more than any other company. They are more efficient with capital and have the most motivated and best engineers in the world. They have an admirable mission and should not be held back as they try to make humans a multi-planetary species.

Although I don't live in the Boca Chica area, I want to send my support for the orbital launch of Starship. This launch and return is largely happening over water and the fact that there has not been a launch attempt in 5 months indicates that they are trying to get this right. A 100% reusable space vehicle and booster would be a total game changer for NASA and could totally revolutionize Space Exploration and our understanding of Space.

I support the SpaceX Boca Chica Starbase as essential for the future of humanity and advancement of space travel. The greater good for the US and it's leadership in space based from this facility far outweighs the relatively minor financial and environmental impacts. As Americans, we must help SpaceX accelerate towards achieving it's mission and open access to space for all. It's the right thing to do.

I support continued operations of SoaceX near Boca Chica, Tx. I believe we should continue expansion of the project to include orbital and potential interplanetary launches. Yes, there will always be environmental impacts when humans embark on large scale building. To assist in mitigating this impact SpaceX should commit to land acquisition set aside as a preserve. This would prevent further building of subdivisions and associated infrastructure. An argument on road closure impacts while also discussing environmental impacts seems laughable. Why would we want additional human traffic if there is an environmental impact concern? The research and developments realized through our continued spaceflight endeavors have improved the lives of humans and our understanding of the global ecosystem upon which we rely. M. Dear FAA, Please approve Starship's flight. It's extremely important for us to fly Starship. Humanity needs new frontiers to create jobs, expand our ambitions, unlock trillions of dollars in new space-based industries, all of which will accrue to the benefit of humanity. A regulator's first job should be "first, do no harm." Boca Chica is remote enough, and SpaceX responsible enough, that they should be given the green light ASAP. Thank you! - Marcelo P. Lima / @MarceloPLima

SpaceX can parallel NASA. Why not? A successful Renaissance Man is using his personal wealth to advance the frontiers of science and space exploration. Just as early NASA launches inspired me into a career in aviation ultimately flying as Captain on international wide body aircraft, imagine the inspiration SpaceX has done already and will with the awesome achievement we can expect with the Starship launches in what appears to be an ideal location. This is our future. Let SpaceX soar.

I really want the spacex starship to fly. I believe that the area is safe as long as spacex takes the correct permits and precautions. They should not be denied because this is the vehicle that will taken hundreds for humans to Mars before nasa, speaking if nasa, nasa gets all the permits they need just because they are a government agency. Spacex's option is also a reusable option because it is using a very thin sheet of metal that is recyclable and also can land and reduce costs of a launch. It is supposed to take humans to Mars and I know you wouldn't want to stop.

Hello, I am writing to bring an opinion on the Starbase in Boca Chica. I think the project should be validated because it brings a significant attractive gain for the region (tourism, employment, economic boost, etc.), its environmental impact is only very slight and SpaceX has already shown in the past to be sensitive to the environment and animal life by helping turtles in South Padre Island and we have for example the Kennedy space center which shows that rockets and animal life can very well coexist. I am not a resident of Boca Chica, I am French (sorry by the way if my English is not very correct) but that is to say how much this project can interest and make dream people everywhere on the planet. The negative points often cited would be the noise and the road closures. Concerning the noise, according to the testimonies and the measurements of its it would not exceed a noise of fireworks and I understand that the road closures can be quite restrictive but there are very few really effective, many are canceled / postponed. Should we really ban this kind of project for simple access to a beach? I hope that despite the fact that I am not living in Boca chica my opinion can be taken into account. Thank you for reading me!

I certainly understand and appreciate valid environmental concerns, but also think it would be a huge mistake to let relatively minor issues on that front hinder the most pioneering technological program in human history. So I strongly support quickly granting Space-X the necessary licenses to continue its Starship testing and development, with the need for any environmental mediation measures being addressed on a continuing basis without blocking those efforts. Many thanks, Scott Finder

The US needs to win the space race and foster innovative companies such as SpaceX. As a voting taxpayer that lives in Texas, I wholeheartedly support SpaceX and its endeavors in Boca Chica. I have been to the SpaceX site numerous times and have witnessed how it has rejuvenated the local economy and provided numerous jobs in the area. It is also inspiring to see such incredible human innovation and I believe it would be a tragedy to not allow SpaceX to continue testing in Boca Chica. Please continue to support SpaceX.

There is no better place for SpaceX to develop a launch complex for rapid, daily launches, than their chosen spaceport of Boca Chica. As a specialist in biotech, I can appreciate the unprecedented pace of SpaceX progress, though it is occurring in a completely separate industry. It is akin to the rapidly developed mRNA COVID vaccinations. As a society, we must allow trailblazers to succeed for the good of all. Please do all possible to allow SpaceX to develop launch capability and cadence to their maximum, at their chosen site for the good of all humanity.

What SpaceX is doing is progress. Progress is benefits all in this country. Do not hold back progress. Making sure we are safe from dangers is one thing. But once it is clear that Americans will not be hurt or harmed by any spx activities, the FAA should not hold them back or regulate them. Saftey is your only concern. Beyond that, let innovation and progress work.

I believe the work of Elon Musk and Space X is essential to our country. The FAA should allow the program to continue unhindered in an effort to further rapid advancements in technology. The FAA has an opportunity to be a part of the solution and should do all things possible to assist in the progress of the starship project. The starship project and its rapid development has the ability to create a safer and more sustainable use of the public airspace. Please approve the starship process.

A little back story. Back in the 60s when I watched Star Trek and we were launching rockets to the moon I would talk to my dad about how exciting space travel would be. He could see how much space inspired me. So, he got a a telescope for my birthday and I loved it. Later in life, while on the hood of my car at the drive-in, I would talk to my girl friend about the stars we could see, completely ignoring the movie. My wife and I still spend time stargazing through a newer telescope dreaming of the possibilities. What I'm leading up to is: These are the moments that inspire humanity to be greater then what they are, to evolve. As a private pilot and space travel enthusiast I felt compelled to add my voice to ensuring Starship gets a green light for it's missions. Not just because it marks an achievement, but because of the inspiration it instills in our youth and future planetary travelers. We are on the cusp of chartering life's adventures across the solar system and it's exciting, and about time to do so.

SpaceX is the only launch provider dedicated to complete vehicle re-usability, which translates to them not littering the rest of the planet with their spent hardware. The launch facility in Boca Chica is vital to the furtherance of the goal of spacecraft re-usability. If legitimate ecological threats are posed by SpaceX operations in the area, then by all means reasonably address them. But I urge you to work with SpaceX to get this assessment done as quickly and reasonably as possible, because the longer we wait to get efficient access to space, the longer it will take to move industry and its associated environmental impacts into space where they are no longer be a threat to the planet. And then there's the nagging issue of how do we get to a safe haven if the Earth is threatened with destruction. We need an off world settlement to ensure the survival of the existing life on Earth, and SpaceX and their operation at Boca Chica is dedicated to that goal. We can't afford excessive hindrances to this essential capability.

Hello FAA! I wanted to take some time to express my full support for the approval of the SpaceX Boca Chica launch site for orbital launches. I am a biology student studying ecosystem ecology and marine habitats. I am also a supporter of space exploration and feel that the most immediate threat to our existence as a species can be mitigated by finding potential planets for human colonization. The goals of SpaceX and the Starship program are to do precisely that. As a biology and ecology student I understand the implications of such a risky endeavour to habitats in the surrounding Rio Grande Valley. The facts are that Starship has already been tested several times and has evolved significantly to complete a successful landing. The superheavy booster is another animal, but given SpaceX's track record, I trust that it will be successful soon. Additionally, all Starship flight failures to date have been on landing. The first few flights will be performing water landings far off the coast, giving time to SpaceX to perfect any issues. This will mitigate the risk to wildlife and the local environment. SpaceX is changing the game, so it's only fitting that regulatory processes catch up. It is imperative that Starship becomes operational as soon as possible, for the good of all mankind and by extension, for the good of all species on earth.

I, Maximilian Marschner (14) from Germany, fully support the operations performed by SpaceX in Boca Chica, Texas! I believe that the Starship system is an essential stepping stone into the human era of space exploration, that is required to make humanity an interplanetary species! Also, concerning the environmental concerns, SpaceX, in my opinion, has proven and presented multiple pieces of evidence that they do care about the environment in the surrounding regions around the launch and construction site! For example the, due to the fairly clean burning of the Starship's Raptor engines, relatively low amount of, into the earth's atmosphere admitted, gases can be made up for with their future plans of making their own fuel and oxidizer, which will pull CO2 out of the atmosphere! But such activities can best be effectively performed and improve upon, if SpaceX gets their launch license as soon as possible! And this is what I, and I think many other people around the world speak up for, for humanities transition into this new era in space, using Starship! Thank you for reading! Have a nice day!

Hi, I wanted to let you know that I am fully in support of SpaceX's mission, and how they are using the Boca Chica/Brownsville area. SpaceX has demonstrated that though aggressive, their work is done with safety in mind as much as possible for experimental vehicles. In addition, their mission to create the first truly 21st century spacecraft in Boca Chica is too important to let slide. Please let SpaceX proceed with their sub-orbital tests, and please help them to make the Brownsville area a future center of space exploration!

I believe that its imperative that we have multiple ways to get to space and beyond. By having the ability for spacex to launch that will provide another method for getting to space and building the infrastructure in space so that we can go beyond LEO. I also believe that space X will address any findings that may impact the local land. If you compare padre to kenedy they are very similar and the wildlife there is thriving... I am for Space X getting approval to go forward with their plans.

I've been watching the Starship program over the pond for quite some time. Here in Finland nature is important and protection is sometimes needed. Starship program makes the future look bright and is needed for humanity's survival. This also needs to be as fast as possible, so I urge FAA to give SpaceX all the permissions they need ASAP. Even if it seems like the operational launches should be done from the Sea launch platforms, there is no reason why a handful of test launches shouldn't be allowed to happen. A launch site ensures that the protected nature won't be built with houses. SpaceX has also made a huge difference in a fairly sparsely habited area. They have 2000+ jobs for locals and have supported the local community. SpaceX has also proven themselves to be the most reliant space launch company with over a hundred consecutive of two different spacecraft. Among those are also the crewed flights. While Starship may have some mishaps during testing, they are likely to happen during reentry far from the launch site. Again, all things considered, SpaceX should be allowed to continue launch and recovery operations as soon as possible.

Hello, I would like to offer my support for SpaceX and their endeavours at Boca chica Texas. I have been following them since they first broke ground and have been impressed not only with the speed and progress they have made but also the way in which they have conducted themselves, only considerate and friendly to the environment with little disruption but also a conscious effort to consider both the natural surroundings and local residents. The work in SpaceX is conducting is critical to the future of humankind and will deliver many benefits to everyone around the world, it is therefore imperative that we support their endeavours and allow them to continue to progress with a balanced set of guidelines to ensure they can continue as they have already without over regulation and control that will only delay progress and force SpaceX to consider other locations which in the end will negatively impact the already many benefits to Boca Chica including jobs and income. Thank you
Gavin Browne New Zealand

I am much in favour for the continued development of the facilities and rocket hardware at B.Chica. It is a new era of this type of rocket development and should and must be allowed to mature. SpaceX has and will continue to ensure the lands and wildlife are respected as they have stated and requested. I have been waiting for a lifetime to see mankind take the correct step to our space frontier in a positive way and hope others will follow. Expansion of mankind requires the minerals and energy that can be mined from space. Please, let this continue at this new and fast transitioning means of rocket development, time is not on our side for resources this can generate. Thank you, Don Smith.

I hope that SpaceX will be able to perform it's flight test and keep it's development speed to create Starship. I believe that this rocket, thanks to it's low cost, will kick off the space economy and make humanity enter a new era which will benefit everyone. On a scientific level, this rocket will help humanity explore the solar system, in particular the moons of Saturn and Jupiter, which might the key to understand the origins of life. Of course ensuring the safety of the test is primordial, and a catastrophe with life loss might significantly slow down development. If no human lives are at risk, then I think it is imperative to perform this test. Thank you, Etienne Bernard

What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market
2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1bill in annual revenues from satellite, engine purchase and human flight. 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet. Please grant exceptional regulatory approval for Starship's orbital launch attempts from November 2021 onwards.

Hello, My name is Kent Kroll and I live in San Francisco, CA. So while I'm neither a Texas or boca chica native, I do think the world has a vested interest in the success of this project. No other government or company has ever attempted a cheap reusable rocket of this magnitude before. The early tests have proved that this concept may be viable, and that should be enough to allow the only people in the world attempting to change humanity for the better, to continue with their testing operations in an empty isolated space in boca chica. Please approve their operations. Thank you, Kent

Dear FAA, Humanity has always been about exploring the unknown. Unfortunately one of the biggest plagues to have been brought upon our need to explore is having to wait for the governments, or ruling body for approval. Let's allow spacex to go at whatever speed it needs to, or at least speed things along so humanity can have a future it looks forward to, and believe in. The way the FAA is halting progress is destroying the moral of an entire species. Life sucks right now and we all really need something to look forward to and believe in. SPEED UP THE PROCESS

I am not American, but I can say this: This ambitious project, Starship, is the kind of audacity that the world watches with awe and which gives hope to younger generations. I hope, given the history of success in protecting endangered species by affording natural areas required by protection/exclusion zones for launch capabilities found at other launch centers, that it should be a no-brainer to allow SpaceX to move forward with launches and development of the facilities they are proposing.

Greetings! I am David Datu N. Sarmiento, currently living in a town here in the Philippines, 17 years old, currently a senior high school student, , and I'm awed to be able to send you a message. I have known SpaceX via "Youtube" for about 2 years now and I've been following them everyday. Their future plans inspires every people in the world, just like me, who's never even touched the base knowledge of rocket science and engineering. Reusability, commercialization and all these new innovations made ignites my passion-to educate myself higher to be able to take a part of this movement someday. I hope you would help SpaceX inspire more people like me. Sincerely, David Datu

Thank you for the valuable work the FAA does. Every action we take on this planet has some environmental impact. SpaceX activities in South Texas will have an impact, just as Cape Canaveral has an impact on the wildlife refuge in which it resides. The important question is what value do our actions bring and is the impact justifiable. I believe the value SpaceX brings to space exploration, scientific advancement, NASA, the US, and Texas is worth the impact, which will be mitigated as much as possible by SpaceX and regulatory bodies. Starship represents an ambitious leap in space capability, and has established itself as a crucial element in NASA's return to the Moon. A fully reusable rocket has the capacity to expand the entire US economy, secure space dominance for decades, and further democratize space. I am in favor of SpaceX operations in Boca Chica Texas as a human and as an American.

I fully support the Starbase and Starship project. People who claim that we need to focus more on Earth's problems are focused on problems not solutions. Focusing on the heavens will help solve humanities problems faster, because aiming higher will at the very least land us in a place higher up then we were before. Aiming at the ground will land us in the ground. Our environmental problems are not just SpaceX fault, but everyone's problem, and will require organized effort from all over the world. I don't live in the area, so I don't know what specific environmental challenges the Boca Chica area is facing, so I can't comment on that, but I think the challenge of figuring out how to make Starbase work with and along side the environmental challenges would be part of the mission to the Moon and Mars, so it all works together.

To whom it may concern, I think it's incredibly ridiculous that I should even have to put into words to another living human why SpaceX is so important to our survival but nonetheless... here we are. SpaceX is the most important engineering happening on our planet right now. They have built reusable rockets and brought the price of going to outer space down. Humans need to become a multi planetary species, for more than just one reason. SpaceX is leading the way for us to do just that. The fact that they were just able to put four normal United States citizens in outer space for three days and raised for 200 million dollars for St Jude is also absolutely inspiring. Too bad our own president couldn't even congratulate those remarkable citizens for being the first normal humans to spend three days in space. This future makes me the most happiest when I wake up. I've been to Starbase and I couldn't picture Heaven being a better place. We need SpaceX. We need more people in outer space. We need to feel inspired and we need to become a multi planetary species. Thanks for reading - Jerricka Lee Peters

Please permit space x to conduct regular launches as he is the newest American and Canadian hero this is all we have left to look forward to as having any hope of a future the economy is in desperate need of jobs and a better future and Elon is the only person stepping up to the plate The government has taken everything even my future I can't even afford to live in Ontario I have to move away from my family because the only place I can afford a place is in Nova Scotia as well as most Ontarians are buying houses out in Nova Scotia because we can't afford to live in these heavily populated areas I say it's a 100% go for star base look at the wonderful things he is doing for Brownsville and Boca Chica beach people are scared of change but they don't realize that change isn't always a bad thing especially if it benefits the population and the industry all the thousands tens of thousands of immigrants trying to escape a country of poverty at the border in Texas not realizing that you were preventing them from A better future Elon musk has inspired and still inspires and continues to inspire he is 100% all of the greatest American heroes mixed into one human being and you cannot deny that my son is 11 years old and he looks up to him more than he looks up to me I look up to Elon he is like the father and the God of all we have left When opportunity knocks you can't deny it

I am for one in support of the SpaceX approval to be able to carry out launch's from Boca Chica. The past year has shown a new generation of scientists, engineers and dreamers that the sky is no longer the limit. I can only hope that this enthusiasm continues for years to come, as humanity reaches outwards.

Dear FAA, I'd like to leave my support and approval vote for SpaceX and their activities in Boca Chica. I believe SpaceX is an incredible company with super skillful employees, and I trust that they will do whatever is possible to gradually improve the situation (reduce risks and environmental effects). Their work is of extreme importance and, besides that, it brings hope and joy to the lives of many. The region should be proud to have them. I hope they will continue to make fast progress and make Boca Chica famous around the world, and soon enough, around the universe. Thank you for your time. Diogo Souza

I am writing today to request that spaceX orbital approval be granted as soon as possible. Their various missions have continually improved and their safety record has nullified all regulatory obstacles. I hope that you will protect all stakeholders by expediting my request and we can soon cheer as the mission touches down in Hawaii as an American success.

Please grant SpaceX an orbital launch license at their Boca Chica facilities. Locations in the US are few and far between that can support rapidly reusable spaceflight, and spacex has shown to be proper stewards of the environment despite their massive growth. This is a unique opportunity for the government to support a massive technological leap forward. God bless.

The future of space flight is an exiting event that has given humans hope and inspiration since it's roots. I'm sure there are plenty of messages on this topic, so I'll save a lot of the common points. However, one thing really stands out in my mind to consider. As important of a cause as this, and with unprecedented advancement of engineering, science, mechanics and the like, are we really going to have ships that are ready to be tested and progress, just sit there with the only thing holding them back be paperwork? I know it's kind of extreme to put it that way but really if you think about it it's kind of arbitrary, we created these limitations for ourselves but it doesn't have to be this way. Let these people fly and test at rapid pace as long as it is safe and in good consideration to risk factors. Please don't limit the speed of progression in space flight.

Dear FAA Please allow SpaceX to make Boca Chica a large launch complex for Starship to LEO and beyond with daily launches if need be. The human civilization need to become multi-planetary or it will die out on Earth with certainty like so many other species before it. We have a first chance now at this moment in history to actually develop the tech that make humanity multiplanetary. Let's not waste that moment in history on comparatively small localized issues regarding safety and environment. The survival of humanity is at stake so let's help SpaceX to fulfil their mission instead of forcing them to go to other countries to get the job done. Regards Henrik Mathiesen

I fully support SpaceX activities at Boca Chica and foresee minimal environmental impact. The cutting edge technological advances being made at this site, which will enable the success of the NASA Artemis programme to return humanity to the moon, and also drive the first crewed missions to Mars, heavily outweigh any minor environmental concerns. If the FAA significantly delays SpaceX it will clearly be against the interests of Texas, the USA, and frankly the future of all of humanity.

Dear faa, I'm a Dutch master student who is doing a master in game technology with the dreams of one day joining the American workforce to work on some of the great games we all love and play. I know that probably a lot of people will be writing letters to the faa and that mine will just be 1 in a million of those. But I hope to give you a small perspective of what the great achievements of SpaceX and spaceflight in general have meant for me. I'm sitting here in my small room on a Friday night watching Dutch television and to be honest there in not a lot of things that make me happy anymore and specially with the covid lock downs here in the Netherlands. It has made me feel more depressed then ever before. The news just keeps repeating new people have died and more hospitals are again screaming to have stricter covid restrictions. Somehow you just hope to have some good news once in a while. Just some news that is not about "we are destroying the world in a alarming speed". This may sound a bit strange but the many YouTube channels that are following the SpaceX starship development have became that news and temporarily happy place for me. Nearly every morning I'm now sitting in my room watching how Boca Chica has changed compared to the previous day. It always makes me feel happy. I really get that feeling every morning while eating my bread and I don't even know why. I still remember the first qoute on qoute watertower that could fly for a short moment in Texas. It was really great watching it together with my mom and dad who both where glued to the screen to see rockets when they where young. American landed the first man on the moon when they where young and somehow I have that same feeling now. I truly believe America will get a new man on the moon moment in a few years and that Boca Chica is making that moment closer then ever before. I know that that this email will be a bit strange. Why would a Dutch boy from the other side of the world want to send a random mail to some agency from an other country. I know it's strange but I truly think that the things that are going on in Boca Chica will change every single person that lives on this planet. This is not just a simple is everything save check. This is not a are the sound levels everywhere okey check. This is about the question do we as humanity want something where we can all look forward too? Do we want to dare a dream big? Do we as humans want to prove to ourselves that we can do anything we set out minds to? Do we people on this spaceship earth want to dare and dream about the next chapter in our history books? For me a random village in a country I have never been has change the way I look at this world. This small village has become the virtual place where I can be proud again. It has become a place where i have watched more videos about then any other place. It's the place where I have a Lego mockup of in my room. This random village called Boca Chica and part of the people that live there have become my virtual friends. It has become the place where I have never been to but feel like I can be happy just walking around and seeing everything that is going on there daily. And again I know that this email is one in a thousand, but I just want to say thanks to Boca Chica. Thanks for making me feel proud again. Thanks for making me feel like there is something to look forward too. Kind regards, Timo Strating (a random dutch stranger)

I would love to say that I love what Elon Musk's team at both Space X and Tesla are doing. Space poses many challenges for humanity and engineers in understanding how we live and providing a contrast of earth bound activities vs extraterrestrial. This is important as it will greatly highlight what's important. Space needs to be colonized by Space X urgently and specifically in the manner which Elon is progressing. Letting people see what's happening and not acting behind closed doors like some groups are. Personally I've been waiting a long time to see super heavy lift off for eons that's the opposite of Elon things must move. It's almost crazy how much technology has advanced but all the important information is locked up behind patents and intellectual property that taints capitalism. The most beautiful thing America ever did was to make the internet "free" to use. Information has liberated humanity. Halting SpaceX endeavour's kills any information SpaceX might gain even though they don't share all the information about how the rocket is built to see them building without hiding is more valuable than then all petro dollar as it's an enabler of independence (if covid has taught us one thing it's that we are heavily dependent upon earth). I pray and hope for the sake of humanity that information is shared and condensed so people can live the life they desire without constraints from corporate because we live in a physical world where things are millions of times harder than theory. Go Elon Go Space X Go life Go independence

This email is in regards to future SpaceX launches. In my personal opinion, we humans don't have many options relating to the longevity of our species. Without companies like SpaceX, we will continue our unyielding march towards inevitable overpopulation on this planet with 0 recourse. Are there risks to rocket launches and space travel? Yes. But to slow down the process would be an ignorant and irresponsible course of action in the wake of current events all over the world. And speaking of the world, our Earth is wearing herself thin to accommodate us. The least we can do for her is to spread ourselves out and preserve our "Tiny Blue Dot".

To whom it may concern, Please take all the time you need to prepare a thorough environmental review for SpaceX's Boca Chica proposal. In the meantime though, perhaps you could approve 2 test launches while the report is finalized, that would help maintain engineering momentum while giving ample time to work on your end. Hoping for a successful resolution for all parties. Cheers, Matthew Hensrud

I think SpaceX has no interest in harming the environment, but it's part of the Space Exploration, especially if you want to do so rapidly. The progress of SpaceX is truly inspiring to people all around the World and shouldn't be put second Place to the ones living in Boca Chica Brownsville. SpaceX would appreciate it aswell as we do, and would definetly be willing to invest some of their capital into a Reservoir similar to that in Houston. SpaceX is the company that breaks Boundaries, which has to be compensated for not forbidden. Best Regards Julian Baumeler

At the beginning of this century, the technologies used in the fields of rocketry and space exploration were very much the same as those used in the sixties. SpaceX invented new technologies like reusable rockets that have caused a paradigm shift and have made space flight more economical and viable. SpaceX has given a new hope for humans all over for an exciting future, most recently with the Inspiration 4 mission. Future of humanity lies in making humans multiplanetary and the Starship/Super Heavy booster is an important step towards that goal. The review process provides important feedback that will be invaluable in planning for the future. A timely schedule would greatly help SpaceX in reaching even bigger and exciting milestones that lie ahead.

I write in support of the FAA issuing operational license to SpaceX Starship program. As has been demonstrated for over sixty years at Kennedy and Cape Canaveral Space Force station, launch vehicles and the environment can coexist and even flourish. SpaceX development is crucial for our national space goals, especially lunar and Mars crewed exploration/sustained presence. Starship also can prove vital to our national security via Space Force utilizing the cargo variant to deliver 100 tons plus to anywhere in the world within an hour. SpaceX Starship program is also a benefit to the local community by hiring workforce and attracting skilled labor to the community. SpaceX will not only benefit the school system financially with a larger tax base, but also by inspiring students in the area that they have a role in the future of mankind's effort to become multi planetary. I urge the FAA to issue SpaceX the operational license that the seek as soon as possible so that development of this vital program can continue. Respectfully, Mark Gautier

To Whom It May Concern: I am not a Texas resident, but have followed the progress of SpaceX over the years. Nobody can deny the major significance of SpaceX's entry into the US aerospace industry - they have single-handedly advanced our technology after many years of apparent stagnation. This is so important on many levels, but especially in light of increasing competition from China. The events happening in Boca Chica today will no doubt prove to be pivotal to our progress tomorrow. We must encourage SpaceX to continue to push the boundaries of what is achievable in space and we must ensure that these breakthroughs are owned by the United States. While environmental and resident concerns have their valid place, when we prioritize what is important for our American society and our position in the world, these concerns are secondary to the need to maintain our leadership position in space exploration and technology. Thank you for your attention. Sincerely,
Michael Kim

My name is Howard Hull. I am a citizen of the United States. I strongly support Space X and what they are trying to achieve in Boca Chica Tx. As Americans, we are very fortunate to have a company like Space X seeking to advance the capabilities of America and the entire human race. Please approve the plans of Space X and allow them to lead us to new technological heights. Thank you for your time.

Hello, We strongly support the SpaceX endeavors in South Texas. They are a conscientious, progressive company that is focused and determined to provide human kind not only quick cross planetary transportation options but also push the frontier of interplanetary travel. SpaceX has shown their commitment to reusability and sustainability, and I can confidently say any environmental impact would be grossly overcome by the net benefit this technological advancement delivers. Elon and company are environmentally motivated and aware, as shown through his other companies such as Tesla, prioritizing electric vehicles to reduce pollution and consumption of fossil fuels. We urge the FAA to swiftly approve further SpaceX testing and launches with the proper oversight and protocols in place. Thanks for your continued support of SpaceX and their endeavors. We are excited and inspired for the future of humanity, due to large part of SpaceXs constant innovation and success. Thanks, Anne McQueen

I know that, as a non-resident of the area, many here may dispute the validity of my opinion as it relates to this public hearing. But give me a chance and let me explain how my lived experience near the birthplace of America's manned space program truly does relate to SpaceX' current efforts in South Texas. Although I'm a Texan by birth (I was born in El Paso the year we landed on the Moon), I grew up in Titusville, Florida in the 1970s and 80s. I'd like to start off addressing the economic impact and gentrification question. I lived through the local economic impacts that resulted from the end of the Apollo program in my community – which was a fairly significant local recession – but I also lived through the economic rebirth that began with the development of the Space Shuttle program and which lasted through the 1980s. Titusville and other communities in Brevard County certainly saw rapid change at the beginning of the 1960s. The town grew faster than anywhere else in the country back in those days. But that boom didn't last. Many of the high-tech and blue collar workers and their families eventually moved out. My community needed to diversify, and not put all our eggs in one basket. Economic diversification is the tool to fight gentrification. Part of my community's economic diversification – especially since the end of the shuttle program – was embracing an environmental economy. Which leads me to my next point: addressing the question of environmental impacts. I live near one of the most environmentally pristine locations in Florida, as well as in the United States. Although several early communities were displaced in the area because of NASA, the long-term result has been that a large portion of the Florida coastline and coastal wetlands have been perfectly preserved and protected due to the arrival of NASA on Merritt Island and Cape Canaveral. There are numerous protected and endangered species that call this area home, and I firmly believe that many of these species are still with us today precisely because of the arrival of NASA and the Kennedy Space Center. I believe that may also happen if SpaceX and Starbase are allowed to remain in South Texas. When I look at what has happened to the rest of Florida up and down the Atlantic coast, and consider what "could have been" had NASA not come to town, I truly believe that our pristine beach and wildlife refuge would have eventually succumbed to the pressures of private development. Finally I'd like to take a moment to talk about the bigger picture. Surely this isn't the 1960s all over again. We can't simply continue to rely on NASA and the U.S. government to solely keep leading us into our future in space. Space exploration, with measured government oversight, is precisely where companies like SpaceX and Blue Origin can and should be allowed and encouraged to step up. In conclusion, yes we do need to be mindful of the environment and local economies as we continue our efforts to explore outer space. But please keep the bigger picture in mind as well. This isn't a zero sum equation. SpaceX is giving humanity hope of a bright and prosperous future among the stars, and with your guidance they can also continue to bring prosperity to Cameron County. Thank you for your time.

Having spacex continue to operate from Boca Chica is as low of a environmental impact as you can get and the safety to the people that live around the area as low in numbers .. there is no better place for them at this time and it is important they are granted the rights to keep building as they have plans to move things off shore in time witch would make all of this even safer .. we must take steps to make sure spacex can keep developing its rockets and the tech to operate them safely

Starship is a key technology that will enable humans to explore our world and spread out among the stars. American innovation should not be looked down upon but instead be given every opportunity to grow more. Starship is a costly project that has helped recover Brownsville from being such low to putting them on the map. This test is not only important for SpaceX but it is important for the sustainability of life, both on Earth and in the future on other planets. Please grant regulatory approval for them to do their first test launch from Boca Chica. This is not a mission for one, it is a mission for all.

Elon Musk and the people at SpaceX is one thing the people of this country, and around the world, are watching that gives us hope during these times. Especially for those who are in complete lockdown and have nothing else. Please dont delay this launch. Millions across the world have been looking forward to this. And the U.S needs to stay ahead of China in something. Thank you.

I write in support of the SpaceX Boca Chica launch program. I visited Boca Chica and viewed the SpaceX facilities from both the public roads and the beach. From what I can see SpaceX is being very careful to respect the local environment. More important, what SpaceX is trying to achieve is extremely important for humanity. The Starship/Super Heavy system will greatly lower the cost of launching payloads to low earth orbit. That provides extensive benefits to those of us on Earth, and greatly enhances our ability as humans to go to the Moon, Mars and beyond. There is a small risk every year that an extinction event will occur on Earth. Expanding human civilization beyond Earth is important to preserve human culture. It's also inspiring to many of us, and to our children as well. Let's Go!

I believe it is important to allow SpaceX to continue with full functionality. Not only has SpaceX contributed to making hundreds of jobs for the locals, they are also creating the future right here in the sweet state of Texas. If Texas would to refuse SpaceX, we would be removing one of the greatest companies to ever be produced. SpaceX is the future and I believe they will achieve greatness.

Dear FAA, I am writing the FAA to show my support for the continued testing of SpaceX's development of Starship at their Boca Chica, TX Starbase facility. I am a resident of Texas as well and share the excitement of watching this program develop. My children are encouraged to enter careers of engineering or aviation because of their passion for watching SpaceX develop this platform for future space missions. As a taxpayer, I feel it is important to support development which brings a positive influence to our future generations. I hope your administration will continue to assist and approve SpaceX to launch further iterations of their Starship prototypes. Thank, William Lebo IV

To Whom it May Concern, Please deeply consider Elon's Starship Launch for approval. This is a vital step for Humanity's reach to the stars. His actions are inspiring me and millions - if not billions - of others into the STEM fields, space interests, and patriotism toward the wonderful scientific achievements of our country. Good relations with regulatory bodies is vital for space travel. Let Elon take the risk toward his own working capital, as long as human lives are not at risk. Thank you, and look forward to the launch!

I strongly support the development of a launch facility by SpaceX at Boca Chica, TX. Those people attempting to halt the program made the same claims about Cape Canaveral in Florida, and it is now considered an environmental wonder. SpaceX has a track record of being a considerate neighbor and should be given the opportunity to continue their work.

To the FAA — As all forms of innovation accelerate and interact to produce unknown consequences in every arena, isn't it utterly amazing that one company keeps America in the game more than any other? One company has restored wonder. One company innovates at breakneck speeds, and does it without a destructive cost plus mentality. The future is now. Let's make sure SpaceX receives approval and launches. Cheers, Lawrence Latvala

Hello! I am writing to express my wish for SpaceX to get the approval from FAA to launch Starships from Boca Chica. First of all, humanity must evolve. Starship is one of the first steps for humanity to become a multiplanetary species. It would enable us to survive an eventual mass extinction (for example an asteroid impact, a deadly illness or even self-destruction). Secondly, the aerospace industry must evolve too. SpaceX's Starship is such inovating, efficient and cheap launch system that no other launch vehicle can ever be compared with it. Furthermore, it would be the first and only fully reusable rocket in use. It will change the world even before it lands on Mars by cheaply deploying satellites on Earth's orbit or even enabling people to fast travel between distant locations. Finally, SpaceX has a very good reputation. SpaceX managed to make a routine out of landing rockets and reusing them, an achievement no other company has earned. They are very intelligent, experienced and willing people working on cutting edge technologies and needing your support. Therefore, by taking engineering to a next level, inovating the rocket industry and helping humanity, SpaceX has proven that they deserve your trust and support. Thank you kindly, a space enthusiast.

I'm requesting for FAA to expedite review of starship approval process and two take a global look at the accomplishments of this company, the importance of this for the future of this country in terms of competitiveness why balancing the risks to a small Beach and a local community. Storing this company down would be like stopping the Apollo project because of changes to the beachfront or stopping to Manhattan project because of the desert animals. I consider myself to be an environmentalist but I also believe in balanced approach to everything and when one company is so important to future of mankind, leniency would be warranted. Thank you

I have gone to the Boca Chica beach several times. The only debris I ever see there is from littering beach goers. SpaceX is responsible and even has had several people volunteer to rescue local fauna during natural occurring events. We need this site to become competitive internationally. If after two years there was substantial changes from SpaceX being there, the evidence would be clear. When I visit the beach, I see several fishing parties going on and driving which has more of an effect to natural habitation spots than SpaceX having their site there. For that matter, what are the effects from the ships coming into the port? Residents aren't heavily regulated and environmentally conscience like SpaceX and their senior leadership. So naturally, SpaceX is going to be responsible as it impacts their mission. Not being able to launch from the site. It's a no brainer that a CEO who has changed the transportation industry to become more aware of its environmental footprint, would also make sure that his operations aren't effecting an area where he not only works, but also is a resident. We are talking about rocket science here so it's pretty obvious that every risk has been analyzed and mitigated. I get the need to do checks and balances as a government, but it's pretty obvious that this has not been done to ULA, Boeing and other organizations that are in the same naics as SpaceX. So the question here is who is lobbying to stop the advancement of a topshelf rocket science company? Please stop the bureaucracy and allow progress to happen. Otherwise we can keep letting other countries who don't believe in democracy to overtake us as the best on the planet and then what will ULA, Boeing and the rest do? Capitalism will cease to exist and we will be frankly screwed.

In a world where everything seems to be going wrong, SpaceX is the only thing that gives so many of us hope. It's because of the efforts that SpaceX is putting in to make humanity a space faring species, why the future still holds hope. Without them, it is ridiculously stupid right now in the world where everyone hates each other, we're going through a pandemic and politics is ruining everything good. Please, don't be a blocker and authorize SpaceX to move forward with their efforts for Starship in Boca Chica. They've already proven to be the best hope humanity has beyond this planet, it's time to support them and fast track their progress. Thank you.

What SpaceX is building down in Boca Chica, TX is not just for Texans or Americans, it will ultimately be for the benefit of the world. The rockets must be allowed to be flown and frequently. Building this rocket is already an insane challenge, please do not continue to make it harder on spacex to achieve what we once thought was not possible, an orbital, heavy lift, reusable rocket. Not only is this rocket going to benefit the world by opening our species up to space travel, but it inspires people that the future isn't bleak it isn't doomed, look at what the collective will of people can create! A space ship! Please please please allow Star-base and Starship to continue. From 25 y/o.

Dear FAA, I am a young man of 26 years old, who is paralyzed from the neck down. I am emailing you today because I am showing my support for Elon Musk's endeavor to bring the first humans to Mars, and also back to the moon. I am graciously asking you to allow Mr. Musk's first Starship orbital flight this next coming month. I am a dreamer. But sadly that is all that I will be is a dreamer. Due to my injuries I will never be able to go to outer space, at least not in my lifetime. By seeing Elon reach his goal would in turn allow me to share on this extraordinary and life-changing trip, the most otherworldly experience of a lifetime. Please find it in your heart to let this happen. Thank you very much, Sincerely yours Ryan

I support Starship's first orbital launch attempt by next month because we need innovation and safety when attempting such endeavors and they have a good track record of not doing anything to go against that sentiment. Also we have no internet access in rural parts of America this would increase satellite launches if successful and bring equal access to my home and it would pave the way to have us one day travel to Mars and become pioneers and build a legacy of human kind having the passion to do something together that might save our species in the futures of our children.

I wish to add my personal endorsement to granting SpaceX the necessary regulatory approval to support launch operations at their Boca Chica, TX facility. I believe that the advantages and innovations that will result from their proven commercial space launch and exploration platform will benefit both Texans and all Americans, presuming an appropriate level of agency oversight. Now more than ever we as a country should directly support the ability for commercial companies to help advance our leadership in space exploration and to actively explore inter-planetary actions. The role of the FAA in supporting and overseeing this effort is crucial - but so is its partnership and advocacy. I look forward to the FAA making the right positive decision in support of SpaceX and their Boca Chica facility. Sincerely, --Scott Langdoc

This launch by SpaceX is more than necessary. No other agency has made the advances that SpaceX has done. If it is not approved we will be putting the advancement of any future space travel on indefinite hold. This will impact the U.S's plans to go back to the moon, and ultimately Mars. Please consider the benefits of approving the SpaceX launch.

Low cost transport to orbit is necessary for the long term survival of the human species. SpaceX offers the best opportunity and is the most advanced in the world. However other countries such as China may catch up and present a national security threat. Spacex must be expedited for the sake of humanities future, and national security.

I strongly support the issuing of experimental launch and/or vehicle permits for the Starship/Super Heavy program at the SpaceX Boca Chica site. The site is an excellent location in terms of range safety as launches can be directed over the gulf of Mexico while accessing orbital headings to the East and South. Local environmental concerns are important, but I believe on balance the success of the SpaceX site in terms of bringing economic activity to the area should be a net benefit to the local environment -- the additional local taxes brought in by that activity can pay for improved environmental protection as well as access to alternative beachfront locations for leisure activities that may be displaced by space operations. The Starship/Super Heavy program also promises to improve the climate impact of space activities in general by implementing a propulsion system primary based on methane fuel which can (and ultimately should) be produced in a carbon neutral manner by way of solar-powered electrolysis and the Sebatier process (this is the same technology that SpaceX will need to use to generate fuel on Mars, so I fully expect they will ultimately employ and perfect the technology here as well). The possibility that this technology could be used for point-to-point transport on earth could transform the global air travel industry to being complete carbon-neutral. The proposed non-carbon-neutral emissions during the experimental Starship/Super Heavy development program are a small price to pay and are not a major concern given the long-term potential to dramatically change space transport and air transport industries into carbon neutral activities. I urge you to approve the applications for experimental permits for SpaceX activities at Boca Chica.

FAA, I'm a huge fan of SpaceX and it's mission. I believe it's really important to become a spacefaring civilization as fast as possible. So when I see tax dollars being spent only to throw on the brakes just to impeded progress it becomes pretty frustrating. Please do whatever it takes to speed up the process so we can continue. Best Regards, Andrew Watson

Out of all of the risks taken, this would be one we should all take, as a people. This will be the future of our species. A spacefaring civilisation and a multi planetary species. I think it's important. I think have lost their minds a little in the last decade. Caught up in the internet with things like fashion, gender, race and war. We as humans are explorers and seekers. We all seek the same answers. This orbital launch vehicle is going to be the doorway to exploring other planets to find out the number one mysterious questions we all ask deep down; 'Are we alone and where did we come from?' This will make history. Yet again. I believe this orbital launch test should be something we ALL put FIRST! Above weapons testing, above product testing, above chemical testing on innocent wildlife above many other inhuman conditions we as a species test for the better of ourselves. We should get back to it and focus on the mission. Humans have lost the way. We need to explore. Yours sincerely,
A random observer and traveller from Australia, Jackson Thomas Vincent McCarthy.

SpaceX is making the future possible. They are pushing us forward in human capabilities and human ingenuity in a major way. More than can be said for most companies today. SpaceX and their founder, Elon Musk, have no intentions to harm the environment without knowing the consequences, and I know they plan to replenish any damages done along the way. Please, authorize Starship for launch. Whatever the cost, no cost is greater than finding ourselves incapable of looking outside of Earth should humanity be facing an existential crisis. If we are able to look outward of Earth for resources, think about how much that can end up benefitting Earth's environment. We need deep space travel and SpaceX's Starship is the answer. PLEASE authorize Starship for launch. SpaceX needs this, Elon Musk needs this, Earth's environment needs this, humanity needs this.

The starship program thrives on rapid testing and development, regulatory delays would harm one of the most advanced and important programs in human history, the starship program is time consuming and ambitious, and the orbital test is just a small milestone in the grand scheme of things, if it suffers delays that much every step of the way, it's going to be doomed to fail, don't get in the way of human progress.

Dear FAA, I am just a Twitter user. My opinion does not matter. I, like every other individual who has and will email you, has zero expertise on the matter of the safety of a Starship orbital launch. I'm excited for the launch but tbh it would be pretty funny if it got delayed anyway especially after they announced they'll launch within the month, so it's kinda a win/win for me. So do whatever lol

The importance of space x is far beyond any slight damage to the very minute wild life. And the upsides, regardless of If your in to spaceflight, out weight any slight disturbance to the locals. Even to the locals , space x has given so many of them jobs and has put the place back on the map. It would be an incredible and disgraceful setback for spaceX, the locals and the whole world. Please help spaceX and humanity by making the regulatory process fast and efficient. Thank you

What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market
2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1bill in annual revenues from satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet What are arguments against SpaceX: - they are displacing birds - their investments gentrifying neighborhood Who would benefit from SpaceX slowing down: - China - Russia Above are undisputed facts. Please extend ALL the support you can to US/World LEADING SPACE company!

Dear FAA, I started following SpaceX Boca Chica journey for almost 2 years now and I strongly believe what they are doing is extremely amazing. It has never been done before and due to that mistakes will come accross the entire journey, however this is the way to learn. And if we want to evolve as a humans we must make those mistakes hand to hand and make sure we learn from them. I know it seems scary and mission impossible BUT i'm sure you've seen the progress SpaceX has made in the last year. I hope this small paragraph helps SpaceX achieve their next goals and I'd love to see where this leads. Thank you for your time. Kindest, Luis Pacheco

Elon Musk has done more for humanity and cleaning up the pollution produced by vehicles by giving the world electric cars even in adversity from all the automakers and oil companies. He proved them all wrong. He has also focussed on solar power and boring tunnels under cities to make commuting faster with said electric vehicles, I firmly believe that he has earned his rights to build, fly, and help make humanity a multi planetary species with his SpaceX Starship! What an exciting time to be alive!

