I think the FAA should approve SpaceX's launch because the government is wasting too much money & time on SLS, Boeing starliner, & Jeff Bezos' pile of garbage. My reasoning for this is simple, SLS costs too much per launch (I think about 2 billion per rocket, a complete waste of taxpayer money) plus it's not renewable, Boeing is making worse tech for more money (remember that whole NASA discovering 80 flaws when starliner's internal clock screwed up fiasco?), & JEFF FRICKIN BEZOS where do I start, Blue Origin doesn't even have a rocket capable of going to ORBIT, sure they can take 4 rich people the Kármán line for 3 minutes but what about their rocket that can take 100 tons to the Moon? Oh wait! That's SpaceX!! & when NASA chose the most financially viable/capable option (SPACEX'S STARSHIP) Jeff Bezos whined his ass off & basically diverted the entirety of Blue Origin to filling lawsuits & all of Blue Origin's employees hate the workplace mostly because Blue Origin can't novate as well as its "competitors".

I believe SpaceX is more than just revolutionizing space travel but also helping the United States and the world at the same time. Greater access to space and moving heavy objects faster has always led to some of our greatest technological advances. SpaceX pays employees very generously and continues to do all they can to minimize environmental impact. The vast majority of the company is held by a man who mainstreamed EV's, I don't know who would be more suitable to lead this project. I would love to see them press forward as quickly as possible and believe they should be given regulatory authority to do so.

Hello I fully support SpaceX's plans to expand their spaceport and launch prototypes into orbit the more launches from starbase will give spacex enough time to develop the hls and also pave the way for future missions to mars and beyond and im sure alot of other people in the space community will agree with me as there is no other way to expand our civilisation I believe that in the future starbase will be the new capital of the United states as this is will be written down in the history books.

As a teenager in this modern age, SpaceX's drive to make real advancements for humankind is inspiring. It gives me something to look forward to and something to be hopeful about for society. SpaceX should be allowed to launch their Starship-Superheavy launch vehicle from Boca Chica, Texas. In order to allow humans to advance from our home planet into the realm of the solar system, it is necessary to permit the continuation of SpaceX's development in Boca Chica.

Dear FAA, I'm Sean a 19 year old kid. I have been fascinated with rockets and exploring planets my whole life. I really would love if you granted spacex a launch license for starship! I have been watching starship live and grow from the little star hopper all the way now to SN20, If starship becomes a human traveling ship. It is possible for my dreams to come true and not just for me. But for everyone else on this planet for space flight. Starship will also increase our economy. By doing commercial launches and large payload launches. I would love to see SN20 launch before 2022. And we need your approval to exceed in changing the world forever! Space travel is necessary for extending the time humanity can live. We need to start now, not later but now! I would deeply appreciate you reading this. And granting SpaceX a launch license for spaceX! Best Regards, Sean Carroll,

Dear FAA, To: Director of FAA and Management, Dear Mr. Steve Dickson, Subject: future existence on this planet. Dear Mr. Dickson, I am writing you because I feel the need to stop my life and to share with you some opinion of mine that I guess a few more people can relate. Today after a long time of my existence that I feel that someone very special someone decided to put all his efforts and his dream is ambitions and his talents to us the human kind with humans have existence maybe over thousands of years back in histories of religions nationalities in primitive tribes that has been here on this planet and made us what we are today this dream race called life wouldn't have existed without the common intelligence knowledge! And if we understand the precious the thin layer between us and just being raised stands only one company in this is SpaceX just to see what they have done in one decade even though they didn't get as humans in humanity besides them to help us save this planet from being vanished. If I look backwards to the innovation and technology and the endless unsolved problems that SpaceX has been solving I would take my head off and much more I think I'm thankful for the future That SpaceX is allowing me to dream about, and giving me hope for the future generations my kids and grandkids to dream beyond the limits of our thin delicate planet and to understand the importance he will SpaceX mission to give us humans technology of global worldwide Internet communication that will Bring democracy too much more than it's ever been to give a chance to every soul on this planet to become a human being with community rights and the chance of even entering the race of humanity all this and much more SpaceX has been giving us a lot of chances,. Therefore I am begging you I am asking you I will do whatever it takes to join this ridiculous war between personal ego complexion that some people have to stop as humanity from surviving and developing this planet to much better future worlds to being sustainable and not only sustainable to put humanity in an endless path that will put us almost unbeatable in the race of humanity in this planet. SpaceX has just started in the way of the approach they have has never been seen before and this is why we have to look very carefully to this matter be able to look ourselves in the mirror in the white of the eye and be fully honest that politics and personal interest want effect the future of all of us. I honestly think that SpaceX is a company that must be supported by your organization and not the opposite! FAA Federal Aviation Administration is supposed to help an amazing company like SpaceX to execute their vision future plans and to help them make it able to be executed your job is not to be a policeman you are federal aviation administration you want SpaceX to fly more than anything that you ever dealt with we are humans that care more for us as a planet as a species then some personal politic interest! Please read this carefully I am begging you to let's basics make their tests I am sure that if you check it the first rule of SpaceX is safety of our planet and humans specific! The community that supports SpaceX is not small it's actually gigantic gigantic it's growing every seconds we want SpaceX to continue and get your support much more than you have done before I'm proud to take part in supporting this magnificent future company that are doing the most ATM for humanity and our civilizations for a future and now! Thank you very much for reading my concerns, Best, J.

Elon Musk and SpaceX should be granted a permit to launch from the facilities in Boca Chica, TX. The great number of electric vehicles manufactured by his Tesla electric car manufacturing company reducing green house pollution outweighs the amount of pollution that will be produced by launching the so-called Starship. SpaceX has demonstrated his wonderful concern for the environment many times and again. He also has demonstrated his excellence in safety and as I am a previous quality engineer for a major US automotive corporation do support and encourage SpaceX in all of their future endeavors!

I would like to stress the importance of SpaceX not only to the United States, but to the World.To Humanity. If something happens to our planet in 10 or 100 or 1000 years, what SpaceX is doing NOW will matter to improve our chances of survival of human race, because space exploration isn't a priority for most of the countries. If SpaceX is halted, we may loose the opportunity to develop rockets and technology that we'll need as the basis to colonize another planets.

I will be honest I'm not entirely sure how to start this so I will just jump right into it. I believe in SpaceX and I believe in Elon Musk to safely take humanity to greater heights. As a citizen to the United States and just a regular ol gal I fully support everything SpaceX has set in motion for the future of mankind. Please allow SpaceX to continue with what they are doing, they are backed by many! Be the reason humanity can reach the stars! Thank you for your time.

There are very few geographic places, and likely a single one -- Boca Chica -- where the United States could iteratively develop advanced, reusable interplanetary rockets. Other operating Spaceports have too many high-value missions and assets for the high-risk and rapid pace required to succeed in this decade. Therefore if the United States wants to continue and advance for itself and for humanity its long-term space exploration leadership, we must accept some strategic compromises and quickly authorize SpaceX's proposed use of the Boca Chica site for orbital launches.

While I consider myself an environmentalist, I have always believed that space exploration, utilization, and eventual colonization are absolutely essential for humanity. SpaceX is clearly leading the way. On a national level, with SpaceX, the U.S. is the clear leader. Without it, we're not in first place - we could not even launch our own astronauts. And Starship offers the possibility of so much more - to completely change the future of humanity in space. Please don't do anything, not absolutely necessary, to impede their progress. Please don't squander the U.S. lead. Or hurt humanity's future.

Space travel is probably inevitable as technology continues to advance with a great amount of talented and ambitious professionals on earth. SpaceX is one of the best aerospace companies today, to lead some historic projects in our planet. I do wish SpaceX could continue to succeed in their projects, while promising to give more back to the society in education, to help children with economic disadvantages to have opportunities to learn technology. We have already sacrificed some wildlife to support all these amazing space travel projects as a whole. We shouldn't sacrifice nor neglect the future of our next generations regardlessly. In other words, we may probably find another young Elon Musk among the children. Please kindly let SpaceX continue to work on their projects, if they would be willing to commit more to CSR in education. Thank you.

hi thank you for giving me an option to say my opinion. i am no resident in the united states and i dont have that much knowledge of space travel, rockets etc. however, thanks to NasaSpaceflight on youtube, i have been watching starbase evolve for more than a year now and have been absolutely stunned on the progress and the ambitious plans that SpaceX has in making humans a multiplanetary species. this has got to be one of the most exciting times in the space industry since the moon landings and i wish i was alive at that time to see for myself but these things take time. who wouldnt love to see humanity taking great strides to enter a territory where no man or maybe no life, or possibly past life that we haven't discovered yet, has yet touched the ground of another world other than the moon. the residents of boca chica, some may agree and some may not. it is understandable that it could potentially affect something in their life in the future. That is yet to be determined however we won't find out what the right things are until SpaceX reaches or somewhat reaches their goal. But hopefully around that time Boca Chica will be attracting a lot of attention and bringing in a lot of tourists and it would be amazing for the economy lots of stuff would go towards quality of life and even more jobs for the future generation living there. I am confident that SpaceX will look after Boca Chica and its residents. please consider approving as the future for ultimate human accomplishment can be achieved and we will strive together and build a world where anyone can be inspired to do anything they want. thank you again, stay safe.

Everything looks to be there.... I believe the closure time per year is too low; triple would not be excessive... As for sight, there are other things in the area which produce light at night, and can be seen in the daytime... The sonic boom is going to be heard, but not severe... My focus would be on safeguarding the historical sites from pressure impacts and vibration... Also some of the wildlife impacts will need attention as mentioned... This facility has to be somewhere, and Boca Chica is a very good place for it... This facility has become a point of interest for tourists already...

Dear FAA . . . Elon Musk has worked harder and fought more for the future of humanity and the health of our beautiful planet than most of the governments and large corporations on it put together. He has made solar energy cheaper, easier, and more powerful through dedication and tech advancements. He has (against all odds) disrupted the auto industry to force the issue of sustainable clean energy and is now selling his own battery advancements to other manufacturers looking to catch up and not be left behind. That brings us to SpaceX and what is being achieved in Boca chica. Huge advances in rocket motors and reusable systems never achieved by anyone before now are commonplace. I do not feel I'm being dramatic when I say the future of not only space tech, but numerous fields of technology here on earth will depend firmly on the freedom and speed with which Elon Musk and SpaceX are allowed to function. More than that, we are used to knowing America is the strongest and greatest country in the world. It is Elon Musk and his dedication to moving us into the future through new technologies and sustainable clean energies that will keep us there. This is much bigger than arguing over one beach or one bird (that is protected along the ENTIRE Atlantic seaboard by the way, even up to Staten Island where I live) .I'm sure the traffic issue can be easily remedied. When the amount of revenue, new jobs, and Elon Musk gladly adding positive growth to the surrounding communities is added on top of his achievements and position to move the U.S. into the global lead for sustainable clean energy, electric vehicles and leadership in space exploration, I see no other course of action than to assist in these efforts and be a positive force toward our children's future. Thank you for accepting my opinion. Sincerely---<="" dd="">

Dear FAA, I'm writing this email to express my support for SpaceX and the operations in Boca Chica, Texas. I believe that humans must become multi-planetary species, be among the stars, and explore the universe. This needs to happen fast and the only way to achieve this goal is with Starship. Please receive this email in support of orbital launches of Starship. The company cares about the wildlife in the area. In February 2021, SpaceX provided power generators and saved thousands of turtles from the freezing weather conditions in South Padre Island. SpaceX is making the new generation excited about space, is helping the local economy by employing locals from nearby cities, and is bringing more tourism to the area during launches. Moreover, Starship will be important for America to maintain the lead of space exploration. Please grant SpaceX a launch license to conduct orbital launches of Starship. Best regards, Minas S.

Subject: Go for lunch

I spent most of my 30 year Career as a flight test Engineer and Flight Test Director with Lockheed Martin. I've followed Space X testing and progression. It is my opinion that they have done everything necessary to insure a safe launch and recovery.

I regretfully believe that an operational starship is essential to national security and consequently see urgency in completing development.

I recommend Space X be cleared to execute the test program as proposed with safety review updates being conducted for each significant design change or test failure as the test program progresses.

Subject: I support SpaceX

Hello there, I wanted to voice my FULL support for SpaceX and their operations around Boca Chica.

SpaceX is bringing much needed jobs, revenue, and renown to our region. Additionally, I believe what they're doing is actively making America more competitive and more hopeful.

It's critical we do what we can to support them.

Cheers,
Brennan White

Subject: In Favor of SpaceX for Draft Programmatic Environmental Assessment (PEA) for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas.

Good afternoon

I had previously signed up for the Public Comment and spent 4 hours on October 20, 2021 waiting my turn to comment only to be told they were out of time at 9:00 pm. I was on the zoom from 5:00 pm patiently waiting. I was 159 from 171 that signed up to voice my APPROVAL for the Programmatic Environmental Assessment (PEA) for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas.

I am the 3rd generation from Brownsville, TX. I am born and raised here in Brownsville, TX. I have 1 daughter and 2 sons and they are now the 4th generation of our family in Brownsville, TX. As a child, our father would put a camper on this pickup load my sister and me, and our dog and my father and mother would take us to Boca Chica Beach to spend the night. We would BBQ or take sandwiches to camp there. Our restrooms were the dunes. Back then there was barely anyone at the beach. Boca Chica Beach has never been the beach to go to if you want everything available to you. My father would take us because there was barely anyone there and you didn't have to worry about safety because you were pretty much the only ones there. As far as the beach is closed to the public, that is a lie. I go twice a day to deliver coffee to SpaceX and trust me, the people that go are not going towards Boca Chica Beach to go get their feet wet by the ocean or walk on the sand, they are going to see the Rockets and everything SpaceX is doing. They are taking selfies and posting on social media for everyone to see that they are part of history in the making.

They are thousands of protected acres for the animals, birds, and insects to reproduce and live as God intended them to do. I have encountered coyotes, nilgai, deer, ocelots, snakes on Hwy 4 towards SpaceX. SpaceX has done more than anyone Federal or local agency to preserve the rights of animals, birds, turtles, and beach cleanup. SpaceX not only cleans the beach but the HWY across the street of their facilities.

During the record-breaking Freeze in south Texas in February 2021, SpaceX didn't just take care of their employees, instead, they utilized their resources and help save thousands of sea turtles by providing their generators to provide oxygen and temperature control of the water tanks to keep the sea turtles from dying and becoming more of an extinct animal. They helped a small community by providing generators to supply electricity to a town of 6000 50 miles away from SpaceX. Without SpaceX the town of Los Indios, TX would have had people freezing to death and no shelter to go since no one had electricity to keep them warm, cook food, or running water.

Not only has SpaceX brought many jobs to our City and surrounding cities but their involvement with our Shools has brought us a new sense of future security for Brownsville, TX-Los Fresnos, TX-Point Isabel, and South Padre Island. Elon Musk has given our youth a new dream. A realistic Dream. As far as economic impact in our community I would not be in business if not for SpaceX. During the Pandemic we had no customers because of the shelter in place, CDC guidelines, no PPP supplies, on top of County and City restrictions we could not open our doors to the public, SpaceX purchased coffee from us during the most difficult times in our generation The Pandemic.

As I mentioned, I deliver coffee twice a day to SpaceX 6 days a week. I start my day at 4:00 am to be at SpaceX at 6:30 and again at 4:00 pm for the night crew. Every day is a new adventure because they are a no-stop building machine. They are extremely a group of professionals that care about the community, our environment and are genuine in their efforts to make our planet earth a better place.

For this and many other reasons, I SUPPORT SPACEX and I ask that the FAA allow SpaceX to continue developing and launch the Starship/Super Heavy.

Sincerely
Zeke Silva

Subject: On issuing SpaceX a license to fly Starship

A major piece of the puzzle regarding whether or not to grant SpaceX permission to fly a full-up Starship out of Boca Chica rests with the unknown, and presently unknowable affects that a rocket with twice the power of the Saturn V will be like. How loud? How far away will your house need to be before you don't have to worry about broken windows? And surely many more. The only way to get the data needed for long term planning is to fly.

My suggestion: issue SpaceX a launch permit for the Booster 4 / Starship 20 stack, a flight presently on the SpaceX books. Personally, I think the Boca Chica launch site will be in the greatest danger (as is the case for every 1st launch of a new vehicle). Require SpaceX to place acoustic sensors at whatever distance and in whatever pattern is judged reasonable. Do whatever else is specifically intended to gather the data needed to make informed decisions about all future launches.

Let SpaceX fly. Study the data. Use that data to inform launch criteria going forward.

On a personal note, I do not live anywhere near Texas, and will be affected not at all if the Boca Chica launch site and its billion dollar infrastructure goes up in a ball of flames. I will be upset, furious actually, if the US government in any way, shape, or form delays the progress of one the greatest geniuses this country has seen in nearly a century, an act that would provide the Chinese with time to develop their own rockets (their stated goal being is dominate space by mid century). SpaceX and Starship are our best bet to ensuring that the next boots on the moon, and the first on Mars will be American.

A space geek since before Apollo,
David Boyle

Subject: Please allow SpaceX and Elon MUSK to help life outlast planet earth

Dear FAA SpaceX Boca Chica Project Team at [REDACTED]

The survival of mankind and all other species may depend on FAA's allowing SpaceX and Elon MUSK to help life outlast planet earth, e.g., by utilizing the "Starbase" spaceport that Musk and others have created at Boca Chica in Texas in order to improve and launch "Super Heavy", etc. rockets. I request that the FAA help them to do so in any way possible.

I registered to speak at the SpaceX Starship/Super Heavy at Boca Chica Virtual Public Hearing #1 at 5:00 PM CDT but was unexpectedly unable to attend that meeting.

Thank you for having given the public an opportunity to express its opinions.

Subject: Public comment for SpaceX Super-Heavy plans for Boca Chica: Please Allow SpaceX what it needs and the save the Planet

The future of humanity rests on us as human-beings overcoming our differences and uniting as one species. And in order to unite as one, we also need to have a broader perspective - so that we can understand what sets us apart as people from different regions is far tinier than what makes all one people.

As a species trying so hard to give up our parochial past, and rise as a single global civilization, we can either look inward and backward, or we can look outward and forward. Just like for any living being, our modern civilization cannot grow stagnant if it wants to survive. It can either grow outward with new vigor and off-shoots, or grow old and withers and dies - suffocated by its own stale substance when there is no room to grow. Earth in some sense, with humanity, is transitioning from being oblivious to its own existence until recently, to becoming semi-conscious with the dawn of modern internet and space age. We have a physical perspective of the pale blue dot (see the famous photo taken by https://en.wikipedia.org/wiki/Pale_Blue_Dot), but we also have the ability to rise as one voice on Tik-Tok, or other social media to make positive change - fast. But these new social tools also drown reality and can cause trouble. Unless we keep expanding our perspective, and inspire our children to expand into science and technology and knowledge.

From here, where we go is all up to us. We can either get stagnant, then get infected with self-doubt, polarization of differences, perceived lack of resources, and pandemics - both physical and mental - that destroy us, or at best set us back to the medieval ages. Or, we can use the power inspiration for knowledge, and leverage science and technology to discover new science and build new technology that will provide Earth self-awareness that will make the planet truly sentient - eventually not acting like a brawling toddler who gets fits of anger, but as a cohesive intelligent being reaching out to the Cosmos - as one voice.

The recent polarization of politics and people across the world, the pandemics, and the climate disasters, have shown that the window of opportunity to expand beyond Earth and provide a new perspective might be limited and starting to close already. If we don't get out and settle multiple planets in our solar system right now we may never get this chance again. Having all our eggs in one basket is not good.

What SpaceX is doing in Boca Chica with the Starship and Super-Heavy system is something we have now waited for 50+ years. People have not left Earth since I was born, and no woman or a non-white person or a civilian has ever landed on another planet. Though Apollo was great as a cold-war victory and inspiring for all of us, the promise of lowering the cost of space exploration enough to enable this new frontier for a mass settlement has not been realized.

SpaceX has already lowered the cost of orbital transportation by around 10x. We need to lower this by another factor of 10 to 100 before everything I described above will come to pass and we will be safe from an extinction level event, and perhaps even provide the inspiration needed to unite Earth as a single nation of all humans, regardless of their language, where they live, or skin color - in a united front dominated by liberty and justice for all.

Keep in mind, beyond helping humans become multi-planet species, this 100x lowered cost of transportation to space will move several dirty industries off-Earth (precious metals), allow us to focus on Earth remote-sensing, bring high-quality internet to remote places saving thousands of lives every month (think all those people who die every year in the mountains, oceans and other remote forests because they cannot even get a phone signal!), provide better education to kids in remote places (cheaper higher quality internet), allow us deorbit all of the massive debris in space (ironically what you need to clean up space debris is to make launching cleaning systems - massive nets and other processes to

deorbit junk, cheap enough) that is inaccessible due to prohibitive cost of launching to space, invention of new space materials at scale, provide massive space telescopes to astronomers, especially the one on the far side of the moon that may help us find other planets with advanced civilizations (by shielding from Earth-based radio noise), help us find 100s of habitable planets (easier since much larger space based telescopes can be launched), and more. Because of the dramatic reduction in cost of access to space, the list is shockingly large and comprehensive.

Starship is close to achieving the next step to this now, but without Elon Musk and his leadership this may have never happened. However Elon is already 50 years old, and one can argue whether the window of opportunity will close because something happens to Elon personally as he gets older, or because there is a much larger pandemic, or because there is a much larger war or civil unrest in our closed little world that does us in. We are literally running out of time. There is a lot of steps after this one (the one FAA is approving) before we get there, but if we slow things so much down that SpaceX builds their ships from scratch (what NASA could not do in 50 years due to bureaucracy) faster than the super-slow FAA approval process, then what would FAA be remembered as if we fail because of them? Go down in history as an enabler, or another organization that failed to upgrade itself with time?

And it is not enough for SpaceX to succeed over the next 3-5 years with FAA's help to get to Moon and then Mars with one or two missions; the other babies they are inspiring (Rocket Lab, Relativity Space, Firefly and others) also need to grow up fast and compete with them before we can be sure that there will be stable and sustainable ecosystem of self-supporting companies and economy that will allow humans to become multi-planet species - permanently.

Given the massive burden faced by SpaceX already with limited NASA budget, legal battles caused by changing administrations, limited commercial market, and sheer difficulty of moving large cargo into space, not to mention developing all of the technologies for fully reusable rockets that did not exist, we should focus on what is important, what is critical, and what cannot be replaced.

It is true that the area SpaceX is working at is a wild-life refuge. I spent six years in Texas and often visited that area for vacation when I was in the PhD program at UT Austin. But it's a vast area, and SpaceX is using a tiny section of it. The minor effects to the environment around Boca Chica are dwarfed by what would happen to Earth if humanity itself gets messed up, or we don't inspire the world to unite as one. We may lose many of the species that nest around Boca Chica all over the world, and we may lose half or more of Earth's population.

There is one chance. The ships look beautiful, have a massive positive effect on the local economy and tourism, and most locals are proud of hosting the civilization-changing level of rocket ships being built there.

Perhaps Space-X should pay a few million dollars to buttress the local wild-life preservation and enhancement plans - and this should be a voluntary suggestion which I am sure Elon will agree to and should be given directly to the local state park funds. Plans for increasing support for the park to improve areas away from the location may benefit a lot more than spending it for just that location. Such fees or payments however should only be attached to as a fraction of the revenue generated from such launches and NOT for developmental launches. Any charges during this crucial R&D phase would just reduce the budget available for actual development and increase odds of failure.

FAA and EPA got to get their [REDACTED] together and get out of the way. Sure - do your assessment but defer any contributions from Space-X to commercial launch cadence not right now. You are blocking the country and the world from getting back to the Moon and Mars, and from humans becoming multi-planet species.

Please go focus your energies on the massive stink that comes from Corpus Christie from unburnt oil-leakages. Not clean-burning launches of a few dozen ships in a relatively empty area around Boca Chica.

Approve SpaceX to have enough launches for fulfilling their urgent national and planet-scale security missions. Find a way to work with them on commercial higher volume percentage fees for environmental improvements if you will. Not right now!

Subject: Public comment on PEA

I suggest that minimizing the impact of starship/booster testing by minimizing the total number of actual tests is only viable for short term testing, say for no more than a few months. For test periods longer than a few months, focusing on minimizing the total number of tests, instead has the effect of increasing the disruption in the lives of the local population, because *people can not plan around noise and closures if they do not know when the noise and closures are going to happen*.

For long term testing, say for years, minimizing the disruption in the lives of the local population is better achieved by maximizing the known periods when disruptions will not occur. That is, establish windows on times that are easy to learn, understand, and remember, when no noise or highway closures are allowed. Then the locals and everyone can plan their lives around knowing when there will be neither noise nor closures.

The slower SpaceX is required to test, the longer the testing will take.

Thus, I propose the following method of scheduling noise and closures.

First, that there be no rocket noise, except possibly each Tuesday and Thursday between 4 pm and 7 pm. While during these two time periods, SpaceX be allowed to make the rocket noise it needs.

And second, that Highway 4 and Boca Chica beach are always open, except both are normally closed each Tuesday and Thursday between 12 noon and 12 midnight. While during these two time periods, SpaceX be allowed to close the highway and beach when, and for as long as, it needs.

This has advantages over the current method of scheduling, for everyone.

- 1) Everyone will know when there will be no rocket noise from the Starbase launch site.
- 2) Everyone will know when the beach will be open.
- 3) Thus, everyone can schedule around the noise and closures easier.
- 4) SpaceX can test more, earlier, and thus complete starship/booster testing sooner.
- 5) The burden of scheduling and managing starship/booster testing on local governments will be less.
- 6) The burden of scheduling FAA oversight of testing will be less, because the time of the oversight will be more predictable.
- 7) FAA will not have to start processing a new SpaceX Boca Chica PEA in less than a year.

Therefore, please include this possible method of scheduling in the current PEA and later survey the local population and follow the scheduling method they prefer.

Ms. Stacey Zee, SpaceX PEA,
c/o ICF, 9300 Lee Highway,
Fairfax, VA 22031

I would like you to consider the following comment.

"Human life on this planet is on an irreversible course towards extinction by the year 2047. If human life does not become multi-planetary by then nothing else will matter. 1. Public safety issues (such as overflight of populated areas and payload contents) will not matter because there will be no more humans after 2047. 2. National security or foreign policy concerns will not matter. China and Russia with their current progress will be able to place troops and equipment anywhere on earth within 2 hours and will probably already be on Mars by 2047. 3. Insurance requirements for the launch operator will matter between now and 2047. After that they will not matter. 4. Potential environmental impact will not matter because there will be no more humans to impact any life on earth after 2047. I urge you to approve a license for SpaceX with unlimited launches and recovering of spacecraft. I implore you to do so immediately as time is of the essence. "

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach

because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Mary Vela

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

When growing up in Brownsville, we would make trips out to Boca Chica Beach to play and swim. We would go to a place we called the cove, because a family friend had a beach house near it. Everyone in the family would go. When a hurricane destroyed the friend's beach house, he wasn't allowed to rebuild because of the State Park and National Park rules.

Now we have a billionaire who has been allowed to think that Boca Chica is his. The last time I went to visit home, my mom informed me that we may not be able to go to Boca Chica because of the launches.

Boca Chica has always been the beach to go to to enjoy peace and quiet.

I am appalled that the State and National parks services would allow for expansion of Space X. He can go to other areas and ruin their beaches or use areas that are away from populated areas. South Padre is not too far from Boca Chica. What if a rocket went off course and blew up over South Padre? You seem to not care that they may blow up over a pristen beach.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach

because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Donna Robinson

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

This area and this culture is so rich and it's time for our representatives to show that they care about OUR PEOPLE in our community and STOP letting others exploit our towns, beaches, and population. There are so many homeless in our cities and this isn't right.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

The Federal Aviation Administration (FAA) held two virtual public hearings to solicit comments from the public concerning the scope and content of the Draft Programmatic Environmental Assessment (PEA) for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas.

The hearings were held on October 18 and October 20, 2021, at 5:00 p.m. Central Time. At the beginning of each hearing, the FAA provided a presentation in English and Spanish. Afterwards, members of the public provided oral comments.

The presentation is available on the FAA's project website (English and Spanish recordings): https://www.faa.gov/space/stakeholder_engagement/spacex_starship/. A transcription of each hearing will be posted on the FAA's project website soon.

If you were unable to attend or speak during the public hearings, you can still submit a written comment at the following email address: [REDACTED]
Comments are due by **November 1, 2021**.

Subject: Real World Models for Stem Teachers

SpaceX has a proven track record of safely and reliably designing and manufacturing spacecraft. More and more educators are relying on companies, like SpaceX, to serve as real world models for the application of scientific principles. The success of this company inspires my students to envision themselves as career professionals, innovators, and inventors within the aviation and space technology industries. The continued advancement of spacecraft manufacturing, in this context, is in line with the FAA's YIATF committee's mission of encouraging American youth to "Pursue in-demand careers in aviation." The members of Sci-Create, homeschool creative writing club and space enthusiasts, are deeply saddened by the delays impacting our nation's progress into the cosmos and beyond, and wish the trusted company, SpaceX, light speed approval for their testing of Starship!

thanks you,
Samantha

You curtailed the Saturn V / Apollo program

You gave the space shuttle design unnecessary design requirements (for national security reasons upon return) such that large wings were required, that reduced its efficiency, and ultimately gave it a heat shielding vulnerability.

Your space contracting system (apart from recent SpaceX one) rewards slow contractors financially so your billion dollar budgets cannot be spread across more space technology and projects.

The Boeing Starliner is a joke.
The SLS rocket is too expensive.

...and you want to limit and slow down SpaceX on their ability to achieve progress with Starship that will ultimately not only benefit USA and your national security, but benefit humankind and see the proliferation of the human species across planets.

At what point do you think it is time to change your behaviour?

On the environmental front, there is no reason why wouldbe affected wildlife cannot be relocated. I am sure this would be a much cheaper option that SpaceX would be prepared to pay for compared to the intended disruption your limitations would make.

Subject: Space X must obey the law, just like everybody else

Dear Federal Aviation Administration,

First they, Space X folks working for Elan Musk, close off the beaches, then the roads, then they bombard elderly and fixed residents with super-loud noises. They made an idyllic community unbearable. Evacuation in an emergency is impossible. And this is the tip of the iceberg. What about the absolute devastation to the blue-green algal mat habitat, a specialized coastal tidal flat habitat that has been critical for the success of migrating shorebirds for countless millennia. When did mass destruction of wetlands become okay? Send Space X to an abandoned Air Force base. Why were they allowed to destroy pristine habitat and edge out our Texas residents? No amount of money is worth this.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Teresa Carrillo

Subject: Space X to be allowed to launch as many rockets as necessary

Dear Sir/Madam,

I am writing to you because I am concerned that you are limiting Space X to only 5 flights per year.

That will stifle the development of Starship and its aim to take us to the moon and Mars.

I believe this decision has nothing to do with the environment and is instead a political act to thwart Space X in its success and instead to work in the interests of corrupt old space oligarchs who fear their loss of influence and power and money to Space X.

Blue origin and Boeing etc are corrupt and have influential congressmen working on their behalf who also fear the loss of back handers they have been used to in the past from old school NASA.

Thus I protest in the strongest way possible to the FAA's decision to curtail Space X in its development and success.

Yours sincerely,

Jonny Casey.

Subject: space x

You curtailed the Saturn V / Apollo program

You gave the space shuttle design unnecessary design requirements (for national security reasons upon return) such that large wings were required, that reduced its efficiency, and ultimately gave it a heat shielding vulnerability.

Your space contracting system (apart from recent SpaceX one) rewards slow contractors financially so your billion dollar budgets cannot be spread across more space technology and projects.

The Boeing Starliner is a joke.
The HLS rocket is too expensive.

...and you want to limit and slow down SpaceX on their ability to achieve progress with Starship that will ultimately not only benefit USA and your national security, but benefit humankind and see the proliferation of the human species across planets.

At what point do you think it is time to change your behaviour?

Subject: SpaceX - Starship/Super Heavy vehicle licensing process

Please find below details of my comments in support of SpaceX.

I ask, that in the event that the content of the email needs to be published, please only display the first letter of my Surname. If you need my full postal address to validate this email, please let me know.

FAO -
Ms. Stacey Zee,
SpaceX PEA,
c/o ICF,
9300 Lee Highway,
Fairfax, VA 22031

Dear Ms. Zee,

I would like to take a couple of minute of your time to provide my feedback on the license process for SpaceX and the Starship/Super Heavy Vehicle licensing process.

There are not many times when I would write in support of a company or a license application, but this time I feel I must due to the gravity of the situation.

I am currently located in the United Kingdom in a small rural farming community approximately 10 miles from the nearest major city. The jobs my partner and I have mean we are reliant of high speed, reliable, always-on internet connectivity. For the last 20 years we have been badly let down by incumbent operators here in the UK (British Telecom / Virgin Media [now part of Liberty Global]) who are the main network and infrastructure providers.

For too long, we have been promised 'faster speeds', 'more reliable service', 'better value for money', over a 20 year period, this has not proven to be the case. At my previous house, I had to rely on 3G and 4G connectivity as my cable service was so unreliable (48% average monthly uptime over a 12 month average) or a very slow speed circa 6Mbps down and less than 1Mbps up).

Within days of SpaceX and Starlink proving a beta service, I had my pre-ordered hardware arrive to the UK from California in less than 48 hours (time from dispatch to arriving at my door). Less than 20 minutes after the box arrived, I was online and getting 200 Down / 20 Up.

Its now three months later, my service has been rock solid and I have had no issues at all with the service. My story is not an unusual one here in the UK. Over the last 20 years we have been promised a lot by incumbent operators who

really don't provide a good service. Mr. Musk and SpaceX have done more for the world with Starlink in 5-7 years than hundreds of telecom providers world wide. At every point I read in the news legacy providers are complaining. Legacy providers are saying how 'unfair' things are that SpaceX and Starlink are doing things so fast.

I wholeheartedly support the application having looked through the 142 pages of the assessment located here: https://www.faa.gov/space/stakeholder_engagement/spacex_starship/media/Draft_PEA_for_SpaceX_Starship_Super_Heavy_at_Boca_Chica.pdf

Looking at the information available, I believe this will be a benefit to Texas as a state as well as Cameron County.

Personally, I would have NO problem living within a 20 mile location of the site and believe that SpaceX will 'Do the right thing' not only commercially and legality wise, but also ethics wise. As a global nation, we need to support and encourage companies such as SpaceX who are going ground breaking work faster than any other companies I can think of.

Should you have any questions or require further clarification to any points I have made, please feel free to contact me.

Kind Regards,

Ben

SpaceX is the future of man-kind and should receive all the help that may be available from the FAA. Their programs will end up in the private sector and then to THE PUBLIC.

The ability to get large amounts of payload to far reaching places, like the moon.and then MARS makes them the best and the most cost effective method to carry on this important work. If you look at other launch facilities I believe that they will be able to achieve the same safety and concern for the wild life as set by those facilities. Thank You,David Melson

Subject: SpaceX and space privatization, strongly support SpaceX!

As a Texas resident, a scientist, and a pilot I strongly support SpaceX's effort in building a new industry in Texas.

SpaceX has created thousands of high paying jobs, many of which are in Texas. That have provided some degree of wealth to many families in the Boca Chica, Tx area. SpaceX has purchased homes and land for several times more than the real estate evaluation would have ever provided had it not been for SpaceX.

While their site is relatively large, it is small in comparison to the Texas coast line and Padre Island. Ecological impact is small as SpaceX has a small coastal exposure. The micro environment surrounding SpaceX extends not only along the coast of Texas but also along the coast Mexico. The limited ecological impact is more than off set by benefits to Texas and, indeed, the world.

SpaceX is creating a new industry by privatizing space. Their network of satellites will provide high speed communication throughout the world. This allows developing nations to have access to knowledge previously accessible to 1st world nations. Education and opportunity is opened to all. Fantastic!

As a pilot I have faced regulations set forth by the FAA. While those regulations may have good intentions, the agency is under staffed, making decisions in months, not days. The bureaucracy itself is limiting by not being a nimble, responsive body that allows commerce to thrive but are constrictive.

The FAA and government involvement should be in a role of cheerleader for this innovation. Not innovation limiting!

To: SpaceXBocaChica
Subject: SpaceX Boca Chica Autorization

To: FAA / SpaceX Boca Chica

From: Rodolfo Talento Lane (not USA Citizen / Not living in USA)

[REDACTED]

Considering the authorization process for SpaceX to carry out spacecraft development activities, the ultimate goal of which is the expansion of the human race outside planet Earth, the cradle of our civilization, it is based on this concept that I dare to write on the matter, not being a citizen of the USA or a resident of Boca Chica or its surroundings.

I understand that there are considerations of various kinds in this matter: safety of human lives, conservation of nature and its wildlife, etc.

Regarding security, I understand that Boca Chica is a unique place for the implementation of an undertaking of this type, since there are no large human concentrations in the surroundings. It is also known that, in terms of security, it is necessary to implement these facilities on the coastline in order to avoid the overflight of these ships due to human concentrations. I believe that there is not a more suitable place on the entire east coast of the United States, by topography and by population.

The beach that is accessed through Route 4 is one more beach in the thousands of kilometers of the coast of the Gulf of Mexico; there are no facilities whatsoever, it is not close to any population (leaving aside Boca Chica itself). The residents of Brownsville can perfectly access the beaches to the north with the same ease and where there are facilities and services. One person complained that access to the beach was always closed: just check the details of the closures and it will be seen that this statement is not true.

The few residents of Boca Chica who were settled before SpaceX arrived, want to be there precisely because they want to be part of this history.

Regarding the protection of the biosphere, it is necessary to be clear that at any point on the planet that this develops there will be an impact on it. It is about minimizing the effects that the activity may have and this should be emphasized.

I appreciate the possibility of holding this exhibition in favor of SpaceX and any company that wants to develop the future of humanity.

Greetings

Rodolfo

Subject: SpaceX Boca Chica Launch Site Environmental Assessment.

Dear FAA,

I wholeheartedly SUPPORT SpaceX's application for a Launch Licence at its Boca Chica Starbase facility.

As a citizen of the United Kingdom, you might ask yourselves why I am bothering to support a project that is based in Texas, United States. The reason is simple. The decision YOU (the FAA) make will have a long-lasting effect for the WHOLE of humanity.

SpaceX has singlehandedly reinvigorated the whole Space industry. It has proved to be a thoroughly reliable Launch Provider for NASA and the US Government. It provides services that are substantially cheaper than its rivals saving tax dollars and has returned human spaceflight to US soil.

The Starbase facility is a vital component in the advancement of humanity's ambition to be a multi planetary species. The US is now at the forefront of this new space race, but it has competitors biting at its heels in the form of Russia, China and other emerging markets such as India. These countries are a lot less stringent in their impact on the environment, which gives them an advantage.

If you look at many Military and closed off facilities such as Launch Sites, you will see that these actually act as wildlife refuges and provide a haven to rare species due to the fact human access is limited in these areas. SpaceX's Boca Chica facility is no different and would provide a haven to wildlife.

The economic benefits for the local economy are very clear to see. SpaceX is providing highly paid, highly skilled jobs in an area that would otherwise not benefit from these if SpaceX weren't there.

I therefor urge the FAA to APPROVE SpaceX's application.

Kind Regards.

Subject: SpaceX Boca Chica site

I strongly support SpaceX and it's Boca Chica site for StarShip development and launches. I believe it is essential to future US space efforts including the Human Landing System (HLS) to be built by SoaceX for NASA. The HLS is to be launched by 2024 to the moon and any delays to the site at Boca Chica would unnecessarily delay the administrations plans to reach the moon by that year. If we don't meet that deadline China will undoubtedly beat the US back to the moon which could prove a strategic blunder. Again, I strongly support SpaceX and Boca Chica site.

Subject: SpaceX Draft PEA comment

I appreciate the opportunity to publicly voice my support for SpaceX to receive a launch license in Boca Chica for their Starship/Super Heavy launch program.

I have reviewed the draft PEA, and feel that using the 2014 EIS for the same facility as the basis for this environmental assessment was a sound choice.

I am a longtime Texas resident. I lived in Port Isabel during the starship launches last year and have recently bought a house in the area. The SpaceX activities at Boca Chica are THE ONLY reason my money and time is being invested in the local economy. The economic impact of this project cannot be overstated.

I have traveled extensively over the last 15-20 years, both in the United States and internationally. I can say unequivocally that the natural spaces in the United States are indeed a national treasure. However, I believe it is important to protect the environment in a way that allows us to work with nature cooperatively and still progress forward. Nature is not more important than human endeavors. It is equal and care should be taken to mitigate the impact on the refuge and beach.

I believe SpaceX's plans are in line with that goal. From the air, it is clear that their footprint in the wetlands is very limited and I have never been to the site without viewing abundant wildlife. After visiting the Cape Canaveral launch facilities, the limited size and scope of Boca Chica is even more astounding. The 500 hours of beach closures requested equates to only a bit over 5% of hours in a year, which is minor. The noise from the launches or test firings is impressive, but short lived and from both South Padre and Port Isabel, it is similar to the regularly heard fireworks in the area. SpaceX has already demonstrated an eagerness to minimize environmental impact through their extensive use of solar panels and batteries for power, and their plan to distill air locally to provide the needed liquid oxygen and nitrogen in a way that will drastically reduce vehicle emissions and road traffic from deliveries. SpaceX's quick action to help save sea turtles during the freeze in early 2021 is well documented and a real testament to their fundamental concern for the local community and environment.

Working with local, state and national agencies and SpaceX, I urge the FAA to issue a finding of no significant impact or mitigated significant impact for this environmental assessment and issue SpaceX an updated license as quickly as possible.

Thanks,

Michelle Murray

Subject: SpaceX Starship Super Heavy Project at the Boca Chica Launch Site - Public Comment

Dear FAA:

I am a land use and environmental attorney from Los Angeles, California and a Certified Flight Instructor in helicopters. I fully support adopting a mitigated Finding of No Significant Impact ("FONSI") in accordance with ICF's Programmatic Environmental Assessment ("PEA"). As analyzed and mitigated in the PEA, SpaceX's operations at Boca Chica would have minimal impact on the environment in much the same manner as space operations at Cape Canaveral Space Force Station. The flora, fauna, and SpaceX can all successfully thrive together. Please do not be persuaded by NIMBYism and other detractors that only offer bare conclusions, speculation, conjecture, and/or misinformation with no actual credible evidence of significant impacts. An EIS is entirely unnecessary and would be crippling. This Project is vitally important to our nation and our security. Please approve this Project without further delay.

Very truly yours,
Stan M. Barankiewicz II, Esq.

To: SpaceXBocaChica
Subject: SpaceX Starship/Super Heavy at Boca Chica

I am a citizen of the United Kingdom and therefore unsure whether any contribution I make to this assessment will be counted. However, as I have strong and positive feelings about what is being attempted by SpaceX at its Boca Chica facilities, I will share them for what they are worth.

I am 70 years old and was a child in the post WW2 austerity which lasted in my country until it fully lifted in 1956. I remember the 1962 Cuban Missile Crisis, the 1968 Soviet invasion of Czechoslovakia and the spectacular achievements of the moon landing program which culminated in Apollo 11 in 1969. Throughout the Cold War the United States of America was the West's defender and bulwark against the threat of communist tyranny. Its technology and science led the world and it enabled us to share in the excitement of discovery as NASA's spacecraft ventured further into the solar system.

Humans are curious and adventurous by nature; throughout our history there have been explorers, adventurers, and yes, conquerors. What they did, intended or not, was to advance human knowledge and slowly improve the human condition. Unfortunately, we have now reached a point where our activities are having a big impact on Earth's natural order such that the balance of our climate has been disturbed.

By the wonder of the internet, I am able to watch events at Boca Chica on a daily basis and I am very impressed, and somewhat awed, by what is being attempted. It is revolutionary and I am astonished by the boldness of the program. Yes, some of it may need of modification, some elements might fail but the essential thing is to try then to learn and advance, by failures if necessary. However, it exemplifies the human spirit. I fully subscribe to the notion that our species must become multi-planetary and it is most important to me that it is American knowhow and America leadership heads this great new adventure. It is simply right that it be so. In later human history Boca Chica may become hallowed ground, the point from which our species set out on its greatest adventure.

Alongside the higher aspect of the venture is the simpler human condition. SpaceX has created a place of employment in what I believe is an area in need of investment. The area has attained a degree of fame as the world become aware of the facilities being built and tested. Tourism has increased, money is being pumped into the local economy, traders are benefitting, morale is rising, hope is returning.

I believe Mr Elon Musk and all the team at SpaceX are dedicated to their cause while fully wishing to observe, and mitigate if necessary, any effect the activities may have on the surrounding area. It is their interest to do so. It is in humanity's interest that they succeed.

I hope this project will gain the support it so richly deserves.

Thank you for your time and any consideration you give to my submission.

To: SpaceXBocaChica
Subject: SpaceX's Starship program review process

To whom it may concern:

I have been following the development of the SpaceX Starship program for several years now and, from my viewpoint outside the aerospace industry, SpaceX has been a good steward of the environment throughout this endeavor. SpaceX has a track record of being one of the more environmentally conscious aerospace companies in existence as well as one of the most innovative in terms of both aerospace and environmental protection.

In addition, I believe rapid development of reusable, heavy lift orbital capability to be vital to national security and development of the infrastructure for future space industry as well as achieving Mr. Musk's goal of making humanity a multi-planetary species.

The upside for Starship development, I believe, far outweighs the downside as I believe that there can be practical and effective mitigation strategies implemented to allow this program to move forward.

Thank you so much for your time in considering my comments.

Sincerely,

Phillip J. Russotto

Subject: Support for Boca Chica SpaceX facility

Honorable FAA Commissioners,

We are on a precipice of a huge space land grab on the part of the Russians and the Chinese. We have already seen their appetite for neighboring lands that have been somewhat blunted by western actions and the actions of their endangered neighbors. Now the stakes are even larger with the Moon, Mars, and the Asteroid Belt. There are valuable minerals to be had that will be useful for future exploration and exploitation. Yes, we have Boeing and Lockheed with their cost plus contracts and overruns. More importantly, no reusability! SpaceX is our only hope of competing with Russia and especially China.

I live near SF international Airport and hear low flying Jets incessantly. I only get annoyed when these jets come in from China at 2:00 AM. The Boca Chica area is lightly populated and I imagine, most of the population is very happy to have SpaceX there. The testing cuts traffic to the beach but there is thousands of miles of beach to choose from so it can't be that serious for the infrequent closings of the road. The danger from an exploding rocket is real but the area's sparse population make it unlikely that it poses an overbearing threat.

We allow very dense population around airports and we know very well that there is a significant threat to the local population in that case. We live with threat continuously on our highways with over 30 thousands highway deaths a year. Teslas are the safest cars on the road yet NHTSA seems to have singled out Tesla for infinite scrutiny. I hope the FAA doesn't follow this pattern just because they are nonunion which seems to rankle the current administration.

Elon Musk has a mission in life that he is sacrificing all his time, money and energy on. Yes, he is worth many billions in stock but he repeatedly has said he plans to give it all away when he reaches his goals. That is to lower CO2 levels and become a space-faring civilization. Many of the people who work for him are devoted to these same ideals. We all should, since it is a matter of having a bright future, or even having a future at all!

Thank you for giving me an opportunity to address this issue,

Gary

Subject: Support for SpaceX

Please count my support for SpaceX at Boca Chica TX. I consider SpaceX to be essential to US national security. SpaceX should not be delayed for any reason. We are in a space race, and Russia and China are catching up, which will be dangerous to Americans if either becomes dominant in space. I understand that some bird species are endangered at Boca Chica, and may go extinct because of rocket launch noise. The safety of Americans is more important. Safety first.

I think Space X is doing a great job. Not only is it a plus for Texas. It is a giant step for the American Space Program. I think approval should be expedited not smothered in red tape. Yes I agree with and environmental study. It should be ongoing. They can work together without bringing things to a halt.

Subject: Approve Starship flights now!

ALCON,

Space X is the world leader in spacecraft development and soon exploration. It is criminal to see Space X doing everything to excel and promote humanity forward, only to see it slowed down by a boat anchor of a bureaucracy - the FAA. It is pitiful and shameful. It seems the FAA is being subjugated by China. The FAA should be rolling out the red carpet and not China's red carpet.

I realize that Space X is killing off a lot of legacy dinosaurs like Boeing and Lockheed martin. Space X's progress goes to show competition and the free market lay the best ground for incredible discoveries and growth.

We have to win this race. The FAA is impeding the success of America. I am not surprised coming from this administration, which already show's contempt for our times greatest inventor and manufacturer - Elon Musk.

FAA - let's get the show on the road and get out of the way of great success!

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

Port Isabel and South Padre Island are small communities who's sole income comes from visitors and tourists. Eco-tourists and water recreation are huge draws for our community. Impacts of major construction and industry are essential to ensure that our livelihood is sustained. Please make sure that SpaceX have adequately initiated mitigating actions to environmental impacts for the projects being conducted now and not what was proposed in 2014.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

A new cumulative analysis needs to be conducted. A 3rd-party launch failure analysis is needed due to the proximity of Port Isabel, Long Island Village and potentially three LNG export terminals within five miles of the launch site. Additionally, an analysis of the potential impacts to the proposed Jupiter LLC project, a crude upgrading, processing and export facility which includes an offshore VLCC loading facility six miles offshore.

A new biological opinion is needed. The Starship is much larger, there will be more testing, more beach closures, and more traffic where endangered wildlife is present. More closures of Boca Chica beach will result in increased inaccessibility to monitoring of endangered sea turtle nesting sites.

Additionally, I request the FAA enforce and/or hold SpaceX accountable to their required mitigation.

Sincerely,

Raudel Lopez

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

This matter of the possibility of a continual mishap by SpaceX puts the endangered and threatened species and all other flora and fauna of Boca Chica in grave danger. All that happens here involves the surrounding state and federal refuges of which has been a place where I fished and hiked to watch and observe these special species that are mentioned in the PEA. In 2017 I completed an in-depth soil survey both north and south of the SpaceX launch pad. The areas where the samples were taken were marked by GPS. We found in the analysis of the soil no contaminants therefore, we had a clean and pristine nesting area behind the dunes adjacent to the launch pad. This has to stay that way so that the thousands of sea birds can stay in this fragile habitat. So much depends on keeping this habitat secure and including damage already done one worries about the future for this area. I've not mentioned the decades of work that the biologist and others from the refuge have completed to save species

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

AN ENVIRONMENTAL IMPACT STATEMENT (EIS) is needed to address cumulative impacts that have yet to be recognized by the Federal Aviation Administration and SpaceX, including but not limited to proposed Liquefied Natural Gas (LNG) export terminals and a proposed crude upgrading, processing and export facility that includes marine loading berths 6 miles off shore for loading of VLCC ships (65,000dwt Panamax sized) at the Port of Brownsville.

A LAUNCH FAILURE ANALYSIS should BE PART of the Environmental Impact Statement (EIS) to assess the risks to public safety and risks to the proposed infrastructure and operations at the Port of Brownsville and off-shore."

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I am extremely worried about the impact on endangered birds, turtles and mammals at the site. There has already been a great reduction in numbers of endangered birds since the initiation of the launch site.

This area is immensely important for migrating species as well as year-round birds, and there has been lots of debris and trash on what was a pristine beach/land. Even if there was no trash, just the presence of humans disturbs all species. A new EIS must be done!

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I treasure the beaches near my home. SpaceX is hazardous to enjoying them in peace and safety, and its launches threaten the safety of humans and wildlife in the surrounding area. It is egregious that SpaceX had not filed and adequate EIS. It must now do a thorough one! It must also do a Launch Failure Analysis---launches do fail, and a failure of one of these big rockets would be very dangerous and would create an environmental disaster.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment on the Programmatic Environmental Assessment of SpaceX's operations

To whom it may concern:

I am strongly against SpaceX continuing to operate with little concern for the environment in Boca Chica. This assessment failed to provide any semblance of a complete picture of the facility's effect on Boca Chica, and ignored the impact on birds and other wildlife and the habitat they need.

I beg the FAA to reject the current assessment and to instead require a full-scale environmental impact study of SpaceX's operations. This is the bare minimum that should be done if we care at all about the environment and sensitive landscape in Texas. It is disgusting to me that SpaceX is currently conducting experiments without any concern for the environment around its facilities.

I repeat: improve the oversight of SpaceX activities and conduct a full-scale, comprehensive study of how the company's operations will impact wildlife and the environment.

Thank you,
Sarah W

Subject: Comments or questions on the Draft PEA

I am not sure if my bio or background is needed or relevant. Service in Army and CA National Guard gave me first hand experience in protective measures for tortoises, k-rats and the like as well as MSDS operating and reporting standards. I also have a law degree and have been a trained mediator, so I know there are two sides to the story and part of your job is balancing needs of the environment against the need for human endeavors, living wage jobs and our inevitable march into the unknown.

Yes environmental issues for indiginous animals are real, but they are also really small compared to what is being balanced on the other side. SpaceX's presence in South Texas is clearly not limited to all that is being made real in Boca Chica. It also includes not one but two Brownsville based oil rigs being converted to off-shore space platforms. It would be kind of odd for FAA to have environmental issues with sea launch platforms with all of the environmental damage caused by the original use of the oil derricks.

SpaceX has offered to off-set some of the local inconvenience of the beach closures by tunneling to connect an arguably better route. That should probably be written out in the assessment. Trust but verify.

Subject: Dreams are part of humanity

To whom it may concern,

I support the development of the starship in Boca Chica. I would ask that you would give the greatest leeway to allowing the freedom to develop something that could so greatly positively alter human life. I don't have the words to describe the quality of dreaming that is associated with watching the star ship be developed. But dreaming is a human quality that we have had since we crawled out of our caves. I think in particular, it is difficult not to recognize that Elon Musk has pursued what to most have been impossible accomplishments, and then accomplished it. The truth is is that Elon musk himself is a limited resource that humanity has. And we should give that resource the breadth of freedom to develop a dream for all of us.

I was six months old when Neil Armstrong took the first steps on the moon. I'm 53 now. I'd love to see the first steps on Mars. I hope you can help make this dream possible for me.

Subject: FAA get out of the way please

Hello,

The FAA needs to get out of the way! We need to be a multi planet species and you bureaucrats are in the way. Don't give me the spin you are protecting the public?! All the people at Boca Chica have been offered very good prices on their property and the ones that have stayed know the risks. The same risks that space X personal are taking. They can relocate at any time with a big payday. I have visited Boca Chica and the environment has not suffered at all. Space X goes out of its way to preserve the local environment. But the old saying to break some eggs to make a omelette applies here, this is a test and development site!! Unknowns will happen, plus the ultimate plan is to move launches of the coasts. So in closing get out of the way of human expansion, or be labeled in the history books as the bad guys!!!

To whom it may concern. I would like to send you my utmost plea that you approve SpaceX's environmental assessment for the Boca Chica Launch Site in Texas. I'm sure you have received plenty of similar e-mails asking the same and if you need a valid reason look the other way truly consider the potential benefits Starbase's existence will bring. The logistics of beach access and airspace control are manageable considering not only the incredible amounts of Prestige and revenue this will generate for the citizens and the state of Texas, but also as a beacon in this world that the USA is still at the forefront of modern technology. Any delay in the program, be it by dismantling the launch tower or toiling over details for months will allow other nations to copy the technology and the momentum of the events unfolding Starbase are unseen since the Apollo program in the 1960s and 70s. The Starship program is already inspiring generations to come of aeronautical engineers and physicists who are ultimately going to be the people responsible for all the consequences we are passing on to our grandchildren for the actions of the last two centuries. To Summarise, Say Yes PLZ

It is my belief that SpaceX has done their due diligence in good faith to minimize the environmental impact to the Boca Chica area. Also, from what I have seen, SpaceX's presence has had a very positive economic impact on the Boca Chica area. As a space enthusiast, I personally feel that further space exploration can have a positive impact on the world economy and the environment. SpaceX has been a leader (and in my opinion, is THE leader) in space launch technology and future space exploration technologies. It is my hope that SpaceX receives approval to continue their activities in the Boca Chica area.

Dear FAA, I think it is imperative that the Starship development program be allowed to continue at Boca Chica. Earth desperately needs the carbon capture technology that SpaceX needs to develop in order to refuel Starships on Mars. Please don't stop this from happening. Thanks! James Norton

Dear Committee Members, I would like to lend my full support to the activities of SpaceX at the Boca Chica, Texas facilities (Starbase). I am a professor of American History at Kennesaw State University. As a historian, I understand the profound implications for the United States and humanity in the goals of SpaceX and the development of the Starship and SuperHeavy Launch System. This is analogous to the building of the railroad infrastructure of the mid-19th century, which culminated in the construction of the Trans-continental railroads that knit our nation together and brought an increased standard of living for Americans and altered many facets of American life. We are at the beginning of a new age of economic opportunity and it begins with encouraging the development of Starship and SuperHeavy. Dr. Michael H. Taylor Department of History and Philosophy Kennesaw State University Kennesaw, GA

Dear FAA reader, with roughly one week till comment-closing, I would wish to express my support to SpaceX and their ongoing Starship program. Being a Maritime Engineer who went through extensive MARPOL training, I understand the risk and possible consequences technologies (in this case rocket testing) has on the environment. Having read the Assessment, I mostly agree with the proposed construction/operation measures. In all fairness, Starship testing has a minimal impact on Boca Chica residents as well as the surrounding wildlife. In my opinion, the scientific benefit gained from developing an orbital rocket of this magnitude clearly outweighs any potential environmental risks. SpaceX is willingly paving the way for human exploration, and it would be a shame to see all the time-consuming planning, hard work and resources die in vain. Thank you for considering public opinions! Sincerely, -Marko Vesanovic-Dvornik (Croatia)

Hi, Please let SpaceX keep their tower and development side in Boca Chica as is. SpaceX has demonstrated they they can execute on plans and they are changing the way to innovate in aerospace, manufacturing, and other industries. It would be a shame to slow down their progress (and with that humanities progress of innovating technologies.) Thank you for your consideration and the collaborations you are doing with SpaceX (and other launch providers). Let's get Humanity to space!

Let SpaceX continue work at Boca Chica. It is extremely important that they are not bottlenecked by things such as regulatory approval. Obviously there is a important need for safety, however SpaceX always seems to be held up on regulatory approval. There must be a more efficient/ faster way to safely analyze and validate SpaceX's test launches. Thanks from a concerned citizen and space fan, Michael

10/26/2021 Plovers and Humans My interactions with Plovers was in the early fifty's. I was eleven or twelve when my dad decided he would build a house. We lived on the corner of Seventh and Logan Ave. in Billings Park area of Superior, WI. Dad worked for the GN Railway and they had a program that allowed their workers to dismantle out of service wooden railway cars, mostly wooden forty foot box cars. When the box cars were built, they used what would now be classed as select lumber. Our driveway was double lane, next to the alley, which ran North and South. The West lane of the driveway was used to remove the nails and stack the lumber. Over the course of two years I filled three five gallon pails with bent nails each year and also ripped a lot of the lumber with a ten inch table saw. Over those two years we dismantled ten box cars. There were two or three pairs of Plovers nesting along the NW shoulder of Seventeenth Street between Logan and Maryland Avenues. Next to that shoulder there were three vacant lots. There were only four houses on the entire block. I was within thirty feet of the first Plover pair nesting and the noise and activity never caused them to leave the nest. There was a lot of foot traffic by their nests, account of a foot path from the Fifteenth Street Viaduct over the GN Rail Yards. That path was the most direct to downtown Superior businesses, and many people walked to downtown. That path used Seventh St between Logan and Maryland Ave before continuing on towards Cooper Elementary School. The Plovers never left their nests unless someone walking by was almost on the road shoulder itself. Not many people owned vehicles then. Back then, some people still had ice boxes, and grocery stores still delivered and delivery trucks also drove by the Plovers. The Plovers didn't leave the nest area when cars past close by either. Even fireworks in the driveway on the fourth of July didn't make them skittish. Thunderstorms, nor sonic booms from Air Force Jets, their base located near Duluth, MN failed to annoy them either. A lot of the roadways then were gravel, with loose sand mixed in it. Cooper Elementary School four square block area, which was a block and a half West, had many Plovers on it. Plovers were very adaptable to living next to humans. When a house was built on those lots, and the road was paved, the Plovers simple moved to the Cooper School property. This adaptability is pretty well ingrained in all wild life. You are determining the speed and direction SpaceX's Mars Quest will proceed. As well might determine your future decedents, and all descendants possible path to survival, I believe Mr. Musk's Starship Project, and his Mars quest, is vitally important, and eclipses objections to it. This is a pivotal point in history, one that will far surpass humans landing on the Moon. I am past sixteen lustrums now. and yearning that I was just starting on this adventure. JB Peterson

Dear FAA, in my opinion, SpaceX should be allowed to continue work in Boca Chica, because SpaceX is really doing something for the whole humanity, and is not just an organisation that wants to maximize profit. Also all the outdated regulations that aren't made for such rapid development shouldn't stop them from achieving their goal.

As a kid I was enthralled by space exploration. I read about landing on the moon and the voyager program as all these events happened before I was born. I always wondered why there was not more space exploration. It was as if the final frontier exploration had come to a crawl. I was so excited when I learned about SpaceX and it's plans to colonize mars. I think this is a lofty goal, but definatly worth it. I hope goverenment regulation and burocacy will not shut it down. I am also a hugh fan of starlink, as I live in the country and have only 1 option for internet that goes down on a weekly bases and costs twice what I paid in the city, not to mention the crapy speed!

Hello. Please, help SpaceX, support SpaceX to do, what they are doing. Nobody else at this planet did and does it. Please dont stop the next brilliant genius Mr.Musk to do, what he is doing. In case Starship get success, it will change almost everything! We will get the first time cheap access to the space, and with them new endless possibilities. Solve Nuclear waste problem, will be able to shield planet from the sun, to slow the climate change a bit down, put solar power plants into the orbit, to transfer energy to the earth, mine asteroids, instead of destroy our planet and so on... Otherwise we also risk, that other countries like China will be a leader in the space, and will it be really good for America? Regards, Alexander Kant

I believe that while reasonable environmental concerns need be addressed, that in general the work being done by SpaceX should be given special privilege as their efforts are taking us further into space than any actions since the 1960s. To delay or place wildlife that has abundant habitat outside of the SpaceX above the needs of the company makes no sense. Too much would be lost with any delays. If Cape Canaveral can run as it does, Space X should be given the same, and possibly more leeway.

Subject: Support of Experimental Permit(s) and/or a Vehicle Operator License to SpaceX for Starship/Super Heavy Launch Operations I fully support the Federal Aviation Administration's (FAA) issuance of an experimental permit(s) and/or a vehicle operator license to SpaceX for Starship/Super Heavy launch operations. As a retired Army Officer and retired Department of Defense Civilian, I understand the importance of a robust space industry supported by sustainable and fully reusable launch vehicles. SpaceX's Starship Program promises to kick start this revolution and I feel compelled to lend my voice in approval. The United States' Industrial and National Security interests will both be well served by your approval of the permit/license for SpaceX's Starship. I appreciate the due diligence displayed by the FAA to protect the public's interest by soliciting feedback. I encourage your agency to press for the resources required to staff and organize your Agency to accommodate the increased workload brought on by all the innovation going on in the Space Industry. I wish you success as you go through the budgeting and workload-based manpower review processes. Sincerely, Jerome Sirmans
Colonel, U.S. Army Retired

Hello, right now humanity is living a new era of innovation and massive acceleration in the development of technology. Space exploration however, hasn't evolved as fast. Thanks to companies like SpaceX this has not been the case for the last decade. BocaChica is the pillar for the next step which is humanity being an interplanetary species. SpaceX is known for its safety and unlike other companies they try to impact the environment as little as possible. They need to continue their work for the continuous evolution of the human race and keep inspiring individuals such as myself to innovate and believe in the future.

The importance of the work being done at Boca Chica, Texas is extremely critical for the United States and the Western World. If the we do not keep up the pace, we will pay for it significantly in lost opportunities, future prosperity and peace. The work being done in Boca Chica is inspiring a new generation of innovators and leaders willing to push what is possible and embark on a multiplanetary adventure to help assure humanities survival on Earth and beyond.

Hello and thank you for reading this. Please let space-X keep their tower as is and let progress continue at Boca Chica. It is fascinating seeing what they are accomplishing. Please don't let Amazon/Jeff Bezos interrupt humanity's progress just because he wants to rule the universe. Amazon/Jeff Bezos it's clearly trying to delay space-x at all cost. Thanks for your time. Enjoy the day! Kendall McCann

Personally I don't care if things are allowed to continue in Boca Chica. If you shut them down, then the Chinese will pick up their slack and they'll be the ones with commercial space stations and a moon base and all the technology that comes with it. We can just buy all the tech from them like we always have. Lets never change or progress our society. Let the Chinese do all the heavy lifting. They're good people.

Starship will be a critical tool for space exploration and continued American dominance in space. Hindering progress will be a great boon for our adversaries. There are birds and beaches elsewhere, upset locals can relocate. This is larger than Boca Chica and it's residents.

This program is providing a new industry for America and directly providing hundreds of jobs for people involved. As JFK said "lets lead the world and stop following". Approval with constraints only makes sense so do the right thing for all of us and let SpaceX create the future. Your positive decision will help make America great again and you can take ownership of the future in a very professional way, never to be forgotten. Congrats!!

I write in support of permitting SpaceX to continue activities at their Boca Chica site. While environmental concerns exist, that is true everywhere economic activities occur. Without making Boca Chica off-limits to all economic activity - as a State or National Park - there will be some mild environmental impacts. The only objections would be impacts "in comparison to being a pristine nature preserve." In comparison to other economic activity, the SpaceX activities are extremely well suited to minimizing environmental activity. The other criteria to consider is the importance of the activity - if this were another road, another factory, another fishing pier, there are balancing factors which may outweigh those activities, and alternative locations for those purposes. The SpaceX activities in Boca Chica are determined by the physics of launch trajectories, and alternatives are impractical, and the importance of the end-goal of the activities (preservation of consciousness and the Human race) is potentially infinite. SpaceX has been good stewards to date, and flexible in trying to minimize impact on the local community. Please permit SpaceX to continue their activities unimpeded.

I support SpaceX. I believe pushing for the stars answers a lot of current problems. I am writing today because I can't believe the FAA is still in the way, still moving this slowly, and is still listening to ppl about the damn turtles, birds, and whatnot. Animals can move... and so do humans. Please do your side faster and get out of the way so WE can move to a new planet. Maybe the turtles would like fewer of us here! The FAA has practically turned into a damn speedbump of a joke at this point. SpaceX can invent brand new tech and build it faster than you can fill out paperwork. That's pretty bad. The planet and its inhabitants haven't changed, tech has, so use some of it. Just do what you normally do to make the bird/turtle people happy and just ask SpaceX to fund a wildlife refuge (seems to be the answer to a lot of things) and then get out of the way. sheesh. No one asked us if we should set off Massive Bombs in the Oceans but that still happens! I mean no turtles, fish, coral reefs, or other wildlife died there, right? If we still allow that to happen (and that affects the entire planet in one way or another) how can we even be on the same page when it comes to death, pollutants, and destroyed habitats? I understand safety but come on... I support SpaceX 100% and my vote is for you to approve their starbase infrastructure and every launch they request.

The starship development program is a vital driver of innovation and crucial to the advancement of space-related technologies in the United States. SpaceX has spurred a new race by innovation and rapid development of technologies that will re-establish this county as a clear leader into the frontier of space and will drive new business and ventures into the solar system. The innovation of the integration tower in Boca Chica is a great example of outside the box thinking that is needed to be at the forefront of this new race. Please allow SpaceX to continue developing this technology at Boca Chica so that their efforts will not be in vain. Governmental regulation should be there to assist growth, development, and competition, not impede it. As far as the impact on the community of Boca Chica and surrounding area, I am already planning on a trip to visit Starbase to see a starship orbital launch. I anticipate a healthy stream of space related tourism to the area and other sustainable business growth in the area.

We need SpaceX to move us into the future. We won't have another chance at broadening our horizons, technology or capabilities. I think everyone knows that during this process there are environmental changes that take place. We have crossed that bridge already. On a daily basis we are destroying large swaths of nature to house people, or build office complexes for pencil pushers, with no tangible goals. SpaceX is trying to change that as much as humanly possible. I support SpaceXs' development, and I would ask that the FAA team up with SpaceX, similarly to NASA, as they have the potential to do great things and need all of our support. If we support them now, we have so much to gain and learn in the future.

In the last decade, spacex has made a lot of accomplishments that people have thought it is either impossible or spacex is just very ambitious. However, after spacex landed its first boosters in front of the whole world, it changed a lot of thoughts, to be exact, the company has proven to us how capable it is of turning sci-fi into reality. Nasa now trusts spacex with its rockets to deliver astronauts and cargo, doesn't that mean we should build our trust on them? If we delayed or canceled the progress of starship we will never level up with our technologies in our lifespan. In my opinion, we should always support the good work, and what spacex is doing is another era for humans that we ourselves will see in our lifespan.

Although I doubt we could effectively go to Mars with such technology, it is good to see more ideas from SpaceX. Couple of launches won't destroy the life in Boca Chica, but could bring some value to all of us. Going to Mars requires few fundamental discoveries which we haven't done yet. So let's at least prove we need to invest into fields that we barely touched and not in some ancient technology like chemical engines.

I understand peoples concerns regarding the environment and yes with any big development there is always an impact. With this being said though, if this does become what it could become (the potential for industrialization off world and the ability to get recourses from different parts of our system) this would change everything and their would be a net positive effect to all. More resources for humans that we would not need to exploit from our environment. I am in favour of continued development of spacex boca chica.

An adequate review of the unstable nature of governance of the State of Texas including repeated attempts at secession and the deployment of troops in opposition to manoeuvres by the US Army indicates that the expenditure of large amounts of US dollars from NASA in the State of Texas constitutes a waste of taxpayer dollars. Florida and Mississippi are both more stable states and should have this facility. Indeed building the facility in Mexico would be better for the US.

As a soon to be aerospace engineer student, I really believe that SpaceX's plan to create a launch complex in Boca Chica village will greatly benefit the south Texas area. The vicinities around Brownsville and Padre Island will certainly become the epicenter of a substantial economic growth which could maybe even pave a path for the creation of new tech startups. The development of this program will inspire many to pursue a high level education and will attract many qualified experts from all around the world. I can surely say that this will happen, since I myself have felt the inspiration. The decisions taken now about this matter will affect the future of mankind. They will be crucial for NASA to reach the moon again, and eventually Mars.

Slowing down, or not allowing SpaceX to continue their operations in Boca Chica would be crushing to the space industry and it would allow other countries to leapfrog the US in space technology. China is catching up to the US and at this rate they will overtake us in a few years. We need all the help and momentum we can to maintain our leadership in space. SpaceX currently has no competition in the US and blocking them would in fact be "anti competitive", artificially allowing others to catch up. Blue Origin are a joke as they have yet to fly a proper rocket in to space. Lockheed Martin is still focussing on old technology. Boeing can't spell out the words quality, safety even if their success depended on it - their Starliner program is a literal joke. So please, allow SpaceX to continue and move at a faster pace!

Dear FAA Representatives, Your job and duties are incredibly important to the safety, reliability, and predictability of aviation and the use of air space. It is with this in mind that I as well as many Americans across the country strongly support SpaceX' requests for flights within the requested timeline. SpaceX' mission reverberates for many Americans young and old, including for national heroes like Buzz Aldrin, who stated just this week that companies like SpaceX are reinvigorating a thirst for American-led space exploration. Unnecessarily slowing down or halting their progress will cause high disapproval ratings from these people, the citizens of the area (who have benefited greatly from jobs and who are hopeful to be the center of 21st century space travel), and the billions around the world who have yet to see how revolutionary this technology truly is. I myself have been inspired greatly by the work of SpaceX. Though I focus my studies on international relations, I have taken this inspiration to go back and personally learn astronomy, biology, chemistry, and complex mathematics including orbital mechanics, something me 10 years ago would revolt over. Thanks to the recent work of SpaceX, NASA, and more, Americans are once again excited and, more importantly, inspired by space. Placing costly or timely restrictions on this program would, for most including me, induct on me the feeling that the government does not care or place much importance on STEM, space, and science in general. This is not the time to do that. Moreover, as someone who does study geopolitics and international relations, this would shorten or eliminate the U.S.' current advantage in space technology (among others), allowing competitors and partners alike to likely surpass U.S. tech in this field, causing major geopolitical issues and likely lead to greater national security problems. This does not, however, mean that I nor most people support letting SpaceX have no regulation or letting SpaceX have free reign over whatever they wish to do. Air space, environmental, and socio-political concerns must be addressed and demanded from SpaceX in order to provide an equal and equitable space for those who may be negatively effected by SpaceX' actions. Nonetheless, these issues pale in comparison to the incredible possibility the Starship can have on revolutionizing space exploration, travel, and colonization. Millions around the world are awaiting your decision, and billions will applaud or criticize it in the future. Thank you for reading.

Please give starbase as much support as you can. I know this technology needs a lot of regulations so that security and environmental needs are met. However, the starship program is so much faster than other rocket developments that I must insist (beg) that you make bureaucracy process as quick as you can. Kind regards from Spain.

Dear FAA, While it's important that the FAA continues to do a great job protecting our shared environment, I think those concerns must be balanced against other priorities, in this case, humanities destiny among the stars. And it's not often a project like Starship comes along. It has the potential to keep the US as the most important player in space, inspire young generations to become engineers, and unite humans with a shared vision. For these reasons, I would like to see SpaceX be given the ability to build and launch their rockets from Boca Chica. Not a free pass to do whatever they please. They must take all reasonable precautions to protect the surround nature, but they should also not be forced to relocate to another location due to onerous regulation. I hope all of you at the FAA can keep our dreams alive. Thank you, David

SpaceX and its work at Boca Chica, is inspiring Americans of present and future generations, and giving them something to be really proud of America for, and for the rest of the world to look on in admiration. They have rigorous safety standards and the best safety record of any human-rated space program ever. Boca Chica is the safest (coastal) location with the least impact on residents or wildlife, that they could choose. Please grant them all permissions to proceed without delay... otherwise, we risk either having to watch the latest Space developments being done in Mexico or Russia, or, worse, see Humanity sink into another Dark Ages due to events we can not yet predict. Spaceports/programs need to become more like Airports, with frequent launches and testing. Thanks.

I am a US citizen residing outside of Texas, but am submitting this comment because I am very supportive of granting SpaceX a license for expanded launch operations at the Boca Chica site, and find the draft environmental assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site thorough and well considered. SpaceX does inspirational work, and the FAA should strongly support that work while ensuring operations are safe and considerate to local stakeholders and broader environmental and regulatory policies. I personally trust that the FAA will act in the best interests of America on this issue, and I believe that means moving forward with the licensing process using the draft environmental review provided.

Thank you for your service to the country ensuring safety where pertinent. SpaceX is a company moving fast, with good results so far, and I know it's difficult to keep up with good stewardship of citizen safety, and environmental consideration. All humans have some negative impact on some part of the environment, and business are no exception. Boca Chica certainly affects the area with increased traffic, launches, and infrastructure. I don't however see a global effect on any species of plant or animal. With that said, I respectfully request an expedited but reasonable consideration of all facts, not feelings, that are pertinent to supporting this amazing company I follow as a prime example of what makes America great.

I am from Switzerland and I follow Space X since I first saw the falcon9 booster landing. I thought this is fake and as I realised that it's real I was fascinated. Projects like Starbase in Boca Chica are nowhere else possible than in the United States. Here in little Switzerland everything is highly restricted and rules are here to control other rules. That makes innovation and over all progress very hard. Please let your country be the innovator for the future of humanity and keep up the unbelievable pace with development of Starship. It's one small approval for the FFA but a giant leap for mankind.

In regards to SpaceX at Boca Chica Texas. Its my opinion that the work being done by SpaceX has a level of importance to humanity and the future of our society that far outweighs the impact of the immediate surroundings and conveniences of beach goers. That however doesn't mean that spaceX should be given a free pass to create mass destruction over a vast area. But only that they should be given the freedom to continue as they are. History will look back on this massive accomplishment as a turning point that advanced humans to new levels. In short, I'm in favor of SpaceX and their Starship rockets to be allowed to continue launching at will.

The work of SpaceX is absolutely vital to the economic, technological, political, cultural and BIOLOGICAL well-being of not only the United States, but the whole of Humanity. The choice of the Boca Chica, TX site for launches deliberately takes into account the need to make a minimal environmental impact. It should also be considered that the depressed area of Brownsville will benefit tremendously from the presence of SpaceX. Approval of their work in Boca Chica by the FAA is a winning decision and a moral one. Stuart Gilmer

Hello, I have been casually following SpaceX's progress on the Starship program, which has been thrilling to watch. For the first time in my life (I'm 26) I may be able to witness Americans stepping foot on celestial bodies, which gives me immense hope for the future. Of course, SpaceX's, and by extension, NASA's, success hinges on obtaining any and all required FAA approval. As civilians, I, along with my peers, believe that Starship's importance for sending Humanity ad Astra must be given priority consideration by the FAA. Space represents not only the final frontier for mankind, but often, the first frontier for young inquisitive minds. Surely, our nation, and the world, would benefit greatly from the inspiration manned deep-space flight provides our youth. I cannot think of a better way of building our pipeline of young scientists, engineers, mathematicians and entrepreneurs than by the rapid and successful development of Starship. The message to our young boys and girls: in America you are empowered to build the vehicle to take Humanity anywhere it dreams. Finally, the US faces significant foreign competition in space exploration, and I fear certain countries may surpass us if we don't advance at a rapid pace. While we maintain a lead, we must not rest. The US' space advancements have been paid for by the blood, sweat and tears of many generations. Efforts should not impinge our continued advancements, but forward them. Accordingly, I believe that the FAA has a duty to American voters, members of the free world, and all global citizens to position SpaceX and Starship to succeed. Actions that slow Starship may be bureaucratically convenient, but must be avoided at all cost. Humanity relies on you, the FAA, to spread our seeds among the stars. Sincerely, J. Alexander Rurka

Hello, My name is Kyle Rhodes. I am 22 years old and an Ecology graduate from UNC Charlotte. I Have been following the Start ship program for the past couple of years. They are fueling an incredible fire in the space industry. I support regulations, but SpaceX's rapid prototyping has shown promise in an impressive time. Slowing this process would slow this successful process. This would require many flights per year rather than the proposed 5. The Starbase site is showing respect and awareness to ecological contamination and believe would continue with their expanded design. Thank you so much.

Hi Team, In regards to the FAA approvals for Boca Chica SpaceX, in my personal opinion I believe this should be fast tracked and approved. Sure there might be a enviromental impact, but this should be report so the correct measures should be taken, in haste that is. Slowing down and rejecting anything in regards to the site (if the rejection is fair, then great) actually has a global impact on spaceflight development.

Dear Sir or Ma'am, I'm writing this brief note to encourage the FAA to swiftly provide regulatory approval for SpaceX's orbital launch tests. As I'm sure you understand, the importance of this work cannot be overstated. I genuinely appreciate the FAA's efforts to ensure risks can be mitigated where possible, and the importance that the agency places on the safety of US citizens. That being said, my personal opinion is that the potential benefits of this space program warrant the acceptance of some additional (well-mitigated) risks. Respectfully, Matt Pinkerton

FAA hearing

I fully support SpaceX as my parents fully supported Nasa, without which, many of the luxuries we have today would not exist, like this e-mail.

Nasa's launch facility has a bustling wildlife profile despite original concerns over its environmental impact.

Many of the beaches at Boca Chica are shown with cars parked on them, if environmentalists were concerned about turtle eggs I think that would be a bigger concern than any threat SpaceX poses.

Go for Launch with spaceX is a huge milestone for the entire world and the entire industry of space exploration and manufacturing. It is a big step towards many goals like learning more about our world, space, the moon, and how organisms and other things work in space. I really hope this approval goes through and we all can benefit really soon from all the good things space exploration brings

Thank you for inviting public comments. SpaceX is an industry leader and the starship program is an important part of developing and securing our future in space. Delaying the program could be a significant setback to the space industry and could slow the new space race. Building momentum is difficult and is not guaranteed. Please avoid creating any unnecessarily delays. Thank you Josiah Newman

You won't stop Elon's team and their great work. What you might do is force them move 2 miles across the boarder into Mexico. Wouldn't that be globally embarrassing? Let's not be stupid and let them move forward. Starship will be on sea launch platforms in two years anyway, so what's the difference?

Hello, I am writing out of concern that the SpaceX project will be delayed due to guidelines set by the FFA. I believe that any progress made to hinder or delay this SpaceX program is not only bad for humanity but also the United States as a whole. Seeing as SpaceX is a private company it would seem to me the parts can be manufactured at one plant and shipped to anywhere else to perform a launch. If this is the case would SpaceX not be able to launch from another country that would support these activities in spite of the United States. Personally I feel that the government should be working in the best interest of the country and the people. Please do not delay this program any longer and allow SpaceX to complete their mission of making humanity a interplanetary species. Thank you for your time, Joseph Barrowman

I'm pro SpaceX should continue with his projects from now on and in the future. I'm not living in the area, actually i'm from germany, but with all the regulatorms we have here - we have enough laws for 3 country's - my opinion is that Boca Chica Texas should be an idol for the world and let them do. Think of your grandchildren and what a chance it is to witness this progress right now and telling them about this time. Not only that - in your personal case, who ever reads this, beeing in the position to be responsible to clear the way for a future we can be proud of and have a reason to getting up in the morning. Thanks for your time - A little voice from germany J. H.

Hello, I would like to express my support for SpaceX's efforts to get Starship production ready from Boca Chica. With the looming competitive threat that is China and more importantly, the gains for humanity that this project can bring, any risks to the environment, which appear minimal from your own assessments, are easily acceptable. When you take the long view and consider how much potential Starship has to speed up moving various types of manufacturing and perhaps even agricultural activity to orbit, there seems to me to be an even bigger environmental risk to NOT pushing Starship as fast as possible. Please throw your support behind SpaceX and Starship. Thanks! Michael Case

I think space X should be able to continue their testing program in Boca chica provided that there are sufficient barricades and sound dampening strategies in place to protect the town and its inhabitants. I do not think that landings should be permitted at Boca chica as the town is too close and things may be slightly off course as they have been in the p[ast of the falcon 9 campaign.

Hello, Hope you are safe and well. I have been following SpaceX and Starship development for about 10 years. I have seen the impossible become possible. From landings of Falcon 9, to Falcon Heavy, to Crew Dragon, to the first landing of Starship prototype. I am inspired by hope that humans can become in the near future a multi planet species. Starship development and eventual settlement of Mars is the most important project on earth to protect humans from extinction if we have a planet killing event. Ie. Rogue asteroid, nuclear war etc In light of this, star base and starship FAA environmental assessment must allow all testing, construction and flights commence ASAP. Jesse Jensen [REDACTED]

Concerning the SpaceX facility at Boca Chica Tx. Compared to any and all petroleum industries located in Texas, it is my opinion that the SpaceX facility has a very small additional impact and that cleaning up the oil industry's many sites will have a much more positive impact than prohibiting a budding industry from continued development.

Dear FAA, SpaceX which was founded only 20 years ago is now a leading company in Space Exploration and has contributed to the Aerospace Industry and to the world as a whole in an unimaginable way. From the first privately funded liquid-propellant rocket to reach the orbit to the first fully reusable first-stage booster and now reaching for the first fully reusable launch system, those achievements are only a fraction of what has SpaceX accomplished. In addition, all those technological breakthroughs are being developed and tested with one thing in mind which is "reusability". With that said, SpaceX is, in its essence, aiming for reusability which means lower costs, accessibility, and reducing the environmental impact of Space Exploration as much as possible. Therefore, I am of the opinion that while I understand that SpaceX's Starbase might have some negative environmental impact on the environment around the Boca Chica area, the sheer potential and benefits of SpaceX's development of Starbase and the Starship system far exceed the negatives. To conclude, please let SpaceX continue their work on Starbase, Starship, and all its other projects in Boca Chica so that we can live in an exciting world where we no longer only look up to the stars but finally get a chance to reach them. Thank you,

Greetings, As someone who watched Apollo land on the Moon when I was 6 years old I have dreamed of a day when the United States would once again lead the world in space exploration. The Shuttle was too expensive and too risky. Follow on programs appear to simply want to regurgitate old ideas with slight modernizations. SX is truly re-inventing the space industry and invigorating countless current and future engineers. Do the right thing for raising a desperate nation out of trying times to the stars again!

It would be a big step back not to allow SpaceX to launch. And It would send a message to every nation, that the USA stops development. SpaceX is doing something big, that will change the world.

Hello... It took an entire country, multi thousands of people, and billions of tax payers dollars to build the Saturn 5 rock that took us to the moon. Now we have one of the richest person in the world, spending a good deal of his own money, to help NASA, help companies (including the US government) launch satellites, and push our country to the top of the space race again. I think we need to support SpaceX. It is great that he has lowered the cost to put satellites in orbit. And he is not stopping with just that. His company will help us go to mars. We need to help this company, not stand in it's way. I hope you balance all of this when you make your decisions. Thank you, James Honeycutt Salem, Oregon

Dear FAA, please continue to grant SpaceX, at Boca Chica, permissions to continue their very important research & development into human space flight enabling the USA to remain at the forefront of space technology. I myself am a UK resident and am in ore of my American cousins and what you have acheived in this field of technology since the early 60's. The American people have shown the world that they can and do share this technology with other countries and work alongside other countries but feel it would be disastrous if a dictatorship such as China were to leap frog the great USA and become the dangerous leaders in space technology. Please, please remain our hope for a peaceful future in space. God bless America.

If USA for whatever reasons do not want SpaceX to launch Spaceship from USA territory it is perfectly understandable in a democracy. But for sure they are most welcomed to create an offshore company in many countries to do so with much less "red tape". Mauritius may be a good candidate. Best Regards Jean Marc

To Whom It may Concern, I fully support SpaceX and all of its efforts at Boca Chica. I would request that the FAA grant any and all requests of SpaceX with little to no red tape. Progress can not be made with over regulation. Please do not let any sort of environmental review slow down the progress being made there to get us to space. There are a lot of other areas that the environment is in trouble and should be worked on, but I do not think it is there. Kindly, Steven G. Meeks

SpaceX's goal is to make life multiplanetary, which I personally thinks is a really important thing for humanity as a whole. In order to achive this as fast as possible, they need Starbase. They are almost ready for their first launch and it would be the next big milestone for them! I really hope the FAA tries to give them permission to keep the Orbital Launch Tower and lets them continue progress further with the Starship program from Starbase.

I write to you in hopes you will let spaceX keep there infrastructure in place and let them continue their progress. Hindering the starship program I believe would cause more harm than good from the individual, global, and environmental stand point. individually you would be taking away jobs in the community where people have moved themselves and even their families to work on the program. Globally the starship program is a major key in the starlink program which will provide those who have not been able to receive internet. Especially those who have been underserved like Indian reservations. Environmentally the starship program is designed around renewable and natural fuel sources. additionally it will significantly reduce the the cost to orbit allowing universities and small companies to conduct research on our environment which would otherwise not be able to be funded.

It is my opinion that the return on investment for humanity overall will be far greater than the risks to the environment posed by Starship development. We are quickly running out of time to ensure the long term survival of the human race and the only project on track to give us insurance against a cataclysmic event is the starship. In addition it will be a giant leap forward for not only spaceflight but humanity as a whole as we begin to truly explore space. Thank you for reading, Alex K.

SpaceX needs to have the ability to test rockets. While the rockets do provide some level of risk, this is the type of risk that cannot be entirely avoided if it wouldn't be practical to force tests to be done from the ocean. Alternatively if the FAA continues to hinder SpaceX it could provide motivation for SpaceX to go to countries (Russia) where they may be more willing to allow the tests to occur unhindered by "red tape". I still take pride in my country and our accomplishments and would like the SpaceX to remain here as a US company. I believe that SpaceX treats safety seriously and as long as a reasonable effort it made and people living near by understand the risks then SpaceX should be allowed to continue.

Good day to whom it may concern My name is Darren Harvey and I'm from South Africa. In my personal opinion the progress space x is making can change the way our day-to-day live operate in the future. It is the first time my generation (I was born in 2001) has seen any enthusiasm in space for human exploration. It is magnificent and encouraging to see the things people can create for good. I think the progress should be allowed to continue and everything that has been achieved so far should be allowed to stay. The only time program of this scale was achieved, it was during the cold War. This time the intentions are to land people on a different planet and make mankind multiplanetary. With good intentions this project should be encouraged and rewarded. If other companies can pollute for worse reasons like profits, then surely this project can continue to give hope and inspiration across the entire planet, no matter what language or culture, space exploration is something that can unite us all. I hope this contribution helps and makes you consider what could be lost if exploration, creativity and passion are put to a stop. There are other companies and pollute this planet far worse and it's in the name of profit for a few yet this endeavor contributes to humanity as a whole and brings hope and inspiration. All current progress should be kept and all future progress should be assisted. Kind regards Darren Harvey

I write to you to ask that the FAA permit SpaceX to keep their launch tower as is and to grant more licenses to SpaceX to launch their current & future Starships from Boca Chica. The value SpaceX provides not only to Boca Chica but also to our country, as well as the world, can not be denied. Do not hinder or further delay what SpaceX is doing as a leader in space travel. By preventing SpaceX from their goal, which benefits all of humanity, would be very wrong. Sincerely, Ken MacTiernan [REDACTED]

I am writing in to support SpaceX. I have lived relatively close to Fort Campbell Army base for 54 year now. There are a lot of helicopter flight paths that cross our city, they are loud and have become quite normal to us at all hours of the day and night. I have also hunted on the base close to the demolition area/artillery range. The wildlife don't seem to be affected by any of the military actions. I love seeing the different helicopters fly over and support their actions. I also support SpaceX and will take a trip down to that area soon. From the flyovers available on youtube the SpaceX area is very small and looks to have a minimal foot print for such a large investment. Please monitor but allow SpaceX to move forward quickly. Thanks, Jerome Pulley Clarksville Tn.

Hello I am writing to encourage the approval of SpaceX orbital flights. By pursuing orbital flights, The knowledge gained and advancements in technology benefit mankind greatly. The technological knowledge gained by proceeding towards orbital flight benefits far more than just the space industry. This technology benefits arguably, almost every industry and is absolutely critical to advancement of mankind. please do everything you can to assist SpaceX in its mission. Keep in mind this is at no expense to the taxpayer we are gaining all of these benefits. never before in history has all of humanity benefited from spaceflight innovation at zero expense from governments or taxpayers. You single-handedly have the capability to benefit all of mankind by approving SpaceX requests. Thank you for your consideration and thank you in advance for helping advance the worlds knowledge.

I just wanted to drop a quick note to provide my support for establishing an active space launch complex at the site in Boca Chica (aka Starbase). I was just a couple of months old when Apollo 11 set boots on the moon. In 1972, Apollo 17's lunar module blasted away from the lunar surface, ending our moon missions. I've been a fan of Space activities my entire life, but have been disappointed we've not gone beyond LEO is almost 50 years (essentially my lifetime so far). The 10 year gap in the US having a crew rated vehicle to orbit was inconceivable to me. The government has it's priorities and funding is key, etc... Plus I always hear the arguments that we shouldn't be wasting money in space when there are problems down here. Despite knowing the advancements the space programs have brought to people's everyday lives, I can agree with that to an extent. The Commercial Crew program was the beginning of a strategy that makes sense. Let private industry develop and build the craft to allow NASA to meet their missions on smaller budgets. NASA provided the guidelines and expertise to allow companies like SpaceX to succeed. Thankfully, now we have the Dragon Spacecraft. SpaceX isn't perfect, but they produce results. I believe that Starship will succeed as well, providing a craft capable of delivering cargo and crew to the Moon, Mars, and hopefully beyond. I would love to see boots on Mars in my lifetime. I think that the work being done at Starbase will make that happen. I don't know why that location was chosen, but I hope the locals and the wildlife are not impacted long term as we (the human race) witness and benefit from the history that can be made at Boca Chica. Somebody standing in the Acropolis on the hill in Ancient Athens probably wasn't thinking about what it would signify to Western Civilization today. Provide oversight and guidance, but let's keep those hardhats working in Boca Chica, someday, all of humankind may point to them and say, here is where we leap off to the stars.

As a biologist and former resident of Brownsville I cannot emphasize enough the value that SpaceX brings to the Rio Grande Valley. I encourage the FAA to allow SpaceX to continue their work developing and testing orbital rockets. While I do appreciate the environmental costs of this development may be non-negligible, a future with reusable rockets is ultimately one with less waste from rocket programs and less cumulative environmental impact as an industry. I ask that the FAA take this as an opportunity to develop new environmental mitigation frameworks and technologies that support natural resources while also encouraging technological development. Thank you for considering my thoughts on this matter, Austin Greene PhD Candidate at the University of Hawaii Manoa and former UTRGV graduate

Growing up my brothers were always fans of nasa and the excitement surrounding the moon landings. I never understood this until in 2010 i became disabled and was and still am partially bed ridden. Due to this tv became boring and i started to look at utube and saw SpaceX and started to see the reason why we needed to go back to space with our own rockets from the USA. I couldn't believe that Obama canceled our ability to go to space. It has become more evident to me of the need and urgency to return to the moon and mars. If we truly want to survive as an sentient species. We need to proceed with complete urgency. SpaceX is trying to complete this goal and as an government agency the FFA Needs to work with urgency like we did when going to the moon during the gemini, mercury and the Apollo missions. Yes government over site is somewhat needed to keep people safe from reckless exploits and company greed. But all to often government agencies are to big an bureaucratic to keep pace with ambitious goals like SpaceX because they cannot function as quick and proficient as the private sector. and Government agency's should be slashed in scope so we can actually get things done again in our country. I hope that the FFA can see urgency required for what SpaceX is trying to do and why it takes so many months for to do your assessment it boggles the mind. I could go on about how slow gov agencies work but i wont. Please allow SpaceX to continue to do their work for this great nation and humanity in an quick and proficient manner!

Greetings from Czech Republic! I would like to express my positive attitude towards SpaceX's activities in the Brownsville, TX area. The company has demonstrated how efficiently the development and validation of a new generation of space hardware for cargo and crew can work.

I think that the amount of good achieved through starbase environmentally, based off spacex's cheaper manufacturing costs, launches, and general construction methods greatly outweighs any downside of the location. If spacex is delayed, NASA will continue with their antiquated methods, which are significantly worse for the environment in every single way.

Being a child of the original "Space Race" which when I sat with my mother back in the 60's was the backbone of my inspiration & eventual career direction. I had the ambit to become an Aerospace Engineer on the British Aerospace/Aerospatial Concorde . After many years of study in school , college & technical college I did basic trade training in the discipline of electrical and electronic engineering. I was driven along by the NASA projects such as Skylab, Hubble, of course the space shuttle. Then as life went by the ISS . Also the various probes sent to Mars , Saturn , the sun etc. All kept my desire to better myself before, during and after my career. As a result of my love for space, I became an Avionics Engineering Tech in the Royal Air Force eventually working on the Tri-National tornado GR1 . 4 years of a busy flight line . Then from Jan 1990 to end of 2003 I was an engineer on the British Airways Concorde fleet. Followed by 4 years on Boeing and Airbus industries aircraft. So, why the life story according to Chris. It's about inspiration, the future of travel, business , engineering, tourism, exploration. During the NASA , Mercury. , Gemini & Apollo years, many thousands of human beings were recruited not just by NASA but thousands of other companies, all in a vast supply chain, huge employment figures were order of the day for the world as a whole. What I'm getting at here is, Elon Musks dreams of a fully reusable launch system is a superb idea. The ability to not just reduce costs of delivering payloads to space & bringing them back. Not just taking people into space and back. It's about advancing the technology to do those things ever more efficiently. To not have to keep destroying perfectly good vehicles . But doing it all in a sustainable & more efficient way. It's also a means of making exploration so much easier, building off planet bases that will help us not just live for the sake of exploration on other planets or bodies. It will advance efficiency in life support and monitoring, growing food sustainability, Worthy of mention of course is the commercial advances in the ability to get much needed material resources from other places such as the moon in order that we can reduce the amount of removal of materials from planet earth . I could keep typing out the benefits as I see them. So let me cut to the crux of the matter I wish to support The SpaceX starship system to be allowed to continue . For it to be unhindered but assisted by the FAA to make the continued advances in the technology & infrastructure to ensure a safe operational manufacturing, test and launch facility. The advances in the technology can only be of benefit as we head into the future Also the mass employment for everyone wishing to participate As an individual employed directly by SpaceX Or indeed the many thousands that will have to be employed by 3rd party suppliers to ensure the entire invention, construction, manufacturing, production & launch areas of the whole project . That in itself has to be the biggest positive of all. If all goes well, there will be a future in space for the human race. A future for the world economy A future for commercial investment to acquire materials from space bodies such as asteroids, moons and other planets to reduce the ever increasing stripping of raw materials from planet earth. The bottom line for me is. We do need to become space travellers We do need to expand our horizons for the survival of the human species Above all, Elon Musk has the vision, the expertise & commitment as yet not fully displayed by others . He returned along side NASA Americans to space in an American vehicle, this time a vehicle that returns to earth. Then reused Let's get the start ship program the same support , if we don't , we may lose our opportunity to do this next "Giant Step" for not just "Humankind" but for all the life on planet earth (but that is another complex story) That's all from me, I've just said my thoughts as I see them. I do believe , the benefits outweigh the negatives. FAA I give my full support to SpaceX Boca Chica's unhindered operations for the next step into orbital flight and on to the Moon & Mars Yours Chris Brown (Avionics Systems Eng tech SST)'UK

Dear staff of the FAA, I would like to add my own thoughts to the topic of SpaceX building a "spaceport" in Boca Chica, Texas and potentially launching rockets from there. My opinion is that SpaceX is showing humankind to reach for the stars (pun intended) and this should not be stopped. Obviously they cannot do however they please, but I believe that their goals of building an almost fully reusable rocket and using it to fly to the Moon and potentially Mars are a very positive thing, if you look at it from a long-term perspective. So even though they need to build an entirely new spaceport, including a launch tower using a never seen before concept of catching a rocket mid-air, as well as testing their rockets at said place (which includes failures as well), I am convinced that this will be an investment into the future, that will pay off. Thank you for taking the time to listen to the public's opinion. Yours sincerely, Marvin Hülsebusch from Germany

Hello! I'm writing from Poland, so you may think this does not concern me and that will be right... however I want to share some thought: Starship project along with Iter fusion reactor are two the most crucial undertakings that are, in my opinion, essential to survival of the Humanity. The second should bring us unlimited power to overcome any obstacles that our civilization is going to face in decades to come, while the first may just give us a backup plan if the first fails... Kind regards, Łukasz

Ladies and Gentlemen, I think, SpaceX should be allowed to continue their development program in Boca Chica. I believe they put a lot of thought into selecting a site that will allow them to launch into orbit without impacting other countries (you know the planned flight path past Cuba), impacting people and the environment as little as possible, while keeping everything on US soil. I think that site is actually better than Florida, because there are less people around (a lot of people moved to Florida when NASA set up Cape Canaveral, so it's much harder to set up a larger exclusion zone than the existing one there). Best Regards, Ullrich Jans

Regarding SpaceX activities in Boca Chica, TX specifically in regards to approval for activities related to development of the Starship/Superheavy program. I'm just a member of the general public but I have an appreciation for the advances in science that can be traced to access to space based satellites and technology. Weather prediction has proven to have saved millions of lives with advanced warning and disaster planning and staging possible only because of extensive monitoring of numerous parameters from many satellites owned by many countries or companies. As was the case when weather balloons were first used to try to understand the weather over 100 years ago, it is hard to predict how future technologies might assist with tackling mass migrations and humanitarian crises associated with global warming. The promise of the fully reusable rocket that vastly lowers costs for launching satellites is something I feel strongly about as it could be students or private companies putting very small satellites into orbit to try new technologies which would only be possible if costs are reduced significantly and no other active programs look to be on track to succeed in this regard to the same extent. Though SpaceX is only a launch provider and we can't know this rocket would be used for this purpose it is reasonable to assume that reduced obstacles to space X will benefit society greatly if there are no similar alternatives. That said, i would agree it should be possible to further mitigate the impact of activities at that site. Hopefully government and private agencies can work with spaceX to accomplish ongoing monitoring and mitigation improvements such as tunnels for animal crossings, lights and sirens to pre-warn animals to pending launch / landing attempts or other approaches which have been used previously to minimize direct impacts to wildlife. This should be doable without blocking progress with appropriate agreements and financial commitments. Maybe the initial approval can require some immediate and direct mitigation's over the next 6 months with expectations to continue such public and government engagement? Perhaps additional land can be allocated to SpaceX in exchange for additional mitigations where roads and access can be changed/repositioned to both allow SpaceX activities with the benefit of minimizing impacts to preserved or endangered habitats. Hopefully there are past projects that set some precedent or examples of win-win solutions with give and take. Perhaps activities can be approved based on agreements for bi-yearly assessments and evaluation of how well mitigation as are working with periodic refinements. I don't know the relationship between such activities and environment assessment processes and leave it to those that can work cooperatively to figure it out - but ask that you do where reasonable. With regards, Steven Glasser CA Principal Systems Engineer for a large medical device manufacturer.

FAA and Steve Dickson, Please approve the permits and the audit being done now in Boca Chica/Starbase, TX. The complete collapse of the SLS program is a national embarrassment, we have China and South Korea and Japan all able to launch national rockets with ease while the Americans keep slipping and falling on their face. SpaceX is the face of the United States presence in space and their programs need have all impediments moved out of their and that includes the FAA. Stay out of their way! Just sign off on what bureaucratically needs to be done and then move out of the way. Thank you, Max Harrison Kennewick, WA

Hello to whom it may concern, Hope this finds you well. Space x are doing revolutionary work at Starbase, we can agree that some of the testing may have not met regulations before. However given the current state of construction it would be a detrimental to the program to refuse permission. Space x are changing the world with mind blowing progress and they need your support. I feel if they didnt get the support they will simply move location at huge cost to the program and the surrounding area growth. Hope the right decision is made. Joshua Brennan

What SpaceX is doing in a Boca Chica is the most important advancement in technology this century and the only hope for American leadership in space. The environmental impact can be worked out. Allowing China to lead the world in space technology, shape the future of humankind and become the world's beacon for hope and progress is much harder to rectify.

Environmental and public safety are crucial as we move into the future to ensure we as a species are making efforts to coexist with our environment and each other. I completely understand that. With that said, what SpaceX is accomplishing in Boca Chica Texas is nothing short of inspiring and revolutionary. Their accomplishments are not only spurring an entirely new generation of engineers and scientists, they are validating the US's foremost position in aerospace domains. The future can be bleak if looked at through some of the tinted lenses some would have us look through, but only SpaceX and their project in Texas can power through all of that to show us all what we can do if we set aside our differences and work together to accomplish something great. I urge you to consider the application and not be swayed by opponents but to adequately and expediently make an objective decision so we can all see what the future could be like. Thank you for listening. Jackie

(sorry for the spelling in advance) You can tell a child 1000 times what's on the roof and yet the moment he or she is left alone with access to a ladder, on the roof they go. Humans will never be ok with just being told what's on mars we will have to go at some point, not only because it might be a only option but we will have to go because of the same reason kids fall off roof's every year, SpaceX and elon musk are the ladder, please don't kick the ladder out from under the kid. I'm a 9th grade drop out but at least I'm able to see this for what it really is. It's my favorite part about humans, God speed spacex keep making the human ladder taller and taller and I assure you you will find humans to climb it....

The SpaceX Starship effort at Boca Chica is the most visionary and yet practical space program since Apollo. As someone who watched Neil Armstrong walk on the moon, I remember well how the world was united by the thrilling prospect of someday sending humans to Mars and beyond. And how the world looked up to America as a beacon of courage, confidence and engineering excellence. Now, 50 years later, SpaceX is ready to re-ignite our spacefaring know-how and exploratory dreams. I urge the FAA to approve Starship launches at Boca Chica, and help accomplish those goals.

As someone that was captivated by Space and the many great minds behind our awe inspiring programs, I wanted to share my opinion about the current developments at Boca Chica and now Starbase, Texas. It's be disheartening to see the most promising endeavor since the Apolo program and the Spade Shuttle era, to be delayed or blocked in any way by regulations, regulations that some may even consider bureaucracy. While it is imperative to maintain the safety standards required to bring forth this vast endeavor, for the first time in decades the public is engaged and hopeful about our space fairing capabilities and the possibility to create permanent settlements outside of our planet. If it's possible, please expedite the regulatory approval process for SpaceX and the development of Starship and Super Booster so the new generations can go through the experience and excitement of a new future around the corner, where we can look up to the stars and dream. Thanks in advance.

For your consideration, in reference to SpaceX's Boca Chica, TX Starbase as well as their Starship and Super Heavy Booster program, I would like to voice my support. It is my belief that the technologies being developed by SpaceX and the progress they continue to make is a great benefit to not only the United States and its citizens, but all humanity. I believe it is imperative that their FAA application be approved as early as possible to be able to continue this revolutionary work as safely and timely as possible. Delays will not only harm the program, but the thousands of employees who work there, as well as the employees who work offsite to support this program. I'm sure there are others who share my enthusiasm, as well as some who may sincerely disagree, however, it is my opinion that the benefits of allowing SpaceX to continue their work greatly outweigh any possible risk, or environmental impact to the local area. We are at the cusp, as a nation, to be the leader in reusable rockets that will aid the entire country in technology evolutions and research. Thank you for your time.

SpaceX's Starship/Super Heavy as well as the "Mechazilla" launch tower are not a threat to the local wildlife or nature. The people living close to the SpaceX launch site were evacuated and there was never a problem, so it's highly unlikely there will be one in the future. Many people around the world are excited for what SpaceX is doing with their Starship program. Me as well as millions of other people want to see Starship take flight.

Good Day In my opinion, SpaceX is moving at a frenetic pace to innovate, build and iterate the next generation of heavy lift rockets. It would be a huge pity if some administrative issues were to cause delays or curtailing of their efforts. It is clear, to all who are following this process, to see the huge effort and cost being invested in the facility and the technology. They are not playing games. It is essential for the FAA to keep pace with the technological advancements and developments taking place in Boca Chica, and in no way be a hindrance to progress. My plea is to approve the developments and encourage the development of innovative methods, technology and designs, be it infrastructure or vehicles. Be part of progress and do not apply outdated rules and thinking that will in any way slow the drive and ambition of SpaceX Learn from the innovations unfolding before us as this is history in the making. Do the right thing Regards Michael Nyenes South Africa

As a SpaceX fan its only natural to say that they should be able to continue their work in Boca Chica. Although, I understand that there needs to be some environmental restrictions, to not pollute or endanger the surrounding environment. I think as long as there is no evidence of that, SpaceX should be able to build and test their Starship prototypes and infrastructure at full speed.

Dear FAA, protecting lives is in everyone's best interest, followed by preserving the environment. I'm an OSHA accredited health, safety and environmental manager. I also studied ecology in university. I've worked with/for various State and local environmental regulatory agencies prior to my current private sector position. My extensive research on this matter has shown that SpaceX as a company has gone above and beyond as an honest environmental steward of the immediate area surrounding Boca Chica while also protecting the lives of their workers (my profession) and the general public in particular. Their private-public work is critical in helping the local economy and extending our country's technological advances in a very critical time. Any more unnecessary blocks and delays only help our adversaries gain ground while we hinder our own success. Ultimately, but longer term of course, our species survival beyond Earth is on the line as well. Thank you.

I understand and can appreciate both sides of the SpaceX Boca Chica launch site controversy. I understand that performing experimental rocket launches on a wildlife preserve is, on the surface, counterintuitive. But the United States government set that precedence with the Cape Canaveral Space Force Base and NASA's launch complex. It is my belief that SpaceX has picked the most remote, safest sliver of land it could in creating Starbase in Boca Chica, Tx. I further understand that SpaceX is not a "conventional" launch provider especially when it comes to the development of its vehicles. SpaceX would rather learn from failures than dot all their "I's" and cross all their "T's" when it comes to prototypes. This rubs a lot of people the wrong way, but it does seem to be a successful plan of operations thus far for SpaceX. I am in favor of allowing them to continue their work in Boca Chica, Tx and urge the FAA to approve their environmental review. Sincerely, Kip Biddle [REDACTED]

I am on top of the swiss fridays for future movement and still - this has to be done. Dear Sir or Madame, there are millions of people all around the world who want to see SpaceX getting humanity to live on different worlds. No I am somebody who is thinking and acting in favour against climate change. I only say this: We might only have this one chance to do it and I highly doubt that anybody else is even one percent as close to achieving the score then SpaceX. So yes, I did consider that there is quite an impact off those rockets on our carbon emissions but still, this is not the place to save the planet. This is the place to move forward. And I am very sure that technology will become way better in the future, once there is a need to improve it. Best regards, Stefan Fehr

Hello, I live in Sweden so maby my voice doesn't count. But I felt I had to say something anyway. About Starship and launching out of Boca Chica. I think this should continue! Its important for the spacerace with China, the climate(minerals and factories in space) and to secure that humany will continue. Whatever happens on earth. Thanks. Niklas Malmberg Gothenburg, Sweden

What SpaceX is doing is a once in a generation space development. Please swiftly allow SpaceX to continue doing their work! In fact grease the rails so they can develop at their speed and not waiting or being held back by the government. I understand you may be concerned about safety but remember SpaceX safely to delivered NASA astronauts to the space station. Thank you!

I am a huge supporter of SpaceX and think that they should be granted more freedom in terms of launching prototypes as well as proven and reliable rockets. SpaceX might move facilities and production sites to a different location in case they are not granted permission to proceed. FAA processes and decisions take far too long for a fast forward company that urgently wants to make a difference. Just imagine how the industrial revolution would have been pushed back if the naysayers would have taken over. Dear FAA, please stand on the right side and do not prohibit humanity from finally conquering space. Thank you!

SpaceX is in an area safe to people and with minimal interruption to surrounding area wildlife. Not more than people pose driving to and from Boca Chica, and or anywhere. In SpaceX's pursuit, they bring life to an otherwise poor community, and a critical capability for all people far into the future, bigger then, you or me. Please stop limiting advancement based on archaic standards and ridiculous levels of 'Protections". You are not protecting anyone by limiting our advancement. the hard things are not without consequence and change.