I strongly urge the FAA to make it simple as safely possible for Space X to operate Starship at Boca Chica. Starship may be the single most important thing to happen to humanity in this century. There is nothing else's like it, and nobody else even has plans to develop something like it. It is very important for the survival of our species to become multi planetary. As Texas resident, it is also important to me that Starship is being high paying jobs to our great state. Please allow Space X to operate starship.

To keep it short and simple, to hinder SpaceX and/or Elon's efforts is to literally hinder the future of our civilization. SpaceX Rockets will make space truly accessible, not just for the super mega rich, but for many around the world. We see what they are doing in the world of EV's, and we need them to be the winner in space as well. Other space companies are working on travel for PROFITS, while SpaceX actually has goals beyond making money. Let's help make their reusable rockets even better and cheaper!

I watch every space launch with anticipation of the better & brighter future to come. No one is doing more than SpaceX to make the future a present reality and their application for Boca Chica is an important part. SpaceX has consistently put preservation of the environment high on their priority list even to the point of advocating for a carbon tax even though it would cost them. The point is they have a clear vision and do not dodge the environmental costs, instead doing their best to minimize or make up for them in a manner consistent with realizing access to space. I can think of no other space company who I would rather have as a steward for responsible access to space across all measures. Not just the environmental, but ethical in a broad sense and with genuine desire to benefit all of humanity. It would be wrong to hold them back in this endeavor. Let them help humanity boldly go where no man has gone before.

Regarding the efforts of SpaceX at Boca Chica and their greater projects in general, I believe this is a pivotal time for our country, and the FAA. While I am usually supportive of it's overall purpose, do not construe the old paradigm used for traditional aerospace programs to be relevant to the development of interplanetary transport. Basically, get out of the way of progress - stay in your lane. Work quickly in your assessments and open your mind to new technology - you will find SpaceX has the same goals of safe success. And stop listening to political influences - especially those of unsuccessful alternate vendors. Focus on the scope of the FAA's mission, and stay out of the way of progress..

Dear FAA, Of all the companies out there, SpaceX (and other companies under the hood of Elon Musk) are showing both the greatest passion for engineering and for sustainability of the human race. Many arguments could be made how a space flight at this stage could have environmental impacts, but we cannot forget the big picture here. The success of SpaceX will in the end result in many technologies that have a net positive impact on humankind. Take for example the production of fuel from the carbon in our atmosphere, essentially becoming the first rocket company that will soon launch carbon neutral rockets, or the fact that there is a great strive by SpaceX to preserve human consciousness, expanding our presence to other planets and in the process ensuring our future survival among the stars. Of course we should strive for a safe environment in which these rockets are developed, but we can't let bureaucracy quench that thirst for progress. Please consider providing SpaceX with the necessary permits to continue their development and in the process help save the human race. Best regards, Erik Stens [REDACTED]

In support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than \$15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. This came with a commitment by SpaceX to invest \$85M in the local economy and create at least 300 jobs. In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commercial spaceport would look like. It seems the FAA has bowed to a vocal minority of activists, and the state of Texas has been oddly silent in the matter rather than fighting for their investment as one might expect. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties.

To whom it may concern: As a US taxpayer I wish to voice my full support of SpaceX and the Starship project in Boca Chica Texas. It is my opinion that SpaceX is contributing immeasurably in the areas of scientific discovery, human exploration, and commercial industry. Additionally, the development of a fully-reusable orbital class rocket benefits all US taxpayers by driving down the cost of space launch systems in general. Lastly, the economic impact and accompanying job creation opportunities underscore the positive contributions to the area of southern Texas. I fully support the endeavors of SpaceX and I hope the FAA allows their continued development in Boca Chica.

I wholeheartedly support SpaceX and their efforts to make Space more accessible. They have shown active support for the environment around Boca Chica by rescuing sea turtles and providing a large generator to the local wildlife center during last winter's freeze and power loss. The Starbase, TX area can be a haven for wildlife and people, despite occasional rocket launches, as is shown by Kennedy Space Center in Florida. I urge that the SpaceX program be approved without delay.

The Opportunity we have right now with spacex's starship is nothing more that pure Inspiration. I don't know about the rest of you but I've always wanted to go to space, explore other worlds, satisfy Curiosity, leave behind something bigger than my self. Humanity is now capable of achieving that and we have to seize it and never look back we have to reach for the stars and learn there secrets learn all that space has to offer for everyone, for our children and grandchildren for those not able to explore on their own we must push forward and keep pushing forward with out looking back. Starship is Humanity's key to figuring out things that we don't have the answers to right now and it would be a real shame to see that slip through our fingers because of a fleeting concern for the environment when we have the chance to learn more about our planet and environment then ever before. So approve starship and approve the orbital launch so we can better our selves as a species and better our planet along the way. -Seth Alderete

I am writing today to request that SpaceX orbital approval be granted as soon as possible. Their various missions have continually improved and their safety record has nullified all regulatory obstacles. I hope that you will protect all stakeholders by expediting my request and we can soon cheer as the mission touches down in Hawaii as an American success. Thank you for your consideration,

the reasons why the faa has to give the relevant permissions to spacex to launch starship are that it can immensely change the course of humanity on other planets and in space in general, sending people, satellites and equipment through earth, mars and beyond, solutions must be sought for the existing problems in starbase and i sincerely believe that starship is a great hope for humanity.

I wholeheartedly support SpaceX and their efforts to make Space more accessible. They have shown active support for the environment around Boca Chica by rescuing sea turtles and providing a large generator to the local wildlife center during last winter's freeze and power loss. The Starbase, TX area can be a haven for wildlife and people, despite occasional rocket launches, as is shown by Kennedy Space Center in Florida. I urge that the SpaceX program be approved without delay.

My message is pertaining to Starship's first orbital launch . With all do respect to the environment and the local population of Boca Chica . The importance of such an endeavor of this history making launch and future launches will enhance humanity in critical ways . This achievement will advance our prosperity and existence into the future bringing forth Hope for All mankind. The Good far outweighs any negative that can come from such remarkable achievements, that will benefit in more ways then can be described . Space X and Elon Musk have great Empathy and take remarkable care in assessing human and environmental concerns. This remarkable endeavor into Orbital space is to also enhance quality of life for humanity and our planets future along with giving hope of a multi planetary existence for our future generations . At this time in our history this step for humanity is critical to bring forth Hope and to Unite people for a purpose that is so greatly needed . I am requesting as a daughter of a Marine and retired FAA father that you please deeply consider my letter as heart felt empathy for the future of humanities space program propelling us forward starting with Starships Orbital launch . It is in the best possible care with Elon Musk and his team for close observation of safety for human population and the environment . Very Respectfully, let's All wish Space X Godspeed . Hi there, Please allow SpaceX to launch from boca chica, because expanding into the universe is humanity's best shot at lasting survival. Not because we need to run away from the earth, but because living away from earth will mean understanding the conditions we require to live, and the tools to affect that can be used on earth to similar effect. The starship represents the best shot at this. Once it starts landing, starship also has a smaller environmental impact than single use rockets that don't land and just end up on the ocean floor. Regards, Graham

** IN SHORT, I SUPPORT THE EFFORTS BY SPACEX AT BOCA CHICA** We humans are not vegetable. Through technology and enovation the human race propelled further with in the last 150yrs. You have one man with his private company that through expanding technology is forging ahead in an attempt to expand the human race further through the universe. Government attempts through public/government funding has been stifling by government buracracies. Looking through the eyes from the universe and the history of human, what SPACEX is doing is PRICELESS. SpaceX is taking steps to prevent loss of human life here on earth. There may be affect to wildlife, but the price to expand the human race is much outweigh and priceless. I pledge you to allow SPACEX to proceed with their enovation to expand the human race and that of me to the universe.

From my perspective the FAA has been established to ensure public safety and such. That doesn't seem to be what we have seen in practice. The bureaucratic process has only stifled and slowed our transition to space. Allow the transition into a space faring species at a faster rate. I feel you won't have a say for much longer anyway. What happens when people build and test their rockets on a different planet or the moon. Not much you could say about it then, so please stop standing in the way of actual progress.

In support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than \$15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. This came with a commitment by SpaceX to invest \$85M in the local economy and create at least 300 jobs. In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commercial spaceport would look like. It seems the FAA has bowed to a vocal minority of activists, and the state of Texas has been oddly silent in the matter rather than fighting for their investment as one might expect. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties.

Hi, Brazilian Space enthusiast here and I just wanted to say that SpaceX's starship program is the most fantastic thing to ever happen in Space history since the Apollo Program. Even tho it doesn't directly affects me, as I'm not American, it is still incredible, as a teenager to be able to see history being written. Best regards, Esdras.

Hey ! Im in favor of the starship program, as I consider really important that begin making life multiplanetary as soon as possible, as to damper the possibility of becoming extinct before we have the chance to do so. Im also in favour of regulation being checked, although maybe in a bit faster track, considering the importance of the project.

Please allow SpaceX to further conduct its regular and orbital flight tests from boca chica space port, it is of critical importance for the military, social, and economic development of the USA. The success of the starship program will dramatically lower the cost of access to space, giving the USA an edge in its operations in space where we have recently seen an increase in competition with foreign, not so friendly countries. It will also surely increase the revenue american companies get providing access to space to third parties, this in turn will create high level, well paid jobs for americans and nourish the USA economy. I'm sure there must be ways to encourage the development of the starship program and make it compatible with saving the local wildlife, I'm sure SpaceX will be happy to comply with any requests in this sense. SpaceX is leading the way to a new brighter future and should be encouraged to do so. God bless America! Nacho Bevilacqua

Good morning, I think that the work that is being done in Boca Chica, Texas is something that has never been done before, Elon wants to start with the tests because he wants the first human launch to Mars to be in 2024, the project may involve something pollution, but we cannot ignore the great importance that this entails, it is a very ambitious project with which it seeks to facilitate and lower the costs of absolutely all trips to space (it is more pollution to spend on getting all the components and extracting everything that is needed to build a rocket every time one and the other is discarded and so on an infinity of times, that more than a rocket that is completely reused EVERYTHING, over time it will contaminate much less than what it would contaminate to extract materials every time. discard one after another), all of us who support Elon are more, because we know that his intentions are good and just thinking that in the future we will be able to have a child or grandchild, I saw seeing on Mars or in the stars is something very inspiring, since we come from the stars and we will return to them, this is very inspiring for the entire Aerospace community, being Mexican I have not seen someone who is inspired by that, but at the moment When the starship is launched I know it will make world news and can inspire to fly and create innovative things to be a more intelligent and advanced civilization, please let the starship fly

SpaceX developments at Boca Chica, TX are essential for sustaining US leadership in space industries and creating jobs. As an individual who traveled to the site and seen the surrounding area with my own eyes, I can state that there is no environmental damage done by SpaceX. FAA should grant SpaceX all necessary permissions for continuing work and flights at Boca Chica as soon as possible.

Yo, I want SpaceX to launch starship 20 and booster 4. It's really awesome that the FAA is allowing a public opinion! I'm grateful to have the availability to do so. I may not know what goes on behind the curtains but all I know is that the environment is fine as it is, even if a starship launch fails all that will remain is a lot of stainless steel and ceramics and funky gases left as the result of a RUD. And some burnt grass and a couple of shattered Windows but I believe SpaceX would pay for the Windows to be fixed and the remains to be cleared. #Starship!

The SpaceX Starship development programme down in Starbase, TX has for one changed my life dramatically since first discovering it over a year ago! It's allowed me to discover a community I've absolutely loved and adored since the moment i came across them! A good friend of mine recently moved down there to document history in its tracks and i will soon hopefully be following! The Starship programme has often given me reason to wake up in the morning when I otherwise don't feel like it. Space exploration gets me exited. A future as a multi planetary species and one among the stars sounds like fair good one to me. I believe SpaceX should be given approval to further test out the Starship system as their 20 years in the industry shows clear progress and success! If anyone can take us to the Moon, Mars and beyond... its SpaceX.

Distinguished Ladies and Gentlemen of The FAA and Congressional Oversight Committee on Commercial Space Exploration: As a proud citizen of our great United States of America and space enthusiast, I am composing this letter regarding the launching of SpaceX's - Starship. As we know SpaceX has been on the innovative curve in space exploration with the first vertical take - off and vertical propulsive landing spacecrafts ahead of our competitors. This is why Starship and it's mission must be given clearance to advance forward. We must remain vigilant and competitive - cutting edge in the area of Science and Space ahead of our competition. SpaceX has proven reliable and forthcoming to their commitments to personal agenda as well as supporting NASA within these last 19 years. In closing, we owe this advantage and forwardness to those brave men and women who have given the greatest sacrifice to country and honor. God Bless You All and God Bless America. Respectfully,
Mary E. Weaver

Hello, my name is Michele Vietti and I am a fifteen year old Italian. I am writing this email because I want to do my part in the future of humanity in space. About a year and six months ago I met Elon and SpaceX, my amazement at seeing a rocket being launched and then land was unprecedented. Now I'm studying computer science, but I'm learning the physics of rockets and their propulsion systems at the same time. By telling this story, I want to make you understand, to you who are reading: that the Starship project is not just a rocket, it represents the inspiration of millions of people for a better future for all of humanity. So I ask you to give Elon and all of SpaceX all permissions, so as not to stop this dream. TO THE MOON - TO MARS - AND BEYOND. Thanks for listening to me.

To whom it may concern, There are very few times in human history where a small group of people or sometimes only one person can alter the course of humanity. Sometimes this is for the better, but not always. The efforts of SpaceX guided by the vision of Elon Musk to make life interplanetary is, in my view, the most profound of such a time in our history. For this reason alone, should the FAA assist SpaceX in any way possible. This does not mean that we blindly approve everything, but that we judge requests from SpaceX in light of their mission. That being said, for their initial request to continue to test and develop the Starship system, please grant them immediate approval for their requested test flight from Boca Chica, Texas. Warmest regards, R. Olaf van IJperen

I would implore the FAA to consider environmental impacts if SpaceX is not able to successfully develop their reusable Starship platform. Demand for space access and space systems is only going to increase. China has increased their activity, the ISS is coming towards its retirement and will need to be replaced, movies are being filmed in space, private travelers are making their way into space. 60 year old space technology expends all of the components involved in flight, usually into the ocean where those materials sit or wash up on shores polluting our oceans. Additionally, the fuels used by those old systems is harmful and even known to be carcinogenic. China's space activities usually result in rockets just falling directly onto the populations as was seen in a recent de-orbit where no one knew where the expendable component would end up. My fear is regarding what happens if SpaceX is not able to be successful? As demand increases and these old, wasteful, dangerous and harmful space launch methods will continue to ramp up as demand is increasing. We NEED SpaceX to successfully develop their fully reusable, methane/oxygen rockets for the sake of the environment. CO2 capture methods will also need to be developed as a way to generate methane directly from the CO2 in the atmosphere, as Musk has already put out a \$100M prize for carbon capture technology advancements. Demand for access to space will not go away, and the SpaceX Starship program is currently the most environmentally and economically sound way for providing these services and meeting this demand. I understand this assessment is very localized to Boca Chica, but think of the havoc that will be wreaked on the environment all across the world by a growing space demand if SpaceX's Starship system is not able to be put in place. Thank you, Chad Cravens

Dear FAA, I message you because I want to support SpaceX's endeavour in Boca Chica. Mr. Musk and SpaceX are already going to space with their falcon rockets. Not for fun but as a highly valued partner in a striving industry. In a very short time SpaceX accomplished what took others much longer and they even made the thing reusable. I say give them Boca Chica as a Launch facility. Imagine 50 years from now we still haven't achieved what we dreamed of in the 1960's because some folks are concerned about a bird. Please help that we can move forward as humanity because we desperately need it right now. Please help that we have something to look up to, something that can inspire billions of people worldwide and bring us closer together. Kind regards Mathias Wachtel from Germany

From: Everett Hoover [REDACTED]
Sent: Saturday, October 23, 2021 5:17 AM
To: SpaceXBocaChica
Cc: Everett Hoover; Irene Waldron; Jj Hoover; John Hoover; Anna Hoover
Subject: I support and recommend approval of this environmental plan.

To: SpaceXBocaChica@icf.com

Subject: The purpose of this comment is to urge the immediate, on an emergency basis, or as early as humanely possible, approval of SpaceX's sub-orbital / orbital launch of the starship so that development and testing of the Starship is NOT delayed.

The proposed approval of 5 launches per year is sufficient for the immediate needs, which only include development and testing.

I support and recommend approval of this environmental plan.

The details of this comment are broken into six, (6), areas:

1. Potential and historic loss of life, and,
2. Environmental damage or the relative lack there of, and,
3. National security, and,
4. Economic impact for the world, and, the United States, and,
5. Economic impact for the local area (Boca Chica and a larger local area in Texas), and,
6. The impact of allowing this regulatory process being used by potentially hostile Nation States, competing Billionaires and other commercial competetors to delay developmet and testing by SpaceX.

1. Potential and historic loss of life.

It is difficult to find previous projects that have a comparable impact on the world economy, or, indeed the survival of the humane race. But other large projects, taken on by the US, include building the Panama Cannal, building the Grand Coulee Dam, building the Hoover Dam. and previous Nasa US space vehicle testing, and previous Nasa space flights are good candidates.

The building of the Panama Canal cost well over 10,000 lives. The French building period by itself cost well over 10,000 lives and the US portion included well over 5,000 lives.

Building the Hoover Dam cost over 90 lives.

Building the Grand Coulee Dam cost over 80 lives.

The US previous space programs have had a total of seventeen, (17), lives lost. This includes three, (3), lives lost in an Appolo 1 ground testing accident and seven, (7), lives lost during space shuttle 1986 Challenger 10 flight, and, seven, (7), lives lost during space shuttle 2003 Columbia STS-107 flight.

SpaceX, by contrast, has had no, Repeat NO, loss of life accidents, this includes any people on the ground or in flight, despite over 100 space flights with the Falcon 9, and over half a dozen Starship flight tests.

2. Environmental damage, or, the relative lack there of.

Spacex is the most environmently responsible space transportationl corporation in the world. Elon Musk, the Billionare who owns AND controls Spacex, has done more for the environment than any other person on earth.

Elon Musk made his Billions designing and selling electric, green cars.

Elon Musk is Mr. Electric car AND if he was not disrupting the entire automobile industry, Ford, GM, Toyota, Volkswagen and all the other car manufactures would not be converting to Plug in Hybred Electric, Hydrogen Fuel Cell, and pure electric cars as fast as they can, to ensure their survival.

Spacex provides the entire world total access to every phase of the manufacturing and launching space craft through the video record.

If the US delays Starship testing in any way, the US is sending a message to the world that the US is against space flight, and will use regulations to kill space exploration. This is litterally a test for the US Government.

Does the US believe in the most environmental space exploration OR does it not.

3. National Security.

This alone requires the emergency approvele of this environmental impact authorization.

Spacex, more than any other space transportation company, keeps the U.S. ahead in the space race.

We can not afford to delay this testing.

4. Economic impact for the World and the United States.

SpaceX takes people and freight to low earth orbit in Falcon 9 for about a third (1/3) of any other operational rocket in the world.

The Starship is projected to cost one tenth (1/10) of any other projected rocket in the world to take people or Freight to the Moon, Mars or Jupiter.

5. Economic impact for the local area (Boca Chica and a larger local area in Texas), and,

Boca Chica village has about 24 people living there. SpaceX has bought out the other residents of the village in free market transactions. No one was bought out by eminent domain.

Other residents in the surrounding counties are heavily in favor of SpaceX development.

SpaceX is a big, big deal for the economic development of the Texas counties near Boca Chica.

6. The impact of allowing this regulatory process being used by potentially hostile Nation States, competing Billionaires and other commercial competitors to delay development and testing by SpaceX.

If the United States government allows potentially hostile nation states to use this regulatory process to slow down testing and development of the Starship, then National Security will be substantially harmed.

If competing Billionaires and other commercial competitors are allowed to delay development and testing of the Starship, then not only National Security will be substantially harmed, BUT, costs to the taxpayers will be greatly increased.

Finally, this proposed approval is for only 5 test flights per year from Boca Chica. Another approval process will be required for the many operational flights from any location.

The proposed approval of 5 launches per year is sufficient for the immediate needs, which only include development and testing.

The purpose of this comment is to urge the immediate, on an emergency basis, or as early as humanely possible, approval of SpaceX's sub-orbital / orbital launch of the starship so that development and testing of the Starship is NOT delayed.

The proposed approval of 5 launches per year is sufficient for the immediate needs, which only include development and testing.

I support and recommend approval of this environmental plan.

Subject: In support of SpaceX

Hello,

I would like to register my support for the planned expansion of SpaceX operations in Boca Chica, Texas.

I believe that the company's mission precludes them from inflicting any undue damage to the environment or the population in the area. Their actions so far seem to indicate as much. I also believe that the company has proven their good intentions towards the local communities in the past and I believe can be relied upon to address any possible future concerns. I think this because the company culture is - quite visibly - to constantly adapt to the realities - be it rocket engineering or day-to-day operations.

Indeed it is not possible to launch rockets without a little bit of noise or road closing, but the benefits, I think, far outweigh those minor sacrifices.

I hope that SpaceX will be given full approval to move forward with the Starship/Superheavy project development, expansion and subsequent operations.

Thank you.

Best regards,
Frantisek Svoboda

Subject: Public Comment on SpaceX Starship Super Heavy Program

To whom it may concern,

I am writing today in support of the SpaceX Starship Super Heavy Program at Boca Chica, TX. SpaceX is single handedly reigniting rapid changes in space flight and passions to push the boundaries of what was thought possible. This program has captured the attention of millions and started a new space race that will allow technology to benefit more people and start our march toward the stars.

Although undoubtedly there will be a cost to the local environment of Boca Chica in the short term, we are doing much more harm to all life on earth and Boca Chica through practices that we are not being responsible for; such as commercial fishing, release of toxic chemicals/oil spills, transportation that the highway brings past and all the people that use the area that leave pollution behind affecting the environment much more than SpaceX ever could.

Please allow SpaceX to move forward without more delay for many more benefits than costs in the long term.

Best,
Adrien Tanguay

Sent: Saturday, October 23, 2021 12:52 PM
To: SpaceXBocaChica
Subject: Public Hearing

Hello to you,
I am Benoit ST-Jean, I live in Canada / Quebec.
I am not a scientist, environmentalist or any other specialist.
I do not represent any group or community.
This email describes my personal opinion, based on the information to which I have been exposed,
I do it of my own free will.

Thank you very much for letting us have the chance to express ourselves about the activities of Space X.

I have read the reports that you published during the public consultation in October 2021.

I understand the importance of studies and impact on environments.
We have the technologies to minimize the environmental impact.
We are able to relocate species (plants, animals, etc.) from the regions which may be disturbed by the activities of space X.

we have badly used the resources from here, we have the chance to start over again to colonize another planet with collective knowledge to avoid making the same mistakes again

But it looks like we're missing out on Space X's ultimate goal, the survival of the human race.

a scenario that is no longer subject to science fiction is that an asteroid hits our planet earth
there is one in particular that gave birth to a certain fear in me: 2010 RF12

2010 RF12 was discovered on September 5, 2010, it a very small asteroid, its size is estimates to be 7 meters (23 feet) in diameter with a mass of around 500 tonnes.,

classified as near-Earth object of the Apollo group, that passed between Earth and the Moon on 8 September 2010 (three days after discovery), at 21:12 UTC, approaching Earth within 79,000 kilometers (49,000 mi) above Antarctica. a chance that this trajectory was not directly on us and a dimension

to give a perspective of distance, the moon is at 384,400 kilometers (238,855 miles) from our blue planet.

there are several methods under study to deflect asteroids that cross the path of our planet.

the different solutions studied by space agencies depend on criteria, the size of the object that threatens the earth and the time they have in front of them to react.
but still, these are only studies

In September 2095, 2010 RF12 will be 33,000 km; 20,000 miles away from us and hope the course predictions are correct or will be to our advantage.

2095 seems to be a long way off but no matter who is reading my words, the days can be long sometimes but the years go by quickly, I even wonder where those years have gone !?

In short we must be prepared for any eventuality at all times

the people in this advance of the space conquest are not eternal, their vision, creation, method of doing are unique, they can be imitated but not equal, we must help them for the good of the human kind.

Let's work together without compromising the time we have.

Time is the only important currency

<noreply@event.eventbrite.com> wrote:

Thank you for registering to attend the SpaceX Boca Chica public hearing this evening at 5 pm Central Time.

Please review the instructions, tips, and ground rules below in advance of the hearing. A court reporter will transcribe the hearing. Comments received help the FAA develop the Final PEA.

VIRTUAL PUBLIC HEARING INSTRUCTIONS:

- Connect using the Zoom link below.
- <https://us02web.zoom.us/j/88394232774>
- Password: FAA2021
- Please only use the telephone number provided below if you are not going to connect using the Zoom Link.

- 1-833-548-0276
- Meeting ID: 883 9423 2774
- Meeting Password: 4300505

ONLINE MEETING TIPS:

- Prior to the meeting, please access the Zoom link above and download any needed software. This may take a few minutes, so it is best to download software in advance of the meeting.
- When logging-on to the meeting, please indicate your organization name in parentheses after your last name, if you represent one. If you registered to speak, this is how you will be identified during the meeting. Please also provide your email address.
- All lines will be muted during the meeting.
- To hear audio when connecting through the Zoom link, please make sure the volume on your computer speakers is on and that you do not have any programs with audio features (e.g., Skype, Spotify, YouTube) open that may interfere with the online meeting audio.

ORAL COMMENT GROUND RULES:

- The meeting facilitator will call upon each speaker in the order in which the speaker registered. After all registered speakers, participants can raise their hand to provide oral comments.
- When called upon, the speaker's line will be unmuted.
- When called upon, please state and spell out your full name for the court reporter and indicate if you are representing a group or organization.
- A court reporter will transcribe oral comments for use in preparing the Final PEA. Please do not provide any personal information in your comments that you do not want to be made public.
- Please speak slowly and clearly so that the court reporter can easily record your comments.
- Each speaker will be allotted three minutes to speak; when 30 seconds remain, the facilitator will let you know. When your time has elapsed, the facilitator will notify you, ask you to complete your comments, and then mute your line in preparation for the next speaker. You do not have to speak for the full three minutes.
- Out of respect for others who wish to provide comments, please honor the three-minute time allotment. If you think you will have more comments than you can present in the time allotted, make the most important comments first.
- If you are not able to voice all your comments, you may also submit them in writing. If you have a written statement already prepared, you may read it aloud. This statement may also be submitted it as a written comment.

- If you have registered to speak and are unable to attend the meeting, please email SPACEXBOCACHICA@icf.com so we can remove you from the speaker list.

Thank you for your interest in the environmental review process. We look forward to hearing your comments.

Subject: SpaceX expansion to launch from Boca Chica

Stacey Zee, SpaceX PEA,

Hi - There is absolutely no way the sonic vibrations from the launch of StarShip Heavy Lift combo will not greatly adversely affect ALL of the bird wildlife in the adjacent wildlife areas - and likely drive them out permanently - effectively defeating the very nature of why, in part, those preserves are there - before SpaceX came along.

Please evaluate the sonic vibrational impact from a 33 engine StarShip / SuperHeavy launch. And remember - the Saturn V's first launch in Florida's was under estimated - breaking windows and damaging the press corb structure setup for observers. SuperHeavy has twice the thrust or power - not sure if that is a direct relationship to the sonic damage done to the surroundings or not - but warrants careful evaluation.

Multiple launches per year will drive the birds away. Birds fly into windows at night just from city fireworks displays on the fourth of July nights when startled - imagine what they do when something many times more impactful takes place. If the birds have migrated there to roost and have offspring - say goodbye to all of that after a few launches.

Placing their launch facility in the location they did - it was cost - being cheap - with Elon's total disregard for anything that gets in the way - and the Texas propensity to let industry do as they please for whatever reason Texan's do that (they have yet to be contaminated like other places have - and when they are later - watch out...). An launch explosion and debris field into the preserves would be catastrophic, especially after all the heavy equipment is run through to retrieve the debris.

Can't speak for the other wildlife - fish, bugs, snakes, fauna, etc. But the birds - are very sound and sonic sensitive - and we expect a full and comprehensive report on what SuperHeavy is expected to generate - with a safety margin - and compared to what the wildlife birds can or would tolerate (not as much as a launch).

Please do not let them totally destroy the preserves / refuges. SpaceX is on a mission to generate a colony on Mars to preserve humanity / backup humanity - at the expense of whatever and anything that gets in the way on our host planet - including the enormous amount of CO2 generated from each launch - the company goals are completely inconsistent with preserving humanity - polluting and helping to accelerate worsening our home planet to do it. Please don't fall for the market bs. Make them use their oil platforms.

Thanks,
Bob Miller

Subject: SpaceX PEA

Dear Ms. Stacey Zee,

I am grateful for your careful review of SpaceX's request for expanding operations in Boca Chica. This is a special site with many unique features.

The location near the coastline and at a low latitude make it an ideal location for launching rockets. The low density of human and animal populations and the sparse vegetation add to this site's suitability. If not here, then there may be no place in the US that is deemed suitable.

While I understand the need for a careful environmental impact assessment, it is important to note the significant national importance of the research and development going on here. The future of NASA's moon program is at stake. The continued dominance of the US in space is dependant on this project. Delaying any further will put these national goals in jeopardy.

Any further delay will only prove that the US is not the place to develop space technology. If red tape holds back progress again, then the American dream will be lost. Companies will choose to develop rockets in other countries where no care for the environment will be taken. Keep this technology in our country where environmental standards can be enforced. Keep it here for the benefit of all Americans.

Thank you for considering this opinion as it is shared by many of my fellow Americans. Please approve SpaceX's request to launch from this site.

Subject: SpaceX Starship Program

Good Evening,

We can easily assume the next big ELE will occur well before our sun envelopes Earth as a red giant star. We can conclude that red star event is roughly 5 billion years away, yet we know not how long it will take our species to discover the technology to escape such an event. Unless we intend to send a cargo ship of embryos to a Goldilocks planets and fingers crossed, leaving the then current population to burn, we should make haste in the scientific effort to avoid such a horrific event. Sure, one could say the rate of advancement of our species necessarily means we will find that means of travel well in advance. My next addition to that is the unknown threat of what could hit Earth, with no chance of evading a life-ending impact. Our current situation is massive loss of life, and probable extinction of ours and many other species.

What I think should be done:

1. Colonize Mars at the early possible moment. See also SpaceX.
2. With the tech required for travel to other systems in our part of the galaxy, colonize distant habitable planets having no current intelligent life.

SpaceX has a target date of yesterday. I like that. Everyone I know likes that.

Please allow SpaceX to continue its efforts to make our species multiplanetary.

Respectfully,

STEVE T. MORRIS
CW3 (RET)/U.S. Army

Subject: SpaceX Support

Dear Ms. Zee,

As a native of Fairfax County, VA (Centreville), and someone who has lived in WV for the last 20 years, I want to express my support of SpaceX operations in Boca Chica, TX.

I support the SpaceX mission to make humanity multi-planetary in an effort to protect life as well as creating a “back up plan” for the Earth.

My MBA doesn't exactly qualify me as an expert in rocket science, environmental, or other areas, but I do work in the aerospace industry [REDACTED]

With Boca Chica residing in a nature conservatory, I feel like the location is quite similar to space operations conducted at Cape Canaveral, FL. The area, as I understand it, is pretty secluded, and I believe that having SpaceX there will only help the local economy as well.

I am in support of the FAA granting a license as soon as possible to allow SpaceX to continue their testing program. I want to be able to see life on Mars in my lifetime. The fastest way to get there is through SpaceX.

Thanks.

Best Regards,
Matthew Ziman

Subject: SpaceX

Hello FAA,

SpaceX has completely revolutionized the space industry. The company has revealed the myopia, slow moving bureaucracy and financial waste of all other traditional space companies in the Western world. American taxpayers have been way over paying for access to space from these slow lumbering companies for decades. I am totally in support of SpaceX's starbase effort and I am asking you to support them fully as well.

I am very much an environmentalist as well, ever since I went door to door fundraising for a regional environmental group in my college years. I understand there may be some animal habitats that are harmed, and some local residents annoyed within a few mile radius of the SpaceX facilities. However, the massive benefit to American taxpayers, and to all citizens that benefit from massively reduced costs to everything in space is well worth it.

If protecting the environment is an increasingly large concern of the FAA, I strongly encourage you to focus on environmental issues that are of much larger scale. For instance, how about banning all airports from using forever chemicals that are poisoning people all over the United States?

<https://www.theguardian.com/australia-news/2021/oct/22/pfas-forever-chemicals-contaminate-waterways-soil-wisconsin> T

In the meantime, please give full approval to SpaceX's boca chica Starbase plans since the benefit to humanity and the United States is many orders of magnitude larger than the inconveniences of local animals or unsupportive residents within a few square miles.

Additionally, China is quickly outpacing the United States in many technological areas and Russia and even North Korea continue to make significant space advancements. Stopping SpaceX in their plans would clearly delight all communist authoritarian dictatorships around the world. Please see this much larger picture and let SpaceX advance their Starbase as they plan. America's Future will be so much better for it, and so much worse without it.

Thank you !

-Tom

Subject: Alert : Ms Stacey Ze. My comments on SpaceX's BocaChica facility

I am an amateur Astronomer and a long time space enthusiast and have been following the space industry since the past 20 years. I have especially followed spacex's meteoric rise ever since its inception (yes I was there when their first falcon succeeded – what's history for space newbies is something I experienced). Given this background – I have watched America's slide in space supremacy with great alarm – especially given some of our “Stellar” pioneers such as Lockheed Martin/Boeing/ULA have steadily found themselves in competition with rising powers like China and even with allies like ESA embarking on modernization that rivalled our best from earlier.

All that changed with SpaceX's flourish with the Starship program. Suddenly, a company that was nowhere 20 years ago has suddenly put America on the Global map as the most innovative company by an ORDER. They have undercut almost every space agency (including the highly frugal ISRO) and this is a stellar achievement. Not only that, SpaceX single-handedly saved us from spending countless millions to Russia by bringing back space launch for crew members from American soil.

It's said that innovation is what drives advances and supremacy and we are in great danger of being bypassed by the likes of China if we don't cave in to rhetoric or sweeping objectionism that many misguided groups we have here in US want us to cave in.

Given these, It's highly important that we keep our perspective, national pride and acumen while deciding SpaceX's immensely important BocaChica facility. I have seen them over and over allay fears of environmental apocalypse:

- They [saved](#) the endangered turtles in TX from cold that would have certainly killed them
- They have a pretty well oiled debris clean up program. Granted, it can go a bit faster, but as I understand listening to the youtubers onsite (Jessica kirsh mentioned it in one video) -> they eventually cleaned up every last piece

Moreover, they have provided immense job opportunities to a very neglected area of TX as well which itself is a feat unto itself.

Starship will take ordinary people like you and me to space by virtue of either space tourism or earth based point-to-point orbital transport -> something that was impossible to imagine 5 years ago.

I whole heartedly support SPACEX in their endeavors to take us and America into the future : and would ask you to consider the same

Thanks
Raj

Subject: Comment on SpaceX PEA

I would like to say that I support full timely approvals for SpaceX operations in Boca Chica. I believe this is in the national interest of the country to keep at the forefront of space operations.

Boca Chica is a great example of one of the few suitable places to do this from the USA. Florida continues to be congested for launches, so it makes good sense to have SpaceX continue increasing the pace of Starship testing in Texas. The environmental impact of any rocket launches is unfortunate, but picking the best sites possible can help mitigate this. I believe this is a good location. I also believe that if there are any issues, then they should be presented to SpaceX as soon as possible so that they may suggest mitigation as they are very agile. As a country, we cannot afford to slow their progress and NASA's progress with any unnecessary delay.

Lance Gingell

Fairfax, VA 22031

Dear Ms. Stacey Zee,

Thank you for the opportunity to comment on the Draft Programmatic Environmental Assessment (PEA) for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas.

SpaceX's Starship/Super Heavy Launch Vehicle Program is essential to both U.S. national security and NASA's Artemis program. The SpaceX Boca Chica Launch Site launch site has already brought great economic benefits to Cameron County and the approval of this PEA would provide further momentum in the revitalization of the area. My primary concern was noise impact of launches and landings to the local communities; however, the assessment in the draft PEA demonstrates that the noise levels are not anticipated to be disruptive. Furthermore, any significant impact to local wildlife will be mitigated by SpaceX and, as shown by the Kennedy Space Center, the active management provided by launch sites can be beneficial to local wildlife.

Given all of these factors, I strongly urge the approval of this draft PEA.

Sincerely,

Jacob Lyons

Cc: Piggott, Jennifer
Subject: Concerning Environmental Impact studies for SpaceX, Boca Chica, Texas facility;

Hello:

My Name is Stevan Akerley, I am a retired engineer living in Connecticut, and I am a Space Ambassador for National Space Society (NSS).

However, these opinions are my own, and ***DO NOT reflect any Official NSS Position.***

1. I am concerned about adverse environmental impact, and suggest we find ways to ***Proactively Mitigate*** any serious problems as quickly as possible, not just stall and delay (with analysis paralysis).
2. We need to use the Environmental Impact lessons learned from other launch facilities, some are in wetlands, such as Kennedy Space Center/Cape Canaveral, Wallops Island, and others like Vandenberg, etc. to enable a satisfactory solution to this Environmental Impact Study.
3. We need to consider and address the concerns of the local populace, not just brush them aside with 'Eminent Domain'.
4. I believe that the Starship and Super Heavy Booster are ***Critical Assets*** for the future of human space exploration. For cis-lunar space commerce, developing the Moon, and then finally Mars.
5. The Starship and Super Heavy Launcher are reusable, and represent a significant enhancement to the U.S. ability to launch payload into space at a much lower cost and more frequently than previously possible.
6. This is particularly important in the historical context of the current disposable (wasteful) launch systems, which end up being very expensive, infrequent, and have delayed progress as a result.
7. There may be other launch facilities that can be utilized to launch Starship and Super Heavy Boosters from, so that not all of the launches need to be from Boca Chica, Texas. Off-shore based launches may also be possible.
8. It is important to realize that this endeavor will spin up a new and large commercial market for supplies and services that are revolutionary for Space Exploration and Earth/Human Benefit.
9. Other potentially unfriendly international competitors are watching for opportunity to seize our lead in this area of technical development.
10. There are examples of environmental engineering that could be useful as examples;
 - a. Waste Water Reclamation using biological systems (like living machines)
 - b. Artificial Reefs have been shown to encourage flourishing shallow water habitats
 - c. There are examples of aquatic farms (farm raised fish, muscles, etc.)
 - d. Artificial islands, lagoons, and harbors are possible.
11. It is imperative that we get this right for many reasons. And we must get it right for both the short term and for the long term. If we do not get it right in the short term with an evolutionary/growth approach, we will lose the opportunity, and others will take the initiative.

Thank you for your time and efforts in this matter.

Sincerely,

Stevan Akerley

Subject: Draft PEA

Dear Ms. Stacey Zee, SpaceX PEA

My name is Larry Trimm and I was born in Texas and have been a homeowner in Houston for over 30 years. I grew up watching the Gemini and Apollo space programs and have been a fan of Nasa and anything to do with manned space travel since I can remember. This program SpaceX has initiated to build a reusable planetary rocket; test and launch it from Boca Chica is a major step forward in human space travel and should be given a green light to progress at a rate that outpaces former programs of Nasa and competitors such as Russia and China.

There are so many advantages for the United States, Texas and local residents to see that this program succeeds; such as Economy, Job creation, Increased tourism, Innovation in many areas, especially reusability, and much more.

All the concerns of opposers can be; or already have been worked out. Compare this operation to Kennedy Space Center and the superb benefits that that operation has provided for southern Florida and all should be convinced that nothing should get in the way of the progress of SpaceX in Boca Chica. I am of course for dropping any restrictions put in place or proposed that would slow those efforts.

Thank You,
Larry Trimm

Subject: Draft Programmatic Environmental Assessment for the SpaceX Starship

I want safe launches into space, but I also want timely launches. I don't want to wait long for an airplane to launch, but I want to be reasonably safe getting to my destination. The same should be true for space flights.

n, Section 50903 requires the Secretary to encourage, **facilitate, and promote commercial space launches** and reentries by the private sector

Sounds good to me. Lets get USA up into space quickly. **Space is the new frontier**, and getting a shipping service to space will greatly benefit USA. The competition isn't far away, and keeping USA strong in space is good for our country.

Subject: Email Letter in support of Starbase, Boca Chica, Tx

Dear FAA Review Baord:

I would like to express my support of the rocket launch facilities and associated assembly buildings and propellant storage and processing facilities at Boca Chica, Texas, and the nearby surrounding areas. While I am a supporter of space exploration, my main reason for writing is to describe the ecological benefits of these facilities.

One only has to look at Cape Canaveral to see the benefits to the ecosystem of rocket launch facilities. They require large unoccupied surrounding spaces, in ecologically sensitive areas like wetlands and shores. On the Florida coasts, the Green Sea Turtles were once plentiful, and then they became locally extinct. By keeping the Cape Canaveral launch areas free of humans, and with some aid from NASA, green sea turtles were reintroduced to the Cape Canaveral area and they are now thriving. Many bird species also benefit from the shores and wetlands around Cape Canaveral that are devoid of humans.

Without the Starship launch facilities, the Boca Chica area would have eventually become overrun with resorts, beachfront homes, golf courses, shopping malls and restaurants. Having launch facilities in the area insures that wild wetlands and shores will not be developed further, as long as rocket launches continue.

Think of the turtles. Think of the birds.

Sincerely,
Frank E. Harris

Subject: Feedback for Federal Environmental Assessment

To Whom It May Concern:

We are contacting you to express the strongest support possible for the mission of SpaceX, and to request that everything possible be done to approve its ability to move forward. Its mission is critical to not just the United States, but to the entirety of humanity, and this should be looked at with long-range vision toward the future.

When making your decision, we ask that you consider the following points:

- Establishing human colonies on new planets – beginning with Mars – helps ensure that humanity will survive as a species, even should a disaster befall Earth.
- History has shown us that space exploration produces technology that benefits humanity at every level, in military, medical, technological and other industries.
- The U.S. is already on the verge of losing the space race to entities like China and Russia. If our government bureaucracy inhibits SpaceX's progress, the company can simply leave the country and be welcomed with open arms by our competitors, who will not put up unnecessary bureaucratic roadblocks.
- NASA relies heavily on SpaceX, and without them we are certain to fall behind in the space race to the point where we cannot catch up. This would have *disastrous* implications for our national security and position on the world stage, along with our technological advancement as human beings.
- Environmental concerns about SpaceX's location adjacent to a wildlife preserve are unfounded and exaggerated. All one has to do is watch one of the many live cameras which are trained on the facility 24/7, and you can clearly see the animals are undisturbed and have adapted well. Local residents overwhelmingly attest to this fact, as well as the benefits to local schools and businesses from the company's presence.
- We already have two time-tested examples – Cape Canaveral in Florida and Space Center Houston in Texas – which both show how a space agency and multiple nature preserves can coexist in a *very* positive fashion, with minimal disruption to the native wildlife.
- This peaceful coexistence is highly visible at SpaceX today. The company has a dozen or more regular YouTube channels which film the site 24/7, and just listening to these recordings makes it clear. Those who object to SpaceX often cite the impact to the sea turtles; it should be noted that during last winter's extended power outage in Texas, SpaceX and its employees provided extensive funding and manpower hours to rescue these animals. The company has proven itself to be a strong supporter of the local environment, and dedicated to its preservation.
- If SpaceX is allowed to continue its innovations, it is very likely that mining and production operations could eventually be moved off-planet, which would allow us to re-adapt Earth into the less polluted "garden" that we would all like it to be.
- Technological innovation is far from the only factor. The SpaceX complex was constructed in the poorest county in the *entire* U.S. It has brought undreamed-of prosperity to the Boca Chica community, and 95% of the community feedback has been overwhelmingly in support. The remaining 5% have expressed concerns which are unfounded or fall into the "not in my back yard" mentality.

In conclusion, America's role as the leader in space exploration has been a source of national pride since the 1960s – more than half a century. If this were to be lost, it would be yet another huge psychological blow to our citizenry, who are already struggling on a variety of fronts.

The permit approval SpaceX needs to forge ahead is vital to our nation and its long-term security and prosperity. Please show yourselves to be the kind of leaders who take humanity to the next level, not enable those who would hold us back, to our eternal detriment.

Thank you,

Coy & Staci Hensley

SpaceX has been instrumental and innovative in space science. With starship, this would drastically change how we access space. I totally understand why there could be some constraint when giving environmental clearance, but SpaceX has developed one of the cleanest rocket in the world. With plans to capture carbon dioxide from air to create fuel for the starship, this would allow spacex to reach net zero emission possible in a decade or so. With the advancement of starship, humans would be able to reach mars and beyond , which would allow us as humanity to explore and possibly get answer to who we are . Exploring and studying another planet might help us solving issues like global warming back on earth. Elon and SpaceX team has already made US proud with only commercial company to carry human to space. With starlink, Spacex would further provide connectivity around the globe with low latency. Starship would be instrumental for the same. With starship US would be decades ahead than any other country around the globe. Humanity's future would be centuries ahead with starship as the vehicle to space. With proper environmental review, we as humanity should allow spacex to go ahead with orbital launch without any further delay

To whom it may concern, I am in favor of Space X Starship prototype going to orbit and conducting further test. I believe Space X has done an excellent job at advancing rocket technology. It is better the we stay ahead of the competition (other countries). Delaying test are just going to slow us down. Space X has the advantage by far and it should stay that way. Thank you. Best regards, Carlos Barragan

The work that SpaceX is carrying out in Boca Chica in view of the public is both greatly inspiring and is helping to advance the space industry, both in the US and world wide. While no company should be allowed to do what we they see fit without regard to public or environmental safety, it seems that SpaceX has carefully chosen a location where the impacts of their work will be the lowest. SpaceX has shown their ability and willingness to work with the government on past projects such Commercial Cargo and Commercial Crew and I feel the same opportunity should be offered with their work in Boca Chica. SpaceX's work is one of the best examples today of American ingenuity we have today and it will be beneficial to the region and nation to allow their work to continue.

Hi, I am writing in support of allowing SpaceX to develop a SpacePort manufacturing and launch facility in Boca Chica, TX as well as allowing rocket launches of super heavy and StarShip vehicles which can reach altitudes required for orbit of planet Earth. I am a licensed pilot and understand the benefits of FAA regulations. The infrastructure and implementation required to achieve this kind of advancement of the human species is enormous and without some impact to the surrounding area. I believe SpaceX has been able to find the best possible spot in the United States to perform this work. Thank You, Juan Danny Garza

Hello FAA Please move the approval forward quickly. I have been a fan of all things NASA since the first moon landings that I got to witness when I was 10. We need this country to be the best for a least 1 big thing! NASA is unfortunately through lack of funding a shell of itself from the 60's and 70's. This country needs this! Anything to unify our collective american souls. Why not the goal of going to MARS? We can do great things if we try. Do your review, but please do so with haste. Do the big things that are hard (I do recall hearing this decades ago). So please - get this done! I beg you.

This is the next step towards becoming a multi-planetary species, if we consider the necessary steps to ensure the survival of our species for generations to come, this is a step that MUST be taken. If our Earth ends up not being able to support human life any longer what do we do. If the population on Earth becomes so large that we don't have enough resources to fully support the NEEDS of EVERYONE what do we do. Eventually, we will need to take this step, better sooner than later. We have made the mistake of delaying action before in regards to climate change and we now see the consequences of doing so. We must not delay taking action on any future problems we suspect could have a major impact on the safety of our species.

Dear FAA, I highly support SpaceX's plans for an Starship orbital launch attempt. I am aware of the risks of eventual mishaps, just as I am aware of the fact that every progress is a unknown an a first of its kind but no matter how scary it seems to be, in the end it promises to benefit our understanding of the origins of our universe and life, scientific research and therefore humanity as a whole. Thus I urge the Admistration to make these groundbreaking tests possible as fast as u can, or - if needed - to update regulatories so that you can make them happen even faster and more frequent.

Hi, Just to add to the voices that say that spacex is doing a wonderful job and allowing us to go to space, moon and mars. If it was for the other rocket companies we would sill be paying 1billion per launch! 1billion versus 60million per launch proven and demonstrated 100x at least! They are mining spacex work and prejudice the future for more money now! We may all die if we dont have a capable rocket to outer space and support on avoiding a asteroid. There are envoronmental impacts? I dont know the full impact but for sure, if required spacex will avoid as much as possible, compensate the wild life and activelyly compensate the wildlife. Hope the others do the same! Align with spacex to overcome if necessary. They are already doing something. Not sure if it matters but i fully support spacex in this endeavor and hope for the success of this company! BR Rui Chilro

Advancing human to Mars and sending starfleet in exploration of other galaxies and planets is very important. You should allow SpaceX to try to make this happen. They will fail many times, but they will learn in the process. This will help humanity. What if an astroid hits and wipes out humanity? What if China launches world war 3 and destroys humanity? what good is environment review then? for few species you destroyed 7 billion humans. why would you do that? Please help humanity. It's in your hands.

We represent two Rio Grande Valley companies with Headquarters in Brownsville, Texas. After careful review of the proposed document we STRONGLY SUPPORT the further authorization and expansion of SPACE X operations from Boca Chica. The environmental concerns are valid, however they are being addressed and it would be unrealistic to expect zero impact. We respectfully recommend better community communication of future launches or necessary road closure on local Radio, TV and newspapers.

To whom it may concern: We want to voice our support for this FAA report and preliminary authorization for continued and increased operation parameters for SPACE X at Boca Chica. The mitigated environmental impacts and limited closures to the Beach SHOULD NOT impact the development of new technology and the growth of this important industry in the Rio Grande Valley. We are local investors and users of the public areas and find it offensive that opinions on what should or should not happen in our region are being voiced from other parts of the United States and Abroad. Any and all effects of this decision will majoritively affect our community, it follows it should be voted and decided locally. Thank you.

Hi, I'd like to thank u for looking out for environment, especially wildlife. I'm the one that helpt Elon put together the methane rocket, and I would never have done so if I were not 200% certain that it is safe, I know for a fact that it burns clean at high temp, and does not do any harm. The Noyes that she will make, well we don't know, i suggest ear plugs,lol. But this is crucial for our world! we need to start mining of world and colonize other planets. we are heading into a vanishing point, it happens every 700 years or so, so it is crucial that we get people of world. we can not continue to pull out resources from this planet and think that it is limitless, we are already seeing volcanic eruptions and more devastating foodies earthquakes etc. this is happening in part due to the fact that we are emptying the planet, she recycles her self and takes back what has been taken, from her, we need to get of world and start mining asteroids, if this is not done and soon we are all stuffed to put it bluntly. we need to colonise other worlds the moon and methane is the way to go! it is abundant on all planets and is easy to come by. Elon is also an environmentalist and I can assure you that he has 0 intentions of harming anything. I could go on about the chines and their fule and the cow's pumping out thousands of tones of methane daily and the farmasutical companies populating the oceans and not to forget the oil industry and the pcp factory, but I won't not now. just consider the benefit this will have to our children and their future and lives, it would be so cool to have a son or daughter mining asteroids or living on the moon or mars. Jupiter maybe! lol. C.L.V.P****8888****

Dear FAA: Please issue an experimental permit(s) and/or a vehicle operator license to SpaceX for Starship/Super Heavy launch operations, including at the Boca Chica Launch Site. Texas needs more commerce to create jobs and improve quality of life for residents. SpaceX operations can help bring in more tax revenue to the state. The revenue can be used to fix the failing power grid. Thank you, William Conyers

Hello, I hope this find you in good spirits. The FAA needs to wake up. Space x is one of the best and primary companies leading space exploration. This isn't the 1960s anymore and although industry can't pollute like it did back then it sure as heck will not advance the human race of these restrictions are so tight. Starship from my pretty well educated opinion is not something that is going the cause a BP oil spill level of pollution event it lands in the gulf full of fuel and leaks out. This things is leading the future of technology, with front running modeling and leapfrog technological iterations in the shortest period of time while also remaining safe. This need to be allowed to continue and at the safe pace they are going, they shall not be bottle necked. We all need this company to succeed. We also need this company to be given a fair shot and everything it can and not unfairly be restricted because other companies want to throw temper tantrums. No one in our entire living history have seen an enigma like Elon Musk. He is one of the greatest visionaries of the past 200 years and see all need to absolutely love and respect this man for what he is doing.. FAA: You have done incredible work the fields of aviation and aeronautics and the world is safer and more educated because of you.. we are in a dire window of time, the life in the area will be fine Maybe SpaceX can sound a different alarm of different harmonics to push away more wildlife during tests. But at the end of the day this isn't Dupont and their C8 scandal, affect 99.9 percent of humans on earth and that company still exists. This isn't Fukushima dumping 800 million gallons of radioactive water into the ocean which will ruin the Pacific for 500 years (thats Bout to happen, Google it). This is the Wrights Brothers about to take off for the first time. This is the invention of the cell phone, the internet.. we need this company as a species to succeed. I'm 37 years old, self made millionaire (not social media), I've educated myself on almost every science topic I can find, I absolutely love science and this is the opitomy of it all for the next 20 years; getting us off this planet, please let spacex have a go, pleas le give them a cushion on helical and safety, give them freedom of maneuver within a reasonable standard. For us all. John Swensen CEO

I support what SpaceX is trying to do. Any impact that it has by its operations is far outweighed by the advancement of space exploration that it accomplishes. All the government regulations have not prevented us from harming the environment so why single out SpaceX for the spall impact they are responsible for. We are hypocritical in that we are saying we are trying to protect the environment yet don't stop the littering of the ocean. Look at the bigger picture!

Hi, I would like to give my opinion about SpaceX's activities in Boca Chica. SpaceX proved many times that they can achieve their goals (Starlink, delivering cargo to ISS, Inspiration4), and I think that the Starship development program is a giant milestone in our history. There come risks, such as the extinction of some species of animals and plants as in the Environmental Assessment, but in my opinion, SpaceX activities are for the greater good (making humans multi-planetary species).

My name is Morgan Johansen, I'm from a small farming town in central Utah, I've had the opportunity to work for SpaceX once, and have been watching them for years. I believe SpaceX has every one person and the environment in mind when developing the future. We've seen SpaceX and or their rockets provide a very safe and reliable way to transport people to and from space, resupply the ISS, save turtles and so forth. Therefore I have complete trust is the development of Starship in Boca Chica, and think the FAA should approve them for the continuation of construction, launches, testing, and leading in the space industry. Starship has a long way to go, but if anyone is to do it, SpaceX knows how. Go SpaceX. Go falcon. Go dragon. Go starship. Go Boca Chica. Go FAA

I feel SpaceX has taken tremendous efforts to ensure the safety and well being of everyone involved. If we want to progress as a culture of innovation and exploration. Then SpaceX has the best opportunity to provide that to humanity. Should we sit idly by while other Countries develop more advanced space programs. It is necessary for everyone involved to look at the bigger picture. And SpaceX is doing just that.

Starship represents everything that we can hope for in an exciting future. It has inspired millions of people like myself who watch the rapid progress occurring there each day! This program has brought many people together at a time when no one can agree on anything! This is our best chance to ensure humanity's future is amount the stars! We must not impede on those objectives being accomplished. I understand the environmental concerns that this program has, but if starship truly becomes what it promises, it will make up for that easily. The benefits of a fully and rapidly reusable super heavy lift launch vehicle are beyond exceptional! Just think of the possibilities that would unlock! We could launch so many more complex satellites for cheaper that will further our understanding of our affects on the environment! And to be honest, these environmental affects are not new, NASA has been doing the same sorts of things for decades in Florida and California, why is Texas any different? The worst thing we can possibly do is slow this program down. NASA is counting on starship to be ready for a 2025 lunar landing! And the longer this process takes to reach approval, the less likely that will happen! Starship is an incredible feat of engineering, and we should not delay it's exciting implications for humanity! Let's get thing thing flying ASAP! Mars here we come!

Message

While SpaceX is working to ensure long-term environmental sustainability, safety and financial responsibility conditions, please grant exceptional regulatory approval for Starship's orbital launch attempts from November 2021 onwards because test agility matters too. It is for the good of USA and the world at large.

I understand that the FAA is responsible to ensure the safety of all people in and from flying objects. I also understand that the approval process is lengthy especially in special circumstances. However, I ask the FAA in the name of all people, please expedite this process as it is crucial for the existence of this species to have options. Global warming will change the world in this century. Many people will need to flee their country and possibly a Third World War with nuclear Fall out are not unlikely. Having the option to be multi-planetary and use the space around earth will be a crucial part of human survival in that worst case. Even if none of this happens, an accelerated space exploration will have a positive effect for all people on earth. It should be seen as a gift that space X is on the forefront of this being an American company and ensuring that the US has and retains the leadership in all things space. Don't let bureaucracy stand in the way of the greatest achievement human kind has achieved this century thus far. Thank you for the consideration. Sincerely Roman Ivantysyn

Dear Sir or Madam, I strongly support the proposed SpaceX orbital launch test for Starship. With SpaceX's rapid pace of innovation, we are witnessing a rate of progress in access to space unmatched since the Apollo program of the 1960s. It is vital that this launch be allowed to proceed without delay, to support U.S. space leadership and innovation, which has been sadly stalled for decades. Please permit this launch to proceed. Thank you,
Naoise

Another federal agency - NASA is being helped by SPACEX to get to the moon by 2024. I read the initial environmental study was minimal impact. If we are going to the moon by 2024 we cannot have additional delays. If there was a problem with creating starbase in Boca Chica, TX. Why wasn't this discussed 5 years ago. They could have moved a few miles south to Mexico to avoid delays.

Imagine humanity didnt make it. Its the last day on earth. Father: Im so sorry we (humanity) messed up son. We could have done better. We almost went interplanetary once. Son: What happened Daddy? Father: The FAA didnt think it was important enough. Son: Really? Why? Father: Who knows son. But I do know theres some lovely beaches and wildlife where the base used to be. Sadly when we are gone there'll be no one to control the invasive species, so theyre dead too....

Spacex launch attempt should be allowed, because progress should never be stoped, in addition, the USA would significantly expand its advance in space technology. With help of these tests, we would be able to become a multi-planetary society in the near future, which significantly increases the chances of human survival, because if the earth should become uninhabitable we would be very well prepared. Since our society is growing, we need more and more space that the earth cannot offer in long term, which is why we have to look for places to live outside of the earth.

In regard to orbital launches, space, Mars, all things about space ... Do a lot of people think Elon specifically is disillusioned. Potentially. Do a lot of people think it is stupid and even hilarious to attempt to send people to Mars, sure. It is practically all reason to scoff. Then again he who laughs first or last laughs the hardest, hopefully. The US has since its beginning laughed last and the hardest. Project Mercury, which started with the Air Force, gave Americans great excitement over the prospect of reaching new heights. The US DID gain technology supremacy over the Soviet Union, and it DID prove what the American spirit is. It is 63 YEARS later in the making of "what's next" for America as far as SpaceX and the new frontier is concerned. Thankful, the Soviet Union is not looming as a boogey man any longer. Still, to retain a Top-spot in the world, the first option the US has is to continue to stretch itself and test its muscles in space. America is about SHOWING WHAT IS POSSIBLE. America can go deep under sea, or it can go far up in the sky, or it can pursue BOTH. It is fantastic that Americans CONSISTENTLY achieve what 98% of the world ONLY DREAMS ABOUT. To continue the United States global leadership is to continue showing to the world what faith (applied effort) and excellence can achieve, which is what SpaceX's plans' signal. Of course to never try is to have already failed. The US is about winners even if with incredible perseverance. America explored widely in the 1960s, up to literally the moon. Apparently today SpaceX is about how America can continue leapfrogging... The country did not allow itself to be hog tied from achieving greatness when it mattered 63, 64 years ago. Winning approval from the American public today is also about not being hog tied from advancement, if even people are nervous. The older generation is passing a baton through what SpaceX's able to accomplish and continually moves toward. Orbital launches, continually advancing no matter how painstaking the steps, is what's going to set the pace for the world who's watching the US for the next event. Good Luck to the team

SEND SPACEX ROCKETS INTO SPACE! This is necessary for the development of and research for the future of science and space exploration. There should not be any reason to halt the launches of these rockets if SpaceX has adhered to all FAA safety precautions regarding safe launches in an area where air traffic is clear and ground safety to the general public is a priority. I stand for development teams to pursue all endeavors regarding space research, and I believe that now is not the time to put a halt to the SpaceX enterprise.

I kindly ask you to approve the SpaceX launch site in BocaChica, it is a project like never before, that a company like SpaceX knows how to manage in the best way without making big mistakes. It is a step forward for humanity, both in a scientific and technological sense, a great step that will lead humanity to have a reason to live in a more distant future, but now the only thing that can be done is to approve of the future! Furthermore, SpaceX is offering thousands of jobs, and surely if the project goes ahead it will take more and more work and that means progress, which is just what we need. SpaceX is only doing good things, has never behaved childishly and deserves a faster and better process, plus the approval of the SpaceX launch site in BocaChica would create a huge influx of visitors even from continents outside America. , which is truly a wonderful thing. I conclude by repeating to APPROVE the project! Thanks! -Diego (15 years old, Italy, future astronaut 🚀)

Hi FAA, Please don't put obstacles in the way of SpaceX project of sending humans to Mars and beyond. It is a dream not for one country but for all humanity. There might be losses in achieving this dream with safety issues but comparing to possibility of colonising Mars is nothing. You need to remove any bureaucracy in this way and be faster than creating Starship. Remember this spectacular vehicle is not taxpayers' money, so please trust Elon Musk safety procedures and give him any approvals he needs and up to my knowledge none of the machines, factories, vehicles etc. has 100% safety. Kind regards Nasir H.

I fully support Space X and the path they are following. Working closely with the FAA we need to fully understand the evolving technologies that are inevitably evolve in the future. Better to do this now working with Space X than having foreign companies dictate these policies in future if they overtake the USA in this field. The USA needs to remain at the forefront of these new technologies.

I find it greatly disappointing that we even have to have this debate. SpaceX and their innovations will one day provide us the ability to expand our "home". There's always going to be groups of people that will attempt to limit this progress but it's necessary to secure a better future. All sides should easily come to this conclusion and should aid, not hinder, these extraordinary innovations led by SpaceX. To be honest, the last few years watching SpaceX has given myself a better outlook on the future. Please consider this when concluding your decision. Thanks

SpaceX needs to be able to launch rockets out of Boca Chica, Texas without interference. It is critical to America's leadership in space that we are rapidly developing evolutionary advancements in rocketry. The negatives, of any sort, outweigh the negatives that this may cause. Consider their use of Starship for starlink which brings internet to the world, or the massive benefit to the world when they land humans on another planet using this sight. The FAA should considering the present and future benefits over the miniscule negatives in the grand scheme of things when considering providing a launch license. Please, I beg of you, make the system show that America can lead again with minimal interference. Godspeed and Good Luck! Thank you Ben

Message to the FAA, re: Input regarding the "Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site" "SpaceX's Starbase is a chance to do something uniquely important. The possibility of highly visible failure has an exceptional power to propel us to want to succeed, and that power can be harnessed to motivate a team or even a community to do something difficult. So many things that will happen today in any one life are possible only because of a functioning local government. The FAA needs to be trying to bring about the greatest good for the greatest number of people. One of the reasons we have qualified, experienced individuals in organizations is to use their intuition and expertise to solve problems. At its best, the practice of politics is about taking steps that support people in daily life -- or tearing down obstacles that get in their way. It is time to step out of the warm embrace of well-branded institutions known for both nurturing and defining their people, and exchange it for the chance to build--and become-- something new. To achieve great things, two things are needed: a plan, and not quite enough time. SpaceX's intentions are focused on erasing inefficiencies and producing results. The status quo is not an option. Embracing the permanence of change is the only thing that can liberate us to move forward. If manufacturing is to grow... it will come from those of our employers who seek to compete in new ways. Anyone who has sat on a big committee with lots of experts knows the feeling when people around the table display their expertise by mentioning one complication after another, admiring the dimensions of the problem in an ever-deepening discussion that cries out for some modicum of simplicity so that there can be action. A simple (or even simplistic) goal would create the kind of risks, and rewards, that would cut through the problem of analysis paralysis. You might spend lots of time and resources gathering data that will never be used, or accumulate data that winds up telling you things you already know. It's time to turn analysis into action. Our moral intuition just tells us that making an exception is the right thing to do, even if we can't explain or defend the precedent. Without exceptions to rules, the world would be a colder and probably worse place to live. Knowing when one valid claim must give way to another, or when rules must be relaxed in order to do the right thing, is not programmable, if only because it is not completely rational. Only a person can sense when an unexplainable factor ought to come into play. That has been the job of elected officials all along. A kind of greatness in our society became a beacon for others around the world, helping us to prevail in the Cold war, it did so because of a global admiration not only for our space program and our skyscrapers but also the everyday prosperity, however imperfect and unequal, that could be observed in so many of our neighborhoods. An adventure is only an inconvenience rightly considered." Edited excerpts from "Shortest Way Home" by Pete Buttigieg, the current United States Secretary of Transportation

I would like to express my strong support for approval of the SpaceX launch attempt. SpaceX has been transparent and made thorough efforts to comply with regulations and mitigation environmental impact. Moreover, this development effort is vital to US long term economic prospects and national security interests. Put in stark terms, each month our Chinese competitors will continue to ravage the environment with impacts several orders of magnitude worse than any possible negative impact from the SpaceX attempt. We cannot afford to delay our leading technologists at this time, especially given that they have taken great care to address regulatory concerns. Thank you, Ted Lanpher Half Moon Bay, CA

I am a resident of Brownsville, TX , approximately 20 miles from Boca Chica Village and Starbase. I regularly visit Boca Chica Beach multiple times a week. Since SpaceX has started activities and ramped up their work cadence, the local economy has been positively affected for the greater good. SpaceX with all due diligence allows almost unfettered access to the beach. Before SpaceX the beach was akin to a dump with all the littering and garbage that both locals and non-locals left lying around. These garbages are and we're a much graver danger to local wildlife than anything SpaceX has done. In fact if anyone from FAA were to spend a week out there they would see dozens are different SpaceX employees regularly cleaning up the beach completely voluntarily. They pick up garbage, pull people out of the beach who are destroying it with there vehicles getting stuck, and generally make the whole area nicer and safer for wildlife. An aeronautics company with ecological preservation at their core is what one can and does infer from these activities. I commonly see citizen beachgoers speeding in the beach and leaving behind roadkill with their vehicles. These animals include all manner of crabs, birds, and turtles. SpaceX is affecting the area only in positive ways by having their presence there which brings about a wider respect for the whole beach. In the past you might see a Sheriff out there once a week providing oversight and keeping people respectful of the laws and environment , now with SpaceX, there is a 24/7 presence of law enforcement, security personnel, and volunteers who keep the beach safer and cleaner. The terrestrial impact has been greatly reduced by SpaceX . It is a cleaner , safer, and nicer place to be and visit for both humans and animals since SpaceX has come.

I looked over the report filed. Nothing looks unreasonable. Do your job, manage the airways and skies not the environment!!! In the 60's NASA was allowed to build and launch when ever. Over time the EPA was created to assess and manage environmental impacts. SpaceX has been doing what's been asked of it. To monitor, and minimize, mitigate, and manage the area it operates. Also, what SpaceX is doing is important to the nation and our national security. So get on with it and approve the request.

I am a 17 year old in Colorado in my senior year of high school about to graduate with my associates. Like many of the people submitting their message about Space X's review, I have no stake, yet. To be a Space X aerospace engineer is my dream and I can't wait to assist in making the operations and testing of Space X even safer than they already are in similar fashion in which aerospace engineers have dramatically reduced emissions in airliners. In order to be connected as a people we need travel, the broader we are connected through travel, the closer we are brought together. Unify one people both on Earth and soon on Mars with another Apollo era of development that brought the inspiration of millions of scientists and the best of all those involved for a common human mission like Space X's. Please allow my future job to work. John Valadez-Rodriguez of Denver, Colorado.

There are very few geographic places, and more likely a single one -- Boca Chica -- where the United States could literally develop advanced, reusable interplanetary rockets. Other operating spacesports have too many high-value mission and assets for the high-risk and rapid pace required to succeed in this decade. Therefore if the United States wants to continue and advance for itself and for humanity its long-term space exploration leadership, we must accept some strategic compromises and quickly authorize SpaceX's proposed use of the Boca Chica site for orbital launches. Best regards Nelule

SPACEX is developing a multi mission , fully reusable , super heavy lift launch vehicle that would reduce cost of access to space ,exceeding capabilities of launch vehicles and will enable cost effective delivery of cargo and people to Moon and Mars.The private sector participation will strengthen and expand US space transportation infrastructure. It will also facilitate economic benefits to the regional committee as also job creation. Also , environmental concerns would be controlled by the incorporation of Best Management Practices. In view of the above , I request that SPACEX orbital approval be granted as soon as possible. Thank You.

I am in Support of the advancement of technology. Space X is a get it done culture. We as a human race is much more important then the possibility of a small environmental mishap. Look how the power plant in Japan is just spewing waste into the ocean but it is such a small percentage that it will be undetectable soon. Let Space X continue there advancements toward new rocket systems.

I'm writing this in support of SpaceX and the continued development of their Texas launch site. Here are a few reasons they have my support: 1. Their ambitious goal of making life multi planetary by reducing the cost to access space benefits all of humanity. 2. They have a solid track record for orbital launches and rocket development in general with limited impact to environment. 3. The environmental impact to south Texas seems relatively minimal and they can always take reasonable steps to lower this impact even further. 4. Their rapid pace of iteration is paramount to making this technology work which is why we should not delay this development any further. Thank you for taking the time to read this. Brett Largent

The FAA brings up important points that needed addressed that could be affected by construction and regular launches. It appears that the impact is low. The SpaceX team is aware and prepared and ready to mitigate any concerns that arise. The numbers proposed for the launch's from the SpaceX Boca Chica launch facility seems reasonable based on SpaceX's past development of the program. However as critical launch hardware is being completed, SpaceX will have more time to rapidly iterate the Starship program. If SpaceX is to reach there needed NASA HLS contract in time, there will need to be more launches per year. SpaceX is an important company in the space industry, also SpaceX is an important company in the development of human exploration. SpaceX is stimulating the local economy of Brownsville area and the state of Texas. The FAA should look to streamline and limit the holdups when it comes to the launch cadence from Boca Chica. I can see SpaceX looking to move to a different location or Country with minimum restrictions. This is an important company for the Brownsville area, the State of Texas, and the United States.

Here in Huntsville, AL, we have a vested interest in the continued development of space programs. What SpaceX has accomplished in Boca Chica in a short time is nothing less than amazing. The continued development of a reusable orbital system is paramount to bringing technology to all regions of the world in addition to continued exploration of our solar system. I strongly feel that the benefits of this program vastly outweighs any environmental impacts on the Boca Chica area. John Denney

I follow the history making progress of SpaceX developing a fully reusable multipurpose space transportation system at the Starbase in Texas every day. Having seen and heard two Saturn 5 and ten Space Shuttles launch from the Florida coast from similar distances as the nearest residents of Boca Chica I consider the environmental impact of SpaceX totally acceptable. This apart from the experience at the Cape that the wildlife diversity has increased since the hunters with their rifles have made room to the rocketeers.

Hello, I'd like to see SpaceX fly because I think it will be very important for our future to colonize mars and without testing in short term this is centurys away. I know probably a lot can go wrong, but without testing of the whole system we will never find out whats wrong thus never upgrading and never implementing better solutions to the next prototype. So i think you should let them fly, because if its over the ocean its very unlikely someone will get hurt. Also other rockets could also have a malfunction so why do you let them fly? Sincerly Stefan schöller

Starship is a hope for humanity and an Americans born company is going to Launch Americans people from Americans soil. The earth is becoming less inhabitable everyday and at our current pace we will not be able to sustain our current population. Think of starship in lets say 50 years or so as a plan f. If all else doesn't go to plan we leave earth and take what we can with us. I know how scifi that sounds but that might be our only option. Or maybe we don't need it in that context. It still provides a way for humans to live among the stars and believe that's a dam good future to look forward to. Ps it will create millions of jobs!

To all of the responsible people who are tasked to observe and deliberate upon this monumental time in history, I ask you to listen to the feeling in your gut. My brain says it makes sense. When I compare this occasion with all other of my life here on the planet earth, I have no other examples that compare to the charged, emotionally inspired, historical events. We need to see this type of thing work. We as a general international society, NEED to see this demonstration that we are capable of greatness. My guts tell me that I will be watching the next starship launch with the same baffling emotions as I did with the last. Do the right thing. Thank you, John Wagner

To show it may concern, Please note my support for the Boca Chica facilities and test program of SpaceX. I believe this project provides an opportunity to the local community, environmental groups, industry and regulatory agencies, such as the FAA, DOT and EPA to work together to create a world-class model that considers and balances the interests of all parties. Respectfully, Nico Keyserlingk

Please work in support of Space-X with the understanding that space travel has inherent risks. The greatest risk is the injection of bureaucracy hampering human progression. Risk needs to be reasonably mitigated, not eliminated. Oversight needs to be in the interest of American tax payers and rapid progress of Space-X is in the interest of Americans tax payers.

There is definitely a problem if the FAA is being utilized as a tool to stall competition in the space race, you've recently opened a new branch to further accommodate the space companies in Texas but now there appears to be need for regular guys like me to write in order to help you see that the public wants to see the space frontier sooner and not later. Can you please streamline your regulatory process to operate more efficiently so that space can become like the auto transportation industry where it's accessible by most? We need spaceX and every space destined company to start launching more frequently! What will you do when relativity space starts printing new rockets every day?? Can you please streamline a faster regulatory process?

I support SpaceX's development of Starbase at Boca Chica. I am a California resident and US citizen and although I would love to see a site like Starbase take shape in California, Boca Chica is one of the only places in the continental U.S. that is feasible for rocket development of this type. It's remarkable what has been accomplished there already and I greatly look forward to what's in store for the future of the site and the economic development of the surrounding area. Our nation has the chance to firmly remain the world leader in space exploration and be a decade ahead of any other nation on Earth to pursue the exploration of Mars. In order to keep the lead that we have, we need to do everything we can to speed up development of Starship and Starbase; not slow it down. Please allow SpaceX to proceed with their development of Starbase and orbital tests of Starship as soon as possible.

Hi FAA, I believe that SpaceX should have their launch licence for the following reasons, 1. SpaceX is doing the best they can to ensure safety to members of the public. 2. the space community really want to see starship and superheavy fly their orbital mission before SLS and Orion. 3. we want to put starbase on the map so Blue Origin can realise that spacex are the best

Actively support this, keeping in mind there is an issue with road closures. Would appreciate industry and government working to fast track a tunnel under road so that we aren't impacted in terms of freedom of maneuver. If government can hurry approvals and the Boring Company can quickly get the tunnel finished, that would be a great example of cooperation and working together. That said, it should be happening concurrently with the launches and should in no way impede the March to American dominance. On to space!

I visited Boca Chica not too long ago, and spoke to the local population about the impact SpaceX has had on their community. Many told me there has been a boom for business and that local investment is starting to begin in the form of newly planned construction. And while all of that is great news nothing compares to the impact SpaceX will have once Starship is fully developed. I've had the privilege to see both the space shuttle and Starship up close, and I can say it's like comparing the size of a Gulfstream to a jumbo jet. This will be humanities hope to make space attainable for all, and as a young kid who was mesmerized by the night sky, this will be a chance to bring the heavens down to earth. I am fervently in support of Starship's development and hope if SpaceX comes back desirous of more launches, you will approve that as well. P.S. Today is my birthday, so let's make this happen!

The United States needs to continue it's leadership in space. If progress is left to NASA alone China and other countries will surpass the United States in space technologies and that is not acceptable to the American people. SpaceX needs the full support of the FFA. The FFA needs to remove obstacles that would impeded the progress that SpaceX is making in Boca Chica, Texas. The benefits that SpaceX can bring to the people of the United States cannot be properly imagined at this time because it would exceed any expectations we currently have. That progress can only happen if the most important work in the county, the work being done at Boca Chica, continues without interruption and without the obstacles often put in place by government. Thank you for this opportunity to share thoughts and concerns about what SpaceX is doing in Boca Chica, Texas. Their work will benefit all Americans and in turn that will help all humankind. Dustin White

Hi there, I'm Sebastian, I am Romanian and I live in Denmark. Legally I might not be entitled for an opinion in this debate, but as a citizen of the same planet as you and as a member of the same race as you, I believe I am. SpaceX is the most inspiring thing happening in the world right now. Might be the most ever in the our history. You must if not help to at least not stand in the way of writing a marvelous pice of history. . Years ago nobody was thinking landing a rocket is possible. Bow the entire planet believe in Musk and roots for its success. I'm a nature lover, and truth is that always wild life lost in the face with progress. I'm sad about this and I dream about a world where we can live in harmony with animals and plants around us. Truth is, it has never been possible. Now, in case wildlife is indeed threatened there and you want to save it, I'm happy about it. Save it. Find a way. But not by shutting down SpaceX's plans. It's infinite easier to save and relocate the turtles than to build what Musk's building. And with all the respect to wildlife, we have just one Musk. And his time on Earth is limited. We should make the most of it, and maybe, maybe, his plans will again turn true. And us, as a race, we'll achieve the most important step in human history. Warm regards from Copenhagen, Sebastian

Hi, my name is Jordan House. I am writing to express my support towards SpaceX and the Boca Chica Starbase site, as well as the development of Starship and Superheavy. I believe we are seeing once in a life time innovation here which has provided not just jobs for locals but hope. Hope for the older generation, hope for the current generation, hope for the younger generation and hope for the next generation. To push the human civilisation to our next frontier and beyond. To become a multiplanetary species and expand our self to beyond the stars. While also doing so the innovation in technologies will enable better quality of life on Earth as well. I plead you consider this email with my full support towards the SpaceX team and continue to allow them with full access to grow. Thank you.

Buenas tarde Mi nombre es William Felipe Acevedo Rivas y escribo por la citación de SpaceX acerca de el lanzamiento orbital y estoy de acuerdo en que mantiene todos los estándares de seguridad y cálculo en cada parte del proyecto y lo más eficiente seria darle el permiso lo más pronto posible, para así poder seguir avanzando hacia una mejor vida y un mejor mañana para toda la humanidad, gracias espero sirva de ayuda este mensaje para el progreso de la humanidad. Muchas gracias Administración federal de aviación

Translation: Good afternoon. My name is William Felipe Acevedo Rivas and I am writing because of SpaceX's summons about the orbital launch and I agree that it maintains all safety and calculation standards in each part of the project, and the most efficient thing would be to give it permission as soon as possible in order to continue advancing towards a better life and a better tomorrow for all humanity. Thank you, I hope this message will help the progress of humanity. Thank you very much Federal Aviation Administration

SpaceX is building the future of humanity. They are doing the work that the U.S. government is now too corrupt and dysfunctional to do. No single project in the world is more important. Let them do whatever they want and mankind will benefit.

To whom it may concern, Thank you first of all for your service to the country. I hope you and team are staying well in this times of uncertainty. BLUF: I am in support of SpaceX with their iterative development of Starship that includes the upcoming orbital launch attempt. I recommend FAA and the various governing bodies provide a timely risk & reward informed approval to the upcoming orbital launch attempt, with the caveats detailed below. My name is David Sadeli, and I am currently a principal engineer at one of the Department of Energy National Laboratory. I help manage the various nuclear deterrence mission space the United States have, and I am also one of the Program Manager in our effort to apply Artificial Intelligence into our mission space. This comment related to SpaceX is my personal comment as a United States citizen. From my limited perspective, the general trade that FAA and the various governing Federal agencies should assess - is whether this iterative (rapid design, prototype, test, fail spectacularly, iterate, retest, fast maturation) development approach core to SpaceX, with the potential of increased risks to the environment and general safety, is something the US Government should fully support or not. In general, that trade above is not an easy one to answer. Relatively speaking, us too in the US Nuclear Deterrence mission space try to make similar decisions through the years. Where the (historical) general conservative approach has been to do our outmost to minimize risks to safety and environment, over the years this ever increasing risk averse mentality does lead to the slow, meticulous, rigid and systematic (waterfall), cost prohibitive (if not wasteful), and reactive processes prevalent in our Government processes. I recall the typical joke we have in the defense industry - the "system" won't be fully ready for deployment until such time when the weight of all the paperwork exceed the weight of the actual system we plan to launch! The fundamental question here is whether or not evaluating SpaceX through our baseline approach lenses - is the most appropriate given this new emergent industry leader in this commercial space exploration space. The different approach to product development SpaceX implements, informed by their Silicon Valley agile software development pedigree, is something that the various US Government agencies are carefully monitoring. NASA and the DOD had made explicit comments and contract decisions that reflect their positive sentiment to this agile approach. I too am exploring the potential leveraging such approach in our (very rigid and historical) Nuclear Deterrence mission space with our leadership. These are definitely uncomfortable questions, but we cannot readily dismiss the breathtaking successes SpaceX has achieved in the commercial space mission areas. If I may, my recommendation is for FAA to timely approve the planned orbital launch demonstration and associated preceding steps fully (with a reasonable alignment with SpaceX's development timeline), but to implement the following risks mitigations: 1. Have FAA and other US Government agency be privy to the detailed analysis related to SpaceX's mission failure modes and probabilities. Whereas SpaceX may be protective to their detailed prototype design and margin analysis, the areas as related to safety and environmental protection have always been under the purview of the US Government. 2. FAA to explicitly specify expectations and ownership of responsibilities for any potential (not intended or malevolent but a degree will still occur) collateral damages that may occur. 3. Implement an appropriate (reasonably driving SpaceX's decision calculus, but not overtly suffocating) penalty scheme (cost penalty, responsibility to cleanup and rehabilitate impacted areas, subsequent approval penalty) to applicable damages SpaceX development vehicle may impart. The point here may be to challenge SpaceX to do (increased rigor) their due diligence on their own program development risk-reward assessment, but not to make it so unexecutable that all development activity slows to a crawl, or worse - cancelled (and the potential strategic negative impact to US

technology development, and tactical economic impact to fellow Americans living in Texas). Fundamental to my recommendation above is the potential need for our country to balance this very unique and critical (moderate) risk - (very high) reward calculus. Although some amount of collateral damages won't ever be minimized down to zero with any reasonable cost and timeline allowance, SpaceX can and should be made aware of the explicit expectations from the US Government where and when damages do occur. On the very critical flip side, the potential for success of this highly challenging and innovative new space exploratory technology space, and what that may mean to our country's future capability, state, status, and role as the vanguard of our democratic values in the world - is something that should not be discounted lightly. Last, a potentially cheesy but apt line that may apply in this circumstance, is the famous line from Hamilton the musical, that (paraphrased) state that we need to go back to our fundamental young country's root of being "young, hungry, and scrappy" - for us to have a fighting chance in the rapidly evolving future world order. I hope this email and the perspective contained are more helpful than not. Once again, I personally appreciate your leadership in this challenging time. Thank you for your time. David Sadeli

From a brief scan of the EIS PDF I note that the negative effects expected from continued and expanded SpaceX operations are low and within existing allowed ranges. SpaceX and Mr Musk's other companies are at the forefront of environmental protection - but currently any major physical changes shall have some environmental impacts. Overall, the balance appears to be greatly in the positive direction environmentally for the entire planet. I support SpaceX's development fully.

Dear ladies and gentlemen, I am Luis from Germany and my opinion to the orbit test flight of spaceX is that it is very important to authorize this flight. Firstly because it is an important milestone and huge step for spaceX's goal to go to mars. Another aspect is that the world has no big drive for people, like it has been in the apollo-era. In this time people had been together and near to each other and there was an cohesion in the world (mostly in the USA of course). And such an cohesion is needed in this time. Humans are far from each other and due to corona this is very noticeable. And this is why we need this. SpaceX is in the USA located but the hype around then is everywhere on the world. Since the internet was go public no big new invention has been done. I am feeling like we stepping on the spot and don't go further. We need inspiration like SpaceX and co. and this is why I think SpaceX need your support and help to get this goal. Fast approval and permanently presence of officials are essential for SpaceX. So please open the gates for an change in the rocketry and for an change in the human history and the most important thing, the cohesion in the society. Thank you for listening and greetings from Germany

Hellooo, Kenyan space enthusiast here. Lemme give you a small story. Since I was a kid, through the education system, I always thought I was stupid, cause I wasn't in the smart category of students, but I shone in one place, that is science. I did my mates and teachers dirty,.. I just never knew how this love for science would get me. But since I knew Elon musk and his programs, I feel more Alive like I did as a kid. Now I feel I have a purpose, even though I'm just a entrepreneur. SpaceX ignites this to many people... Letting them get with their way,... regardless of the means, even if its complicated, will inspire future generations. I stand for their mission and pray you not only let them get by over the gerontocracy currently running the regulations, but help them advance. Thank you for reading thru. James.

Hi, I'm the founder of a public 3D printing company, Markforged. As a kid, I dreamed about flying jets and exploring outer space. As a teen, I went to MIT and studied aerospace engineering. When I looked at jobs and internships in 2003, it felt like we were in sustainment mode, and that we weren't pushing the limits like we did with jets in the 40's and rockets in the 60's. It was a sad reality. SpaceX has changed that. The dream is alive again. I've seen the best and brightest out of MIT head there to make a difference. I've worked with SpaceX and witnessed their tenacity and engineering might. I urge you to encourage them on this journey. Approve their launch. And let all of us keep reaching for the stars. Greg Mark

This flight is very important, it can give us the possibility to test the first full reusable rocket, which has the capability of taking mankind around solar system. Of course all sort of safety tests need to be done, but not allowing this flight to go on is a serious step back in terms of progress. Therefore I am pro to this flight.