Please allow SpaceX to launch their rockets, super heavy booster from Boca Chica, TX. While we need to protect the environment there is also a great need to get cheaper access to space. There is a proven track record of inventions that occur every time mankind stretches the boundaries of knowledge, this is especially true for space programs. If we can get cheaper access to space via the super heavy booster and starship designs then I believe that there will come in the near future much better science from space that will help our planet. This will come via more satellites to space for cheaper to study our environmental impacts from a global perspective, better manufacturing processes invented in micro gravity environments, better medicines that can benefit from cheaper access to microgravity for their formulation processes. Humanity also needs inspiration for the arts and for human nature itself. Forging into new frontiers has always been inspirational to our species, whether it was from exploring routes for the trading goods of the past, Magellan's search for a faster passage between the east and the west, to the exploration of the deep seas or polar regions of the earth. Humanity must explore. Please let SpaceX continue that great heritage of humanity. kind regards, David Brent Wilson

Hello - I'd like to express my support for the Starship program that SpaceX is working on. I am not related to this system or SpaceX in any way, but I appreciate that they are providing motivation to the rest of the space industry, including NASA, to do more, and different, work that will help make new discoveries. This may eventually be used to save the world, if something occurs that needs that kind of technology. I believe that it is imperative to keep this program going. Thank you for your time - Mark Mark D. Bulla [REDACTED]

Please allow SpaceX to launch all the rockets they need to from the Boca Chica site. I understand you are concerned about the environment, however you are on the wrong side of history here. The environmental impact of the rocket launches does not outweigh impact this program will have on society as a whole. This program has implications to dramatically change the world and so far the FAA has put a total hinderance on progress. Please change your tune. This is a private company and if they decide to leave the US you will have no control over them. Think about that.

I would like to start by saying everything SpaceX are doing is really a benefit to help all human kind globally & by testing the prototypes as fast as possible. All parts to make this happen need to be in place including the launch tower as a major component in achieving this. Why can the FAA support the bigger picture here as it is in our best interests to make this a reality! You only have to speak to the people who have managed to go to space and how it changes there views on the world for the better. We need this to be the most important venture and endeavor and rally to support where ever possible. If the world given its problems & inevitably is in decline I feel its madness not to want this to be supporting the extension to save our species. The whole picture is adventure and earth security. Please please help Space X achieve this marvel.

Would American astronauts have flown to the international space station from American soil without Space-x? Projects that push the boundaries of what we think is possible are the projects that greatly enhance our lives. Think of all the safety measures that come out of Formula 1 for example. Yes, there are risks but these are the best of the best people and the last thing they are are wreck-less. Space-x has an urgency that is much needed in this era. We face great uncertainty and what we all need now is technologies that give us options. And maybe what we need more than ever is the inspiration, the inspiration to learn and do. To contribute and solve the problems of our age. Please let Space-x continue,

I live near Space X on South Padre Island. I hope Elon Musk and Space X are very successful and that they do everything by the book to protect our area, the beaches, our air and water. I don't want government to block his progress because he is not only a pioneer, but his company is providing many good new jobs to an area that needs jobs which pay a decent wage. However, the same rules must apply to everyone, including Space X. I think this must be a win-win situation for the good of our country and the future of Cameron County.

I believe SpaceX has been running operations safely while being 10x faster than any other space company out there. They propose a new technology that is not always fully understood or believed in by lobbyists and competitors. Hindering them during this crucial time will only set back earth's possibly travel to other regions in space and set back science in general. I stress you believe in SpaceX and continue to watch their endeavours.

SpaceX should only be allowed to use renewable sources of energy to power their energy needs at Boca Chica because of the nearby Lower Rio Grande Valley National Wildlife Refuge that could be harmed and the not to avoid contribution to the climate change. Getting the power from the vacant land to Starbase, whether from nearby or farther away, is an issue, but so is the issue of building pipelines. If you can build pipelines, then you can build power lines. Plus, power lines don't leak and cause other environmental harms the way that gas lines do. The cost of doing 250 megawatts of solar is probably higher than 250 megawatts of gas, but it doesn't make sense to be trying to save the species with Tesla and then turn around and burn natural gas for SpaceX's space colonization efforts.

The environmental impact if any, on the area surround Starbase would be minimal compared to the seeming exponential jump in evolution for humankind and space flight. SpaceX needs to be allowed room to operate and continue to push the envelope so that we stand a chance at saving every other endangered or otherwise species on the planet! Let them launch so that humanity can move forward!

Dear FAA, The Starship Boca Chica Facility is essential for Human spaceflight and for us as a species. If humans do not make a leap into space with lower costs than the current costs, we will not have a chance to save our species and all species on this planet from extinction. We Need to travel to other planets and settle there as well to keep future generations of all species safe. This is what SpaceX is working on in Boca Chica: Saving all species from extinction with a fully re-usable starship capable of bringing all species to other planets. And we are talking about 1-2 years to reach this goal- not 10 years. By closing down the facility we will miss the chance to take this leap forward. Looking forward to your decision on how to proceed in Boca Chica and thanks for letting the public comment!

Hello, I'm writing to express my support for SpaceX's efforts in Boca Chica and request that their flight tests for Starship be expedited as quickly as possible. I believe SpaceX is doing everything they possibly can to make these efforts safe and environmentally friendly. SpaceX's goal to make humankind multiplanetary through their Starship program is an absolute good, whose success will demand development of technologies to survive in space that inevitably helps those living back on Earth to enjoy the quality of life they know but with less impact to the environment, and by moving industry off-world by making space travel cheaper so resources can be mined on the moon and asteroids, instead of on Earth. The history of the world shows that progress and technology ebb and flow and we must take this opportunity while we can to establish habitats on multiple worlds in the event a catastrophe occurs here on Earth that sets us back indefinitely, or wipes us out altogether. SpaceX is the only company taking on this responsibility and they should be helped, not hindered. Thank you,
Christopher Genovese

To whom it may concern. This is the most important aerospace advancement ever. I grew up with NASA, as the son of a NASA scientist, and now as a business owner and personally responsible for over thirty Patented technologies, this work by Spaces (and others who are following and trying to catch up) by far represents the most innovative and free flowing development process I have ever had the pleasure to follow. Please find a way to accelerate (much like SpaceX is accelerating their work) this approval process. It is much more important to ensure this moves forward as unrestricted as possible (within reason) compared to what I am sure are significant concerns that some have voiced, however we must look past and into the future to see that this work falls into a completely different category and should be judged as such. SpaceX uniquely seems to have captured and is successfully harnessing the imagination of our youth and aged alike, something I personally am excited by, so please focus on how to get this approved as expeditiously as possible, and allow the emotion and energy of these people to reach their full potential...critical mass can be killed by unnecessary delays. All the best, Bob Cree

I support the approval of SpaceX's Starship and Super Heavy operation licence. It is important to increase humanities payload to orbit capability per dollar. As NASA is a customer of SpaceX, this will save the tax payer money. Starship and Super Heavy launches should be licenced, since it is of utmost importance to expand the presence of mankind to other planets. In addition to that, not approving SpaceX's Starship operations would endanger NASA's Artemis program. Since Starship is planned as a lunar lander, its operations should be approved so the Artemis program is not at risk of delay.

Hello, I am writing to ask that you approve the orbital test of SpaceX's Starship vehicle. The FAA has a long history of enabling aeronautic innovation in the United States. This is a time to show the world the FAA continues to be a regulatory agency that is aiding new space technology development, rather than hindering it. I have read through the Starship flight proposal and do not find any issues that could justify stopping this test flight. We cannot allow minor local issues to hinder the achievement of major aerospace advances every American and person in the world will one day benefit from. Thank you for your consideration of my comments. Best Regards, Jason Meaux, P.E.

As a native Texan born and raised in Corpus Christi, I fully support the Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas. SpaceX has brought hope and prosperity to one of the nations poorest regions. In partnership with NASA, SpaceX played a huge role in re-establishing America's manned spaceflight capability while launching over 1,600 hundred of its own satellites. Many of which were launched out of Cap Canaveral in Florida. SpaceX is well versed on the environmental impact analysis process. They previously underwent environmental assessments for Boca Chica, Cape Canaveral and Kennedy Space Center. Each assessment found no significant environmental impact. SpaceX continues to be a symbol of pride for our nation and hope for those around the world.

I would like to voice my opinion on SpaceX continued operations, especially in Boca Chica, TX. If we are to go back to the moon and to venture to Mars, we will need a rapid system for doing so. A streamlined process for the regulatory steps is needed to be able to achieve a rapid launch cadence. Giving SpaceX the ability to develop the rocket building apparatus and launch infrastructure will allow them to gain the knowledge and expertise to also develop sea-launch capability which is really going to be needed once rapid launch cadence is required. Thanks for allowing me to have a voice!

SpaceX Boca Chica has the potential to become a 2nd Kennedy Space Center, a uniquely important asset for the United States. Environmentally one need only look at the in Florida to see that the KSC has been a huge boon to natural resources native to the area. The same would clearly occur if SpaceX is allow to fully develop Boca Chica into a parallel facility. Furthermore SpaceX is largely footing the bill for this development, saving the American taxpayer millions of dollars. The FAA should issue immediately a "Finding of No Significant Impact" and fully support SpaceX's creation of new this critical National Asset in every way possible.

Please grant SpaceX the necessary permits to continue without delay all testing and launch operations at the Boca Chica site. The FAA cannot guarantee the human race is immune from global destruction from either space objects crashing to earth (astroids) or self destruction from human stupidity (environmental disasters). This Starship system is literally the only option for the human race to establish a multi planetary human presence and to ultimately survive in the event of catastrophe. If you deny the necessary approvals, you are guilty of denying the human race the chance to explore and more importantly - survive. The Boca Chica site is of global importance. To move to another site is simply waisting time because of bureaucratic interference into what is currently the most inspiring operation know to mankind.

Hello Guys. I am from Brazil and I'm giving you guys my opinion about SpaceX Boca Chica Site and overall progress on space technologies. Straight to the point. I think the progress SpaceX is doing right now should not be interrupted by any means. The humanity needs this type of technology and space is givin us hints on what we going to do tomorrow. Advances in physics, medicine, chemistry, biology and many others areas depend on this progress. We can't to the next step while sitting on a rock wandering in space/time. We are in a moment where people should cooperate with others to achieve success together (on all purposes). And let's considerate... This progress will be done, if not by SpaceX, them by others, and if not by our generation, ours childs and grandchilds will do in the future. The Human Space Program should not be stoped, it has to be encouraged. I hope my opinion gets read and it help you guys on the final decision. Best regards Thanks Gustavo José dos Santos

If we do not allow SpaceX to push forward, we will harm the progress humanity is making. Yes, you have to obey to rules. But what is the purpose of rules? I'm sure it is not to undermine a magic leap in the development of humanity. Overall, SpaceX is putting emphasis on security. Their reusable rockets are very safe. They push the envelope with their way of development, that's true, but in the end, their goal is again to build a reliable and safe starship. So I think we should not stand in their way.

SpaceX and StarShip is one of the biggest opportunity USA has to be the leader in space. You are deciding your on fate. The progress can not be stopped, just delayed. You decide if you want to profit from it. And just so it hapends you help humanity as a hole as well if you let SpaceX make StarShip.

I not-only unreservedly support SpaceX Starship and the work Elon is doing , I also think its in the USA governments own interest and in the interest of all good American people to give their full support and further the authorities should see this work as fundamental to the sustainability of human life and therefore actively reduce the unnecessary barriers. Natural animal life is important and the reason all non-human life will become extinct is because none of them can design and build transportations to get themselves to a safe place when necessary, they wont become extinct due to rocket tests and launches. In fact these animals best chance for not becomming extinction fodda is if SpaceX takes them with humans to the next safe place to colonise. All attempts to slow down the progress of SpaceX are own goals. But its worse than that for America because every hurdle the state throws at Elon, Russia and China and the rest of the world all get undeservedly rewarded to pursue their own copies of Elons dreams.

Please approve the environmental report regarding the launching of Starship prototypes from Boca Chica, Texas. It is imperative that SpaceX be allowed to continue its development work for the betterment of access to space and the ability to improve life for all humans on earth. They have shown that they have the capability to take us back to the moon and Mars for a fraction of the cost of any other providers. Thank you in advance for approving the report and allowing them to continue their good work.

I am writing to express my strong support for approving SpaceX's continued Starship program at Boca Chica. The section on "Purpose and Need" in the Draft PEA outlines some of the benefits this program will bring to America. However, it does so in a limited and understated way. As an American I consider Starship a program of vital national importance. If it is successful it will: - Make the USA completely dominant in commercial spaceflight - Give the USA a key military and intelligence-gathering advantage (the ability to deploy massive constellations quickly and cheaply, for example in response to attacks against our existing satellites) - Provide a cost-effective way to deploy satellite internet for all the Americans who live in remote areas Even if it is not successful, the Starship program is providing experience and training for a whole generation of aerospace engineers and technicians, which strengthens the USA commercially and militarily. As a human I consider Starship more important. The first modern humans left Africa more than 70,000 years ago, and ever since then we have been seeking out new lands and settling them. For the first time in two generations it feels like we have a chance to reach outward again, and for the first time ever we may have a chance to colonize other worlds. Krishna Dole [REDACTED]

To whom it may concern, The exploration of space and the advancement of civilization into the solar system is the most important step to ensure the future of mankind and life itself. In my opinion SpaceX is the biggest contributor toward this step, bigger than all countries' space programs combined. SpaceX has a great track record of developing new technology for that goal not only fast, but also responsibly in regards of safety and environmental impact. It is not foreseeable how long our current global economical systems remain stable enough to support the development of affordable space transportation infrastructure, so in my opinion it would be wise to support SpaceX's operation in Boca Chica TX in every way we can. Time is of the utmost essence, we might need a reliable way off this planet sooner than we like. Please make sure that SpaceX is able to continue their endeavor in Boca Chica with as little delay as humanly possible. Thank you for your consideration. Dr. Stephan Mölders Rhumspringe, Germany

I fully support Space Exploration Technologies' (SpaceX) operations in Boca Chica (Starbase), Texas, with its Starship Superheavy program. SpaceX is attempting to alter humanity's direction by propelling us to become a multi-planet species and making space accessible to everyone, not just the wealthy. To begin with, this is a challenging task, and to have the FAA question if they are "environmentally ready" is simply depressing. The goals of humanity should not be constrained by such shoddy and insufficient criteria. Not only with their innovative technology, but also with other companies, SpaceX has shown to be a safe and dependable corporation. The National Aeronautics and Space Administration (NASA) has awarded SpaceX numerous contracts, all of which have been successful. They have shown to be not only trustworthy, but also astute in their decisions to take humanity to the next level. Many of the decisions and options SpaceX has used in the past should be held accountable as part of this environmental study. For many people, SpaceX has provided optimism and excitement. Not only would denying SpaceX the opportunity to launch the most powerful and ingenious piece of engineering in the history of humanity be disappointing to other organizations, but it would also be disappointing to SpaceX supporters who have followed the company since its creation.

Dear FAA members, unless the direct health and well-being of residents and people around Starbase are at risk - please proceed with the approvals for SpaceX's Starship program. Humanity, as a whole, is too important and this endeavor is on another level for us and could be (noone knows until we try) what we need in order to cross not just our planetary borders, but deep space too. We cannot and you should not let bureaucracy hold mankind back. Ladies & gentlemen with your pens and stamps, consider that next generations should be able to benefit from what we leave them. It's up to us - do we leave wars, poverty, disasters, ever growing number of issues (viruses, etc).. or do we give them a chance to look where we weren't able to so far. Please and thank you! - the entire Bulgarian people. Or at least all those who dare to raise their heads towards the stars.

Regarding SpaceX Starship launching from Boca Chica, TX location. I support allowing SpaceX to continue testing from this location. The need for continued growth of the Space industry outweighs the minimal environmental impact I am seeing listed in the documentation. This site will not be continued to be used long term like the Cape Canaveral site that has ongoing into indefinite future. The impact to local population is limited and has added to the local economy more than any negative impact I can fine.

SpaceX is currently the most important company on the planet. Making humans a space faring civilization is just as important as safeguarding the environment. The two can happen at once. Delaying the starship program would be the worst mistake of our era. Not only that, but SpaceX is needed if the united states want to remain ahead of the competition and retain their independence. The environmental and local impact that the starship program has is genuinely insignificant when compared to what it could bring for all of humanity. Make the right choice for all of us.

I'm 75 yrs old. I worked on both the Mercury and LEM programs. I know and appreciate that the U.S. can't fund a worthwhile program like the one SpaceX is attempting. But I think the least we can do is support his efforts. SpaceX safety record is excellent and I think the sense of urgency in this endeavor is real. I'm not an environment expert but my experience tells me that the birds will be fine. If SpaceX needs to test it's starship in November than I think it's imperative that we OK it Thank you and God bless

I urge your swift approval of SpaceX plans for orbital test flights from the Star Base Boca Chica site. While I appreciate the due diligence you need to perform, I believe our planet is facing many existential threats including climate change, from asteroids, Carrington type solar flares etc that require we develop the ability to become a multi-planetary species ASAP. I was a boy of 17 when we landed on the Moon. Now I'm a man about to turn 70 and we've made no substantial progress since then beyond low earth orbit. Our eggs are all still in one planetary basket. The capabilities being developed at Boca Chica by SpaceX are crucial to our survival. I was inspired by what our country accomplished in going to the Moon to become an engineer. Because we've not progressed our space program since Apollo beyond LEO, that source of inspiration for the young people who came after me has diminished and, as a country, we are in great danger of being surpassed by China, a totalitarian communist dictatorship that brutally suppresses its people and commits genocide against its religious and ethnic minorities in Tibet and Xinjiang. The face of humanity future in space should be that of a democratic nation that represents the best aspirations of humankind. Please use your due diligence but please have the necessary sense of urgency and keep in mind the larger picture of what the work being done by SpaceX at Boca Chica represents, for our country, for democracy and for the survival of humanity. Let's continue to provide inspiration for our young people who can look to the future, as I did all those years ago, and not feel sad. Respectfully Joel Brown

Dear FAA, Please let Starbase happen. Please let constructions and orbital flights from Boca Chica happen. What Elon Musk is trying to do doesn't just mean a lot, it's potentially saving the human race. Every day we aren't a multi-planetary race is a risk to our survival. The faster we can build colonies and truly explore our solar system, the more time we have to truly build it up and not have those colonies depend on earth. This is one of the most important things of this century in my opinion. With best regards, Dirk Schäfer

In all of humanity progress of new discovery or just to survive there are sacrifice that need to be paid. We have been living in a state of "peace" for a while so we might have lost or forgotten those ability which all our ancestors possess. It is in our blood to take risk and sacrifice to discover a new frontier. This project of SpaceX, if you look at it without discrimination or self-interest it is in all for the better of humanity. It is an inspiration for many and it is at least for me as one good thing in this world which make me what to still be living. Please, for humanity let them fly. Thank you.

I would like to see SpaceX continue to work on its rocket and new technology from the Boca Chica location and to see them take off and land at that site. I do not support delaying SpaceX, and would support allowing them to fly from the location as soon as possible to complete the necessary testing of the space craft. I feel that the benefit to our country and to the rest of the world is much greater than the limited impact of the site in Boca Chica. If not allowed to continue, these efforts may be lost for years and may never be duplicated by SpaceX or by another company. I would recommend that if not given the approval to use the Boca Chica site, and not allowed to fly now and into the future from that site, SpaceX should divest itself and move to Mexico and form a company. I would guess that Mexico would be willing to allow such a job creating company, and tax paying company to run its business from its country. It would be tragic to see, but it would be the only way to keep this momentum going that SpaceX has started in Boca Chica, not to mention all of its other sites that have created jobs for many Americans. Thank you for your time.

I strongly encourage the FAA to approve the SpaceX proposed development and launch of Starship at Boca Chica. SpaceX has proven themselves to be a responsible partner with NASA, and essential for the United States to remain competitive in developing next generation infrastructure for space exploration. There will be environmental impact associated with any such major endeavor, and at any location. Boca Chica is well suited to minimize the impact and risk. The potential benefits to the nation's economy and national defense far outweigh any environmental impact identified in your extensive review.

I am deeply inspired by what SpaceX is working on and, most importantly, accomplishing. While protecting the environment is a worthwhile endeavor, we as a species, will always have an impact on the environment around us. What then becomes important in my eyes is understanding what that trade off is. I'm not a fan of diminishing the environment for non-sustainable energy exploration and extraction. But I am a fan of environmental compromises for an inspirational endeavor the likes of which has never been seen before and which may well be the defining effort of a generation. When issues appear, please find a way of working out reasonable compromises that allow SpaceX to continue their work. Warmest, Scot.

To Whom it May Concern, I think it is imperative for the FAA to allow SpaceX to continue building the infrastructure for its starbase launch site. The SpaceX program not only inspires Americans all over the country to endeavor for greatness, but it solidifies our standing on the global stage as a leader in space exploration and scientific development as a whole. Preventing SpaceX and other companies with aspirations beyond the average person will hamstring the creative ability of any individual or group in our society that wants to exceed expectations. I implore the FAA to allow SpaceX and other companies to move forward with all due haste to continue our efforts in furthering humanity and America's ability to defend its own interests. Thank you, John Liberto

What SpaceX is currently doing in Boca Chica is probably the most important project ever undertaken in this century. By threatening to shut them down, you are threatening humanity's future in space, as a fully reusable rocket will revolutionize space travel in the same way the car revolutionized travel. If you want to help the environment, start working on fighting climate change instead of shutting down random rocket development sites that could actually help us in the long run. DO NOT shut down SpaceX, it is pointless and seriously hurts human progress.

Hello,

I love having a new space race! The work SpaceX is doing is amazing, groundbreaking, and revolutionary. Allowing these missions to proceed will inspire a new generation of space explorers and enthusiasts. While rocket launches are not the cleanest or safest ventures, the technological, medical, commercial, etc... benefits far outweigh the potential risks involved. That being said, SpaceX should still be held to a high standard that is in line with their industry leading position. Thank you for your consideration.

Dear FAA, I am personally writing this email in support of future orbital launches of SpaceX's Starship, and believe that SpaceX should be granted launch licensing to permit Starship to enter Orbit from Boca Chica. Any progression regarding space exploration, and relevant technologies is imperative to the progression of the United States, with StarShip being an incredible proof of concept that could inspire a generation of entrepreneurs aiming to improve Humanity's drive for exploration and improvement. As such, I believe it to be in the best interest of both the FAA, the United States and Humanity as a whole to allow this rapid experimentation to create a new sector of transportation, exploration, technologies and economy, through permission of Launch Licensing. So please consider the future of not just Boca Chica, which will thrive with the success of space port, but the United States and every new generation which will be inspired by a hopefully new perspective of the stars and earth alike. Best Regards, Mackenzie Batterham

SpaceX has an objective to accelerate the world and its leaders to a better future. Whether it is an interplanetary basis, or engaging a more healthy environment for our Earth itself. By rapidly changing the industry Space Exploration Technologies is seeking to commercialize the industry with never before seen support of exploration of outer worlds. Without FAA approval this transition to greater discoveries for the good of our kind is not possible; so as an enthusiast I would appreciate a greater push to help SpaceX by leveling up the industry and expecting for further companies to join in the expanse in rapidly re-usable large-scale rocket operations. In nearly 50 years we haven't had a moon landing, so it would be a priceless venture to allow more sustainable life to be focused on. This is the start of a revolution, and SpaceX cannot do it without the help of the government. Thanks for understanding.

Please allow SPACEX to continue their mission. Not discounting the environmental impact of the work but the long term impact of our society. What SpaceX does will be more important in the future then the impact they will have in the area.

Please ! Please ! By and through power of God's blessing on America's colossal existence, support her lone ranger son of the soil and make the SpaceXBocaChica comes to fruition in his quest for america's economic growth and wealth creation and do america great one more time. So he is able to support my technology echo friendly Science and Space Hub training Centre in Lagos Nigeria and Continent of Africa and contribute to turning the proverbial African brain-drain-to brain gain.Which for too long science and technology- the most important drivers of economic development- have been neglected in Africa. We cannot talk about transformation without investing in science for girls and young adults (Pro.Oramah) .President Afreximbank). Creating jobs and globalisation is in my gene while Race for Space Pie my focus for Africa. Please support and help him so he can also help us with technical and financial support . Make Africa a scientific Super Power. THANKS Omotolani Sulu

Subject: Fwd: Encourage you to approve the Project

I encourage you to approve this project as the benefits to humanity well outweigh the environmental impact. The proponent is not some developer trying to get rich but Elon Musk trying to insure the long term survival of humanity. He has done more for the environmental cause (TESLA is forcing Auto manufacturers to transition from fossil fuels to electricity) than anyone I can think of.

Peter Briere

Subject: In Favor of SpaceX

Hi,

My name is John Pelletier, I am a huge advocate on space exploration for many reasons.

I do believe that we, humans, need to become an interplanetary species, sooner rather than later.

As history has shown us, the earth has had many catastrophic extinction level events.
We are living here on borrowed time.

I have heard people and articles comment on the environmental impact of rockets launching from Boca Chica. I understand that and say what about the environmental at Cape Canaveral?
The wild life at Cape Canaveral had adapted and has learned to live with rocket launches.

I also say we need to look at the risk vs reward mentality.
The benefits of Star Ship to only for LEO, Moon, Mars and beyond space travel are unthinkable.
The other benefit of Star Ship is rapid travel here in Earth.

I'm sure you have heard of all the potential benefits, and all the potential impacts of this Start Ship program. But SpaceX and Elon Musk have already shown that there is far more benefit to the program.

The Benefit stems further than just at Boca Chica, the benefit goes to the county and state levels.
Star Base will create thousands of jobs, creating millions of tax dollars that the area is in desperate need of.

In closing, please allow SpaceX to continue on with their work.
Cause at the end of the day, this is bigger than you or I.

John Pelletier

Subject: In support of SpaceX Boca Chica site

Hi,

I was not able to attend. However, I am for the launch site. I have spent time studying the site and looking at other potential sites and SpaceX really doesn't have anywhere else to go in the USA and would have to export their launch site to another country in order to fulfill NASA obligations and beyond. SpaceX must have a coastal site. SpaceX must have open spaces along the trajectory of the rocket, which is a big reason why they need a coastal site. SpaceX needs to get as close to the equator as possible so that the rotation of the Earth can help the rocket get the speed it needs to achieve orbit as at the poles the Earth is barely moving while at the equator it is moving a great deal faster as that circumference needs to spin around and end up covering that entire distance every day. Even the best rockets barely achieve orbit, so this extra speed is crucial to getting acceptable performance out of the rocket. SpaceX must be able to clear people away from the launch site. Most of the world's population lives on or near the coast or at least another major body of water and there are billions of people crammed onto this one planet, making finding a spot that meets these requirements a challenge to say the least.

Here is the thing, what SpaceX's Starship can and will do if allowed is a game changer. It is far too important to the entire planet and all of humanity to not let it happen. This is humanity's best hope of expanding to the solar system, which Elon Musk has gone on about in length and Jeff Bezos has also talked about. This is humanity's best hope of halting global warming via building an orbital sunshade. Starship will help transform communications by making it far cheaper to launch communication satellites. Starship can be used to cheaply make the next space station, especially as the current one is falling apart. Especially if we can work at making self sustaining habitats in space, the technology can be brought back to Earth to make our living here more sustainable. People need a reason to do something different and being self-sustaining when living in space / Mars is a must. People need examples to change and being self-sustaining in space / Mars could be that transforming catalyst. Starship can transform astronomy by launching bigger, more sensitive instruments than ever before and making those instruments frequently serviceable more like ground based instruments that are hampered by Earth's atmosphere where before space-based astronomy has largely been one off wonders where when one breaks or if there is a launch / early failure, that is it as rocket launches have been too expensive in the past and even with Hubble, you were talking about \$1 billion missions to service before the Space Shuttle was retired over safety issues. With Starship you will be looking at a few million per mission to service potentially giant instruments that Starship initially got into space, which is of far greater utility. As there are vast distances in space requiring large, very sensitive instruments with unobstructed views (such as in orbit, not trying to peer through Earth's atmosphere and getting interference from people's microwave ovens and cell phones and such) to really observe what is going on out there, Starship could say lead to the discovery of alien life, transforming our understanding of our place in the universe. Space based manufacturing and pharmaceutical will be a big thing. We already know we can only produce ZBLAN fiber-optics in OG and ZBLAN fiber is far superior to more traditional fiber to the point of revolutionizing communications if mass deployed. Only Starship can cost effectively move stuff to and from orbit on the scale needed to make the millions of miles of hair thin fiber in space. There has been a great deal of trouble 3D printing organs from stem cells of patients on Earth due to gravity so that they don't have rejection issues with the organ as the stem cells for their replacement organ came from their own body. In OG these replacement

organs can be 3D printed without issue. Starship could haul up whole labs and then all of the stem cells and associated supplies and then haul back thousands of 3D printed organs, saving thousands of lives per trip while eliminating the need for anti-rejection drugs. If you are ever in need of an organ transplant to save your life, deciding to allow SpaceX to operate here could literally save your life one day. As everything on Earth fell in from space, everything we need is in the solar system somewhere. Starship could be the catalyst for getting precious resources from space as we need to get into space in the first place before we can contemplate effective ways of getting these space-based resources. And these are just some examples. There is a great deal more both known and not yet known that we could be doing.

Jason Snyder

Subject: Let Starship Fly!

Hi,

I'm writing to encourage you to approve SpaceX's proposed starship and super heavy test flight without delay. Starship is a historic achievement for humanity that captivates the imagination and will enable dramatically more and faster exploration of space. Historically space exploration has stimulated economic activity on earth many times larger than the original investment. The government should take the massive benefits into account and barring any major environmental impact quickly approve the test flight.

Sincerely,
Brian Bargh

Fairfax, VA 22031

Dear Ms. Zee:

Space X's entry into the Rio Grande Valley has brought much enthusiasm and many educational, employment and economic development opportunities to the region. At The University of Texas Rio Grande Valley (UTRGV), we have already seen Space X employ some of our graduates, many of whom would have likely left the Rio Grande Valley had this opportunity not been here.

Our Career Services Office and Space X are also working on invaluable internship opportunities for our students at Space X, which may well lead to permanent employment. Our Entrepreneurship and Commercialization Center has also seen an increased interest in companies connected to the aerospace industry that are seeking to locate in the Rio Grande Valley and we have worked with the Brownsville Community Improvement Corp., the City of Brownsville, the Brownsville Chamber, the Economic Development Agency and others throughout the Rio Grande Valley to build a center that will consolidate resources necessary for entrepreneurs to start their ventures, acquire capital, scale up existing companies and reach new markets, including companies in the aerospace or aerospace related industry.

The Rio Grande Valley is one of the fastest growing regions in the country and we look forward to continued collaboration with Space X to expand opportunities and the quality of life for our growing population.

Sincerely,

Guy Bailey
President

Office of the President

October 22, 2021

Dear Ms. Zee:

This letter is to urge the Federal Aviation Administration to grant approval to SpaceX Corporation to operate its Starship/Super Heavy launch vehicle at its existing Boca Chica Launch Site in Cameron County, Texas, and to conduct launches originating from this site.

The SpaceX Starship/Super Heavy project is one of the greatest things humanity has ever attempted, comparable to the fifteenth century voyages sponsored by Prince Henry the Navigator of Portugal which began the Age of Discovery.

Elon Musk and SpaceX have the same objectives as Prince Henry, but on an interplanetary scale, and they are building the means by which humanity will travel and live and work throughout the Solar System.

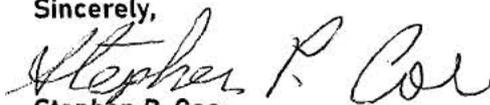

In comparison to this great endeavor which has already achieved so much, the environmental, noise and traffic concerns of a small number of people seem trivial and obstructive.

By all reports, Elon Musk and SpaceX have been good neighbors to the people of Cameron County, Texas, doing such things as supporting science and mathematics instruction in Cameron County schools to such an extent that this past week hundreds of school children held a "Thank You SpaceX" day outside of Starbase!

It is inconceivable that a good corporate citizen and neighbor such as SpaceX would be wantonly destructive of its environment or of the living things with which the company shares physical space. It is thoroughly conceivable that SpaceX will do everything reason demands to mitigate hazards its operations might pose to wildlife native to the Boca Chica area.

The FAA should accelerate its approval process, work out mitigation plans for wildlife protection with SpaceX, and speedily grant every approval SpaceX has requested. Elon Musk just stated that the Starship/Super Heavy vehicle will be flight-ready in about a month - it would be a wonderful thing if the FAA could find a way to permit a flight at that time.

Sincerely,

Stephen P. Coe
Yerington, Nevada

Subject: Martin Comments on DRAFT PEA, for the SpaceX Starship/Super Heavy Launch Vehicle

Hello,

I strongly agree with the American Bird Conservancy analysis of ongoing Space X Operations. Please make this company do the right thing and perform a comprehensive Environmental Impact Study. When doing a small deck in my backyard in Virginia, I had to do an environmental assessment for Fairfax County to approve my permit. Make these large corporations do the same thing!!!

And I know you understand Fairfax County rules since this is the address provided for comment.
CONTACT INFORMATION: Comments should be mailed to Ms. Stacey Zee, SpaceX PEA, c/o ICF, 9300 Lee Highway, Fairfax, VA 22031. Comments may also be submitted by email to [REDACTED]

I am deeply concerned about the impacts on birds and other wildlife from SpaceX operations in Boca Chica, where the company's Starship/Super Heavy Project and launch site are being built and expanded.

Ellie Martin

Subject: Help birds threatened by SpaceX operations

Ask the FAA to Protect Birds and Wildlife in Boca Chica, Texas

Dear Ellie,

Threatened birds and other wildlife in Boca Chica, Texas, face a growing threat as aerospace company SpaceX builds and expands its Starship/Super Heavy Project and launch site.

Ongoing construction, fires, and rocket debris are impacting important habitats, putting at risk bird species including the federally Threatened Red Knot and Piping Plover, as well as the Endangered Northern Aplomado Falcon.

According to an analysis by Coastal Bend Bays & Estuaries Program in Corpus Christi, the Piping Plover population in the Boca Chica region has decreased by 54% over the past 3 years (2018-2021) since SpaceX started testing and launching rockets.

Despite the clear impacts, the company has received little oversight from the Federal Aviation Administration (FAA) as it has conducted and expanded operations.

We can help change things now: The FAA is accepting public comments until November 1 on a draft Programmatic Environmental Assessment of SpaceX's operations. The assessment fails to provide a full picture of the facility's effect on Boca Chica, ignoring the impact on birds, other wildlife, the habitats they need, and on nearby communities.

Tell the FAA to reject the current assessment and instead require a full-scale Environmental Impact Study of SpaceX's operations.

The SpaceX facility in Boca Chica is surrounded by federal and state public lands used by hundreds of thousands of birds of many different species throughout the year. These lands also support several species of sea turtles and mammals listed under the Endangered Species Act.

Rather than minimizing its operations to protect this fragile area, Space X has increased its scope well beyond what was specified in the FAA's 2014 Environmental Impact Assessment. This includes testing a new rocket, much larger than originally authorized – a massive 400-foot-tall ship with 43 engines and 5,200 metric tons of propellant. It also includes development of a natural gas facility to extract and deliver fuel to the site.

Given substantial changes to its initial scope of work, the FAA should require SpaceX to conduct a full-scale Environmental Impact Study, as required by the National Environmental Protection Act.

Act now: Tell the FAA to improve oversight of SpaceX activities and to conduct a comprehensive study of how the company's operations will impact wildlife and the environment.

Space exploration should not come at great cost to the environment and wildlife here on Earth. **Over 14,000 acres of federal and state public lands have already been affected by the SpaceX facility** — and much more is at risk if we don't raise our voices now.

Help us protect birds in Boca Chica: Please demand a full scale, in-depth analysis of SpaceX's environmental impacts.

Thank you,
EJ Williams
Vice President, Southeast Region
American Bird Conservancy

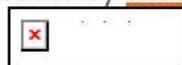

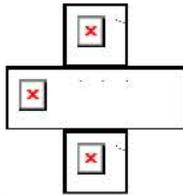

Take Action

Subject: Nature and Scope of Environmental Review

Whom It May Concern: Coastal environments around the world are changing more quickly than ever before. The acceleration of climate change and its effects are both unprecedented and uncertain but life must go on. The benefits generated by the Starship program are undeniable. However, we must continue to evaluate and balance the benefits versus the potential harm to coastal South Texas. In my opinion, the environmental review should be ongoing and progress in tandem with launch activities. Approve a certain number of launches based upon current environmental conditions and then continue to monitor and re-evaluate. Your review, findings, recommendations and decisions should not be cast in stone. I think you're doing a great job!

My name is Aracely Trevino and I reside in Mission Texas, which is about 85 miles away from SpaceX Boca Chica. I am honored that the development of the Starship and Super Heavy are being done in the Rio Grande Valley and that this area along with SpaceX is already making history by producing and launching Starships, which hopefully soon will be the moon and Mars. I believe what is being done here will change the world and the generations that follow will live to have more worlds to explore thanks to SpaceX.

SpaceX has also brought job opportunities to many in the surrounding area which was much needed, in addition, the economy has boosted since the arrival of SpaceX and will improve as things progress as there are many people from the U.S and other countries that want to visit the area to see for themselves and experience a starship launch.

I am confident they SpaceX will work with the EPA and any other agencies to comply with their policies.

Thank you for this opportunity to give my point of view.

Sincerely,
Aracely Trevino

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

The SpaceX program is a shameful use of our resources and the stupidest thing we could possibly be doing right now when we need to be doing the exact opposite to prevent complete climate disaster!! Be brave and do the right thing and say NO to the whole program!! Shut down SoaceX!

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Lisa Allee

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

This largely affects the people of Brownsville, but it negatively affects the rest of the Valley and even Mexico. The amount of bending over backwards for Musk and SpaceX is bound to break your back. And who ultimately is affected? Us, the answer is Us. While some may say that it brings jobs down, what of the people who live here and have applied, they are denied. Texas doesn't have private beaches and yet, we can not get into Boca Chica when we would like. How can a man who said, about Brownsville, "there's nothing there" be trusted with the communities best interest? He doesn't even see us. Don't give in to fake promises especially when we do not benefit. How much money has already been lost through not taxing him/SpaceX/Tesla proportionally?

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Madi Harris

Subject: Space X permit

I am writing this is a senior citizen of the US. Our country is falling behind in almost every aspect of technology, until now. This company needs your support and ours. Its essential that it gets the permits needed to keep doing its tests and keep expanding our technology well beyond what Nasa has done. Please do the right thing and give them the permits needed to continue. If you don't I fear we will become a third world country, technologically.

Subject: Space X Public Hearing - Environmental Assessment Comment

Dear Sir,

I have downloaded and reviewed the executive summary of the "Draft Programmatic Environmental Assessment for the Space X Starship/Super Heavy Launch program at Boca Chica, Texas" and strongly encourage you, the FAA, to approve as quickly as possible the environmental approval for the planned experimental launches. NASA and all of us as concerned citizens, need an aggressive space program that has timely FAA approval to be able to move forward with us competing on the world stage. These unmanned test missions are crucial to these goals.

As a registered Professional Engineer in the state of Texas, I feel the environmental impact is manageable with the plan put forward. Please approve.

Sincerely,
Dennis

Hello,

The FAA needs to get out of the way! We need to be a multi planet species and you bureaucrats are in the way. Don't give me the spin you are protecting the public?! All the people at Boca Chica have been offered very good prices on their property and the ones that have stayed know the risks. The same risks that space X personal are taking. They can relocate at any time with a big payday. I have visited Boca Chica and the environment has not suffered at all. Space X goes out of its way to preserve the local environment. But the old saying to break some eggs to make a omelette applies here, this is a test and development site!! Unknowns will happen, plus the ultimate plan is to move launches of the coasts. So in closing get out of the way of human expansion, or be labeled in the history books as the bad guys!!!

FAA

30th September 2021

Dear Sir, or Madam,

The future is Hybrid fuel Electric self charging cars. Texas Oil and OPEC middle East peace. Putting a Space rocket in a habitated area is as bad as pretending Electric battery landfill and hydrogen fuel deserts and floods are a good idea.

1) fly from NASA Florida. Rent SpaceX a Launch pad. If someone try 9/11 then the military will jump on it.

2) not all SpaceX rockets land well, see 1).

3) SPACE PORT AMERICA NEW MEXICO already has winged sub orbital Virgin Galactic.

4) California has Virgin Orbit satellite launch system.

5) fly SpaceX on Virgin Atlantic flights from California to New Mexico or Texas to New Mexico. And Space Force Colorado trainees. Or drive them in a hybrid car. Or do both with a hybrid fuel electric self charging flying car that uses existing roads, airports and air traffic control.

Money cannot buy space travel. You need Exo thermic staggered ignition fission propulsion system, see UK embassy of USA.

Astronauts can mine Dust for concrete, heated for glass and silica for Microchips for every electrical device as Market.

Uranium is needed for earth, use the asteroid belt to find it.

It is not the Boca Chica income from a launch site, it is the putting of a massive rocket near oil reserves of Texas America knowing what happened to the Hindenburg when Europe blackshirts ruled. Ever seen Iraq with Saddam Hussein and we run out of oil UK 2030.

Rent SpaceX Florida NASA Launch platform. For safety.

Rent Virgin Galactic Edwards Airforce Base and others as potential landing areas for Virgin Galactic winged rocket Flight.

Sell space on international space station when Artemis Lunar programme gets more funding, Privatise it. Give SpaceX and Blue Origin somewhere to go.

SpaceX could build at Space Port America New Mexico. No one there to drop in on. Purpose built. Only a plane or car ride away. Sell the launches to Space Force and NASA and any other country or company.

Yours sincerely,

Philip Miller

Subject: SpaceX Draft PEA Comments

Dear Ms. Zee,

I am writing to express my support for the proposed site development and testing/spaceflight operations at SpaceX's Starship/Super Heavy Launch Site near Boca Chica, Texas, as described in the Draft Programmatic Environmental Assessment dated September 2021.

After reviewing the highly detailed report, it is clear to me that the impacts of the site expansion and operations on the surrounding area have been thoroughly and thoughtfully considered, with adequate proposals to mitigate the potential impacts to the surrounding environment and local amenities.

I strongly believe in the importance of preserving the natural environment, and protecting native species to the maximum extent possible. As humanity takes its first footsteps towards becoming a spacefaring civilization, we must also take steps to protect our natural environment, and to be considerate of our neighbors of all species. Therefore I am glad to see that the impacts to terrestrial and marine wildlife, as well as to the nearby human populations (road closures, noise and light levels, etc) have been so thoroughly considered.

While there is little point in reiterating information already contained in the draft assessment, there are a few items I would like to briefly touch on, and add some information and considerations which I believe may be relevant to the discussion.

The first is the effect of this project on the surrounding communities. While there has been some media attention focusing on the detrimental impacts of the launch site (road and beach closures, primarily), less attention has been paid to the many benefits that SpaceX has brought to the area – benefits which are realized and appreciated by many locals. To name just a few: the obvious economic benefit of hundreds to thousands of skilled, high-paying jobs to an area that has historically had little opportunities; a constant influx of space enthusiasts observing Starship development and launches, bringing year-round cash flow to Brownsville and South Padre Island, whose economy is traditionally reliant on seasonal vacationers; and inspiration to nearby residents for “putting us back on the map in a very positive way” and to local schools whose students have been provided with private tours of the facilities and interviews with SpaceX engineers. As someone who was inspired by a visit to the Goddard Space Flight Center when I was six, and The Challenger Center when I was eight, it is hard to overstate the importance of opportunity and inspiration to young students. At a time when the world faces unprecedented challenges and when STEM careers are more important than ever, I imagine there are few things that make science and math seem so exciting as having a rocket factory and launch site just a short field trip away.

In support of this, I'd like to share a link to a recent “Thank You SpaceX” visit to the site that was attended by more than a hundred local residents and students: <https://twitter.com/considercosmos/status/1449519725302763524>

Additionally, I would like to share an older story that I find very encouraging; one that shows the SpaceX employees are not just talking the talk, but walking the walk as well. When unprecedented cold weather hit the area in February of this year, SpaceX employees worked with the Sea Turtle, Inc. nonprofit and the local South Padre Island community to rescue and shelter almost 4,500 sea turtles from the dangerous weather, demonstrating their commitment to protecting and preserving the wildlife that lives near the SpaceX site: <https://interestingengineering.com/spacex-joins-locals-to-save-nearly-4500-sea-turtles-from-cold-in-texas>

On a similar note, while it's easy to see the challenges that come from siting a launch facility next to a wildlife preserve, there are also benefits that are less apparent. While a rocket factory and launch site may provide significant economic benefit to existing nearby cities, it actually discourages development from the immediately surrounding area, as few are likely to want to build new homes or commercial buildings in areas where loud noises and road closures are common. In this way, along with the “neighborhood watch”-like aspect that SpaceX's presence will provide, dedicating this land to this use may actually serve to protect the surrounding wildlife area from future intrusion. An excellent precedent for this exists in the form of the Merrit Island National Wildlife Refuge, which has surrounded NASA's Kennedy Space Center since 1963, and has shown that the two land uses pair surprisingly well together, and can be mutually beneficial.

Additionally, while the draft assessment report notes that the splashdown of Super Heavy boosters in the Gulf of Mexico and Starships in the Pacific Ocean will have little to no adverse effect on the wildlife living there, I do want to note that – unlike most other launch providers- SpaceX’s focus on reusability (and in Starship’s case, complete reusability) will in the long run significantly reduce the number of spent rocket stages that the industry currently discards into the ocean every year (in some cases, with much less environmentally-friendly propellants onboard).

I would also like to briefly touch on the energy production strategy that is indicated in the report. While the solar energy farm, even in its expanded state, will provide only a small portion of the site’s total energy needs (its size being limited by the relatively small amount of land that SpaceX owns in the area), its inclusion does speak to SpaceX’s passion for sustainability, and helps to normalize and encourage solar energy use in the public consciousness. While the majority of the site’s energy use will come from natural gas, a fossil fuel, it is worth noting that natural gas has a significantly smaller environmental impact than the two most prevalent fossil fuels, oil and coal.

All of that being said, it is important to note that, realistically, no development can be made without some impact to that which has existed before – this is true of almost every human endeavor. As long as humans and technology exist on this planet, we will inevitably have some effect on the natural environment. The key is not to eliminate this effect, but to mitigate it, to achieve a *balance* with nature and build a society that allows humans to thrive and progress while avoiding undue harm to the health and beauty of our natural environment. While humanity often falls far short of this goal on a global scale, I believe that based on the considerations and mitigations indicated in the draft assessment, SpaceX is sincerely endeavoring to achieve this balance at the Boca Chica Launch Site – to move humanity forward while also being good stewards of the only home we have.

It is clear from the report that SpaceX is taking a number of measures to ensure that the detrimental impacts of the project will be minimal, and that those drawbacks that cannot be entirely avoided will be, at the least, severely outweighed by the beneficial impacts of the project. While the focus on protecting natural amenities and the local ecology is very much warranted, it is also important to note the incredible positive potential of the research and development being conducted at this site. I do not believe it is hyperbole to say that the technology being advanced at this location –if SpaceX’s lofty goals for Starship are realized- may be seen by future generations as one of the defining advancements of the 21st century.

The road to becoming a multi-planetary civilization will undoubtedly be a long and arduous one, and there is no guarantee of success. And SpaceX’s Starship project, even if entirely successful, will not alone allow us to achieve that goal. However, its immense capabilities and focus on complete reusability are critical first steps along that path; critical first steps that, to be frank, no other organization on the planet is currently seriously pursuing. Even NASA, which remains the only entity to ever send humans beyond Low Earth Orbit, has not done so in nearly fifty years, and the current plan to return to the moon –the Artemis program- also relies on the successful development of Starship. Extending our civilization beyond our home planet will undoubtedly be the most difficult endeavor humans have ever pursued, but it is not an exaggeration to say that our best chance of success –and for the foreseeable future, likely our only realistic chance of success- lies with a budding development and launch site in a remote corner of South Texas.

It is hard to imagine now, with humanity’s space programs still in their infancies, the full measure of what that success might look like. But if this endeavor is successful, if we do become a spacefaring civilization like those that currently exist only in the dreams of science-fiction, if we are able to –hundreds and thousands of years from now- construct massive orbital space colonies, build cities on distant bodies, and even terraform other worlds, our descendants will see Earth’s ecology expand into the cosmos. Earth is an incredibly rare world, perhaps even an entirely unique one, and therefore protecting and sustaining its beauty and its habitability are critically important. But equally important is proliferating that natural beauty so that Earth is no longer the only oasis of life and nature in the vast, harsh, desolate desert of space.

This is why I believe that the work that SpaceX is doing is critical to the future not just of humanity, but also of the flora and fauna with whom we share this beautiful world. It is incumbent upon SpaceX to take what realistic measures they can to protect the surrounding environment and avoid undue inconvenience to their neighbors. But as long as they do so, and it seems by all indications that they intend to, it is also critical that this vital work be allowed to continue, that the minor drawbacks of road closures and intermittent sound pollution be weighed against the tremendous and unparalleled benefits that this project, and those that follow directly from it, may bring to future generations.

One day, trillions of humans, living and thriving throughout our solar system and perhaps even on worlds beyond, will be able to trace their origins back to the advancements made and the risks taken by our generation, and those generations immediately surrounding us. Trillions of humans who may only exist because here, at the tail end of 2021, humanity made the bold and courageous decision to try what has never been tried before, to take our first, fearless footsteps on the road to the stars.

With best regards,

Per aspera ad astra,

Stanley Nate

Subject: Spacex Environmental Review

I'm all for respect of environment and safety but I also think that we should support in any possible way SpaceX efforts and not hamper their project if it is not necessary.

While I believe it is good to continue to monitor and review Spacex activities I also I think that the company has shown great responsibility and attention to both people living nearby and the environment so I see no reason to delay their progress, just continue to work with them as you have done so far and let them launch ASAP!

I also can not help asking myself how many of the few vocal people who are suddenly complaining about this project have received a little monetary incentive from Spacex competitors... is it not curios how most complaints started after spacex won NASA contracts? I know it is not up to you make a judgement on this, I just trust you will continue to keep a serene and impartial view on the matter as you have always done.

Sincerely,

Claudio Berni

Subject: ***Possible Spoofing Attempt*** Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

Any time a project of this magnitude is undertaken it should be based on the most extensive investigation of its impact on the local human and natural communities as is possible. I don't think that is the case here, and strongly urge the entities involved here to explore ALL the possible eventualities.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

A new cumulative analysis needs to be conducted. A 3rd-party launch failure analysis is needed due to the proximity of Port Isabel, Long Island Village and potentially three LNG export terminals within five miles of the launch site. Additionally, an analysis of the potential impacts to the proposed Jupiter LLC project, a crude upgrading, processing and export facility which includes an offshore VLCC loading facility six miles offshore.

A new biological opinion is needed. The Starship is much larger, there will be more testing, more beach closures, and more traffic where endangered wildlife is present. More closures of Boca Chica beach will result in increased inaccessibility to monitoring of endangered sea turtle nesting sites.

Additionally, I request the FAA enforce and/or hold SpaceX accountable to their required mitigation.

Sincerely,

Judith Walton

Subject: The importance of spaceX to me

Hi,

I'd like to keep this brief to take up less time and space during this process but would like to encourage all the elements of this process to help advance rocketry and the goals of spaceX in the interest of mental health of all things.

I am a single dad, broke, a student and fighting to get a career in order to afford living in an expensive city to stay near and with my kids as they grow. I'm really quite fortunate for my supports but I'm struggling none the less. SpaceX and all other aspects of aviation, rocketry, orbital exploration of our solar system and beyond as well as the supporting technologies gives me hope for Earth's living systems.

All life and organism are linked by care for survival and quite beautifully it has happened mostly unconsciously for almost all living things and life systems from what humanity has witnessed. I feel that our consciousness/social structure/society that has emerged relatively recently is a call to action for life to survive beyond the womb of our home planet.

Most frown on the idea of viruses as they challenge life, however I think all living things communicate even unconsciously in their own way and the challenges of life are what guide change. Having Earth's living things exist as something of a gentle virus beyond our world and solar system, perhaps a bit perversely, gives me hope.

My mental health and I believe the mental health of many is improved by the impressive progress of innovation mostly by the vanguard Elon Musk and the talent he employs in our time. I would hope all elements involved in seeing these innovations progress safely will consider the above in their do diligence and help guide all who would brave it, more safely towards the stars.

Warmly,

Matthew Morigeau

Subject: Approval: SpaceX launches

By nature humanity is a self-checking balance of resistance to change and resistance to the status quo.

History is full of the tension and conflict between these two world views. When Robert Fulton worked on developing the first steam powered ship, the press and populace called it "Fulton's Folly". As the automobile became more common and more robust, there was a general belief that being exposed to excessive speeds, such as 35 mph., would result in the fatal injury of having one's head blown off one's neck by the force of the wind. For a period of time, it was required that a pedestrian carrying a lantern precede an automobile at night in order to warn others using the roadway that an automobile was coming.

From our point of view, those precautions, concerns and mockery seem absurd, and they are. However, they felt real to the people who lacked the experience that we have. Those illustrations seem appropriate to our current discussion. They were done without any government oversight and were fast paced and chaotic. The important thing to observe is that while they were opposed, they were essential stepping stones in our progress.

From the time President Kennedy promised to land an American on the moon, it took us nine years to achieve that goal. NASA could only go as fast as the political establishment would allow. The Space Shuttle program was equally as slow. When it died, as it was designed to do, there was nothing to replace it. The people with ideas were not attracted to positions where they had to receive approval to do the new and exciting that is necessary for exploration and discovery.

SpaceX is the first endeavor that brings together the chaotic, fast paced achievement of the new and unproven that is needed for progress and the need for government oversight and approval of aspects of their work. SpaceX's speed of change and adaptation certainly scares government workers who are used to the slow pace of government projects.

Rather than slow down the pace of SpaceX's progress, I believe that we should speed up the timeline for approval in the government offices. We have computers. We have talented and well trained civil servants. Turn them loose. Give them short deadlines to respond to requests for permissions. America has been the number one nation in space exploration. We dare not lose that position due to the laborious nature of traditional approval cycles.

Approve SpaceX to launch from Boca Chica on the fast paced schedule that Elon Musk envisions. If SpaceX is delayed, I can guarantee you that China will have established a Chinese hegemony on the moon before we even launch Starship into low earth orbit, let alone have the infrastructure in place to refuel and complete a round trip to the moon. China is our adversary. Their space exploration program is already ahead of every other country in the world, except for the US. If we slow down our progress, they will beat us.

President Kennedy staked our nation's future on the success of a program to land on the moon before the Russians because of geo-political consequences if Russia got there first. The stakes are higher in our generation. We must let SpaceX push ahead and keep America first in space exploration with all the pluses that brings to us on the world stage.