The role of regulators is to ensure operations are conducted safely, not to stop progress. SpaceX have no interest in creating problems in their own backyard, environmental or human. They have a proven record of safe and considerate operations at the Cape, Vandenberg, McGrogor and at Boca Chica. Rocket development is loud, noisy and frequently involves blowing things up. To the uninitiated that looks scary and dangerous, but it's just a normal part of the process, and can be done safely and with minimal impact. Minimal, not zero. But nothing is zero impact. Beef production has a massive environmental impact. Housing does too. So does driving a gasoline truck to the beach. So the benefits of any activity must be weighed against their impact. The benefits of the Starship development programme are clear and real. Lower cost access to space using propellants which can be produced in sustainable ways, as they will need to be on Mars, and creating a capability for the first time in the history of this planet for humans to become a multiplanetary species. On a global scale the footprint of Starbase is miniscule. Scientific studies show that impact on neighbours from launches will be minimal. Cape Canaveral has a thriving and protected ecosystem with rare and protected species thriving in close proximity to space launch operations. The affected area in Boca Chica is a tiny portion of a coastline that stretches for hundreds of miles in either direction. Nature will adapt, survive and even thrive. Humans will get used to the noise of occasional launches which may be more noticeable than an aircraft takeoff but far less frequent. Assuming that a launch site has to be built somewhere, there will always be opposition from those closest too it. There are hundreds of miles of local beaches, so occasional closures of Boca Chica beach should not be an issue. For these reasons, and many others, I am confident that Starbase will ultimately be approved and see Starships launching to orbit and to their new homes on offshore starbases. The issue is merely of timing. I urge the FAA to work with SpaceX and other interested parties to ensure progress is not slowed. Starships need to be launching to continue development. Operations can be modified to reduce their impact, but they need to be starting now. There is a finite time left to achieve these goals. We don't know when the next meteor will hit, or if climate change runs out of control like it did on Venus. Every day of delay increases the risk to the survival of our species. Thank you for your time, and God speed to SpaceX and Starship. Chris Parr UK Planet Earth

To whom this may concern at the FAA, Please pass Space X at boca Chica on its environmental assessment. It is already going out of its way to be as environmentally friendly as possible for its industry and its impact on innovating technologies for the space industrial environment cannot be overstated. History has shown that any of our greatest historical technological breakthroughs come either as a direct result of space tech research or tangentially through variations of that technologies, ways to improve telecommunications, ways to improve filtration, innovating fuels while improving fuel economy. Improving energy storage and production technologies, even reductions in noise pollution. Further considering the implications of radically shortening time frames of cargo transport, the possibility of enabling such access at major airports to not only improve cargo, but passenger transportation, all of which can occur and generate even greater research via private sector innovation into passenger comfort, noise reduction, technologies. And any of numerous space access based technologies. Space x, through their boca Chica facility, is at the forefront of these technological innovations, enabling spinn off and support industries to also be created, grow, and thrive as the economy continues to change and grow. Please enable Space X to continue their work unabated. Thank you for your time, Morrell Jones

Hi everyone, I'm not a resident of Texas, but I am an American, and I want the best for all of us and every state in the nation. I have a deep faith that SpaceX's work in Boca Chica will be a tremendous boon for the country, and similarly for Texas. It's a company where the best minds are sharpened and focused on some of the hardest tasks we as humans have ever attempted. The intellectual capital returns for both the US and Texas are probably inestimable, but certainly great. And the monetary capital returns for the area will follow suit, especially as SpaceX eventually goes public and turns all of its employees into tax paying millionaires. I can only see tremendous good coming from their presence and work in Texas. I'm sure you'd all agree that the work is exciting to follow, despite the short-term noise they make while they hone their technology. Thank you all for being open to hearing from the public about this. I think a great deal of us care about the outcome, because SpaceX is a tremendous source of hope for us, and we all want to hope for a great future. All the best, Tim Isenman, Los Angeles, California (But sent from Tokyo, Japan)

Hi! Elon musk is extremely environmentally conscious. He's taking the necessary steps to ensure the smallest amount of negative environmental impact is achieved. Even going as far as to hiring a biologist for this project. The location he chose is quite remote. Beyond concerns of the health of earth; progress towards establishing life on other planets can help us learn more about our own planet. Compare and contrast so we can improve the state of our planet. This is very important for the future of the human race. Thanks for listening! - Anthony

I fully support all the launch development and intention to fly Starship at Starbase, Boca Chica ,Texas. If America wants to stay ahead of China, the FAA must grant all permissions to be forthcoming in this regard. Reuseability of rockets is the only sensible way to gain cheap access to space. If The FAA fails to support fully the work at Starbase, then China will surely pull ahead of America, to its real detriment. America loathes being second best. There is also the benefit of all the jobs available there and all the support network that supplies basic items.

Please provide approval for SpaceX's request for orbital flights, well, any flights, they are requesting to speed up the implementation and testing of Starship and it's boosters. What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1B in annual revenues fro satellite, engine purchase and human flight 4. Created first and most reliable reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet Who would benefit from SpaceX slowing down: - China - Russia Please extend ALL the support you can to SpaceX, the US/World's LEADING SPACE company! Thank you for your consideration! Bret Caruso

Dear Federal Aviation Agency, Today, I woke up and realized that the only thing keeping me from totally falling into despair over the state of our great civilisation is the existance of the SpaceX Starship Program. I don't mean to discredit the efforts made by NASA or other governmental institutions to advance human presence in space, however, as long as governments will change periodically I find it impossible for these agencies to follow a coherent plan and achieve their goals. I think I don't have to tell you how important the relatively recent development of the private space sector has been for inspiring younger generations. In my opinion it is absolutely crucial that SpaceX receives as much freedom as we can give them without causing harm to anything or anyone. In my opinion, however, they've showed themselves more than willing to take the needed precautions in order to ensure the safety of the wild life in the immediate vicinity and beyond. I hope you consider the impact this organization has on all our lives by inspiring us to be excited about the future. Thank you for reading! Theodor.

The FAA needs to get out of the way of innovation. We have a once in a generation chance to become a multiplanetary species and SpaceX is working to achieve this. The FAA should be doing everything in their power to support the rapid development of reusable rocket technology. It angers me and many Americans to see the federal government bogging down amazing companies with beurocracy. I have said it before and I will say it again. Get out of the way. Your agency has failed to ensure the safety of passenger aircraft where extreme caution is needed I.E Boeing 737 max. Funding for the FAA should be cut and given to Nasa and other agencies that support science and technology advancements instead of holding them back. If you choose to limit SpaceX and their ventures in Boca chica and elsewhere I will support any cause to protest and defund your organization that lives off of my wasted tax dollars.

To whom it may concern, SpaceX proposes to conduct Starship/Super Heavy launch operations from the Boca Chica Launch Site in Cameron County, Texas. As I'm sure they've applied to obtain an experimental permit(s) and/or a vehicle operator license from the FAA Office of Commercial Space Transportation to operate the Starship/Super Heavy launch vehicle as requested. In my opinion, the rule book set forth by the FAA, would be the beginning foundation of SpaceX's development and deployment plan. After careful review I believe you will come to the same conclusion. Thank you, Dana Levine

I live in Alaska and am an avid Space X fan and follower. I teach high school science and math and have used the incredible technology and development of a reusable, giant rocket capable of going anywhere in the solar system and especially to the Moon and Mars as inspiration for my students. They love seeing what Elon Musk and Space X is doing for the future of our country and the world. I strongly believe that we as a nation need to do all we can to responsibly support Space X and its vision to make space economically accessible to all of us. I believe we can both support this incredible company as a nation as well as be environmentally responsible. I feel the importance of fully supporting and encouraging Space X in Boca Chica and their vision, including the sustainability of our technical leadership as a nation cannot be understated. Let's make and launch those rockets and continue the shift into a new space industry paradigm!

I would like to add my voice to those in favor of SpaceX's activities in Boca China, Texas. The future of American leadership in space exploration hinges on the rapid development taking place there, and the fact that it is done in such a visible and open manner will inspire a whole generation much like the Apollo program did. It makes me optimistic for the future for my son that such driven and ambitious ingenuity is still possible in today's world. I believe the environment impact of the project is well with the positive impact the project will have on humanity's future. The fact that the methane, nitrogen, and oxygen can eventually be gathered from the local atmosphere mean that eventually launch activities of starship could offset their own carbon impact is very promising. The fact that that process is necessary to SpaceX's Mars plans makes me hopeful that propellant generation will succeed and benefit us on earth as well. Thank you for the opportunity to share my opinion, and for the future-forward work the FAA is doing to safeguard the safety and prosperity of American citizens.

I believe America has its best interest to compromise and allow authorization for SpaceX's proposed use of Boca Chica site for orbital launches. I wish for America to have access to advanced reusable rockets and be the leading figure in space endeavors. We may not see another SpaceX kind of progress in the future as such we need to make use of this momentum. As a citizen of Malaysia, I wish America the best and be the leading figure over such technology over China and Russia. Best Regards, Mohd Idee.

I follow spaceflight progress across the world as a hobby, and what SpaceX is doing is much ahead of all the other projects happening around the world. If the Starship project is allowed to continue from Boca chica, it will allow humanity to become multiplanetary species in our lifetime, starting a new chapter in human progress. Ofcourse any human project will have some impact on environment, but this will be so much lesser than the oil and gas drilling projects that exists today. Regards, Sagar Sugandhi

Please give SpaceX your approval for launches in Boca Chica as soon as possible. The Chinese are not waiting for us. It is a national security threat if they get to space before we do. You know how they are claiming Taiwan and how they have built an island out in the ocean just to extend their international waters. What do you think they will claim if they get to the Moon and Mars before we do? The environment in Boca Chica will be just fine.

Please allow the continued testing and development of Starship at Boca Chica, Texas. I believe in Mr. Musks dreams and I haven't been this excited about space travel since my late teens. Mr. Musk brings hope and has helped bring forth advancements, we should have had decades ago. And he has helped influence other company's to further develop technologies for the advancement of mankind.

Please approve SpaceX For further operations at Boca Chica as they have proven they are best suited to help propel the US and humanity further into the stars. SpaceX and Elon Musks other companies are all focused on the benefit of humanity and our continued existence on this and other worlds. Delaying activities further would be counterproductive and only put us further behind other powers that are both less concerned with the environment and able to deal with the responsibility of safe launch activities.

I am Texas resident who has been awed by what SpaceX has brought to the state and the US. SpaceX has brought jobs and recognition to the State of Texas and the United States. Space travel is important to the US for obvious reasons, including national security. NASA has done incredible things, but they are increasingly held back by funding and political motivations, which change every 2-4 years. It's difficult to create and sustain a government space program under mountains of red tape. SpaceX can relieve this situation as they are not politically motivated. Their focus is to innovate, and make humanity multi-planetary. As far as environmental concern, the US government has been launching rockets from the Florida coast for over 50 years in a more sensitive environment than South Texas. Not just any rockets... big Rockets like the shuttle and Saturn V. To say SpaceX poses a larger impact than that, is beyond hypocritical. Let SpaceX do their thing: Create jobs, Innovate the space industry, and Inspire new generations of engineers and astronauts. Cut the red tape and let them fly.

The primary mission of SpaceX is to guarantee the survival of the human race through development of sustainable societies on multiple planets. We don't know when a mass extinction event, like an asteroid impact, will occur on earth, but it is vital that we develop the technology to mitigate this potential catastrophe now that we have the means. Starship testing is the beginning of that effort and must be allowed to progress without delay.

Dear FAA The global economy needs economic growth to sustain our lifestyles and lift people out of poverty. The biggest problem is the earth's resources are finite. By opening large scale access to space, the global economy can continue to grow and USA can be a leader. If the FAA prevents SpaceX from developing this technology in the USA, they will do it elsewhere, and USA will have squandered the greatest economic opportunity of all time. It's your move.

For the first time in my life I feel as though we can work for humanity. "Multi-planetary species" isn't just a buzzword it's a real and achievable goal. I recognize the rights and freedoms of the people dealing with this situation firsthand, but I believe the long-term importance of this project is important enough to speak up. Starship isn't just another rocket, it could truly be a paradigm shift. If SpaceX achieves even their conservative goals then the space industry takes a giant leap forward, and consequently humanity benefits. I wish there were an easy and amicable solution but I haven't heard of one, so I will simply say that I believe this is a small price to pay for a potential return of exponential growth for our people. Maybe that's overly optimistic but maybe that's what we need right now. Thank you for your time.

Regulations are important. However, Starship, a relatively new but flight-proven and landing-proven rocket which will be the future of us in the Moon and Mars, needs to have more tests, and more tests can only happen with quicker approval if we want to land on the Moon as soon as possible and go to Mars and beyond. So please, do allow SpaceX to go ahead with their orbital flight test as soon as possible, since this'll be a major milestone in getting ahead with this a step quicker to humans become multi-planetary.

Dear Ms. Stacey Zee, SpaceX PEA and/or others at ICF, I am writing to you regarding the licensing of SpaceX Boca Chica launch site and the Draft PEA. I am in favor of granting all license requests/authorizations for SpaceX newly constructed launch site for their Starship development and deployment project. After viewing the site(and reviewing the proposal) for a considerable amount of time, I believe SpaceX has shown itself to be a responsible steward of the environment surrounding the site. I trust that SpaceX will not sit still on protecting the environment while performing operations. I feel that SpaceX will always strive to improve their environmental impact whether or not they are mandated to do so. And their improvements will be like a testing ground for improved methods/practices in environmental protection for other industries, not just the space industry. Please expedite the approval process for me. Thank you for your time in hearing my views, Robert Clifton Storey, Jr. Strasburg, VA.

Hello to whom it may regard, I wholeheartedly support SpaceX's Starship prototype launches, dry tests, and all other launches/launch perpetrations. If the convenience and economic pay off of damage to the environment caused by oil pipe leaks is worth it, so is this 100 times over!!! If the pollution caused by drilling for oil to pollute more on transportation and then again through the final user ...this is worth it too. Get it done! Sincerely, S Coss

I am writing in favor of approval for SpaceX to continue with their plans to develop Starship and all that entails. As a lifelong resident of Austin, TX who visits the SPI/Brownsville area twice a year, I understand and care for the environmental outcome of said area. I also consider myself a lover of all wildlife and wildlife sensitive areas. After reviewing SpaceX's proposal, and considering potential future plans (even with possible refueling pipelines), I believe the net positive outcome for the area, for the U.S., and for humanity as a whole, would be to let SpaceX finish developing their Starship and the launch system it needs.

Greetings from Singapore, I have been watching SpaceX work for about 5 years now. They are an incredible group of people with an incredible goal of making space available to all for a decent price. I love animals and I love nature - especially the eagles of the northwest. I love the habitats that we are establishing around the world for our wonderful animals. There must be a balance however in the usage of land for either man or animals. It seems to me that the mutual benefits (worldwide) of setting apart Boca Chica for such a venture as space access greatly outweighs the concerns over damage to the environment. Time is of the essence for humanity to reach space. This is my heartfelt plea to move on getting SpaceX the clearances that they need to move ahead. This is of global significance, not just for the country of the United States. Sincerely, Greg Eck

I am an air traffic controller and work for the FAA and also happen to be inclined with operations conducted at SpaceX. I am an enthusiast of SpaceX and of the invitation that is produced from Boca Chica/Starbase, Texas. Unfortunately, any time a new developing company starts to expand and increase operations, it will have some sort of impact to it's immediate area. However, the benefits provided by SpaceX towards humanity and the local area completely outweigh the negatives. SpaceX provides jobs to thousands of construction workers and machine operators. They provide jobs to food service, security, and administration personnel. Not to mention engineers and technical jobs. Ultimately, the goal of SpaceX is benefiting the entirety of humanity and inspiring people, not only from the United States, but the world. It appears SpaceX is conscious of local wild life impacts based off their attempt to relocate turtles for protection several years ago. I would like to continue seeing SpaceX on this innovative and inspirational path without being halted. I am for SpaceX to continue operations and am excited to see advancements next year. Thank you, Philip Vinson

Boca chica should allowed to used as spacex main location for its operation and it can developed in to the space hub on earth. Given than NASA has several opearatuon hubs near boca chica its easy for spacex to be near that visinity. Research and development is key in space travel and boca chica can be the main destination for that. This will potentially generate lot of tourists and investments and boca chica will be developed in to huge urban area. I have always dreamed of a place on earth where all the space related works will be happened and i will get to visit that place. Boca chica will be that place.

Although government oversight provides essential safety and regulatory guidance, I feel it is important that SpaceX should be given much latitude and priority to prevent costly delays in their program at Boca Chica. Recent launches and advancements in the space programs of certain communist countries make it essential for companies like SpaceX to gain rapid advancement of U.S. civilian projects, which have been shown to be more cost effective, efficient and productive than most government run ventures in the rocket industry. Please provide SpaceX with the urgent and efficient assistance necessary in getting their starship program off the ground as soon as possible. Sincerely Joseph Cesta

Hi FAA. No disrespect, but its time to up your game. SoaceX are charging and you don't want to become the limiting factor. What happens in Boca Chica will be seen as a pivotal point in history and the narrative will require a bad guy. Let Bezos take that role. Assign more staff, apply for more funding and adjust your outlook to include failure as a good thing; a learning experience. Yes, public safety should remain your highest priority, but the risk here is negligible. Please get out of the way and let SpaceX do their thing. Thank you for your consideration. Simon Braniff, a futurist.

To whom it may concern, I would like to comment on the SpaceX Boca Chica facility and flight operations. I am very much in favor of allowing these operations to continue. Naturally I would provide a common sense reason for this opinion. SpaceX is designing and developing a fully reusable spacecraft. That means, once operational, no part of this spaceship will land into the oceans and cause any damaging effect there. To date, every other operational spacecraft, except spacex Falcon9 eventually crash into the world's oceans or land masses. I believe it is a small price to pay in allowing SpaceX the necessary experimental flights so that they may achieve the goal of complete reuse of their space craft. Further, I also believe that given the success of SpaceX Falcon 9 and current tested Starship flights that SpaceX will accomplish that 100% reuse ability goal. Thank you for the opportunity to comment on this subject. I hope you're my comments I have made my point clear and that you will see the value in allowing SpaceX the necessary flight approvals. Sincerely, Philip W Hermann

I do not believe that the impact assessment looked at the source of all of the natural gas needed for a power plant of this size, nor do I think FAA should be approving power plants. Locating a power plant in the estuaries would likely have negative impacts on both animal species and recreational opportunities in the area, as well as negative impacts on the whole region associated with drilling for gas. They could easily power their facility with renewable energy installed away from the area instead of making all of these unnecessary impacts.

I am a Brownsville resident. My wife is from Matamoros and of native decent. Her people were here for thousands of years before people dreamed of space. When I first heard of SpaceX coming to my home town I was very excited. I have been fishing for years in the in the secluded bay directly adjacent to the build site. This bay is an amazing place. I have seen it filled with thousands of ducks in the winter and schools of red fish. I am concerned about the environmental impact the SpaceX experiment rocket program will have on this fragile ecosystem, and I am disturbed with SpaceX's disregard with concern to their original FAA license which they have most brazenly violated. However I believe that far more good than harm can come from the SpaceX's presence. The Laguna Atascosa is an amazing place where the ancestors of my wife and children have hunted and fished for hundreds of generations. I propose that SpaceX offset it's environmental footprint through wetlands restoration projects throughout the Laguna Atascosa and beyond. They have the means to restore wetlands and bring them back to pre-Columbian conditions. Many wetlands in the surrounding area on both sides of the border were destroyed before SpaceX, the FAA, and even Texas were conceived. SpaceX is in position to do so much good. Please allow them to continue their experimental rocket program with the caveat that they donate a significant sum of money in excess of one hundred million dollars to restore adjacent wetlands on both sides of the border. Thank you for allowing me to be part of this process. Sincerely, Kevin Osborne

To whom it may concern, I am an American citizen and I am awed by the astonishing progress made by SpaceX. I fully support the efforts to begin interplanetary human exploration with their Starship. Accordingly, I request the FAA and any other governmental bodies that may be involved assist SpaceX to stay on track with their orbital insertion test flights of the Starship. Just as the effort to get to the moon created incredible technical innovations that continue to permeate through into the retail markets to the public benefit, America will see another explosive cycle of innovation that will drive our economy for decades. Please understand the enormous excitement and pride that the Starship is creating in the American public as well as the rest of the world. Help make it happen. Thank you, Greg McCullough

I'm writing on behalf of SpaceX's application to launch their new prototype rocket Starship. They desire to launch from South Padre island in Boca Chica, TX. Their preferred launch schedule of Nov 7-14 represents a bold step towards regular space launches to the moon and beyond and would reflect greatly on the USA's capabilities for interplanetary launches. We would like the opportunity for this to take place in the specified timeline and seek your approvals for launch activities next month. I am etc. Gavin McGibbon

Hello Mr/Mrs. My name is Duc from Vietnam. Im living in oversea but got excited with every launch of the spaceship. Beside that I still worry about the damage that Earth will catch when so many spaceship launch in the future. But I thinking the support for the first launch of SpaceX can accept in this time. That may make we cross in to the good line of the future Earth timeline.

SpaceX should be allowed continued launch. They have sparked a new generation of engineers and kids excited about science again. It's the same mission NASA did with Apollo and Shuttle. As a person who has been to South Padre for vacation, the influx of high paying jobs and skilled jobs in the area is a huge benefit to the small businesses in the area.

Dear FAA, Mankind's future is among the stars. Starship and Super heavy stack is objectively our current best hope for extending the human race beyond our home planet, which, I hope, might eventually save and preserve life as we know it. Don't you think that dinosaurs would have loved to have Starship available as soon as possible? For us, humans, asteroids are not at all a single existential thread that we face or that we might face. Please FAA, let that this future happen and help SpaceX realize dreams of so many people, dreams that have so far been only captured in books, movies, music, art and our imagination. Your fellow aviator and glider pilot, Jakub Výmola

Hello, My name is Giovanni Sophia, from Rio de Janeiro, Brazil. I would like to support the Space X program, by telling that this is a campaign that WE humans need. We need to explore the boundaries of space, we have a necessity to expand our race. Since we are born, we've been told that we must raise our children for life, not for us. And SpaceX is the basis of this sentence. In this time of COVID-19, a burst of light and hope is created. With this program we can access new life, new medicine, new species and a new home. Release SpaceX shuttle and let humanity fly and evolve.

Hi, Sir or Madam, I am writing you that you may know I am an enthusiastic supporter of Space Exploration Company's efforts to construct and operate a non-military industrial space launch platform. Thanks for your work keeping American Aviation safe for the flying public and non-involved personnel and the flora and fauna at all airside and maintenance facilities under your remit. My hope is that you will be able to assess the draft review for SpaceX Boca Chica Starship and Superheavy Booster favourably to allow the flight and operation of said experimental facility; and eventually to grant flightworthiness to the SpaceX Orbital Flight System being developed. It is my opinion that the environmental impacts inherent in these planned and demonstrated operations can be mitigated by proper controls during the development phase, and that the operation phase will bring great benefits to the World Environment and help with Humanity finding its place in the Universe. You stand as gatekeepers to the future of life's orbital industrial capacity, and we have seen how fragile our chances can become. Please ensure that these spaceflight developments are allowed and encouraged. Thank you, Tony Squires, Townsville, Australia.

I am writing in support of SpaceX and their Starship program. There has never been a more critical time in human history to look beyond our own atmosphere and bring to life the dreams of one day becoming an interplanetary species. The benefits of the Starship program (e.g., advancing humanity to the moon, Mars, and beyond) greatly outweigh the consequences. Please approve and support the altruistic endeavors of Elon Musk and his expert teams making these dreams become reality, safely and efficiently, for the sake of all humanity.

There are very few geographic places, and likely a single one -- Boca Chica -- where the United States could iteratively develop advanced, reusable interplanetary rockets. Other operating Spaceports have too many high-value missions and assets for the high-risk and rapid pace required to succeed in this decade. Therefore if the United States wants to continue and advance for itself and for humanity its long-term space exploration leadership, we must accept some strategic compromises and quickly authorize SpaceX's proposed use of the Boca Chica site for orbital launches. Best Regards, Max Haot

To whom it may concern, The Starship project in Boca Chica will be known in history books as man's first step toward Mars. It is profound beyond words. This rocket will revolutionize spaceflight. NASA is fully aware of this. That is why they have chosen SpaceX to deliver America's astronauts to the surface of the moon. So then, why the negative comments toward SpaceX? I would guess that those opposed to Starship don't really understand its historical impact. Their focus is purely local - beach access, endangered species impact, etc. But there is no scientific evidence to suggest we need to be concerned about local wildlife. Please, we cannot stifle a project with such historical implications for a few folks who want to go to the beach, or those who make unfounded claims regarding wildlife. America has found its way back to the moon. And that roadway is through the SpaceX Starship rocket. That is our reality. Not only that, it is likely our road to be the first humans on Mars. Back in Apollo days, it meant a lot to become the first on the moon. This is our chance to return to the moon, and continue on to Mars. Please, let's do everything we can to help SpaceX achieve these national goals. Historians will indeed record how it all started at Boca Chica, TX. This is history in the making. And we all get to watch it unfold. Thank you for your time, Mike Hawes

I support approval of SpaceX license. FAA should not be a speed bump to progress in space exploration or a puppet of a certain single political party. Human population is growing exponentially on earth and we need to explore space now to prevent the extinction or massive genocide of humanity.

Please Provide SpaceX with expedited inspections, for all there regulatory requirements due to the reasons stated below. What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet. Yours truly, Meir

SpaceX has saved NASA and the tax payer Billions with its Falcon rockets. Starship will lower launch costs dramatically further, stop the pollution of the ocean floor with spent rocket stages and enable development of space resources to proceed in an exponential pace. It will make America the undisputed leader in this area for years to come. Please support all of us by allowing unfettered action by SpaceX in Boca Chica.

Today, as soon as I woke up, I saw an amazing SpaceX video about assembling a Starship with a booster. How inspiring it was just to think that they've gone so far in sending a man into space, and there are also missions on Crew Dragon. We live in an age of changes and I ask from myself, please, it may depend on your decision whether we will become an interplanetary civilization or not. please make the right choice, I am sure you can do it.

I support SpaceX activities in southern Texas. I hope that the FAA approve their request and allows them to proceed with their orbital test flights soon. I reviewed the documents and they are less impactful than I had feared. I am jealous of the local residents who will get to witness these developments in humanity's next major steps. Noise impacts are less than airports, fireworks, leaf blowers, and vehicles with no or modified mufflers. Environmentally, the footprint of the facility is minor and should ensure the protection of the adjacent marsh lands. The blown up starships were not really that impactful to the vegetation and animals on the ground. I can't help but notice in the videos all the birds. They are not going away as long as the bulk of this habitat exists. If I lived near Route 4, I would be annoyed with the increase in truck traffic. For that I sympathize. They are building new access and pipelines to alleviate this? I think SpaceX should maintain an escrow account so all this can be demolished and returned to nature if these efforts fail (like they go bankrupt) or they simply move on from operating in Boca Chica. They must prevent leaks of methane into the atmosphere. Jesse Levin NY

Hello, I'm a 39 years old French woman living in France, I may not agree with 100% of what Mr Elon Musk says on Twitter but I do support both his Tesla and SpaceX endeavors very much, I believe that it is of utmost importance that Humanity pursues the goals that he pursues through them, he unlocks amazingly helpful other technologies on his way, and he communicates a lot and is open about it which is rare and precious. Thanks to that, following the progress towards these goals over the years brings me a lot of hope and joy everyday. When I wasn't well and couldn't sleep at night I watched the launches and was moved to tears everytime, because I felt inspired. This inspiration and hope were such a huge help to me to push through both Covid and work / family issues. Please support them, you wouldn't only be supporting Humanity's technological progress but also Humanity's soul. Just help them manage as well as possible the impact on the local people, fauna and flora, please. Take care, Laura

Hi I am an 18 year old from Vermont who is currently attending University for aerospace engineering. My inspiration for studying in this field has almost entirely been the advancements from SpaceX in recent years, and I am sure I am not alone in this. SpaceX represents the only real chance my generation has to experience the excitement and awe that was brought by the Apollo program to past generations. If you believe in a future where humanity is not limited to one planet, please allow SpaceX to continue their work in Boca Chica. Thank you.

SpaceX should not be held back because other sapce companies are not cost competitive. The urgency to become a multiplanetary species is too important to be political. Imagine if we stopped airplanes or railroads. Where would we be? Support SpaceXs mission. Humanity most likely depends on it. Cataclysmic evens have wiped out almost all life on earth in geographic history. It's only a matter of time before it happens again. The time is now!

Respected FAA, please note, that we fully support the mission of Elon Musk's Starship's Orbital launch Mission. We must allow great thinkers like Elon musk to take on such challenges so that we have something to show to our future generations to come. We hope this message is heard and delivered to the decision makers. USA must remain the global power when it comes to technology and space exploration. Please allow this mission to continue. We thank anyone who shows support to this mission and to the people of the United States.

I wish to express my support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than \$15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. (which is a rather mediocre amount when you compare it to how much a regular roadworks cost in Belgium...) This came with a commitment by SpaceX to invest \$85M in the local economy and create at least 300 jobs. (They clearly exceeded in the amount of jobs created..) . In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commercial spaceport would be like before commencing the works. It seems very strange that the FAA and the state of Texas are silent in the matter rather than fighting for their investment. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties.

Hello, I would like to support SpaceX and their Starship project, currently awaiting approval for the first orbital flight. I can see great potential in this project not only for space exploration but for the entire humanity. SpaceX inspires many people from all around the world to study and develop new technologies. This project is one of the most important steps for humanity because it creates an opportunity to travel to another planet for the first time in our history, create a sustainable environment for space tourism and new discoveries. We can not deny what SpaceX have already done not only for the United States of America and its people - saving millions of dollars by lowering costs of space flights for the US government and other clients, developing the most advanced rockets in the world, creating satellite internet, accessible worldwide even in remote locations, creating jobs for thousands of people. With the Starship project as next-generation rockets, they can develop these possibilities and create many more. The benefits of this project clearly outweigh the negatives connected to the production and testing of new rockets and other space exploration technologies. We need projects like Starship to inspire humanity to make this world better.

I'd like to express support for SpaceX's activities and facilities in Boca Chica, TX. Developing the capability to send humans to another planet will ensure the survivability of the human race if a catastrophic event were to occur on Earth. A relatively small impact to the Boca Chica area is, in my opinion, worth it. Of note, it is critical to have the facility as far south as possible to take advantage of the Earth's rotation when launching toward the East. The facility also needs to be in a location where a large uninhabited area (like an ocean or gulf) lies to the East. There are very few locations in the U.S. that meet those criteria, but Boca Chica is one of them. I know some of the local residents are saying "we want uninterrupted beach access", but the rest of us are thinking that we want uninterrupted access to Mars. I think that should take precedence. So, I'm voicing my firm support in favor of allowing SpaceX to conduct Starship orbital launch activity from its facilities in Boca Chica. [REDACTED]

To whom it may concern, Good day to you. As a concerned citizen, I am reaching out to implore the FAA to approve the orbital test launch, and future test launches, of the SpaceX Super Heavy and Starship. These rockets and this company represent an outstanding opportunity for advancement of the United States and humanity. It would be a shame if they were held back by too much red tape. I of course believe in safety, and no doubt the FAA always has that in mind, but please be swift in evaluation and approval once you've found their plans to be acceptable. Thank you for your service! Here's to progress! James B Voight

if SpaceX is not allowed to perform multiple launches per month within the next few years I fear that the chances of us making it to Mars within the next century drop to almost 0. I do believe that SpaceX should work with the FAA and Cameron County to create a safe environment for launches. I do not think the FAA or Cameron County are doing anything wrong but I do think since this frequency of launches has never been experienced before that this has not been a problem up until now thank you - Cole Willingham

Greetings, I am writing in support of SpaceX's mission to launch Starship and help bring the world closer to affordable space travel. I'm especially excited to see them direct their advancements toward providing global internet coverage to the US and the world, especially in under-served areas in dire need of modern coverage. I hope the FAA supports SpaceX on this path and opposes those who wish to impede a rare moment of monumental progress, all for the sake of petty quibbles that pale by comparison to what's being achieved here. Regards, Allan

Hi my name is Sam Wilson and I believe that spacex should be aloud to launch their star ship and as many star ships they need to launch to get people to mars. If you where to keep them form achieving this goal that would be a catastrophic mistake. Denying spacex approval could be that you are denying humanity to live on after our earth is gone. The pros of this trip to mars obviously outweigh the cons.

Dear FAA, In today's world of global warming and uncertainty, it is more important than ever the human species becomes multi-planetary. There are factors, such as another pandemic, worse than Covid-19, world war, a meteor-strike on earth, a super volcano going off. SpaceX is giving us a lifeboat. Even NASA is behind SpaceX's ambitious goals. I understand that safety is important, but SpaceX does too, Their track record is flawless thus far, i.e. the falcon/dragon program. So, please do not hinder, or even stop, the effort. A restrictive ruling of five Starship launches a year is drastically undermining Elon's ambition for humanity to become multi-planetary as soon as possible. Besides, it should be America who leads the way, as it has for the past 200 plus years. Thank you for reading this and the many letters so many undoubtedly have written you about the Starship program. Sincerely, Andreas Boesch

Others have already articulated these points more thoroughly and eloquently than I will be able to, so I will simply state my support for the rapid innovation going on in Starbase, Texas. The Starship program will have profoundly positive economic, political, and technological consequences far outweighing the negligible environmental harm to the surrounding area. Federal regulation is necessary to facilitate competition and innovation without endangering people or the environment, but the opportunity cost of any delays to the Starship program are immense. It is clear that the FAA's responsibility is to streamline the safe development of Starship without causing unnecessary and harmful delays to the program. Therefore, I implore regulators to finalize the environmental review and grant SpaceX an orbital launch permit in a timely manner. Sincerely, a student inspired to learn engineering and physics in order to work in the space industry some day soon.

Dear FAA, There has been a lot to read and hear about SpaceX and the FAA over the past few months. It is very important to carefully examine any type of test that could cost human life and take appropriate precautions. From SpaceX, however, I am used to the fact that every single step has been checked down to the smallest detail. Unfortunately, technical malfunctions can never be completely ruled out, but for this reason slowing down or stopping a development only brings us several steps back instead of a big one. Falcon 9 is an impressive rocket, so will the Starship. The earlier the release comes, the faster the development. I am very much in favor of the approval of the further starship tests, especially the upcoming orbital flight. Sincerely yours Leonid Japs, Germany

Please let Space X continue their mission. Look back at history and see the beginning of the Jet Aviation Industry as a template for the present reusable rocket development. We should let more visionaries like Musk be able to implement their vision within a reasonable framework of rules and regulations.

We have one chance to go to Mars. Elon and his company may be the only people on this planet that are capable of giving that chance to humanity. The more we destroy this planet, the less time we have to preserve the human race. Every man, woman, and child on this rock we call "Earth" wants what's best for their descendants. Let us give them a home where it's not on the brink of destruction.

Hi there, I've been an avid watcher of the SpaceX Starship program in Boca Chica Texas. I'm looking forward to the opportunities that this rocket presents for space exploration and scientific potential. I believe that these benefits far outweigh any negatives posed to me as a member of the public. I look forward to the speedy approval of this test infrastructure and program. Best, Spencer Wolf

It is of Extreme importance that Starship flies ASAP as a United States Citizen I think it is incredibly absurd that the FAA has dared to delay this incredibly beautiful and essential project. Humanity must become multi planetary ASAP Starship is the only way that is possible. The FAA has made a horrible mistake by deciding to delay this. No more delays!

Dear FAA, Please grant SpaceX the necessary permits to enable the Starship program to proceed without undue delay. SpaceX represents a rare combination of vision and talent, with the required capital to really accelerate the human endeavour. We should not squander this opportunity. While it is important to recognise the impacts on the local community and environment, it should also be recognised that there are few places in the developed world which are as scarcely populated as Boca Chica. That is, the selection of that location was itself intended to mitigate the impact on others. Furthermore, SpaceX is already constructing platforms for offshore launch capability. But they need to get the systems working on land, before they can integrate that added complexity. The Starship program is the only viable path to unlocking sustainable access to space. The development process is based on rapid iteration. That is the only way to achieve the desired outcome, without getting mired in years of delay. Your help is needed to make progress possible. I look forward to visiting StarBase one day. Thank you for your consideration. Kahne

The activities of SpaceX at Boca Chica to develop the Starship for both point-to-point Earth travel and interplanetary travel will fundamentally impact the course of humanity and the role that the United States plays in achieving this monumental step. As a company that supports SpaceX, and has plans underway to build housing developments in Brownsville, I have no doubt that SpaceX's Starbase will not only be historic for spaceflight but will benefit those in the vicinity through the associated economic development, tourism, and growth. If SpaceX cannot proceed in Boca Chica, there are few suitable options elsewhere in the country, and to have SpaceX and its network of positive impact forced overseas would be a devastating loss to the United States. I, on behalf of Astreia, Inc., fully support the activities of SpaceX at Boca Chica, and petition for the necessary FAA support to enable SpaceX, and the United States, to continue to be the pioneer in spaceflight. Kind regards, Natalie Rens

Hi, just wanted to throw my support behind the SpaceX team. I honestly believe that the work they are doing is helping to move our species forward and that is an exciting prospect. I also strongly feel that there will be numerous unforeseen benefits that will positively impact the human race for generations to come. What NASA did for our nation to accelerate our technological progress, SpaceX is doing on an order of magnitude further and at an unprecedented rate. Their program out of Boca Chica is crucial in continuing this process and should be granted approval in my opinion. Thank you for your consideration.

Please support SpaceX Launch complex Located in Texas. Despite a lot of responses you may be receiving from people that do not live here I am a Texan and have visited the area many times in the past. Stop listening to people who do not live in or near there. " What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet What are arguments against SpaceX: - they are displacing birds - their investments gentrifying neighborhood Who would benefit from SpaceX slowing down: - China - Russia" Regards, John Letney Texan & American Taxpayer [REDACTED]

The only reason SpaceX has managed to accomplish so much in such a small time period is because of its rapid rate of innovation, and testing. This rate being limited by regulations is just delaying the future of human spaceflight. I understand the great risk factor of such colossal launch, but when it determines the future of mankind I'm pretty certain most people would be willing to take it.

When I was six weeks old the USSR launched Sputnik, the first artificial satellite, sparking one of the greatest periods of technical advance in human history. We are on the cusp of a new era in the use of space, in this case a commercial one. Please consider the proposals of SpaceX in the light of what it portends, rather than considered as just another oil refinery or distribution facility.

The orbital launch by SpaceX will be a milestone achievement by human race. All evidence confirms that human beings are on a forward march and every generation has left a mark and pointed to a direction we should all go! It is also our God given responsibility to press on towards the mark of purpose. Accord SpaceX all necessary approval needed and may the coming generations find thais useful.

I am fully supporting of this launch and future operations at Boca Chica. SpaceX is relighting our collective human spirit to explore and work together to innovate, inspiring me and thousands of others. This project is for the good if mankind and the human spirit. SpaceX has proven to be a responsible, successful company with their previous successes with Falcon 9 at Kennedy. So I am in full support.

Mr Musk and SpaceX are doing something for America and the world that has not been seen since the dawn of the space age over 50 years ago. A feat previously only achieved by sovereign nations is being spearheaded by a single man's willpower, determination and vision. To push the boundaries of space exploration not for personal or monetary gain, but for humanity's. To do what all who have come before, since the dawn of Apollo in 1969, proved that the stars are within reach. There may never be a person or opportunity more suitable to ensuring Mars exploration is as attainable as Mr Musk and Space X. To hinder their progress now would be an injustice to everyone who has ever dreamed of living among the stars. To everyone who has looked up at the night sky wondering what else is out there.

Although the following was prepared for a rebuttal on another forum, it should serve as my support for the Boca Chica complex for SpaceX. Please let's work this thing out, as a country, we really do not want Elon Musk to become so frustrated with government controls that he finds it more convenient to move his efforts to another country... Does anyone else remember when NASA would shut down the beach road to Playalinda Beach, at Titusville, FL for several months at a time? If there was a Saturn V, a Saturn 1B, or any number of Shuttles sitting on the pads at Kennedy Space Center, fueled or unfueled, NASA would deem it unsafe (or a security risk), and literally thousands of residents and visitors, were unable to drive to one of the best beaches on Florida's east coast. So me, and the rest of the local citizens, saw it as an inconvenience, but a necessary precaution. Now it seems to me, that SpaceX only closes the "Highway 4 beach" road for a few hours or maybe a whole day, for the safety of a few fishermen, campers, or visitors, while moving equipment or when a launch or dangerous test is imminent, NOT for weeks or months as NASA regulated years ago. I think it's time those Boca Chica authorities and "beachin" residents came up with some other issues to "beach" about... Try to remember that Elon has put a ship load of money into the economy of all of Texas, and I'm sure he will protect to the best of SpaceX's ability, that little three or four miles of wetlands, that was basically unused except by a very few people that still get to use the beach more often than not. Trust me please when I say, the "Highway 4 beach" turtles and the birdies will be just fine overall considering all the other oil refineries and petrochemical industries that you already allow on your Texas waterfront.

Hello! I'm writing in support of the SpaceX orbital test launch. We're on the cusp of witnessing something historic and we need something for humanity to be inspired by. This is the ultimate opportunity to see massive economic growth and assisting SpaceX in their mission will bolster growth in economies globally. This is also a way to further push countries from war as revenue generation in dispersed sectors also removes money from concentration into war hawkish sectors. I appreciate your time and look forward to your contribution to make history with these space flights and be remembered for helping humanity reach the stars.

The simple of it musk be done. If not SpaceX than who? If not there then where? People, animals and things parish daily. Safety is SpaceX's number one priory. The goal of SpaceX is to save humanity from itself. A vote of confidence is a vote of yes! SpaceX should continue to work on its goals, a few will say no, but many will benefit from the technology SpaceX develops. Weighing the good with the bad. I VOTE YES. Keep SpaceX and the surrounding community working. Ad Astra,

SpaceX stationed already away from Zivilisation and on the east coast. Were should they go instead. We shouldn't restrict a space company so hard they can't even work. I was surprised when I heard that an authority seriously wants to stop the space flight, a mission to Mars and the second time to have the first humans on the moon due to environmental concerns. We should definitely not stop this step of humanity because of something like that

Hello, My name is Alex Paluch and I'm writing in support of the current draft environmental assessment so that SpaceX may continue to development in it's Starship program. In addition to national security importance, I believe it will have a very positive economic impact on my home state of Texas, as well as the US more broadly. Additionally, important technology for environmental protection will ultimately come out of this program; namely carbon capture. Mars colonization, the self proclaimed ultimate goal of the Starship program, is not possible without extensive carbon capture. everything from plastics, to rocket fuel, to steel on Mars requires carbon, and the easiest source of that on the red planet is the atmosphere. Colonization of Mars will result in IP critical to combating global warming. Finally, the environmental impact of the program is not entirely negligible. However, it is not as dire as many warn, as evidenced by many other launch areas around the world, such as Cape Canaveral. I hope you see fit to grant SpaceX permission to continue their work. Thank you.

I would love to see SpaceX being granted the FAA approval for starbase BocaChica Texas. If built, this place will be on globally known area for its importance. Yes we do need to keep environmental issues and people in mind but this place is pretty far from regular cities and is not a beautiful visiting place which is truned into a nightmare. Its is a great location for Starbase. So its not a bad things which is relocating people. As far as environmental issues are concerned it is same as the other launch centres and building it anywhere else won't address it anyways. So i believe FAA should let SpaceX continue with the test flights also let it use as a launch site. I am very much positive that lesser restrictions on launches would enable people like Elon Musk and companies like SpaceX way ahead in space race and proud thing to the nation as well and human race,

I believe the proposed Starship/Super Heavy launch system and launch site operation in Boca Chica, Texas has the ability to be truly revolutionizing for the aerospace industry, as well as others. SpaceX proposes the Starship system will be fully and rapidly reusable which will enable cheaper spaceflight, more frequent launches for satellite operators and human spaceflight, and opportunities for more launches to the Moon, Mars and other destinations. The launch site is being built in a state park so there is some opposition to its construction and operation, however SpaceX has stated many things it will do to lessen the impacts the site may have on the surrounding environment including using solar power to power the launch site, creating a lighting plan for the site to lessen the impacts on sea turtle nesting, training employees on how to handle fires and pollution hazards, routinely checking that fuel tanks and hydraulic systems are not leaking, and others. Starship will most likely be a huge inspiration to many around the world (it already is) and as such will bring more tourists to the area which could help the surrounding communities and businesses. I have confidence that Starship will succeed and do great things, and that SpaceX will make sure their operations do not harm nearby wildlife and nature. SpaceX has a history of making history and doing things never thought possible. The Starship launch system is the rocket the world needs to become a space-faring civilization and has the ability to push humans farther than ever thought possible. I fully support it. -Chandler Drummond

Hi, We're happy to host SpaceX and its launch systems here in Europe if it's too much of a bureaucratic and political burden to host it in Texas. After all, we don't want the galaxy to be speaking mandarin in a few hundred years, which is what will happen if you allow the Chinese to catch up on space tech too. If you want to save the planet either humanity must decline or we expand and grow elsewhere. Look at the big picture and choose wisely. -Dur

In my opinion, SpaceX has a lot of potentials and it seems they can achieve what they promise in time if there is no barrier in front of them. One of the barriers is regulatory approval and if we can interact with an email to final answer then my words will be " Let them fly this Starships for sake of human kind"

I am an American citizen with a PhD in physics working as a research scientist in quantum computing. I have been following SpaceX closely for around seven years, including touring their facility in Hawthorne and observing multiple launches from Vandenberg, near where I live. I am writing in emphatic support of their work in Texas on "Starship" and "Super Heavy" and approving orbital tests this year. Their work on reusability with the Falcon program has already revolutionized space flight, and the next-generation technology they are working on now will likely do so again. In particular, it will unlock new capabilities exploring our solar system, including putting Americans on Mars and reasserting American leadership in space travel. SpaceX has been working extremely hard and fast to get this technology ready. There's a Mars transfer window in one year (Sept. 2022), and it would be highly advantageous to send a test flight to Mars then (next window in late 2024). An orbital test this year also pushes us closer to a lunar landing. Please review the case carefully and recognize the great national and scientific interest in allowing SpaceX orbital tests in 2021.

Hi. I'm a 17 year old computer programmer, living in Austin. I saw Starship SN10 launch last March, and I think it's the most important experience I've had in my life. After seeing that, I'm really invested in humanity, or consciousness, or *something* having a future up in the stars, and right now SpaceX feels like our best bet. It would be so sad if in future generations we forget how to leave Earth's orbit and this experiment of consciousness dies here on earth. I'm leaving the country in a few months, and I'd really like to see one more launch before I go. And then later maybe go to Mars, if that's ever a possibility. Yes, there are environmental concerns, but I feel like the concerns we'd have with our future of a *non*-space-faring future far outweigh that. PS If y'all don't like Elon I don't blame you. I just like space; I mostly try to ignore him.

I'm a huge fan of consciousness. I'm writing this because I'm conscious. I'll love to see consciousness spread across the galaxy. But we have to start small from spreading it across the solar system. The only company or organization that has such technicality to do so is SpaceX. Please approve their request to do this. Odufu marvelous from Nigeria.

I strongly support the work SpaceX is conducting in Boca Chica Texas. The work they are doing is extremely useful not only to the people in the space industry but also every American and non American at that. Their aim is to better humanity which they are proving they can do on a daily basis their work could also help multiple government agencies. I understand the importance of the wildlife in the region affected by spaceXs proposed plans but I would like to highlight the company's history with helping the local wildlife an example of said help was when Texas had a major power outage and SpaceX provided generators for the turtle sanctuary at Boca and not only that but the fact employees help with any turtles in trouble in the area and with that example in mind I would like you to see that I strongly believe they would do the same with other wildlife in the area making sure that the impact caused would be so minimal that the wildlife would still thrive in the area Not only do these plans enable great things to be completed in a safe manner for the public and the government together it also represents hope not only for the American people but world wide. People tune in daily from around the world to see the progress at Boca and it brings hope for a better planet for everyone and I strongly believe that this is something we all need right now just a little bit of hope Lastly I would like to say that i personally believe this project has almost no downsides in comparison to the many upsides it brings. It would be a true shame to hinder not only the amazing technological advances and not only SpaceXs developments but also NASAs own advancements as they require this to advance so their own space program can. It's about time progress was made and I agree that it should be in a safe manner but I believe that this will be as they will be doing everything they already have been before in coordination with you and your agency I strongly implore you to look at the many benefits of this endeavour and grant this the ability to advance thank you for taking my view into account and consideration

Swift approval of this project is strongly in our nation's best interest. Over the recent decades we have ceded our clear position as innovators in the world, and certainly in the area of space. We have here a unique opportunity to rapidly become clear leaders and usher in a new era of space exploration and travel. Understanding that I am a strong advocate of climate protection and myself am close to achieving a carbon-neutral lifestyle. However, the benefits of this work radically outweigh the costs and will serve as inspiration to another great generation of engineers as scientists, much as the Apollo missions did.

Dear FAA team; Please allow SpaceX to proceed with their upcoming launch out of South Texas. Society needs some positive progress to combat this world riddled with negativity. Space allows people to be inspired, to dream of new possibilities and of new frontiers for exploration. Whatever consequences or negatives that are perceived from this SpaceX launch, please weigh them against the full range of positive incentives as well. The US needs SpaceX to lead in private space endeavors otherwise China will dominate Space as well. The US is already losing the cyberwar, let's not outsource space as well. Thank you for considering my comments,
Raymond Meyers

SpaceX is providing a model for American ingenuity, and the advancement of human technology and civilization. Their investment is not only monetary, but intellectual. As evidenced by their past actions, they are careful and considerate planners. A study of their previous, future-facing development makes evident their careful consideration of stakeholders in each of their operations, and their Boca Chica facility is no different. With very few possible sites available for such launch complexes in the United States and the extent of land development at this time, every potential location will produce some level of "Not In My Backyard" (NIMB) reaction, the only negative rhetoric likely to present itself in these discussions. Historically, such NIMB movements do not oppose development efforts in general, but desire the burden of any inconvenience to be placed on another third party, typically a lower-income area that cannot defend itself with the same level of political participation. Their arguments are based out of personal convenience, with little to no consideration of the ramifications of their hindrances to societal development, or to the potential benefits for local and country-wide economies. These potential benefits of the continued existence of SpaceX's Starship program (to Brownsville, the USA, and even human-kind) far outweigh the minor inconvenience of occasional public beach closures, the only material complaint such NIMB proponents have produced. When the potential of this program is considered, its ability to cut the cost of payload launch to Earth orbit and beyond stands to put the United States at the forefront of a new space economy, and provide an unparalleled level of national security presence in space. The incremental technology researched by other agencies and companies-- both in recent memory and currently-- cannot compare to the leap forward in relative efficiency and absolute payload capacity generated by the ambitious and innovative approach utilized by SpaceX. Scientifically, the promise of Starship technology to deliver significantly reduced payload cost and improved launch cadence has fundamentally altered the space exploration community at large. Researchers and investors now discuss new plans and development in terms of Starship-sized payloads and the number of Starship launches to deliver new technologies. Plans for extraterrestrial bases, space stations, and colonization missions have produced myriad uses for (and modifications to) the base Starship model, in ways that promise to turn science fiction into near-future possibilities. Economically, the Starship's reduced cost and increased capacity for payload delivery provides a feasible means of investing in manufacturing techniques in near-Earth space. We can look forward to production of significant capital for US businesses and advancement of consumer and private technology. Beyond the short-term, this new means of payload delivery can start the shift of environmentally destructive, Earth-bound industries to space, the material output of which could synergistically enhance the development of a space economy. Beyond the considerations of defense, exploration, and economics, the Starship program at Boca Chica has catalyzed the existential hopes of our species and inspired children and adults alike to explore and celebrate the STEM disciplines. Existentially, the Starship program is the first significant leap forward in manned space exploration since the end of the Space Race. Although currently in its infancy, the program's purpose is not only to make human life outside of low-Earth orbit a possibility, but to deliver on the imperative of making humans a multiplanetary species. The history of the Earth is rife with examples of global catastrophes that have obliterated the diversity and abundance of life on this planet for millenia at a time. Such catastrophes cannot be accurately forecasted, and are far more severe than the slower march of climate change and pollution. Even if individuals of the human race manage to survive such an event, the system of organisms on which we rely will collapse. We cannot wait for the announcement of an incoming disaster to begin preparations to protect our civilization and existence. Nor can we rely on the slow

pace of bureaucracy to deliver a solution to our imminent destruction, as political groveling impedes our speed, agility, and ability to take the risks necessary to move spaceflight forward, and continue the multi-billion year march of life to explore and survive. Inspirationally, the continuation of the SpaceX program at Boca Chica is a sign to the engineers, scientists, and children of this nation that we value a future of innovation and technology. Younger generations are being inspired by the possibilities set forth by the rapid development of the Starship program, promising a future of STEM-literate citizens who will improve society and technology. Our current population of STEM-oriented professionals are equally inspired and driven by SpaceX's technological leaps and bounds, with many devoting themselves to smaller, competitive launch services that are taking cues from Starship's forward-thinking development. Regular citizens too are awe-struck with the scale and speed of SpaceX's Boca Chica development, leading to pride in American ingenuity, and encouraging their children and friends to celebrate space exploration. Stifling the progress at Boca Chica would rob our youth of their excitement for futures in STEM education and employment, and risks alienating American spaceflight professionals and regular citizens alike, leaving them disillusioned with the American government's priorities. Inhibiting the transition of SpaceX's Boca Chica site to orbital Starship testing and forcing it to relocate would do material harm to the program's momentum. The timing and cost of such inhibitions could be enough to halt progress of the program indefinitely, causing incalculable losses to the potential future benefits to our defense, economy, exploration, development, and even our survival. Please consider the approval of orbital spaceflight from the Boca Chica SpaceX site not only as an investment in the future economy and generations, but as an opportunity to affirm the importance of a species-advancing technology that is ripe to deliver a new age of prosperity.

Good Day FAA, I am in support for SpaceX on doing those efforts to make life multiplanetary. I hope you can approve the Orbital Test Flight of the Starship 20 and Bosoter 4 prototype to make the final version as soon as possible. Also, it is important for the US to bring humans back to the moon. If this test will begin as soon as next month, it would be a good advantage for them to modify and change things that will make the prototype more reliable and efficient.

I fully support the development and launch of SpaceX's Starship and Super Heavy Program. The purpose of SpaceX's proposal is to provide greater mission capability to NASA, Department of Defense, and commercial customers. SpaceX's activities would continue to fulfill U.S. expectation that space transportation costs are reduced to make continued exploration, development, and use of space more affordable. The Space Transportation section of the National Space Transportation Policy of 1994 addressed the commercial launch sector, stating that "assuring reliable and affordable access to space through U.S. space transportation capabilities is fundamental to achieving National Space Policy goals." SpaceX's proposal is needed to increase operational capabilities and cost effectiveness of space flight programs. Satisfaction of these needs benefits government and public interests to continue resource protection and reduce operation costs. Demand for launch services has continued to increase over the past 20 years beyond that originally proposed, and the space industry growth projections indicate this will continue into the foreseeable future. SpaceX is now developing a multi-mission, fully reusable, super heavy-lift launch vehicle (Starship/Super Heavy). Starship/Super Heavy would reduce the cost of access to space, exceeding the capabilities of the Falcon 9 and Falcon Heavy launch vehicles, enabling cost-effective delivery of cargo and people to the Moon and Mars. SpaceX's proposal would satisfy requirements for more efficient and effective space transportation methods and continue the U.S. goal of encouraging activities by the private sector to strengthen and expand U.S. space transportation infrastructure.

If not here, where? There are no better places. Rockets need ocean views. Boca Chica is by far the best in the USA. KSC is too busy and has far too many National Security flights for a development program. It is also another site with environmental concerns like Boca Chica. If not here, Where? I was born in Texas and I live in Austin today. The beach closure issue resonates with me. Free beach access is a birthright to us Texans. But there can be balancing of rights. Given the massive opportunity that SpaceX represents to those of us in Texas and the US as a whole, it would be almost criminal to handcuff SpaceX in their efforts to launch man back to the Moon and beyond. As a child of the 60's, I remember those first flights. I grew up 5 miles from JSC. I remember the excitement I felt from the Apollo program. Please don't deprive our children their opportunity to dream of space, nor their chance to capture the enormous benefits from going to Mars and beyond!

My name is Jacob, I am 25 and I have always had a huge fondness in space. I am not a Brownsville native but because of the work that SpaceX has started I would one day like to be. Over the past 3 years me and thousands, maybe even millions of other have been captivated by space in a new way. SpaceX has a proven track record of accomplishing what once was thought of as ridiculous goals. Time and time again without discernible danger to the public, I have full faith in Gwynne Shotwell and Elon Musk and all of the engineers and professionals working at SpaceX to see us into this new generation of space flight. It would be an incredible shame to let bureaucracy hamper the progress that we are seeing today in Boca Chica, but not only today but everyday for the past 3 years. So I ask, may we please let them fly?

Hi, I would like spacex to receive approval from the FAA for the orbital mission because lets be honest, spacex is the only company that will allow for the US to compete against china and russia. The difference between spacex and the lobby companies like Boeing is that the latter only fool the US taxpayer for money. They always have delays and never innovate. SpaceX on the other hand innovates and has a vision. With them we will be able to compete against china and russia without spending billions, as they will spend their own money mostly. The billions of dollars that are saved (by not disappearing in the money hungry lobby companies and spent on luxury) the US government could spend on cleaning the environment and being more sustainable in terms of energy and waste. Without a spacestation or a base on the moon or mars humanity as a whole will not advance further. Spaceflight has brought us very important innovations, like air purifiers, artificial limbs and the insulin pump. There would be no internet without affordable access to space. Im sure it will bring many innovations that will benefit humanity, including those that will allow us to clean the earth and achieve sustainable energy. Like solar panels in orbit that beam the energy towards earth with lasers.

SpaceX is the next key stepping stone in humanities path to outer space, leading the way in Commercial Space Operations. It is vitally important the company receives regulatory approval to continue operations to orbital flights in order for the sheer amount of time, money and effort put into my the Starship programme by not just SpaceX employees but civilians all over the world. Unless we don't want a path to safety when humanity destroys Earth, it's vital that SpaceX continues to operate.

Dear FAA, Elon musk has submitted an application for a orbital insertion launch of SpaceX's Starship. I support his efforts and hope you find them worthy. The man has revolutionized the launch industry with new technology, new ideas and a drive to invent and succeed that reminds me of giants like the Wright Brothers, Thomas Edison and Henry Ford. Re-usable boosters and and spacecraft! It changed everything. I know he's a disruptor to the industry...but it's because his new thinking has actually made orbital launches and space travel practical. Same for electric cars and home solar. Help him...he's a character, sure, but he's also a national treasure. Thanks, Ken

Dear FAA, The Starship Program is very ambitious and still unproven. But that is the exciting part--its unproven. It makes us watch every move they make, and also make us excited for the future, and root for their success. It also inspires the next generation to look outwards--to space especially Mars--as their next frontier. I believe in SpaceX. I believe that they are the best hope for humankind to open space for massive human activity. I also believe that humanities' role to Earth is to spread it's life outwards, this is our payment to Earth for what we have done wrong. Regards from Philippines, Bandar

I write in support of Space X's proposals in relation to the FAA's Draft Programmatic Environmental Assessment. The project is of national and international importance, and brings much needed employment and investment to a deprived area. Delaying or obstructing the project is not in the USA's best interests. The proposed Space Centre "Starbase" does not, and will not in the future, affect the wildlife in the general area in a negative way, quite the opposite as the Kennedy Space Centre has demonstrated clearly for many years. <https://www.kennedyspacecenter.com/blog/07/the-wild-side-of-kennedy-space-center> Thank you for your consideration, Rory Keegan

I am very much in favor of continuing starship orbital testing and launches from Starbase in Texas. This innovative space program will facilitate cheaper access to space for deployment of climate sensing satellites in addition to accelerating the moon program and exploration of other planets. It would be foolish not to support this effort in any possible way. Note that I am a conservationist as well as a space enthusiast and I believe that they are not in conflict in this case.

I am in support of SpaceX using the Boca Chica, TX area to further develop and launch its Starship rocket. There are very few places within the mainland United States where they can continue with their iterative test program and create a spaceport of the future. Failing to allow them to continue forward progress with Starship will significantly set back the United States' effort to continue to be at the forefront of space exploration and send humans the Moon and Mars in the next decade. I am not a native to the Brownsville/Boca Chica area, but what SpaceX has done so far is create an amazing amount of support and appreciation for the area. I am excited to see what the future holds for SpaceX and Boca Chica as they continue to work together on this inspiring program.

As a Canadian, In regard of the space industry I would like to ask if it would be possible to work together with SpaceX to find solutions to make safe but fast permit/license processes. All at the same time keeping same high standard of safety. It is because, I would be a proponent to say that, any significant gains in reduction of time of permit deliverance could have really significant positive impact for access of space all over the world and impact all generations. That we should the most we can to work in solutions that work. Thank you very much, Caetano Galli Gonzalez

To whom it may concern: I fully support SpaceX developing a multi-mission, fully reusable, super heavy-lift launch vehicle (Starship/Super Heavy). I think that a multi-planet species is critical to our future and that a more efficient and effective space transportation method and the continuation of the U.S. goal of encouraging activities by the private sector to strengthen and expand U.S. space transportation infrastructure are also critically important. Thank you, Tommy Hendricks

Message

Dear Federal Aviation Administration, I am writing to express my support for the Starship/Super Heavy Program in Boca Chica, Texas. While I do not live in the direct vicinity of the area I do consider myself a stakeholder in this discussion because I strongly believe the implications of the Starship program can have a strong positive effect on humanity as a whole. That includes you, me, and every other human on earth. I believe most of us are familiar with common reasoning as to why the Starship program is a good idea (i.e. making humanity a multi-planetary species and learning more about the origins of the universe through increased access to space). I have found that when pursuing a grand goal it is useful to look at incremental progress to get there and I'd like to offer a more immediate positive impact that a successful Starship program will have on our planet. The Starship program is going to make planet earth a more equitable and inclusive place to live. We live in an age where we can access almost any information instantly through the internet. This gives everyone, regardless of class, status, or ethnicity, access to things such as lectures from top professors at top universities (i.e. MIT), online courses, coding bootcamps, networking websites, etc. The internet provides the single biggest unbiased opportunity to any individual who is willing to learn, work, become successful, and be a contributing member of society. Unfortunately, roughly 40% of the world does not have this opportunity, simply because they do not have access. 40% of the world is at a major disadvantage because their ability to learn, be exposed to new ideas, and make their voice heard is impeded by their lack of connectivity. I believe the human and societal cost to this is enormous and this must be addressed with great urgency. Starship can fix this. Starship will enable a significant increase in the launching of space infrastructure such as Starlink which can bring gigabit internet to the most remote places on earth. Millions traditionally without internet will be enabled to come online, participate in our online communities, and will no longer be disadvantaged due to a lack of information access. It is an opportunity for so many more young minds to learn and get inspired. This is the type of world I want to build towards and for this reason, I think it's important that SpaceX can continue to rapidly develop its Starship program in Boca Chica. Safety is important and I am very grateful for all of the hard work and thoughtfulness the FAA is putting in regarding the Starship program. I believe this focus should be on ensuring everyone's safety without halting the progress of the program and I trust the FAA is very qualified to do this. Please do not hesitate to reach out if you have any questions. Warmly, Joeri Leemans

Starship system is leading the world in rocket engineering currently. It will provide the possibility of huge space telescopes, large space stations, in-orbit manufacturing, recovery of debris and onward travel to the moon and mars. Please expedite progress as I believe it is essential and urgent that they continue to make progress to their goals, benefiting humanity at the same time. Elon Musk has drive, vision and a touch of genius, also being open with the technologies his companies discover to further us all. Any environmental impact at the Boca Chica test site must be set against the huge gains to be made if all goes well. It is revolutionary in that he is not building a few rockets, he is building a rocket factory to make them cheap and plentiful. Science and engineering are opening new chapters with cheap access to orbit. Instead of one James Webb space telescope, expensive, as it has to fold up we could put many telescopes in starships and have the whole astronomical community moving into space. Low gravity manufacturing is set to change the world with with huge perfect crystals and fibres, lab grown human organs and many more technologies. The pace of development is much faster now than has been seen previously and the regulatory authorities are duty bound to keep up with changing circumstances and not delay progress without good reason.

Spacex needs permission to fly their rockets not only for their first flight next month but also to fly multiple times a month in the near future. We are in a new age of spaceflight and in this age rockets need to become reusable and available rapidly if we want to get humanity to other planets. The major issue when it comes to Spacex having permission to launch is the impact their rockets will have on the environment. Spacex is going for a 100% reusable rocket. This means that once the rocket is out of testing it will have a very minor impact to the environment as Starship will not be dropping any debris into our oceans or preserved areas. The only way to make this happen is to build a rocket and test it over and over again until you nailed a design that works with 99.9% certainty just like how we have done with airplanes. The only reason why we are able to have quiet, efficient, low emission and safe planes is because we were able to fly them over and over again. This let us gain data to improve designs to make them the safest way to transport humans and we need to be doing that with rockets. I want to point attention to what Spacex will achieve in terms of spaceflight, given the opportunity to proceed with the Starship program and not where they currently are. I am looking forward to the orbital flight next month.

I've been a fan of science and space from a young age and was unfortunately born far too late to see the moon landing. Yes there are plenty of issues here on earth, but until we can really study other planets we may never find a good answer to making earth sustainable for all of us. SpaceX are doing great work and some of the talent that have is unbelievable. I fully support the Starship program in Boca Chica. It has engaged the younger generations (including my own kids) and is leading to more and more of them following STEM careers which in one way or another leads to benefitting humans across the globe. Go SpaceX, go Starship, go TeamSpace!

I'm writing to say that Starship development at Boca Chica is of tremendous importance not only to the United States but to all of humanity. It opens a pathway for humans to spread throughout the Solar System. Obviously it would be of great benefit to the US to be at the forefront of that expansion. And already at this early stage of development, people all around the world are excited and inspired by what's happening and are looking to the US as the world once did during Apollo. What's more, the Brownsville TX area has long been one of the poorest and least attractive places in the US. Today it has new jobs, tourists and there's the potential for the area to grow and prosper as the Florida space coast already has. Given that all of these developments are being funded largely by private money at little cost to the taxpayer, it looks like a win-win for the US government. The FAA obviously must look closely at the safety of residents of South Padre Island and Port Isabel. (Brownsville itself looks to be a safe distance away.) But please, find a way to let this happen! It's a once in a lifetime opportunity for the United States and for humanity as a whole!

Please Allow SpaceX to launch its superheavy orbital test! Things that SpaceX has done so far: 1. Returned 80% of commercial satellite launches back to US - \$4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1billion in annual revenues from satellite, engine purchases and human flights. 4. Created first and ONLY reusable rockets 5. Created world's largest heavy lift rocket 6. Lowered cost of space flight for US gov by 70% 7. Created world's first broadband LEO satellite internet All this has been done already. Imagine what they could do if they were give more permissions.

I just want to add my voice in support of SpaceX's Boca Chica, Tx, rocket development program. Having followed our national space achievements from the time of Sputnik thru the ISS, I can appreciate the potentially history-making work now being done in commercial space efforts in conjunction and cooperation with NASA. And I personally don't see any more, or even as much, environmental or public risks in the Boca Chica test and launch location as at the massive Florida space coast location. I urge prompt approval of SpaceX's program by the FAA and other regulatory agencies. Thank you for this consideration. David M. Sims, DMD

I am in full support of space X's proposed launch schedule and their need to launch their new test vehicle. As a Texas resident and a follower of pioneering technologies in the modern era, I feel the need for rapid testing of the new starship vehicle is vital to the progression of society as a space-fairing species. Due to the turbulence of global events, the rapid development of new military weapons in all superpowers, Brexit, the Taiwan crisis, the energy crisis, global warming and many other negative impacts on our world, I feel the progression to cheaper space travel may be the only solution to global nutritional and electrical equity.

To whom it may concern, Much of the world is watching us to see how we respond to the pressure put on the FAA right now. This will be an unprecedented decision with no right answer. You will not be able to make this decision without decent. I request you look at this decision as an American. One that will put the needs of the many ahead of the few and approve SpaceX's permits. I ask that you trust in the government entities such as yourself to guide, not block SpaceX in building, developing and fully operating their Boca Chica, Texas site. I've seen so much disinformation bring disseminated throughout the internet, social media and special interest groups that I hope are ignored. There is no other location capable of these launches that wouldn't have an even more impacting effect to the environment. Once the construction is complete the impact will be minimized on the environment. They are using far gentler chemicals than those used at Cape Canaveral Kennedy Space Center yet the environment there thrives. This can be done here at Boca Chica Texas site as well with the guidance from our government entities such as the US Fish & Wildlife service, EPA and the Army Corp of Engineers. I personally have worked in wetland areas and know the capabilities of these entities and how trustworthy they are. I implore you to trust the systems we have in place and approve the plans that SpaceX has exhausted details trying to be as safe and productive for their community as possible. If I can be of any assistance to you in making this decision please feel free to reach out to me. Sincerely, Robert W Smith [REDACTED]

Our environment is critical to our survival, but in this case, this is the only environment that we can safely test the next generation vehicles that will advance technology that will increase the survival of all species on the planet. Going multiplanetary, even this small step, is worth the sacrifice to secure a more mobile future for all species.

Hello, I'm writing to tell you that I'm deeply disappointed that potential risks, which are always unavoidable. Not just limits but STOPS current attempts to put the USA ahead in the space race against China in the coming decades. You NEED to explain to the public why you limiting space exploration and what causes it because you are a federal agency with the public against you big time. No one understands how small risks can stop these big missions that will NEVER be risk-free. That is the nature of the business and if the USA is not adapting quickly we lose time against CHINA advancements. With the hope of resolution, Karl Anderson

Please allow Starship Orbital prototype to launch as soon as possible, progress on this cutting edge design will have untold benefits for all mankind and slowing it with undue regulation would be a real shame. If environmental concerns are the main issue, Elon Musk has frequently said he is in favor of a carbon tax, there should be a per launch carbon offset, tree planting, or other environmental remediation charge, but this should also apply to other launch providers. I doubt the ancient Soyuz cares much for the planet, and the US has been hitching rides for years letting Kazakhstan do the dirty work. This advancement of moving forward with a much larger reusable methane rocket is a net good for mankind.

Am writing in support of Space X and the use of Boca Chica/Starbase for sub orbital missions and testing. The US had a strong track record of leadership in space exploration - the work Space X is doing is inspiring the next generation of American engineers and inventors. The site is well suited for this type of work and creates massive investment opportunities and jobs in the region. I am based in NJ but watching with envy as Texas continues to invest in the future of space.

To whom it may concern, the inquiry into the construction of the SpaceX test site at Boca Chica (Further referred to as 'Starbase'), has been ongoing for some time now. Although insignificant, I felt like i wanted to let my voice be heard. My name is Felix. I am a student pilot for the German air force. I have been put into the extremely privileged position of pursuing my dream career as a pilot. This, like any goal, does not come without sacrifice or inspiration. Like many in the aviation and space business, I was inspired by legends like Neil Armstrong, Yuri Gagarin and even ones like Brian Shul (an SR-71 pilot). All of them have one thing in common. They came forth from a time where there were efforts made to push the boundaries of what is possible. I need not mention the technological marvels machines like, for example, the Saturn V and SR-71 represented. Both systems were entirely different, of course, but it would be an understatement to say they not only inspired me, but rather they inspired entire generations - and still do. I see SpaceX's 'Starship' achieving the same. Due to the unprecedented openness of their construction project, many youtubers have picked up on covering the development thus making it easier than ever to follow the progress being made on platforms frequented by adolescents looking for possible career options. I think that this will inspire more people to get into the aerospace industry, pushing the envelope of what's possible and developing new technologies all of humankind can profit from. This is the larger point here. While such a localized event does not only provide a whole new ecosystem and economic benefit to a new area, it will carry its fruits far and wide. At a pace that is unprecedented and, frankly, very much so needed. Humanity needs to become multi-planetary and this is not achieved by government contracts costing tens of billions and decades of development, while still using hardware that was designed decades ago. There have, of course, been concerns on the environmental side effects of a program like this one. I consider myself environmentally conscious (even considering my job as a pilot), but it's about trade-offs. SpaceX should obviously be closely watched in terms of their environmental impact on the area. Another solution would be for them to create wildlife refuges in another area. Although I am convinced that the land around the launch site would profit from fewer people coming there as a safety measure already. The last concern would be people having to move. I am no stranger to this, since people close to me had to move out of their homes because of brown coal pits being dug at their village. However, they were thoroughly compensated and in contrary to their reason, I think Starbase will benefit more people than just the region. In conclusion: The potential of Starbase and by extension Starship are unprecedented. The boundaries of what's possible are being pushed, which not only creates and retains intellectual property and many jobs, but also helps to create something to look up to for the next generation. All downsides are outweighed by the upsides. Thank you for taking my opinion into account. Sincerely, Felix

I grew up in Texas but moved away when I was 18 and have lived all over the US for the past 32 years. I visited Boca Chica, Texas this summer to see the firsthand the development of Starship production. When I arrived to the Brownsville area, I have to say I have never felt so much promise and hope in a city. Growing up in Texas, I knew of the economic hardships this area has had for decades, but seeing the promise of development, jobs, technology, and hope, it gave me a sense of pride knowing that this area could someday be the center of economic prosperity for the nation. EPA regulations must be followed to make this safe but we should also not prevent progress from taking place and must be willing to accept some risk for the amazing benefits. The hope for improved education for the children of Brownsville is one of the most exciting things to see. Families moving to south Texas, finding good jobs, receiving a good education, and improving their quality of life, is a future we should be working towards. Please continue to approve future plans for SpaceX tests and operations. Thank you, Dan Oosterhous

Dear FAA, Among all, vastly lowering the cost of access to space is also a way to protect environment on earth by eventually pushing some manufacturing to orbit, as is worked on by plenty of companies. Not to mention all of the environmental research satellites that this will enable. The net benefit to environment of the whole planet is 100 fold. It would be borderline insane to impound that for the sake of a few. Best regards, Ad Astra

I would like to start off by addressing the environmental concerns people have about the SpaceX launch site. I believe that SpaceX's operations in Boca Chica do not impact the native environment in a negative manor, but rather a positive one. Take Cape Canaveral for example. NASA constructing this launch site on one of the largest wild life reserves in the country ended up benefiting the animals there, and I think that something similar to this will happen with the SpaceX site in Boca. Just this winter, when Texas faced one of the largest power outages in its history, SpaceX came to the aid of the sea turtle population, by donating a generator to provide power to the group of people rescuing the turtles from the cold. South Texas is an ideal launch site for SpaceX, as it is in an optimal position for performing orbital missions. SpaceX is attempting to advance our species to the next frontier, and their starship rocket will allow them to accomplish this goal. Mars launch windows only occur about every two years, and every delay that SpaceX faces in its starship program increases the probability that they will miss the next few launch windows. If not for SpaceX, NASA would not be ready to send a human to Mars until at least the 2040's, which would leave a terrifyingly high risk of a Chinese mission making it there first. I hope that this Environmental Assessment is approved, so that SpaceX can continue to push its program forward, and help get humans to Mars.

I am in complete favor of SpaceX continuing this entire process to its fruition. They are manifesting the full potential of the human species vision and purpose and contributing to our future on this delicate planet. Sacrifices must be made in order for us to evolve as a species and become completely aware that we are all connected here on earth. That borders and politics only hold us back from our full potential. We must move forward together and SpaceX is illustrating that if we focus on a common goal..... anything is possible. Thank you for the opportunity to speak my piece on the subject at hand. We need to either help SpaceX or get out of their way. Dan Swan

FAA) Your decisions are important, but; You should encourage the demands of your entrepreneurs by facilitating them like a developed country institution. SpaceX has great labor, hard work and capital. I think that the necessary approvals should be given without causing material and moral losses, without reducing the motivation, timing is important. If you can't catch the time, it will cause losses. Give this support to Elon whenever he wants. Thanks.

Hello, my name is Nicholas Andritch. I live in California, but I have been following SpaceX and their Starship project since Starhopper launched in 2019. I hope to visit sometime soon, and I am here today to support the launch license. People are talking about how much SpaceX harms the community, but this rocket and company have created so many things that help support the community and they have renewed an interest in spaceflight and are inspiring new generations of engineers and astronauts. Birds and turtles were harmed during the freeze that happened 8 months ago, to help the community and the animals SpaceX helped save many turtles in the area and also provided a generator to Sea Turtle Inc., which helps rehabilitate and save turtles in the local area. SpaceX has created hundreds, if not thousands of jobs for the local area, created another tourist destination for the area, and has helped start a part of social media dedicated to SpaceX and Boca Chica. I hear people talking about how SpaceX closing the roads and beaches are unconstitutional. But the fact is that SpaceX was granted an exemption to the constitution, which allows them to close the roads and beaches. There are millions of people in online communities such as LabPadre, NASASpaceFlight, and Everyday Astronaut. These communities are fueled by SpaceX and this project, and help educate many people on the projects going on. Once Starship achieves its current dream of operations, this place will be on the map forever as the birthplace of the rocket that brought humanity to Mars. Thank you.

I just wish to say that I have dreamt about our space program since Neil Armstrong. It's been stagnant in my view, held up by bureaucracy and disinterest in Congress. We have the \$\$ to provide the space exploration that we may need to mine, and colonize off planet. SpaceX shows us how to do it. They are audacious and take risks, as explorers have always done. Help give them our tax \$\$ and stop throwing stones in the path of great exploration companies. Also note: I won't vote for a party that is so myopic it can't see past the ground in front of it.

SpaceX is doing more for Space and Space technology then all of the legacy companies combined. They are consistently underfunded by NASA when compared to competitors and still manage to outperform and advance rocket technology faster than the others. The FAA should approve SpaceX's Boca Chica facility as their advancements in technology are advancements for human kind and reusability of resources.

Private industry can lead the way with government support. SpaceX is clearly leading the way in this new age of potential expansion. They are an American company. The full support of the government is what is required and requested by the citizens of the United States. SpaceX's efforts will keep America at the "Tip of the Spear" that is racing to awards the future. Our country should control it and this is how it will be done. If not then maybe we could just start asking the Russians for rides again. THAT WAS PATHETIC. APPROVE THE LAUNCHES AND PUSH THE COUNTRY INTO A FORWARD POSITION!!

I respectfully request that you allow SpaceX to proceed with its launch next week. To prevent this launch would be wholly un-American, as SpaceX has established a track record of achieving unprecedented advancements in record time, which directly benefits the US. For example, SpaceX has returned 80% of commercial satellite launches back to the US and has re-established the US capability of human space flight.

I support SpaceX in BocaChica in launching the Starship system and all construction that they need to make this a fully functional space base. (including but not limited to: desalination, oxygen, methane, and nitrogen propellant creation, drilling natural gas wells, boring tunnels to SanPadre Island or anywhere). This company, and specifically Elon Musk, is the only entity that has the vision of lowering the cost of delivering cargo/people to other worlds, and that is proving this vision, by pissing through billions of dollars ,building a Spacebase and many Starship prototypes. They should be responsible for all litter and pollution created from their enterprise. They should try to lessen the noise (of rocket engines), if any, to acceptable levels by whatever means available. They should pay an organization to monitor the animal population and biology changes occurring in the conservation areas.

Hello FAA, My name is Andrew and I live in British Columbia, Canada. I've been fortunate in my life to have manufactured some space hardware for local universities, but that satisfaction pales to being able to watch and enjoy SpaceX building humanity's future. I've struggled with depression for most of my life but seeing society forego the division of wars and politics to accomplish something so motivating in human exploration has been such a blessing, one that I hope you'll agree is overall benefiting everyone. I'm aware that there may be some drawbacks to such a large endeavor in the Cameron country but hopefully with SpaceX's support and revenue, both the residents and wildlife can flourish with additional resources in the area. Thank you for your time.
Andrew

My name is Joey Cowan , and I am representing myself. I have been watching starships development for over 2 years now and I would hate to see all the progress at Starbase being lost. I also want to address the fact that if Starbase would need to close , we would have a way bigger problem removing all the equipment without threatening endangered species of animals and plants. The CO2 output of the necessary equipment would be way more then if the operations would continue. So if we want to protect the wildlife , letting Starbase operate as planned is the best way to go. thanks for listening to my comments, Godspeed SpaceX , Godspeed America.

SpaceX is doing such a great job in advancing the rocket technology and by sending astronauts to ISS and on orbit and under orbit. Since Appollo program, nobody achieved this. There is no reason to restrict SpaceX advanced research program. SpaceX is the only hope for Moon and Mars travel! There are rockets in other countries that explodes at liftoff or ar unable to launch them into orbit. Besides this, SpaceX succesfully launched into orbit and more than that, reduced the costs of the rockets for a significant order of magnitude and made them reusable. So what should the strong reasons to prevent SpaceX or any pursuit? It is humanity's hope!

Dear FAA, I want to thank you for the good job you are doing so far. As a new passionate by spatial exploration I hope to see the S20 fly again. I really love the SpaceX policie because they care about environment and humanity future so I think it's enough to get an approval for the S20. Regards

After reviewing the Draft PEA, listening to the public hearing, and following NASA and other US Government contracts utilizing Space Exploration Inc. (SpaceX) hardware and launch technology I believe the Boca Chica TX site is the optimal launch location for this activity. Having a redundant SpaceX launch location to NASA Cape Canaveral, FL with access to ocean drone landing opportunities is critical. As a US Citizen and tax payer, I approve the FAA supporting SpaceX at the Boca Chica, TX launch facility. Matthew Martin

I fully support the spacex operation at Boca. Yes, environmental studies are important, but FAA should do a better job and speed up the process. Delays will allow China and Russia to get a tremendous advantage on the moon base. We must let America compete! Don't get in the way! This is a matter of national security!
Respectfully, Ken

It is my sincere belief that the ability that SpaceX is developing here is the only chance for America to keep pace with the rapid space innovation occurring in China and we lose this opportunity at our peril and that of future generations of Americans. This is truly a tiny bit of the US environment that would be impacted (and not significantly), compared to the impact to our national security and our future. I implore you to move this forward at the fastest pace possible. The Chinese government is not waiting.

My name is Craig MacGillivray. I am representing myself and have researched the environmental impact survey and related scientific topics to the extent of my understanding. I am writing in support of Space Exploration Technologies Corp (SpaceX) and Starship/Super Heavy development. SpaceX has been setting the industry standard for space exploration and launch vehicle engineering. They have inspired hope and given humanity visions of a bright future, while innovating space technologies to a point no one believed possible 15-20 years ago. From creating the first propulsive landing, reusable orbital class booster, which has shown immense reliability, safety and success, to proving fully and rapidly reusable launch vehicles are within reach. They have opened the eyes of engineers, scientists, investors and public persons, showing us where the capabilities of science, mathematics and engineering can take the human species. Not only are they creating a launch vehicle which will make space exploration cheaper and safer, they are doing so in a way that helps the environment by phasing out expendable vehicles which are usually left in the ocean or in orbit posing a danger to future life. By using methane as a fuel source and fully reusable hardware there will be a significant benefit to the environment of this planet and the life that inhabits it, over existing technologies. SpaceX have cooperated greatly with environmental organisations since their inception almost 20 years ago. The CEO Mr Elon Musk has devoted his life to helping the environment and human species by popularising electric vehicles, funding carbon capture projects and even assisting the safety and well being of turtles on the beaches of Boca Chica. Cape Canaveral is an example of a thriving wildlife habitat which has benefited greatly from being located at a launch site due to the restriction of the public in the area. Boca Chica will benefit in the same way if this permit is granted. The beach and surrounding wetlands will thrive with life due to less human interaction such as vehicles and litter. Brownsville and Boca Chica have also seen a significant benefit financially and to employment, inspiring hope in young students while providing opportunity to residents and local industry. I hope that the FAA will grant SpaceX this opportunity to push humanity forward in to new realms of engineering and science. With little or no immediate environmental impact and the possibility of beneficial environmental impact in the future. Thank you for taking my message. Kind Regards, Craig

I have not been more excited about any project of engineering undertaken within the United States in my entire life than this (I am 29). My family watches every launch, we countdown together over Zoom. Even my mother, whose eyes usually glaze over when I talk nonstop nerdy news at family get-togethers, will ask me frequently "When the next SpaceX event will be". This is a quest of a generation that brings multiple generations together. My family is also staunch members of The Nature Conservancy and firm believers in individual rights. I make this point to emphasize I respect that there are concerns from both environmental and local homeowner viewpoints. Every project on a scale such as this can't help but step on a few toes - not through any evil intent by those involved but simply because of the physics involved. But should that mean that the needs of the few be prioritized over the needs of the rest of the USA and the global community that is cheering this on? Mitigation measures can be implemented, for both the residents and wildlife. It may not be to the extent that it completely masks the company's activities. But that isn't a strong enough justification for scuttling a quest that has lifted up millions of fans all over the Earth. Imagine if every airport, interstate or if the Apollo launch site at Cape Canaveral had to meet the same requirement of "zero impact" before it was constructed. None of these projects would have come to fruition, it's impossible to build something large and have zero impact on the surrounding. Now weigh the positive impact those investments have had on our country and imagine them erased from our history because of impossible regulations. SpaceX has brought tremendous benefits to the local community that often get lost in conversation when the debate solely focuses on "loud sounds (bad) vs exciting future (good)". The economy of the community has blossomed because of their investment and if this project is allowed to proceed, that investment stands to triple at minimum. Please approve this project without delay. To merely approve, but insist on lengthy delay, is death to any company. Delays have a real monetary cost. Momentum should not be taken for granted, it is hard to generate and even harder to keep going. The team at SpaceX have worked incredibly hard to bring this momentum to bear. Delaying will destroy a precious, once-in-a-lifetime opportunity to expand the domain human experience and scientific knowledge in a way that many didn't think possible.

I am writing to you in support of SpaceX facility and rocket launches and landings in Boca Chica TX. I have previously visited SpaceX facility in Boca Chica TX and they are definitely respecting the natural habitat in the area. Both the beach, and nature in the area in my belief will remain unaffected, I believe it may also prosper. We can look at Kennedy Space Center as what can be done with the prospering habitat in the area. I see SpaceX following suit and respecting the area.

Dear Sirs/Madaams, Please find this note in support of the SpaceX program up for review by your organization. It is critical we continue exploration of those frontiers free of the constraints of our society. There are unknown variations to those environments in space that may help us in the fields of alloys, medicines, alternative fuel and energy sources, etc. Please consider our place in the field of space exploration, science and preparedness as a precursor to any catastrophic events as well. With global warming being so eminent, it would seem prudent to simplify space travel as a common occurrence while we are not under the pressure of any unforeseen issues. Respectfully, Sydney D Chase President XavierC,LLC [REDACTED]

Dear FAA, The WORLD depends on you making the right decision concerning SPACE X. This American company has taken us farther in space than any other company... due to FINALLY developing REUSABLE ROCKETS! The SPACE X technology is above and beyond what other companies have accomplished for the last 60 years. *** If our world gets taken out by an asteroid or God forbid ... an atomic war, the WORLD NEEDS A BACK UP HOME. This is not sci-fi any longer. With China sending rockets/ bombs around the world at the speed of light THIS MONTH ☆☆☆we are all afraid for our safety. Without a back up plan for humans on the Moon or Mars, it is a scary thought that Earth could lose all life and not have the opportunity to keep our human kind alive in the universe without Earth. SPACE X, TESLA AND ELON MUSK are one of the few companies & men trying to preserve man kind and at the same time, help our current issues on Earth. I pay tax dollars to help fund and pay your salary plus help with funding these companies. I wish SPACE X would have been in the picture a long time ago so that we would not have been paying companies trillions of dollars to build DISPOSABLE rockets! Boca Chica is a perfect home for Space X. I have been there and it is amazing! SPACE X has not only put Brownsville on the map, but Elon and SPACE X have donated so much to this once sleepy town. Every resident that I have met and come across in that area are thrilled and proud of their local SPACE X. SPACE X has proven time and time again that they are doing the right thing and not just for a profit. They have proven time and time again how safe and successful a company CAN be and as a tax payer, I am begging you to make the right decision and allow SPACE X TO PERFORM ALL TESTING NEEDED for THE FUTURE OF OUR PLANT AND A HOPE THAT EARTHLINGS HAVE A 2ND HOME IN CASE OF AN EMERGENCY. It is way past time ...we should have been multi planetary 50 years ago. SPACE X IS OUR NOW AND OUR FUTURE. Paula Sindelar Owner/Broker 23 years for & PROUD TESLA OWNER Pepper Realty [REDACTED] [REDACTED] [REDACTED] cell

I am communication science university lecturer. The decision the FAA is going to make now will determine whether the Chinese beat us or not. SpaceX have gone a long way to bring space science back to the USA. SpaceX has also inspired many private companies to follow suit. In all, we have seen a huge growth of jobs and business, and this not only in South Padre region but every where SpaceX and others have space facilities. Please approve ALL SpaceX proposals.

Launch approval should be given to SpaceX .. It will be good for the whole country as well as the economic growth of this part of Texas. Like Cape Canaveral, this kind of activity results in NO harm to the local environment. As a government agency the FAA should clearly see that America has been overtaken by the Chinese space program and the Star ship program is vital to the country.

I support Space X's orbital flight test. I live near the Boca Chica launch site and I do not see any evidence of environmental harm with the naked eye. The area is well maintained and managed. I would only suggest there be ample security when and if the launch happens due to there only being a skinny two lane road stretching 20 miles. Accessibility for emergency responders could prove troublesome if anything goes wrong and onlookers/media should not be at the facility unless permitted.