Warm regards,

Richard Harrell (Rich)

Subject: Approve SpaceX Request

Greetings,

This summer my family of seven took a 1,500 mile (one way) road trip to South Padre Island just so we could also visit Boca Chica and see the progress of the SpaceX launch site.

We never would have come to this part of the country otherwise. We never would have learned about the Civil War historical site en route or spent a week dining, shopping and playing at SPI.

We spent over 50 hours on this trip seeing the vast, beautiful and mostly empty expanses of the American Central Plains and Southwest.

I appreciate the concerns for the environmental impact that having a launch site at Boca Chica has for this corner of our country, but it is one of a very few places in the US ideally suited for this endeavor. Impeding the progress of SpaceX at this location has the potential for significant long-term negative environmental, economic, educational, scientific and strategic impacts for our country.

I am requesting that the FAA grant SpaceX permission to continue utilizing the Boca Chica Launch Site for the foreseeable future.

Sincerely,

John Ligtenberg

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I have a long history with the Boca Chica area where the SpaceX site exists as a surfer, fisherman, and as a Contractor that has built mitigation sites in the area inclusive of Boca Chica Village. I have also served as Harbormaster for the City of Port Isabel. I am well familiar with the environment surrounding Boca Chica and regulations pertaining to the Clean Air and Clean Water Acts as well as the Texas Open Beaches Act. I do not support any expansion of SpaceX at Boca Chica and insist that current regulatory violations be corrected and mitigated. I currently have a business that depends on the quality of the water off Padre Island to not be organically or inorganically contaminated by industrial waste.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

A new cumulative analysis needs to be conducted. A 3rd-party launch failure analysis is needed due to the proximity of Port Isabel, Long Island Village and potentially three LNG export terminals within five miles of the launch site. Additionally, an analysis of the potential impacts to the proposed Jupiter LLC project, a crude upgrading, processing and export facility which includes an offshore VLCC loading facility six miles offshore.

A new biological opinion is needed. The Starship is much larger, there will be more testing, more beach closures, and more traffic where endangered wildlife is present. More closures of Boca Chica beach will result in increased inaccessibility to monitoring of endangered sea turtle nesting sites.

Additionally, I request the FAA enforce and/or hold SpaceX accountable to their required mitigation.

Sincerely,

Roel Cantu

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

The environment of the Rio Grande Valley is already under great threat with only 4% of its original habitat remaining. The Valley is a critical migratory route for birds and for the endangered Ocelot.

Please take the time to ensure a full impact survey!

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

It concerns me that there has already been one malfunctioning launch, and this of a much much smaller spaceship. We humans, as well as the animals, are all in danger if a larger ship must be destroyed on the way up or down. Debris was found miles from the launch pad when the first rocket blew up. It's necessary to reevaluate the permissions for these launches.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I do not support any expansion of SpaceX at Boca Chica and insist that current regulatory violations be corrected and mitigated. I do not support any SpaceX development that will contaminate the Boca Chica Beach area by industrial waste. SpaceX has never had an Environmental Impact Study (EIS) done on the site and are well beyond original scope of operations.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Dear Federal Aviation Administration,

The Laguna Madre area, which includes Boca Chica Beach, is a very delicate ecosystem. Just north and west of Boca Chica are bird nesting grounds and fish nurseries which are so important not just to the environment but to the fishing industries. I have always been concerned by the proximity of the launch site to the beach. Chemicals and hardware will easily be swept from the Space-X site in storms. Already, construction and launches keep the public away from the public beach. It feels as though little thought or concern was given to the location of this enterprise. The land was cheap, that was all that anyone cared about. This is a beautiful area which deserves our respect.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Dear Federal Aviation Administration,

I believe SpaceX is doing harm to everything surrounding it. We live in Long Island Village, and our house and windows shake. As the ships get bigger and bigger these effects can only get worse. I believe we should be ready for a future catastrophe. I just don't understand how this was allowed to happen without more studies being done. I believe and I am disappointed because I believe Elon's money is what's pushing this project forward. I have never and will never watch any of the launches. I think they are wrong and have to be doing harm to the environment. I moved here for the beautiful beaches and the wonderful wildlife. I can't even imagine the harm all this is doing to our Beautiful beaches. All the chemicals are going somewhere. I am all for progress. I am just not for progress if it harms our environment. If this is allowed to continue, think of all the fishermen that will probably lose their means to make a living. Please stop this insanity!!!!!! This is not good for our area!!

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Dear Federal Aviation Administration,

I hate space x they don't care about the environment or the beach that they are destroying. Not even thinking of the environment before starting the construction of space x. Space x is not even for the valley but for people outside the valley. Elon musk thinks he owns everything and that money can cover up all his mistakes and the mayor is on his side because of money. Buying boca chica village was history of boca chica beach forcing people out instead of welcoming them and providing opportunities. Why is he worrying about going to Mars instead of working on the planet he lives on. I just see rockets blow up and go to waste and selling shitty ass cars that I always see stranded. Not only does it affect boca chica beach but SPI as well since both beaches connect. Space X doesn't think before doing they need someone to stop them before the water is contaminated and less wildlife!!!!!!!!!!!!!!

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I cannot fathom why Elon Musk was allowed to build in the middle of an animal sanctuary. Brownsville needs Elon's money. I get that. But not at the expense of the environment. In the long run we lose

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

A new cumulative analysis needs to be conducted. A 3rd-party launch failure analysis is needed due to the proximity of Port Isabel, Long Island Village and potentially three LNG export terminals within five miles of the launch site. Additionally, an analysis of the potential impacts to the proposed Jupiter LLC project, a crude upgrading, processing and export facility which includes an offshore VLCC loading facility six miles offshore.

A new biological opinion is needed. The Starship is much larger, there will be more testing, more beach closures, and more traffic where endangered wildlife is present. More closures of Boca Chica beach will result in increased inaccessibility to monitoring of endangered sea turtle nesting sites.

Additionally, I request the FAA enforce and/or hold SpaceX accountable to their required mitigation.

Sincerely,

Susan Eades

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I grew up fishing in the Laguna, and I'd like for more people to get that same chance.

AN ENVIRONMENTAL IMPACT STATEMENT (EIS) is needed to address cumulative impacts that have yet to be recognized by the Federal Aviation Administration and SpaceX, including but not limited to proposed Liquefied Natural Gas (LNG) export terminals and a proposed crude upgrading, processing and export facility that includes marine loading berths 6 miles off shore for loading of VLCC ships (65,000dwt Panamax sized) at the Port of Brownsville. A LAUNCH FAILURE ANALYSIS should BE PART of the Environmental Impact Statement (EIS) to assess the risks to public safety and risks to the proposed infrastructure and operations at the Port of Brownsville and off-shore.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment in support of SpaceX operations in Boca Chica

Hello.

I want to express support of the plans to launch Starship/Super Heavy from the Boca Chica Launch Site in Cameron County, Texas.

It is very important that SpaceX can quickly proceed with testing of the unique reusable launch system. The whole World would benefit immensely from such launch system.

Best regsrds,
Uko Nurk

Subject: Comment in support of the FAA's issuing a Mitigated FONSI in respect to SpaceX's development work in Boca Chica

I hope the FAA will support and expedite, responsibly, SpaceX's development efforts in Boca Chica. These will surely lead to positive economic consequences for the great majority of the local residents, and eventually, for the benefits of Americans everywhere, and to humanity as a whole. Space represents a hope for a much better future, and more than other national space programs and companies, SpaceX seems especially able to achieve these hopes.

By aiming to simplify rockets so that they can be used with the same facility and regularity of airplanes, SpaceX seems set on a process that will make rocketry more environmentally benign. Just as airliners have come far more fuel efficient, their engines far quieter, in the course of industry technological development abetted by regulatory guidelines, in the same way SpaceX's reinventing of rocket and space technologies seems likely to push these industries in a positive environmental direction. The FAA has an important role to play in ensuring such an outcome. I strongly hope the FAA will take this opportunity to do so.

Thank you for reading and considering my comment.

Best wishes,

David Joslin

Subject: Comment on PEA for SpaceX Starship/Super Heavy Launch Vehicle at Boca Chica

I have read the September 2021 Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program and I'm impressed with the detail of analysis. I'm also struck by the consistency of its conclusions that the Proposed Action would **not** result in significant impacts / adverse effects / interference / changes / etc.

Given the vital importance of space technology, and the key role SpaceX is taking, I urge the FAA to issue a Finding of No Significant Impact and to issue a vehicle operator license to Space X as soon as possible.

Investment in space travel and exploration by NASA have produced hundreds of beneficial and even life-saving "spinoff" products such as safety grooving for highways, cochlear implants, image sensors, artificial limbs, air scrubbers, memory foam, and more. Continued research and investment, especially by a company as progressive and innovative as SpaceX, will undoubtedly continue to benefit humankind. Mars missions aside, Starship can be the most cost-effective delivery vehicle for satellites, improving our communications, weather and climate monitoring, military observation, and more. By significantly reducing cost/kilogram, SpaceX Falcon and Starship programs will support advances in space biology, space medicine, and in-space manufacturing, with potentially immeasurable benefits.

I see that concerns include impacts on species and habitats, historical land, airspace, and nearby residents, but I also see that not only are these impacts relatively minor, SpaceX seems committed to monitoring and mitigating effects such as noise, light, and land impact. The importance of Boca Chica's southerly location can't be overemphasized. Only Hawaii and Florida have locations with better equatorial spin, but they clearly have much more sensitive ecosystems and populations, especially when compared to the relatively sparse biodiversity of the Boca Chica area. Yes, there are turtles, plovers, and ocelots, but it seems unlikely they will be more impacted by SpaceX activities than by established human use of the area, including driving gas-powered vehicles on Boca Chica Beach.

In summary, the extraordinary benefits of SpaceX's development easily outweigh overblown concerns about road closures, old battlefields, and environmental impacts, especially if SpaceX follows through on its commitments and obligations to monitor and mitigate.

Thank you for your time.

Jim Taylor
Poulsbo, WA

Subject: Comments on Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

To whom it may concern,

I would like to thank you for the opportunity to comment on the “Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas”. In general, I am a supporter of advances in space flight and would like to see the Starship / Super Heavy program succeed. This program could provide immense benefits in increasing access to space for scientific purposes, commercial ventures and crewed exploration. It could also provide considerable non-tangible benefits in the inspiration it provides to the public at large.

That said, those benefits do not and should not lessen the FAA’s and SpaceX’s responsibility to follow environmental laws and minimize impacts to the extent practicable. A mission to space is considerably less inspirational when it leaves a damaged environment in its wake. With that in mind, I have several concerns with the current draft of the PEA. Some of these concerns relate to the document and its characterization of environmental impacts, whereas others are more directly related to the proposed activities themselves. I hope that by providing these comments I can help the FAA and SpaceX develop a better Starship/Super Heavy program with a lower environmental impact.

1. Scope of the Program

What is the scope of the program that is to be covered by the PEA? Typically, programmatic reviews are used to assess new policies, new plans or broad actions that may occur over large areas or have many components. It is not clear what the current PEA is meant to cover. Does this cover all activities relate to Starship / Super Heavy regardless of where they take place? Does it cover tests and flights which originate at the Boca Chica site but may terminate elsewhere? Is it only meant to cover activities at the Boca Chica site itself?

Without a clear statement of the scope, it is difficult to tell if the PEA covers all relevant impacts or not. Furthermore, it is clearly the intention of the FAA to use this document as a foundation from which subsequent analysis can be tiered. Without clearly defining the scope of this document, it may be difficult to determine if some future tiering in appropriate, which could risk either unnecessary environmental impacts or unfounded legal challenges. In this vein, it would be helpful if the FAA provided some clear guidance on the types of future activities that would or would not trigger a need for additional compliance.

The PEA should also indicate what the role of the Boca Chica site is in the overall program. Is the Boca Chica site one of potentially several launch sites for Starship / Super Heavy? Or is Boca Chica intended to be the sole launch site for the foreseeable future. Again, a clear understanding of what is proposed will be helpful in determining what environmental impacts should be assessed.

Finally, if the scope of the program is limited to activities at the Boca Chica site, it would be helpful if the FAA provided an expanded discussion as to why a programmatic EA is appropriate rather than just a normal, non-programmatic, EA covering the same issues.

2. Purpose and Need

The Purpose and Need section (1.3) simply states why innovation in space launch is desirable and thus is too vague. As written, the Purpose and Need could equally apply to any other launch site, and could even apply to various projects undertaken by SpaceX's many competitors. The Purpose and Need should explain why the exact activities taking place at Boca Chica are needed. A clear Purpose and Need will allow readers to evaluate if the proposed actions are necessary and sufficient to meet the Need, and allow for a meaningful comparison of alternatives. This problem is related to the program scope issue mentioned above - without a clear definition of the program it is hard to have a meaningful purpose and need, which in turn makes environmental assessment difficult.

One obvious issue with the current Purpose and Need arises when you compare the proposed annual operations (Table 2-2) to the current purpose of providing cost effective reliable access to space. Table 2-2 indicates that in the operational phase, only 5 Starship launches and landings will take place annually. This does not seem sufficient for the revolutionary nature of the program's stated purpose. A revision of this section, that clearly illustrates how 5 annual launches will fulfill a program need would greatly improve this draft PEA.

3. Artemis III

SpaceX recently was awarded a \$2.9 billion contract from NASA to transport a crew from lunar orbit to the lunar surface using the Starship / Superheavy (sometimes called HLS – the Human Landing System). This contract includes 2 missions, an uncrewed test flight and a crewed landing as part of the Artemis III mission.

Artemis III is scheduled to launch in late 2024, and the uncrewed test would need to fly with enough lead time so that any needed adjustments can be made. While these missions may be delayed, possibly for reasons beyond SpaceX's control, they are contractual obligations with upcoming deadlines.

Publicly available information indicates that each of these missions would require between 10 and 16 Super Heavy flights in order to carry sufficient fuel to earth orbit. Table 2-2 indicates that only 5 Superheavy launches will be made per year, which is clearly inadequate to accomplish the Artemis III / Human Landing System Missions.

Where will the Artemis III Superheavy flights launch from? If they are to launch from Boca Chica this should be explicitly stated, and the PEA should be updated to reflect these impacts. Does the FAA intend that numerous launches in short succession, such as those needed to accomplish a moon landing, count as only a single "launch" in Table 2-2? If so the table should state that and the environmental impacts in the remainder of the PEA should be updated to include this possibility. If the Artemis III missions are launching from elsewhere that should also be made clear. While a Programmatic EA does not require the FAA to consider activities that are tentative and not ripe for assessment, a PEA is not a license for "segmenting". That is, the FAA cannot divide known impacts into two or more compliance documents in order to mask the true overall impact of the program. The Artemis missions are not speculative, and given the short timeline, their environmental impact should be considered as part of this PEA.

4. Alternatives Considered

Due to the vague scope of the program and the lack of specificity in the Purpose and Need, the Alternatives Considered section is not adequate as written. As written, this implies that Boca Chica is the only acceptable launch site for Starship / Super Heavy, and that all future flights will launch from there. This seems to be completely at odds with the proposed launch schedule, which has only a modest number of launches from Boca Chica.

In section 2.3, the considered but excluded alternatives include Space Launch Complex 40 at Kennedy Space Center and Space Launch Complex 4 at Vandenberg Airforce base. SpaceX, however, also has access to Space Launch Complex 39-B at Kennedy Space Center – why was this alternative not considered? Furthermore, why was a hybrid approach across two or more locations not considered? For example, some tests could occur near the Boca Chica production facility but launches and landings of Super Heavy take place from Kennedy Space Center.

Finally, this again brings up the issue of the Artemis launches. If KSC is inadequate for the Artemis related missions, then the current PEA needs to be updated to reflect the impacts of launching them from Boca Chica. If Artemis can launch from another location, such as Space Launch Complex 39-B, then it is a viable alternative location that should be fully considered in the PEA.

Summary of Points 1 through 4

To summarize points 1-4, the scope of the PEA, the Purpose and Need, the alternatives considered, and the demands of the Artemis III / HLS contract are not consistent. The document needs to be updated to provide a coherent view of the Starship Super Heavy Program that explains the need for the Boca Chica launch site and fully accounts for the contractually obligated launches related to Artemis III.

As it stands, the document is too vague, the need for and role of the Boca Chica launch site is not well explained and justified, the considered alternatives are too narrow. Furthermore, the lack of information on Artemis III seems like an attempt to illegally segment the compliance document. It may be that clarifying text would alleviate many of these concerns, but it is very likely that additional impacts or an in-depth study of alternatives will need to be include in the PEA.

5. Sonic Booms

One of the most dramatic noise related impacts is the sonic boom that will result when Super Heavy returns for a landing. The draft PEA indicates that at the southern end of South Padre Island, pressures of 4-6 psf are expected.

The FAA needs to clarify the expected level of damage in this area. While the PEA mentions that the probability of window breakage could be 1 to 1000 or lower, what does that mean for the community? Is that 1 in 1000 per window per event? At 5 sonic booms per year and apparently many thousands of windows in the high-pressure zone, it seems that window breakage in South Padre will become a routine phenomenon and will be a hazard for the population, including vulnerable groups such as small children.

The draft PEA indicates that repeated sonic booms may occur during fueling missions. Could there be additional impacts from repeated sonic booms beyond that for individual sonic booms? Could repeated sonic booms weaken structures so that they are more likely to be damaged by a future sonic boom?

SpaceX is planning to pay for any damages that occur due to sonic booms. Is there some way that they could monitor the impacts on structures and perhaps learn how to avoid some impacts? What proof will be required if a homeowner wishes to be reimbursed for damages?

Finally, the sound related impacts are based on computer modeling. SpaceX should be required to deploy monitoring equipment throughout the affected area, including South Padre Island. This monitoring would allow SpaceX to collect data to validate or improve these models and better understand the sounds related to the Starship / Super Heavy program. Ideally this data would be live streamed to the web, so that the public could assess the impacts as testing, launch and landing activities take place.

6. Wildlife

The Boca Chica Launch site is in the middle of designated critical habitat for Piping Plovers and is also located in an area that has a number of other federally listed species. Given the size of the Super Heavy rocket, and the measures that are needed to protect humans from hearing damage and other harms, there is considerable potential for harm to protected wildlife.

I was surprised and disappointed in the way in which the Piping Plover critical habitat was addressed. While it is true that the TX-01 habitat (shown on Figure 3-8) is a small part of the overall plover habitat, that does not justify any

impacts to TX-01. For a migratory species such as the plover, individuals can require access to a variety of habitats along their migratory routes, as well as habitat at both ends of the routes, so individual sites may be more important than their area alone suggests. Furthermore, individual critical habitats may be small, but if projects such as this destroy many of them, the overall impact will be catastrophic and greater than impacts for each individual habitat would suggest. Only about 8000 piping plovers are left in the world, so any loss by of habitat or birds is important.

Rather than debating if TX-01 really is critical habitat, the PEA should indicate how the habitat and plovers will be affected by testing, launch and landing activities. The critical habitat was designated before SpaceX decided to place a launch pad there, so SpaceX should have detailed plans for how to protect that habitat. On page 99 the draft PEA indicates that 11 acres of TX-01 would be adversely affected. However, on page 112 it is stated that the heat plume will be 212°F at 0.3 miles from the launch pad. A circle 0.3 miles radius covers about 181 acres. Is it safe for wildlife to be exposed to this level of heat for even brief periods? It seems the in the PEA the FAA is stating that a large area is unsafe for humans during launch (see No Personnel zone on Figure 3-8) whereas in that same area, the PEA is assuming wildlife will be completely unaffected.

While the PEA cites some studies on smaller rockets and their effect on the environment it is not clear that these are relevant to the Boca Chica launch site. A full literature review should be conducted that would indicate what impacts have been measured, what distance from the launch these impacts were measured at, and how these impacts are likely to compare to that of the much larger Super Heavy rocket. While the PEA makes brief mention of a study that shows non-significant declines in bird populations, this data should be present at greater length and include methods and more detailed results, as it seems to be the only data actually collected at the site. If the current activities may be causing declines in birds, what steps can be taken with Super Heavy to ensure that steeper, statistically significant declines don't occur.

One impact that should get particular attention is the noise impact on birds. Given the extreme noise levels it is possible that the hearing of birds can be affected. Studies should be undertaken to determine if these noise levels are damaging the hearing of federally listed bird species, as this could threaten their survival.

One possible mitigation, at least with regards to the Piping Plover, would be to cease all testing and launch activities during the months when the birds are present at the launch site. This would eliminate any impact on the birds from launches and thus limit the area of TX-01 that is negatively affected to only the area where construction or similar activities take place.

7. Closures of Section 4f Properties

Currently the PEA defines a closure of the parks and protected areas as the time starting when law enforcement closes SH-4 and ends when the road is reopened. This definition is too narrow and does not allow for proper analysis under Section 4f. Given the importance of visitation to the parks, the National Historic Site and the Wildlife Refuge, a more useful definition of a closure would be any activity taken by the Boca Chica facility that would deter a reasonable person from visiting the sites. This definition would include not only closures of the SH-4, but also all days where the public was warned not to visit due to testing or launch activities, even if those activities were subsequently canceled.

Regardless of how a closure is measured, the PEA seeks to define the closures as a "temporary" occupancy and therefore not a constructive use. However, this seems to be at odds with the legal definition of a temporary occupancy. Section 23 CFR 774.13(d) states the conditions for an occupancy to be temporary. Condition (3) says of the occupancy "There are no anticipated permanent adverse physical impacts, nor will there be interference with the protected activities, features, or attributes of the property, on either a temporary or permanent basis".

Visitor use is a protected activity of parks and wildlife viewing is a protected activity of wildlife preserves so the repeated closures of these areas cannot be considered a temporary occupancy, but rather are a constructive use.

Section 23 CFR 774.15(e)(3) also indicates that a constructive use occurs when “The project results in a restriction of access which substantially diminishes the utility of a significant publicly owned park, recreation area, or a historic site”. Seeing as the purpose of the closing the road is to restrict public access, and a temporary restriction of activities in a park cannot be considered a “temporary occupancy”, it is clear that this project is a constructive use of the parks and appropriate mitigation must occur, if possible.

If road closures will take place, then the planning should be substantially modified to meet the needs of both SpaceX and the protected areas. Under the current system, SpaceX has wide authority to close the road without any prior consultation with the protected areas and with minimal advance notification. A better system would be for all interested parties to regularly meet and work together on a road closure schedule. This would allow the parks to reserve days for the road to be open. These might include National Public Lands Day, the anniversary of the Civil War battle that took place at the historic site, and days when local schools are on vacation. Protected areas also need to have a mechanism to stop launch pad activities should an emergency occur that requires the use of SH-4. Emergency access should not be at the sole discretion of SpaceX.

8. Climate

It is a relief to learn that this project will not single-handedly double the world’s or even the United States’ yearly emissions of carbon dioxide equivalents. That said, this is not a useful assessment of the climate change impacts of this project. This section should be rewritten with a more useful discussion of impacts and mitigations. For example, SpaceX is planning to build a power plant for the facilities. How will the emissions of that power plant compare to other ways of generating power? Are there steps SpaceX could take to offset some of those emissions? How do the emissions at Boca Chica compare to other space launch facilities? SpaceX is also proposing to build a solar farm – compared to other alternatives this should have lower emissions and SpaceX should take credit for this.

9. Next Steps

Given the issues outlined above, the PEA requires, at a minimum, substantial revision to the EA. However, given the complexities of the impacts on wildlife, and the fact that there is no comparable rocket in use today, the project will should require a EIS to be prepared. However, should the FAA choose to proceed with an EA, after making the necessary updates to the PEA, the revised draft should be opened for an additional public comment period before a final determination is made.

Thank you for allowing me to comment on this PEA,

JP Schmit

Subject: Comments on Environmental assessment

The NASA programmes of the 60's and beyond would have had a measurable environmental impact. The space programme at that time was consuming more than 4% of gross Federal budget for a time. This would have had an unquestionable environmental impact. The goal of landing a person on the moon was awe inspiring. The moon landing was the most watched event ever. Armstrong, Aldrin and Collins were greeted as heroes in every country they visited and this was claimed as a triumph for the world, not just America. There were other more strategic gains for the US. This was the Cold War phase of US - Soviet relations post Cuba and America needed to show its dominance which it did with the moon landings. This arguably contributed to thawing of relations and the eventual fall of the Berlin Wall in '89.

It might be a stretch to equate SpaceX 2021 to NASA in the 1960's, but the goals and aspirations are as impressive. In his 1994 book a Pale Blue Dot, Carl Sagan makes a compelling case for reaching into the Solar System and realising the possibilities associated with colonising our solar system as well as ensuring our future. Currently, it is hard to see who else is in a position to deliver capabilities that will offer open, democratic and equal access to the Solar System to the greatest number of people.

Even if all the above were not true, I do not believe the environmental cost of Boca Chica to be beyond what is reasonable. Animals struggle most with permanent loss of habitat and with human activity. The footprint of the construction and launch sites is significant but a small proportion of the whole of Boca Chica State Park and neighbouring Las Palomas Wildlife Management Area. I think the long term impact on wildlife is likely to be small.

The disruption to human social activity is measurable and important to consider. The complaint about road closures is understandable, but the local residents as well as those living further away in Brownsville would still have access to S Padre Island. Even with closures there are many opportunities to reach Boca Chica beach at other times I have noticed that SpaceX avoids road closures on key public holidays and testing is usually on a weekday.

I would like to lend my support to the SpaceX project at Boca Chica and I hope that the FAA is able to fully support ongoing testing and launches to meet both NASA and SpaceX goals in coming years.

I just want to note that I think what SpaceX is doing in South Texas is valuable on so many levels.

- It is giving the US a gigantic head start in what may well become the largest emerging economic opportunity the world has ever seen, the 21st century equivalent of the railroads of two centuries ago
- It provides high paying jobs to thousands of workers, and those jobs in turn stimulate the regional economy, and provide a large increase in tax revenue for the region
- It is providing inspiration and excitement about the future to people all over the world
- It is inspiring the youth of our country to study engineering, orbital mechanics, mathematics, and other sciences that are vital to our future
- It is a symbol that this country can still be fertile ground for great new companies

Federal Aviation Administration (FAA) c/o ICF
Attn: Ms. Stacey Zee
Environmental Specialist
9300 Lee Highway, Fairfax, VA 22031

Dear Ms. Zee:

DHR Health would like to express our enthusiastic support of SpaceX's application to the Federal Aviation Administration (FAA) to conduct Starship orbital launch operations from Starbase in Cameron County, Texas.

We see many parallels between the way SpaceX conducts business and the way our health system does. Since opening our doors in the Southern Texas region in 1997, we have been committed to excellence, investing hundreds of millions of dollars to bring the most advanced health care services to our patients and eliminating the need for our community to travel hundreds of miles to receive the health care they need and deserve. Most recently, DHR Health was designated as a Level I Trauma center, the highest designation possible, and the first and only in the region to reach this milestone. This is the same mentality that SpaceX has, consistently pushing the bounds of technology in order to accomplish things previously thought impossible.

Another parallel between DHRHealth and SpaceX is the spirit of giving back to the community. We have supported our communities through our employees, who have given over 50,000 hours of community service since 2013, by raising millions of dollars for the Renaissance Cancer Foundation and the HOPE Family Health Center, a charitable free clinic for the indigent, and by directly giving back over \$8 million in philanthropic activity and donations. Similarly, SpaceX has positively impacted the local community through educational opportunities for students, employee volunteer and outreach events, and wildlife conservation efforts.

Finally, both DHRHealth and SpaceX have become job staples in the community. Our health system employs over 5,000 people locally, and Starbase is rapidly approaching that number with 1,500 employees in just a few short years. This has a massive economic impact, fostering opportunities and stimulating economic growth throughout the region.

We are thrilled to have SpaceX as a part of the community, and excited about all the future growth the company could bring to Cameron County. We fully trust that SpaceX will continue their efforts to limit environmental impact and look forward to having them as a historic partner in the region. For these reasons, we request that the FAA please approve SpaceX's application. Please do not hesitate to reach out to me if I can provide additional information at 956-662-0891 or by email at M.singh@dhr-rgv.com.

Very Respectfully,

Manish Singh, M.D.
Chief Executive Officer

Subject: Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle

Reference:

Response to Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas Dated September 2021

To whom it may concern:

Thank you for taking the time if this email is being reviewed. I am a retired BEng, electrical, avionics, from Canada and expect to have no influence what so ever, but am compelled to type something to ease my mind before a decision is made on this matter.

I have decided to forego a lengthily attributed reply mainly due to the fact that you belong to a very capable agency who would have someone fully aware of any reference/source that I gave. I will revert to a messy freehand reply...I am sorry in advance :)

Prior to SpaceX's arrival, the village was sparsely populated with few services. The beaches and marshland in this area were and still are traveled by road vehicle as well as atv's, easily visible from aerial footage and the beaches have been subjected to constant litter.

This area fronts on the Gulf, an area plagued for many decades of oil spills. The local area, Brownsville in particular, is a petroleum staging area for fabrication, repair facilities, equipment and personnel transport, ship breaking and a new LNG storage and transport facility.

I agree that environmental concerns are valid but not when used as an adversarial weapon against a company that belongs to a group that embodies the drive to renewable energy, energy storage, and the world leader in electric vehicle production. SpaceX itself is leading the charge to reusability in launch vehicles, a stand that others have now embraced. The major disruptions of the automobile market as well as the launch market, while necessary, also breeds contempt and unjust resistance in many areas.

In closing, SpaceX has one of, if not the brightest workforce in launch vehicle construction and operations. The young ones there are more than aware environmentally and the future workforces of many companies draw off this pool eventually. Why is this so...hopes and dreams, period.

I was born in the 50's, was privileged to watch the Apollo missions and experience the awe that was struck from this and the dreams of the future. While probes and landers have been remarkably successful, the human exploration dream ended in 50 years of LEO. SpaceX is the next best attempt to move us out of LEO and beyond to the Moon and then Mars, something I will not be around to see, but am excited that the young ones will have an opportunity that I only dreamed of.

I know that you will be fair...and the future awaits the brave.

Subject: Environmental Realtime Monitoring and Mitigation - Space X Starship Program
Attachments: StarGate - Concept.jpg

Subject - SpaceX Starship Super Heavy Project at the Boca Chica Launch Site
Request - Environmental Realtime Monitoring and Mitigation

Attention: Federal Aviation Administration (FAA) and Space X

We would first like to start this comment by providing full support of the "SpaceX Starship Super Heavy Project at the Boca Chica Launch Site". We are very excited about the Space X's developments as a national and global priority for expanding the human footprint beyond earth to the Moon, Mars and beyond. We full support NASA and its innovations as well but as shown with Space X progress, private companies are able to be nimble and diverse in its iteration approach to reduce waste and prolonged delays. We believe that Boca Chica's Star Base will be our gateway to the future as well as our restoration of Planet Earth through the same iterative approach and exploration of environmental restoration systems.

We fully support the approval of this project in part and whole. We support their footprint expansion and are also excited about the potential future launches to take the starbase SuperHeavy Program to regular use and commercial development / expansion at sea repurposed platforms to lessen environmental impact further.

Specific to our comments - We would like to suggest, encourage and request the use and deployment of real time environmental monitoring, mitigation and management of water, land and soil due to particulates that will enter into the region due to the launch cadence. These can be deployed on land and in wetlands as well as in the Gulf of Mexico. The units can be coupled with solar powered pumps for in water / in sea solutions to encourage treatment capacity over traditional natural wetland systems. The environmental impact is guaranteed to have a negative impact but a robust and real time monitoring and display for public access and regulatory oversight will ensure that the habitats are able to be protected. We have several partners that we work with and would be able to assist with this program's deployment. This can also include plastic repurposing to fuel and energy for the campus. Please see the following links and information of selective consultants we use in this space and would be able to assist along with our project management team.

Additionally the "Star Gate" Concept (attached) we are developing would be possible by the Falcon Heavy Program but would have less of an environmental impact if able to be developed through the Starship Heavy program. We fully support the approval of **SpaceX Starship Super Heavy Project at the Boca Chica Launch Site** but hope that real time environmental monitoring, mitigation and management programs can be developed alongside this innovative game changing space development program. We are happy to help if needed and greatly appreciate the FAA and Space X's consideration.

To: Pepper Realty Paula Sindelar <[REDACTED]>

Dear FAA,

The WORLD depends on you making the right decision concerning SPACE X.

This American company has taken us farther in space than any other company... due to FINALLY developing REUSABLE ROCKET! The SPACE X technology is above and beyond what other companies have accomplished for the last 60 years.

*** If our world gets taken out by an asteroid or God forbid ... an atomic war, the WORLD NEEDS A BACK UP HOME. This is not sci-fi any longer. With China sending rockets/ bombs around the world at the speed of light THIS MONTH ☆☆☆we are all afraid for our safety.

Without a back up plan for humans on the Moon or Mars, it is a scary thought that Earth could lose all life and not have the opportunity to keep our human kind alive in the universe without Earth.

SPACE X, TESLA AND ELON MUSK are one of the few companies & men trying to preserve man kind and at the same time, help our current issues on Earth.

I pay tax dollars to help fund and pay your salary plus help with funding these companies. I wish SPACE X would have been in the picture a long time ago so that we would not have been paying companies trillions of dollars to build DISPOSABLE rockets!

SPACE X has proven time and time again that they are doing the right thing and not just for a profit. They have proven time and time again how safe and successful a company CAN be and as a tax payer, I am begging you to make the right decision and allow SPACE X TO PERFORM ALL TESTING NEEDED for THE FUTURE OF OUR PLANET AND A HOPE THAT EARTHINGS HAVE A 2ND HOME IN CASE OF AN EMERGENCY.

It is way past time ...we should have been multi planetary 50 years ago. SPACE X IS OUR NOW AND OUR FUTURE.

Dear FAA, I am but a humble high school student at 16 years of age. I wish, though, to impart a clear yet concise message on the fact of whether or not SpaceX should be allowed to continue their construction. I must concede SpaceX has not obtained the proper licensing to build such structures. However, you must acquiesce that, in order to get to the Moon, their pacing must continue. Congress' funding is fickle and the sooner the due date, that is for the lunar landing, the better. I thus implore you, though my words may fall upon deaf ears, to be lenient with SpaceX, I do believe they should obtain permission but if congress sets a date but blocks the path with bureaucracy nothing will ever make it on time. I know that competition among space launch providers is essential to a thriving space economy, especially in the future, but in all honesty their competitors are hampered by the very thing SpaceX tries to avoid, Bureaucracy. I am not in any way a veritable "fanboy" of SpaceX, but rather a young citizen wishing that we can be United by something beyond us. In a world so rife with division we, as a country, as a world need to see mankind emerge into a new Epoch defined by only the illimitable imagination of our forefathers who so miraculously planted that flag upon the face of another heavenly body almost half a century ago. That is half a century to long! If we are to go back we must go back with gusto, verve and drive, traits only seen in NASA during the Apollo days and SpaceX today. Please allow SpaceX to continue for, though we may be divided here on Earth, on the Moon We stand as one. All borders dissolve looking down from above, all race, gender, ideology, gone we are left as One, Mankind. Godspeed FAA Your humble acquaintance, Gabriel. John .Fontenot

Our world has a time limited life span. To extend the duration of Human life on our earth, and to ensure it continues even after major catastrophes, be they man-made (global warming, wars..) or not (natural including cosmic disasters) we need to accelerate applicable technology to to better protect our planet and species As a Chartered Engineer and retired VP of a Swiss global engineering company who has lived & worked on 4 continents, I believe that SpaceX is currently the ONLY company with the vision & implementation track record to help human life to continue long-term. I thus request that you grant them the necessary permits to continue ASAP with their Starship plan. Obviously this must be subject to their adherence to your sensible safety & environmental considerations. Kind Regards Denis Harding C.Eng, M.I.E.T

About Starbase. I firmly believe that Starbase is one of the most important locations in the United States. The innovation at Starbase is unprecedented and the need to keep the US as n°1 in the space race can only be accomplished with Starbase. Not only do I think that Starbase should have a full go ahead but I believe they should have a larger launch capacity along with funding. Thank you. Tristan

Please do not impede the progress of the SpaceX program at Boca Chica. In thinking about environmental effects, there are confined actions that sometimes have huge effects, and there are huge actions that have confined effects. For the former we want to find and limit, for the latter, we want to support and encourage. For the former one thinks of the introduction of chlorofluorocarbon refrigerants and propellants, for the latter one thinks of SpaceX at Boca Chica.

I was born less than five years after the Apollo11 flight. My dad (RIP), a science and science fiction enthusiast, went to office with a portable TV, after being up whole night, for seeing humanity accomplish his, so far, most outstanding achievement. My whole life has been influenced by his passion. I am an aerospace engineer, ten minutes ago I was planning some thermal test I will carry on tomorrow on some European TPS, and once this message is written, I will carry on numerical simulations for the tomorrow tests. I was a kid when Columbia did her first flight, but I still remember where I was and what I felt. For the following forty years I have studied hard, I graduated and got a PhD. I like to think that I contribute a little, a very little bit, to human expansion beyond our blue marble, but for the last forty years I have seen nothing actually new and innovative, in this my loved field. Apollo11 has been the result of a perfect storm, the cold war, Vietnam, cosmonauts conquering space, Dallas. America is still ruling the world with the technology developed in that years. Soviets are no more an issue. But our freedom is always in danger. I hope that we are living a new key period in human history. There is a man with a vision, another one that "do things because they are hard, and not because they are easy". We have the opportunity to fly as high, and even higher, than the Apollo11 Eagle did. That Eagle flew for the whole mankind, or at least for the free part of it. Do not stop all this. Allow mankind to fly high again. Allow us to become an interplanetary specie. Allow us, free men and women, to prove again that freedom is natural and best condition for humanity. Do not stop our future, our hope, our dreams. My dreams. Thank you Sincerely Roberto

Hello, you want to know why you should let SpaceX carry on freely? This planet will one day die, we don't know how, or when, if it will be from nuclear war, a solar flare, a meteor hitting the earth, a virus or any number of disasters we cannot fore-see. But it is going to happen and human life on this planet will one-day end, no matter how hard you don't want to believe or think about it. (Who would have thought a virus created by China killing millions of people and locking down the world would have happened, but we are living it right now!) The end will probably Not be in our life time, and hopefully not for many generations, but even though we have no idea when it will end, the clock is always ticking down. You are in control of letting SpaceX carry on building/testing rockets, to one day make the human race a multi planetary species. To make sure human life continues on other planets if anything happens to ours. That might not mean much, if anything to you right now, and you might not think your decision to let SpaceX carry on will be important for you or your loved ones, and true it might not be in your life time. But what about your grand-children, or their grandchildren? Your decision now about SpaceX may save or doom them, and when the earths time is finally up, if you don't let SpaceX to carry on freely now, you could be ending your bloodline, because your great grand-children may have no way to leave the planet. SpaceX is our best hope to keep the human race and your DNA alive, if you don't let them carry on, then the only humans left alive will be Chinese and Russian as they will join forces and carry on from where you stop SpaceX. SpaceX will save the human race and save your bloodline but only if you let them carry on freely. People like Elon rarely come along and if you stall him, you might be dooming you family, their family and the rest of us.
Best Steve

Hi. I'm from Canada and I'm one of those who believe in saving the planet. But SpaceX make me proud to be an "North American" with our values and all what it's implies. I would be very sad to see the space exploration retarded or halted because of our fear. Of course we need to be very prudent but we also need to go forward. We want to preserve the nature as much as possible but we know that in the case of a an desired event, nature will adapt. As always. Please don't let our fear stop us.

The FAA is an instrumental part of the safety regulation of the airspace throughout our country. Without it the unregulated aviation industry and other air-bound traffic would cause countless more casualties than it does in today's world. It did this by watching and learning from the way aviation worked and changing its regulations accordingly. When the FAA started the aviation industry and much of its regulations were already in place, much of it having evolved on its own as pilots and ground crews learned the safest ways to operate. Eventually as rules became more complex and numerous a central agency was created to regulate and mandate the rules. Without this initial process of learning and feeling out the best ways to operate, the FAA would have had a much more difficult time learning the best way to manage the industry. That same learning process is now starting in a different industry, that of the rocket industry. Something that overlaps with but is very different from the administration's typical area of expertise. This of course is causing conflict where the administration is considering calling a halt to the processes that are taking place so it can ensure safety and create new regulation if needed. While this course of action is the safest, it may not be the most prudent. If the FAA had existed during the growing days of aviation, it would have likely felt the need to do the same as it does now. Dozens of unregulated new prototypes of aircraft, plenty of them large enough to cause major damage. Any sensible person would call a halt to ensure safety. But this halt, though safe would have done other harm. By preventing the continued development of these aircraft the FAA would, of course, delay their development, but moreover, it would also delay the changes that the vehicles would bring to the regulations. One way or another the aircraft, or at least similar ones would take to the sky eventually, but by keeping them grounded the FAA would have lost valuable experience for what changes need to be made to accommodate such aircraft. A similar situation is seen in the Boca Chica situation today, a massive rocket is bringing with it growing pains that need to be handled. One way to do this is of course to stop everything and plan things out before continuing. However, to use the same theoretical as earlier, if the FAA were to let the large new prototypes fly, but keep a close eye on them while doing everything to ensure safety, the benefits of both sides could be gained. That is to say, the aircraft could continue to develop, at the same time helping to find the cracks in the regulations. All the while the FAA would be able to monitor and ensure that wherever a danger is perceived, a solution is formed before an incident occurs. The same can be done in Boca Chica, if the FAA were to become more actively invested in Starships development process, it would allow the administration to monitor the situation and ensure safety, all the while collecting information on what new rules and regulation would need to be put in place to ensure safety in the future. Another topic of conflict that is being faced at Boca Chica is in regards to the Orbital integration tower that reaches well into the airspace above Boca Chica. The Orbital Integration tower is comparable to what airstrips and airports were in past years. Large structure that interfere with the flow of other transportation. Airports are massive lengthy strips of empty land that often interfere with roads forcing the roads to circumnavigate around the airport. Boca Chica is in an almost parallel situation, the tower is a massively tall structure that is interfering with the traffic in the air, and —especially when launching or testing— forcing traffic to circumvent the launch site. That is something that cannot be avoided, and is definitely a safety concern. Yet, yet instructing aircraft to circumvent the area is something well within the FAA's grasp, where airports mark their boundaries with fences, the FAA can mark the launch facility's boundary with a restricted airspace boundary. Of course this leaves the launching itself which in the end is a danger in itself, not only because of the danger the potential debris poses, but also by the launch itself. When a rocket is so powerful it

can cause injuries on sound alone, of course some sort of regulation is needed. But this is something the FAA is already familiar with in places such as Kennedy space center. Of course this means that the administration would have to go through the process of recreating the regulation of a government facility for use by a private one, which is certainly uncharted territory. But nonetheless as it appears that this will happen one way or another eventually it seems that a solution in the short term may be more effective for both parties as it allows them to keep operating towards there respective goals. I send this email as an observation, I support both sides thoroughly. Safety of course takes precedence over progress always. Yet it seems that it is possible for both side to continue operation with complete safety. The FAA has some experience with similar situation to Boca Chica, and SpaceX itself is taking many steps to ensure safety as well. It doesn't seem that is would be to far off to combine the efforts to find a solution without bringing development to a halt. I realize this email means little and likely seems the ramblings of a biased teen, but thank you for taking your time to read it. Thank you for all that the FAA does, you all have saved countless lives. Have a wonderful day and an amazing holiday season.

Gavin S.

I am really excited about the progress SpaceX has been making with their new rocket. I've been a space nerd since I was a kid, I remember watching many space shuttle launches. Unfortunately I was not alive for the moon missions, but today I am alive for the potential return to the moon and perhaps beyond. I do not believe we should hinder the progress of SpaceX or any other private company trying to reach space just for the sake of doing so. I cannot wait for JWST to launch and return images. I cannot wait for man to step foot on another planet. I am however concerned about space debris. China, US, etc, should stop exploding its own satellites...

As a Robotics PhD student at the University of Michigan, I recognize the incredible skill and transparency that SpaceX has demonstrated working on StarShip. Allowing them to start orbital test flights is incredibly important to not waste the effort and skill that is unparalleled in a sector often plagued by delays and cost overruns. Work with SpaceX going forward to minimize environmental harm -- they care about public image and will do everything feasible to prevent, or at least reduce, avoidable harm.

Space utilization is vital to The Worlds ability to grow without undue environmental damage, current space craft are not up to the work that is needed. Those "environmentalists" who oppose this project are not seeing the big picture and that they are trying to win a "small battle" at the cost of the "War against Climate Change". Space utilization can and will take pressure of the environment here on Earth if fully reusable Starships are added to our tools to make life better here on Earth. Therefore the SpaceX testing program should not be slowed by excessive limitations and enough launches should be approved after the test phase is complete to at least allow the Boca Chica site to be at least a major manufacturing site for StarShips and Super Heavy Boosters. The 250 MW power plant will be necessary in the short term as will onsite methane extraction however the replacement of this capacity with Solar and the replacement of methane ground extraction with atmospheric extraction based methane production within 10 years should be committed to. Thank you for your consideration. P.S. I would be happy to explain any of my comments in more detail at your request.

Dear FAA, Please approve the SpaceX Star Ship production at Boca Chica. Competition is desperately needed and many companies are competing in space but we have a competitor in China that is pushing for space superiority and we need to innovate faster. SpaceX has disrupted the entire industry in positive ways with reusability which not only saves us tax payers money but makes industry as a whole innovate just to keep up and as a consequence helps keep a competitive edge on China. Please consider the benefits to the environment through blustering reusability of the upper stage as well as the national security benefits. Further it is well documented the investment in space has created amazing technology like GPS and this phone and so much of the infrastructure we take for granted. I believe it will benefit the US, environment and humanity but pushing to allow Starship to develop and those that come up to compete with it. Please except this option for your consideration.

To whom it concerns. SpaceX is fighting for mankind's future. It is my opinion that there is no greater cause out there than making us a multi-planetary species. Otherwise known as going to Mars. Currently they are the only company who actually has the know how and will to make this happen. There is honestly almost no sacrifice to great to achieve the next step in mankind's evolution. The good news is we do not have to sacrifice much at all. Just give them the thumbs up for the environmental review. Even if this trashed the local environment at Boca Chica it would be easily worth it. However that won't be necessary as these launches will not disturb the ecosystem greatly. This is my plea to the FAA to please stand back and give SpaceX the thumbs up to do great things for our future. Do not be a lead weight holding our destiny and future back. Give SpaceX the authority to launch as many rockets as they need to take us to the next step on our journey.

Hi FAA, my name is Arthur Lutz. I think that the space program activities that Space X is proposing are reasonable. Other than noise, and debris, I don't think Space X is causing too much of a negative environmental impact. Also you couldn't find a more professional and positive and inspiring company to lead Americas space program forts than Space X, and Elon Musk. I think it should be a priority to have a space program in America, even if there's an environmental impact because it brings back engineering jobs to America, once the space industry ramps up, that way we can get back to early 90's economic prosperity in America, which will fund small boutique businesses like book stores, and music stores, etc. and bring back lots of good starter jobs for people that want to work part time and go to school part time and get even higher paying jobs. Much like how a Central Bank Digital Currency may lower crime rates because of how digital transactions can be recorded by the Government, I think having engineering jobs back in America in a space industry is a second important part of making America into a great place to live and work. In fact probably the greatest way to run things that's achievable. I would say its such a good direction to take America, that we should do whatever we can to help Space X succeed. So hopefully the FAA can see fit to provide more than 5 launch opportunities per year for Space X over time. As long as its safely conducted, and meets environmental standards. Thanks for reading my comment. -Arthur Lutz

Hi, My name is Cesar and I was born in 1969 in Mozambique, I'm Portuguese, Swedish and French, why am I telling you this. Well as you know the first humans to set foot on our moon were launched in 1969 on a Saturn V rocket, so being born on the same year as the moon landings made me feel like I had a special link to Space Exploration. These astronauts were American and the Saturn V was proudly built in the USA, all this inspired me a millions others and then after years of nothing extraordinary happening within space exploration I actually starting loosing faith in mankind and our future within the stars!! Then came SpaceX and a few years later starbase. I, once again am inspired and my faith in mankind has been restored. I also inspire others as I speak about space exploration and humans exploration the stars and explore Mars! Please stop and try to see the bigger picture, humanity needs starbase , we need to go to Mars, we need to be a multi planetary species. I'm sure you're just doing your job but putting up road blocks in the name of human safety but at the same time putting human survival at risk is silly and dangerous, SpaceX isn't dangerous, you are! Please stop being a road block but rather be the traffic cop allowing the high density traffic to fly through so not to cause a road block and everyone comes to a complete stop. Thank you Cesar

Dear FAA, The environmental concerns that are being investigated for the launch integration tower, and the starship program in Boca Chica Texas cannot get in the way of the rapid innovation that Space X is showing. This is what space looks like in the 21st century, we have the most advanced and "new" ideas ever. Space X is taking humanity to the stars, it must not be stopped over regularly approval, this is for all of humanity!

Hello, I am 62 and have been a space enthusiast for over 50 years. I remember how excited I was as a 10-year-old watching the first moon landing. That excitement has continued over the years. But not the same excitement as watching the crew of Apollo 11. The Starship program has now rekindled that initial excitement of 50 years past. The spinoff technologies from the space program are undisputable not the least of which is medical equipment. People are alive today because of the space program. I absolutely believe protecting the environment is important, I also believe the future of mankind is off this planet and with all the new technologies developed from it. Please allow SpaceX to continue the development of Starship as quickly as possible.

In my opinion, it is vitally important that SpaceX are allowed to continue their flights, production and testing at Boca Chica Star Base. This is important to me and my family and friends, but more importantly Humanity itself. We need to do all we can to support this rapid development and high cadence. Let's all do our part to advance humanity in the right direction.

Sehr geehrte Damen und Herren der Federal Aviation Administration, als Nichtamerikanerin (ich bin österreichische Staatsbürgerin) verspüre ich dennoch den starken Drang Ihnen zu schreiben und meine Meinung zu diesem, wie ich finde bedeutenden Thema (bedeutend für alle Menschenbürger dieser Welt!) los zu werden und die Wichtigkeit der Missionen von Space X's Starship die uns von unserer geliebten Erde, über unserem natürlichen Satelliten den Erdmond, hin zum Mars und danach zu anderen Planeten führen soll, zu betonen. Schon als Kind blickte ich fasziniert zum Nachthimmel hinauf und staunte über den Blick zu den Sternen. Dieser Blick in den Weltraum beflügelte meine Gedanken und brachte mich dazu, mich für Reisen ins All zu interessieren... Ich begann darüber zu lesen und las vor allem viel über Wernher von Braun, von seiner Vergangenheit, seiner Arbeit mit der NASA, vor allem fesselte mich das Von-Braun-Paradigma. Das Apollo-Programm fand vor meiner Geburt statt und ehrlich gesagt, konnte ich lange Zeit nicht begreifen wie dieses, für uns Menschen als Spezies so wichtige Programm eingestellt werden konnte... ich weiß es ging um Kosten und die Leistbarkeit... aber mit einem breiten time- horizon müsste einem doch klar sein, dass es sich auf lange Sicht gesehen mehr als rentieren würde... Einige Veränderungen waren natürlich noch durchzuführen... diese Veränderungen hatte schon Wernher von Braun geplant gehabt, wie zum Beispiel die wiederverwendbare Rakete, die es möglich machen würde die Kosten der Raketenstarts enorm zu senken um die Flüge ins All erschwinglicher zu machen... Da kam der südafrikaner Musk ins Spiel, dieser Mann träumte nicht nur die selben Träume vieler Menschen, die die Augen ins All gerichtet hatten, nein er setzte diese Träume in reale Taten um und machte die wiederverwendbare Rakete, von Brauns Vision, Wirklichkeit!!! (Nebenbei schafft er viele Arbeitsplätze für die USA, das stärkt und belebt eure Wirtschaft...) Space X macht die Raumfahrt wieder erfolgreich, die ganze Welt blickt wieder auf die USA. Blickt mit Zuversicht auf die künftige Absicherung der menschlichen Spezies, denn eines ist klar, irgendwann kommt es, das Ereignis, dass das Leben auf unserer Erde beendet oder die schleichende Zerstörung unserer Umwelt, die das Leben auf Erden unmöglich machen wird und da ist der Plan B für unser Überleben essentiell... Sie wissen das und wir alle wissen es... es ist Zeit etwas dagegen zu unternehmen, es wird Zeit Träume zu beenden und Aktionen zu setzen... machen Sie die Raumfahrt wieder zu etwas Großen, denken Sie nicht nur kurzfristig an Kosten, denken Sie an die Absicherung unserer kostbaren menschlichen Gene, unserer Spezies, die es Wert sein müsste, sie zu erhalten und für eine unbekannte Zukunft zu retten. Ich bitte Sie inständig, bitte erteilen Sie die Startgenehmigung der Starship-Rakete, die Welt blickt hoffnungsvoll auf die USA. Ich bedanke mich bereits jetzt herzlich für Ihre Zeit, die ich in Anspruch genommen habe und hoffe sehr auf Ihre Unterstützung um das Leben wie wir es kennen, eines Tages multiplanetar machen zu können. Machen Sie es wahr! Ich verbleibe mit freundlichen Grüßen Elisabeth Jivkov dipl Päd

Translation: Honorable Ladies and Gentlemen of the Federal Aviation Administration, as a non-American (I am an Austrian citizen), I feel the strong urge to write to you and give you my opinion on what I find a significant subject (to humankind of this world) to get rid of. And to emphasize the importance of the SpaceX starship missions that should lead us from our beloved earth, over our natural satellites to lead us from the earth moon, towards Mars and thereafter to other planets. Even as a child, I glanced fascinated at the night sky and marveled at the view of the stars. This view into space inspired and gave wings to my thoughts and brought me to the interest of traveling into the universe. I began to read about it and primarily read a lot about Wernher von Braun, about his past, his work with NASA, and I was primarily captivated by the Von-Braun-Paradigm. The Apollo Program was started before I was born and, truthfully, I could not for a long time comprehend that such an important program for the species of man could be halted. I know that it was about cost and affordability, but in the broader time horizon, it should be clear though, that in the long view, it would be profitable/ worthwhile. Several modifications were naturally not implementable -- Changes that Wernher von Braun had planned were of course still implementable. These alterations/changes that Wernher von Braun had planned, for example the reusable rocket that would make it possible to reduce the costs of the rocket starts enormously in order for the flights into space to be more affordable. There came the South-African Musk into play, this man not only dreamt the same dreams of many people who have their eyes focused on space; no, he converted these dreams into real deeds and made the reusable rocket of Wernher von Braun a reality! (incidentally, he created many jobs for the USA, that strengthens your economy . . .). SPACE X made space travel a success, and the whole world looks again to the USA. Look with confidence to the future protection of the human species, for it is clear, at some point in time it comes - the result that life on our earth will end or the creeping destruction of our environment that will make life on earth impossible, and that the Plan B for our survival is essential. You know this - and we all know this: It is time to do something against it. It is time to end dreams and put actions into place - make this space travel again into something great; don't only think in terms of short-term cost, but think about terms of protecting our valuable human gene, our species, that should be worth it to preserve for an unknown future to be saved. I fervently plead, please grant the start permit of the Starship Rocket. The world looks with hope to the USA. I heartily thank you in advance for your time I have taken with my message and hope that your support of life as we know it, one day will be able to make a multiplanetary system possible. Make it happen. I remain, with friendly greetings, Elisabeth Jivkov dipl Pad.