To whom it may concern, There are few places around the world where one can develop, test, launch, and land a fully-reusable, super-heavy lift capable, orbital launch vehicle. Boca Chica, Texas is one of them. It will be a valuable resource for orbital launches seeing as its latitude is slightly lower than Cape Canaveral's, leading to a wider range of possible orbital inclinations from launch. Additionally, it will serve to lessen the strain put on other launch sites (Cape Canaveral Space Force Station, Vandenberg Space Force Base) by a high launch volume. With that, I urge you to quickly approve Space Exploration Technologies Corporation's (SpaceX) request to use the area for orbital launches. Regards, Sam Almo-Milkin

The development of SpaceX's Starship is of crucial importance to the future of this country, both for its economic and security interests. The sheer potential of Starship outweighs any technological development in Space Flight since the beginning of the US Space Program. A fully reusable rocket and spacecraft will enable the US to maintain Space Superiority, but potentially even to achieve Space Dominance if given the support it needs to succeed sooner rather than later. The heavy lift capacity that Starship could provide may revolutionize the Space Industry by enabling it to not only be possible, but to also thrive and bring about new and even unprecedented advances in science and technology. Obviously safety is a factor that should be a priority, but not so stringently that no progress can be made in advancing spaceflight technology.

As someone who has watched the Space X Starship program ever since star hopper took its first flight, I have a strong belief in this program. Starship in my opinion is the best option the world has currently in regards to getting to the moon, Mars, and beyond. Granting its first orbital launch would be a monumental step in the right direction, allowing Space X to gain the valuable data it needs to become a fully operational and human rated ship.

Hello, please reevaluate the regulations for space launches. Elon and them are closer than ever before, on making life multiple planetary. Elon's very upset about the regulations and so am I, if we want have a human colony on Mars, we need to look at the regulations. I understand you haven't seen so many flights before so it's new to you guys, but now that there is we have to change the regulations. I and many other people feel like it's unfair and your restricting and blocking are future on Mars with there regulations. Thanks for you for your time.

FAA) Your decisions are important, but; You should encourage the demands of your entrepreneurs by facilitating them like a developed country institution. SpaceX has great labor, hard work and capital. I think that the necessary approvals should be given without causing material and moral losses, without reducing the motivation, timing is important. If you can't catch the time, it will cause losses. Give this support to Elon whenever he wants. Thanks.

It's important that regulatory bodies become an enabling force into the future. Hindering progress seems to be the obsession of bloated authority. No one is in danger from approving such an important milestone. We should be building a world that our children will be proud of -- one where we didn't say no just to feel like our authority was still relevant in the modern world. Progress trumps all, and it doesn't go backwards. Not anymore. Try not to stand in the way of innovation.

Regarding SpaceX by Ronald Cole. To the FAA. I am a drone Enthusiast. I taught myself computer science C++, On the Arduino. Currently programming a Arduino ecosystem touchscreen display. I have a reading disability that has been with me for my whole life I use Google tow right and read. With my service animal. Awesome Dawson. A commitment to the basic civil & human rights of all people with disabilities. See civil rights laws covering service animals, transportation and health & safety. Mobilizing Leaders. Impactful Policy. Fostering Equality. No Limits Mission. Promoting Inclusion. -----

----- I believe the SpaceX community, We, will step up. I would imagine that they would have a Mars enclosure for the turtles but that is just my thought. I would like to see come out of the space Community would be smaller space tech companies in Boca Chica Texas, or now called Starbase. I believe my self to be a entrepreneur, of space. related things. * I live in the Columbia River Gorge between the state of Washington and Oregon. I live in a small town called Mosier between the Dalles and Hood River. I have watch the. Drone industry take off. Companies like. Insitu, ICE. Conclusion. SpaceX needs room to grow in its production. They need to follow math this is rocket science. If they want to go to the Moon they need a second fuel Farm. Ronald Cole says yes go for it. SpaceX has Growing Pains let them grow when they need to regulatory Should be passed to the people Vote.

Dear FAA, We must keep accelerating technology & Elon Musk is helping mankind, in a big way do that. Starship is in a very isolated place, it won't do harm to the environment or the people. Starship also uses the raptor engine, which is a clean burning engine. The little amount of CO2 that will be put into the air, will be made up for with the fuel and oxidizer production that actually pulls more CO2 out of the air than is made from a starship launch. So please let space x do these launches to help mankind for the long run.

Respectable FAA Officials: (Excuse me, but in what follows I can't stop repeating the word "more") I want to speak for myself today, in addition to what I heard, learned and lived from my parents, from their parents and I am sure of all my ancestral lineage, because I believe, it is present, it is written in our subconscious, in our DNA. Space X in Boca Chica, TX, is becoming possible, today, those dreams, those that we cannot explain, those that we have superficially exposed in the science fiction literature. There, unquestionable technological advances are materializing, responding and solving high-end problems on all fronts, both Engineering, Industrial, Technological, Infrastructure, etc. in every sense! The most ambitious projects of the human race are being taken to a higher, tangible level in the immediate future! Some of the most creative solutions have been shown to make space exploration possible in a more economical way, to the point that they have put some into jealousy and exposed, discovered, others "bigger". We all look at the Moon, the firmament in its vast depth every time we have a chance! For all these, please FAA, in our relatively short time of life, allow my Grandchildren, Luis Damian and Mónica, to be part of our destiny today, allow Elon Musk and the chosen ones to continue with this plan. That is the inevitable future, that was my expression of Freedom! It was with that spirit that I tried to bring my students in my Physics, Astronomy and Electronics classes in my years as a teacher in the classrooms within the dictatorship of the Castro-Communist regime. America is represented in Boca Chica! SpaceX symbolizes the National Eagle Sincerely Luis Guerra Juvier

It's incredibly important for our nation and humanity to be a leader in space exploration. Starship will open access to space that was unfathomable till now. For our nation - NASA will be able to contract with SpaceX and save taxpayers billions of dollars annually through the highest cost-effective and reusable Starship. Looking at competitors, they're nowhere even close to delivering a product as impressive or cost-effective. For humanity - Many people like myself have been inspired by SpaceX and solely chose a STEM program due to SpaceX. Go to an aerospace engineering school and ask why they're there, many will credit SpaceX for inspiring them. Inspiring people to devout to highly complicated, STEM based degrees is important for humanities advancement. Additionally, it's critical for our nations national security to have highly skilled aerospace engineers for advanced missile development. To conclude, SpaceX is doing more than build another rocket. Their inspiring many Americans to push themselves into harder, in demand degrees while also potentially (likely) saving taxpayers billions of dollars over the coming years. It's clear SpaceX is taking the bulk of new NASA contracts, and will deliver the safest, most cost-effective rocket.

SPACEX is an important and amazing company not only for US but for the whole world. They are leading the world of innovation with their rapid reusable rockets. SPACEX inspires people and with enough ingenuity, we can officially become a multi planetary species within our lifetimes. As crazy as that may seem to say aloud. This has been a dream for millions of people throughout Earth and throughout time. Establishing base on moon, mars are some of the great achievements to be achieved, This will also help to know about our universe and how can we make life better on earth and continue to live in this universe. We must not miss the great opportunities that can be realized through the successful flights of the STARSHIP SPACEX. The STARSHIP rocket represent hope for so many people and we are dreaming of great possibilities that we can achieve. So, I hope the FAA allows SpaceX to do the first orbital launch.

Low cost access to space is critical to national security, supports understanding of world climate and supports planetary protection. In addition, the promise of public access to space excites and motivates our kids to pursue careers in STEM, which leads to better lives for all. SpaceX listens to and mitigates environmental and nuisance impacts. They were quick to alter the Starlink reflectivity to lesson impact to astronomers. They have proposed a tunnel to provide alternative access to Boca Chica Beach. The reusable heavy lift rocket is a critical technology for the future, and the United States should not be without this capability.

Hey FAA, going to Mars has been humanity's dream for a long time and we both know there's only one company which can send humans there in these decade which is SpaceX. They've accomplished alot in a short period of time and are willing to do bigger things for the sake of humanity, please let those brilliant people do their thing. I cried during the sn8 and sn15 lunch cause actually startreck could become reality. There's someone out there who actually thinks outside the box and wants to do what no one is doing. Imagine your kids going to the moon for tourism, wouldn't you want that?? Imagine big universities going to the moon for studies and experiments, wouldn't you want that?? All this people are trying to do is adding another meaning to life. please I support SpaceX. I don't know what more to say but you guys too are doing a good job accessing safety regulations thumbs up for that. Please give this company a chance,if I go to YouTube,it is to check what this guys are doing and for a very long time now there hasn't been any mind blowing milestone which they've done and i think it's because you guys are holding them back or I mite be wrong on that claim but no lunch,no fun. Look at how many job opportunities SpaceX is offering. I will like you guys too in the FAA to leave your own thoughts because there's a future which you all will want, being in the FAA doesn't mean you don't have a dream for yourself,your kids and for the world. How would you wish tomorrow will be like??how would you wish humanity will be like??how would you wish the world would be like?? Thanks for reading and have a good day

Subject: Supporting the Future

I have been following SpaceX for a long time and see them as the best hope of rapid practical technical development. The progress I've watched via internet indicates to me that SpaceX is a responsible venture that is willing to take reasonable risks, but also is very mindful of potential harms that could develop from such rapid development. I believe they have been responsible in minimizing risks to the public and the environment and should be allowed to proceed. If not at BocaChica, where else do opponents propose to build the infrastructure to move this forward. It appears they are afraid of potential downsides to any development and only wish to wield victim power to stop the success SpaceX has had thus far.

I believe there should be reasonable accommodation to allow SpaceX to continue to rapidly develop with plans to monitor and address negative impacts if and where they are discovered.

I live in a relatively remote area with very poor options for internet connection. Starlink could be a real game changer if allowed to develop. With increased SpaceX capabilities Starlink could potentially roll out much faster.

Thanks,

Charles P Kretzmann

Subject: Upcoming SpaceX launches and their importance

I am writing in support of upcoming launches by SpaceX in Boca Chica Texas. Things that I hope you will consider:

This singular moment in history where a private American company can efficiently push the boundaries of space travel are fragile and unlike the rockets being built, there is no guarantee this moment can be relaunched.

Leadership in space technology has many tangent benefits. As a country we cannot afford to be outpaced by foreign powers, and those powers are making great strides.

On a historic note, our country and the world at large has always relied on the ability to 'Go west young man, go west'. Frontiers have always fueled our hopes and dreams and unfortunately our good earth has run out of new lands. The hopes of expansion are paramount to sustaining our civilization and that leaves us the starry skies. They call to us now. We must heed the call.

I understand that any bureaucracy is loath to act quickly with flexibility. I know that many corporate interests would attempt to bend that bureaucracy to their own ends. On that thought, I would ask you to consider the overt motives of the man who leads this endeavor. Because of Elon Musk, many automotive manufacturers were pressured into taking the electric vehicle more seriously. He is clearly not a perfect man, but Elon Musk has shown how much he cares about the people of this planet.

Thank you for listening.

Sincerely,

Alan Wayne Kott

What SpaceX is doing is more than historic, they are pursuing a critical National priority, to continue with USA pre-eminence in space technology. China is close behind, and catching up with the USA after other failures and delay with NASA-funded initiatives for human spaceflight. It is absolutely imperative that SpaceX receive timely approvals for flight tests these next two years.

I support the SpaceX program at Boca Chica to advance space exploration. It is probably the best location in the USA being far south and on the west side of the gulf. Every location will have people who oppose every possible location so you have to go with the safest and most practical affecting the fewest people. There is wildlife everywhere so just get with it. Humanity needs to do this to further the existence of all life on this planet by making space an alternative to our existence. Sam Huffman, Idaho.

I believe you should allow SpaceX conduct their orbital space launch test. I believe this because right now they're is not many companies trying to conduct something so exciting and innovative as trying to make our species multi-planetary. I understand the pause because of unknown factors like environmental impact. But we should have some sort of idea of the impact seeing as how launches have happened for many years and that same knowledge should be able to be applied to Boca chica. We have to be open to change and be inspired by what they are doing. This can and probably will spark a desire for our next generation to become scientists and/or engineers. That is something this country needs if we want to be competitive on the world stage. Correct me if I am wrong but SpaceX seems to have a high degree of safety considering that they are trusted with launching our own astronauts to the space station. Also the level of success they have had with falcon 9, imagine the opportunity we would have if they are equally successful with starship!

Pt 1: What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market 2. 2. Returned to US capability of human space flight 3. 3. Deprived Russia from \$ 1bill in annual revenues fro satellite, engine purchase and human flight 4. Created first and ONLY reusable rockets 5. 5. Created world's largest heavy lift rocket 6. 6. Lowered cost of space flight for US gov by 70% 7. 7. Created world's first broadband LEO satellite internet It is important to humanity and the United States that spacex be able to continue at its rapid pace of innovation and not be slowed down by regulation. It is particularly important to help, maintain and grow lead in rocketry.

I support SpaceX's efforts in Boca Chica. You need to work with SpaceX, not hinder them. Elon has located his launch efforts as far from civilization in this country as you can get. If you and the environmentalists don't get out of the way, Elon will be forced to find another country to work out of. That attitude has worked out so well with the manufacturing world moves to China, right? Get the politics out of this equation, do a reality check and start helping and get out of the way.

When we think about things in our life that can make a difference to humanity as a whole, SpaceX and its starship program are, if not at the top, at least at the forefront of human endeavors. This program has gone to every attempt to ensure that their impact is at a complete minimum. This should be plainly obvious to a thinking person. Do not let the knee-jerk minority ruin another galactic leap to the benefit of all mankind. Sincerely, Todd Brewer

I write this note to express my support for SpaceX's Starship program at Boca Chica TX. SpaceX's pioneering, groundbreaking effort to establish, grow, and maintain a rapidly reusable large rocket program should not be stifled by impractical-to-overcome regulatory obstacles. It appears they are already doing an adequate job of growing their facility, incorporating environmental protections along the way. Thank You, Kevin Calhoun

First, thank you for keeping everyone on their toes. Bureaucracy can and **does** get in the way of progress, but we still need to make sure that progress is done sustainably, so your role is essential. That said, the evolution of humankind depends on progress and it's quite rare to have brilliant people working on far reaching goals that benefit everyone. The FAA now has a rare opportunity to contribute to a pivotal moment in humankind's history, by supporting SpaceX in their goals of developing the Starship vehicle. It's a difficult challenge, but the wealth of experience that the FAA has can be put to good use to make sure that humanity moves forward both fast and safe. Keep up the good work and make the necessary changes to play this historic role the right way.

Hi, I'm emailing to show my support for what spacex is doing in Boca Chica. The starship program is the most ambitious science and engineering project the US has embarked on in a long time. This program has inspired so many already and will continue to do so for generations to come. I understand that we must protect our environment, but we can do so while not slowing down the progress of spacex at Boca Chica. Lastly, we have a window now to go to the moon and Mars via Elon and spacex. If we miss this window we are not guaranteed it will happen again. Folks like Elon, Einstein, Da Vinci, Newton don't pop up in society very often.

Elon Musk is no ordinary human, rather he is one of the smartest person you can find on Earth. Therefore, his endeavors of space exploration are thereby extraordinary in scope and nature. Moreover, any restrictions placed on his endeavors are thus shackles placed upon the entirety of the human race as an evolving entity of consciousness, whose direct application is for the development and betterment of all humankind for now and for evermore. Hope this helps Thank you

I support spacex starship program, because it will open up the gates to space, with a reusable rocket. Their Falcon 9 rocket exploded many times in the beginning, but then they figured it out, and today Falcon 9 is one of the best rockets in the world. The progress with Starship is going really well, and they will get it to work just as good as Falcon 9. I think building a self sustainable city on Mars is good for humanity, and helps our chances for survival if something happens to Earth. It creates new jobs, and new technology that will benefit life on Earth, just as earlier space programs did. I'm excited about a future where we are out there among the stars exploring

Dear FAA. As a US citizen and resident of Texas I urge you to give favorable consideration to the SpaceX starship program. I believe it is critical for the competitive of the United States to enable SpaceX's programs in view of competition from China and Russia not to mention other private companies. The frontier of space is littered with waste and inefficiency. We need starship to fight climate change and extend internet to everyone. While a small part of a beach rarely visited may be affected, there are many thousands of beach and coastal area that are unaffected and SpaceX along with sister company Tesla have done much to improve climate change technologies. Best regards,

Please support the SpaceX Starship testing. The orbital launch is an important step forward as the US strategically works to re-establish itself as the leader in space. Our dependency on Russia since the space shuttle has come to an end, now we race China to keep our lead as we prepare for the moon and much more efficient launches with reusable hardware. We will reassert our leadership with launches that cost 1% of competition. That is the most green you can be vs trashing more than \$50m worth of hardware every launch! Go USA!!!!

I ask the FAA to approve the Boca Chica site for SpaceX to further development of its Starship program. As we enter the era of private space exploration, launch facilities that are privately owned are critical to: increasing the number of possible launches; driving down the cost of going to space; advancing space technologies; and ultimately making humans a space-faring civilization. There are limited locations that are ideal to launch from the United States that are both far south, and provide ocean to the east. Boca Chica's location is ideal for helping the United States, through SpaceX, remain a world leader in space exploration. The environmental concerns, while valid, are adequately mitigated. SpaceX is a very environmentally conscious company, and has already done much to help the local and global environment. If they meet their goal of bringing humans to Mars, they will need to advance technology that conserves resources (for air, food, water, etc), which may help our conservation effort here on Earth. Stifling innovation by slowing, or halting the work being done in Boca Chica would adversely impact the environmental future of our planet. The importance of the space exploration cannot be understated. Becoming multi-planetary provides a level of "insurance" in the event of a large scale natural (or man-made, i.e. nuclear) disaster. It requires investment in technologies that improve our quality of life on Earth -- solar technologies, recycling, water/air/fuel production technologies, scientific experiments in space or other planets, and much more. The money spent on these technologies and the development of Starbase, stimulates the Boca Chica economy, the United States economy, and potentially the global economy. Granting permission for launches in Boca Chica has local and far reaching benefits for all people. If the United States does not lead -- China will. And environmentally, China has a very poor record. SpaceX is environmentally friendly, US-based, and located in an ideal location for safety and launch efficiency. Please grant approval for SpaceX to launch from Boca Chica under the conditions of the Draft Programatic Environmental Assessment (perhaps with allowance for additional launches). -Ken Paulsen [REDACTED] [REDACTED]

I don't really think it's still safe enough for them to launch Starship considering that they are not even capable to keep the tiles attached during a static fire. I think that the spaceship should be perfected even more, I mean it's better that they operate at 100% perfection. What, they can't wait? 2022 seems a good starting point

Hello, I respectfully ask you to allow your US companies do what others cannot. What SpaceX accomplished for US: 1. Returned 80% of commercial satellite launches back to US - \$4bill market 2. Returned to US capability of human space flight 3. Deprived Russia from \$ 1bill in annual revenues fro satellite, engine purchase and human flight. Thank you, Tasos

Please support SpaceX at Boca Chica and grant licences. I feel any environmental impact is more than offset against space travel development. I am sure that more environmental damage is caused by the public driving vehicles on the beach and walking on the dunes trampling vegetation and nests. Thank you for the opportunity of having my say. Let spacex launch starship. Don't act like you care about the environment now. NASA launched 135 space shuttle missions for 30 years out of the Kennedy Space Center which sits on a wildlife preserve. The space shuttle was way less efficient and used more fuel per ton than starship will use. Let them fly the rocket.

Hello, i am a person living in a small town in north carolina and i too would like to give my opinion on the recent situation of hesitancy in giving space flight approval to spacex for several launches in upcoming future. I believe that it is extremely important to explore the other celestial bodies and improving our ways of reaching them. Without these endeavours we wouldn't have satellites revolving around earth with which it is possible to monitor the conditions of wildlife and conditions of thier habitats around the globe. So if progress in space flight means progress for humanity and for animals even then why should spacex be stopped? What they promise is no ordinary improvement so they do deserve a chance to fulfil thier promises. Besides spacex, whenever possible does try its best to help converse wildlife and environment around the boca chica area. So sir, it is my humble request that you keep trust in spacex and give the decision which would benefit everyone and make space flights from boca chica launch site possible at the earliest. Thank you

I am extremely wary of the proposed SpaceX project under the leadership of Mr Elon Musk. Mr Musk has consistently proven himself to be primarily interested in promoting his personal self interests, inflating his ego and wealth, often at the expense of the public interest (undermining public safety related to this pandemic, brazenly manipulating cryptocurrency markets, as two recent examples). He has lost my trust as a private citizen that he can lead a project like this safely or be transparent with facts. I hope you will scrutinize this application carefully, and not be at all swayed by pressure that Mr Musk is trying to manufacture, financially or via social media.

As a trained FAA specialist, I have the opinion that SpaceX can meet all the conditions to carry out a safe test in our earth orbit in order to test and further develop the new rocket stage 4 for future missions to the moon and Mars. This is part of the contractual requirements that NASA and SpaceX have jointly agreed upon and I find it unfair that there are entrepreneurial activities of the competition to torpedo the greatest project of mankind.

I have done loads of research into this subject comparing images from RGV Aerial and comparing stuff to the cape. The wetlands in the area have not been affected from SpaceX, wild life flourishes. There are a few simple issues that could have easy fixes like dimming the lighting around the site. But nothing to major. The Enviornmental impact has not been bad and SpaceX has and is trying to lower its Enviornmental impact

I am an environmental scientist with almost 30 years of field and laboratory experience. There is no doubt that any activity by man (eg. road construction) or by insects (ant hills) will have impacts. Impacts are inevitable. However we sustain ourselves by managing the impacts. The question should be not whether SpaceX should be permitted to launch from Boca Chica but rather clearly have a plan in place to quantify and manage the impacts. Having said this, there is a lot at stake with the Starship program especially as it relates to national security. I support the regulatory approval as soon as possible.

Hello FAA Representative My name is Jon Ell I support SpaceX and I believe that it is best that SpaceX is able to move as quickly as they want and to perform as many launches as they want. How much easier is this for humans to send people to the moon now than it was in 1969? It is no easier. I am a PhD student in materials science and engineering at Cal Berkeley and unfortunately there are no new materials that will come out in the future that will make the goal of colonizing space any easier. If we colonize space it will not be any easier in the future than it is today. This is not a situation where delaying SpaceX's rocket development is okay because in the future this will be easy. If it will ever be possible for humanity to develop space it will be because of rapidly reusable rockets. SpaceX has the best chance to do this as they are the only company that is committed to it. While it is not great that some locals will experience difficulties and that the town will change, there is no other place that SpaceX can do this where these same problems and complaints will not arise. This is the best location for SpaceX. If it is a choice between not doing it and doing it with a relatively small number of downsides it is best to do it. Unfortunately some sacrifices of people's wants and some wildlife habitat must be made for the benefit of all. You have probably heard a ton of cringy stuff about the future of space and what not from other space nerds but I will pile on some more about the importance for you (sorry). If you look at what is truly important, it helps to use history as a lens. Looking back at the most important milestones of all time, they are: the advent of life, the development of multicellular life, the formation of plants and animals, life moving from water to land, the formation of mammals, the formation of consciousness. If life is able to leave earth and begin to colonize and live in space this will be on an important level as great as life branching out from the oceans to live on land. This could be the most important thing humans ever achieve. This is not about leaving earth, this is about expanding and ensuring the prolonged life and health of earth while ensuring the light of consciousness continues.

I am in complete support of SpaceX's work and development towards a completely reusable rocket at Boca Chica. Over and above of any mention of going to Mars, the concept of use for intercontinental travel has the ability to be a transformative factor to our air travel which has so many economic benefits just not at the Boca Chica site, but more across the entire US. I would ask that the FAA provides full unfettered testing and use of the Starship Rocket System moving forward as this is our future, not just for use in and around earth, but for far more reaching goals as well. It's within our makeup as Americans to champion exploration and entrepreneurial efforts. SpaceX is providing an avenue to extend our reach as a human species not unlike Lewis and Clark, Columbus and many others. We need to do everything we can to support this effort as it's undoubtedly our next great leap! Thank you, Joe Fentross

I am writing to express my support for the approval of the environmental impact study for SpaceX's Boca Chita facilities. The advances in space launch hardware that are being made and that will be made there and the benefits to mankind certainly outweigh any slight environmental impact that may occur. SpaceX's vision for revolutionizing space travel must be allowed to continue.

This project has my support with a little input and revision. I would like to see a finite amount of usage to put a limit on how long that portion of the project can operate in. 5 years, for desalination of water as well as checks and balances in place to ensure that any ocean salination levels would be indemnified at a future date. Also, for that future funding be made available for such a task. My only environmental concerns at this time with this project is maintaining a healthy ocean.

This is a comment supporting the launch of starship from Starbase, TX. Please don't let sour people stop innovation. It's happened in my home town of Albuquerque where we've placed culture more valuable than future economic conditions. It's a small price to pay now for long term economic development in TX as well as survival of our species. Perhaps limited number of launches per year and other similar regulations are necessary until SpaceX has the ability to launch from the ocean rigs. For the time being we need allow SpaceX to develop the Starship as well as the private space industry that strives green technologies and saving the planet. Thank you, for whomever reads this.

The launch of Starship marks a beautiful turning point for human kind, where we can achieve a multiplanetary existence, and thereby be more likely to survive any mass-extinction event here on Earth. This benefit extends to all species that can be brought to Mars. Nobody wants to see any harm come to the local residents or the local endangered animals. But it must be possible to mitigate those risks in ways that do not significantly delay development and launch of the starship. As a common man living on this Earth, I implore the FAA to facilitate the starship launch, and all subsequent launches, to help ensure our survival as the human race, and all life as we know it. Please help Space X achieve this incredible feat for the benefit of all human kind.

Hi! I just wanted to do a quick comment of what I think about Space X 1st orbital Launch attempt and what all this journey to Mars means for a lot of people. In my case, all the journey to Mars made me think really about what is really important for us. All of us are really overwhelmed with small problems and are surrounded by negativity all day long. Space X made me see the bigger picture, that not everything are problems and we should do more exciting things and think about bigger things, like making life multiplanetary. I think we can not comprehend right now the importance of the test campaign that Space X is currently doing. This particular goal can unite people all over the world to look for hope, for a more exciting future, where not everything is problems. But I think the most important thing, is that Space X's goal will ensure that we wont die as a species, in case something catastrophic happens to earth. Some day, all of this work will be appreciated. Someone NEEDED to start this journey to making life multiplanetary, and im SO GLAD im living and seeing the whole process to make this big milestone for our species. Regards, Jan Schurch

Dear FAA, Due to the cost of resources, it takes for a ship to launch into space. I Believe The company SpaceX has a mission with great ambition, but until we find a more sustainable resource for fuel, We the people of Sandpoint, Idaho would prefer if our government officials, who are in the environmentalist, an economist field could weigh in on the decision to allow SpaceX to pursue its future ventures into space. Thank you. Sincerely, Christopher Patterson

Although I think SpaceX's "guess and check" method of launches is entertaining to the world, it is also reckless and dangerous. The company's CEO has been rewarded far too much for his infamous ability to ignore or circumvent the rules, safety measures, and quality standards that other companies work diligently and spend millions to uphold. The FAA is one of the few organizations that has the power to ensure SpaceX is in compliance of all safety standards, and I hope that you do not bend just because of the influx of emails driven by the tweet of one man with millions of blind followers.

This sounds great. The energy & ambition of this company is our modern era's source of inspiration. So many people that wouldn't otherwise say so need companies and activities like this to keep them hopeful - hopeful that something good, something truly excellent, can still be built today, and that despite all the challenges we have folks that are literally reaching for the stars on a daily basis. People need this - it's good for the soul and, strangely, the economy as well. Let's get this big guy off the ground and inspire an entire generation of dreamers to become doers.

I have been following space x and starship program via news articles and videos .As a child watching shuttle missions learning in school about the moon and space and how we get there it is a subject that inspires all children.Now with children of my own I see the awe and excitement they show when seeing the amazing accomplishments that nassa and others have achieved. The starship program is giving the same excitement and awe to everyone around the world young and old.America has always been a country that strives to inspire push the boundaries advance and give hope.I do understand that the environment is particularly delicate and we (humanity)need to step up .Precisely because of this and climate change ect puts more importance on programs like this . As I am not American and dont live in the US my opinion may not be valid but from afar this is one of the special things that That inspires the world and gives hope and the whole world needs hope in these challenging times. Kind regards Darren pidgeon

As a lifelong Texan and Space advocate, we need Starbase, heck the whole world needs Starbase. I live near Austin and have made a visit to the site this summer. We saw no indications of environmental damage, congested traffic or racist anything. I can tell you Brownsville seemed better than ever and every local we talked too there and S.Padre seemed extremely positive when SpaceX is mentioned...Because its jobs and opportunity they've never seen before. Let Elon build this and take us all to a new place, any issues I'm sure can be dealt with evenly and with a positive ending for Texas and the world. Sincerely, Russell Avant

Hello, my name is Maurice and I'm from Germany. In Germany to start a business or to be innovative is very hard and you get many restrictions if you want to do something. In my opinion too much. SpaceX is a very innovative company that writes space history every month. The world is watching on Boca Chica to the next step of the humanity. Please don't do the same mistakes like in Germany. The environment is very very important but there are better and more efficient ways to save the environment. Thank you for reading. Best regards Maurice Roefke

I strongly encourage this department to approve the launching of the rocket. I haven't gone through the whole document yet but feel no matter what This is a critical event that must take place. It affects so many lives in a positive way. I can't think of many things more important than the development of this program that will far outweigh the survival of the human species. I believe intelligence about the whole matter is critical but the thoughts of how we can make it happen is the way we should be thinking and delays should be thought of as this will happen tomorrow . Dear FAA department , Today im here to request FAA team to please give approval for SpaceX launch of super heavy starship , this is not only a simple spaceflight , future depends upon it and its shameful that we have to step in to request a company for approval of a launch by one of the biggest aerospace company that's taking humans forward into space . However we respect your department and your administration on launches but please we want to please you to not limit boundaries of space exploration in name of law , hopefully our voices and emails won't be ignored and go worthless Thankyou

Good Morning, To whomever this may concern: Respected Members, All I would like to say is that the immense work and dedication that any space mission takes and the fruit it bears for the growth of civilization on our planet in various technological endeavors provides some positive vision for our human race. Its success seems a step closer to a better world. As an individual, I guess it is a selfish desire in a way; because each individual life could be affected in a positive way. Thank You Kind Regards, M.K.

Dear FAA team, Please simplify the procedures. Launching a spaceship has to be so simple as to launch an aircraft. That's the goal for space travel, to become so normal as flying nowadays. I know you can dynamize it and help SpaceX with their mission that will help all Humanity. I live in Ukraine and follow the Starship project around the clock. It is very important that there are no unnecessary checks, please.

I fully support the program spacex has established and continues to expand. This is world history changing technology that should be both commercially attractive for an economic expansion as well as scientific research access to a larger audience with shared launches, potentially down to where each us school could run one experiment per year. It's also an incredibly huge leap forward for military operations logistics for site to site transport as well as orbital launch capability expanded by ten fold. This must be permitted to develop for the security and strength of our future generations because eventually adversaries might develop the same technology further unfettered by an overly cautious restrictive government. The risk of not developing at this pace is too high, we're winning the reusable rocket to earth orbit now and we're pushing to deliver ten fold for half the price per launch.

SpaceX should be granted a launch license for their Boca Chica site. It is clear to me that the starship system is a vital part of the future and essential for NASA's Artemis program therefore should be allowed to test their vehicle. It is also clear that SpaceX will take appropriate mitigations to preserve as much of the surrounding area and wildlife as possible.

Dear federal aviation administration reviewing committee, I would like to provide my support to the spaceX superHeavy program for one simple reason: I'm specialized in risk management on large industrial projects and this sounds to be a excellent plan B in the case we are not able to reduced warming climate issues. We all trying to work on plan A as much as we can (and Musk is working it on it too with His Tesla EV company) but it is always an excellent strategy to have a back-up plan. Seen the track of records of space x, the super heavy program has a good chance of completion, with your support of course Thanks for reading me Alex Zobe

Development of the starship program is vital to humanities goal of space exploration. This vehicle has the potential to completely change the space industry with its completely reusable stages & also it's ability to carry nearly 100 tons of payload to orbit. Not allowing the starship program to launch & continue to innovate is a net negative to humanity.

Please let me tell you why I believe you should consider the Starship program's Orbital Launch attempt this upcoming month. The US is leading in the space industry, and we have proven to be the most innovative and capable of perusing such great heights abd achieving such outstanding things. With this technology we will be capable of transporting and outstanding amount of cargo, support a great number of astronauts all per flight. We can open the doors for so many possibilities. With that said, let us continue to make history, and continue creating and innovation, and achieve our ambitious goals for we are capable and nothing is stoping us but ourselves in situations like this. Thank you for taking the time to read this. I hope you'll consider opening these doors, have a great day.

Please let SpaceX proceed with its launch next week. We choose to go to Mars. We choose to go to Mars.... We choose to go to Mars in this decade and do the other things, not because they are easy, but because they are hard; because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept.

I was watching the live stream the other night regarding the environmental approval for spacex to conduct launches of starship/super heavy and the use of starbase including the tower and It was frustrating not to be able to have my day. I have seen this link this morning and I'm glad we have the chance to voice our opinion. I am in full support of spacex and Elon Musk, his goal to make life multi planetary. We are only one major event from extinction, and currently have all our eggs in one basket so to speak. From watching starbase develop over the years, and from other companies Elon has, it's clear to see the environment is a top priority for Elon, not just Boca Chica, but Earth as a whole. The location of Starbase is vital in order to get to space as fuel efficient as possible, while he is also making a smaller footprint as possible with starbase to do this. The research that has gone into making space travel re usable, to help not only financially but also to help protect the environment due to not having to constantly re build new rockets which again has an impact. I could go on and on listing reasons why this should go ahead but to sum it up not allowing this to proceed is harmful to our environment in the long run, if a natural disaster hits and we are not multi planetary, there won't be a second chance or an independent review or time for reflection, there will be a mass extinction event. I applaud Elon for the work he has done and the finances, time and energy he has put into SpaceX for the good of mankind and I hope you can do the same

Hello, my name is Demas Huckaba and I live in Florida. I am writing in support of SpaceX in Boca Chica. Many of us have heard the phrase, "Out of sight, out of mind." Well, sadly, that goes for the threats of space as well. There are countless threats in space that whiz by our doorstep and if one were to knock, we'd be in trouble or not here at all. Currently, we have no way to defend against this grand unknown. However, we are now having a once-in-a-generation push to expand into that vastness, and with it, bring security to all that live on earth. I get that people don't like change but it is just a fact of life. A life it is up to us to preserve. We are the only known species in existence that have the power to protect ourselves from the comets, meteors, and whatever else lies beyond. However, we make the mistake of thinking we have all the time in the world when the reality is that we could actually be wiped out tomorrow by a rogue asteroid that was never spotted. We need to expand our defenses in space and our ways of life in general. It kills me to see worry for a beach when the world is at stake. These people just don't want change and are comfortable where they are. Advancements are not made this way. On the environmental note, SpaceX has shown a love for earth and ALL that inhabit it. Holding them back is just painting a target on our own backs and waiting for the universe to take its shot and hope we live through whatever blows it throws. Just like Cape Canaveral and every other Space Launch Complex, SpaceX will keep things clean and life will flourish as it always has. Remember, the beaches and environment won't matter if none of it is here after one rogue asteroid or Coronal Mass Ejection that we could've stopped had we taken space advancement more seriously. Let SpaceX bring us into a new era. Thank you.

Subject: Hearing My opinion

Respected FAA,

I am Shameer Pillarisetti writing this email to hear my opinion about the SpaceX Starship and Starbase. First of all, I have to point out the importance of this program. More practical; it is a revolutionary concept that minimizes the debris in space, such as second-stage rockets and many more benefits. Here they are providing livelihood and opportunities. There might be some disturbance initial testing after fully forming stare base will be more user friendly where people can access the public areas without hesitation. If Starbase migrates, it is a considerable loss and time taking process. As a humanity, we are far behind in space colonization and revolutionization. Make them go higher and let them achieve their pinnacle and fulfill their goals. Elon Musk and his Team are working for natural friendly and sustainable development. They have done some of the programs in the rescue of natural habitats. Continuously they are working for the goodness of humankind, executing, and showing to the real world. We must think about the previous history of development in technology, a lot of damage was done with Vehicles and Planes now slowly it is electrifying.

In conclusion, nothing is possible as a sudden and minimum loss. SpaceX keeps on upgrading their technology to a more user-friendly Starbase will be eco-friendly and valuable with the pinnacle of success. In considering testing and few launches in a Starbase and further using oil rigs for their launches, it is the right move and minimizing the damage at a Starbase to make it more eco-friendly. I am sure, they are working restlessly towards the goals, definitely will upgrade to more eco-friendly rocket engines (Photon propulsion or other effective propulsion) further to be successful.

I am happy to be born in this era and blessed to watch what Elon Musk and the team have done further.

Best Regards,
Shameer,

Ms. Zee,

I would like to voice my ardent support for SpaceX and I plead with you to expedite approval, of the proposed 1st orbital launch of the SpaceX Starship. In our home, we so appreciate the progress made in the implementation of new technologies as applied by SpaceX and Starlink, it is difficult to express.

We live in rural SW Washington and have long been dealing with the severe limitations and the lack of progress made to further our communication options. For too long, a very few large media/entertainment groups have controlled rural access to new and improved communication technologies and the internet. Their lack of action and investment has been abusive and irresponsible.

Elon Musk, SpaceX and Starlink have made more progress in furthering our access to the internet and new communication technologies for U.S. rural citizens, than has been made in decades. If there is anything we can do to help support SpaceX, please let us know. And what ever you do, please, please promote the carefully prepared Starship space vehicle trials.

Thank You,
Dan Clark

Who's that shadow holding me hostage?
I've been here for days
Who's this whisper telling me that I'm never gonna get away?
I know they'll be coming to find me soon
But I fear I'm getting used to
Being held by you
Oh, baby, look what you've done to me
Oh, baby, look what you've done now
Oh, baby, I'll never leave if you keep holding me this way, oh o-oh
Oh, baby, look what you've done to me
Oh, baby, you've got me tied down
Oh, baby, I'll never leave if you keep holding me this way, oh o-oh
Who's this man that's holding your hand
And talking about your eyes?
Used to sing about being free but now he's changed his mind
I know they'll be coming to find me soon
But my Stockholm syndrome is in your room
Yeah, I fell for you
Oh, baby, look what you've done to me
Oh, baby, look what you've done now
Oh, baby, I'll never leave if you keep holding me this way, oh o-oh
Oh, baby, look what you've done to me
Oh, baby, you've got me tied down
Oh, baby, I'll never leave if you keep holding me this way, oh o-oh
All my life I've been on my own
I use the light to guide me home

But now together we're alone
And there's no other place I'd ever wanna go
Baby, look what you've done
(Look what you've done to me)
Oh, baby, look what you've done to me
Oh, baby, look what you've done now
Oh, baby, I'll never leave if you keep holding me this way, oh o-oh
Oh, baby, look what you've done to me
Oh, baby, you've got me tied down
Oh, baby, I'll never leave if you keep holding me this way, oh o-oh

Subject: Public Comment - SpaceX Boca Chica

I am submitting this comment to the FAA for public acknowledgment of my support for a Finding of No Significant Impact (FONSI) with regards to SpaceX's present and proposed operations of the Starship/Super Heavy launch vehicle out of Boca Chica, Texas.

Having reviewed the Draft Programmatic Environmental Assessment (PEA) I can find no valid reason why the FAA should not reach a FONSI and subsequently issue SpaceX permits/licenses for the testing, development, and operation of its Starship/Super Heavy launch vehicles and the associated facilities and infrastructure to support them for much of the reasons given below:

Proposed Annual Operations

The majority of my concerns stem from the low number of proposed launch operations for both Starship & Super Heavy. During the Development Phase, there appears to be more than sufficient consideration for the testing of the Starship, but a mere 3 launches annually of Super Heavy during the development phase seems rather low and doesn't give much room for error. Errors should be expected as part of the development process especially one as ambitious and never tried before such as the Starship/Super Heavy, so I would support a larger cadence of annual Super Heavy launches for this phase. When it comes to the Operational Phase I am even more concerned at the small number of launch allotments for both Starship & Super Heavy.

At a mere 5 launches for Starship & Super Heavy each that is not enough launches to even support SpaceX's missions as part of NASA's Artemis Program in which the Starship will require orbital refueling in order to make the voyage. SpaceX founder, Elon Musk, has suggested it would require at least 8 tanker Starship launches to refuel a Lunar Starship to carry its targeted 100 ton cargo to the lunar surface. This would mean the Boca Chica site would not be able to play a substantial role in helping to achieve the goal of returning humans to the Moon requiring more infrastructure investment at the Cape and other regulatory hurdles to bring online other sites licensed to support Starship tanker launches. This is very concerning even as the Draft PEA acknowledges the offshore launch platforms as alternatives for Starship landing attempts, but a mere 10 operational landings are considered.

Overall, I feel that Starship requires significantly more launch permission for the Operational Phase; and Super Heavy requires significantly more launch permissions in both the Program Development & Operational Phases in order for the launch vehicle to achieve its full potential and in turn impart the benefits to the residents of Cameron County, to NASA, the Department of Defense, and the emerging commercial space economy.

Road Closures & Beach Access

I have heard and read quite a bit of concern by locals about the number of road closures of Highway 4 and Boca Chica Beach as part of SpaceX's operations. However, I disagree that the impact is as large as has been suggested, there appears to be considerable exaggeration as to the extent of the disruption caused. The proposed cumulative hours of closure per year in the Draft PEA is slated at 500 hours with 300 hours of contingency closures used exclusively to address anomalies.

Taken into context, 500 hours even if the closures were to last for a duration of 12 hours per day is only 41.6 days out of 365 in a calendar year. This would be in a **worst case** scenario where residents, tourists, and other parties would still have access to Boca Chica Beach and Highway 4 for 323.4 days a year. Further, these closures would be distributed over the course of a single year, and are unlikely to exceed 12 hours and its probable that in reality as SpaceX's operations mature this concern will be naturally alleviated. Given the FAA's proposed requirements and ongoing coordination with officials in Cameron County, sufficient notice will be given to residents of these closures in advance of any activity.

Were further consideration required, it seems likely SpaceX would be able to negotiate the duration and time of some of its required closures without need for this being held against it as part of the findings of the Draft/Final PEA.

Economic Prospects

SpaceX represents a positive development for the Boca Chica area and nearby Brownsville. Tremendous public interest and financial investment by SpaceX has reinvigorated the future prospects of the region. Job employment opportunities and attracting a young demographic to the area will help support the local economy giving hope to a relatively stagnant and low income region. In consideration of this potential, this could more than offset some inconveniences brought on by the presence of SpaceX's rocket development and launch facilities. As said facilities grow and launches begin to occur, the long term growth potential only increases.

Environmental & Biological Concerns

The Draft PEA and the proposed solutions from SpaceX in coordination with the FAA appear to be more than sufficient to address a number of possible negative environmental impacts such as air quality and water resources. Many of the publicly recorded video and photographic imagery already reveals preemptive and precautionary methods being implemented at the SpaceX facilities to address many concerns their operations would have on the local environment. The Starship/Super Heavy launch vehicle utilizing liquid methane (CH₄) as a propellant is actually going to be more environmentally friendly in the event of an anomaly as methane will not coat and contaminate the environment the way rocket propellant-1 (RP-1) would this is very telling as the FAA found it acceptable for SpaceX's operational usage of the Falcon 9 & Falcon Heavy launch vehicles when an Environmental Impact Statement (EIS) was conducted and a final EIS issued in 2014. SpaceX's operations out of the Boca Chica area. CH₄ also burns cleaner reducing harmful substances injected into the upper atmosphere, we can be assured SpaceX will be committed to this cleaner approach to rocketry as it aligns with their objective to send the Starship on missions to Mars. It is feasible that in the future Starship/Super Heavy emissions will be a nonfactor if SpaceX is able to utilize the Sabatier Process to help negate the impact of its launch vehicles.

I would also note the location of the Kennedy Space Center (KSC) in relation to the Merritt Island National Wildlife Refuge and the Canaveral National Seashore as proof of the mutual coexistence that exists between protected national reserves and operational launch facilities. This relationship at KSC is the inverse of some environmentalists' claims that space launch operations cause substantial harm to the environment and the welfare of the wildlife therein. Boca Chica State Park now part of the Lower Rio Grande Valley National Wildlife Refuge is in a similar situation as that of the Kennedy Space Center and given the close working relationship NASA shares with SpaceX, it is reasonable that in cooperation with NASA that the FAA can be assured SpaceX will uphold its obligations to preserve the integrity of the refuge. In the proposal, it is acknowledge that SpaceX also plans to begin moving operations offshore to repurposed oil rigs in the Gulf of Mexico further reducing any possibility of detrimental impact to the native wildlife. Most other environmental concerns have reasonable proposed solutions included as part of the PEA that if implemented and enforced are more than sufficient to justify a FONSI including proper consideration of migratory and breeding seasons for endangered wildlife and a water deluge system to mitigate noise pollution from launches.

It is also arguable that endangered wildlife is actual safer and faces less disruption thanks to SpaceX's operations. Fewer members of the public disrupting the wildlife in its natural habitats is likely more conducive for its survival. In keeping members of the public from littering or taking off-road vehicles onto semi-restricted land and reducing their levels of interference thanks to the launch operations, wildlife is more prone to flourishing as we see with Merritt Island National

Wildlife Refuge.

Thank you for your consideration.

- Stephen Montano

Subject: public comment for the draft PEA

As a member of the public, tax paying American citizen, I think the FAA needs to stop needlessly pestering SpaceX in their quest to better the human race by testing spaceflight vehicles in Boca Chica, Tx. SpaceX was making great strides, safely and environmentally, to this effect just up to last year. This is obviously a political stunt to limit what this great nation is capable of, to what ends I can only fathom as malfeasance. Leave SpaceX alone, the local community there in Boca Chica is more than capable of policing SpaceX in the advent of rule and code violations. Your push to slow down or stop SpaceX will only make them leave the country and continue flights from beyond the 12 mile border line in the ocean. Is that what you (the FAA) are after- to make them leave the country and develop the technologies someplace else? What good would that do- especially to our nation?

Sincerely,
Chris Sturm

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach

because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Gladys Bransford

It is of the utmost importance to allow SpaceX to progress with Starbase at boca chica because the future of humanity depends on it oh and we didn't even talk about the importance of starship and super heavy for the continued superiority of the US with regards to aggressive Chinese space militarism. This is another important point to consider I would say when wanting to hinder SpaceX because if you hinder SpaceX you basically allow China to continue its aggressive expansion unchecked in space one should also keep that in mind please so you decide what lesser evil will be a new gas pipeline through Texas or China dominating space and humanity being stuck on earth forever and probably going extinct yes this was a long episode but it was necessary one because the short sightedness of some people makes me really angry and also exaggerated Elon Musk hate makes me also angry. Sure you don't have to like him because he really behaves like a complete a-hole sometimes but you cannot deny his insanely important contributions to the advancement of human species if you cannot see this, well then you are lost. Sorry. So that's it from me today

To whom it may concern,

I am all in for allowing SpaceX being allowed to continue developing its Starbase complex and experimental launches of its Starship interplanetary rockets.

This is a no brainer for most American citizens since most of the funds to develop this project are coming from the private sector allowing more taxpayers resources to be used elsewhere like the EPA.

As a American citizen I believe having the premier experience in space exploration, colonization, and mining opportunities will keep us the world leader in cutting edge technology.

Subject: SpaceX Starship Project Comment

To whom it may concern,

I write in support of licensing SpaceX to conduct further testing operations and orbital flights from its testing facility in Boca Chica, TX without further environmental assessment.

I have been following SpaceX from afar so cannot comment on its local impacts, but I can comment on its universal ones.

Sometimes we must create a vision of ourselves that pulls us into the future and inspires us in order to better meet the challenges of today. This I think is the work of SpaceX and has been the work of space flight since the late 1950s.

The image of our earth surrounded by the blackness of space sent back by our first missions beyond low earth orbit inspired a collective consciousness that, I believe, is partly responsible for the environmental movement that picked up speed beginning in 1970. I believe the challenge of travelling to and inhabiting another world can similarly provide renewed inspiration for tackling the global issue of climate change.

While SpaceX will, in the end, only be a small part of that effort, it is currently at the vanguard of creating a launch system that can help us get there. In light of this role I believe the FAA should give SpaceX the green light while working with the company to mitigate any negative outcomes.

New roads can be built, species can be relocated, noise reduction systems can be put in place, but stopping or slowing the momentum of SpaceX's push could set back its inspirational goals indefinitely.

Thank you for your consideration,

Matthew Friedrichs, Esq.

Subject: Starship testing

I have been following the progress of the SpaceX Starship program. I believe it is very important for our country to have the kind of capability that Starship promises. It doesn't take a rocket scientist to understand what would be possible. There are many very important projects that need to be worked on. We need to clean up the space above us and help prevent the Kessler syndrome or we just might lock ourselves out from access to space for a very long time. We could put up huge science experiments, large telescopes, etc. The list is endless. I don't know of any other companies in the US that are pursuing fully reusable rockets. It is critical that we do not hinder the development of this program. I have heard that China is working on this also. We don't really know how far along they are or how many resources they will bring to bear in order to succeed. If we stifle the progress of SpaceX on this, we run the risk of falling far behind. It is a matter of national security that we allow this to go forward.

Please allow SpaceX to do this very important work!

Thank you,
David C. Elliott.

The SpaceX Starship/Super Heavy Program at Boca Chica is vastly important to science and to humanity's future. This program alone presents a pathway in the next few years to slingshot humanity into interplanetary colonization and travel.

Given that the negative possible impacts assessed are minimal (e.g.,

- air quality impact is minimal,
- noise impact will be below levels associated with adverse noise exposure,
- impact to cultural resources will be temporary and intermittent and will only impact some Section 4(f) properties,
- impact to water resources will be mitigated via Clean Water Act Section 404 permitting with U.S. Army Corps of Engineers,
- adverse effects to critical wildlife populations will be mitigated through consultation and USFWS' Biological Opinion,
- Land Use impacts are temporary and intermittent (and closures are not regulated by the FAA),
-

Subject: Comment on SpaceX public hearing on Draft Environment Assessment

To the FAA public hearing personnel:

I am emailing you to have this included in the documentation for the public hearing concerning the Draft Environment Assessment for SpaceX located in Boca Chica, Texas.

I am a retired environmental scientist having worked for the State of Kansas over 15 years as a water quality biologist and limnologist. I feel this qualifies me to comment on the environment assessment you are having public hearings on during the month of October.

I have written and studied a number of scientific papers and developed water quality policy for the state of Kansas. Having read and researched many aspects of what happens when adequate assessments are not done and then dealing with remediation that must be done to correct the incredible environmental damage done by much smaller entities than Space X, I can honestly say this draft assessment is littered with gaping holes and incorrect assumptions that should never be made in a scientific document. The collection of actual scientific data is not there, there are innuendos of safety protocols grossly inadequate to keep the public safe when – and I do mean WHEN – an explosion happens at this facility, and absolutely incorrect information regarding beach access and public and children safety that I am appalled would even be included in what is suppose to be a scientific document.

I am going to pick out a small section of this so called assessment to validate my points.

Section 3.10.5 Mitigation and Monitoring

1. The BMP's for soil erosion and sedimentation controls. Have any of you even been to this site? It is constructed on sand – that is right sand. This sand moves daily and depending on which way the wind is blowing determines how this sand moves. The impact of potential runoff is almost insurmountable and the water table in that area is basically on top of the ground. So any amount of runoff or discharge will get into the water table which will directly impact the ocean, tidal pools, estuaries, marshes, wetlands, and the Rio Grande river as well. SpaceX will not be able to contain this pollution of the groundwater or of the brackish waters that surround it as well.
2. This states that they are going to check for petroleum leaks from their machinery that they have during the construction of this facility. This plan should already be in place

and there should have been data available as to how many leaks have historically been found, how often, and the corrective actions taken. Where is that data?

3. Space X will ensure that discharged water associated with concrete mixing.... does not reach surrounding water bodies or pools. Again. This is something that should already been happening. So unless they build very large, lined pits to hold this contaminated water, this is not going to be acceptable to say that they will take care of the polluted water appropriately. And then what happens when a storm surge occurs. I have been at this facility. It is only a few hundred yards away from the actual beach. We have had multiple storm surges this year due to the hurricanes that haven't even been in our area. Surges that will inundate that area and those pits will not be sufficient to keep that water back. So what happens when an actual hurricane directly hits the Boca Chica beach? The facility will be obliterated and what will be left is pollution and contamination that will negatively impact this area for years.

4. SpaceX will contract a qualified biologist. There are 5 points under this subsection. One biologist cannot have the knowledge to assess all 5 of these points - hazardous waste (specialized field), Noxious and invasive weeds (again a specialized area to recognize the weeds/seeds), organic and inorganic litter and garbage (not a field biologist even study). And Hazardous waste – which I am sure there is a lot of – requires more of an engineering degree to know about containment and disposal must be done, construction for containment pits, etc.

Then we finally get to what a biologist would know about – avian breeding grounds, migratory patterns, and wildlife. Except that it has been reported that the biologist that do monitor the plover breeding and nesting grounds have not been able to access that beach due to highway closures. How can this qualified biologist do his or her job if the data cannot be collected and assessed in a scientific manner? And then reports be forwarded only on an annual basis to the USFWS. A lot can happen on this site in one year that would completely wipe out not only the endangered plovers, ocelots, falcons, but other species as well so reporting on an annual basis is clearly not frequent enough.

One last point that I found in this assessment is regarding beach access for the public in other areas beside Boca Chica. It specifically states that the public has FREE access to points on South Padre Island itself. I know for a fact that some of the access points mentioned charge a \$14.00 daily fee to enter that access.

With all this inaccuracies, inconsistencies, and lack of scientific data – I demand that a FULL Environment Impact Statement be conducted with actual scientific data collected and reported. An Environmental Assessment should not be riddled with assumptions and falsehoods as this Assessment is. For years a second causeway has been proposed for South Padre Island. That proposal must have a Full Environmental Impact Statement completed. Why should a facility that will do considerable more harm than the building of that causeway be given approval on such a faulty and incomplete report as this? I implore you to

not give this assessment a stamp of approval. Please make this proposed construction to enlarge this potentially dangerous facility follow the governmental regulations just as other businesses would have to do. And then make an impartial and unbiased decision before allowing Mr. Musk to complete this expansion.

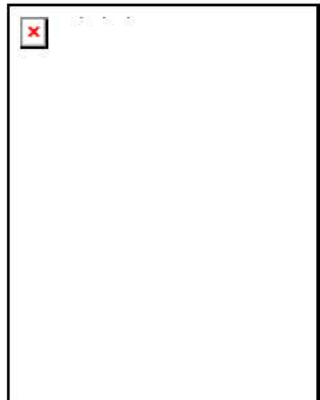

Respectfully submitted,

Sent: Monday, October 25, 2021 11:44 AM
To: SpaceXBocaChica
Subject: Comments for FAA concerning permission for orbital starship development and testing by Wesley Ashley from Odessa Texas

Nothing could be more harmful to life than allowing all life that we know exists in the universe to be wiped out by an extinction event when we had the opportunity to prevent it by expanding the habitat for that life to more than one planet. We have no idea when such may occur so best to expand urgently. Preservation of life on the species level must superced preserving individual living things just as preserving a world of life superced that of a species.

The only species on earth capable of driving this expansion is humanity and the only civilization among humanity with the level of respect for individual rights that would allow this mission to move forward from the vision of a man Elon Musk who came here with little more than a dream is the United states.

If enemies of the United states are allowed to copy and get ahead with the development of the technology that could make Musk's dream a reality its likely they won't use it for that purpose but to further their agenda of disrespecting individual human rights and hoarding resources and power to rule over the people.

Compared to what has been endured for many other activities to go forward the negative impact for life and the environment will be very small for the starship development and testing to go forward but its positive impact for life in the long run will be enormous.

Subject: Comments in Support of the SpaceX Draft Programmatic Environmental Assessment

To Whom It May Concern:

Having reviewed SpaceX's Draft Programmatic Environmental Assessment, I must say that there is nothing in the assessment that concerns or alarms me, especially considering that similar launch activities continue at other locations in the United States and, indeed, throughout the world. The biomes and habitats within the vicinity of these other operations have adapted and continued to flourish in spite of periodic launch activities. If we are to maintain our current leadership role in the world with regard to aerospace technologies, we must continue to move forward with all due haste and to stop hindering the progress that SpaceX is making in helping us maintain our lead. Please approve this assessment immediately and let SpaceX move us forward without further delay.

Sincerely,

Candace L. Davis

Subject: Comments on review

Hello

My name is will and I would like to state my opinion on SpaceX Starship system development at the Starbase site in Boca Chica.

I have heard and understand all the concerns about road closures and beach closures and how it's mildly aggravating to people. And I understand the concern with wildlife and the local ecosystem in the event of a RUD or any other possible mishap. But I also understand that launches that occur at the cape in Florida have this risk as well. Since the launch complex is surrounded by a wildlife refuge.

I am a strong supporter of Mr. Musk and SpaceX. I believe we need to allow SpaceX to deceive the Starship vehicle and booster. Since it will be the first 100% reusable launch system. Driving cost per ton to orbit. And allowing everyday people the chance to travel to space.

They will launch from the sea anyway. Starbase is there for R&D of the vehicle. Once they have perfected the starship they will launch from modified oil rigs. I'm sure everyone understands why SpaceX bought 2 oil rigs. They just need to be given the chance. SpaceX is a proven company with an outstanding record. They launch customer satellites into orbit. Our military sends payload to orbit on falcon and we send crew to the ISS on falcon.

The competition such as blue origin has no heavy lift rocket, no orbital class rockets, nothing. But they are allowed to launch from Texas no problem. Blue origin can't even deliver on the engines they were contracted by ULA to produce for the Vulcan rockets.

SpaceX has actual tangible progress. You can literally walk up to Starbase and right up on a starship. Elon is very transparent about what they SpaceX starship teams are doing.

In conclusion I want to convey my support for Elon and SpaceX. I want them to be given a fair shot at their starship. I see good things for humanity coming from starship. It has created jobs and given to the community.

Thank you for your time reading this and the opportunity you give for regular people like me to give input on this matter

Thank you
Will

Dear Sir/Madam

SpaceX is unique in that currently it is the only way we the USA can get our astronauts to the Space Station using American made rockets.

The Florida Cape Kennedy launch site is next to environmentally sensitive land and its presence acceptable.

Boca Chica Texas with even less area should also be acceptable.

History will record this process and we as a nation should not want to stifle SpaceX or worse yet force SpaceX to seek another nation for its launch site.

Lets speed up SpaceX and immediately grant it the permissions needed to create this new chapter in our space fairing nation's history.

Douglas Kennedy

Subject: concerning the draft environmental assessment for Starship

Comment:

I have several concerns about this assessment:

1. I think it must include the ways that SpaceX will use the growing, economic and intellectual capital of a Starbase establishment to improve the local Boca Chica and extended environment.
2. I think it must include the ways that existing measures, designs, and roadmap for plans for expansion will enhance environmental agendas for transportation internationally and interplanetarily.
3. My feeling is that SpaceX has taken the lead in caring for all aspects of the environment with its Starship program and Starbase development work and planning, and I would like to see it expedited, as well as to proceed unimpeded by regulatory obstacles. I think that this will increase SpaceX influence on practical ways to enhance all aspects of our human environment with heavy, technological industry.

Subject: Draft PEA Comment

SpaceX is raising the bar in commercial space development for the US. It is a critical priority, to re-establish USA pre-eminence in space technology and enjoy all the benefits these advances bring economically.

Its only been a short time since we were relying on the Russians to support the International Space Station with resupply and astronaut ferrying missions.

China has surpassed the US in many ways in this arena and would be beating us if not for the amazing advances made by SpaceX in the design and use of reusable rockets.

With all of the other failures and delays with NASA-funded initiatives for spaceflight it is absolutely imperative that SpaceX receive timely approvals for flight tests at the Boca Chica facility.

We need the commercial truck for space, the Starship, and we need it as soon as possible if we will have any hope of competing with the Chinese juggernaut in space.

Subject: Elon can go back to hell

Dear Federal Aviation Administration,

If you give that fake south African piece of [REDACTED] an inch hell steal the mile from under you. Keep Texas projects and American tax dollars in the hands of people who have a personal interest in seeing their home grow for the better, not to some half way communist who's entire goal with this is to set up his own totalitarian society on Mars. This message might not even be read by a person with a soul but if it is this isn't a warning its a cry for help. As a South Texan I know for a fact Texans and Mexicans need boca chica more than that egomaniac. Do the right thing -ABE

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Alex Estrada

Dear Sir or Madam,

Having been given an opportunity to respond to the environmental assessment you seek regarding the properties in Boca Chica (Spaceport) Texas, I hereby offer my point of view on the matter at hand.

First off, I do not claim to be an environmental specialist. Far from it. However, I don't imagine many people are. Next, I'm a retired federal employee that has seen so much waste over the years that I consider this effort to be worthless just to please those in government who line their pockets and seek to delay the chance of allowing Space X (Elon Musk) to pursue his dream for all that wish too travel to the Moon, Mars, and beyond.

Finally, I reside in Dayton, Ohio. You may have heard of a pair of brothers that were born, lived, and died here. They (Wright Bros.) opened airspace for all who dared to explore. I can only imagine what they would have accomplished if environmental and other governmental restraints were put on them.

Orville: "Wilbur, do you see what's happening in Boca Chica, Texas?"

Wilbur: "I do, but only if the government would mind their own business and keep their hands off of progress. Thank God we didn't have those concerns."

Sincerely, Kevin Unterborn (N8EBJ)

Subject: FAA - Draft Programmatic Environmental Assessment

As with NASA during the 60's and 70's, a focus on space exploration stimulates Americans (particularly young Americans) to pursue STEM careers and provides a source of pride and optimism. From my perspective, SpaceX has taken this baton and is running with it - largely at their expense and risk. Additionally, I'm in favor of their stated goal of creating a multi-planet human footprint. Boca Chica (SpaceX) has become a key element in all of this and should be expeditiously granted continued approval to pursue its plans.

Subject: FAA approval for SpaceX continued development

This is my comment for SpaceX to be allowed continued development at Boca Chica, TX. I believe it is in the national interest for Elon Musk to be allowed to proceed on his plans for Starship progress and development. Even as the Saturn/Apollo program brought technical innovation into the mainstream of humanity's everyday life, so will SpaceX development do so.

And compared to what wind turbines do on a 24/7/365 day a year basis to wildlife, the SpaceX effect on biosystems is negligible in my opinion. Every effort has been made to locate in an area with the LEAST impact on biosystems by SpaceX.

Please allow this important work to proceed with all haste.

Sincerely,
Stuart H. Ward

Subject: FAA flight approval

I would like to submit my support for the SpaceX site in Boca Chica Texas. I have lived in Texas for over 35 years and have spent much time down in Brownsville and Austin. I have made several trips down to Boca Chica, and from what I can see there are zero negative impacts from SpaceX operations. What I do see is improved roads, significant contributions to the local school systems; which desperately need the funding. I see construction near the site going off the hook. I see higher paying jobs and a lot more jobs than were ever there before. I see local people that are optimistic about their future and the future of this planet. I see local businesses growing. The work Elon is doing should have been done by the government, but the government wants to fund illegal immigration and car companies the support unionized labor, WTF. If the government really cared about the environment they would shut down all the oil rigs in the area that leak oil on a daily basis into the gulf. The FAA needs to get onboard with the tens of millions of people world wide who support SpaceX and their vision for a future that gives mankind a chance. Elon is the only person doing this in the world....Don't let your socialist bureaucratic agenda doom us to extinction. This is a very real and very necessary endeavor. Please allow SpaceX to continue their flight operations.

Subject: FAA public comment for the Draft PEA

FAA - Draft PEA concerning SpaceX and Starship Boca Chica development and testing :

I am writing from the UK, a 'has been' country that was once the home of great engineering innovators – Brunel, et al.

It is with enormous disappointment that I heard that the USA Aviation Authority (FAA) is intending to (what amounts to) delay and disrupt the development and testing regime of SpaceX's Starship rocket based at Boca Chica..

The challenge of "Making humanity a space-faring species" will presumably be taken up by China, with obscure consequences for the future expansion of the 'free world' - the social type of its planetary settlements, their aims and purposes.

It is an extremely rare chance that a practical-genius such as Elon Musk is born into a historical time and place that has reached a technological and social stage which can provide physical knowledge and techniques that are sufficient to stimulate perceptions of developments capable of expanding human performance-potentials and even of solving problems of human survival.

Musk has taken on all the most obvious major problems that presently face our civilisation and indeed our existence as a species. Via Tesla he is progressively transforming all modes of transport, and simultaneously modes of power generation, storage and distribution into 'near-zero-carbon' systems. His vehicle guidance software and hardware is a world leader in practical-use AI computing. His world-coverage satellite com-network is rapidly becoming the fastest and most complete of all such systems. His tunneling company is already relieving city traffic and his Neurolink will probably

succeed in reinstating body and nerve functions to many damaged humans. As to species survival he extols the settlement of Mars as a mitigation of the risk of an Earth war or asteroid impact.

This extraordinary individual has and will initiate more unforeseen and life-changing (and for many of his doubters 'impossible'!) improvements in more areas of tech and manufacture than any other recognised contemporary innovator. Outside his own country he is an international 'monument' of present potentials realised, an admired inventor and an astonishingly efficient organiser of our human future necessities.

However there are many in his home country who act as if he is a clumsy nuisance. Rather than an advertisement for American science, enterprise, foresight, and individual social freedoms, they believe he must be trammelled with the limitations and interminable dictats of bureaucratic officialdom.

It seems to me that the FAA has recently imposed such severe limits on orbital testing of SpaceX's Starship as to cripple the whole enterprise. They have made the NASA proposed Starship Moon visits and research base impossible to achieve in the proposed format and time scale, and have potentially pushed Musk's Mars-base ambitions so far into a hypothetical future as to exceed his probable lifetime! So much for the great country of America's famous nurture of individual abilities - its support for innovation, exploration, research and the values of knowledge.

Regards ...

D C-S

I think the faa should push this along as fast as they can, this has put a burr under the saddle of the space industry, there has been more going on with making rocket re usable.which to me makes more sense then leaving all that junk in space.

From: Anthony Costa <[REDACTED]>
Sent: Monday, October 25, 2021 5:25 PM
To: SpaceXBocaChica
Subject: Federal Aviation Administration (FAA)

Federal Aviation Administration (FAA) Solicitation of comments to FAA environmental study SpaceX permission to launch.

I Anthony Costa a citizen the United States is asking FAA to permit space X to launch test orbital superheavy and starship.

I have read the summary of the document of FAA environmental impact and ask the FAA to permit space X to launch and test their space vehicles. I did read the summary I see no reason why there is any environmental impact that would prohibit this test to be completed.

S.1

IntroductionThe Federal Aviation Administration (FAA) is evaluating Space Exploration Technologies Corporation's (SpaceX) Starship/Super Heavy program, in particular a proposal to operate the Starship/Super Heavy launch vehicle at its existing Boca Chica Launch Site in Cameron County, Texas (Figure S-1) and conduct launches originating from this site. SpaceX must obtain an experimental permit and/or a vehicle operator license from the FAA to operate the Starship/Super Heavy launch vehicle. Issuing an experimental permit or a vehicle operator license is considered a major federal action under the National Environmental Policy Act (NEPA) of 1969, as amended (42 United States Code 4321, et seq.), and the Council on Environmental Quality NEPA-implementing regulations (40 Code of Federal Regulations [CFR] Parts 1500–1508 [2020]) and requires an environmental review. The FAA is the lead federal agency for this environmental review. SpaceX plans to execute its Starship/Super Heavy program over the next several years and may require a number of new or modified experimental permits or vehicle operator licenses issued from the FAA in order to execute the program. Thus, the FAA has drafted a Programmatic Environmental Assessment (PEA), which evaluates the potential environmental impacts of the activities associated with SpaceX's Starship/Super Heavy program. The FAA is not licensing the entire Starship/Super Heavy program because SpaceX does not have the full details of all its planned operations at this time. The applicant, however, has provided the FAA with an initial mission profile that has been analyzed in this

PEA.A programmatic document is a type of general, broad NEPA review from which subsequent NEPA documents can be tiered, focusing on the issues specific to the subsequent actions. The use of a programmatic environmental impact statement (EIS) or EA, and subsequent preparation of a project specific EIS or EA, is referred to as "tiering" the environmental review. The FAA has recognized that a programmatic review and tiering may be appropriate "to sequence environmental documents from the early stage of a proposed action to a subsequent stage to help focus on issues that are ripe for decision and exclude from consideration issues not yet ripe or already decided."¹The completion of the environmental review process does not guarantee that the FAA will issue an experimental permit or vehicle operator license to SpaceX for Starship/Super Heavy launches at the launch site. SpaceX's license application must also meet FAA safety, risk, and financial responsibility requirements per 14 CFR Chapter III.**S.2 Purpose and Need**The purpose of SpaceX's proposal is to provide greater mission capability to the National Aeronautics and

Space Administration, Department of Defense, and commercial customers. SpaceX's activities would continue to fulfill U.S. expectation that space transportation costs are reduced to make continued exploration, development, and use of space more affordable. The Space Transportation section of the 1 See Paragraph 3-2, FAA Order 1050.1F, Environmental Impacts: Policies and Procedures. See also 40 CFR 1501.11 (2020).

Boca Chica is not really Ocelot territory, lack of prey and they can't compete with the coyote population. Ocelot's can't compete against domestic feral cats, and they have crossed bred before, making the gene pool undesirable by the scientific community. It's like 1000 to 1, no way a Ocelot can be there without it being lunch for a coyote. As for sea turtles, Boca Chica is not really a primal nesting ground. In my years working for sea turtle conservation, I have never seen a Kemp's Ridley nest in Boca Chica, I know there have been some reports of a Ridley nesting on Boca Chica beach, but without human intervention, the odds of hatchling survival rate is virtual 00.00001% in situ (or left in nature to take care of) . Boca Chica is the worst nesting grounds probably in the United States, not because of humans, but Kemp's Ridley sea turtle biology, i.e wrong beach, wrong nesting habitat, we intervene and take the nest out of Boca Chica, because it has no chance of survival. Not because of SpaceX.

I am not from Boca Chica, in fact, I'm not from the USA. But I, like many other people, follow the progress and development of Starbase. This is a very important moment for the near and mid future of commercial spaceflight and I think that the development of Starbase and the Starship program are the priority. In fact, that kind of activity could suppose an economical growth for the region. But thinking in the future, this can be much more than only that. Maybe in a couple of decades this place will be a cultural, scientific, engineering and economic reference. It will be probably the most popular place in the state of Texas. I know that there may be problems like the access to the beach by road or the damage to the wildlife of the area, but I think this project overcome all inconveniences.

Please let Starship fly. It's a revolutionary rocket, changing the way humanity sees the future. There really seem to be no real reason not to let it happen. At the age we live in, nothing is more important than trying to preserve the human intelligence in the universe, by expanding life to other planets. If the Starship program cannot go forward rapidly, this will most likely never happen and humanity will go extinct, sooner or later. Starship gives hope for a better future thousands of years from now. Space X seems to have all the necessary precautionary measures in place already for the first orbital Starship flight with no significant sacrifices for the surroundings, wildlife, nature etc.

Please expedite and facilitate the approvals of SpaceX plans for Starship and Superheavy. You can contribute to one of the most important and exciting achievements of humankind this century. Please focus on collaboration to mitigate problems without further delay, e.g. offsets to compensate for environmental impacts.

Dear Federal Aviation Administration As a person who is interested in space exploartion since my earliest days it is the biggest dream for a person such as me to be able to see an event as imporant to humanity as an orbital launch. Due to the huge misunderstanding between SpaceX and Blue Origin we finally see a person who delivers promised words. By tossing it aside for a short moment please let the people experience somethig they could tell their children for a long long time. Sincerely Filip

Hello! While I'm not a resident of the Boca Chica area or even the state of Texas, I feel moved to urge the FAA to grant SpaceX certification to proceed with its ongoing efforts to complete the construction of the Orbital Launch Site for its Starship vehicles and to test, launch and land these vehicles from its Boca Chica facilities. While steps should, of course, be taken to protect the local citizens, wildlife and environment from any harm, that should not come at the cost of preventing progress toward the goal of allowing mankind to reach the goal of living and working in space. Exploration has been the hallmark of advancement for the human race and this endeavor should be extended beyond our planet. The Boca Chica facility is a stepping stone to that end. It will be a source of economic opportunity for the surrounding community and a source of inspiration to the country and the world as the place where man began his journey to colonize the solar system. John A. Hammerland, Jr.

There are over 4 million miles of roadway that connect our cities, our homes, places of work and so on. Much of our land is covered by buildings, large cities, homes, stores, airports... Within all this land we take from nature most of it is for luxuries that we humans have become accustomed to. But we also take large areas and create parks and nature reserves. In the US there are more trees today than there were 100 years ago according to the FAO. Forest growth nationally has exceeded harvest since the 1940s. By 1997, forest growth exceeded harvest by 42 percent and the volume of forest growth was 380 percent greater than it had been in 1920. We are commenting on a barren land with no trees, no homes, no life. The sole purpose of this endeavor is to extend life on another planet. If there was a good reason to sacrifice a small barren piece of land, this is definitely one of them. I would grant SpaceX the authorization it needs to continue their operations with as little governing as possible because I see no other large scale effort of this kind anywhere else on this planet. The next SpaceX leader may be only worried about dollars and profit. Take advantage of this kind hearted man who cares nothing about profit while we are lucky enough to have his presence on earth. Give authorization, give it quickly and lessen governing on this operation while we have time. Thank you for listening.

Dear FAA I am here to Support the building of the orbital launch site and starship/Superheavy in the town Boca Chica also known as Starbase. I believe it is important to allow SpaceX to be granted the launch License to allow Starship to Launch and land at Starbase Boca Chica. Allowing SpaceX to build Starbase to it's fullest potential will make wonders. We need you to support SpaceX to make a difference. Bringing Starbase alive will bring many jobs to the Boca Chica and the surrounding area. Building starbase will become a local and national landmark for people to see and dream. People from all over the world will always know that Boca Chica is where starship/Superheavy were born, with that as well it will bring people and economy together. The next generation of kids, teenagers will look up to SpaceX as the company that made it to MARS AND BEYOND. Make the next generation excited about space travel and exploration. Myself included I am very excited to be part of the generation of the next milestone on the space race. Thank you Godspeed 🚀🚀🚀 Noah Psiharis

To Whom it May Concern, As a born and raised Texan, it is inspiring to see the work that SpaceX is not only doing for the state, but for the country. SpaceX's pioneering in reusable rocket technology is something to be proud of as a Texan, as well as an American. With how large the great State of Texas is, I don't see how we can't let SpaceX use a small slice of it to make a Gateway for the Future of Humanity. I hope that their request is approved so that Texas can become a Cornerstone for our Future in Space. I for one give their proposal two Texas-sized thumbs up! Thank you for your time, and may God Bless Texas. Best Regards, William Schwind

On July 20, 1969, an estimated 652 million people watched the live global broadcast of the Apollo 11 Moon landing. This audience constituted one fifth of the total population of the world at the time. The next space exploration events of this magnitude are set to launch from Boca Chica, Texas in the next few years. We remember 1492. We remember 1969. Historical dates of this significance await launches from Starbase, Texas. A tomorrow of “boldly going” is being built today. Concerns about noise and pollution and species displacement have been raised regarding the vicinity of Starbase. These same concerns were factors during the development of the Kennedy Space Center and the rocket launch facilities at Cape Canaveral. Far from becoming a nuisance or a blight, this region went on to become a global beacon of inspiration which has lit the fires of the dreams of generations. Its vicinity is a thriving wildlife refuge, with the stewardship of the Earth well maintained even as humanity’s arms reach for the stars. The Florida Space Coast is an international treasure. Starbase, Texas is already becoming the same. Inspiration-hungry people from around the nation and the world are visiting Boca Chica and getting their picture taken with the rockets. There are accounts of people from the poverty-stricken and politically tumultuous south side of the Rio Grande traveling to the riverbank to watch the test launches at Starbase from miles away. A world of cartels and desperation is getting a front row seat to one of the noblest endeavors in human history. Ambition and hope are being sown where before they seemed impossibly distant. When something magnificent is on the horizon, people awaken and may change the world. A rocket which can take me and you to the Moon and to Mars and beyond lifts far more than metal. It lifts destinies. That is a cause which should not wait – not when there is known and inspirational precedent in Florida which has already shown that the kinds of concerns which have been expressed about Starbase are easy to exaggerate in much the same way that fear is easier than courage. Years of delay for the sake of a more detailed environmental review will result in years of children whose perceptions of life’s possibilities will be cemented into something lesser than they could have been. “There will certainly be no lack of human pioneers when we have mastered the art of flight. Who would have thought that navigation across the vast ocean is less dangerous and quieter than in the narrow, threatening gulfs of the Adriatic, or the Baltic, or the British straits? Let us create vessels and sails adjusted to the heavenly ether, and there will be plenty of people unafraid of the empty wastes. In the meantime, we shall prepare, for the brave sky-travellers, maps of the celestial bodies – I shall do it for the moon, you Galileo, for Jupiter.” (A Letter from Johannes Kepler to Galileo Galilei, 1610 - <http://phl.upr.edu/library/notes/themaps>) Let’s sail the final ocean blue. Let’s take the steps and leaps. Let’s discover together a courageous future of new homes undreamt of. <https://vimeo.com/108650530>

Elon and SpaceX team are aspiring to achieve what has historically been deemed unachievable – full and rapidly reusable rockets. This in order to make life multiplanetary and subsequently “extend and preserve the light of consciousness to the stars”. Going orbital is a fundamental step in this direction. As mass extinction is a probable future event (Sir Isaac Newton predicted our inevitable demise here on earth in ~40 years) supporting accelerated SpaceX innovations by preventing regulatory roadblocks is essential to achieving these extraordinary and exciting goals. Please support their pending orbital mission. Thank you for hearing me/us. :) Sincerely, Tanis

The SpaceX Boca Chica complex represents one of the most exciting and promising developments for the spaceflight industry since the start of the space race a half century ago. In today's national security environment, and an ever-increasing dependence on space-based technologies for everyday life, it is important for the United States to maintain and protect its prominence in the international spaceflight community. It would be safe to say, that outside of SpaceX's own endeavors, much of the industry remains lacking, with advancement moving at slow pace. This is especially true in the realm of the civilian sector, where the future has been hamstrung by various internal and outside forces. SpaceX, and their relentless focus on iterative development and rapid development, seeks to push the envelope not just on the technology, but also in industry best practices. By not allowing SpaceX to continue its mission, we risk relinquishing our position in space to others, and at worse, to potential national security adversaries. Many other organizations and governments have seen the virtues and advantages of what SpaceX is trying to accomplish. They are beginning to push their own capabilities in that direction. If we are to maintain this unique position, we must ensure that progress be allowed to continue.

I am in strong support of the SpaceX operations at Boca Chica. The local community has benefited tremendously from the growth and interest in their community. If you look at Cape Canaveral, you can see that the space industry not only benefited the community, but supports a large wildlife area with diverse life that is protected and thriving. This is a model for Boca Chica. Elon Musk is all about the environment and preserving/improving it for our future. He certainly will work to balance the local environment with the need for advancement of Space exploration. We are in a new space race that should be led by someone who cares about the environment. Please allow SpaceX to continue leading the world in this endeavor.

Ms. Stacey Zee, Hello and good day. My comments below will express my opinion that SpaceX should receive approval for the requested suborbital and orbital launch operations. My background is that of a 20 year career as an Air Force missile launch crew member, a meteorologist, and a technical solar analyst. I also have 20+ years as a software developer and I.T. architect and also consider myself to be an environmentalist who supports space exploration as a high priority. COMMENTS: The location affords launch operations that produce less atmospheric pollution because less fuel is used when launching locations nearest the Equator. It is not possible to launch further south in the U.S. except for the southern tip of Florida's Everglades. I have visited the location several times and it is very compact and extremely remote. At different visits to the beach front I witnessed between zero people to a handful, and those were primarily incidental to driving the road adjacent to the launch site vs. beach enjoyment. In addition, the beach area is only useful for a short distance North due to the waterway into the bay and a short distance South due to encountering the Mexican border. To reach the SpaceX site and after driving for hours along semi-submerged land thriving with wetland wildlife, I viewed the launch complex as encompassing a vanishingly small percentage of the available habitat along the South Texas coast. As far as the town of Boca Chica, I could understand the case of offering compensation to residents that are disrupted by launches and traffic. I think that the SpaceX goal of making life interplanetary is worth the effort to accomodate concerned stakeholders without the need to halt the pace of space exploration. It is also interesting to note that the entirety of the SpaceX property is miniscule as compared to Cape Canaveral and Vandenberg AFB sites which I have spent time at. I do not know the precise acreage of each, other than to characterize them as enormous and have managed to achieve a balance with surrounding wildlife and communities for the greater good. Thanks for your time and patience, I tried to be brief. Regards, Paul Pinkerton [REDACTED]

Dear FAA, Since the beginning of time we've looked towards the cosmos. Our ancestors made out shapes in the stars and looked upon this forever black abyss as the edge of human understanding. As we advance as a race we see this cold dark expanse not as the curse binding us to this rock but an ocean of opportunity upon which we can sail to a greater future. Thanks to the advances of companies like SpaceX this future may soon become a reality. I strongly believe that as a private organization the government must oversee their conduct however I also believe that we are running out of time, and we must act quickly. SpaceX has shown I high level of responsibility and humility and their failures and success and a firmly believe that this starship program must be greenlit to continue, for earth and for the future of humanity. Sincerely, Owen S. Harrington

Bottom line: I support the SpaceX activities in Boca Chica, TX. Every infrastructure project has some impact to the local environment and the people who live nearby. It could be a road, dam, solar farm, or sewage treatment plant. "Space" infrastructure is no different in that regard. I read the environmental documentation, and between the documented plans and what I have seen them do over the past couple of years, I believe SpaceX is operating responsibly and respectfully while working hard to drastically reduce the price of accessing space. That alone makes the localized impact a small price to pay for the benefit to our country and even the world.

Starship and the work that is happening at Space x is revolutionary for space travel, not just that but the tech that is used their will run down to the ordinary average populous, all this coming from a guy in the North East of England. I'd love to work at space x (currently 15) and for me to hopefully go their would be great once I've passed my exams and the like. Their progress they're making is next level and we should assist in it wherever possible.

Good evening,, I do not know the chain of command of who decides of SpaceX will respond to China but USA may want to respond, ASAP. USA is already looking weak perhaps inept but that can change quickly. USA must exceeds the China Mission. Nasa/ SpaceX exceeds their capability? Well, it's time to show it. Yall ready?Approve the mission. Compete. Thanks Joy \$lade <https://twitter.com/scienceClub01/status/1452621231526760453?s=20>

All too often genuine innovation is stifled - all out of good intentions, but stifled none the less. We are on the precipice of a new era in space exploration and thanks to SpaceX a new level of commitment and commercialization. Now is the time to support, not hinder. Out of all the "space" companies, SpaceX is the clear leader in access to LEO and beyond. We should be supporting their growth and innovation, not holding them back. While the FAA has saved countless lives through the years through oversight and dedicated civil servants, now is the time to embrace change, and support domestic commercialization of access to space, and not bury it in red tape. I whole heartedly support SpaceX and their vision of Boca Chica as the first of many spaceports. Blue Beckham A concerned citizen

As an American citizen, it is my belief that economic, academic, and overall societal benefits of the SpaceX Starship program are far beyond the risks posed to the immediate area and its inhabitants. As they are on the very forefront of aerospace engineering, there may be regulations or standards that do not account for the scale and type of work that SpaceX is doing. Work should be done by the FAA alongside SpaceX to update and establish new policies that better suit modern space travel. I fully support the orbital test flight of Starship.

I think we are sitting at a decision point as to if we want to take space exploration (and humanity) to the next level. To do this requires an incredible amount of capital, people, research, IP, and land. I think that if we are to look across the entire United States, we would be hard-pressed to find a better location than Boca Chica balances safety with access to the resources (people, land, equipment/materials, transportation). I believe that transparency and oversight and paying for all externalities (including the environmental, population, transparency and oversight costs) should be born by SpaceX. But PLEASE do not slow them down. Agree to land swaps, require them to give FAA, FCC, EPA, OSHA, etc. access and accommodations, and whatever else is fair. But to put things that slow down and take years is not fair to society, humanity, or America.

SpaceX's Starship endeavor in Boca Chica amounts to nothing short of a Transcontinental Railroad of our time. It has the potential unlock new sectors of science and economy for the world and the United States in particular. Given these major benefits, I strongly support a timely permit for SpaceX test flights. As a professional ecologist, I also support implementing an extensive long-term environmental monitoring program in the area. In many ecosystems, detailed data over many years are required to disentangle specific human impacts from concurrent environmental events (e.g., droughts, heat waves). In sum, I believe a prompt test flight permit to SpaceX combined with an extensive environmental monitoring mandate would best benefit SpaceX, our economy, and the local environment.

I 100% support the SpaceX launch facility in Boca Chica, Texas. I find it hard to believe that we even have to have this conversation. Asking for input on an organization's goal of ensuring the long term survival of the human species seems completely irresponsible to me. There should be no question as to whether this should be allowed to proceed. They should have the 100% support of every person on this planet. When the flame of human consciousness goes out, it is gone forever. For a government entity to even question this goal calls into question what that government stands for in the first place. Do humanity a favor, step aside and let this proceed.

I am sending this email in support of allowing Space Exploration Company, LLC (SpaceX) to test their Starship and Starship booster orbital launch capabilities from Boca Chica, TX launch facilities. I do not believe negative environmental impact of this testing will offset the benefit to our nation. In fact, SpaceX has shown that they will take appropriate measures to minimize impact and restore environmental impacts. SpaceX has demonstrated they will be a good partner in protecting the local ecology while pressing forward with rapid development efforts to give the United States a distinct advantage in launch capabilities now and into the near future. Furthermore, the local economic benefits should not be understated. Many good paying jobs in technology and engineering have been created in an area where there were once very few, giving hope to an otherwise stagnant rural economy. With these jobs, a long train of supporting construction and services are developing around Starbase and spreading to the surrounding communities. Lastly, SpaceX goal of making our human civilization multi-planetary is not only prudent, but inspiring. The national, local and even global impact of allowing SpaceX to press forward into their testing regime now, really call for the swift approval of the license. Thank you.

I am in favor of allowing SpaceX to build and use its space port on the coast of Texas in spite of local environmental impacts due to construction as well as the environment impact due to rocket engine exhaust. In considering this issue I believe that it is important to take a longer term view of the net benefits to our nation, to humanity, and to the environment. There are significant positive implications for our quality of life and the environment that can derive from the expansion of commerce into space. SpaceX developments will greatly lower the cost of access to space, thereby opening realistic possibilities for a better environment on earth and, overall, a more assuredly safe future for humanity. Benefits of increased affordability of access to space: 1. Affordable solar energy production from orbiting solar farms instead of environmentally impactful earthbound solar and wind farms. 2. Reduction of mining and strip mining on earth. 3. Orbital manufacturing, enabled by space mining of natural resources, will alleviate some of the manufacturing burden on our environment. 4. A realistic planetary defense. An ability to protect earth from meteorite impacts. Regarding protection from meteorite impacts: The need to deflect meteorites, asteroids and comets is becoming clearer as we uncover the historical and prehistorical traces of such events. Even smaller, higher likelihood, impacts have a potential to cause enormous human misery over long periods of time as well as environmental devastation when they occur in our increasingly urbanized and sensitive environment. The seeming rarity of devastating impacts is not so relevant when one considers that a single impact could erase thousands or even tens of thousands of years of progress and environmental evolution in an instant. The harsh reality is that the scale of expected loss and human misery, and the long recovery times from such losses are a very relevant concern. Many have an unwarranted sense of security based on the notion that available rocket technology can save our planet by deflecting large objects. The reality is that we do not currently have the necessary technology to reliably detect or deflect such objects. The reason for this lack of ability is largely that the technological and commercial substrate does not exist to significantly support this capability. SpaceX and the technology that it is developing on the Texas coast are, far-and-away the leading contributors to the advancement of the necessary affordable space based capabilities. The development of the space port in Texas is key to this advancement. It is my hope that the FAA will take a longer term view of environmental impact of SpaceX developments and weigh such impacts against potential benefits for our environment and our future. There is risk in all of our endeavors because we do not know the future. Even so, as a somewhat educated person with an awareness of history and prehistory, and as a follower of commercial space development, I do not consider my speculations on these matters to be idle speculation regarding our future and the future of our environment. Thank you for listening and thank you for the thoughtfulness with which you perform your regulatory functions. Sincerely, Richard Pitre, PhD Physicist

As impressed with SpaceX's rapid advancement in rocketry I am also very disturbed at what consequences of putting ~400 metric tons of CO2 into the upper atmosphere each time a Super Heavy booster is launched. SpaceX plans to launch one of these massive CO2 generators three times a day at a time when we know CO2 is causing rapid climate destabilization. If SpaceX had chosen a propellant that wasn't so harmful to life on the planet like liquid hydrogen and oxygen I would be its biggest cheerleader but, I cannot get behind destroying our environment for any reason. Earth is the only habitable planet that we know of let alone we can reach. Please don't let a billionaire destroy its biosphere!