I think the submitted Draft PEA for the SpaceX program at Boca Chica does a good job outlining the issues and steps taken to mitigate their impact. As this is a test and temporary facility with future permanent plans to be offshore, I think it is reasonable and the FAA should be supporting this as they have submitted the required information and have proceeded in good faith. Any paperwork holdup on this should be noted as a proceed with future corrections and updated plans as this is an evolving test program. Please support this program and help SpaceX in its goal. Please make SpaceX follow the environmental rules, but in a light-touch way. For example, if they need to come into compliance with somethings, give them an option to proceed with experimental launches (no carp go or people from Bocca Chica), but need to come into compliance within a year... else they agree to stiff financial penalties (in an escrow account that they initially fund 20% of it immediately), plus shut down of their facilities if they don't comply within in a year.

Hello I'm not from Boca Chica, I'm not from Texas, or the USA. I live in Australia so my opinion may not matter. However, what SpaceX is doing at Boca Chica is of global importance. Environmental impacts resulting from this proposal are important and must be addressed, but the work at BC by SpaceX is of world importance. Thus, unfortunately for the locals there must be some sacrifices. Approval must be issued allowing the continuation of the development of star base . What SpaceX ais doing at BC will re-shape our world and civilisation for ever. Thank you.

SpaceX is attempting to make a giant leap forward in Space Tech. It is imperative for the future of technology that SpaceX be allowed to move forward. Although it is important to ensure that rules are followed to ensure safety of our aerospace and the environment we need to be flexible so that future technology is needlessly delayed due to government intervention. Please approve SpaceX's Boca Chica efforts and Star Ship testing.

Please allow the SpaceX Starship program to continue in the manner Elon Musk has been running the program. He's making incredible progress which, if stopped, puts America's rocketry programs in a position to fall behind our competitors in China & Russia. It would be incredibly short-sighted to hamstring the progress Musk has shown. Make his road easier, not harder.

I'm writing to voice my support of SpaceX's efforts in Boca Chica, TX. This company is doing more for humanity and the progression of life on earth than all human effort combined in the history of our planet thus far. The leadership of Elon Musk is invaluable and we can all see that he can be trusted to make decisions that will benefit humanity in the long run. We have seen the decline of human spaceflight in the USA for a matter of decades now. If we are to reverse that trend we must act with an extreme sense of urgency. I implore you to aid SpaceX in their quest by approving the Starship Orbital Test launch and continued operations at Boca Chica. Ad Astra!

I support SpaceX and its mission. If we do not allow space transportation hubs in the United States, then other countries will build them and we will lose this burgeoning market. Just like airports there will always be compromises in environmental cost, and public nuisance. However, this must be weighed against the benefits of increasing humanity's access to space and to the solar system. Please approve the new space center in Boca Chica. Ideally, with the most launches per year requested. Jack Kirby

In my opinion SpaceX operations out of Boca Chica Texas should be continued, as they has massive economic gains, I myself plan to get a job working on the starship program. It would also have huge benefits to wellbeing of everyone, the capabilities that the starship program will provide for launching specialized Earth observation satellites are massive. The planned expansion also means that it will be fully solar powered and produce its own fuel, and making it carbon neutral and good for the environment overall. However It would have some effects on local environment, these negative effects would be overwhelmingly outweighed by the benefits to the environment as a whole, and the local population. Due to SpaceX's plans to expand the road infrastructure in this area to allow for the rapid transport of launch vehicles, negates the arguments that they are restricting access to the beaches, I'm sure closing the road is annoying for them as well because they have to coordinate it with the local government. So them being approved to expand there operations, and thus build roads would resolve many of the issues. Overall I believe that SpaceX should be allowed to continue working and expanding in this area, as the benefits far outweigh the downsides.

Dear FAA, The environmental impact from SpaceX in BocaChica in comparison to other industry impacts to the environment shows, that SpaceX is taking care of many aspects. The damage to the nature e.g. from passenger flights and or chemical or oil and gas industry is much bigger! SpaceX is using renewable energy and rapid improvement of the solution of every kind of problems, so including environmental problems, too. I highly recommend to approve SpaceX plans to make America and the whole humanity to a multiplanetary species! BR Soeren Fromhagen, Germany

Hello, I am writing to address the pending hold on SpaceX high-altitude testing in Boca Chica, Texas. To uphold the central ideals of innovation and excellence, I believe the FAA should allow SpaceX to continue and facilitate flight activities in a safe manner. If that manner does not exist currently, the progress that SpaceX is making is critical, and accommodations must be made to make safety central to allowing progress' continuance. I am confident in the FAA's ability to accomplish that. I say that the work SpaceX is doing is critical because by hindering the company, the FAA is effectively working against the will of the people and the future of the nation. While there must be some restrictions concerning safety, halting the Starship orbital program is not the solution. Newer boundaries and terms must be agreed upon with urgency that takes into account the inevitable and rapid growth in space flight. Not only will this be an overarching, consistent solution, but it will also provide a foundation in which the United States becomes a leader in space and propagate American ideals of democracy that will ensure the survival and expansion of the free world in the future. I feel very strongly on this issue because I am a product of the inspiration that SpaceX provides. Their progress gave me a vision for what I want the future to become. I am studying Astronautical/Space Engineering at Purdue University because of this along with millions of future scientists and technologists. The generational cultural benefits are priceless and invaluable. This is why I believe the FAA should accommodate SpaceX flight operations in Boca Chica, Texas. Thank you.

Its clear that FAA hates Elon and SpaceX. But if FAA is smart about hating Elon and SpaceX, then you should let SpaceX do its thing, Because if you hate someone you want to be as far away as possible and SpaceX as the only serious space company on Earth can potentially provide FAA a flight to Mars. So, FAA, i hope you are smart about it.

Liebes FAA-Team, Please grant SpaceX approval for Boca Chica. It is a larger rocket than the Falcon 9 that was first considered, but the Starship is fully reusable and also has a higher transportation capacity. So it is the more advanced option. And progress can't be stopped. The economy in the region will be strengthened by the space industry. This is already evident. We need to move away from natural gas and oil soon. Why not do it now and offer oil workers an alternative job? Regards Mike Hofman

Hello. My name is Joe from South Korea. My English is not perfect so please excuse me. I'm sending this email regarding SpaceX and its development towards multi-planetary traveling. I've been following the development since day 1 and it's been my hobby ever since. And my dream is to one day travel to another country and explore the new civilization that we created. Sadly this will not be possible if some things don't change. I understand that as a government-controlled institution, the law and regulation have to be more than strict but if we keep moving at this pace, we're not going to get there. You might think we will get there in time, but with delays after delays, I'm afraid that SpaceX will one day shut down all of its development and give up this dream. We're not asking much here. We just want your most needed support and leeway. Yes, rockets can be dangerous. Yes, rockets aren't perfect yet. But look at the progress! I think it perfectly speaks for itself. We are getting there and it's not that far ahead. But we need to change some rules and regulations to make sure this pursues. You may think that I'm just a SpaceX fanboy trying to be significant, but that is very much false. I don't care which company or who creates these rockets. My dream is to see our humanity evolve to a point where we could be multiplanar species. Imagine the amount of science and technological development we could achieve. So, please. I beg for your support and leeway to keep SpaceX up and running and finish its starship development as soon as possible. Sincerely, another insignificant human that just wants to see the world become better.

I wholly support SpaceX in their endeavor to develop the Starship Super heavy program from the Boca Chica launch site. Having a reusable, us-based heavy lift rocket would establish a firm position in future space research and travel. Starship has the potential to become a flexible platform for a variety of missions. Bulk resupply, satellite launch and maintenance, astronomy, communications, point-to-point transport, and inter-system travel. The Boca chica launch site, Starbase, is in an ideal southerly location. Frankly, it's the best possible place in the continental US. I support the building of the integration tower and other infrastructure as Starbase is an attraction to space enthusiasts, and a magnet to future growth in the area. Technology developed for space benefits life on Earth.

Please allow SpaceX to continue to build out launch infrastructure, and allow orbital launches from Boca Chica. Environmentally, please consider that the area in question has had a history of gas drilling, and is currently a playground for 4WD cars. Human safety-wise, please consider that it is miles away from populated areas (similar to Florida/Virginia) and that the tourist benefits for those areas would be considerable for local income/revenue. The benefits of reusable launchers (for the United States and humanity) far outweigh the limited risks to an already damaged environmental area and would pose limited risk to the local populated areas.

I feel it is best that SpaceX is allowed to continue in Boca Chica South Texas . Due to Elon Musk could just as easily move this out of the United States . Which would result in the FAA having no control of any of the process . Simply Boca Chica appears to be the best spot for this project of this scale in the United States . Out side of the country would require a large number of citizen commuters in air traffic and possibility of loss of skilled trades & educated citizens else where . Thanks for reading this , Mike Reeves .

Please proceed with the environmental review with the Boca Chica launch site quickly. Make it fair, but I vote strongly in favour of granting permission. It is a rare time in human history for this much innovation at this pace to occur. Please aid and support it. The net effect of making access to space easier, more reliable and fully reusable carries longer term environmental benefits that far exceed the amount of local disruption to the launch site itself. Vote yes! Vote soon!

To whom it may concern, I beg you to allow SpaceX to have the opportunity to correct whatever environmental regulations you deem necessary for their Boca Chica site. The environment and unique species living nearby this site is of great concern. This is especially true given indirect impacts and constantly changing ecosystem these species already have to cope with from climate change. That being said, the implications of a successful Starship development program at Boca Chica is sooo much bigger than the miniscule environmental damage launching methalox powered rockets from a <10 square mile Texas region would cause. I'm not saying don't try to mitigate environmental impact, but let's keep the problem in perspective. The potential gain, vastly outweighs the consequences. This is humanities first big step towards the stars, our first real spaceship. This program envisions a launch vehicle that can take massive payloads to low earth orbit and come back in 1 piece. Literally, the cost of fuel... Not a single company or government on our entire planet is even within 5 years producing such a spaceship. However the implications of such a vehicle are literally astronomical, it would open industries we can scarcely imagine in present day. Regardless of whether you agree with SpaceX's final goals (Mars colonization etc), it's hard to deny that a spaceship of this scale would benefit the entirety our species. I beg you, don't stand in the way of progress, let us continue to maintain the spirit of the explorers that founded this country. Let us continue to reach out, make mistakes, bump our heads, find the next boundary and continue to push. It is basic human nature to push boundaries and seek greater understanding of our place in the universe. At present day, this program is one of the greatest steps we can take to pursue that goal. Please, let us continue to explore. Best regards Dean Sanders, PhD Computational Biologist, Bioinformatics Resource Center UW Biotechnology Center University of Wisconsin - Madison

Dear Sir/Madam, I would just like to voice my support for the continued SpaceX Starship development work at Boca Chica, TX. I firmly believe what SpaceX is doing in Boca Chica is not only environmentally responsible space technology development work, but perhaps more importantly also a crucial break-through technology innovation that can offer many viable options for humanity's continued existence beyond the Earthly environmental confinement since the dawn of human race! Sincerely, -Qiaobing Xie Chesterfield, MO

Hi All, I hope you are well. I would like to express my approval for SpaceX activities in Bocha Chica. As a space industry fan I am aware there might be certain bias so I will try to keep it on the sides and focus on the facts and statistical data. 1- Number one to consider is the economic impact of Space X on the greater Bocha Chica area. Apart from yearly spring break Bocha Chica was mostly seen as a place for pensioners to come to enjoy their well-deserved rest generating very little economic activity. SpaceX change of all this brought a lot of high-paying jobs (still increasing), cutting-edge technology, and a promise for the future development of the region that people did not have before SpaceX. 2-Number two is the prestige that SpaceX successes bring to the whole of the United States making it by far the most innovative space company in the world by all statistics. One of the very few industries we are ahead of the competition in today's time and something that should not be taken lightly. US spirit is a core value of the nation and its people, its pride to call oneself an American used to be a synonym of a progressive innovative society. For the last few years, this is fading, and SpaceX is contributing in a big way to keep it that way. 3-We should not pretend there are no flaws in the SpaceX activities, however. Rapid innovation and pushing the boundaries often result in testing malfunctions or explosions that can cause damage to wildlife and properties in the area. The risk compared to the actual gains and any incidents so far however seems to indicate that the benefits far outweigh the risk. SpaceX team is doing their utmost best to keep such incidents at the minimum. It needs to be said that future tests pose a progressive danger as they move forward. A fully tanked Starship could cause serious damage to the area where the most severe damage would be felt by SpaceX and their facilities. Smashed windows can be fixed and I am sure SpaceX would be happy to cover such costs, however, they do everything in their power to avoid such scenarios. All innovation inherently brings with it its own risk. Historically SpaceX did a very good job of cleaning and protecting the wildlife and it is a reasonable assumption that they will keep doing so. 4-Environmental impact on fauna and Flora. Boca Chica area is home to a certain type of rare bird and animal species that are adapted to the special climate around Bocha Chica and might not thrive elsewhere. This is one concern that needs to be considered also. Marine life would not be impacted as water suppressant abilities will provide ample protection. It is really the land animals that need to be in focus. Maybe a certain relocation could be arranged in the area closed to the SpaceX launch facilities. With enough manpower, such a solution might not hold up the testing campaign too much and still do their best to consider the wildlife. Such relocation might be temporary and the animals might be returned after the riskiest test campaign is finished (a few months of fully stacked and fuelled Starship testing). I tried to make my points for either side and personally hope FAA will grant the license to SpaceX while keep closely monitoring the progress and safety precautions taken by SpaceX. However, fearmongering of the worst-case scenario should not be stopping such important progress for all of the human race. I hope you have a nice rest of the day. Kind regards, Matej Stulak

Please don't interfere with SpaceX's activities at Boca Chica. SpaceX's success in making reusable rockets is the most important thing happening on the planet right now, and may be crucial to our species' survival. Specifically their giant rocket Starship is arguably the most important thing that has happened in our nation's history. I am at an age where people normally start thinking about retirement, yet I am instead trying to start a new career in the space industry. I am currently working toward a Master's degree in this field. I am doing this with my life because I profoundly believe that our nation and our species need this. Please help SpaceX to succeed.

I think the next few years and decades will revolutionize spaceflight and space exploration. Lately private companies have been trying to reimagine many methods and aspects of launching spacecrafts and planning to reach other celestial bodies. Millions of people are excited to see them in practice. It would give them the feel of adventure and hope. In case to speed the process up, SpaceX needs to rapidly go through the iterations of its vehicles, which means many flights. I personally think, that they are doing all of these as safely as possible, and human lives have always been their priority. Space exploration needs this change, and I'm supporting this technological revolution. Let us support this, please.

All human activity has environmental impact, but a balancing analysis must be made between the impact and the goals and importance of the activity. In the case of SpaceX development of Starship, the goal is noble, important, and a point of honor and prestige for the United States. FAA should work with SpaceX at SpaceX pace, not hold them back to operate the slow pace of a governmental organization.

I think SpaceX is doing all it can to take care of the environment e.g. saving turtles during the deep freeze and spacX should get all permits to make humanity multi-planetary and not only benefit space travel but also benefit earth by reducing the cost of launching to save and the fact that the rocket is fully reusable. SpaceX should be allowed to launch from Boca Chica and the Draft EA is more than enough.

It is essential for the future of humanity for SpaceX to continue their work in Boca Chica Texas. SpaceX's goal of pushing for humanity to become multi planetary should not be restricted (within reasonable bounds for public and environmental safety). Not since the Apollo program of the space race against the Soviet Union have we seen such rapid and innovative development from space exploration. The goal should be to foster and support this growth for the good of humanity. For those reasons I state my opinion that SpaceX should be able to continue Starship and Super Heavy production, testing, and launching.

SpaceX's Starship is critical to the United States national and economic health success. The environmental impact should be weighed against the enormous benefits of having a fully reusable rocket. Since other nations are striving to develop this same technology, it is especially important the FAA does everything it can to expedite permit processes. If the FAA requires modification of the design, then the FAA should alert SpaceX promptly.

All the progress of the Starship program and the infrastructure currently present at Starbase build & launch sites are critical for humanity to become multiplanetary in the near future. Developing a rapidly reusable, massively capable and reliable interplanetary vehicle is the first step, that acts as a trigger for new ones. The impact on the wildlife around the launch area is invisible, with finishing the process of building the spaceport rendering it practically non-existent in early to mid 2022. This is a huge leap in the courage of our species and without it, we are on the path to self-destruction. One feeling of being unsure or a simple misunderstanding leads tens of thousands of people into putting the whole project on hold, which may be the only one we get to see in our lifetime. Our entire technological world we live in today was built thanks to the efforts of millions of people regardless of how different they were and our unbelievable ambitions that were never put in the shadows. As a Ukrainian student/space enthusiast, with all the strength of determination and the sense of unification, I shout: "Don't set us back and help humanity reach for the stars!"

We need the dreamers like Elon Musk and SpaceX to help drive the human spirit to achieve the next steps in our evolution. If innovators like SpaceX had to wait each and every time that a bit of red-tape got in the way, we would never get anywhere. The best way to educate is to show whats possible, as this is what drives the rule book. Let them fly. We need their optimism and innovations more than red-tape and rule-books

SpaceX does an incredible job pushing the boundaries of innovating technological advancements for space exploration. Their progress at Boca Chica is really incredible and exciting. I'm hoping you let the progress continue at Boca Chica and allow SpaceX to further continue their goal to make life multi-planetary! PS: I'm from the Philippines and a huge follower of SpaceX's progress at Boca Chica. I hope to visit Boca Chica one day and see the incredible progress they've been working on!

Hello! The SpaceX Starbase, and the Starship and super heavy booster programs being developed there, are truly inspirational and hope-giving. If the USA has any chance of reclaiming the lead in the rapidly evolving space-race against China, and remaining relevant as the ISS nears end of life and the moon begins to be mapped for mining, we must adjust our expectations and practices to make room for innovation and risk taking. Currently SpaceX is the best hope we have for launching practically sized payloads into orbit and beyond. The traditional methods and partners, such as Boeing and, Northrup and others, have shown themselves to be only focused on their own profit and incapable of delivering on time and in budget. Please be creative and open-minded when conducting this review. Failing the Starbase with this review will mean an end to any hopes of American leadership in the space race, and ongoing international embarrassment as we watch SLS and other traditional NASA programs run years over schedule and billions over budget with nothing to show for it but 50 year old thinking. Thank you.

It would be a shame to halt SpaceX's progress towards bringing the human race to be a multi-planetary species by hindering the progress on their launch tower. Please let them continue their quick pace at bringing this tower into operating capacity so we can be that much closer to the Moon, Mars, and Point to point travel anywhere on Earth within 30 minutes. Governmental agencies such as yourself and NASA are unfortunately limited by politics, regulations, etc., and SpaceX is in a particularly fortunate (for everyone involved) situation where they can work privately outside some of the restrictions that government agencies tend to have. SpaceX is advancing flight technology in a way that strictly government funded agencies can't due to regulations and politics. Please give them every opportunity to advance space technology in an efficient manner. If they are over-stepping regulations with their quick off-the-cuff structure builds, please consider imposing fines before considering to halt their progress.

Hello, I would like to express my support to SpaceX. This company is revolutionizing space industry in lightspeed way. And everybody should support this for these reasons: 1. Reducing costs of space transport will open new capabilities for humanity. 2. Developing of these kind of technologies makes domino effect and creates new technology/processes for public. 3. It inspires humanity to greater good. 4. It is progress which should not be slowed. Please do your best to support this initiative, because it gives hope. Best regards, Resident of Lithuania Jonas Ribokas

I am writing in support of continuing and expanding SpaceX's rocket production and launch activities at Boca Chica Texas. Their work is leading towards making us an interplanetary species with economical access to space. It is critical to national security, human security and to the security of nature as well since this work will lead to vehicles capable of being used to protect the planet from a wide range of future asteroid strikes. Please approve their paperwork as quickly as possible so they can continue their valuable work.

The environmental impact of SpaceX operations/Boca Chica site (Starbase) is, as it always is, a judgement of cost to the environment Vs benefit. Unfortunately the 'benefit' of rocket ships is, prima facie, low. However, requirements for orbital/off-earth systems are, undeniably, important. Satellites, communications, positioning, etc. are all a vital part of human civilisation. Should we require functionality beyond this, perhaps in the face of an existential threat (e.g. asteroid impact), it would elevate the 'importance' of ventures such as Starbase/Starship as an absolute imperative beyond any comparison. On this basis alone it is an indisputable conclusion that progress on Starbase/Starship should proceed at pace with all reasonable considerations for safety and the environment given commensurate priority.

Please. Let the work continue. It is important on so many levels. It would mean so much to so many. In ways unimagined as of yet. Thank you for your consideration. High Flight by John Gillespie Magee Oh! I have slipped the surly bonds of Earth And danced the skies on laughter-silvered wings; Sunward I've climbed, and joined the tumbling mirth Of sun-split clouds, – and done a hundred things You have not dreamed of – wheeled and soared and swung High in the sunlit silence. Hov'ring there, I've chased the shouting wind along, and flung My eager craft through footless halls of air... Up, up the long, delirious burning blue I've topped the wind-swept heights with easy grace Where never lark, or ever eagle flew – And, while with silent, lifting mind I've trod The high untrespassed sanctity of space, Put out my hand, and touched the face of God. An Anglo-American aviator and poet. Magee served in the Royal Canadian Air Force, which he joined before the United States entered the war; he died in a mid-air collision over Lincolnshire in 1941. Cheers Randy Rasmussen Long Beach, Ca. USA!

I am writing in regards to the current building and construction of SpaceX's Starbase at Boca Chica Texas. I am asking the FAA to please allow SpaceX to continue working on Starship and to approve the orbital launch tower for the first ever test flight into orbit for Ship #20. This entire project means so much to so many that want to get humans to other planets, namely Mar's. The future of our species depends on the ability to move onto other worlds so if anything ever happens to Earth our race won't be killed off instantly. We need this program not only for becoming an interplanetary species but Starship itself can be a massive change in how we travel on Earth itself since we could literally launch from a Starbase and be anywhere on the planet within an hour or so. Imagine launching from Texas and landing at a Starbase in England, Australia or Japan within 45 mins to an hour! Starship will change transportation beyond anything we've ever known. Starship would be critical to use in times of disaster as well. Imagine if a severe earthquake hit Japan and they needed supplies and disaster relief. Starship could be loaded and ready to go within a few hours to provide food, water, medical supplies along with emergency personnel to help the injured compared to long flights taking many hours to fly to different points around the world. In closing I would like to thank you for reading my thoughts on the Starship program and I would like to ask the FAA to please allow SpaceX to continue the amazing work they're doing for humanity.

I am a graduate research assistant at Purdue University studying aeronautical and astronautical engineering. When I heard a request for comments about SpaceX's operations in Boca Chica was underway I wanted to add my voice! The work SpaceX is doing is a tremendous boon and opportunity for the United States. The topic of my thesis research is actually modeling the development of the space industry and how it is affected by government and other policies, competition, incentives, etc. The FAA has the opportunity to work with SpaceX in leading the world in aerospace innovation that will strengthen the United State's position of experience and expertise. Although there are concerns for the environmental impact of SpaceX's launch site in Boca Chica, SpaceX is clearly invested in long-term operations in the area. They will be willing to support reasonable accomodations for local wildlife and environmental concerns as long as they are given the opportunity to operate quickly in the area. Please work with SpaceX in finding solutions to whatever problems may arise. They are providing an excellent example to the free world of what it means to dream big and reach for the stars.

I fully support SpaceX in this endeavor to build upon the history of this country in reaching lands never thought possible before. The outcome of this review will speak loudly to all inventors in the US and if all they see is never ending red-tape and governmental hurdles, then I'm afraid they might take their projects elsewhere in the future. This project has some of the largest international support I've seen from something coming out of the US in a while and it would be a shame to watch this fizzle out or be surpassed by other competing countries due to regulations. No country has embraced space like we have here in the US and SpaceX is inspiring a new generation of brilliant minds to literally reach for the stars. A cause that excites and unites many in a world that seems to be ripe with distress and anger is something all of humanity can use right now. Let's figure out how to make this work!

In support of Starbase, TX: It was widely reported in August of 2014 that the state of Texas offered incentives in the amount of "more than \$15 million" to SpaceX in order to facilitate the creation of the world's first commercial spaceport. This came with a commitment by SpaceX to invest \$85M in the local economy and create at least 300 jobs. In July 2014, the FAA issued approvals to make this a reality. I urge the FAA to again issue all necessary approvals for this launch complex to become fully active, and I would like to point out the following: When the original plan was proposed, the launch vehicles were to be Falcon 9 and Falcon Heavy. The switch to make Starbase a launch site for the new Starship launch system is likely an improvement in the overall environmental impact. The Falcon family of rockets use RP1 propellant, and launch on the power of the Merlin gas generator cycle engines which pump exhaust overboard. Starship uses Liquid Methane propellant, and features the revolutionary Raptor full flow staged combustion engine, which keeps all gasses in the combustion cycle for unparalleled efficiency. This results in a much cleaner burn, and emissions that are far less harmful to the environment. SpaceX, the state of Texas, and the FAA all knew what a fully functioning commercial spaceport would look like. It seems the FAA has bowed to a vocal minority of activists, and the state of Texas has been oddly silent in the matter rather than fighting for their investment as one might expect. In that light, once again, I urge the FAA to issue all regulatory approvals needed for Starbase, TX, to become what it was always intended to be under full disclosure and previous support of all parties.

To whom it may concern: SpaceX is attempting an unprecedented endeavor, which is the development of a fully reusable space transportation system with an eventual turn around time of an hour or two, which would lower the cost of access to outer space dramatically. This is their project called Starship. The company has already proven its abilities convincingly with its Falcon 9 booster which is fully reusable along with its attendant vehicle components that have cut costs to the point of facilitating numerous launches per year to become a reliable workhorse in the U.S.'s space efforts. Starship would be multi functional both as a human transportation vehicle and for launching cargo, fuel and additional orbital service at even greater reduced cost. The goal is to provide eventual mundanely affordable access to Earth orbit, the Moon, Mars and the Solar System's numerous celestial bodies so as to be able to reasonably exploit the huge geological potential of the Solar System at a time when such capability is about to become critically necessary. Innovation takes courage as well as imagination and I beseech the FAA to consider this simple but accurate platitude when considering SpaceX's efforts at Boca Chica. Every consideration should be tabled to protect resident wildlife and Boca Chica's environment so as to satisfactorily find a way to allow SpaceX to continue its work there. It's work, I believe, is vital. Steven Kellar

I fully support the SpaceX Starship program in Boca Chica Texas. The FAA should do everything possible to expedite and facilitate SpaceX in its historic efforts at expanding space flight. I am a licensed private pilot and regularly fly FAR 103 aircraft. I fully appreciate the FAA responsibility to safe aviation. I also understand the need for the FAA to become more responsive and not be tied to the archaic rules and procedures of the past. I am a part time resident of South Padre Island, Texas and have witnessed 3 launches at Boca Chica this past year. I could not be happier that SpaceX is my neighbor.

To whom this may apply, While I am not an expert in either environmental science or chemistry, I was able to understand the environmental report. It is my belief that there is no reason that the starship program should be denied launch clearance due to environmental impact. I believe that SpaceX and the Starship program will provide the world with a more effective and approachable way to interact with space. Denying SpaceX the ability to test their designs will only serve to delay any advancements which could serve to decrease the impact on the environment. Thank you for your consideration, Nicholas Fiedler

I believe that the work SpaceX does is important to the future of humanity. I can understand the need to regulate large explode-y tanks, but SpaceX appears to be taking the safety of the community and their workers into consideration. If the environmental concern is related to carbon emissions or other pollution, let's please deal with bigger problems like generating electricity with fossil fuels and burning poison in our streets to run our cars. I believe that there are two possible futures of humanity - one where humanity survives our infancy and is able to expand out from earth, and another future where we don't. I believe that SpaceX will hasten this future and be a net positive to the future of humanity. I also want the United States to be a part of this future. We should encourage this kind of innovation here, and SpaceX can help make sure that the U.S. will be a large part of this future. Please allow SpaceX to continue on their mission to make life multiplanetary. Companies like SpaceX give me pride and hope in the future of our country, and I believe we need that today as well.

Buenas tardes. Como ciudadano español y por tanto europeo, se podría decir que nada tengo que ver con las operaciones de SpaceX en Bocachica. Pero este asunto no solo compete a USA, sin ir más lejos, el desarrollo de la denominada "Starbase" es fundamental para el programa Artemisa. Dicho programa en una ínfima parte también está financiada por mis impuestos, mediante la participación de la ESA en el modulo de servicio de la nave Orion. Con ello, todo mi apoyo al proyecto presentado por SpaceX.

Translation: Good afternoon. As a Spanish and therefore European citizen, it could be said that I have nothing to do with SpaceX's operations in Bocachica. But this issue is not only the responsibility of the USA, without going any further, the development of the so-called "Starbase" is essential for the Artemis program. This program is also financed in a small part by my taxes, through the participation of ESA in the service module of the Orion spacecraft. With this, all my support for the project presented by SpaceX.

I don't want to waste your time, so here's the point. Space X has made more advances in less time and as a result saved more money and human waste than the government run programs trying to achieve lesser goals. The developed technologies from this will benefit many industries as well as push us towards better fuel uses. Let them test and move us forward.

I believe SpaceX should not only be allowed but actually encouraged to continue their work at Boca Chica. Musk has already changed the paradigm for rocketry and it is only his unbridled drive and vision that will see this venture through to a successful completion. Yes, regulation regarding environmental impact is required, but please temper that with the knowledge Musk has already singlehandedly moved the world away from a future of fossil fuel with Tesla automobiles, solar generation and small & large scale battery storage solutions. I feel his green credentials have already been well established. Give the man some headroom to achieve his goals, don't mire him, and by extension, the human race, in red tape and bureaucracy - monitor, guide, advise by all means - if he goes off plan, then intervene, meanwhile encourage and support, help America maintain the lead it now has (and must sustain) against China and India - two rivals who will stop at nothing to beat the USA to space, and by extension, lunar and Mars dominance. This is within your purview; humanity will look back on your decisions - it is within your power to determine if we will look favourably on your choices. Choose well.

I am a 24 year old boy who works as a systems engineer and despite my young age I am well aware and worried about global warming and running out of raw materials. We need to go into orbit, we need to build off this planet and right now only spacex is doing it. we need (and quickly) large, fully reusable rockets, even bigger than starships. I understand the concern for the environment and the species in boca chica but what spacex is doing will prevent a LOT of environmental damage that industries and the aerospace sector are causing to the planet right now and in the future. Forests burn, glaciers melt, raw materials run out we must change the world and as soon as possible, time is running out and the best solution is to bring everything that damages the planet into space. I know it sounds crazy but one day the industries will be in space. All. The more we delay the more we hurt ourselves ... I ask you with my heart not to slow down the objectives of spacex, work together with them rather, this environmental assessment is not useless, on the contrary, we need it! But with each passing day that you delay starship testing the whole world continues to degrade very quickly. Really take it into consideration, we are now used to seeing all these environmental disasters after so many years, but we are in really bad shape. NB: I talked about spacex because in this case it is with her the problem but you will have the same problems soon also with the competitors and everything I have said about spacex above I repeat it also for the other space agencies. We need to get up there everything that hurts us down here. Thanks

The human race, going into space is inevitable. Our only question is when? I am 73 years old, so I was around and remember very well, our race to go to the moon back in the 60s. My great wish is to live a few more years and be able to see us land on Mars. At this point, Elon Musk and SpaceX is our best chance for that happening. While I can very well, understand the objections to his launching his rockets from Texas, I feel the results far outweigh the objections. The great achievements that will come from this endeavor will better mankind, the same way all the achievements that came from the 60s space race made life so much better for all of us. I hope and pray that SpaceX gets the approval to go ahead with the program they have. Thank you Daniel Swanson

Hi For the future of space travel, national security and a long list of other items, it is critical that SpaceX stays in the USA. As such, we as the citizens of the country need to support all commercial ventures that are opening space to commercialisation, colonisation, and human expansion. While no venture is without risk and leaving earth is a high risk venture, we as a nation need to stand behind the companies that are opening the doors to the future. Let SpaceX use and expand the Boca Chica facility to help all of us. Sincerely, Richard Whyte

SpaceX should be allowed to continue development of the Starship program. If SpaceX succeeds, they will revolutionize the space industry. With this comes competition and a thriving economy along with more jobs. Additionally development from the Starship program can influence and improve day to day living. For instance, SpaceX's Starlink Satellites allow for improved internet where other providers are unable to deliver services. With the addition of Starship and Super Heavy, SpaceX will be able to launch in increased number of Starlink Satellites resulting in improved internet. Thus by allowing SpaceX to continue, the public will benefit from not just additional jobs in the aerospace industry but also through daily living.

I have been tracking, with great interest, the SpaceX efforts with starship. This program will bring us back to the moon, and on to Mars, as well as potentially around the globe too. I watched the Apollo 11 mission when I was a kid (I turned 5 years old 6 days before Neil Armstrong stepped on to the moons surface). I remember that like it was yesterday, and since the Apollo 17 mission, we have never returned. Why did we do it at all? Just to say we did it, and the Russians didn't? We need to go back, and we need to go further. What we learn from doing this, will have dramatic impacts for life on earth, and I urge you to approve the Starship launch tower, and launch for their first orbital test. These steps, are the first steps to something much greater, and should be allowed to go on as planned, and as quickly as possible.

Dear FAA, I don't have very much right to have my voice included, as I'm a New Zealander; I'd still like to express my excitement at what SpaceX is trying to do. There is no doubt that they need to minimise their immediate environmental impact, but their work is so important, even beyond the United States. I urge you to work with them. Hold them to that impact minimisation, but please let them fly. Ngā mihi nui - Adam Cheney.

Dear FAA, I am a startup founder in Brussels, Belgium, working on AI and Chatbots. But I am writing to you as a citizen of our blue planet. The environment, the climate, the economy, the depletion of resources... We live in a time of such pervasive uncertainty, and we face challenges that require strong decisions. I implore you to let SpaceX continue its testing, it is perhaps the most important decision you will ever make. The world is watching SpaceX build humanity's second chance, and a future for our children. I hope you will realize that what is at stake is too important to delay. Sincerely, Jérôme Corbiau

Humanity needs to reach for the stars. We need to explore beyond earth and do science- that is what helps us develop further as human species. We learn more about ourselves and our universe where we reside. What SpaceX is doing in Boca Chica is fantastic and they need to keep moving forward. This is something I've never seen before and I think we deserve to try new things and develop further. I'm excited to see Starship fly and I'm sure everyone else is too.

I fully support the SpaceX efforts in Boca Chica, Texas. Look at the big-picture/track-record of how the SpaceX company is improving many things previously considered "too expensive for the investors" from almost all other companies. Anyone familiar with progress knows there will be a given percentage of detractors, which is a typical way to monitor balance, and it is a good thing to be reminded when one goes too far away from the good of mankind. However, SpaceX is doing great work for us all. Please let SpaceX continue.

I have been closely following the starship development program and SpaceX for years now. SpaceX is probably one of the main reasons I am studying aerospace engineering right now and aspire to become part of this amazing new space race. Halting the construction of the Boca Chica launch site, or descopeing it, would be a major blow to the extremely talented and driven people working there to make space travel real. Although I'm sure there are drawbacks which come from allowing orbital flights to take place from there, the benefits for everyone far far outweigh them. Please strive not to be a roadblock to the path to space, but rather the enabler of what the future we now see could be.

Dear Federal Aviation Administration, i'm writing to you - even if i am not a resident of Texas or the U.S.A.. The project whose future you have to decide is a project that affects all of humanity. And so my voice should also be heard. Many are not aware of the scope of the SpaceX work at Boca Chica for the whole mankind. The comparison may sound teatral but since Columbus set off for America there has not been such a significant moment for our future. The SpaceX Starship program is the only realistic chance, to make a big step towards making humanity a multiplanetary species. If we miss this opportunity because of regulatory, it could potentially be impossible for decades or maybe forever. I'm from germany. Our regulations prevent any attempt to build a space company from the very beginning. We will never move forward in this direction. Humanity need to take this step in order to develop further and to see the earth in a new light. With SpaceX and Elon Musk, the U.S.A. has an unimaginable luck and a chance that might never come again. This also results in a great responsibility for humanity. If you are going to take the momentum off the SpaceX-Starship-program in Boca Chica, you may will block the way into space for generations. if you decide against SpaceX, the path could only be reserved for china and its allies. What kind of environmental impact would that mean if you let them take the lead in this field? What would that mean for freedom? The reusability approach that Space works with shows that they are arguably the most environmentally friendly company in the whole space-industry. Please don't fight against them - please support them! I belive in the future everyone should have the chance to explore the universe directly and personally if they want to. Please make this future possible. Surely this is a nobler goal than staring at a smartphone for half a lifetime. The future is in your hands now. Please help SpaceX. Allow the further development and testing of the Starship in Boca Chica and the surrounding area. Sincerly, Martin Henke

Dear FAA, I want to start off stating that I am in favor of SpaceX and SpaceX operations happening in and around Brownsville, Texas. I honestly believe that if it wasn't for their daring objective to make a reusable rocket, not only to send payload to orbit, but now to safely send American astronauts, and Americas' citizens to space and back. We would not be where we are at, at this moment in space, without SpaceX. Finally we have a ticket, a ticket that isn't held down by politics of a season, a ticket that isn't subject to war. We have a free ride that is on the path to sustaining itself freely without the tax payers money. Not even going to mention the tidal waves of opportunity this will set forth for so many generations to come. Just because one company wants to better humanity. So to that I say let's take advantage of this wonderful opportunity and be supportive of the great impact they are going to set forth for everyone. Allow Starbase to happen in Texas. Thanks. Boca Chica Texas is probably the greatest hope for mankind. People like E Musk need to be encouraged with the efforts he has done looking both to green energy, reusable rockets, low impact to the environment, and saving mankind from itself. The complaints I am seeing and hearing are often the same ones we saw in Minnesota when we decided to put up windmills.. " not in my backyard!..". A selfish stance. I would advise as things happen to encourage him to continue as much safety as possible and to add when discovered. But I would not hinder his hand. Survival of mankind may depend upon the starship project. We may have less time on this earth than everyone thinks. He has not only added to the economy in the area, but produced success after success in his reusability and forward thinking project. Personally I'm offended only five rockets are allowed per year. add a couple zeros after that and I could see reasonability. you have to remember he's planning on 1000 rockets a year, in very short order. This is not due to Eagle, but recognizing the need

The current SpaceX development project at Boca Chica must be approved. No project since Apollo has inspired and progressed so quickly in space flight. I watched the moon landings as a 7 year-old and was inspired to make aviation a life long passion and career. Not only will the project serve as a great boost to humanity, it's economic impact cannot be overlooked. A successful program would put our country exponentially ahead of any other space program. Again, the benefits far out weigh any negatives. The project must be approved at all levels. Thank you, Captain Steve Cawthon American Airlines

Dear FAA Just as human's greatest ambitions of any time, became his need for all human beings internet access everywhere, going to Mars will become a human need in near future. On the other hand, all countries, especially the most active countries in space, should take more practical measures to protect the environment in areas and industries where renewable energy can be replaced other energy sources (generators of environmental pollutants). Exactly what Tesla and SolarCity do. Going to Mars will surely advance humanity.

I strongly support granting SpaceX approval for flying the Orbital StarShip from Boca Chica. The successful development of the orbital starship is a crucial first step to getting humanity and eventually much heavy industry into space to offload the some of the harmful industrial effects on the environment. Ritch Bradford Hoover, Alabama, USA

May I ask why are you holding us back from advancing this phenomenal rocket program, The wright brothers were guided and they were able to accomplish something that at the time was unbelievable, now we seem to be caught up in the red tape being caused by your agency, why are you disputing SpaceX plans to further our nation's space program, your agency should be a part of this great moment in time, youe agency should be assisting, not hindering the advancement, this is the dream of many of us who have stood by and sheered them on with every successful launch they've had, and those brave men and women that have helped this nation get to where we are at this point and time would be more than proud to have been a part of what has been accomplished, they were the ones who help develop this nation space program, and you too can be the stepping stone needed to advance us further and it should be done without procrastination and red tape, Guide us, Guide SpaceX in the right direction and do not hinder it, We need to go Upward not Downward.

Dear FAA Just as human's greatest ambitions of any time, became his need for grow later, like the current need for all human beings internet access everywhere, going to Mars will become a human need in near future. On the other hand, all countries, especially the most active countries in space, should take more practical measures to protect the environment in areas and industries where renewable energy can be replaced other energy sources (generators of environmental pollutants). Exactly what Tesla and SolarCity do. Going to Mars will surely advance humanity.

Dear FAA, Despite the tremendous changes and risks associated to spacex endeavor at Bocca Chica, it seems very much unwise to put a halt to their project. Access to space is probably the next big strategic advantage one country can hope to get and space x is allowing this and had years of advance over the rest of the world. Other countries with less regulatory restrictions will follow soon, including, but not exclusively, china of course. America should do whatever it can to support space x and let them move ahead with their project for this reason.

Stop slowing down SpaceX with red tape and bureaucracy. While I am a proponent for preserving nature and wildlife, there are thousands of other U.S. based corporations polluting and destroying this planet for the sole purpose of maximizing profits. Starbase is in as nearly ideal a location as they could be. Let SpaceX blaze new trails into space. Without them the USA would have already fallen behind China and Russia. You know those countries don't give a damn about preserving wildlife over taking the lead in space travel.

Please approve SpaceX for further development. I think it's important to further exploration for mankind. SpaceX gives far too much hope to far too many people. We must keep that alive to help continue inspiration and curiosity in the minds of this planets citizens, continue innovating and overcoming obstacles in our way. What we achieve out there will also help this planet in the process. We have already waited far too long since last going to the moon, we cannot slow this down now. Sure, this planet is still 'Plan A' of course but, look at the big picture, this planet alone will not support us all forever as we continue to grow. We must spread humanity throughout our solar system and beyond if we expect to survive and improve this planet from where it sits today. Yes, safety measures are important and they will continue to be so but, please don't impede on human innovation.

Thank you for the opportunity to comment on the environmental assessment. Based on the review of the information provided by the FAA and its partners, I believe that the impact is reasonable given the isolated nature of the impacts and the additional work that SpaceX is doing to mitigate or find alternate ways to mitigate the impact at the SpaceX site in Boca Chica. I also believe that the advancements that they are likely to provide through their space test program are worth it to humans and the long term space capabilities of our species. I have visited the SpaceX site with my son this past August (2021) and had an opportunity to use the beach, learn more about SpaceX and see what they are doing at the site. I was impressed at the organization and compact way that they were creating both the launch site as well as the build site. It seemed that they were making good use of the available land without using more than is necessary for the programs they are attempting to create. Thank you again for giving me the opportunity to review the materials and comment on this program. Sincerely,
-Jeremy Van Beusekom

Please consider allowing SpaceX to proceed with their test campaign at Boca Chica TX base. BCTX (abbreviation) may or may not be the perfect location, but it seems to be a good location overall. SpaceX does need to be careful and report anomalies, but safety for the public and also their 'spaceport' is primary consideration of SpaceX, as it should be. Their iteration method of development is not the same as prior development projects by others, but it is a modern and is focused on learning to progress the education of man in this industry. Please allow their continued rapid pace of development. If it takes additional funding of a few FAA personnel locally, I am sure SpaceX would be glad to pay for 'resident FCC people' to work at the SpaceX facility to help ensure rapid understanding and approvals (or oversee required changes) to help speed continued development. But that need and request needs to be spelled out for SpaceX. IMHO these individuals should remain Federal Employees to ensure the proper separation of interests between regulators and those being regulated. I wish I was younger to help participate, but as a tax payer, I would like for us (US Citizens) to be able to ensure this gets done as well as keep the pride of space adventurers.

The Kennedy space center is located right next to a wildlife refuge, and throughout the entire period of operations there, no environmental problem has ever arisen which would warrant additional investigations there, so why would it be any different at the Boca chica launch complex that SpaceX is developing. Even if any problem were found the benefits, whether they be economic, or technical, would far outweigh any possible environmental issues found.

ALCON, I believe SpaceX's Starship should be permitted to launch to and exceed Low Earth Orbit (LEO) without any further delay. Also, processes should be further streamlined so launch delays exceeding 1 hour are prevented. This could include setting up a permanent flight exclusion zone over any active spaceport from ground level to LEO, and standardizing and automating to the furthest extent possible, the launch approval process. A human reviewer is usually on hand for most commercial flights but works at a given airport and performs the function as an additional duty, not as a specialist. Perhaps a similar arrangement can be accommodated for any given spaceport to include the launch site at Boca Chica. In fact, now is the best time to produce a regulatory infrastructure specifically for commercial spaceports. The process will be helped by having a similar infrastructure in place for commercial airports that can be emulated, or in some cases, copied. I want to thank the FAA for the dedication and service it has and continues to provide for our country. In the past, the FAA built our current airline regulatory infrastructure from scratch and became the gold-standard model for other countries to emulate. I ask the FAA to lead from the front on this new innovative frontier. Not doing so or hindering commercial spaceflight will give the United States' near peer adversaries the advantage in this sector. Giving them the advantage could give them first claim to Moon real-estate, which presents an unthinkable beach-head for launching untraceable rail-gun ballistic missiles, and other unclaimed extraterrestrial bodies of world economy shaping import capability. May all the wisdom and fortitude possible be will you. Thank you for your time and consideration. Very Respectfully, Michael Barfield

I wish to categorically support the construction, operation and further expansion of the SpaceX Starbase in BocaChica, Texas. This company has demonstrated that using chiefly private funds they are able to achieve goals which are clearly impossible for NASA, or any other country, to match. The FAA needs to align to the 'new normal' of civilian spacecraft bound for Luna and the planets on a daily basis. The FAA should work --with-- SpaceX to ensure that they are allowed to proceed without further delay. The FAA should be an advisor to SpaceX and should otherwise allow them to operate. Proper care must be taken by SpaceX to ensure the safety of the people of Texas, and around the world. The FAA can facilitate this process only if it understands the goal is to build a colony on Mars, and not build a city of permits, meetings, hearings and white papers. This opportunity to build a human colony on Mars will be the greatest achievement of mankind for this century, and for many more to come. We cannot allow petty concerns of the local natural environment compete with the larger objective of making mankind multi-planetary. I ask that you radically re-focus the FAA to facilitate the work which SpaceX is achieving on its own. Please grant any permits necessary and prevent subsequent reviews and paperwork from slowing the human race's best chance for survival into the next millennium. Best Regards,
Robert Ryan [REDACTED]

SpaceX attempt at building an orbital class rocket should not be hindered by undue regulatory hurdles. Please allow the wide bay construction, the entire success of the project demands it. Starship inspires me more than any running project on Earth. Ensure the Starbase environment is respected by SpaceX and let them build. Humanities future may hinge on it.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 6

October 25, 2021

Ms. Stacey Zee
Federal Aviation Administration
SpaceX PEA
c/o ICF
9300 Lee Highway
Fairfax, Virginia 22031

Dear Ms. Zee:

The Environmental Protection Agency (EPA) has reviewed the Federal Aviation Administration (FAA) Draft Programmatic Environmental Assessment (PEA) for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas. Our review is pursuant to authorities provided under the National Environmental Policy Act (NEPA), the Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500 – 1508) and Section 309 of the Clean Air Act.

The Federal Aviation Administration (FAA) is evaluating Space Exploration Technologies Corporation's (SpaceX) Starship/Super Heavy program, in particular a proposal to operate the Starship/Super Heavy launch vehicle at its *existing* Boca Chica Launch Site in Cameron County, Texas and conduct launches originating from this site. SpaceX must obtain an experimental permit and/or a vehicle operator license from the FAA to operate the Starship/Super Heavy launch vehicle. Issuing an experimental permit or a vehicle operator license is considered a major federal action under NEPA and the FAA is the lead federal agency.

EPA offers the following comments for your consideration in finalizing the NEPA process.

Wetlands/Section 404 Comments

The application of a tiered environmental review is acknowledged as not all project details may be finalized and currently ready for a decision. However, to help ensure an appropriate single and complete project evaluation, EPA recommends the documentation include all known and reasonably anticipated project information. Establishing a comprehensive project description as part of the current evaluation will help the public and commenting agencies have a better understanding of impacts associated with current and future anticipated activities associated with the Starship/Super Heavy program.

Because the Draft PEA only evaluates two alternatives, the no action alternative, and the preferred alternative, we are concerned that an appropriate and thorough evaluation of reasonably available alternatives to accomplish the stated purpose and need may be lacking.

The identified evaluation criteria appear to have been narrowly developed and limited to the selection of the existing Boca Chica project site.

EPA recommends the project analysis in the PEA evaluate other reasonable project alternatives and not be limited to one location. It should also include options for the siting and orientation of the project's related infrastructure components. For each of the alternatives, it is recommended that estimated aquatic resource, including wetland impacts be identified and considered. The expanded alternative analysis will better inform the public of the extent of the related aquatic resources impacts and allow the U.S. Army Corps of Engineers to conduct their referenced separate analysis for identifying the least environmentally damaging practicable alternative pursuant to 230.10(a) of the Clean Water Act Section 404(b)(1) Guidelines.

Indirect and Cumulative Impacts

The Draft PEA provided limited information on indirect and cumulative impacts of the proposed and reasonably anticipated project components. The documentation references potential requirements that may limit potential impacts to water quality such as Spill Prevention, Control, and Countermeasures (SPCC) Plans, Construction, and Industrial Stormwater Pollution Prevention Plans (SWPPPs), and Texas Pollutant Discharge Elimination System (TPDES) permit requirements. A thorough assessment of the indirect and cumulative impacts on functions and values of the affected environment is needed. The evaluation of impacts should take into consideration the high-quality habitat being impacted by the project such as the special aquatic sites that are unique habitats with limited distributions found within the proposed project area.

As part of the evaluation, EPA asks that FAA evaluate past site activities associated with the Falcon 9 and Falcon Heavy program at the Boca Chica site as an indicator of future impacts. The documentation references a history of launches at Cape Canaveral, Florida to support the evaluation of impacts to terrestrial habitats and wildlife. Similarly, the history of Falcon 9 and Falcon Heavy program impacts resulting from debris and anomaly recovery, impacts of existing stormwater discharges, and impacts of induced development, for the existing Boca Chica project activities should be evaluated to support the current analysis.

An evaluation of the success of existing mitigation requirements would help provide an informed understanding of net impacts of the proposed project, taking into account mitigation. A review of historic, current, and reasonably foreseeable activities associated with the entire SpaceX operation may provide a better picture of adverse impacts and other potential effects upon the project area.

Anomaly Response Plan (ARP)

Specific to the removal of anomalies and debris, the document includes multiple references to an ARP with some details on the coordination and recovery procedures. EPA recommends the ARP be provided for review. It is unclear if anomalies are only a result of a failure or if debris requiring recovery may be generated during routine operations. Removal and restoration of anomalies/debris may result in discharges of dredged or fill

material into waters of the United States and thus would require Clean Water Act Section 404 permit authorization.

Providing the ARP details along with other proposed best management practices will help reviewers evaluate whether impacts resulting from recovery activities can adequately minimize the potential loss of biological, chemical, and physical function of impacted aquatic resources. The plan should include sufficient details related to activities to help ensure the restoration of impacted aquatic resource areas to pre-construction conditions, and it may be appropriate to include specific and meaningful success criteria monitoring requirements and adaptive management provisions.

Thank you for the opportunity to comment on the proposed action. We look forward to the receipt of the Final NEPA decision document and the responses to comments made on the Draft PEA. If you have any questions, please contact Michael Jansky of my staff at [REDACTED] or by e-mail at [REDACTED] for assistance.

Sincerely,

To: SpaceXBocaChica
Subject: In Support of SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica L

I urge you to move forward as quickly as possible in finding No Significant Impact (FONSI) for the Starship/Super Heavy launch vehicle at its existing Boca Chica Launch Site in Cameron County, Texas. Furthermore, I encourage the FAA to grant SpaceX orbital launch and landing licenses for orbital test launches for the Starship/Super Heavy launch vehicles.

SpaceX is making rapid progress in new launch capabilities, which are being hindered by regulation. If the promises of the Starship/Super Heavy vehicle are realized, new industries in space may be realized in solar energy, advanced manufacturing and reusability of rockets, which vastly outweigh any minor local noise or biological resources. SpaceX has already has mitigation efforts planned to cover minor inconveniences of construction at Boca Chica.

Boca Chica, like Cape Canaveral, was selected for its unique position at a southern access point, favorable to space launch activities. There are not a vast amount of alternate sites within the United States that have not already been developed and encroached on by dense populations. This unique site is critical to the advancement of space flight and the United States keeping an edge in space technology development. The Starship program could revolutionize spaceflight and have profound impacts beyond the local launch site. It is imperative that the FAA move forward as quickly as possible and not stifle innovation.

Regards,

Craig Baerwaldt

Re: Letter in Support of SpaceX and Approval of the Company's FAA License Application

I am a resident of Brownsville, Texas and have lived in the Rio Grande Valley most of my life. I am providing this correspondence in full support of SpaceX and approval of its FAA License Application.

I am aware that SpaceX is building the Starship "rocket ship" to carry people and cargo into space and is continuing to invest in space exploration. More importantly, I understand SpaceX has constructed and continues to improve its launch site for orbital missions at Starbase Boca Chica. This site is located in the South Texas community where I live and work, and I support SpaceX' building, testing and launch operations at Boca Chica.

I am convinced that SpaceX continues to have the greatest economic impact of any single company in Cameron County. The company has brought growth, high paying jobs, additional residential and commercial construction, new infrastructure, and vital revenue to small businesses in our community. I believe this is of critical importance given the history of our County's lagging per capital income and employment statistics. I also have a high level of confidence that SpaceX, working hand-in-hand with our community leaders, has public safety at the forefront of their decisions, along with potential environmental impacts.

I support SpaceX and the approval of its FAA License Application. Thank you for accepting my letter of support.

Sincerely,

Al Villarreal

From: Deland J. Weichert

To whom it may concern,
SpaceX should continue its activities
at Boca Chica, Texas.

Why?

Because it makes sense.

I am one who believes manufacturing can move
into space. But to do that one must get there.

I also believe what I call Block I Starship
is way too small, I suspect what we see at
Boca Chica is about as large as can be obtained
at this time.

Again, SpaceX should continue.

Thank you, with respect

Subject: Ms. Stacey Zee, , Public input on SpaceX Boca Chica

Ms. Zee

With almost eight billion people on the planet there are many cost/benefit trade offs. Finding the right balance can be challenging. That said:

1. Let SpaceX keep their tower as is and let the process continue in Boca Chica Texas. With time any minor impact to 17.5 acres of wetland and tidal lands will eventually be more than **OFFSET BY LOW GREEN HOUSE GAS EMISSIONS**, as 90 minute suborbital flights **replace dragging a large aircraft half way around the world for 25 hours**.
2. With time, **mining near Earth asteroids and Lunar extraction** could one day be a vast new source of scarce material and financial gain... if the financial and technological obstacles can be overcome. **Rear earth metals** will be critical for the electrification of our transportation and generating infrastructure.
3. SpaceX is an example of **American Ingenuity** and expertise in science, engineering, and aerospace. It is **a symbol of pride both nationally and internationally**. It is also an **inspiration to engineers and young adults** that will one day work in *Science Technology and Engineering*, as NASA once was.
4. SpaceX/Boca Chica is a **prime example of unrestrained American creativity** Please do not be a source of **world wide discouragement** by letting 17 acres get in the way of a tremendous technological leap by SpaceX.