Dear FAA, As a high school student who is inspired by SpaceX to get into aerospace engineering, I fully support what SpaceX is doing. I believe that Boca Chica is the best construction and launch site for SpaceX's Starship and super heavy. I also believe that we should take some risks of environmental impact to get to space and to achieve the goals that will benefit the future of all of us. Therefore, I truly think that FAA should grant SpaceX the permission to keep the development of their Starship and Super Heavy booster in Boca Chica, Texas, and also give them the approval of orbital launch. This will not only advance the local economy by providing job opportunities, but also benefit the whole humanity by making humanity a multiplanetary species. Finally, I want to thank FAA for giving us the chance to comment our opinions, and we all have seen how much SpaceX has accomplished in the past few years, I can't wait to see the Starship orbital launch soon.

The FAA is acting in an overbearing and burdensome way in this matter. The environmental impact of SpaceX current efforts is reasonable. The government and all of it's cooperating bureaucracies that are descending upon SpaceX are creating massive cost increases and massive delays in a very important, productive and efficient endeavor. The impact of SpaceX's venture is minor by comparison to environmental impacts that the FAA allows for example with the big airlines just to name one. This is government overreach and big government and big bureaucracy. Stand down FAA! Stop hindering this very important project which is more than reasonable in the face of all other concerns under your jurisdiction. Act responsibly and remove these unjust and unreasonable barriers to progress!

I have reviewed the Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program. The document is thorough and shows that the plans in place are well thought-out and have mitigation steps in place. The benefits of continuing space travel and exploration far outweigh the negatives. All people on Earth are positively affected by discoveries made through the innovation and advancements made in science through this avenue. Many problems have been solved, technologies advanced, health outcomes improved, nations joined together and products created. The Starship/Super Heavy Launch Vehicle will be instrumental in reaching the moon, Mars and eventually further. SpaceX has inspiring leadership and drive to take the necessary steps to move our dreams and goals forward for humanity. Please accept the PEA and continue to allow SpaceX to further our understanding and innovate for an amazing future. Thank you, Jennifer Goudey Portland, Oregon US Citizen

Please authorize SpaceX to launch starship from Boca Chica. There is much deliberation about risks and ecological impact. Space flight is inherently risky and carbon producing. Facilities must be built which will impact the year ecological system. However SpaceX has seen results that no other company has before. It is vital for humanity and American national security for the United States to lead in aerospace technology. Please allow SpaceX to continue unhindered launches and tests. Please reduce oversight and the paperwork that they must do that slows development. Cut them free of the regulatory burden and allow unfettered development.

I am in full support of Space Explorations Technologies (SpaceX) operations with their Starship Superheavy program in Boca Chica (Starbase), Texas. SpaceX is trying to change the course of humanity by propelling us to be a multi planet species, and making space available for everyone, not just the rich. This is a difficult challenge to start with, and to have the FAA question if they are "environmentally ready" is just saddening. Humanities goals should not be restricted to such poor and inadequate guidelines. SpaceX has proven that they are a safe and reliable company, not just with there highly advanced technology, but with other organizations. The National Aeronautic Space Administration (NASA) has given SpaceX countless of contracts, with all of those missions succeeding. They have proven to not only be reliable but intelligent in there choices to launch humanity to another level. With this environmental review, many of these decisions and options SpaceX has utilized in the past should be taken accountable for. SpaceX has shown hope and interest for so many people. By declining SpaceX to launch the most powerful and brilliant piece of engineering in all of humanity, would be saddening to not just other organizations, but the fans that have followed SpaceX since day one.

I'm writing in support of the expanded SpaceX facility in Boca Chica Texas. Almost all human activities have an affect on the environment so it is important to keep the effects into perspective. It is estimated, for example, that 140 million mammals and 32.5 trillion insects are killed every year in the United States as roadkill (estimates from Wikipedia Raodkill article). You can argue that this activity is vital for our our modern extistence, and you would be right... in many cases (but whats the impact of non-essential driving). Americans also use north of 235 trillion gallons worth of water to water their lawns and 100 billion plastic bags each year among many other wasteful practices causing staggering amounts of environmental damage. How many acres of land are paved over (and wildlife displaced) each year to build more sprawling suberbs, malls and casino complexes. I'm fairly certain that the potential damage caused by the SpaceX facility in its entire existence would not come close to a single days (maybe even 1 hours) worth of damage caused by the reasons mentioned. It may be true that the site in Brownsville is environmentally sensitive in some ways. The problem is that any other suitable site for this facility inside the US will have this same, or similar issues. If not Brownsville then where? The space launch industry has been stuck in a quagmire for the last 50 years. SpaceX is the only organization that has made any significant progress in making space truely affordable and accessible. If not now then when? Never...

To whom it may concern, Since I was a little kid I always wanted to know why am I here on earth and how help can I how mankind. So finally just over four plus year ago I finally got my chance, my chance to answer that little kids dream. I got hire to work at SpaceX. I never felt so much joy and excitement towards a job before. And now it's almost been 5 years working at SpaceX. I can assure you its no easy task, only about 1% of the population can actually make it through the daily regiment here. Despite all of this I still have the passion and drive,joy,pride since day one. SpaceX have a massive goal set and with all our hard work endless efforts we can achieve this. But can't do it without the approval of the FAA. Our(little kid) mission is to help Mankind.

I have read the E.I. statement by SpaceX, and the projected impacts appear to be minimal to mitigable in each category being discussed. I do not know if EIS's have been required of civilian operators at the Cape Kennedy / Cape Canaveral launch site for the testing and flights of other companies' rockets on a regular basis or not, but Boca Chica appears to be a similar case, geographically and proximity to urban and suburban areas, for noise, pollution, congestion, and other impacts. Wildlife impacts should be seriously considered, of course, along with other changes to the natural resources areas of study. NASA has known of SpaceX's plans and timeline for some years now, and by deciding to limit SpaceX to so few operations in the crucial testing, launching and recovery phases will set back both SpaceX's aspiration to get safely to Mars, as well as NASA's and even the Space Force's plans for using this enormously capable and beautifully engineered, re-usable launch system. It has to be tested to destruction in order to advance the state of the art (which already surpasses that developed by all the legacy launch companies and consortiums in the USA. Without SpaceX's approach to iterative design, rapid prototyping at scale, and increasingly efficient production methodologies, we taxpayers will be forced to continue to underwrite the bloated schemes and pitifully slow approach, with continual cost overruns and failures to meet deadlines that we have enjoyed since the Apollo missions and even before. Please efficiently and carefully review the required EIS documentation and planning, and allow SpaceX to proceed at full speed. Please discourage those suppliers and manufacturers who continue to lodge bogus claims in lawsuits against SpaceX and even NASA and the GAO in order to cripple a superb competitor. Take SpaceX out of the equation and the USA is just another nation in the pack, and we won't be making the strides to regain and maintain our competitive spirit and expertise and original thinking in the world competition in space systems and projects. I am a former Air Force pilot from a military family background, with a degree in architecture from the U of TX, 1967. I have worked on a large number of acoustical and vibration surveys for the environment in my post-USAF career as an acoustical consultant, from which I am now retired. I care about flight, space, environmental insults and mitigations, and the future of our species. and other species too. Please convince us that neither our government nor its agencies are somehow trying to hobble SpaceX in order to give less determined, less creative companies and their lobbyists a leg up through delaying tactics of the legal variety. Mr. Musk may or may not be "popular", but he is a doggedly hard worker, a brilliant engineer and business strategist, and a dreamer. It is our job as a nation to nurture valuable leaders like this.

I am sending this email in support of allowing Space Exploration Comany, LLC (SpaceX) to test their Starship and Starship booster orbital launch capabilities from Boca Chica, TX launch facilities. I do not believe negative environmental impact of this testing will offset the benefit to our nation. In fact, SpaceX has shown that they will take appropriate measures to minimize impact and restore environmental impacts. SpaceX has demonstrated they will be a good partner in protecting the local ecology while pressing forward with rapid development efforts to give the United States a distinct advantage in launch capabilities now and into the near future. Furthermore, the local economic benefits should not be understated. Many good paying jobs in technology and engineering have been created in an area where there were once very few, giving hope to an otherwise stagnant rural economy. With these jobs, a long train of supporting construction and services are developing around Starbase and spreading to the surrounding communities. Lastly, SpaceX goal of making our human civilization multi-planetary is not only prudent, but inspiring. The national, local and even global impact of allowing SpaceX to press forward into their testing regime now, really call for the swift approval of the license. Thank you.

A comprehensive study of the environmental impact of launch operations at the SpaceX Boca Chica site will no doubt find some level of environmental risk for which remediation strategies may be required. I would like the FAA to consider that the larger goal of advancing human spaceflight, the commercialization of space, and the expansion of humanity beyond Earth is worth a temporary, intermediate, and transitory environmental risk that that endeavor might entail. Therefore, provided that SpaceX cooperates to implement remediation strategies within a reasonable timeline, that operations not be unduly delayed for now or during the period in which those strategies are implemented.

Space Exploration is a must for humanity. Even here, back on earth, its changed the way we see, explore, and navigate the world. SpaceX, and to a further extent, the US, has the opportunity to revolutionize that. Fully Reusable spacecraft will limit space debris, while also allowing for rapid transport on earth, and also in space. For environmental impacts, the perfect case study would be Cape Canaveral, Florida. While also a central hub for space, its a bustling wildlife refugee. KSC has most likely saved the Cape from development and commercialization. Boca Chica will be the same. As someone who has seen major development around where I live as well, I understand some residents' reluctance to accept SpaceX as a member, but SpaceX did purchase the land, and they have the right to develop it as they please. Also, it is a good distance away from any civilization. With SpaceX launching over the ocean, I don't see any impacts to the community. I support the Launch Permit.

I am in full support of Space Explorations Technologies (SpaceX) operations with their Starship Superheavy program in Boca Chica (Starbase), Texas. SpaceX is trying to change the course of humanity by propelling us to be a multi planet species, and making space available for everyone, not just the rich. This is a difficult challenge to start with, and to have the FAA question if they are "environmentally ready" is just saddening. Humanities goals should not be restricted to such poor and inadequate guidelines. SpaceX has proven that they are a safe and reliable company, not just with their highly advanced technology, but with other organizations. The National Aeronautic Space Administration (NASA) has given SpaceX countless contracts, with all of those missions succeeding. They have proven to not only be reliable but intelligent in their choices to launch humanity to another level. With this environmental review, many of these decisions and options SpaceX has utilized in the past should be taken accountable for. SpaceX has shown hope and interest for so many people. By declining SpaceX to launch the most powerful and brilliant piece of engineering in all of humanity, would be saddening to not just other organizations, but the fans that have followed SpaceX since day one.

I'm a climate scientist, and I firmly believe that going to Mars will be to climate change what indy racing is to the automotive industry. You've probably heard countless messages suggesting we tackle problems on Earth before aiming to go to Mars, however climate change is by far our most pressing problem, and figuring out the science around surviving on a planet whose atmosphere is nearly all CO2 will offer our children some very handy skills :) I'm very much in favour of SpaceX's testing and believe the risks of not testing are far greater than the risks of testing. Thanks for reading, I'm guessing you've had to read a few of these :) Vinnie

Dear FAA, This epic undertaking SpaceX is embarking on has given me hope for the future of our species. It's given my 10 year old son something to be in awe of and something to aspire to with wonder. When asked to do a presentation in school of an inspirational figure, he draw a cartoon picture of Elon with a Starship in the background shooting off to Mars. We need this to keep our optimism in life, to give us something to look forward to when getting out of bed, something to inspire awe and wonder on top of the everyday problems in our lives. Please approve SpaceX to continue their mission to Mars. This is a momentous point in history and we should keep the momentum going lest something obstacle prevent us from being successful. The FAA should approve the PEA for SpaceX's use of Boca Chica, TX because the project is to the benefit of the public and outweighs the minimal environmental impacts it will create. Using mitigation measures, these impacts can be reduced. But not allowing the PEA to move forward will not only harm America's cutting edge advantage in the worlds' space exploration development but reduce technological innovations that will benefit humankind in the near future. Sincerely, Anton Kozhevnikov

Boca Chica is providing a great location for rapid reusability test flights and moving the USA into the future as the sole provider of rapidly reusable, low cost, extreme payload to orbit capabilities. This site is unique because there isn't expensive infrastructure in place to possibly destroy in the event of a RUD. There also isn't other launches facilitating the shutdown and evacuation of the entire facility on a regular basis. I believe Boca Chica Starbase is vital to the advancement of the rapidly reusable high payload to orbit vehicles in the USA and will put us on a trajectory to become leaders in space once again. Thank you for your consideration, Brandon Beausoleil

It took about 60 years to go from the Wright Brothers to “One small step”. Since then, another 60 years has passed and we’ve sat around on our arses in LEO. I believe Starship can and will achieve exploration beyond the grip of Earth’s gravity well. It would be foolish to delay any further. From what I understand the effects on the local environment are negligible and the effects on the local community are nothing but positive. -Someone who wants to see the first human set foot on Mars

Dear FAA, I am writing this email in support of the orbital launches of Starship and would like the FAA to grant SpaceX a launch license for several reasons. Starship can help bring people to the stars and make humanity a Multi-planetary species. We learned an incredible amount from the first flights in the air, and it changed our world for the better. Imagine what commercial spaceflight could do for us. Additionally, this would create a massive boom in the economy with the raw resources in asteroids and the commercial aspect of space travel. Finally, as an engineer and a student, spaced has inspired me more than any other company. Their philosophy of rapidly failing leads to rapidly succeeding has taught me a lot about engineering. Overall, these things are incredible on paper, but we have to take some risk if we want to get there. What would the wright brothers say about this decision?

Even though I am not a USA citizen, as a person that lives in a poor third world country, I must say all the technological progress has come from visionary billionaires such as Elon Musk. They build the future, preventing or causing them any delay is a delay for the whole mankind's future and progress. There will always be challenges and issues to solve, and Elon has clearly shown that he is available in Twitter and that if something is important enough he will see it and he will do something about it. The reasons for humankind going to space are beyond just a space race that we had before. Going to the Moon and Mars is beyond simply sending a few astronauts there. It's beyond simply having a few space tourists. Elon has shown the world the proof of concept of the Starship and his ambitions are beneficial for mankind as a whole because it goes far beyond sending a few people but hundreds and eventually millions of people to space. China may be the newer contendat in the space race, and it would not be good if they gained any advantage on USA. Besides if there's still any doubt that this will benefit mankind I think about it this way: Once not too long ago there was the American dream. But now it seems it has run dry, as the life cost has become way too high and with the 2008 crisis has made the cost of owning a house way too high. Space is the new American dream! Or better said, a dream for the whole world! A dream that allows people to build new realities! Just seeing how great Tesla has become and all thanks to Elon dreaming big! Elon is the same force that drives this dream to terraform Mars (even if that's a project way too huge and daunting, he has already thought of ways of making it happen!) The benefits for mankind start from asteroid mining to actually having colonies in the Moon, Mars and orbital O'Neill cylinder colonies. We live in a planet with limited resources, but we are in a universe that could give us plenty of resources, if we could manage to do something about it. Here is a chance, a man that has built a way to do it, allowing this chance for mankind to be lost would be terrible! But at least not getting in his way would be reasonable. Please see all this, and consider, the weight of what is happening is almost like a cosmic event , an event of interplanetary implications! The first humans on Mars, the first space colonies! All the knoweledge and scientific experiments that have been bringing benefit to humankind in the space exploration or from merely having astronauts at the ISS making experiments, they have had these ideas in mind! Do we want to dissappoint them? Do we want humankind's work to be ultimately in vain if we end up extinguished in this planet? I dare say NO! We must do something!

The Boca Chica launches must go ahead without delay. America's space prowess is tied to SpaceX as the leading space innovator in the country and only launch provider who continues to deliver again and again. To delay in any way would be to shoot ourselves in the foot and put the US behind other countries in space exploration and getting large payloads to orbit. There are always trade offs but the benefits here far outweigh any potential risks.

I'm writing this e-mail in support of orbital launches of Starship and it would be awesome if the FAA granted SpaceX the necessary launch licenses. SpaceX is a groundbreaking company that inspire people all around the globe to be interested in science and technology, provides jobs and help local economy, and will help humanity become a multi-planetary species and that's is incredible.

Starship/Superbooster is a system that will be carbon neutral within 5 years. Making fuel by carbon capture and Photovoltaic. $H_2O + CO_2 = CH_4 + O_2$. Flight path takes SS and SB over the Gulf of Mexico, between Florida and Cuba, east over the Atlantic. Do not be fooled by groups funded by Space X competitors, Russia, China and the European union through soft money portals. Stop these tests it is a lot more than a plan to colonize Mars. Scenario. Orbit attained by early 2022. Lunar free return mission 2023. Deploys a Lunar Lander made from Falcon 9 parts. Lunar landings 2024. Late 2024. Puts down 50 tons of assets. Cost per mission: \$75 million. Declines to \$40 million per by 2025. Lunar base start construction 2025. 20+ flights. By 2028 base is operating. 1,000 tons supplies landed. Starship Lunar able to return to Lunar orbit to transfer crew. Lunar base operates with 3000 Tesla and Boston Dynamics robots. First Lunar built CANDU reactor operational by 2028. First Lunar HARP Lunar Orbital Cargo system complete 2028. 2028-32. Lunar base reaches 200 personnel and 25,000 robots largely used for mining asteroid fragments and base expansion. HARP by 2032 now able to lift more than 2 million tons of metals and water to lunar orbit annually. Mars landing 2028. Manned 2030. Also to Deimos and Phobos. Mining of Mars moons begins 2032. 2032 -35. Biggest expansion in human history begins. Lunar base with only 0.5% of assets from Earth builds the first large interplanetary ship. Massing 650,000 tons. Nuclear reactors from moon. Solar secondary. Magnetic and NEXT propulsion. Habitat for 200+ crew of 42 acres. Total Delta V 54 Miles Per Second. Ship aero- brakes for Mars and Earth orbital injection. Able to carry 50,000 tons of supplies to Mars and beyond. 100,000 robots, massing just 750 tons do most tasks building the ship. 2035-40. Moon, Deimos, Phobos, Mars and least Earth operations build out the first O'Neill colony. Paid for by real estate sales. First has 25,000 residents and crew. This ship leaves Mars orbit in 2041 to tour several asteroids, Jupiter and Saturn. It establishes several mining operations and a base on Titan (2046). -First large O'Neill colony 2048. Up to a million robots assist building it. 2 million inhabitants. This is the progression environmental groups are attempting to stop. If Texas is halted Musk will move. Too much at stake

Please pay attention to the positive, proactive part of your role as a regulator and oversight agency. Practical access to space for many reasons is as important as any other thread in the development and sustainability of our culture, including climate change, green power, agriculture, and AI. Our ability to succeed in any of these areas is connected to all the others. Your job is not only to make sure SpaceX's unprecedented efforts are conducted safely and responsibly, but to help show the way. How can you add your expertise and capabilities to accelerate and improve what they're doing? Creating a useful and mission-oriented regulatory model and helping develop business processes to meet them is a major part of the overall program that we need. Don't slow things down ... make them go, better.

The United States needs to prioritize its orbital developments, which in part requires more launch sites. Existing launch sites are good for current imposed demands, but over the coming years and decades, more launch capability will be desperately needed. SpaceX's Boca Chica launch site not only will allow them to rapidly develop and fly their new rocket but will also serve as a stepping stone for US expansion and exploration of space. We must accept some compromises and authorize the proposed Boca Chica site as soon as possible. Sincerely, Riley P.

I think that for the future colonization of Mars some sacrifices must be made and in Boca Chica they have to be made. I know that for the environmental impact such as road closures it is not the greatest benefit that they can get but see the fruit that SpaceX is making with the Starship / Superheavy project is the most ambitious in history that will help to know and discover things that from the era Apollo missions have not been seen and led to deaths and even almost losing a crew but that is the risk that we can see if we want to become an interplanetary species, it seems to me that SpaceX should launch its project from the Boca Chica area more well known Starbase would be the city of stars where tourists can go, children with ambition to know the rockets that can touch Mars and more.

I have been a space enthusiast who came of age in India just as the Apollo program matured around the time of Apollo 8. The wonder of reading about the astronauts exploits weekly through Time and Newsweek at a friend's house still evokes a lot of memories of wonderment about the can-do spirit of the U.S.. There was a lot of debate about how manned space exploration should continue after Apollo and after much debate, the Space Shuttle program was chosen. But I remember there was a lot of debate about whether that was the right choice. Some like von Braun were disappointed that Apollo was abruptly cancelled saying that it was like laying the railroad to the West Coast and ripping it up after it was done. While that may seem dramatic (the Apollo program was too specialized for the moon landings for it to be adapted to other needs), the gist of the argument of building out infrastructure for a sustained human presence in space never went away. While the Space Shuttle achieved some important milestones, it failed on it's fundamental promise of rapid, reliable and cheap access to space that would have achieved the goal. Each mission cost close to a billion dollars and was reduced to a few a year instead of the bi-monthly launched that were promised. Starship is a new attempt at making good on that promise and as a lifelong space enthusiast, I believe SpaceX is doing the right things that will make it a success. It is rapidly prototyping vehicles to test and weed out what could go wrong, building the infrastructure for rapid turnaround times and is promising to build a large fleet of vehicles for routine access to space. Of course, it's impact on society at large and the local community in particular has to be taken into account but, by and large, I consider the Starship program to be important enough not only to the U.S. but also the planet that it's activities not be too constrained by traditional rules and be allowed to continue. Thank you.

Laws exist to enforce positive cooperation. But the application of laws needs to be done in a sensible way. SpaceX's rocketship development is critically important to the future of our country. Just as exceptions are made constantly for Boeing to develop and build its planes without regard for the damage to the environment that it causes. Or how the military is able to build and test weapon systems that damage and destroy the environment. Our country is lucky to have SpaceX here, and the environmental impact they have compared to the aforementioned groups is trivial. We risk not just the future of space exploration, but also a tragic Brain Drain event if we foolishly inhibit SpaceX. Any environmental impact assessment made, must take into account the long term; that our population will continue to grow until we have destroyed our planet. If we inhibit SpaceX instead of helping them, any animals we save today will still be dead tomorrow.

From me, my company, and my family living in Florida near Cape Canaveral, we fully support SpaceX and that they be allowed to move forward without any delays SpaceX's Starship program in Bocas Chica is not only important to science, to our country's future, to our security, but to all humanity. Their work ensures the future of humanity that one day life may be able to extend beyond our planet. I grew up living next to the space shuttle program, and now as an adult through the Falcon 9 program. It has been incredibly inspiring to see humans reach for the stars. I've frequented the nearby beaches, hiked nearby trails, and have had many interactions with nearby wildlife. I have no doubt, when I see beautiful parks like Playalinda Beach so close to NASA for so many years, that the environmental impact is very minimal. What SpaceX is doing is arguably one of the most noble endeavors ever to happen in private industry and I believe we need to come together as a community to support them. We need to do this for the future of humanity and for all life on this planet. Sincerely Nathan M Shortt

SpaceX is the only one that gets us ahead of China's space program. NASA has way to many restraints and politics. NASA has great minds working for us but RED TAPE slows progress to a crawl. The Wright brothers figured that out.

Fully support what SpaceX is doing. Whole mankind must stand by their mission. Otherwise, when bad times come (and they will come eventually), we will have no answers to our future generations. Honestly, it's not SpaceX who should be begging government(s) to take humans to other planets. It's the Government(s) to be begging private investors and private companies to do that, creating all thinkable motivations for them to invest in mankind becoming a Level 1 civilization. This the 2nd most important thing after the climate change issue. Way ahead of religion, which governments incentivize massively, way ahead of healthcare, financial stability, military agenda and so on. Time has come for all of us when we either Grow Up as species or we will be definitely extinct in 1,000 years from now.

It essential that engineering momentum and value added efficiencies are not comprised at SpaceX's Boca Chica site. If we hope to advance the USA's role in space exploration and not be left behind, we must allow for SpaceX to continue their work. From an environmentalist that views broadly the enormous gains from Boca Chica space flight, please provide launch access to SpaceX. Best regards,

Well I think you're stupid. I think you brainwash kids in end times programming by 1980 and hire brainwashed kids who can't break computers to know you're all lying too. And then you stalk them. Take for instance Elon musk. I shouldn't know of him. And if I did well hell my math space ship [REDACTED] all file says he can beg me for my rocket Intel. Not the other way around. So you stalk people and give kids fake endtimes psyops about Mars. In fact you knew as a kid I said that the math be off and there be no issue traveling around yet you decided to try and black op torture me ban me and aw hell you locked me in a room held your costs up and screamed when four years of every torture and memory op erasing tool you had failed. Then you said paint or die and we kill your family too. Then you chased me expected a reaction and make it out like I'm supposed to chase the dumb guys for a bone. Are you a fool. Here's your Mars rocket [REDACTED] report. My life is worth more then all of you. I don't see any investments NASA. I see some psychos thinking I'm weak or to be used for all your brainwashed programs. Like your [REDACTED] war and math. Like banning me from computers as a child. Like ruining my life. Hey I'm great at science. [REDACTED] off you don't appreciate my worth do you. Not even for basic benefits I'm owed. Not even for national security kindness. Get your [REDACTED] level stuff off my computer then. Here's your rocket science. I don't need to know you since I was banned from knowing you and if you ever wanted to know me I have the funding I'm owed you never earned. True huh. Who out there thinks I chase idiots who failed basic computer class. Who thinks you can ban me and then chase me like I'm some [REDACTED] to worship and beg you. You got the wrong class buddy. Here's your advice. You banned me and I have no rocket contract. In fact you left me to starve hoping for some bullshit war reaction. I had the abilities. I didn't get funded. Don't in hell's name think I need to follow you.

Dear FAA, I am writing to urge you to approve SpaceX's request for a suborbital launch of Starship as soon as possible. The work SpaceX is doing is of paramount importance to humanity's future. This launch and all of SpaceX's endeavors are being closely watched by millions of people all over the world, including, importantly, young people. SpaceX is inspiring people of all ages during these difficult times, and giving new generations hope for a brighter future. Further, the world is watching this American company lead the way in the grandest of human endeavors—space exploration. I hope and expect the US to support SpaceX fully, because it is the right thing to do. Thank you, Kat Paterno

Dear ladies and gentlemen, I am writing you in support of the SpaceX plans to build and launch reusable rockets in Boca Chica. I am from Germany, and like milion others I follow the progress with great interest. This project is one that trully unites the world in a single peaceful goal. It inspires me and my children. We are looking forward to a future that we only knew from science fiction. The goal of humanity should not be to promote separation, nationalism and war. This project is a true gem thats has the potential to bring the world together like the Apollo program did for my grandparents. I know that a project of this scale does not come without a cost. I hope the FAA will continue to find solutions to all problems connected to the starship program. Thanks for your great work. Greetings from germany.

El proyecto Starship es un proyecto demasiado importante para la humanidad y en este momento de auge dónde las tecnologías avanzan a pasos tan agigantados es muy contraproducente detener el proyecto estando tan cerca de un avance tan importante para todo el planeta. Es cierto que hay efectos negativos, pero en comparación de todo lo provechoso que es este proyecto para nosotros como humanidad los beneficios superan con creces los efectos negativos. Apoyemos el futuro, apoyemos el desarrollo y sobretodo apoyemos el avance de la exploración espacial.

Translation: The Starship project is too important a project for humanity and at this time of boom where technologies are advancing by such leaps and bounds, it is very counterproductive to stop the project being so close to such an important advance for the entire planet. It is true that there are negative effects, but compared to how profitable this project is for us as humanity, the benefits far outweigh the negative effects. Let's support the future, let's support development and above all let's support the progress of space exploration.

Dear FAA, I'm Mario Gonzalez Brownsville resident: 7220 Lago Viejo Blvd. Brownsville, TX 78520 In regards to the Environmental Assessment for SpaceX operations of Starship I like to give my personal opinion: Highway 4 closures don't affect me at all since we, the citizens of Brownsville have two beach options. 1) South Padre Island less than 30 miles away, it has services like parking, restrooms, showers to get rid of the salt from ocean water, restaurants, water park hotels and bars. 2) Boca Chica Beach about 26 miles away without any services, yes I've been there, if highway 4 is closed I have South Padre Island beach to go to. Noise no a problem: I was at South Padre Island and heard the rumble of SN9 and SN 11, it wasn't a big deal at all, I lived for 30 years in Reseda Ca. right under the path for Burbank Airport and downwind for runway 16 of Van Nuys Airport, should we close the airports because of constant noise? SpaceX will never launch every 30 minutes Wild life won't be affected more than Kennedy Space Center does. SpaceX is brings advancement to South Texas, more jobs, more opportunities for our young generation, our city officials are thinking and planning ahead thinking SpaceX is and will be part of this area, I'm definitely in favor of progress not status quo. Mario Gonzalez [REDACTED]

It is obvious that most of the community supports the SpaceX mission. The community and SpaceX have been, (and I expect will continue) working cooperatively for the benefit of both. The tests and launches are not so frequent that they disrupt the local habitat. The few explosions have had very little to no impact on the local habitat. Any litter that might accumulate can easily be corrected. SpaceX can direct their employees to not litter. The SpaceX community can work to counter inconsiderate tourists' messes. The lessons learned and to be learned continue to accelerate the development space technologies for our nation. There has not been any reason to justify delaying this mission. Please support the use of Boca Chica for the development of the Starship rocket.

The SpaceX project in Boca Chica is amazing to see and could usher in a new era of human space exploration as it represents the potential of a 3 orders of magnitude (~1000X) reduction in orbital launch cost. Effectively that would open up space and the solar system to humanity. The potential long term environmental advantages for our species from new technologies to new locations of factories and mines in space instead of on our delicate earth ecosystem are profound and, in my opinion, far outweigh the minor impact of debris, etc. to the species in the wetlands immediately around the launch site. The whole earth and all of it's species could be helped in myriad ways if humanity truly does become a spacefaring civilization. This is a great opportunity for the government to act in a thoughtful manner and allow SpaceX to launch orbital Superheavy/Starships with regularity from Boca Chica.

I support SpaceX plans in Boca Chica/Brownsville, TX around Space Village. I believe SpaceX adequately addresses environmental impact mitigation and coordination with locals regarding traffic control and noise. To hamper the construction of the gateway to Mars will significantly impact our nation's relevance in international discussions and the final frontier as a whole. Please allow SpaceX to continue their testing of the next generation of space vehicles. My entire family supports their cause. Thank you on the behalf of Americans and humanity.

I totally support the FAA carefully vetting the environmental and climate impact of SpaceX's development. I am concerned about doecies protection and also about greenhouse gas emissions. I feel it's very important to both support a US tech company that's making important advances, AND to stand up for the country's environment. Mr. Musk is very effective with publicity stunts and social media; but the FAA needs to stick to it's mission and not be cowed. Thank you

Successful testing and deployment of the SpaceX starship would be one of the most significant achievements in space technology in my lifetime. I believe it will be a major accomplishment for the future of humankind. However, it is necessary that SpaceX be allowed to pursue this technology without delay so that the risk of losing momentum doesn't increase and the loss of the initiative overall become a reality.

Dear FAA, I am writing in support of SpaceX Starship orbital launches in Boca Chica, TX, and ask that the FAA grant SpaceX a FONSI or Mitigated FONSI with regards to the published PEA. I have a unique perspective on this matter as a South African citizen. I can clearly see increasing Chinese investment in my country, a symbol of China's increasingly global ambitions. I can say with absolute certainty that SpaceX's plans are crucial if the US wants to maintain an advantage in spaceflight. Impede their progress, and in 10 years the US will be left behind as a global power as China pursues interplanetary goals. I am planning on moving to the US and offering my talent as an Aerospace Engineer, purely due to the success of SpaceX in your country. SpaceX attracts and interests the best talent in the world with their progress, and impeding this progress would be stifling the exact attraction of talent that founded your country and propelled it to new heights. Lastly, I am planning on traveling to Boca Chica, TX, in the near future. I am planning this because of SpaceX. I can not understate the economic benefit of this development on the local economy, purely from the increased tourism caused by SpaceX. Best regards, Tian Cilliers

As with NASA during the 60's and 70's, a focus on space exploration stimulates Americans (particularly young Americans) to pursue STEM careers and provides a source of pride and optimism. From my perspective, SpaceX has taken this baton and is running with it - largely at their expense and risk. Additionally, I'm in favor of their stated goal of creating a multi-planet human footprint. Boca Chica (SpaceX) has become a key element in all of this and should be expeditiously granted continued approval to pursue its plans.

Hello. Unfortunately am not a 'local' to Boca Chica geographically, however, I am in full support SpaceX and their valiant mission to extend the light of consciousness beyond earth, and the unknowable environmental, technological, & manufacturing advances that may arise from such an endeavour. With gratitude I watch live coverage of the progress every day without fail, and as such this has been a beacon of hope for myself and my friends over the last several years. Has there ever been a more noble cause for joining together the minds of our greatest engineers and inspiring our next generation(s) of talented individuals?(rhetorical). If any corporation were capable of doing such a task in a manner that will protect the local environment, I'm sure SpaceX would be that corporation. Yours faithfully, James Murphy

I'm from Canada, and the work SpaceX puts in at Starbase effects me daily. SpaceX has been a true inspiration to me for years, and now with the Starship development, I couldn't be more excited for this very near future they are bringing. What they are doing is for all humanity, I believe that's something incredibly special. Before SpaceX came to Texas, I had never even heard of Boca Chica, now it's all I talk about. Many of my dream jobs are now located at Starbase. I believe Starbase And starship development should be allowed to continue In preparation for the Orbital flight test. Thank you.

Would like to put forward my full support for Elon musk and the starship programme down in boca chica. I feel the importance of the mission SpaceX is trying to achieve in making life multi planetary far outweighs the small environmental impact of the program. Everything humans do has an environmental impact so I feel SpaceX should not be punished for this. I also believe the defence of the USA will be sacrificed without starship being used for the launch of military satellites. Only starship is capable of taking huge amounts of cargo for such a low price. Also on a personal note the starship programme is extremely important to me and not a day goes by where I am not thinking and excited about starship and the opportunities it can bring for human kind. We are explorers so please don't hold us back. Thank you.

To the men and women of the FAA, Elon and SpaceX are modern pioneers of the final frontier: Space. Since the space race, and for most of the time since the Apollo missions, we haven't chased the stars as much as I think we should. We stopped dreaming and became gridlocked in this cesspool of human dreams colliding with nightmare. We stopped discovering things down here as soon as we stopped looking for them up there. If we are to save the planet and have peace, we must have the drive and desire to one day leave the planet in peace. Mr Musk should be allowed this time and section of airspace to launch, if we are to dream any further. Yours Truly, Hayden

To whom it may concern, I don't have much to add to the points people mentioned in the public hearings a few days ago, however space exploration is the holy grail of technology and inspires many of us - It is no wonder that Science Fiction movies gained popularity over the last few years, a new age is upon us and the time is now to extend consciousness beyond earth orbit. To accomplish this, Rapidly Reusable Heavy Lift Rockets are required - the very ones SpaceX is developing and building in Texas. The footprint of Starbase is small, however if it all works out the payoff will be gigantic and benefit Humanity more than any law passed concerning the environment. Thanks for your time & Have a great day Ferdi

To whoever reading this: I just want to add to the narrative that people from all around the world fully support SpaceX' ambitions in space. I would love to see any problems that might come up in the final Environmental Assessment be mitigated WITHOUT causing any unnecessary delays to the program. Greetings from Belgium, have a nice day Arno De Pauw

Hello, I'm Ryan Hanson, a 17 year old senior at Appleton East High School. If everything is properly in order and properly prepared, please approve SpaceX for their orbital launch. I believe SpaceX is going to be a huge part of the space front and going to be extremely valuable to the U.S. in the future in so many ways. I dream of working for them one day and am so excited to watch them continue to innovate. Thank you! Yours Truly, Ryan Hanson

Spein. Es una lástima que le pongáis tantas trabas al progreso, vale que la contaminación es un problema que nos afecta a todos, pero estamos hablando de SpaceX la empresa del CEO de Tesla, no hay nadie mas concienciado con el medio ambiente que él, en el futuro podéis ser recordados por quienes hicieron que el hombre llegase a marte una década mas tarde... o puede que no... de vosotros depende. Está claro que todo lo que hacéis tiene un sentido y que nadie sabe hacer vuestro trabajo mejor que vosotros mismos, pero los ciudadanos tenemos que luchar por el progreso, al igual que vosotros por lo que lucháis.

Translation: Spain. It is a pity that you put so many obstacles to progress, it is true that pollution is a problem that affects us all, but we are talking about SpaceX, the company of Tesla's CEO, there is no one more aware of the environment than him, in the future you can be remembered by those who made man reach mars a decade later... or maybe not... it depends on you. It is clear that everything you do makes sense and that no one knows how to do your job better than you, but we citizens have to fight for progress, just like what you fight for.

i support the engineering and technological development from space exploration inc. specifically right now in south texas. the world needs this class of innovation and must be open to trade-offs in terms of pressures on the environment and local disruption and displacement of neighborhoods. longer term, these operations will be conducted off shore, but development today is essential. this is also a matter of national security.

Good afternoon to all the FAA authorities, my name is Jonathan Roberts, 21 years old from Argentina. I apologize for my level of English, I am writing this with the help of a translator. First of all, I appreciate the opportunity that people from all over the world can contribute to this review, given that SpaceX's scope is global and its mission to become a multiplanetary species encompasses us all, with more or less responsibilities, which we cannot deny is humanity's need to go one step beyond where we are. In recent years, advances in aerospace have stalled and we must emphasize that SpaceX has had the energy it takes to revive the industry and motivate future generations with space flight, mainly with the Starship program. At this point I want to emphasize. None of SpaceX's advances have caused any harm to the world, nor do they intend to do so, on the contrary, they have contributed to society in general. They have created a large number of jobs and promoted other areas due to what it means to have staff working 24/7 in the area. There is not much more that I can tell you because I am not a resident of Brownsville, therefore I do not have the concerns that your population has, but if this small contribution that I make can be useful, so be it. I hope the progress of the program is satisfactory for everyone. Greetings, Jonathan.

Dear all, if we as a humanity were to advance, we will have to make clever decisions to support that. I think one of those crucial decisions is to support SpaceX in what they do, because they are unarguably the most progressive space company of them all. Me as a foreigner see great potential in that and I praise America for having these amazing opportunities to be potentially the first on Mars, to have such a prospering company and to help humanity as a whole in result. Everything is a compromise. But in this case, although the nature around will be a bit compromised (but I'm sure SpaceX will mitigate that), the right decision is to approve them for the continuous operation. Be that as it is, I think this is an opinion of a lot of people, and I also think the Boca Chica site will eventually help humanity to get to another level - something that nothing or nobody else can really do at the moment. Best regards Albert from Czech Republic

To the People of the FAA, My home is Colorado. I have been an enthusiastic supporter of space exploration since my earliest memories, formed in the early 1960's. I strongly urge you to expedite the approval process to permit the SpaceX activities at Boca Chica to continue to further our country's expansion into the virtually unlimited high frontier of space. We are witnessing an emergence of a wonderful new space age - one that we have not seen in 50 years. With government support, the new space age are led by commercial enterprises who provide a full spectrum of space services. Various startups have emerged, with SpaceX leading the way with its launch capabilities. With a promise of inexpensive, frequent, and high mass/volume payloads, the Starship opens up completely new opportunities. Think if the James Webb Space telescope had been designed to integrate with a Starship, rather than an Ariane 5. Simply looking at the map of the United States, there are very few locations remaining to test large rockets. Boca Chica is one of those locations. The alternatives are either sea launches or acquiring foreign land agreements akin to the Guiana Space Centre. Both alternatives are not optimal with respect to Starship development costs and speed, and to the economies and securities of the United States. Arguments suggesting alternative testing sites such as Kennedy Space Center, Stennis Space Center, White Sands, etc. are disingenuous. These sites either do not support launches or have extensive at-risk assets already in place or require flights over populated land areas. The premise that we can either choose space exploration or the preservation of natural environments, but not both, is a false dichotomy. Witness the flourishing of both industry and the surrounding natural environments at the Kennedy Space Center and at the Cape Canaveral and Vandenberg Space Force Stations. The Boca Chica SpaceX Starbase is surrounded by waters, public beaches, and wildlife areas. The vast majority of road closures are due to the transport of wide loads between the various Starbase sites. The lack of public and wildlife management access during these events, can be mitigated by providing alternative routes. Working with local, state, and federal agencies, a minimal impact plan could be developed and carried out. SpaceX should bare the financial burden. Moreover, land purchases for natural area expansion and/or financial support of environment maintenance are also possibilities that SpaceX could finance. Of course, hazardous activities to public safety still require area closures. I do not know if SpaceX will fully succeed with the promises of their Starship. The space shuttle also had similar expectations that were never fully realized. Nevertheless, space is a vital frontier for any nation's defence, security, and economy. If we don't succeed, others will. We are a divided nation desperately seeking positive aspirations of a better future. Starship, along with the employees, contractors, and suppliers of SpaceX, can be one of those good things in our lives and our children's. People coming together to work on exciting possibilities. Thank you, Robin D. Knight Colorado

I am in support of SpaceX receiving a launch licence for Starship out of Boca Chica and they should be able to launch starship up to 12 times a year to start with. they take the protection of the environment seriously and believe that launches will not damage this. they are inspiring the next generation right around the world and showing that they can innovate quickly and shows that there is more out there and that science fiction can become fact. and with 100% reusability this will reduce the cost of space travel as well as less impact on the environment unlike other rockets that are thrown into the ocean. once again i 100% support them and the work that they are doing.

I feel that the FAA is putting up roadblocks in front of the most innovative space launch organization that has ever existed in my lifetime, and before. If the FAA had done the same to the apollo program, we would have never landed on the moon, one of the greatest achievements of the human species. Can you explain yourselves now that you are now trying to hamstring an attempt at another great and inspiring endeavor? a As a child I was filled with wonder and awe at seeing Neil Armstrong make that first step onto another celestial body. I was rapt watching 2001 A Space Odyssey and my childhood mind thought we could go to the stars. All this and more inspired me to become a technician with NASA supporting the first four Space Shuttle launches, of which I will be so proud of until the day I die. I have been an ardent supporter of space exploration since I was a child and it so inspired my life to this day! But now I am despondent and sad that the FAA appears to want to shatter the dreams of my childhood and that of many, many children and young people who look with wonder, anticipation and awe at what Space X has accomplished in so few years! When I saw the Falcon 9s landing back to the earth from which they were launched my heart was filled with wonder again, like I was a child again. I am sure so many children were inspired, around the world, to strive for greater things in their life because of Space X! Please, you must need be a roadblock in the progress of humankind. We, as a species,...we need to explore, we need to advance. We need to inspire our children and their children and on down the line. Otherwise our species will stagnate and wither, and die. Just like the dinosaurs. They couldnt adapt and we will suffer the same fate if we do not!