Dennis Belles,

Portland Oregon

Subject: My Comment on SpaceX Boca Chica Draft PEA

Dear the FAA team,

My name is Q Zhang. I am a resident of San Antonio, Texas, a U.S. citizen, and a current student of biology and computer science.

I would first like to sincerely thank you for your diligent efforts in ensuring a proper assessment and regulation of the impacts of SpaceX activities on the local environment. I hold in the highest regard both the values of environmental sustainability and space exploration as an insurance plan for humanity. I believe that, to the extent possible, the conflicts between these two values should be minimized while the core aims of both are allowed to proceed at the quickest appropriate timeframes.

I have personally visited the beautiful Boca Chica state park back in January of this year (2021) and experienced the striking sand dunes of and waves that lapped onto the Boca Chica Beach. I have been immensely grateful for the opportunity, as a Texan, to not only experience our gulf coast, but to also simultaneously observe the actualization of a grand vision of space exploration and expansion for humanity that SpaceX is carrying out at Boca Chica.

In considering the approval of any project with ambitions as grand as the Starship program, we must not restrict our views only to the immediate scale—whether geographic or temporal. Considering the current commercial and governmental landscape in the space industry, I believe that, without the SpaceX project being approved in Boca Chica, it would be unlikely that humanity would see the capability for transporting significant amounts of equipment and establishing sustainable human presence beyond Earth within this decade. This loss of potential capability may have more dire consequences than at first glance.

Already, due to fossil fuel usage, the Earth's environment will become more inhospitable for human life within this century. In fact, even if all carbon emissions were to be eliminated today, the already-released atmospheric CO2 will still lead to further global warming deeper into this century. We are at an inflection point in human history where humans are lucky enough to be *still* capable of devoting enormous capital towards space infrastructure and technology. As the existential impacts of climate change worsen and force the world to take up more resources to address, our economic priorities will only shift more and more towards Earth, and our gaze will shift away from the stars. Therefore, this is a crucial window of time during which we have the power to decide whether to allow SpaceX to progress with their Starship development program at Boca Chica, Texas.

Let us zoom out even further. At a geographical level, suppose SpaceX succeeds in achieving its objectives after FAA grants it the opportunity to continue its development in Boca Chica, then the introduction of capability for human settlements in space would become a watershed moment not only for the United States, but, truly, for the entire world.

At a temporal level, in a century, would we want to see humanity remain Earth-bound, busy cleaning up after its own improper management of the *global* environment with no end in sight, or would we like to have reason for hope towards a better future because 1. we have established space settlements on other heavenly bodies as insurance for the human race and 2. their new discoveries in science and resource utilization may just be the best (or only) way to address our resource demands (not to mention other potential issues) on Earth?

Throughout human history, the exploration of the unknown has expanded the possibilities for human existence. When we place Boca Chica environmental considerations within the grander context of human history, our way forward should not be hesitation, but determination—determination to work towards our visions while holding true to our values.

We should work to ensure that the building of an insurance plan for humanity is not hindered by incomparable concerns, but that we stick true to the uncompromisable baselines of environmental protection while ensuring the longevity of the human race.

Sincerely,
Q Zhang

Subject: Protest about space tourism

Hello,

I was unable to join the public hearing for the space X starship / super heavy project which was held earlier this month.

My main interest in this meeting was to register my dissatisfaction with space exploration as a commercial (money – making) enterprise – especially space tourism. I think it is outrageous with our current understanding of climate change and the need to cut down on our carbon emissions, that we are in a situation where, if you are rich enough, you can go into space for the thrill of it. The emissions, not just from the one off journey but from the whole manufacture / testing of the rockets, has an extraordinary impact and I would like to object to any further licences to be granted for this whole new area of tourism to be allowed.

I can write more if needed but that's basically my point – it seems like madness that space tourism is allowed at all. If I had the money, would it be OK for me to buy some oil fields, and just set fire to them? Yes – it is legal, but it certainly isn't right. This new threat to our planet needs reigning in before it gets out of control.

Best wishes
Ben Cater

Subject: Public Hearing Comment

Good Afternoon,

I would like to express my appreciation for the work of the FAA alongside SpaceX over the past years at Boca Chica. The environment and public safety are, of course, the utmost priority.

With that being said, it needs to be clearly understood that this has the potential to be one of the most revolutionary ventures in US history, and will, if successful, put the US leagues ahead of other nations in the space domain. Innovation like this has not been seen since Apollo, and suppression of this endeavour will mean more decades of relative inactivity.

There are virtually no other suitable locations on the east coast that would allow the cadence and minimal disturbance of Starship launches. KSC is a much more diverse protected environment.

Finally, with the recent allocation of NASA's HLS award, the Boca Chica launch site is ESSENTIAL to ensure timely delivery of Astronauts to the Lunar surface in the next few years. This will be the biggest achievement of the last half-century. I urge you to undertake this process in a timely manner, with every option being considered for SpaceX to resume operations as described.

Thank you,

Thomas Fedzin

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

This proposal does not serve the community in which it would be based, nor the country, nor the greater good of humanity. It is a dangerous incursion on the environment, our climate and our vulnerable natural resources.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Vaeth Rosemary

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Alexa Fay

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

Subject: Space X in Boca Chica

Thank you for accepting public comments.
Space X is vital to the expanding national and international requirements for space access.
The private citizens of Boca Chica deserve a quality of life allowed by their private property rights.

Both should be accommodated, and Space X should be allowed to take over the site, via eminent domain if necessary, while ensuring the private residents of Boca Chica are "made whole" for both their property values, and reasonable compensation for the disruption that relocation will cause them.

Best regards,
Stephen Foraste

Subject: Space X opposition comments

I am opposed to SpaceX expanded operations.

For over 6 years, local communities of Laguna Vista, SPI, and Pt. Isabel have been fighting proposed LNG (liquefied natural gas) export terminals, only to learn that now SpaceX wants its own LNG plant with a supply pipeline.

I have serious concerns about SpaceX expansion without proper oversight and regulations which have already been overstepped from the previous FAA report.

1) Embedded in the current SpaceX report to the FAA are descriptions which indicate an attempt to disguise an LNG plant complete with pipeline.

Why is SpaceX not required to complete a full EIS (Environmental Impact Statement) like Rio Grande and Texas LNG?

Will there be fracking wells and flaring on the SpaceX site? How will the air quality be affected for the locals and mitigated?

How will flaring affect bird migratory pathways which are a major local attractant for the ecotourism industry?

Brownsville already has high particulate emissions (agricultural) and high poverty with little health care to abate the heavy industrialized petrochemical industries which are hurrying to the last of the green fields of Texas due to cheap land and construction labor.

Why is SpaceX allowed to bypass the EIS and instead submit a general EA which does not take into account cumulative impacts of ALL infrastructure and operations?

Why is the Space X LNG and fracking wells operation not regulated under FERC?

Is Space X getting a special exemption? If so, why?

Why is there no launch failure analysis being submitted due to SpaceX location near residents and wildlife refuges and local tourist attractions of SPI and the proposed LNG export terminals?

2) Embedded in the SpaceX report is a description for a huge desalinization plant.

Where will the wastes of this process be disposed? On the flats, in the water? Where?

Wherever poses a threat to the local waters and populations.

3) There is no mitigation anywhere for the actions of SpaceX as to dumping wastes (fracking, salinization, construction, wetlands, etc.) and rocket debris and fuel on the local inhabitants, wildlife, and environment!

4) SpaceX wants to fill wetlands for their operations.

This causes a risk to the local communities to flooding as wetlands absorb and mitigate the impact of hurricanes and flooding on our Brownsville, Texas coast.

An EIS is needed to accurately assess the cumulative impacts of all of SpaceX's infrastructure and operations including safety risks to the public, socioeconomic impacts, and concerns regarding environmental justice.

SpaceX needs to comply with FERC **and** FAA since their scope of operations has changed from minor rocket to major sprawling aerospace complex (the "Super Heavy" rocket has replaced the previous 3 raptor engines to one equipped with a Super Heavy Booster that adds 37 more engines and 1100% MORE power) on and near wildlife refuges and the residents surrounding and downwind from Space X.

Subject: SpaceX - Boca Chica Environmental Impact Comments

Dear FAA,

You have the ability to authorize or halt some of the most impactful work being done anywhere on the planet. It is difficult to overstate the tremendous value to humanity of the work that SpaceX is conducting in Boca Chica, Texas. From completion of the Starlink network providing truly global internet service, to space launch capability with two orders of magnitude lower in costs, to the ability to make humanity a multi-planetary species, the benefits of this project are truly vast. Imagine preventing the Wright Brothers from testing their flyer. Imagine preventing Steve Jobs from marketing the iPhone. Do not stand in the way of this enormous opportunity.

Subject: SpaceX Boca Chica Environmental Review

Michael R. Brewer DPM
[REDACTED]

To Whom it May Concern:

I am a physician based in HI and am writing to encourage a provisional launch license prior to the end of the year for the suborbital launch test that end in Hawaiian waters. The inspiration that SpaceX provides to my children is very helpful as it provides a context to the value in learning math and science.

In addition, I have seen first hand the change in wildlife at Boca Chica beach. With less people visiting the beach, the area has had increased visitation from local wildlife. SpaceX employees have even been trained to save sea turtles and SpaceX has been hailed for their efforts saving turtles from cold weather and blackouts.

Net net I believe that SpaceX has been a benefit to the County economically, environmentally, and sociologically in the stimulation and propagation of interest in STEM fields.

I am strongly in favor of a provisional launch license in November so that their innovation is not held up by the ongoing debate.

Kind Regards,

Michael R. Brewer DPM

Subject: SpaceX Boca Chica Public Comment

As a native Texan who grew up on the Gulf Coast, I am strongly in favor of SpaceX's South Texas launch site plans.

Cape Canaveral, which is also a coastal wetland area, has demonstrated that wildlife can live well alongside repeated space launches (including the very powerful Saturn V and Space Shuttle). The Boca Chica area is very remote and expressed concerns about noise, overpressure, etc. are almost certainly greatly overstated.

Far South Texas is one of the poorer areas of the state and the presence of a high tech company like SpaceX will have a positive impact on the area. In addition, SpaceX's plans are also associated with the University of Texas (UT-RGV) STARGATE facility, and NASA's Artemis Program (through the Human Landing System). The benefits will not be limited to a single private company, but will ultimately be nation-wide.

Subject: SpaceX in Boca Chica

Hello!

I wanted to write to express my deep support for SpaceX's activities in Boca Chica, Texas.

I do understand the importance and need for environmental oversight of the operations in Boca Chica. However, overall I believe the benefits of approving Starship launch and recovery operations at Boca Chica outweigh the potential negatives for the local area.

I hope the finding of a FONSI or Mitigated FONSI will come down soon to allow SpaceX to continue with their operations. This will bring economic benefits to the local area and potentially significant science and exploration benefits to all people over time.

Thank you for taking time to consider my comments.

Sincerely,
Eric Olson

Subject: SpaceX Starship/Superheavy - Draft PEA

Dear Ms. Zee,

Thank you for making it possible for the public to be involved in commenting on the SpaceX Starship/Superheavy Program Draft PEA.

I have been following SpaceX since about the time they started trying to land Falcon 9 boosters. I think this affordable, reusability development really sparked a lot of interest in people worldwide. And finally, something exciting, beyond the NASA Shuttle program, which had ended, was happening. We all know how much success since that time SpaceX has enjoyed and most importantly, SpaceX hasn't slowed down at all. They seem to be accelerating their goals with the Starbase launch site and development of Starship and Superheavy launch vehicles.

Ms. Zee, I think it is very important for meeting the mandate of the FAA to encourage commercial, technological advancement in the area of spaceflight, to "keep up" with SpaceX and give them the trust, based on a great track record of competency, safety, success and seriousness to accomplish their goals at Boca Chica / Starbase.

I believe that SpaceX is in the home stretch of proving out Starship, having safely flown, even considering the "RUDs", a number of times. When the first Starship / Superheavy successfully completes flight and return for controlled landings, the world will take notice of this new, massive capability we have.

I know there are challenges and change for the people and wildlife who live in the Boca Chica area. But I also believe that Elon Musk companies and SpaceX will listen better and behave better than similar scale companies. I urge the FAA to quickly move to approve SpaceX operations in Boca Chica / Starbase to launch the Starship / Superheavy system.

Thank you,

Patrick O'Neil

Subject: SpaceX vehicle operator license - I support granting SpaceX the license

FAA,

I support SpaceX operations at Boca Chica Launch site. SpaceX is a national treasure and leader in space technologies, operations, & launches. NASA launches rockets from Cape Canaveral which is next to the Merritt Island National Wildlife Refuge. Not to mention NASA launches rockets near several cities: Titusville, Port St. John, Sharpes, Coca, and Rockledge. National Security is better and more secure by allowing SpaceX to continue developing and leading the space industry. The U.S.A. needs more such technology advancing companies.

SpaceX proposes to conduct Starship/Super Heavy launch operations from the Boca Chica Launch Site in Cameron County, Texas. SpaceX must apply for and obtain an experimental permit(s) and/or a vehicle operator license from the FAA Office of Commercial Space Transportation to operate the Starship/Super Heavy launch vehicle. The FAA's evaluation of a permit or license application includes a review of 1) public safety issues (such as overflight of populated areas and payload contents); 2) national security or foreign policy concerns; 3) insurance requirements for the launch operator; and 4) potential environmental impact.

Respected sir/madam,
Starship. This rocket will play a crucial role in making human multi planetary species. Humanity is bound to not to only live in Earth, we need to establish our base in moon and Mars following by major cities.

Moreover, shifting Starbase from Boca Chica is even not a good option. This will make whole SpaceX infrastructure waste. A big loss. Not good for people working at Starbase.
On the other hand, there are many photographer and youtubers who makes video about starship development; a stop in project will lead to poor conditions of these people.
Thanking you
A SpaceX fan

SpaceX should be allowed to launch its prototypes from Boca Chica. This is a task and challenge for all mankind. And time is very important. So a non-bureaucratic way to launch prototypes in quick succession should be found as soon as possible until the final goal is reached. At least the first step like e.g. the Artemis program. Not doing this would be like actively preventing the Apollo mission from reaching its goal and what would that mean for America and the whole world? Let them test. There is nothing without danger in space travel, but would we have reached the moon without taking the risks? They are worth it to move the whole humanity forward. And please, let's not repeat this process over and over again and give permission for the whole testing phase so that not every small change requires such an enormous effort.

Greetings from New Zealand. This SpaceX project at Lab Padre is simply the most important human project ever! While I have a limited sympathy to anyone who still remains living locally it is clearly their choice. The road closures would also be a minor inconvenience but again their choice. The local wild live must be protected and I am certain this can be done. This said the SpaceX Star Ship must be allowed to continue with as much imperative as can be given to it as our collective grand children's lives may well depend on a good outcome. Thank you for reading my comments. Regards Rick

SpaceX is doing an incredible job trying to make humans a multi planetary species. I think they should be given a chance to launch an orbital flight. It is important for SpaceX to perform their tests thoroughly to make sure they succeed. A surveillance should be held. And the impact on the environment should be assessed thoroughly.

I lived through the Apollo and Shuttle space programs. The SpaceX starship program is the next 'big' deal in space exploration. There should be wide government and bureaucratic support for the Starship program. Any required approvals should support the program at all costs. Any any environmental impacts should be closely monitored ... but should not hold up the program development and deliveries. The neigh-sayers and other professional lobby groups should not be allowed to halt the Starship program just because they hold a differing or negative position. Let the Starship fly ...

SpaceX should be allowed to continue work and the FAA should act to ensure that requests are processed in a faster and more regular fashion. Especially given the fact that though SpaceX might be first movers on this scene of private space, they sure will not be for long. Other companies will follow, and as such, the FAA should be equipped to process building requests, etc, in a more streamlined fashion.

Please fast track the SpaceX application. We (the public) obviously don't want any company to have zero regulations and no one would expect the government to allow safety to be pushed aside for any company. The gray area comes when you have a company that is trying to innovate for human kind and that same company has a very good track record for safety. Please look at the current policies and try to adapt to make the future more successful. Thank you for your time listening to the public. Sincerely, Michael Reale

Hello... I do not live in the Boca Chica area, but I have not heard of any information that SpaceX itself has harmed any habitats or disturbed any food supply or nest grounds for wild animals. Although if information presents itself that as an entity (SpaceX) has harmed wild life, then compare them to the average American life span that can harm more wild life from driving, mowing their lawn, and or existing(e.g using toilet paper, any mass produced products requiring natural materials). At least SpaceX is trying to improve life here on earth for us humans and by doing so that will reduce our population and allow for more wild life to have a greater open environment to flourish. Yes, I am indeed a SpaceX fan, I even hope I will be given the opportunity to work there in the future once I have achieved my degree, but all in all please allow SpaceX to continue they are doing a great job and will allow us to be open to new technologies due to the harsh environment of space which will intern help this plant heal its many wounds. -Thank you

I support SpaceX's work and believe that they will be very influential to a growing economy in South Texas. This is a first of its type, a rapid reusable rocket launch facility. Boundaries must be pushed and new ideas taken into account. Environmental protection is needed but I believe SpaceX has shown considerable effort to protecting the environment and community around Boca Chica. Examples include SpaceX providing power generation for the sea turtle conservation and supporting community during a landmark weather event in South Texas. Ian

Please lend any all consideration & certification to SpaceX to pursue Starship launch and development. Rarely does a moment come along where an individual or company has the ability to make a paradigm shift in one technology in developed let alone many of them at once,...technological advancement enabling human insitu-off-world development will necessarily be novel in its design, development, and intent whatever it may be,...technologies aggressively developed by SpaceX, and others can then be back populated here, terrestrially, to ensure a certain and sustainable future, for humanity, for the planet, and the biosphere. This aggressive push in development by SpaceX and others is vital to our planet's' future, for the future of our species and for all species. We can no longer afford to be fruit flies in the bottle. We must push outward, aggressively, beyond this planet; doing so will set the path and the standard for innovations to follow that will solve the problems faced by humanity with respect to sustainable infrastructures, access to equal living standards and more,...the technologies developed could balance the equation for the entire planet,...giving humanity the ability thrive while safeguarding everything around us for every living thing on earth. SpaceX has lit fire of excitement in the belly of the entire world, setting mood for a great space race, a time when all of us, not just governments, can and are participating. Please do not Stifel this momentum. It is my wish that SpaceX be allowed to proceed as aggressively and safely as possible, it only takes one rock from outer space, before we're ready to make everyone's nightmares to come true. It's time we stopped dragging our feet. Sincerely, respectfully, David Cassimatis

We need space x and it's starship Programm for humanity to get over stupid unreusabale rockets and unefficient way to get lots of stuff into space. Without space x we probably won't be on the moon permanent for the next 100 years or so. But we need to go to the moon because it could solve some of our ressours crisis by mining asteroids managed by the moon base. Humanity need to go mutiplanatary if we won't be able to fix the klimatchange we still have mars as a backup. And if earth becomes in habitable becausenof something we can't control like an asteroid impact we still got mars...

Starbase and the Starship program has greatly influenced the overall international space community. It has inspired numerous companies and countries to also accelerate their own programs. The rapid pace of SpaceX is now threatened by bureaucratic red tape. Another Environmental assessment would be a huge blow to the overall space industry not just SpaceX. Delaying Starbase would allow other countries like China to catchup and surpass the technological gains that SpaceX has worked so hard to accomplish. Delaying the approval of Starbase is the acceptance that the US is content to no longer be a leader in space. It is time for the FAA and SpaceX to work together to streamline the process.

I am writing to request the FAA grant SpaceX at Boca Chica the right to continue launching from Boca Chica and to not handicap the launch program by overly restricting the launch cadence proposed by SpaceX. The advances made here are important to US strategic interests and for the future of space exploration. Advances being made are nothing short of revolutionary, affordable heavy lift reusable vehicles and close to becoming a reality. I urge the FAA to allow the Space X program to proceed at a rapid unencumbered pace.

I'm a huge enthusiast for the work space x is doing, and making our rockets reusable, and the new technology advances. That being said, I want to make sure that the work they are doing does not cause more harm than good. I do want a good thorough investigation/research to make sure that it is relatively safe for the environment and the people that are close by. If I'm not mistaken there is a nature reserve nearby that I hope isn't affected. I can't wait for the findings of this study whether it's in space X's favor or against. Thanks for the time.

Hello, This is a member of the public comment, in favor of SpaceX, from outside of the immediate area. After reviewing the Summary_Draft_PEA_for_SpaceX_Starship_Super_Heavy_at_Boca_Chica.pdf, each section denoting potential environmental impacts reaches the conclusion of no significant impact. I implore the committee to detach themselves from emotions and stick to the facts from the environmental survey. Although there may be some understandable inconveniences for some immediate area residents, the final decision should be made on what is legally justifiable. With respect.

Myself and family fully support SpaceX and their plans both now and the future in Boca Chica. We would hate to see the progress of humanity stopped because of Government bureaucracy and Jeff Bezos influence. This project is essential for mankind and should not be impacted accordingly. It is clear that SpaceX is a responsible company and would not jeopardize the world we live in - if anything they are protecting ourselves from ourselves.

My name is Andrew B. Allen. As a high school teacher who lives and works in Texas, and as someone who has been personally impacted by environmental damage near Boca Chica (that was not caused by SpaceX) I support SpaceX's efforts in and near Boca Chica because of the huge positive environmental impact. We can not afford the lost opportunity cost of stopping or seriously impeding SpaceX's work on the Starship system in the Boca Chica area. By lost opportunity cost, I mean the value we lose by not allowing SpaceX to proceed unimpeded. REUSABLE ROCKETS Starting in 1957 we humans have been crashing used booster rockets into our wildlands and oceans. These huge wrecks of inorganic waste contain explosive and toxic residuals. The environmental impact of a rocket launch before SpaceX started reusing first stage boosters could be compared to an airplane crash. SpaceX is the only organization in the world currently operating a reusable first stage of a space launch system. Shutting down or seriously impeding their research and development efforts in the Boca Chica area would prevent or delay them from developing a fully reusable system. That would be a disaster for the environment. The impact on the local environment of launching reusable Starships will be less than the impact the FAA originally approved for this site. When the FAA approved SpaceX's launches from Boca Chica in 2014, SpaceX had never reused a first stage booster. (The first time SpaceX reused a booster for the first time in 2017.) The initial approval was based on the assumption that boosters would be crashed into our oceans with explosive and toxic residuals onboard. Throwing Falcon 9 first stage boosters into the ocean seems more damaging than launching the reusing Starships. An appropriate analogy is that I would rather live next to an airport where they safely fly large aircraft than live next to an airport where small aircraft regularly crash and burn. In the same way, I prefer to live near reusable rocket launches as opposed to near rockets that are crashed into our oceans and allowed to sink. While I live in Texas, I do not live in the immediate Boca Chica area. I have been impacted by environmental damage in the Boca Chica area on my many vacations to the Corpus Christi / South Padre Island / Brownsville areas. I remember one childhood vacation where I could not get my feet wet in the ocean without getting mired in tar from an oil spill. I hope we stop crashing rocket boosters into our oceans. SpaceX is trying to do that. We need to get out of their way. No rational American would bring several of the world's worst polluting ship-breaking yards to the U.S.A., but that is exactly the lost opportunity cost that shutting down SpaceX's operations would have. If SpaceX is allowed to proceed unimpeded, the USA will likely lead the world with fully reusable orbital launch systems. This will save our American environment by not crashing spent boosters into our oceans. A ripple effect will spread around the world. As reusable launchers take over, they will slowly change the environmental practices of almost every other launch provider on Earth. We will no longer see Chinese peasants approaching crashed rocket boosters as clouds of hydrazine bellow. This ripple effect will eventually even change the environmental impact of military missile launches if SpaceX is allowed to proceed unimpeded. ONE LAUNCH VS SEVERAL Some complain about the size of SpaceX's Starship. To correctly estimate the environmental impact of such a system, we must compare it to an existing launch system that launches the same payload to orbit. A Starship may be able to launch 150 tons to LEO. A Falcon 9 can only launch about 25 tons to LEO. I would rather be disturbed by one Starship launch than 6 Falcon 9 launches. SECOND STAGES LEFT IN ORBIT SpaceX plans for their Starship to be the first fully reusable orbital launch system. That means it will not leave upper stages in orbit to become space junk, and it will not burn up upper stages in Earth's atmosphere. This will also have a ripple effect on the practices of others who launch satellites into space. Shutting down or seriously impeding SpaceX's operations has the lost opportunity cost of dumping many tons of space junk into

our orbits and of dumping many more tons of toxic junk into our atmosphere. The SpaceX Starship can clean up space junk by deorbiting other people's satellites and upper stages according to Gwynne Shotwell. <https://www.youtube.com/watch?v=Qu7IR6ohBkM&t=476s> Any action against SpaceX would also incur the lost opportunity cost of adding a great many derelict upper stages and satellites to our orbits by preventing them from removing such space junk. INSPIRATION SpaceX helps the environment by inspiring young people to pursue STEM careers. They invent things that help the environment. Imagine how much worse would our air quality be if the person who invented the catalytic converter or the fuel injection computer had decided to work in human resources. As a child I was able to visit Kennedy Space Center and see a space launch. Then I learned that nobody had gone beyond earth orbit in my lifetime. I learned that after 12 men walked on the moon, we did not go back. I learned even the theoretically reusable Space Shuttles crashed fuel tanks into the ocean and let them sink. I felt that I had been cheated. I gave up on space for years before SpaceX reignited my dreams. I have seen firsthand the inspiration that students derive from SpaceX's work. When I taught at Ovilla Christian School (2014-2015,) I hosted parties where we watched SpaceX launches. The student interest was amazing. Many of these students have been inspired to pursue careers in STEM fields. The lost opportunity cost of shutting down or delaying SpaceX's operations includes the loss of thousands of inventions that could help our environment. LOWER COST TO ORBIT, HELP EARTH MONITORING The work SpaceX is doing will help the environment indirectly by improving the data we have on our environment. The Starship will lower launch costs, which will help NASA, NOAA, and others launch more and better satellites to track our environment here on Earth. The lost opportunity cost of shutting down or seriously impeding SpaceX's operations in the Boca Chica area include blinding scientists and regulators to pollution and climate patterns. NATIONAL SECURITY Here in the U.S.A., we care about our environment more than some other countries that launch satellites do. If we Americans lead the way into space, others will copy us. If we stop or seriously impede our progress over comparatively insignificant issues, we may lose the lead in space to China. There are several lost opportunity costs that come from such a loss. First, many countries will be going into space soon. They will copy whoever is the leader. If SpaceX leads the way with its close ties to Tesla, then those countries will copy technology and practices that are friendly to the environment. (Tesla's mission is to accelerate the world's transition to sustainable energy. <https://www.tesla.com/about>) If those countries copy the Chinese Military, they will copy technology and practices that are much less friendly to the environment. Second, harming U.S. dominance in space may cause us to lose some of our sphere of influence to the Chinese. Area influenced by the Chinese Communist Party will be less environmentally friendly than ones influenced by the U.S.A. CONCLUSION The lost opportunity cost of stopping or seriously impeding SpaceX's work in the Boca Chica area is too high. No sane person would crash countless rocket boosters into our wildlands and oceans, leave some many supper stages and derelict satellites in orbit, abort millions of inventions that can help the environment, and transfer control from the U.S. FAA / EPA to Chinese and Russian space agencies. Please give SpaceX a green light to do whatever they want. I trust SpaceX to care about our future. Your finding should show that you also trust SpaceX.

Because both citizens and the leaders of the globe fail to see the importance of repairing climate damage, space exploration and preparation for human travel is more important no than ever. As a Texas native, I support SpaceX and their goals and implore you to close air and beach space to allow them to continue testing. This is not just a billionaire playing with toys; it is a genuine foray into future space life. I appreciate your attention.

I'm in full support of SpaceX creating their spaceport and all of its consequences in Boca Chica. The potential economic opportunity it could offer to the underserved region is immense, even if it's a regular spaceport. Additionally, I think it would be important to force SpaceX to maintain the local beach as it and the wildlife reservation is currently mistreated (trash everywhere). They could easily do a better job than the government can currently do, due to its remoteness, and I'm sure they'd be willing to hold to this contract in exchange for their permit, because the contract means so much to this company.

Yes, I am in support of SpaceX's Building of a launch tower and their entire testing campaign. I do understand the environmental damages that the continued testing can present. I am a strong supporter of conservation, However, I believe that each threat to the local environment should be looked as an individual case to asses all options. In the case involving SpaceX's Boca Chica facility I believe that the contributions made to the local residents, The Space Community, & The Countries Security outweighs the cons associated with the harm that such testing can have on the local environment. Thank you for your time. -Isaias Munguia

To whom it may concern: I support the ongoing efforts of SpaceX in their speedy development of the technology that's necessary for the earliest possible safe human return to the Moon. Towards this end, the development of their "Starbase" facility should be encouraged, while reasonable alternative sites for future mass production and other activities should be actively sought out. The time sensitive nature of these efforts is clear, as is the sensibility of their less risk-averse style of development. What appears to be a risky alternative is in actuality the very best way to drive development of new technologies forwards, by "building stuff and breaking things." The pressure of competition this brings to the entire industry is healthy, and should be encouraged. The relatively glacial pace of commercial space industry development during my lifetime, driven by the reliance upon government funding/control and absolutely risk averse management, is simply unsustainable. We are now in a very real race for the actual high ground, one where we stand a very real chance of our Peoples best interests being left behind. It's a simple truth that, in both the long and short term, environmental and quality of life factors will always be a problem, no matter where they locate operations. I support, wholly and completely, encouragement and expedition of testing of engineering at the Boca Chica site. Short term environmental disruptions will be just that, and the sooner such development is achieved, the sooner any mitigation and rehabilitation efforts will be underway. Best regards, Kris W. Rowe [REDACTED]

Dear FAA, Once in a generation is there an opportunity to do something this great. The hopes and dreams of an entire generation of aspiring young engineers rests on your decision whether to allow SpaceX to continue their work down in Boca Chica, TX. Please let them continue building their infrastructure and launching the Starship Superheavy. My 6yo son is in awe every time we watch one of their launches. He is learning what it means to not give up and keep trying even when things don't work out and the rocket explodes. He wants to launch rockets when he grows up. The women and men in Boca Chica are doing amazing work and inspiring a generation of future engineers to create the impossible. Please allow them to continue their work without delay, the future path of all humanity depends on this decision. Thank for all of the work you do everyday to keep the skies above our nation safe and productive!

Hi, i'm a french engineer and i highly support SpaceX and its Starbase. We are very proud of Kourou, the launch pad in Guyane for Ariane rockets. It's a very good destination to discover but for french people, it's far away and expensive, so not everybody has the chance to go there, but many would like to. The environmental situation is likely similar to Boca Chica, but things has been done to maintain our capacity to launch rockets and respect as possible the environment. US have the chance to have SpaceX, a rocket leader with worldwide admiration. US should be proud, and the FAA should find a solution for environmental issues AND let SpaceX moving forward at Starbase. Of course for space exploration, but also for people : people who need to dream about space, visit a rocket factory with friends, family, collegues, school...please let Boca Chica become a "must to go" destination.

Please allow the SpaceX launches and testing to continue from Boca Chica, TX. The development of this technology and reusable pursuit must continue as the process is bringing new perspectives to a staid and mature market. I believe this activity will benefit Texas, The USA and eventually the entire world with these new and yet-to-be-found discoveries.

Concerning the operations at Starbase Boca Chica. I would advise the FAA to allow SpaceX to continue its rapid prototyping, development & testing program at the Boca Chica facility as to not delay or interrupt humanity's progress towards multi planetary status. Words via an online from cannot convey just how important this step is for our species' long term survival. We can not, and should not allow governmental bureaucracy to stand in the way of our planetary colonization efforts. For too long government agencies and cost+ contractors have been stifling progress in the human spaceflight arena, we finally have a progressive solution to the "human spaceflight problem" namely reusability, and as a species, we can't afford to squander this opportunity. Thank You, Concerned Mechanical Design Engineer from NY USA.

I strongly believe that SpaceX should be allowed to launch Starship from Boca Chica as long as they are able to prevent unburned methane from leaking to the atmosphere. And in future, if they will use Starships for commercial passenger transport (just like airlines) carbon emissions must be compensated, either by passengers or by SpaceX. In my eyes SpaceX is one of the most important companies in the world right now as they have the only real chance to make space truly accessible. This is absolutely vital to the future of not just humankind, but the entire planet as well. For an example, we need to be able to put bigger telescopes into the orbit to be able to detect and deter dangerous asteroids. Without the capability of Starship, we cannot do it. In my opinion US government should help SpaceX to achieve their goals, unless they will start greatly damaging the environment or climate by reckless misconduct.

My name is Jade Hale-Christofi, and i'm half British half American. I can't tell you enough just how proud I am of SpaceX and what they are doing for the United States. I wasn't around in the old days when NASA used to be great but we can clearly see the difference in innovation. SpaceX is the only space company that's inspiring the world and the fact it's an American company again doing it should make everyone proud. In a 1000 years they will look back at us and say "what did we achieve in the 21st century" The FAA with be apart of that history, saying we helped humanity reach Mars. What SpaceX is doing now will be in the history books and the FAA should always be on the side of innovation. Let our time mean something in History, let our time pave the way for the future of the human story.

The US Federal Government and it's entities must support responsible and reasonable risk-taking in pursuit of improving the future of the country, its citizens and mankind if it is to live up to its mission, promise, and legacy. I see no irresponsible plans or risk of irreversible damage or injury on a scale that would cause the FAA to raise significant impediments to SpaceX moving forward aggressively with its plans under the responsible oversight of the Agency.

This is a once in our Earth history to be able to create the foundation of the technology to make the human race a space-faring civilization, we need to push polluting industries and corporations into space if we are going to save the Earth, not doing so would mean that the bad side of our polluting habits will forever be grounded to Earth and it will make us consume our own resources until we are extinct, and on our way out of history we also destroy Earth. The scientific consensus is that in less than 200 years we will enter the beginning of the human extinction regardless if there is a natural worldwide extinction event. Please let SpaceX do their tests, if successful we humans will have for the first time the means to push large payloads into space, large enough to start the spark for the new gold rush in space and then the corporation will push outwards giving Earth a possibility to continue breathing. Thank you.

SpaceX changed the world. They created a more affordable rocket - Falcon 9, and they are not wasting it after one launch. It is very important to constantly develop and create more advanced technology. Many technologies designed for spaceflights are used daily by everyone. There are many problems on earth, but it cannot stop us from exploring our Universe. SpaceX is the only organization that can make it possible. Starship proved that their idea of fully reusable spacecraft will work. Space travels will be simpler, safer, and more affordable. Space represents hope and dreams for so many people, and that's why we should explore it. This is why SpaceX created Starbase. They need their launchpad in a calm place. The country can gain a lot because many people live abroad, so they will travel to Boca Chica to see Gateway to Mars. Hopefully, they will get their license soon, and we will step foot on Mars.

It is a wonderfully exciting time to be alive and witness a revitalized space exploration push! This is completely spurned by private businesses and it not only is fun to watch, but it gives great hope and pride in American industry and its ability to conquer all challenges. I hope that what SpaceX is doing will have resounding affects on other space companies like Blue Origin etc. This is what American industry is about. And it helps everyone when competition forces innovation, which is what SpaceX seems to be doing to me. Let's get behind them and help them innovate. Help them succeed. They do not seem to shy away from necessary review and constructive criticism. Let us not burden them with unnecessary regulation or political concerns designed to hinder them and help the competitors who are unwilling to fairly compete. Let them innovate! Tell them what must be done to keep care of the ecosystem and the local residents and then stand back and watch in awe as they take the reigns of this industry and lead the United States into a new generation of space enthusiasts. I do not believe that SpaceX will stop innovating by squashing this Boca Chica Starbase.....I believe they will move forward regardless, they just wont do it here at home.

I'm behind SpaceX and want them to continue working on the StarShip Program without being constantly stopped by regulations. The US is such a huge country that this tiny space in Boca Chica, where StarBase is located, will not change anything regarding the environment. There are other ways to preserve the environment, stopping SpaceX isn't one of them. Plus you could dedicate a similar sized space elsewhere to be preserved. Please don't let politics ruin that beautiful project. Best regards

Let SpaceX launch from the Starbase at Boca Chica. I'm a Texan and I grew up to live in the valley during the sixties and seventies. I lived in Pharr. During my youth I made countless trips to Padre and we would go to Boca Chica, by dune buggy, because there weren't roads. There isn't wildlife or vegetation at Boca Chica that isn't 10 miles further away in any direction. The topography is in constant change because of the hurricanes and the Rio Grande flooding. This is the perfect area for this program.

Please consider the value added to the economy of SW Texas from these many SpaceX projects as a source of funds for any mitigations needed. It seems to me that these activities are net less harmful than many other current uses of Public lands such as strip mining, "fracking", and oil drilling (with pipelines). i suspect there isn't a way to also evaluate the "wow factor", but please do, if possible. Thank you for what you all do for us all, dave lustig

I am very concerned about how difficult it is for SpaceX to get appropriate clearance for the launch of their space vehicles. While there is some risk in any space endeavor, it has become clear that the largest item holding this company (and by extension the US) is government regulation. This regulation that hinders their operations falls mostly under this agency. The US has a substantial lead in space exploration DUE to SpaceX's efforts and yet we see launches hindered, delayed, and hamstrung by your agency. Please move quickly to adapt to the new world that we live in and do not allow regulation to hinder US leadership due to bureaucracy of the FAA. These facilities have been deliberately put in a remote location as far from densely populated areas intentionally and the FAA needs to work on the assumption of allowing spaceX to "do its thing" in the least hindered way possible. Please take this into consideration as you move forward on how you regulate and control the launch schedule of the area around Boca Chica.

Please don't stand in the way of human progress and let SpaceX continue their work at Boca Chica, Texas. I strongly believe it is in the best interest of humanity in the long run and should not be stopped by minor concerns compared to much larger environmental issues the earth is facing right now. SpaceX's tribute to humanity will address many of those larger issues for the better of the planet in the future thus rendering concerns today meaningless.

Environmental protection and space exploration are arguably two of our most important activities as humans. I appreciate the effort that went into the FAA's assessment to ensure that SpaceX has environmental mitigation strategies in place for all aspects of their Starship/Super Heavy program. After reading the draft PEA, and considering the likely impact the program will have on the future of space, I believe SpaceX should be granted the necessary permits and licenses to continue their program as planned.

Dear sirs, The world is watching. We understand the need for safety regulation, and that trying to go too fast could bring risks that need to be mitigated. At the same time, all humanity is watching SpaceX, and it's clear that the long term future for us requires that we develop a scalable and reusable space infrastructure. At the present moment, SpaceX seems to be leading the way. On behalf of humanity, if I may be so presumptuous, I would request that you work with SpaceX to enable orbital launch tests from the Boca Chica facility, with fair and reasonable conditions and limits on safety. Yours sincerely, John Barron United Kingdom, 2021

Please give SpaceX the clearances it requires. I would like to add my voice to those that support SpaceX in their pursuit of exploration of space. I am 58 years old and have watched the past 50 years slide past without any significant advance in space exploration and now I believe we are on the edge of running out of time. I am very strongly in support of environmental protections but this one experiment is too important to risk the window closing. I believe it will take decades to establish self sufficient colonies on other planets and with global warming we may already be too late. Please give SpaceX the clearances they need to move forward as quickly as they see fit. It may be the difference between our extinction and our second chance!

As a 20-year volunteer in the National Wildlife Refuge System, I am appalled that SpaceX is being allowed to impact wildlife habitat and endangered and threatened species with its growing operations, and the FAA is doing so little about it. It is time to hold SpaceX responsible for the environmental impact of their operations in Boca Chica. I urge you to reject the current assessment and require a full-scale Environmental Impact Study of SpaceX's plans. Without this, you are failing the American public, who you are charged to serve.

As an individual who's very conscious of the environment and do my best to help protect our community and the environment, I support what Space X is doing 100%. There has to be balance between progress and our environment. I believe that Space X developing it's Starbase in Boco Chica was a very smart decision. No matter where this site was going to be built, someone, some communities and/or some groups would not support it and find reason(s) to keep this project from moving forward or even finishing. Environmental impact studies are very important, myself and my family are in total support of having Space X moving forward! Without some form of progress from visionaries like those at Starbase, railroads would not have been laid across the world, cars wouldn't have highways stretching across the lands and airports would not have ever been built to move people through our skies. Hopefully this issue will be settled quickly and progress to a better future for all humans will be achieved. Thanks, David Stanley

I have personally watched over 100 hours worth of youtube videos related to SpaceX. Millions of others have as well. History books will remember the dramatic acceleration of humanities' technological prowess far outweighs any ecological impact Starbase has on this one coastal area. We've waited since the Apollo program to see such a renewed interest in spaceflight, and if the FAA stands in the way of this beautifully American progress... He'll just wind up launching from elsewhere. Russia maybe? Please don't shoot America in the foot by slowing or derailing progress on Starbase, or the Starship program, in any way. If anything, just get out of the way of progress and let this man accomplish his dreams. The world is watching, and we want to see this ship fly.

Dear FAA, I believe it is very important to protect the environment but sometimes an exception should be made. The goals and demonstrated ability of SpaceX I think argue that this is such a time. If we as a nation want to pursue space travel at the highest levels, we have to accept the inevitable associated environmental cost. It is fortunate that the involved geographic area is relatively small. Sometime in the future, space endeavors may not need to have an environmental cost, but I think if we are honest, this is impossible at the current time. The best mitigation strategies should be employed but the important work of this exceptional company should not, in my opinion, be slowed.

I would like to voice my support for Space X getting approval to launch their orbital spaceship and heavy rocket system. I believe the benefits of getting deeper into space and making it cheaper are too great for humanity to be stymied by bureaucracy and small time environmental concerns.

The advantages to the United States and the world that were realized after the space race in the 1960s-70s are almost impossible to count. The food we eat, the clothes we wear, how we build, heat and secure our homes - and how we perform our jobs and in some cases the work we do. This is a pivotal and exciting time in our future. Privatizing the space industry is the only way we can accelerate the countless advantages to our economy, technologies and trending disadvantages in our standing in education. Even understanding and reversing drastic climate change may be an indirect discipline that is boosted by understanding how we survive and thrive in planet/heavenly bodies with little to no atmosphere or gaseous imbalances vs. the needs of life. Oversight and regulation is needed, but exceptions and enablement are critical now. We are at the precipice of one of the biggest social changes in human history. Humanity becomes a multiplanetary species and becomes grounded in how to care for our current and future homes. Please, we must take advantage of these early efforts that have so much momentum. We must not let bureaucracy or too much oversight extinguish this advantageous time where market opportunities are currently in a window meeting the ambitions of the enablers. Imagine if we had prevented the expansion of the railroad in early American history. Thank you

Please allow SpaceX to use the launch tower they have built. What they are doing is amazing. And they are doing it much more affordably, and almost certainly with far less environmental impact than the extremely inefficient alternatives of NASA and the other private space launch companies. This simple fact that SpaceX rockets are reusable means fewer resources spent and less environmental impact.

SpaceX operations have significantly changed since 2014, when the company was authorized to test and launch much smaller rockets than those being proposed today. The company is also now developing a natural gas facility to extract and deliver fuel to the site. These changes to SpaceX's activities in Boca Chica are substantial enough that – according to the National Environmental Protection Act – the Federal Aviation Administration (FAA) should require a full Environmental Impact Study (EIS), rather than the faster, less comprehensive Programmatic Environmental Assessment (PEA) that has now been produced. Construction at the facility, launch activities, fires, and rocket debris are already impacting the wildlife and people of the Boca Chica region. This region contains critically important and sensitive bird habitat used by hundreds of thousands of individual birds of many different species throughout the year – from the federally Threatened Piping Plover and Red Knot to the Endangered Northern Aplomado Falcon. According to an analysis by Coastal Bend Bays & Estuaries Program in Corpus Christi, the Piping Plover population in the Boca Chica region has decreased by 54% over the past 3 years (2018-2021) since SpaceX started testing and launching rockets. These lands also support several species of sea turtle and mammals listed under the Endangered Species Act. The current assessment fails to adequately analyze the impact of operations on wildlife, the environment, and surrounding communities. The assessment presents only two alternatives to be considered: a Preferred Alternative and a No Action Alternative. At this time, the No Action Alternative is recommended by conservation organizations given the lack of an in-depth EIS. Various individual components of the SpaceX Starship Super Heavy Project are massive and complex, and it is reasonable to foresee that they could result in significant environmental impacts. Elements of the project, such as liquefied natural gas processing plants, seawater desalination plants, and solar farms, are of sufficient complexity that they typically warrant analysis through an EIS as stand-alone projects, let alone as components of a larger project. Yet, no EIS has been required. I am submitting my support of the No Action Alternative in the current assessment. I further reiterate my request that the Administration conduct a comprehensive EIS to more fully assess environmental impacts of the SpaceX operations in Boca Chica. Thank you for your attention on his matter. Cecillia Chu

I fully support SpaceX missions from Starbase! They have carefully selected the most southerly point in TX that is on the water. I believe that they will make every effort to address the environmental concerns that have been advanced in discussions. The US doesn't have have the option of an easily accessible launch site in Guyana, like the French government has. SpaceX is poised to advance the exploration of space in a manner that has not been available since the 1970's. Thank you for your thoughtful consideration. Sincerely, Kathleen Vandoorn, Maryland

Subject: An EIS is needed at SpaceX Boca Chica

Dear Federal Aviation Administration,

As someone that lives in Florida, we know the environmental impact that big rockets can have. Please, do the next thing and ensure a comprehensive EIS is done per NEPA. It's the least FAA must do to ensure all possible alternatives are evaluated.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Diana Umpierre

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

A new cumulative analysis needs to be conducted. A 3rd-party launch failure analysis is needed due to the proximity of Port Isabel, Long Island Village and potentially three LNG export terminals within five miles of the launch site. Additionally, an analysis of the potential impacts to the proposed Jupiter LLC project, a crude upgrading, processing and export facility which includes an offshore VLCC loading facility six miles offshore.

A new biological opinion is needed. The Starship is much larger, there will be more testing, more beach closures, and more traffic where endangered wildlife is present. More closures of Boca Chica beach will result in increased inaccessibility to monitoring of endangered sea turtle nesting sites.

Additionally, I request the FAA enforce and/or hold SpaceX accountable to their required mitigation.

Sincerely,

Nathaniel Cantu

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I have been against SpaceX being at Boca Chica since before its original approval. I opposed it because it was being built in an environmentally sensitive area. Because it required the closure of beach access at the discretion of a private organization contrary to The Texas Constitution. Things have only gotten worse than my initial fears. The original purpose has been abandoned and SpaceX is covering much more ground than initially planned. It's scope has changed from a support for the Space Shuttle to a test facility that is leaving debris in its wake as rockets steadily explode over our Federal Wildlife Refuge. I used to go out to the beach quite often but now you can't plan a trip without having to check and see if the road is open. It seems to be closed more often than not these days. They will post the first day of the closure then say if need be there will be closures the next two days. There is never a post to say whether or not they accomplished it day one or two or three.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

I am opposed to SpaceX expanded operations.

For over 6 years, local communities of Laguna Vista, SPI, and Pt. Isabel have been fighting proposed LNG (liquefied natural gas) export terminals, only to learn that now SpaceX wants its own LNG plant with a supply pipeline.

I have serious concerns about SpaceX expansion without proper oversight and regulations which have already been overstepped from the previous FAA report.

1) Embedded in the current SpaceX report to the FAA are descriptions which indicate an attempt to disguise an LNG plant complete with pipeline.

Why is SpaceX not required to complete a full EIS (Environmental Impact Statement) like Rio Grande and Texas LNG? Will there be fracking wells and flaring on the SpaceX site? How will the air quality be affected for the locals and mitigated?

How will flaring affect bird migratory pathways which are a major local attractant for the ecotourism industry?

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

Beach closures and road closures continually exceed allowed parameters. 24/7 work and night lighting onsite is displacing wildlife and affecting nesting behavior. Facilities will require huge amounts of methane but there is no mention of this in company statement or draft, or how it will reach facility. Traffic count increases to facility have affected wildlife movement patterns. Facility has built structures whose height exceed their current permit permissions. Company policies seem to support a "seek forgiveness when caught" versus obtaining proper permissions.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

Subject: Comment on Draft Environmental Review of SpaceX Starship/Super Heavy Program

Hello,

While I am a resident of Massachusetts instead of Texas, I still felt compelled to submit my thoughts on SpaceX's Starship program in Boca Chica.

After becoming familiar with the FAA's draft environmental assessment of the launch site, I was pleased to see that the site's effect on the surrounding wildlife would be low, and that SpaceX would be taking actions to train personnel on safety regarding the surrounding ecosystem. It was also good to hear from the document that pressure from sonic booms are not expected to significantly affect human-populated areas.

SpaceX's Starship program seems highly ambitious but extremely important. As a forerunner in the space industry, the starship program will seat Texas and thus the United States as a dominant force in the economies developing around space travel. The program is also important for humanity as a whole, as Starship may finally enable human-kind to effectively live off-world.

Thank you.

Fairfax, VA 22031

Dear Madam:

I live on South Padre Island, Texas. Please accept my following comments on the construction and operation of SpaceX project in South Texas.

I agree with Purpose and Need discussion in the September 2021, Draft Assessment. I believe that the construction and operation of this project will provide needed important services to security, scientific, military, and commercial institutions in our country. It will also increase the US ability to secure profitable services to other countries.

My family strongly support this program and are willing to accept the inconveniences and hardships it may bring to bear on us.

Sincerely,

Don Coers

Subject: Comment on PEA for SpaceX operations at Boca Chica TX

SpaceX is actively supporting local schools and encouraging valuable STEM learning by groups of local students. The draft PEA shows concern by SpaceX to mitigate possible adverse effects of launch and testing operations. Please work together with SpaceX to find a way to allow further research and testing for this valuable endeavor of developing fully reusable space travel technology.

The Starship development process and rapid launch tempo of Falcon9 and Dragon capsules by SpaceX have created an atmosphere similar to the Apollo lunar exploration program which is inspiring students across the country to explore science and technology. This is important for America to remain at the forefront of space technology.

Thank you for the opportunity to comment.

Subject: Comment on SpaceX Draft PEA for Boca Chica

Dear Stacey Zee,

I support allowing SpaceX to do all requested activities at Boca Chica. On my visit to Boca Chica I saw with my own eyes that SpaceX takes good care of the natural environment. I'm sure they will continue to do so. The Brownsville area's economy and social infrastructure has and will continue to benefit from SpaceX's presence at Boca Chica.

While NASA squanders billions on rockets going nowhere, SpaceX's reusable rockets are opening space to affordable, reliable commercial development. SpaceX's Starship project is a quantum leap forward in safe, environmentally friendly space exploration.

Starship is essential to US national security. Without it China will dominate low Earth orbit, the Moon, and beyond. The world will be at the mercy of China's vicious military dictatorship.

The Earth needs a Plan B in case of another extinction event. Only SpaceX can provide this.

The FAA should allow SpaceX to move forward with Starship development, testing, and launches at Boca Chica as soon as possible. Furthermore, the FAA should strive to facilitate SpaceX's mission in every possible way.

Regards,
Dan Keegan
Seattle, WA

Subject: Corruption
Attachments: Corruption(1).pdf

“But if you look for a companion, be careful in choosing! And be careful of what you say, even to your closest friends! The enemy has many spies and many ways of hearing.” - J.R.R. Tolkien

Two 737 Max planes crashed within five months of one another in 2018 and 2019, killing 346 people. In January Boeing was ordered to pay \$2.5 billion in criminal charges due to bribing employees at the FAA to approve these faulty planes; some may tell you that this proves the need for slower, more careful approval processes. In reality, this highlights the need to weed out corruption.

SpaceX is not seeking approval to fly occupied vehicles, as Boeing did; they intend to test rocket safety. By limiting the number of launches permitted each year, you harm safety advancements. This bizarre, arbitrary regulation increases future death tolls. How can the dangerous approval to use newly-designed planes on hundreds of unwitting people be fast-tracked, but urgent technological and scientific advancement, almost exclusively in improving safety, cannot? Does short-term profit have this much power over us?

Not only is the rare flying piece of rocket unlikely to harm the ecosystem, but local wildlife has actually benefited from SpaceX. During the Texas cold snap, employees at the Boca Chica launch site saved 850 endangered sea turtles and gave a big commercial generator to a non-profit that has worked with them previously. The suggestion that preventing safety improvements will save endangered animals is clearly ridiculous. Every delayed or rejected safety test loses data and eventually lives.

It is insane that Jeff Bezos, for the sake of an ego trip, is approved to launch actual people amidst several whistleblower letters showing that the company has compromised safety. All while SpaceX cannot pursue uncontentious technological advancement towards what is in the best interests of humankind. This environmental argument is a thinly-veiled facade for beliefs and interests too heinous or selfish to speak publically.

Rarely does one get the opportunity to work on something so important; to be remembered as someone who helped facilitate and fast-track multi-planetary exploration is a noble distinction. If humanity is unappreciative as they explore and unlock the secrets of the universe many years in the future, remember that Stanislav Petrov was only awarded for his actions an entire 21 years after his brave deed. He disobeyed orders and averted nuclear war, essentially saving the world.

I send this letter to you trusting that you will do everything in your power to prevent the current corruption of the FAA in delaying the advancement of SpaceX. Forward this letter to anybody you deem trustworthy.

- Concerned Acquaintance

Subject: Danger: Please don't let SpaceX expand

Dear Federal Aviation Administration,

I grew up in Brownsville, and was visiting there last week. My father and I tried going to Boca Chica Beach, a place I grew up near and visited frequently. Construction around the SpaceX area barred us from getting to the water, a public beach that the locals love. I could see rockets from miles away in areas that used to be quiet and full of wildlife. SpaceX is taking land away from local people and they don't care. Boca Chica Beach and the surrounding area already belong to us, and Elon Musk is acting like a colonizer, as if it's some undiscovered land for his empire. Don't let him take more space.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

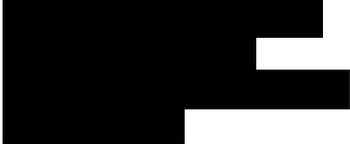

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Jaclyn Barrientes

Hello,
My name is Dmitrij Levchenko,

I am speaking on the behalf on the Ukrainian SpaceX fan-community.

I'm going to make it short and simple.

We are one step away from accessing the opportunity to becoming a multiplanetary species, please, let's not stand against this one in a lifetime opportunity. Of course, there will be negative impact, skepticism, and comments by small brainers. So, I ask you to give SpaceX the green light and approval of all needs to let the Space Exploration Technology Corporation's (SpaceX) extremely innovative vision become a reality for the greater good and for the benefits for all the humankind.

Lastly and not least.

Davej SpaceX and Godspeed on their future endeavors.

Subject: FAA SpaceX Citizen comment

To whom it may concern,

I share my thoughts on the current situation on SpaceX operations at Boca Chica Beach as a humble citizen who was born and raised in Brownsville Texas. Initial news of a company like SpaceX deciding to bring their operations to our little corner of the world was welcomed with excitement. Watching their site start out and build into what it is now was also an experience. As someone who was raised here, early on, it took some getting used to looking at the construction sites on the way to the beach. The Boca Chica beach is an escape to leave the city and enjoy the natural environment in it's purest form, but now it was accompanied with sounds of construction. As facilities started rising and the sites became operational, the PUBLIC beach was slowly being stripped away from the PUBLIC. Continued unusual closures confused the public, as how can a public road to a public beach be constantly closed on their demand. Time passed, concerns were raised and things somewhat sorted out. Closures are now less frequent, but for how long, as SpaceX continues to grow and build more rockets. Is all the trash, debris and metal scraps from failed exploded launches really being picked up? How is all that affecting the local wildlife? I'm no animal activist, I fish and hunt, but also do care about wildlife wellbeing and contrary to popular believe that's an ethical hunters/anglers main goal. These animals can't speak for themselves, the least we can do is raise concerns for them. I'm just a blue collar, but when I see these hopes of going to Mars, I can compare it to holding a carrot in front of a hungry horse with no intentions of feeding it. We as species can't even fix the issues here on earth, but think going to another planet will change anything? I don't buy it, if anything our species will continue to do the terrible things it does here on earth, just at another planet. I refuse to believe that these are the real intentions of the operations at Boca Chica Beach. I feel its just a project that will have the people on a hook until they decide to release. Don't get me wrong, I know people who have been employed by SpaceX, hell I've even been offered a job there and appreciate the employment opportunities it has provided. I can also appreciate the fact that I was able to see a dang rocket mid flight from my backyard. At the end of the day though, to me its all vanity and not worth the price that the environment will pay in the long run. I've been around companies like that, making promises, then decide it's not going to work out and leave the city, leaving citizens without a job. Some who leave their previous jobs because they believed in those companies promises. Brownsville is considered one of the poorest cities in the country, but we are the richest in culture. There's no place like Brownsville, I love this city, the good and the bad. Most of us don't have millions of dollars to travel the world, but we do have our beautiful beach. I would hate to see the beach turn into an industrial park in the name of "progress", when in reality the actual reason is profit. I hope those that read this that have some influence to change the situation and address the publics concern take action, before it's too late.

Respectfully,
Frank

I want to add my voice to supporting the goals and ambitions of Space-X. I am an electrical Engineer who had the opportunity to work on the Mars Rovers. While its good to be considerate of environmental issues it should not be the overriding issue. Elon Musk and his fantastic accomplishments with Space-X make him THE ONLY HERO FIGURE that we Americans have. He exemplifies all that is good and gives our nation the Pride that our nation so dearly lacks. Space-X symbolizes and embodies the dreams of America. It's success and pace of development give all of us hope and pride that "made in America" is a great sentiment. Our nation needs space-X more than it needs us. Success of the company gives us hope, pride and provides a source of inspiration that feels like a boost of energy to the nation. I see this effect on not just the adults around me but more importantly on the kids. It's amazing how their eyes light up when they see and hear about what is happening in Boca Chica Texas. The incredible energy that is palpable there is contagious. The only thing and the best thing that the FCC and the government can do to help America survive, is to get out of the way of Dreamers and Doers. Beurocrats have forgotten that they do nothing but are only obstacles to progress. Let Elon carry us on this wonderful exciting adventure, to space we go! Enrique Villegas

SpaceX should be allowed to continue the rapid prototyping, R&D, and launching from the Boca Chica location in TX. What this company has been able to accomplish in such a short time has been amazing and such a huge benefit to space program for the United States. Looking at the now well established track record of the Falcon 9 reusable booster should show us just how capable this company is at pushing the limits of what we thought was possible. The reusability of the Falcon 9 more than offsets the environmental impacts that could come from the Boca Chica Starbase facility and Starship itself could take the space industry's capabilities to the next level. Hindering developmental progress at this facility could set the total development of this project back years and stop the momentum of innovation in this sector. No other company in the world has made more progress in this sector since the Apollo program. For the advancement of humankind and the US Space Force, please let SpaceX continue in their progress. Further more, help them in this endeavor to accelerate us into the future. Thank you Chad Murray

The SpaceX developments at Boca Chica are returning the USA to its status as the number one pioneer in technology and project delivery. This work is not only critical for human kind, but is also demonstrating new ways to deliver progress. Locally the environmental impact is minimal and is far outweighed by wider global impacts. Locally and nationally, this is creating thousands of jobs and taking the US economy into a new age. America will benefit from backing SpaceX in this historic endeavour. Globally the world is already benefiting from the Starlink broadband which is bringing the internet to every corner of the USA and the world. The Starship initiative will further enhance the USA's lead in this critical field.

The SpaceX Starship/Super Heavy would provide commercial launch capabilities for an ever expanding launch market. Starship would be able carry at most 100 tons of payload to orbit. this would allow a wide verity payloads to put into orbit for commercial costumers, NASA, and the military. The Starship is also key to the NASA Artemis program, Starship would function as a lunar lander. It would allow the commercial launch market to grow. Starship would help expand out presence and access to space. The Starship program would bring business to the near by counties, Brownsville and South Padre island, this is beneficial to those counties. The Starship is a danger to wild life and would affect migration patterns, breeding grounds, etc. I do think the pros of the SpaceX Starship program out weighs the danger to wild life. An alternative solution would be the Starship program to carry on and once Starship is in operation, only a certain amount of commercial launches would be able to launch at the Boca Chica launch site. And the Starship would be able to test new iterations of Starship, these's kinds of launches having a capacity too. I do really believe to shut down the Starship program at Boca Chica would impact to many people to be put on hold. I personally want to see the SpaceX Starship program carry on, its every interestingto watch and the idea that Elon Musk wants to expand our presence in space is inspiring.

Greetings. I've been a fan of NASA since the Apollo days; actually worked at NASA LaRC for a few years in college. I started following SpaceX with their ISS cargo missions and watched with awe as they first tried, then succeeded incredibly, in landing their boosters and reusing them. When SpaceX did a little 150m hop with their first StarShip prototype, I grew very curious about their Boca Chica facilities and plans, and have followed them closely since. Hard to believe it's only been a little over 2 years! I'm aware of the environmental concerns being raised mainly about the launch facility. I know that SpaceX is a pretty progressive (aggressive) rocket company, but they are also (with the other Elon Musk companies) very environmentally conscious and industry leading. During the Texas weather disaster in 2021, SpaceX used it's people and equipment to save thousands of turtles that would have otherwise froze. I can't believe that concerns over wildlife habitat can't be addressed in meaningful ways without impeding the progress that needs to be made to get Super Heavy & Starship into a regular cadence of launches. Kennedy Space Center, Wallops Island and Vandenberg all have a plethora of wildlife, sanctuaries and human populations around them, with no detrimental effects. NASA and FAA know well how to monitor these effects. In all honesty, there is more noise, more flight frequency around where I live with Langley Air Force base, Fort Eustis and the Naval Air Stations. We have bumper stickers that say "I love Jet Noise" ... well, I and many people, all around the world, but especially around Boca Chica, love rocket noise! There's a lot of Not-In-My-Backyard negativity that I've seen regarding this, but the economic and social benefits to the RGV area far outweigh the "noise" and other issues raised. The two most popular companies for engineers to work after they graduate are Tesla & SpaceX, both Elon Musk companies. SpaceX has saved the government massive amounts of money with cheaper access to space. (It could be argued that the surge in electric cars is due primarily to Tesla.) We wouldn't be launching American Astronauts on American rockets from American soil if not for SpaceX. The US Government, read that NASA and FAA primarily, should be doing all it can to keep the momentum going for getting humans back on the moon and on to Mars; to keep our supremacy and leadership in space technology and renewable/reusable technology as well. I/we strongly support FAA quickly approving the Boca Chica site for Super Heavy / Starship launches and landings. As Kennedy Space Center was the gateway to the moon, Boca Chica is about to become the gateway to Mars & beyond; for America and for the world. Sincerely, Joseph N. & Deborah A. Riss Newport News, VA 23607

To whomever reads this, thank you for your time and effort in this process. As far as SpaceX and the Boca Chica site is concerned. I believe that if an alternative route was built for local access it would be beneficial to many in that area during road closures. If an alternate route is unfeasible, a secondary option could be to allow and/or require SpaceX to build a short railway from build site to launch pad. This site is very important to many in the area, if not the world. I have recently come across information that Brownsville, Texas has began an economic upturn after years of decline. Personally, I grew up in a city that economically hasn't fared well. I as well as others have moved away to be above the poverty line. As for the importance for the world, the technology and testing at the site has a goal of making humans multiplanetary. Earth's resources are limited and allowing for expansion into our solar system will provide for a better future for humanity. Impeding this would be a huge set back. I do agree your environmental assessment must be completed in order to proceed. However, our environment is constantly changing. With global warming and other factors involved, many of the protected items in the review will no longer exist. If SpaceX can make the necessary effort to protect the environment, they should be allowed to continue. Thank you again for your time and effort. I look forward to your findings in this review whatever the outcome.

Ms. Stacey Zee,
SpaceX PEA, c/o ICF,
9300 Lee Highway, Fairfax, VA 22031

Is it ironic that as stated within FAA Order 1050.1F section 3-1.2 and 3-1.3, "Actions Normally Requiring an Environmental Assessment" defines when an EA or an EAS are to be initiated based on whether a proposed action has the potential to "**significantly affect the human environment**"? SpaceX's stated goal "Making Humanity Multiplanetary" may be the single biggest impact to extending humanity's existence and finding new environments. In this unique case, SpaceX has shown an exceptional ability to "Think outside the Box" of the world's experts and "can't be done" establishments within many governments and companies here on earth. Reusability and the new rocket systems being developed may be the most significant challenge in history, and SpaceX may be the one to accomplish such an amazing feat.

The environment is important to us all, but if the Earth experiences some random catastrophic event and humans become extinct, who will be here to appreciate the environment we are trying to protect, save, and preserve, what is the point? We must move responsibly forward to multiplanetary exploration, and it seems SpaceX is the one willing to attempt this extraordinary and complex effort.

By not approving this application, we are in fact creating a "Significant Threshold" that may never be overcome thence limiting our Earthly future and preventing expanding environments for humans to eventually occupy other multiplanetary bodies. There is not a better time in our history to allow this endeavor to occur. It may indeed be that "Time is of the essence".

I support approval.

David McNair

Please let SpaceX continue work on their tower and the Starship program. The work being done here is one of the most important tasks humanity could undertake. Yes, we need to make sure that the environmental damage isn't too much. Yes we need to make sure that there is a high level of safety involved to avoid unnecessary risk to people and surrounding wildlife. But please do keep in mind, when evaluating these risks, how important this is to the entire of humanity. Last but most importantly, I'd like to quote Carl Sagan, which describes this space exploration program far more elegantly than we ever could. "Exploration is in our nature. We began as wanderers, and we are wanderers still. We have lingered long enough on the shores of the cosmic ocean. We are ready at last to set sail for the stars." I beg you to please make the right decision... Cheers, Clint

We (all of us) need for SpaceX to continue at pace, especially when you consider that prior to the past few years, real spacefaring development at the government level was stagnant due to the fickle nature of politics. Now thanks almost solely to SpaceX the commercial sector will move us forward in a more timely fashion and without the colossal waste of resources, but only if allowed by regulatory entities such as yourself. Humanity needs to evolve our travel technology to its peak in order to insure a long term future.

I'm sure there were growing pains for the community around what has become the Cape Canaveral launch facility for NASA when President Kennedy got us to the moon. I'm sure there are a lot of my fellow Texans who aren't too happy about Space X setting up shop in their back yard but I feel strongly that with the proven pace and commitment that Space X has shown over the past couple years that they are the right company to get us and the whole world to the space station the moon and beyond. Kinda crazy to think of but I believe we as humans and Americans can do it. With all respect and my humble begging Let Space X Keep trying. Greg Mayer

To Whom It May Concern, I wish to implore you to give consideration to SpaceX to allow for their timeline of testing and launches of the Starship prototypes at the Boca Chica testing site. I am of the generation that witnessed the first landing on the Moon during the Apollo project in the late 60's and early 70's. Hopes at that time were we'd have been working on the Moon and have had been to Mars by now. We have been stuck in Low Earth Orbit (LEO) since the end of the last mission to the Moon, Apollo 17 in 1972. Delays introduced to SpaceX's timeline will cost America the chance to set the next boots on the Moon and possibly Mars, leaving it to the Chinese. Please remember the power you wield, America is counting on you to make this possible. Do not be all that impeded their progress. History will remember the decisions you make, make it count. Respectfully,
Carl Bodin [REDACTED]

The work of SpaceX in Boca Chica TX is revolutionary for the space industry as a whole. They are pushing the boundaries of what has been thought possible, and to this day are the only company making significant progress in technologies that could send humans beyond low Earth orbit in truly innovative ways. Please allow them to continue their prototyping and launch campaigns.

Launching Starship will have an environmental impact, but if we don't let SpaceX keep America in the lead of space technology then China will move ahead and may start a war. I am a fierce environmentalist and want to save every plant and animal I can, but if the free world loses the space race America may fail completely as a super-power and that is unacceptable. Give Spacex the greenlight to proceed with its efforts to make America and the rest of the free world powerful and successful.

Please allow SpaceX to continue their rocket development efforts in Boca Chica, Texas at the pace they want to go. I'm INSPIRED by the important work they're doing. I was born in 1963 and was awestruck by the Apollo program. So much so that I entered college as an engineering student, now with a Masters degree in software engineering. The space shuttle was also inspiring but over the last two decades the manned US Space program has lost its way. We knew the shuttle was going to be retired some 17 years ago but NASA seemed to have dropped the ball for a NASA crew launch replacement. Well, other than paying Russia for a lift to space. Fortunately, NASA opened up crew launch to private companies and SpaceX stepped up to the plate BIG time. I am very impressed at the pace SpaceX progresses. As a software engineer well versed in "Agile development" I completely get their rapid approach to rocket development. And more importantly, I believe in it. They've proven it out with Falcon 9 development. The old guard aerospace industry needed an "Amazon style" kick in the pants and SpaceX has done it. I believe at this point, SpaceX offers us the best chance to really reduce the payload cost to orbit. Please do NOT stand in their way. Do what is needed to keep people in the area safe but let SpaceX continue to rapidly develop. Keep in mind also that SpaceX efforts are contributing to the local economy in many ways. I had never been south of Dallas before but my son and I spent 4 days in South Padre this past March so we could go out to the Boca Chica SpaceX site a few times and check it out. It was an awesome bonding experience with my son. I hope we can do it again and still see SpaceX making rapid progress and NOT BEING HAMPERED BY THE GOVERNMENT. Thanks, Keith Hill [REDACTED]

Dear FAA, Undoubtedly we want to take all safety and environmental concerns into account, but in this early stage, Space X needs to continue it's ground-breaking work. With success Space X will be able to move its launches to its underdevelopment sea launch platforms. The near term test launches may be somewhat disruptive, but will not be perpetual. Mitigation and precautions can be taken to reduce the impact on nearby habitats allowing Space X to more forward with their testing. Please let them continue. Kind Regards, Tom Loveman

It is of maximum importance that Elon Musk and his many thousands of engineers at SpaceX be permitted to continue their important work to make mankind (and America) a space capable race. Boca Chica is as remote of a landmass that can be utilized on U.S. soil and environmental impact will be an issue anywhere an industry would be constructed. This moment in human evolution is too important to stop with over use of regulations. Be careful not to hinder mankind's growth. Sincerely and Thank You Jeffry Griffith Teacher in Sweden

As a Product Manager in the IT sector, I understand how difficult and challenging this project is. I understand and think it is correct for the FAA (you) to be following up the program closely and making sure it is safe. That being said, we must adventure as a species out there, not only to the moon or Mars, but to Europa and Venus, we are explorers and we've been forced to innovate to explore. SpaceX is one of the few companies that have pushed the envelope and that are trying to secure survival for our species, the Starship program is of vital importance for our future and for the advancement of technology. Thank you SpaceX.

SpaceX is a company that is revolutionating technology and the way that we see the world and each other, it is connecting humans as what we are: a species. That being said, what is being done in Boca Chica has to be seen from multiple sides and there must be analyzed all of the pros and cons in relation to spacex impact to Boca Chica communities, the environment, among others. But also, there must be considered the great profit that it would be brought to the nation and to this place, with spacex work, all of the new clean technologies that could be developed to reduce the environmental impact. Something as important as the starship program deserves a green light for the future of humanity, but also, SpaceX needs to have some rules, some significant return to the environment and the communities.

Building a rocket launch facility in the middle of an environmentally sensitive area is not necessarily the best way to protect the endangered species living in the area. But when balanced against the benefits of a program that is obviously pushing the limits of technology and will give the entire human race a chance at a brighter future, it seems 17 acres is a small price to pay. I imagine that the surrounding thousands of acres will also then be more secure as few developers will want to invest in land next to a launch pad. I am inspired and filled with hope from what I see happening at Space X.

Please don't slow SpaceX down, the world is watching. There is an ever growing community of us space fanatics. Some, like me, wake up every day and go look for space news, especially with regards to Starbase and the Starship program. The plan is to use this rocket to get Americans back to the moon, to Mars, and beyond. SpaceX is doing bleeding edge work in the fields of aerodynamics, thermodynamics, rocket engineering and much more, with NASA's blessing. The two things slowing them down most, are lawsuits from rival rocket companies and FAA slowdowns, such as this one in particular. At this point of the starship program, there are zero lives in jeopardy. Something we talk about on space forums, is the ongoing space race with China. With their unlimited resources, and clear lack of regulations, they have developed quite a space program, easily rivalling both NASA and Roscosmos launch cadence. They've even put a rover on Mars. People are literally placing bets on who will reach Mars first, it's SpaceX vs the People's Republic of China. The government should be helping SpaceX with funding and loosening of regulations so we don't lose this space race. Consider how many of these regulations were put in place decades before private space flight was a thing, during the Cold War. Starship will save taxpayers hundreds of billions of dollars over the next several decades. With SpaceX's highly anticipated plans for Starship's rapid reusability, cost for putting payload to orbit will plummet. What used to cost tens of thousands of dollars per kilogram to low earth orbit, will begin to rapidly drop, some estimate as low as ten dollars per kilogram. Projects that previously cost NASA and ULA countless of billions, will soon cost pennies on the dollar. In summary, these FAA, space rival slowdowns, and lawsuits are doing nothing positive for our nation. If we don't act soon, we will certainly lose the silent space race with China. Starship will open up the solar system to the human race, bring the world together for common good, all while bringing down the cost to the taxpayers. The FAA must not allow the bullies at Blue Origin and ULA slow progress any longer. Sincerely,
Luke Fisher

I'm advocating for minimal interference with the operations of SpaceX in Texas. SpaceX is making a difference to the future of humanity in a comparable way to the Apollo program and the Space Shuttle. Ultimately, a fully reusable launch system will significantly reduce the environmental impact orbital launches, and launches will continue whether Starship flies or not. The Starship effort is an amazing program and would be worth continuing even if it rendered the area uninhabitable for miles, which it surely will not. Please allow the testing to continue without delay or disruption. Thank you for your time. Allen Minick

I have closely followed the Starship program since it started. Yes, I'm a Canadian. However, this engineering project and its transparency have set a new standard for the world. I urge the FAA to setup a parallel team to work along side SpaceX to ensure that there are no unreasonable delays. Old regulations and inspectors aren't appropriate. This project requires uniquely qualified and forward thinking officials. Starship is a humanity changing technology that needs to proceed with prudent haste. Do what is required to help rather than stall this project.

Not clear what Native American tribes were consulted. Was only one THC consulted on means to conduct archeological survey. The archeological survey was limited to a metal detector based on THC request. Please take in consideration that Native American tribes are not archeology experts, and if the area is of spiritual interest to Tribes in the affected area, Tribes should be provided and advised of 21st century technologies that will allow for a good faith search and followed with measures to stop soil excavation or digging if artifacts are discovered during excavation. This environmental study clearly preys on Natives Tribes limited means that allow them to identify religious and spiritual artifacts. How can you identify human bones remains (burial sites) or other nonmagnetic artifacts with a metal detector?

Starship represents hope for humanity. Exploring space is the highest level of science and adventure anyone can experience. We all know these efforts convert into a better way of life for everyone across the world. And the way Elon Musk and SpaceX are doing it is just amazing to witness. Now, I understand there are certain environmental and other concerns for safely developing this technology and not make any harm to any part of society. Thus, whatever necessary precautions are needed should be exercised. But these should not be at the cost of delay in flight approvals. SpaceX is operating with a sense of extreme emergency. And that is the way it should be if we really going to achieve this goal. We all need to take a step back and think about how significant this really is for the entire history of our planet. These are efforts to pass the great filter. How many generations actually get to witness this in their lifetime let alone a chance to work on it. I believe SpaceX should be supported by all means and regulators should do their job matching with SpaceX's speed. That will be a great support. Once again, Starship is hope for humanity.

I am in full support of Space-X to go Orbital with Starship. N.A.S.A did it in the early years and we still use those facilities and the wildlife is doing just fine around the launch sites. As a matter fact the area is probably in better care/ condition because NASA has ensured those areas are preserved. I think Space-X will easily be able to do the same at Boca-Chica. If not even better than NASA. Look at everything he does. He has time and time proven people wrong and made the impossible possible. I think the people of Texas need the Jobs and the Economy also. It will also put the USA as the lead in the Space race, any delay and it could jeopardize everything.

Please allow SpaceX to continue their work at Boca Chica. The space industry is transforming in a way only seen during the race to the moon. Nasa, its astronauts, and the Saturn V rocket deeply inspired people of the time and even still, people now. Please allow another wave of inspiration to take place. Please allow us to once again gaze with wonder and excitement toward the stars in the sky and contemplate a brighter future where we are out there exploring them. Thank you

The continuing efforts by SpaceX and Mr. Musk are vital to the advancement of rocket science and private utilization of space for commercial purposes. Making the human race space faring and multiplanetary is the greatest undertaking ever by humans in general and Elon Musk in particular. I believe that SpaceX has proven to be innovative and forthright in their efforts to achieve the above mentioned. I recommend approval.

SpaceX should definitely be allowed to launch out of Starbase. SpaceX has been a massive inspiration for thousands Americans both young and old to get interested in space and to get involved with science and technology, me included. To prevent SpaceX from launching would be a massive set back for American Spaceflight as a whole.

SpaceX needs to be approved! As someone who worked in the area for many years with the federal government, I know the company would have a minimal environmental impact. SpaceX has been extremely important to the region and has had a significant impact on the local economy. The future looks bright for SpaceX, the region, and our great country. Therefore, approval must be granted.

I'm an American who studied engineering at the University of Michigan and I now work in Korea for a machine manufacturing company. What spacex is doing in Boca Chica is inspiring to many people, even here on the other side of the world. I believe that the long term results of spacex achieving their goals will drastically benefit the community in Boca Chica, the united states taxpayers, and the dreams of children worldwide. Lowering the cost of putting things into orbit will open new technologies that can help us study environmental change, along with other unknown benefits we still cannot imagine. I support the development of the launch site in Texas, as it has been created responsibly and incredibly efficiently. I hope spacex continues their responsible approach to building their starships in Texas.

Allowing SpaceX to continue as fast as they can will lead to better technology. We don't even know what would be developed to help man kind yet, so why limit this to all? The faster testing can be done the faster development in more efficient and environment friendly rockets can be developed. It is a small price to pay now in comparison to the potential benifets for the future. Let spacex continue and don't limit all of man kind by stopping the technology of tomorrow.

SpaceX is an absolute inspiration. They have done so much for the world in hiring impressive talent that pushes youths to their limits of creativity and hard work to help a mission succeed that is nearly impossible for the future of humanity. While the location of the launch site may be problematic to the local area, it may also prove greatly beneficial to the local economy. Launching something so majorly tremendous will be remarkable and will change the world, further than what SpaceX has already done. The scale of the operation to colonize Mars must start somewhere, and Brownsville, TX is so far along and so close to starting this effort in a big way that it just must happen. It has to! It will electrify humanity, it will let us know we can do this. The only way to succeed in this effort is to test often. We must start now!

FAA, Where would the American space program be without SpaceX? We would still be paying the Russians to take our astronauts to the ISS. Boeing can't seem to launch their Starliner and Blue Origin can't get to orbit. Who else is in a position to take us to the Moon and Mars? SpaceX is innovating at a pace unseen in this industry and our government needs to move at the pace of innovation, or we'll just allow China to overtake us. These are exciting times that we live in and we should celebrate a company like SpaceX who is doing what no one else can. We should be celebrating American ingenuity. Thank you, Marty Rann

Good afternoon, The entire space program, especially this one, is literally about human kind.. We have to grow and expand as a culture. I am very much in favor of our environment and regulation, but we need change. The site in Boca Chica as well as other sites where new technologies are being developed, are far to important. NASA and SpaceX are doing great things and creating a paradigm shift in our world (one we definitely need!) and it would be a disaster to shutdown everything going on there, and not just for SpaceX...the inspiration, the message it sends to future generations, and expanding our country and our species into an era where maybe we will look up and into ourselves...and do more than just create 30 second social media videos of stupidity, vandalizing our cities and other ridiculous that none of really want. Imagine if NASA never televised the moon landings..? We need change and new types of oversight. One not built into lawsuits and counter lawsuits, etc. but one that encourages a new phase of the human experiment. The loss of the Boca Chica site and the Starship project (or having it relocated) would be taking major, major steps backwards for the county, the space program and the FAA itself. Its time for the FAA to allow the FAA to move into the 21st century and become the branch that allows us to grow into the future and be the respected organization that helped (helps) our airlines stay safe, stay just that..a respected and necessary entity for decades to come! ...not an organization that becomes know for halting progress and sticking to old ideas and ways...we have to make this count! Please consider making the Boca Chica site work and being the positive counterpart to helping something great. We all know what SpaceX is doing is the least of our concerns from a regulatory and environmental standpoint. The company that is most on display will always draw the most attention, let's make this attention be good attention. (I understand there is a lot to this topic and plenty beyond the scope of what I could type in here, but I digress, this is one of those major turning points in which we HAVE to make the right changes for SpaceX, the FAA, humanity and the US. Better late than never. Thank you for your time! Respectfully, Drew Ellis

I believe that SpaceX should be permitted to build the complex, as they deem necessary, to support launch operations. However, there are endangered species in the area and SpaceX should be required to employ as many qualified persons as necessary to mitigate or repair damage to the surrounding ecosystem. Sea turtles nest during specific times of the year, and measures should be taken, during those times, to limit the effect of nighttime activities. Sea turtle nests should be relocated to areas of the beach that would not be affected by the vibrations produced during launches. Modification should be done to the perimeter of the SpaceX property so that direct light is less likely to reach any hatching nests. Lights should not be directed skyward, to limit skyglow, and any lights that can be seen from the nesting areas should be shielded or turned off. I am not familiar with other endangered species in the area, but SpaceX should be required to take whatever measures are necessary to protect those species as well. That being said, I fully support SpaceX's efforts to develop new technology and do not believe their efforts to develop new technology and conduct launches should be limited. So long as operations are being conducted safely for both people and the surrounding ecosystem, SpaceX should be able to conduct as many launches as they are able to from the Boca Chica facilities.

SpaceX's Starship Program is a point of pride for Americans. After the disastrous per capita COVID19 numbers and historically significant recent political in-fightings, it revives our value system and give credence to the US's leadership claims. Delaying it out of abundance of caution destroys the root cause of being cautious: having something worth defending. Please let them innovate.

Dear Sir, You could probably label me a Musk fanboy but nonetheless I don't subscribe to everything that he has done or said but, by and large, he contributes significantly more than any other entrepreneur around these days. His contributions to Space Flight and managing to engage the public in his endeavours has helped to firmly place the US at the forefront today of Space Exploration. Having public support is one of the most important aspects to grow the industry nationally and internationally. I'm sure the FAA understands this and will do everything in its power to facilitate Space X's goals. With this in mind - both the FAA and Space X should be conducting themselves responsibly - taking no unnecessary risks over populated areas - which I know Space X wants to do. Please engage with them positively to find intelligent solutions, free of political interference from Legacy suppliers who Space X have and are continuing to disrupt. I would like this message to be received as a positive expression as to how your organisation should operate in encouraging the huge technological advances that Space X is undertaking. Best regards, Jonathan McDonnell

Based on my review, the preliminary environmental assessment (EA) is inadequate to appropriately determine and disclose the effects of the SpaceX facility in Boca Chica, Texas. To comply with the National Environmental Policy Act (NEPA), a full environmental impact statement (EIS) must be prepared. Some of the issues of concern that must be examined in detail in an EIS include impacts on wetlands; threatened or endangered birds, marine mammals, and sea turtles; hazardous air emissions; hazardous waste production and management; safety from launch debris; human quality of life; recreation; noise; emissions from oil and gas production facilities associated with SpaceX operations; and climate change.

The Starship program is one of the few good things in the world these days. We need to expand out from the Earth, so that we can save our planet. Heavy mining of asteroids, solar power production in orbit, and space exploration are all critical, and are all being pursued by China and other countries/partnerships. It's taking a private company to go where our government is too tentative to go anymore. Please further this program as much as possible. Fast-track it if you can. The world thanks you.

Though it is important to protect the biodiversity of Boca Chica, this shouldn't be at the expense of SpaceX. The work SpaceX is doing is transforming access to space. Hence it is allowing for better communication satellites, more scientific observation of earth and access to the internet everywhere, including the most remote regions. Many more benefits will come from SpaceX's rockets, that we can't even understand at the moment and we shouldn't let short term-ist thinking prevent us from seeing the bigger picture of the future that SpaceX is enabling.

As an European following SpaceX efforts in US I'm very excited for US to enter into age of space exploration like never before and seeing reusable rockets made reality. Please let SpaceX continue the development at maximum pace and allow them to use their current launch platform. It is vital for the space travel that SpaceX can keep its iterative process unhindered and as fast as possible. Thank you and best regards, Jaakko Leinonen, Finland

Dear ladies and gentlemen, Please allow SpaceX to keep there integration tower as it is. It might be that it was built before getting official permission, however in my opinion this was only for the best of the USA and humanity in general. Sometimes administrative processes can be very complicated and thereby take some time, even if everybody is working as hard as they can. However this should not slow down our advance into space - everybody does their part. Sincerely Marces Engel

I am concerned that SpaceX, and the FAA are not doing due diligence and due process in the planning and implementation of SpaceX's venture. I want to make sure you are all following due process and due diligence, not just with what's happening here in Boca Chica, but also the places you are going to. Why isn't there an EIS being done for Mars, warning the inhabitants of Mars of what's going to happen to their planet when SpaceX gets there. They are already dropping junk on Mars with the rovers. Why is it so important for Musk and SpaceX to get into competition for a space race, when they can be more conscious of the fact that they are probably going to go do the same thing that they did here when they considered this to be "a new world", when they came out here to exploit everything and take all the resources. It's been happening here for over 500 years and if they haven't learned anything from over 500 years, I think something's definitely wrong. That's why I'm concerned about having an EIS on the impact of what's going to happen after they get to Mars, from day one to whenever. I'd like to see a 10 to 20-year plan on what's going to happen on Mars after they land. Are they going to do the same thing that they've done here and not listen to anyone? Who's speaking up for Mars?? Just because Mars doesn't have a voice is no reason to avoid this question. The same goes for the moon and any other area of space exploration. You've already "laid claim" to the moon, as if the Doctrine of Discovery applies to you because of your western mentality of greed and scavenging. That should give an understanding of their thinking based on that scavenging mentality. I want to know the ultimate impact of having seven liftoffs every hour of every day as well as what is their plan for the future, because they're not listing this anywhere. How many pollutants they'll be putting into the air with that kind of stuff. That's why Musk wants to set up an LNG for blue hydrogen and a desalination plant to cool everything off. Those are resources that are natural to this land and if nobody's speaking for them, somebody's got to speak for them. And if it's not TCEQ, then who the hell's gonna speak for the resources natural to this land? I'm concerned, as the leader of the Native Original people of Texas, the Esto'k Gna, a group of people that want to have a future, that they're actually pillaging and looting on our lands and that hasn't changed. I want to know who's speaking for Mars? That's due process. Have the inhabitants of Mars been forewarned that they're going to be invaded? We got invaded, "discovered" with the mentality that my god's more important than your god. Columbus didn't "discover" America. How can you discover something that's already there? The Original Peoples discovered Columbus when he landed on our shores. And look what's been done to us, look what's happened. You're not "discovering" Mars any more than Columbus discovered America. Mars is about to discover SpaceX. And who's speaking up for Mars? We are. Just because you choose not to recognize the Estok Gna does not mean that we can't speak up for our ancestors. We are aware of their racist mentality as an organization and for Elon Musk personally, because he hasn't even come and talk to us at any time. He sent letters for consultation, but consultation does not mean consent, even if there is no reply. They're not actually even talking to the right people. Even though space is supposedly your new frontier, it's still an environment. The universe is an environment and there will be an impact. Yen Nawi's Kiapani'k/Juan Mancias, Tribal Chairman Carrizo Comecrudo Tribe of Texas

I would like to comment on the development of the Starship and Super Heavy Booster rocket development by SpaceX. This is a massive development project that has the potential to affect both wildlife and human establishments in the Boca Chica area. However, the value of what SpaceX is developing is worth the risks involved because of the incredible advancement in technology to ultimately explore other celestial bodies, a true advancement in human civilization. SpaceX has chosen the Boca Chica region after careful consideration of the impacts to wildlife disruption, human safety, and operational efficiencies, and after such careful consideration it is my opinion that SpaceX should be allowed to proceed with all infrastructure required to support the development of Starship and Super Heavy Booster rockets. Such progress in human exploration of space has not been witnessed since the Apollo missions, which entailed enormous government support, and SpaceX deserves similar support from the various government organizations involved with the regulation of emerging space technologies. Furthermore, the reason this regulatory process should be completed without delay is due to the successful formula SpaceX has pioneered to advance its program beyond what any previous program has been able to accomplish - rapid innovation cycles. Yours truly, Kurtis Carter

I am an environmentalist and a climate activist, yet I write in support of SpaceX's request to launch its superheavy stack from Boca Chica. SpaceX's starship program is this decade's Saturn V, and SpaceX's efforts are a key component of humanity moving forward with space exploration and commercialization. If we permit 40,000 airplane flights in the U.S. daily, we can permit a couple dozen big rocket launches from Southern Texas.

To whom it may concern. Letting SpaceX continue the development is not a question of economy or environmental impact. Considering the the current political, military and economic activities of the Peoples Republic of China, it is imperative to not let them gain the proverbial high ground. If you do, then whatever military capabilities the ground based US Armed Forces have, becomes irrelevant. A single KEW will remove any and all earth based forces like for example a CVG Strikegroup, ground based ICBMs or the entire Command and Control net. It is vital to not only let SpaceX continue the development of heavy lift systems that enable you to build an orbital infrastructure, civilian and military alike, but to give them Federal support wherever possible. Therefore, in the end, its a question of National Security to let them continue. Not just for the United States, but for NATO and ,in the end, for the entire free and democratic western world. So for the sake of all of us, please be smart. Thank you.

Same as Tesla is pretty much the only hope for the USA to be the leader in the worldwide change to electrification, SpaceX is the only hope for the USA to be the leader in spaceflight. Both companies play a key strategic geopolitical role that will become absolutely apparent in the near future, if it isn't already. Both companies are under attack from other domestic OEMs and their lobbyists, with the complacent help of political representatives, up to the POTUS himself. These attacks are extremely narrow minded as they are based on the false hope that slowing, if not destroying, Tesla and SpaceX will save jobs in the old world. They completely discard the international competition, especially from China. While I understand and appreciate the many worries and disruptions to the local life of Boca Chica and its surroundings that SpaceX's activities bring, I strongly believe that they are trumped by the urgency of letting SpaceX do its thing. Canceling or limiting the Starship program in Starbase could be a de facto existential threat to the USA and their allies, this is no understatement.

SpaceX is a beacon of hope for the U.S. tech industry. They are attracting great minds from all over the world. It would be a disaster for this or any administration to stifle any effort in granting SpaceX permissions in launching from Boca Chica. We can show the world that we support and encourage innovation and exploration. Tying the Boca Chica project up in bureaucracy will only choke the winds of hope in the sails of technology in the space industry. This approval should not be delayed in any way. We have not seen excitement like this in the space industry since the Apollo missions to the moon.

Dear ladies and gentlemen of the FAA, I am aware that the activities of space-x in Boca Chica have a direct impact on local residents as well as many animals, and not only in a positive way. I also think it is extremely important that the voice of the small people is heard and taken seriously. For this reason alone, I thank you for this public hearing, assuming that the arguments are taken seriously and have a chance to influence the final decision. As a foreigner, I am absolutely unaffected by the social and environmental circumstances and I do not claim to be able to analyze them in depth. Nevertheless, I would like to emphasize how fundamentally the development at this site has influenced and will influence the further development of the human race, if the operations continue to be permitted. Space-X has revived the pioneering spirit for the exploration of our environment, as the world has not seen for over 50 years. Most technological innovations in this half-century since then have been used only to further our comfortable and decadent lifestyles. Space-X has used them to revive the pioneering spirit that enabled the United States of America to be discovered, colonized, and ultimately achieve independence. I think this development is fantastic, and I would like to see more of it in my country in the current days. I live in a country whose technological innovations were once often ahead of the world. The country where the automobile was invented and whose people discovered incredible technologies in the darkest of times. The country where the foundation for space travel was laid, even if the government at the time only had destruction in mind. Unfortunately, this very country has sunk so far into insignificance in all these areas today that its efforts to explore space are not worth mentioning relative to those of space-x. In general, our use of technological innovations is sluggish and incredibly tenacious relative to the rest of the world. When it comes to the most important issues, such as the climate crisis that currently threatens our planet, the smallest details become a problem. Immigrant lizards delay the construction of new train stations for years. The expansion of renewable energies is being stopped by country bumpkins who feel visually threatened by slowly flashing lights. Progress is slowed down by every narrow-minded hillbilly, so that useful and necessary innovations are only implemented when the rest of the world has already been benefiting from them for years. Please do not allow such conflicts to slow down progress in your country, too. We explored our planet centuries ago and there are no new habitats to discover here. On the contrary, we are working highly efficiently to make the habitat we have uninhabitable. Considering our technical progress in the last decades, it is long overdue that we as a human race expand our horizon and finally explore new habitats again. Expansion is the nature of humans, as it is of every living being that is not wiped out by evolution, and for this reason this development must not be slowed down. In order to ensure the freedom of mankind and its continued existence, we must accept inconveniences. Be it by flashing lights on a hill, or by having to take a detour to the beach. Greetings from Lars in Germany

Making changes to the environment always raises questions, but it happens every time we build a road or expand a residential or industrial area. The decision should always be based on the overall picture, including all benefits and ill effects, risks and possible complementary actions. As such the Boca Chica site should have an equal judgement, just as the Florida site, or the hundreds of airports across the states. Putting a value on living beings is never easy, but considering the overall, historical advancements in Boca Chica, the balance, in my view, is tipped pro-SpaceX. Especially with the notion that long-term high traffic launch is expected to be done from the sea platforms, and the Boca Chica traffic would drop after some years. What could improve and placate the situation is if SpaceX would do some compensating actions and/or support either for the direct area or more in general. Summary: - I support the SpaceX development of the Boca Chica site. - Short/medium vs long-term differentiation may be implemented. (e.g. restrict yearly launch number after 8-10 years). - "Environmental compensation" may be requested from SpaceX.

Dear FAA, SpaceX is making history and advancing humanity to become a space faring civilization! The comitment to exploration, science and technology is shared across many U.S agencies such as NASA, who is also contracting SpaceX to produce Starship moon lander, being developed at Boca Chica Tx. Please don't "red tape" or stall this amazing progress done by SpaceX. The window if opportunity is now, let Starship fly!!

Please don't delay the lunch of the Starship rockets. This technological advancement is a sparkle in the eye of the United States and needs to continue. I understand there is a great deal of regulatory issues to go through, but delaying progress of this magnitude is dragging down our civilization and the progress of our country, that if continuously draged down, will be surpassed by other nations.

Hello FAA, The FAA(Federal Aviation Administration) is a transportation agency of the United States that has many functions. One of which is to encourage and develop civil aeronautics. I believe that in order for the United States to innovate and develop its aviation technology. The agency needs a particular relationship with a aerospace manufacturer such as SpaceX. The company of SpaceX has proven its loyalty to the United States government/military by delivering its innovation through NASA, and has motivated many to support its means to innovate. Not only have SpaceX have developed a promotion in civil aeronautics in the United States, but it has also safely changed the planning of international civil aviation. Companies such as SpaceX should be an inspiration to the FAA and should be encouraged to grant the permissions of space transportation. Thanks,
Michael Tagay

The FAA should absolutely prevent SpaceX from launching any more rockets. The company has already shown they don't follow or care about the guidelines and rules they're required to follow. There is constant debris raining down on protected wildlife that SpaceX doesn't clean up. The company is having a disastrous affect on the land and animals and they clearly have no concern for anyone or anything else. Stop SpaceX and their destruction.

This is a call for protecting all species. Without taking into account the historic act of transiting to a multi planetary species, the most probable outcome of trying to inhabit Mars will be better carbon capture and processing tech, as well as efficient localized resource recycling. So just considering these side effects, without giving any merit to the achievement in itself, weighs heavily in favor of advancing this project for the sake of conservation at a larger scale. Please, please, in the name of just conservation, let this spacefaring project go as fast as it can. With utmost respect and goodwill, Vincent, your neighbor on this pale blue dot.

To whom it may concern, Recently, SpaceX indicated it's intent to conduct an orbital launch of the "SN20 Starship" from its South Texas Launch Site, commonly referred to as the Boca Chica Complex or the Boca Chica Launch Site. This orbital launch represents a unique opportunity for the United States to improve its handling and development of reusable rocket systems, through real-world testing on American soil. What will be learned from this orbital launch test will undoubtedly be instrumental in the success of future "Starship" designs, and additionally in shaping the new standard for advanced rocketry. The Boca Chica Launch Site is one of very few geographical locations within the United States that can be used for such an endeavour, as other facilities and spaceports are used for other missions and as such cannot dedicate the resources, or the time, for these launch tests. The Federal Aviation Administration should approve the SpaceX request to conduct an orbital launch test immediately to allow the company to improve Starship, and bring us closer to establishing a permanent human colony on Mars — or further. With respect, Josh "Yasyszcjosh" Bieuz-Yasyszczuk

The environmental effects of Starship-testing in the short-term will be negligible compared to the devastating current effects of other industries, such as automotive and air transportation. While the effects of an increased number of Starship launches in the long-term would not be negligible, we are many years away from the point where any environmental regulation is necessary. Please let SpaceX continue their testing in Texas so that space-exploration technology can mature. The only way to solve the climate crisis is through innovation, and the positive impact of space exploration on discovering new technologies cannot be understated, and will only continue to grow as space exploration becomes more accessible. SpaceX has made clear that its ultimate goal is to safeguard humanity's future, and they - and I, and many others - are firmly of the opinion that the potential benefits of more-accessible space exploration, including with regards to solving the climate crisis, far outweigh potential environmental costs.

To Whom It May Concern: My name is Kenneth Elwood. I am a retired Deputy Executive Associate Commissioner for the late Immigration and Naturalization Service, Field Operations Branch, ending my service in 2003. In the Autumn of 1976, I was assigned to the Border patrol Academy in Los Fresnos, Texas. Due to overcrowding at the base, I was housed at the Holiday Inn on South Padre Island. Although born in Brooklyn, NY I have always had an interest in birds and wildlife. I often went to the extreme south end of the island, opposite Boca Chica for the views there. Sadly, at the time, all that seemed to flock to the area were Pelicans and small shore birds. I found out, at the time, that there was a natural gas well near there and some thought it was the reason for the lack of diversity. Now Boca Chica has become the site of the new SpaceX base for orbital space exploration and interplanetary travel. It is always difficult to balance the needs of the natural environment and those of the people who live in any place likely to undergo development. My recollections of Brownsville, Texas are of a desperately poor community, whose young people had little or no chance of making a living without leaving the area. Driving through the town, I saw many stores with the signs, "Ropa Usada" (used clothing), in the windows. For lunch, I often went to a small shop, which had two rooms. One held four formica tables and the other was the tiny kitchen with a small gas stove that the "mamacita" used to prepare the meals. (It was the best Mexican food I ever had). Another visit in 2002 left the same impressions. Now SpaceX is building a substantial industrial facility in Cameron County. This is already having a profound effect on the lives of the population there. SpaceX is already offering support to the local governments to assist in adapting to the new growth that it is bringing to the region. New jobs, many with the possibility of full careers, are becoming available to the local community. Environmentalists say that any growth that interferes with any part of the environment is wrong. Is that really true? It sounds like a "Luddite" response that precludes any improvements in our way of life. Elon Musk has a track record of being dedicated to struggling with Global warming and has a career that emphasizes care for the environment. He has built his Tesla company on perceived need to generate Solar power and to create vehicles that use electricity, with the goal of ending the world's dependence on fossil fuels. His Boring company offers to urban areas a way to funnel traffic away from congested inner urban areas and thereby improve air quality. He has offered a \$100 million dollar prize for innovative ways to go beyond carbon neutral processes to carbon negative solutions. SpaceX also has done its part. The methane oxygen fuel that is to power its Raptor engines is the first non-polluting rocket fuel ever developed. The Inspiration Four orbital flight raised several hundred million dollars for St. Jude's Hospital, when other space companies were using their equipment to make a profit. Elon Musk then added additional millions from his personal wealth. I believe that SpaceX and Elon Musk has promised to do whatever is necessary and reasonable to protect the environment at Boca Chica. Given the history of Elon Musk's care for the environment and his insistence that his company invest in the future of all humanity I would strongly recommend that the FAA look favorably on this proposal. Please clear the way for SpaceX and those leading the way. I am so tired of watching those doing the work getting loaded down with BS. How many years has it been since we had to ride the Soviet rocket to the space station Sad. I believe you may have to update your system to work with this type of rapid prototyping. This method of rapid prototyping and pumping billions into these ideas of Rapid reusable space travel does not look like like the past. This may be the only way we can make it to be the leaders in anything again. If we don't succeed it will be because people get in the way out of Fear and miss information and maybe greed. Let him fly So we can sore again.

Let SpaceX keep their tower and continue their work for humanity as a species in BocaChica. Shutting this down with red tape would be one of the great tragedies of this century and set humanity back years, perhaps decades in space technology.

I strongly believe in the importance of creating safe and cost effective access to space. America needs to support the innovators who move the needle in this regard. Boca Chica is an ideal location for this due to its southerly position as well as relatively low density population. I understand that some in the local community must be frustrated due to noise and beach access impact but I do not think there will ever be an ideal situation where someone is not affected by development. Similarly from an environmental perspective Cape Canaveral can be used as an example on how to have a sensitive wet lands adjacent to a space port. Due to the potential impact to the world if this endeavor succeeds and the fact that approval for similar activity was already obtained I believe the FAA should approve the SpaceX submission. Regards Neil Marcussen

SpaceX is a company that inspires the next generation to pursue careers in the STEM field. Elon Musk is a man who cares for the environment, and in the process get us to Mars. The people stand behind SpaceX. America needs to win this next Space race. Just like how America has owned the skies, has been a land that has inspired pioneers to discover the next frontiers. Within less than 60 years of when America first took flight, the first American men were taking steps on the moon. Allowing SpaceX to continue StarShip Super Heavy's development and eventual flight, the FAA will help ensure America's dominance in all frontiers. Water, Earth, Air, and space. We stand behind discovery, exploration, and the curiosity that will eventually help us to find out whether or not we are alone in this mighty universe.

Dear sir or mam, I am not a local of Boca Chica, so I do not feel the impact of SpaceX's Starship program. I am not restricted from going to the beach any more than my distance from Boca Chica; I do not feel the impact of closing the local road. But I am a local earthling. I live on the same spaceship all other earthlings live on, earth. The development of Starship is key to changing that. It is aiming to make humans, and life as we know it, multi-planetary. This is a lofty goal and should not be hindered. SpaceX should be allowed to continue development of the Starship at Boca Chica to try to achieve something that has never been done before. SpaceX should be allowed to mitigate any environmental impact that Starship poses on the surrounding area. For the environment is key for us still living on this spaceship. But the Starship program should not be halted. Find a way to have it continue while having minimal impact on the local environment. We need a way off this planet to survive as a species. SpaceX is attempting that plan. Thank you, Dustin Snodgress

To whom it may concern, During the public hearings regarding SpaceX's approval for orbital Starship launches from Boca Chica the issue of piper plover nesting sites was raised. This confused me because the piper plover is a migratory bird that nests in the upper Great Plains, Great Lakes region, and Atlantic seaboard from North Carolina north into Canada. This information can easily be found online from trustworthy sources including the Audubon Society and the US Fish & Wildlife Service quickly by searching for "piper plover nesting habitat."

Sincerely, Joseph Peterson, Pennsylvania Resident

We live in the UK and my son and I are captivated by the work going on in Boca Chica. Sadly the UK space agency is as far sited as the US. Wherever this type of activity takes place there will be an environmental impact, but we watch the daily videos by nasaspaceflight and it is great to see how the wildlife is living with SpaceX. Humanity needs to move on, of course there are issues around the world, there always will be, but this is a great opportunity to move us forward. Andrew Baker

Hello, I strongly support the efforts of SpaceX and the Boca Chica site. Please proceed with a favorable action to allow launches and recovery at that site. While I am not in any way affiliated with SpaceX at least they are doing SOMETHING to further the United States off this single planet. I agree we are one meteor away from a planet wide destruction. Also the science coming from SpaceX, Starlink, Tesla all are doing what NASA did in the 60s, 70s where a lot of the products we use today. I grew up drinking TANG, a direct product of the Space Race. in closing please decide in a positive manner on SpaceX requests. Thank you Jonathan David Portland, OR.

I so appreciate the regulatory responsibilities of the FAA. While I was serving as a Senior Member in the Civil Air Patrol, training and performing ground team search and rescue missions for downed aircraft, I got to learn a great deal about the essential and important role of the FAA in all aspects of flight. There would be very little I could add, if anything, in the way of specific flight related knowledge that FAA members don't have in abundance. I would, however, like to advocate for SpaceX and their ability to continue their groundbreaking work both for their own company, but also for NASA and the world in general. While no one wants to squander our natural resources, and I don't think SpaceX has specific plans to disregard the surrounding ecosystem, I do think that there are times when the benefits to progress can outweigh some risks to localized wildlife. I think holding them to high standards to mitigate damage as best as possible makes sense, I feel that the progress that is being proposed and witnessed thus far should hold some weight. Would it be horrible for a disaster to destroy wetlands, of course. But just like with Oil spills off the West Coast and in the Gulf of Mexico, we have learned that man can clean up our disasters and nature can adapt and overcome, even man's failures. Maybe not perfectly, but to an extent that the benefits of certain activities outweigh the hyperdramatized fears of mass extinction and environmental destruction. I am not at all proposing to tell such professionals as the FAA how to do their job. I just hope that you will not be overly swayed by a culture that often defaults to emotionalism on important issues, rather than on science, which is what I feel the FAA's real strength is. There will be people for whom your granting permission to SpaceX will stimulate outrage. Know that you are supported and appreciated by the grand majority of much quieter people who look for rational regulations and support for scientific progress, acknowledging and working to minimize collateral damage to the environment.

The SpaceX Starship will provide cheap access to space (CATS). The US government has recognized this as a very important objective for 50 years which is why the space shuttle was funded by congress with over \$100 billion. The space shuttle failed to deliver CATS. But now 21st century technology and SpaceX's talents are making this objective possible and SpaceX is delivering it with the Starship for the great benefit of America and all mankind. We urge you to approve all launches for and support and enable the SpaceX Starship/Super Heavy Program as soon as possible. Craig Read

To: whom it may concern, I have found it very important for me to write this letter regarding the SpaceX Boca Chica space port and its ongoing future endeavor into space and far beyond that goal to help make us earthlings a multi planetary species. Its time that the FAA try not block Space X and our countries chance to lead the world once again in Space technologies. I hope the FAA does not block and create a slow going problem with hurdles and headaches for the company Space X by letting China leap frog us into the lead to reach the planet MARS before the United States. This slow down will not only cost us time but, also it also feels like you are punishing a company trying to literally reach for the stars. I have never felt so proud of my Country watching these enormous rockets take off from this space port in Boca Chica Texas. I can not wait to visit and show my support by spending my money down there as well. I think Space X can help not only bring excitement and future to our country but also drive the technologies used to keep our world environment clean and I truly believe this is an important time we are at for the future of mankind and all of its inhabitants. This is the rocket that will help us if an asteroid was to end life as we know it. This is the company that will finally bring us to the moon for keeps. This is the company that will take us to the planet MARS to stay for future explorers. I believe we can do more and be better at opening the door to science and technologies for the children of tomorrow here in the United States. This is how you make them get excited and want to be part of it when learning about this in school. We have already lost two generations to STEM because we left the moon and rockets for the past 50 years, Let us not do that again. It is time to embrace it and let it drive the new STEM kids of tomorrow and the future in the USA, We can only now think ahead to what new technologies will be developed with this new space race. It will give us much more than it did over 50 years ago with GPS, cell phones and the children that created most all the technologies we use today because of it. This is not only a space race between the united States and China but race between ideology and who will control the next evolution in science and technologies that will be driven with this new step into space. Please allow SpaceX continue and if you want to make them do anything, make it so they need to put money back into the state land and resources regarding its natural habitats.

Please consider the approval of the SpaceX launch facility. The FAA has overseen many milestones in the history of aerospace travel, and exploration. The Starship is yet another one of these milestones. It will contribute to the betterment of our understanding of our solar system, and bring us closer to celestial bodies deemed unreachable by the prior abilities of humankind. Through the Starship humanity will be able to reach the Moon, and Mars, as well as delivering high mass scientific payloads out to Jupiter and Venus to further our understanding of our planetary neighbors with the fraction of the cost of its competitors. Complete reusability, followed with a high launch cadence is the future of aerospace travel. Thank you for your time, and please give the proper authorization for SpaceX to proceed with their development.

Message

Hi there, I just wanted to express my support for the SpaceX Starship program in Boca Chica. This is a generation-defining program that will advance humanity in a significant way. I believe SpaceX should be allowed to continue their operations with minimal resistance as their mission is to benefit everyone.

It is my most sincere request that SpaceX is given all the support and all the variances as needed. If you consider that we have not been back to the moon for over 50+ years, that the lunar spacesuit is still under development, these are examples of systematic paralysis. People like Elon Musk only come around once in a while, Tesla has changed the automobile, SpaceX has already changed the idea of reusable rockets. Paypal has changed electronic payments, Solar City has changed energy production and storage. Please consider giving SpaceX the ability to pursue the American dream of Space exploration. Look at the stock price of Tesla.. the world has bet on Tesla and SpaceX, to change the world, be part of that success, at the least... do not block the path to further invention. Mankind will reap the benefits for a very long time. just as we still enjoy the inventions of NASA and the invaluable successes from 50 years ago. Elon could go elsewhere to launch his rocket, let him do it from American soil. Thank you.

Please move forward quickly to allow SpaceX clearance in order to launch Starship in the upcoming launch window. The ideas and action of the founder and company show a willingness to reach out and make things happen versus the red tape that binds action unfortunately when the government gets too involved. Let SpaceX get this ship launched now! Thank you!

I was born Murry, UT in 1966 and have few memories of my young childhood, but one that stands out is from 1969, huddling with my family around a small b/w TV in Frankfurt Germany watching a German broadcast of Armstrong and Aldrin walking on the moon. It wasn't just an American achievement, it was a human achievement. Several years later, as an elementary school student in 1977, I recall sitting on the floor on the floor in front of a color TV watching the space shuttle Enterprise launch off the back of a Boeing 747. I still remember the excitement and fascination from these two events, and they are key factors in why I am an engineer today. Over the next 40 years, little in space has compared to that level of excitement...at least until I saw rockets start to actually land. My entire life, going to orbit was for the few, the lucky. The Starship program and Spaceport at Boca Chica have the potential to change that. Please keep my childhood dreams and those of so many others alive and find a way to allow SpaceX to launch out of the Boca Chica launch site. You will be inspiring children STEM for decades to come, and that is priceless.

SpaceX, while some of its practices might be questionable, is paving the way for the future of space flight and humanity as we know it. The technological advances to follow with their successes will change the world, leading us into a new era of exploration and innovation. They are the spotlight to the inspiration and dreams for the next generation to continue their special endeavors, and to stop them from achieving such goals, you are inevitably killing the inspiration that fuels the next generation, and slowing down a process that has already been held out long enough. To stop their progress would be a crime to their supporters, to the people they have inspired, and to the future of our world. While my statements may be ambiguous, the only way to see what I'm talking about is to let them fly! Change the rules if you have to, as the world is changing and you need to keep up. The fate of the future is LITERALLY within your control, do NOT hold it back.

It is almost too late for Humanity. We are destroying ourselves and our environment. Mr. Elon Musk has proven himself to be one of the(if not the) most important, most capable, most competent, and most correct human in our short history. We must begin to strive to meet his schedule. Any costly B.S. delays such as those put forward by the likes of jeff "Who" can not be allowed to continue. Jeff Who needs a big wake up call from someone. His childish behavior needs to be checked. Please see the light and do the correct thing. Give SpaceX SPECIAL EXPEDITED APPROVAL for Starship testing. Get us out of the fossil fuel stone age. Give SpaceX a special waiver for any glitches in their approval process. Stop trying to kill it or "its dead Jim".

Please acknowledge that Starbase can significantly change our future. Many high quality jobs are being created here in the USA. The still remote location is ideal. In the future, SpaceX will transfer the launches to offshore platforms, but for the start of such a grandiose project it is essential to test it on land. Please give SpaceX permission to start asap.

SpaceX is setting the stage for the future of humanity. While the environment is important, I would favor mitigation over blocking their progress. Maybe commitment to construct new habitat to replace affected habitats. There are also much worse environmental destroyers than the occasional space launch and rare explosion.

SpaceX should be allowed to continue development at Starbase Boca Chica. It seems obvious that their long term goal is to launch from converted offshore oil rigs so the test campaigns at Boca Chica are a stepping stone to that ultimate goal. Refusing permission to launch at this critical time in the development would likely cause unnecessary delays to a program that will benefit all humans tremendously and place the USA firmly ahead of all competition. If SpaceX are not able to launch from Boca Chica, they will need to transport their ships and infrastructure to another launch site which will have a non-trivial environmental impact.

Sent: Thursday, October 28, 2021 4:29 PM
To: SpaceXBocaChica
Subject: Letter in Regards to FAA's Draft EA of the Space X's Starship Project at Boca Chica

Greetings,

This letter is to be added to the public comments of the Federal Aviation Administration proposals for the SpaceX Starship Super Heaver Project at the Boca Chica Launch Site (https://www.faa.gov/space/stakeholder_engagement/spacex_starship/).

I was told by friend that this email address would suffice as place to add my voice to the FAA stokeholder engagement for the SpaceX proposal set to close on November 1, 2021.

I am a South Texas native. My father grew up in Brownsville, and my uncle taught vocational learning at Hanna High School in Brownsville for 30 years. So, I am no stranger to issues surrounding both technical jobs in the Rio Grande Valley and the beaches and environment of South Texas.

I have serious misgivings about the SpaceX proposal as it relates to privatization of public lands and environmental impacts.

Regarding the first issue, privatization of public lands, SpaceX, through the 2013 amendment of the Texas Open Beaches Act, has closed access to the Boca Chica Beach on numerous occasions. This amendment seems to be in violation of the Texas State Constitution, which guarantees open access to public beaches (<https://www.reuters.com/legal/litigation/enviros-sue-over-texas-beach-closures-spacex-rocket-tests-2021-10-12/>). There are such few public lands in Texas, lands left for the enjoyment of everyone, not just the rich and connected. It is disheartening that Boca Chica Beach can be closed indiscriminately.

The most concerning issue is the environmental impacts underway at the Boca Chica Launch Site. First, the natural gas needs at the Boca Chica facility are concerning. An onsite rocket fuel pre-treatment system and gas-fired power station have been proposed, but the details remain murky in the FAA proposal. All the natural gas has to come from somewhere, and reports indicate a serious inadequacy related to the development of wells on premises and use of a currently defunct pipeline running through the Lower Rio Grande Valley National Wildlife Refuge (which is being used right now for internet communication lines for the local university system). The liquid methane rocket fuel derived from natural gas for the rocket fuel has numerous other upstream and downstream impacts, too. Methane is a potent greenhouse gas. Well leaks, gas flares from processing, as well as storage of other chemicals like ammonia all have their own accumulative dangers (<https://techcrunch.com/2021/10/08/the-mystery-of-elon-musks-missing-gas/>). Then there is the impact of per- and polyfluoroalkyl substances (PFAS) related to rocket fuel flame retardant—a well-known “forever chemical” and bioaccumulate that has serious repercussions for human health (https://www.cdc.gov/biomonitoring/PFAS_FactSheet.html). Regarding the health of wildlife and ecosystems, the Boca Chica Launch Site is surrounded by wildlife conservation land. A recent rocket explosion littered the area (<https://www.theguardian.com/environment/2021/sep/05/texas-spacex-elon-musk-environment-wildlife>), and disturbances of the wetlands like that will only continue. Further, it is unclear if hurricane mitigation is being considered in any of this. All told, there appears to be a high level of irresponsibility going on. The National Environmental Policy Act (NEPA) guidelines regarding impacts do not seem to be followed, and this opens the FAA proposal to serious litigation delays and contentious public relations.

It would be great if these problem did not exist. The economic impact to the Rio Grande Valley is huge related to SpaceX. The inspiration of spaceflight is huge. But these problems do exist, and they need to be handled responsibly, and not flippantly or casually. This is serious.

Sincerely,
Andrew Tegarden

Environmental Specialist
9300 Lee Highway, Fairfax, VA 22031

Dear Ms. Zee:

I currently serve as CEO for Valley Baptist Health System, located in the lower Rio Grande Valley of Texas. I would like to hereby express my personal support of SpaceX's application to the FAA to conduct Starship orbital launch operations from Starbase in the Cameron County, Texas region.

Having been born in the Rio Grande Valley, I am completely committed to the health and well-being of my community. I have seen the same goal and level of commitment from SpaceX in the relatively short period of time they have been our corporate partners in South Texas, as evidenced by their numerous community outreach efforts. I believe that the health and wellness of our communities will continue to improve as SpaceX' influence grows throughout the region.

One of the ways that SpaceX has shown their dedication to being a good neighbor is through their youth outreach programs. Just this year, SpaceX employees have hosted nearly 2,000 students for tours, encouraging Texan youth to ask questions and dream of the impossible. They have also developed an internship program with the local colleges and universities providing students with a path to space technology that did not previously exist in the region.

SpaceX has also proven their commitment to community through their partnerships with conservation organizations to build knowledge of endangered species in the region, their quick action to save sea turtles during the freeze, regular employee organized beach clean ups, and their sponsorship of the Annual Texas International Fishing Tournament.

I sincerely believe that SpaceX will be excellent partners in serving the community, and am more than thrilled to have them as a community partner. I fully trust that SpaceX will continue their efforts to limit environmental impact and for these reasons, we request that the FAA please approve SpaceX's application.

Very Respectfully,

Fairfax, VA 22031

**STARBASE ENVIRONMENTAL ASSESSMENT COMMENTS OF
THE COMMERCIAL SPACEFLIGHT FEDERATION**

Dear Administrator Dickson:

On behalf of the Commercial Spaceflight Federation (CSF), the leading trade association for the commercial space industry, I write to support the application submitted by SpaceX to the FAA to conduct orbital launches with its Starship-Super Heavy from Starbase in Cameron County, Texas. The Starship-Super Heavy will allow crew and cargo missions to the Moon and Mars - including under NASA contract to go to the Moon in 2024.

CSF supports the availability of a full network of spaceports throughout the United States to ensure robust and rapid access to space for uses of domestic defense and civil exploration. As launch manifests at the federal ranges become more crowded and necessary federal infrastructure is aging, commercial and private spaceports are an important part of growing the commercial space economy and ensuring U.S. access to space. SpaceX is a key launch provider for the Department of Defense, NASA, and global commercial customers - with all launch vehicles manufactured and launched from the U.S. SpaceX's dedicated commercial launch site in Cameron County will aid in technology development that will directly benefit the U.S. Government.

The impact of local jobs creation, local spending, and environmental and community-based initiatives must also be considered in assessing Starbase. SpaceX already has more than 1,500 full time employees located in Cameron County, not including contractors or temporary employees. Additionally, the small business suppliers selling to SpaceX employ more than 15,900 people in Texas.

Starbase has already presented itself as a positive force on those residing in Cameron County. SpaceX has spent \$1.5 billion in the state of Texas on infrastructure development, launch and test operations, supply chain, and payroll, including \$32 million in the community around Starbase. Additionally, by bringing power to the Military Highway Water Supply Corporation, SpaceX has enabled potable water to be delivered to 6,000 people around Los Indios.

SpaceX has proactively worked to better the natural environment in the South Texas region. SpaceX contributed to building a state water reef north of Boca Chica, which after a few years of development is beginning to flourish. They are also working with the Peregrine Fund to gather more information on the endangered Aplomado falcon.

SpaceX is dedicated to preserving the environment near their facility. During the deadly Texas winter storm in early 2021, SpaceX carried out a campaign to save the local sea turtles, with employees rescuing more than 850 cold-stunned turtles. SpaceX also gave a large generator to restore Sea Turtle Inc.'s rehabilitation center. Although many large-scale infrastructure projects will have some impact on its surroundings, SpaceX is highly committed to mitigating their environmental impact on the unique South Texas environment.

Texas has long had a rich history in advancing human spaceflight, most famously NASA's Johnson Space Center has led the training of every NASA astronaut to fly to space. NASA spurred a major growth in STEM opportunities in Texas and SpaceX will ensure that STEM engagement continues to grow throughout the South Texas region. Over 1,100 local students have already toured the Starbase site with the hope it will inspire them to dream big about human spaceflight and exploration. The Starbase site has already hosted some of the top young minds in the U.S. as interns, giving them the experience of creating vehicles that will soon take crew to the Moon and Mars.

CSF supports SpaceX's application because we believe that it will have a positive impact on the U.S., Texas, and Cameron County. Regular Starship orbital launches will make South Texas a Gateway to the Moon and Mars, while driving tourism, employment, and growth of the local economy. SpaceX hopes to launch the first orbital test of Starship soon, followed by the Starship-Super Heavy, which will mark an exciting new chapter of the United States' leadership in space technology and a new era of space exploration.

Sincerely,

A handwritten signature in black ink that reads "Karina Drees".

Subject: PROTECT AND SAVE OUR ENVIRONMENT

Dear Federal Aviation Administration,

Our environment is suffering. We all must wake up! Our future is in jeopardy if we don't take action. Polluting our waters, ecosystems and the air we breathe should be concerning for our future existence. Stop the madness!

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Laura Ortiz

Subject: Public Comment - FAA Environmental Review - SpaceX activities at Boca Chica

Re: Public Comment - FAA Environmental Review - SpaceX activities at Boca Chica

As with almost all human endeavors there will be risk and damage to the environment. Any proposed building and use should be reviewed to minimize habitat destruction, species risk and long-term environmental damage. This potential damage of intrusive human activity may be mitigated by creating nearby, local preserves where threatened species can live in an undisturbed, natural setting. These should be privately financed and maintained by the requesting corporate entity.

The natural environment at Boca Chica will necessarily be affected by the development, testing and production of space-faring rockets. However, some distinction should be made between trendy or capricious industry and uniquely visionary undertakings that advance essential technologies. With a proven track record, SpaceX has not only restored national accessibility to space for American astronauts but demonstrated their ability to successfully build dependable, efficient rockets with reusable rocket boosters. This innovation alone has made the US again a world leader in rocket technology while inspiring other domestic launch startups. In a similar way Tesla's pioneering production of affordable battery/electric cars has moved the automotive industry toward elimination automobile emissions.

In providing regular, affordable access to space, opportunities become available for small and startup businesses, manufacturers and developers in space related industries. Having such companies based in the US, enables American engineering, technology and manufacturing to remain competitive in world markets while contributing to overall employment and the economic vitality of the nation.

In evaluating the risks to the local environment at the Boca Chica launch site, please factor in the anticipated advancements and opportunities SpaceX can bring to our society and the future of humanity.

Subject: Public Commentary- Environmental Review - SpaceX at Boca Chica

I was seven years old in 1961 when Alan Shepard climbed atop a Mercury-Redstone rocket to become the first American in space. At that moment, I believed that America was special and offered hope to the world. I want to believe that today America is still the hope for the world. Today, an American company, SpaceX, founded and led by one of America's greatest success stories, is both rescuing that glorious past and driving forward to America's future in space.

Let's not stand in the way.

The FAA and the entire federal government should be doing all it can to make this future happen. We do not know what space-based capabilities we may need to protect humankind from existential threats such as cataclysmic asteroid strikes, but we do know that when that threat arises no administrative process will save us. Our only chance will be the ability to act - in outer space.

Go ahead and conduct the necessary environmental reviews. But keep your sights on the big picture: Protect the environment, yes, but, ultimately, save the future of our planet.

Help America be what it can be,

David E. McClure, Jr.

Subject: Public Environmental Assessment for Space X

To Whom it May Concern,

The Public Environmental Assessment (PEA) was not very clear to me concerning the closures of public assess areas. If the area of the Brownsville Ship Channel is affected during these moments of closure for a Spacex rocket launch, then general commerce will be affected. Maritime Commerce cannot be hindered in any way by Spacex. Is Spacex ready and able to compensate large and small businesses for their lost revenues?

As an owner of a small fleet of Gulf Shrimp Boats, I do not want my vessels waiting (inbound or outbound) for permission from Spacex before entering into the Brownsville Shrimp Channel in order to conduct our business. Spacex states "estimates that total number of annual closure hours to be 500 hours for nominal operations and 300 hours for anomalies". That is about 9.5 hours each week according to my math.

For the record, I AM NOT IN FAVOR of any closure of the Brownsville Ship Channel at any time, or for any reason concerning Spacex.

Feel free to contact me for any reason.

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains, 3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

As a former National Environmental Policy Act (NEPA) reviewer for Sandia National Laboratories, I know that sensitive species, natural resources, and community concerns have been casually discarded in the name of science to lure Musk businesses to the area. Texas will always choose the fastest, cheapest way through to super-size any industrial activity. The lack of due-diligence process to begin with, the breakneck speed of this expansion, what is at stake, lays this next bastardization of sustainable planning squarely upon the FAA. I have never been impressed by the FAA's adherence to federal law, but the communities negatively impacted by reckless SpaceX development deserve so much better than to become the newest, southernmost bookend members of the entire Gulf Coast Cancer Alley. I know what stewardship responsibilities are. Laws in orbit may be woefully kluged and airless, but here, in the Troposphere, the US, the land, the water, life, these people, are fighting. Take heed, FAA.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline. Pretending the worst-case scenario of the perfect storm and reckless development doesn't realistically involve these risk factors, or that the potential citizen casualties and environmental catastrophes are "worth it," is pure, speculator insanity.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Site-Wide Environmental Impact Statement, because of the size and scale of SpaceX's new launching operations. This Environmental Assessment violates the spirit of the National Environmental Policy Act (NEPA), and is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020, which clearly gutted every due-diligence protection at every opportunity. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The existing damage to land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains.

3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never been to the region. Environmental justice (EJ), as legally supported by the NEPA process, must be thoroughly examined in this context; it appears EJ is being criminally subsumed by new gentrification, where the residents' utility to Musk matters most.
5. SpaceX never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage, along with the potential explosions it could cause, is not safe for the residents of the area and is not safe for the environment.

4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Juan B. Mancias

Subject: Re: Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program

Dear Federal Aviation Administration,

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach

because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Herminia Maldonado

Subject: SpaceX and Starship in Boca Chica, TX - YES!!

Hello, I would like to submit my personal opinion regarding Starship and Starbase that Elon Musk and SpaceX are building in Boca Chica, TX. I fully support what he and his team are trying to accomplish. I wish them all the best of luck in their endeavors. I would like to encourage the FAA to approve SpaceX's application for conducting orbital launches from their launch pad in Boca Chica.

The last few years have been very difficult for everyone, but SpaceX's successes have brought us together and given us hope for the future. They have been successful in the past, they will be successful in the future. Please allow them to continue their work as planned. We all need this.

Thank you for your consideration.

Subject: SpaceX Boca Chica Launch Site NEPA violation

Hello Cindy Barger, Robert Houston, and Toby Baker,

I'm writing to you today because I have concerns about the regulatory ramifications from the latest Draft Programmatic Environmental Assessment ("PEA") written for Space Exploration Technologies Corp.'s ("SpaceX") Starship Super Heavy Project at the Boca Chica, TX, Launch Site. The PEA was prepared by SpaceX, under the supervision of the Federal Aviation Administration ("FAA") and submitted to the FAA for review. I discovered this incident through the article titled [The Mystery of Elon Musk's Missing Gas](https://techcrunch.com/2021/10/08/the-mystery-of-elon-musk-missing-gas/), which was published by Tech Crunch on October 8, 2021 (<https://techcrunch.com/2021/10/08/the-mystery-of-elon-musk-missing-gas/>). I believe SpaceX is attempting to obfuscate the scope of their Boca Chica operations by forgoing the Environmental Impact Statement process. Without providing an Environmental Impact Statement or consulting the Environmental Protection Agency ("EPA") and the Texas Commission on Environmental Quality ("TCEQ") while evaluating this project, I believe SpaceX and the FAA want to fast-track this project without fully disclosing the Launch Site's environmental impact.

As someone with an academic and professional background in environmental science and engineering, it is my opinion that the lack of transparency and detail in this PEA undermines both the National Environmental Policy Act and the Clean Air Act. The PEA contains a 21-page Executive Summary, a 151-page Main Document, and seven appendices (Appendix A through G). The PEA was prepared by Brian Pownhall, a Transportation Engineer with Kimley Horn and Associates, and Kelsey Condell, Katy Groom, and Elyse Procopio – all Environmental Engineers with SpaceX. The PEA was signed-off by James Repcheck, a Manager from the Safety Authorization Division at the FAA, and three FAA Environmental Protection Specialists (Stacey Zee, Chelsea Clarkson, and Amy Hanson) reviewed the document. In addition, the PEA was also reviewed by eight FAA Environmental Support Contractors from ICF International. The PEA authors appear to specialize in NEPA compliance for entities relating to the FAA and Federal DOT; none of the authors appear to have experience with air permits. The most concerning aspects (or lack thereof) presented in the PEA include the proposed 250-megawatt combined steam cycle natural gas turbine power station, the liquid natural gas processing plant, and the proposed desalination plant.

The PEA devotes 186 words outlining the proposed power station. The 250-megawatt power station will supply power using a large natural gas turbine and a steam turbine running in a combined cycle, and a small natural gas turbine and a steam turbine running in a combined cycle. The power station footprint is expected to occupy a 5.4-acre area and would comprise multiple structures, including air intake, compressors, expanders, reflux tanks, a surge tank, a cold box, and a cooling tower. A 250-megawatt power station would normally qualify as a major new source of air pollution under the Clean Air Act. The exact sizes and specifications of the process equipment were not included in the power station description. No off-site air modeling was completed by the EPA for the proposed facility.

The first issue with the PEA 250-MW plant description is it appears to underestimate the emissions from the process. While I could write a lengthy letter about the PEA's emissions miscalculations alone, SpaceX engineers and consultants estimated that the 250-MW plant would produce 9 tons of VOCs, 32 tons of NO_x, and 88 tons of CO annually. The total emissions from the entire operation were 54.8 tons of VOCs, 43.18 tons of NO_x, 102.38 tons of CO, 1.0 tons of SO₂, and 0.58 tons of PM. These estimates only include the emissions from the proposed SpaceX launches as well as operations from the power station, and "natural gas pretreatment and gas liquefaction." The PEA inventory does NOT include any estimates for Maintenance, Startup, and Shutdown (MSS) emissions, fugitive dust, and natural gas transportation. Based on similar-sized facilities, this operation would likely exceed the National Ambient Air Quality Standards if all emission

sources were considered in the PEA. There are no remarks about other equipment typically used for gas power stations or gas treatment plants, such as thermal-oxidizers, ammonia storage tanks, or gas flares. Finally, SpaceX estimates only 9,858 tons of CO₂ would be released annually, which is only about six days of emissions from operation for a 250-MW power station.

The second key issue is the lack of disclosure regarding the plant's source of natural gas. A 250-MW power station, a desalination plant extracting 40 gallons per minute from the groundwater, and a liquid natural gas processing plant will likely require a large amount of natural gas. The PEA lacks detail on the amount of natural gas that the facility would require. It also does not provide a source of the necessary hydrocarbons. The amount of natural gas (estimated to be tens of millions of cubic feet of gas in the TechCrunch article) means transportation via tractor-trailer is highly unlikely. Transporting the amount of natural gas via pipeline appears to be the most practical and likely solution in this scenario. While I can't say what natural gas transportation method SpaceX is planning to use, none of these scenarios are in the PEA. By failing to report the source and transportation of natural gas to be used at the facility, SpaceX and the FAA have violated the NEPA process of providing complete disclosure to the public.

In addition to the power station, SpaceX plans to construct a "Natural Gas Pretreatment System," which appears to be a liquid natural gas (LNG) processing plant that runs methane refined from natural gas through a cryogenic liquefier. The LNG system contains a 200-foot by 16-foot diameter de-ethanizer. De-ethanizers with similar specifications are designed to refine greater than 200 million standard cubic feet of natural gas per day. Additionally, like the power station, it appears SpaceX also underestimated emissions calculations for the LNG plant – estimating only 1.0 tons of SO₂ would be produced by their LNG refining and liquidation process. The size and scope of the LNG processing plant suggest SpaceX's operation will be significantly larger than described in the PEA. As discussed in the paragraph above, the PEA provides no details regarding the source or transportation method for the millions of cubic feet of natural gas that will be used in the LNG process daily.

There are several other needed sections or details omitted from the PEA that I cannot comment on in this email, including a community emergency response plan, launch failure analysis and cleanup, amine oil heater size and location, locations and sizes of various chemical and petroleum storage tanks, secondary impacts from population growth, etc. The full scope of SpaceX's proposed operations remains unclear, preventing the public from understanding the full environmental impact of the project. By revising SpaceX's PEA 8 times, the FAA is taking a permitting by increment approach at the Boca Chica launch site, allowing SpaceX to increase the breadth of their project with minimal disclosure to the public.

The lack of rigor and transparency in the Draft Programmatic Environmental Assessment indicates that the FAA is ill-suited to evaluate the environmental impacts of large-scale oil and gas operations, let alone deem them environmentally insignificant. Based on the size and scale of this operation, and the lack of oversight from the EPA and TCEQ, it is imperative that SpaceX prepare a new Environmental Impact Statement for the Boca Chica Launch Site. Allowing the FAA to greenlight this project without a new Environmental Impact Statement not only undermines NEPA, it puts the interests of a private corporation over the environmental health and safety of the public.

Thank you for reading this letter. I hope you can provide me with clarity on your agency's perspective on this matter.

Sincerely,

Tim Engelbright

Subject: SpaceX Harms

Dear Federal Aviation Administration,

SpaceX's ambitious expansion initiatives not only threaten the natural environment, but formerly thriving South Texas communities are also being threatened by this further gentrification of the Rio Grande Valley. Citizens have been mostly left out of the discussion. Our health, safety, livelihoods, and the land we love - matter.

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Kristy Gaytan

Subject: SpaceX PEA comment - Boca Chica

(please withhold my personal identifying information to the extent possible)

Dear Ms. Zee and the FAA:

Regarding the SpaceX PEA at Boca Chica, I write as a neighbor to SpaceX's "Starbase" facility and launch site at Boca Chica.

I am "Dave L.". I live on Palmito Hill Road, 8.5 miles from SpaceX's launch site (see map below). (I am not the owner of the "Rocket Ranch" or involved with it; he is a neighbor on the same road.)

I don't work for SpaceX or its contractors (I am retired) and I have no financial interest in this matter. For whatever it's worth, I am an FAA-licensed private pilot and fly in the local area.

I fully support SpaceX's plans for their Boca Chica facility, and support the PEA as drafted, with the minor comments and suggestions below. I have reviewed the draft PEA and the PowerPoint slides presented at the public meeting. SpaceX's project and plans are critical to the future of the United States, for the long-term future of the human race, and possibly for all life on Earth. I know that sounds dramatic, but I believe it to be literally true.

I ask that the FAA make every effort to support and enable SpaceX's plans and operation of Starship from Boca Chica, to

expedite all necessary approvals and licenses, and to streamline future approvals for test and launches at Boca Chica.

I am fully aware that there is a degree of risk and inconvenience involved, that will particularly affect me as a close neighbor.

I am aware that there will be very loud noises on both launch and landing (including at night), sonic booms from landing boosters, and that there is a risk of property damage from overpressure events or debris in the event of explosion.

I am aware that there may be other environmental effects including on wildlife, and that there may be air pollution from SpaceX's operations.

These are prices worth paying. Of course reasonable methods should be taken to minimize all these effects. But the goal is sufficiently important that the FAA should expedite all necessary licensing and approvals, despite these risks and costs.

That said, as a neighbor I have particular local concerns:

- Regarding ground closures (PEA 2.1.3.5.1), property owners like myself, as well as their visitors, employees, and contractors, must be able to pass through checkpoints to access their homes and property, *on the same basis as SpaceX staff* (if it's safe enough for SpaceX staff, we must be allowed though as well; we know and accept the risks). **If a bridge or tunnel from South Padre Island is built in the future, it must not be the only way local residents can access their property – the distance from shopping and services would be much too far.** We must be able to continue to access our properties from Brownsville via Highway 4.
- Continued access to Boca Chica Beach (Boca Chica State Park) is extremely important to me and my neighbors, who live in the area partly because of the proximity of the beach. Temporary closures are acceptable when necessary for safety, but the road to the beach must remain open most of the time. Closures must be as brief as reasonably possible, and announced well in advance. *Again, when SpaceX staff are permitted to access the beach, the beach should be equally open to local residents* (in particular those living east of the CBP checkpoint on Highway 4; all alternate beaches are vastly further from there than is Boca Chica Beach). I think it's reasonable for SpaceX and Cameron County to require residents sign liability waivers for beach access during times when the checkpoints are closed to non-SpaceX personnel. (Of course I understand that no one can access the beach during actual launches or static tests.)
- The draft PEA (Table 2-1 and elsewhere) mentions "closure hours"; 500 hours per year for nominal launches and 300 hours for "anomalies". It's unclear to me what "closures" these refer to – closure of Highway 4? Of beach access? Of airspace around the launch site?
 - 500 to 800 hours per year (1 month/year) seems acceptable for beach closures, and closures at the "hard" checkpoint(s). Based on the PEA (and NASA's experience with the Saturn V rocket, nearly the same size as Starship - NASA permitted VIP spectators 3.5 miles from the launches), I see no reason why residents more than 4 miles from the launch site should ever be prevented from accessing their homes and property via Highway 4.
 - As a VFR pilot who flies in the area, any airspace closures should be as small as reasonably practicable, and temporary, only for planned launches or dangerous tests (presumably announced by NOTAM, per PEA 2.1.3.5.3). I think the PEA covers this adequately.
- I am pleased to see the attention in PEA 3.6.3 and 3.6.4 to light pollution; reasonable efforts to minimize nighttime light pollution should be made - some additional light is clearly inevitable and acceptable.

Although road, beach, and airspace closures are unfortunate and must be minimized to the degree possible (I believe that's entirely doable), **if, hypothetically, the only alternative to closures were to prohibit SpaceX from operating from Boca Chica – then close the road, the beach, and the airspace.** Access for the human race to the rest of the universe is far more important than my convenience or that of my neighbors.

I believe virtually all my neighbors in the Boca Chica area and along Highway 4 (past the CBP checkpoint) feel generally the same way (perhaps excluding the bolded sentence in the paragraph above). Everyone I personally know in the local area is strongly supportive of SpaceX (while still caring about road and beach access).

Those loudly objecting to SpaceX and it's plans seem to be from elsewhere.

I hope this input is helpful. I can be contacted via email at <[REDACTED]>

SPEAKER OF THE HOUSE

October 28, 2021

Federal Aviation Administration (FAA) c/o ICF
Attn: Ms. Stacey Zee
Environmental Specialist
9300 Lee Highway, Fairfax, VA 22031

Ms. Zee,

I am writing to express my support of SpaceX's application to the FAA to conduct Starship-Super Heavy orbital launch operations from its Starbase facility in Cameron County, Texas. These launches represent the beginning of a new chapter in Texas' storied history of space exploration. With the goal of advancing crewed missions to the Moon on behalf of NASA in 2024--and Mars in the near future--SpaceX is building on our state's legacy of ingenuity and determination which we proudly continue to foster and promote.

In addition to the boundary-pushing technology, the aerospace industry has a material impact on the economy and vitality of the Rio Grande Valley region. Since January 2020, SpaceX has injected \$1.5B worth of investments into the state through infrastructure development, launch and test operations, supply chain deliveries, and payroll. Including their suppliers, such investments account for 18,000 Texas jobs and have earned the gratitude of local businesses and chambers of commerce. Furthermore, beyond the economic impact, SpaceX has created or partnered with initiatives to improve environmental and academic outcomes in the region. Importantly, Starbase has welcomed local students to tour its facilities, which will no doubt spark young imaginations, enhance academic pursuits, and inspire a new generation to aim high.

I appreciate your consideration and hope you will look favorably on SpaceX's application.

Sincerely,

A handwritten signature in black ink that reads "Dade Phelan".

GOVERNOR GREG ABBOTT

October 26, 2021

The Honorable Steve Dickson
Administrator
Federal Aviation Administration
800 Independence Avenue, SW
Washington, DC 20591

RE: Support for approval of the Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica launch site in Cameron County

Dear Administrator Dickson:

I am pleased to write on behalf of the State of Texas to express strong support for the Federal Aviation Administration's (FAA) approval of the draft Programmatic Environmental Assessment (PEA) for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica launch site in Cameron County, Texas. This program will not only have a significant impact on the local, state, and national economies, it will also solidify the U.S. and Texas as leaders in the commercial space industry.

The commercial space industry is quickly becoming a critical component of the Texas economy. With a long history in aerospace, Texas is a magnet for new commercial space development as the state continues to see considerable capital investment and new jobs created in this industry across the state. As home of the Johnson Space Center and Mission Control for the first moon landing, as well as the host for other groundbreaking industry firsts continuing through today, opportunities abound in Texas' commercial space industry as the Lone Star State continues to proudly push the envelope with regards to innovation in space flight.

Since January 2020, SpaceX has invested \$1.5 billion on infrastructure, operations, and supply chain development across the state, and the company provides nearly 1,900 well-paying jobs for hardworking Texans. There is no doubt that the Starship/Super Heavy Launch Vehicle Program, as well as SpaceX's continued investment in Texas, will have a significant positive impact on our state for years to come.

Continually investing in technology and transportation has long been part of Texas' economic success as a leader in exports, including tech exports. The further development of our commercial space industry is critical to the long-term economic prosperity of Texas and the United States, and I am certain that approval of this project will further advance that goal.

The Honorable Steve Dickson

October 27, 2021

Page 2

My office stands ready to assist with your decision-making process, as this is an important project for all of Texas as well as for our nation's continued leadership in the commercial space industry.

Thank you for your consideration of this request. I look forward to seeing SpaceX's continued development in Cameron County.

Sincerely,

A handwritten signature in black ink, appearing to read "Greg Abbott". The signature is written in a cursive, flowing style.

Greg Abbott

Hello,

Please review the following video open letter from Common Sense Skeptic. Things contained therein are concerning. I respectfully ask that a full Environmental Impact Statement be completed not only on the Super Heavy Rocket Project but on the natural gas plant, industrial natural gas drilling and pipelines, LNG production and storage plant, solar farm, desalination plant SpaceX has planned and/or is working on. Further, please complete a Launch Failure Analysis, and an Emergency Response Plan for marine and land worst case scenarios.

Thank you,

Edward A. Sandoval

I believe SpaceX is the most inspiring companies currently in existence, with a mission more important than any other. Any steps to slow their progress unnecessarily would be massively disappointing. However, I fully trust you to make the correct decision with regards to safety requirements which need to be met prior to launch. I would just like to express my support for the company and their missions.

Subject: Comment for Programmatic EA on Starship/Super Heavy launch operations

Dear Federal Aviation Administration,

We are lucky the Highway 4 road is open, maybe a couple days a week and on weekends. If one goes near it the security guards are there to harass the public. So long to those quiet pristine pristine beach trips.

I urge the FAA to conduct a new EIS for the SpaceX Starship/Super Heavy operations currently underway at SpaceX's Boca Chica site. From the 2014 FEIS, the objective, launch vehicle, and the size and scope is entirely different, which potentially may include off-shore launches via Super Heavy-class spaceports, Super Heavy re-landing on the launch stand, simultaneous launches, and a resort.

FAA should consider not just the "proposed project" and "no action" alternatives, but also other alternatives that include launches of Starship from an offshore platform or moving Starship launches to Cape Canaveral, for which the necessary infrastructure already exists and is situated further away from National Wildlife Refuges and/or state park land.

A new cumulative analysis needs to be conducted. A 3rd-party launch failure analysis is needed due to the proximity of Port Isabel, Long Island Village and potentially three LNG export terminals within five miles of the launch site. Additionally, an analysis of the potential impacts to the proposed Jupiter LLC project, a crude upgrading, processing and export facility which includes an offshore VLCC loading facility six miles offshore.

A new biological opinion is needed. The Starship is much larger, there will be more testing, more beach closures, and more traffic where endangered wildlife is present. More closures of Boca Chica beach will result in increased inaccessibility to monitoring of endangered sea turtle nesting sites.

Additionally, I request the FAA enforce and/or hold SpaceX accountable to their required mitigation.

Sincerely,

Greg Vail

Subject: Comment on impact to wildlife SpaceX, South Texas Program

October 29, 2021

216 W. Carolyn Drive
South Padre Island, Texas 78597

Federal Aviation Administration
Ms. Stacey Zee, SpaceX PEA
c/o ICF9300 Lee Highway
Fairfax, VA 22031

Dear Madam:

I am a local resident near the SpaceX project and I am a supporter of the SpaceX South Texas Project. I have some comments on the FAA permitting of SpaceX.

I have been hearing from the media that there is concern that SpaceX construction and operation will impact the local wildlife. I agree that the several hundred acres will have an impact but an insignificant impact.

Almost the entire area of South Padre Island is protected for wildlife. The island extends from the Brownsville Ship Channel to Corpus Christi, about 250 miles long. It averages about two miles wide, providing about 320,000 acres. The only populated area on the island is in the South Padre Island City area.

In recent years tens of thousands of acres of new public and private properties have been purchased in Cameron County area for protected wildlife lands. In addition, much of the land in Cameron, Willace, Kenedy, and Hidalgo are open cattle ranches, and a small area is irrigated farmland. Kenedy county is 1,200,000 acers of ranch and water area with a population of less than 400 people. SpaceX is and will be an insignificant impact on the wildlife in South Texas.

There has been some concern on SpaceX impact on sea turtles. Sea turtles come on shore only to lay their eggs, usually within 100 feet from shore. Highly unlikely turtles will be impacted by SpaceX.

Sincerely,

Don Coers

Subject: Environmental review public comments

I am a Utah resident and citizen.

my comments are on my own behalf. i am not representing any companies, firms, groups or clubs.

I am an animal lover and i am an amature environmental activist.

I have listened to a lot of the public feedback, and i am concerned at the amount of feedback you have gotten that is not related to the review. the long term plans of SpaceX and making humanity a multi planet species while important, are in my mind not relevant. looking at other rocket launch and testing facilities around the US like Wallops island, and cape canaveral, I do not see a lot of negatives to having a facility in place. quite the opposite. it doesn't even seem to make a big difference what propellants are used or how many launches are allowed annually. in both of those locations the local wildlife seems to have benefited from having a sanctuary where people and our accompanying encroachment are kept at bay. sure they get a bit of a startle now and then, but it doesn't seem to have long term negative affects. given what has happened in those two examples, it goes to figure that Boca Chica will experience similar benefits.

SpaceX has also demonstrated it has a concern for the environment and the local wildlife. helping out the turtle rescue facility during the cold snap last winter. Light pollution, any large facility will be lit up at night. why should this one be of any more concern than any other facility with regards to lights. Sound/noise, the main concerns here would be launch operations, and engine tests. SpaceX offered to buy out any residents that would be heavily impacted by this noise, and if they refused the generous offers, and chose to stay. well they knew what would be happening, and complaints about noise should be given minimal weight. now Launch anomalies are a bit different. the concussive forces alone could cause property damage, let alone erant debris. again they chose to stay. laws and processes are in place and should be enforced which protect life and limb, and hopefully mitigate property damage as best as can be. the LOX and Methane production areas are of even less concern to me. local production reduces traffic and the pollution that comes from it. I have seen no evidence or need to "pipe in" natural gas, though i may have missed something, i do not see why they would need to. water desalination, I am not aware of any reason to be concerned about this. any bi products are simply more concentrated natural elements already present in the water being treated. the amounts of water being treated are relatively small compared to what would be needed for standard systems in use around the world. I am not aware of any major environmental concerns from them why should this be different? Power, while yes the facility is generating some of its power using Methane, some is also coming from Solar, an effort and investment has been made to minimise negative environmental impact from power generation and use. I think that while i could go into further depth on these topics and others, i have taken enough of your valuable time, so with a thank you for taking my input into consideration i will conclude with this simple statement.

Please approve Spacex for the currently requested permits.

I would like to see approval for more sub-orbital, and more orbital flights.

Advancements in the space industry bring advancements and work to many other sectors.

Again, thank you for your time and consideration.

Joey Beckmann

Please stop blocking progress and let SpaceX finish its Starbase and launch its rockets. You are making the current administration really look bad. It really seems like the FAA wants to justify its existence by doing this while is getting closer to finish their existence due to incompetence, bureaucracy, and delays. There is also casting a shadow of a doubt where there is corruption, political interests, or money involved that are causing these delays.

I am a 74 year-old retired engineer. I have been waiting since the last Apollo astronaut left the surface of the moon for the US to return to space. Please approve the plans to complete the building of the SPACEX StarBase at Boca Chica, Texas, and build, test, and launch the SPACEX Starship from the orbital launch facility now under construction. If the bean-counters and visionless regulators infesting the US government have their way, we will be stuck forever looking up from the earth to the moon, planets, and stars with only our fading memories of the spirit of adventure and promise that infected my generation those many many years ago. The biggest excuse until now for not spending the money and resources for launching ourselves into the cosmos has been that our public money and resources were limited and should be spent on an endless parade of social programs and dead-end research and investigations favored by one political faction or another. That has all changed now . . . private money is now being focused and spent by men with vision and talent to get us off our collective butts and into space, resuscitating our dreams and hopes of walking and working on the surfaces of other planets and moons beyond our own earth. We've been waiting patiently for more than 50 years, patiently paying our taxes while suffering continual disappoint and frustration as those hard-earned dollars were being squandered on corruption and pork-barrel social and psuedo-science programs. Many of us who are still alive and came of age during the heady days of Apollo won't be here much longer . . . please don't allow near-sighted excuses based on politically expedient pseudo-science concerns get in the way of approving the plans submitted SPACEX to complete the Space Port (StarBase) in Boca Chica and begin launching rockets into orbit around the earth and beyond.

I believe that SpaceX is instrumental for a steadfast development into a space faring humanity. SpaceX must be allowed to continue their development and testing cycles not only because they have proven again and again that they are effective into pushing the boundaries of what is possible in the traditional space industry. But because SpaceX will also open the doors to other parts of said industry further and keep alive the American ideal of space exploration that was begun in the 50s and had begun to fade. Hindering the times of development to any private company hits hard to the bottom line and slows progress. This in the end not only endangers the jobs of workers but also carves a trench between private and public institutions. Give SpaceX the go to further their mission and you will also be opening the doors to more investment. As well as the support of all space fans around the globe that NASA began so many year ago. Ad Astra! thanks.

Dear Federal Aviation Administration In recent years, SpaceX has shown over and over again that they are 100% capable of achieving their goals considering spaceflight. But, in order to do so "faster" (and with faster I mean within the next 20 and not 100 years), restrictions must be lifted. By allowing SpaceX to build and fly as they wish, you do not only grant them access to a faster future, you grant us normal people a faster life in space. Please do not keep restraining what needs to be progressive. -Kevin

Any delay to the progress to a unique project the likes at Starbase Boca Chica takes away the chance to make humans a multi-planetary species and guarantee consciousness throughout the cosmos. Any delay or further hindrance may benefit rival countries to reach Mars first. Although perhaps that should be just as good for humanities future either way. Any environmental concerns should be made on a national / global scale. Through sustainable development, through green growth by harnessing solar, wind, gas, waste management though recycling, ban of plastic bags etc2. Let the folks at Starbase do what they do best and get us of this rock on a rocket 🚀 Just my 2 cents, peace 🙌

As a young Australian space enthusiast, I strongly believe that if the SpaceX program were to shut down it would be a tragedy for not just the people involved and the supporters, but also our future, SpaceX is taking steps into the space industry that no other space company is taking, these steps could quite possibly lead to a more advanced and possibly interplanetary future. The things that SpaceX is doing are amazing things that young and old people should be looking up to/ looking forward to. So if I do believe that the FAA should not shut down the SpaceX program, as that would devastate millions and be a disappointing move for the FFA to take.

Sir/Ma'am Good day! As a child growing up in a third world country I was in awe after watching a movie about about NASA and some astronaut who made a journey to space and make it back to Earth. I told my dad that I want to be an astronaut, he answered that it was an expensive dream to achieve. I don't know if someone's voice from half across the world matters but SpaceX Starship"s will pave the way too many young dreamers out there. As they progress their space craft Starship it'll open up more opportunities to make space travels, being an astronaut less expensive. Hoping you'll grant SpaceX to do their many Starship testing in the future. Acelyn V.

Hello Federal Aviation Administration & Senator Buttigieg, Thank you for the exceptional work, guidance, & regulation of the skies. I read the report, and am impressed with very detailed, thorough report. Creating and regulating new cities seems to be an incredible job especially in the coming future. Having a fair, and experienced view as government officials, you should feel strong in whatever decision you make about the environmental impact regulations with Starbase. I love working with Mr. Musk, I know he'll do an amazing job, & I would love to start an amazing new media future with a main point at Starbase. I also have plans and am looking forward to running for office in the future myself, the relationship one develops are important for a thriving career and life. I look forward to hearing what you choose, thank you so much for looking after the safety of our Earth. Thank you so much for your exceptional work. Best, Respectfully, Vidas Kulbis

My general view is that SpaceX should be allowed to continue with their Starship/Super Heavy program in Boca Chica. Environmental protection, and mitigation of environmentally negative aspects of SpaceX's program in Boca Chica should be maximized while not stopping or significantly hindering the program in terms of the granting of licences and permits. As a general principle, negative environmental consequences of SpaceX's Boca Chica operations should be balanced with the positive effects of the program (as required by Section 50905 of the Commercial Space Launch Act of 1984) through mitigation, substitution, and ultimately — compromise where necessary. Compromise and mitigating strategies should be explored regarding the adverse effect findings, for example that certain historical properties may be damaged by high sound level vibrations. The negative effects of increased visitors to launch operations needs to be balanced by the value inherent in the unique nature and promise of the Starship program. NASA's extensive and long-term experience operating in the Cape Canaveral area should be drawn upon to inform the FAA's assessments in this regard. Regarding the natural gas power plant and the pollution it would generate. I'd like to see the power production of such a plant (sans that for methane rocket propellant production) be replaced by a larger solar farm. I would also like to see the possibility of a wind farm (windmills) being explored to supply power to the program. I would support expanded battery capacity or other forms of power storage to buffer the effects of the intermittent nature of wind and solar. I would like to see this happen even though I'm aware of what the report says in section 3.3.4.2 that "the ground processing activity emissions are estimated to have minimal air quality impacts." Regarding the Visual Effects section (3.6). Visual effects are, it seems to me, overwhelmingly subjective. For example, this sentence is the inverse of the actual situation, which seems to imply a degradation in my opinion: "The addition of new structures, such as the integration towers and the launch vehicle, may affect the nature of the visual character of the area, including the uniqueness, and the aesthetic value of the nearby public lands by adding tall structures to the landscape." A more realistic sentence (admittedly from a different perspective) would read: 'The addition of new structures, such as the integration towers and the launch vehicle, may affect the nature of the visual character of the area, injecting a new and unique element into the landscape that wasn't there before, enhancing the aesthetic value of the nearby public lands by adding tall structures to the landscape.' I also disagree with this sentence, found in section 3.7.4: "The Proposed Action also has the potential to result in adverse effects from visual impacts associated with Starship/Super Heavy launch operations and associated infrastructure." I would re-write it this way: 'The Proposed Action also has the potential to result in positive effects from visual impacts associated with Starship/Super Heavy launch operations and associated infrastructure.' The reason for the word change from "adverse" to "positive" is that it would be cool (wonderful) to juxtapose the past and the present/future in the way described...from the perspective I, and many others, have on this topic. If there is a segment of the population that feel the visual impact would be "adverse", the advised mitigating action would be to avert their eyes. That way, everybody wins. It is not clear from this draft what the ultimate outcome of the Biological Assessment will be regarding the terrestrial species mentioned. My view is that some sort of compensatory action should be undertaken by SpaceX to balance out any unavoidable detrimental effects on endangered species if mitigation actions are not sufficient.

Please allow SpaceX to launch their tests from Boca Chica. Please allow their launch tower to do its work. NASA wants to go to the moon, and if we don't get there soon someone else will. SpaceX is the fastest way to put Americans on the moon to stay. Please let it happen.

Subject: Support of SpaceX Boca Chica

Hello:

I want to pledge my absolute support for the SpaceX launch site in Boca Chica, TX.

I currently own a home in Port Isabel, TX that I specifically bought to watch launches from the house. Not in the least bit am I worried about explosions or any noise related to launches. I'll note that I'm about 5 miles from site.

I've watched home values rise here as demand has increased dramatically since launch activity began. The economy in Brownsville, Port Isabel, and South Padre is seeing a boom right now and it's all because of SpaceX activities. Brownsville and surround areas are some of the poorest counties in the country, and SpaceX has brought new life to them and given locals the opportunity to earn excellent wages that they normally wouldn't have a chance to earn had SpaceX not picked Boca Chica for its launch site.

We've seen SpaceX donate millions to the local communities for revitalization, volunteer in the community, and partner with local universities in effort to support the communities around them.

I've heard a lot about environmental impacts the site may have, but I'll mention like others have, that the overall footprint is small compared to the vast wetlands surrounding the launch site. We have to remember that every road, home, building, shopping mall, etc was built on nature's land or was at one time part of an Indian tribe. To advance our country and humanity, we've had to use these lands throughout the years. What SpaceX is doing in Boca Chica is no different.

The Starship testing SpaceX is doing not only helps us make humans multi-planetary, but it also makes us more secure as a nation since these Starships may also be used by our military for rapid transport of equipment.

There is a long list of benefits to allowing this project to continue, so we beg you to let them proceed with construction and launch activities.

Thank you,
Clint Galloway

Cc: SpaceXBocaChica; [REDACTED]
Subject: BOCA CHICA SpaceX PEA

QUOTE from Space X founder, Elon Musk, in a tweet *“My plan is to use the money to get humanity to Mars and preserve the light of consciousness”* (as quoted in associated Press article, ‘Stupid’ and ‘insane’: Some billionaires vent over tax plan’ Hadera, October 29, 2021).

Dear Ms Zee,

From Mr, Musk’s own words, one can see he cares NOTHING about our planet or our Boca Chica environment!

I am writing to provide comment on the FAA’s Draft Programmatic Environmental Assessment for the SpaceX Starship Super Heavy Project at the Boca Chica Launch Site. I am very concerned about the current state of development and activities which have already had major negative impacts and which were never evaluated in the original EIS, making this new plan to EXPAND that activity and infrastructure even more alarming. The Boca Chica area, including the Lower Rio Grande Valley National Wildlife Refuge, several Texas State Parks and the South Bay Coastal Preserve – is an ecological gem, yet it is being treated by SpaceX as if it were a wasteland. This expansion plan essentially seeks to sacrifice a publicly-owned natural resource area of hemispheric importance for a private company. I just read an informative article by the American Bird Conservancy, and the following quote is quite alarming:

“The American Bird Conservancy (ABC) is deeply concerned about the facility's impacts on wildlife habitat and species listed under the Endangered Species Act (ESA), including the federally Threatened Piping Plover and Red Knot, and the Endangered Northern Aplomado Falcon...The SpaceX facility in Boca Chica is surrounded by federal and state public lands used by hundreds of thousands of individual birds of many different species throughout the year...”

Boca Chica is an especially vital place for migratory birds that pass through there to rest and refuel so they can successfully continue and complete their migratory journeys. Also, the area contains all five seagrass species that occur in Texas, mostly fringed by dense and probably the most well-established stands of black mangrove in the state. These stands of mangrove also have considerable importance to nesting waterbirds, such as the Roseate Spoonbill. The Piping Plover, listed as Threatened under the Endangered Species Act, is one of the many species being negatively impacted by the ongoing construction of the SpaceX Starship Super Heavy Project and launch site. According to a recent analysis, the population of Piping Plovers has declined by over 50% at the site in only three years since the onset of testing and launch activities. This is an alarmingly rapid decline for a species that is already under increasing risk of extinction.

An **objective Environmental Impact Assessment** should be made:

- To address cumulative impacts that have yet to be recognized by the Federal Aviation Administration and SpaceX, such as fuel transport and storage at the facility, as well as massive proposed infrastructure projects including a 250 MW power plant, a natural gas plant and liquefier, and a desalination plant.
- A launch failure analysis should be part of the Environmental Impact Statement (EIS) to assess the risks to public safety and risks to the proposed infrastructure and operations at the Port of Brownsville and off-shore.
- The Federal Aviation Administration should examine more alternatives, rather than just the “all or nothing” alternatives. One of the other alternatives that should be included is moving the testing of Super Heavy to a designated large rocket testing site, such as Provo, Utah or Stennis AFB in Mississippi. The latter is where the Saturn V rocket was tested, and where the Space Launch Systems (SLS) rocket is currently being tested. Another alternative should include launching Super Heavy offshore or from Cape Canaveral.
- The Clean Water Act, Section 404 specifies the consideration of alternatives to the proposed action of filling or dredging of wetlands. SpaceX has provided no alternatives or other measures necessary to protect public health and safety.
- Construction is anticipated to permanently fill 17.16 acres of wetlands, and the filling of 25.8 acres of floodplain. No alternatives or mitigation has been provided by SpaceX.
- The Draft Programmatic Environmental Assessment mentions that noise and shock waves (far-field overpressure) may break windows on SPI and Port Isabel. If that can happen 5 miles away from the launch site, what will be the effects on birds, reptiles & small mammals that are a half mile or less from the launch site? The launch site is surrounded by national wildlife refuge and state park land.

With these and many other serious concerns in mind, I therefore must ask why is the SpaceX Starship Super Heavy Project and launch site being expanded, even though some of the infrastructure has yet to be approved by the Federal Aviation Administration (FAA). This is not a suitable site for such a volatile and damaging industry to operate. Now that this site is no longer out of sight and out of mind, I ask that the **FAA NOT approve** this proposed SpaceX expansion scheme. Instead, I ask that the FAA move to better regulate and greatly reduce operations there so that they abide by the original approval stipulations which SpaceX has sadly repeatedly violated without sufficient repercussions.

Awaiting Your Prompt Response,

October 29, 2021

Ms. Stacey Zee
SpaceX PEA
c/o ICF
9300 Lee Highway, Fairfax, VA 22031
[REDACTED]

Dear Ms. Zee,

The Nature Conservancy (TNC) appreciates the opportunity to comment on the Draft Programmatic Environmental Assessment (PEA) regarding planned expansion of SpaceX facilities at Boca Chica. While we are impressed with SpaceX's ambitious commitment to space travel, TNC is concerned about the scope of negative impacts caused by both current operations and the planned Starship/Super Heavy Program at SpaceX's Starbase facility and Vertical Launch Area (VLA) at Boca Chica. We question whether a PEA is adequate to address the full scope of impacts (both direct and indirect) to Boca Chica's unique and highly productive natural environments, which have been conserved through substantial public investment and should not be compromised for a private enterprise. We strongly urge that a complete Environmental Impact Study (EIS) be conducted that evaluates all impacts of SpaceX's planned activities on wildlife and on terrestrial, estuarine, and marine habitats.

TNC has participated in conservation at Boca Chica for almost three decades. In 1992, we assisted Texas Parks and Wildlife Department (TPWD) with the purchase of Boca Chica State Park property which adjoins the VLA. In 1999, TNC assisted the U.S. Fish and Wildlife Service (USFWS) with acquiring an additional 11,950 acres at the mouth of the Rio Grande which was added to the Lower Rio Grande Valley National Wildlife Refuge. This land now surrounds the Starbase facility. While its isolated and undeveloped character makes it desirable for SpaceX operations, this area was preserved to protect its fragile ecosystem, which has one of the largest concentrations of rare and endangered species and natural communities anywhere in Texas. In 1999, TNC purchased the 1,370-acre Southmost Preserve a few miles upstream on the Rio Grande, which we own and manage to demonstrate successful restoration techniques of native vegetation to contribute to the rich biodiversity in the Brownsville/Lower Rio Grande Valley area. In 2000, TNC acquired 25,000 acres on South Padre Island which is now part of the Laguna Atascosa National Wildlife Refuge. Finally, in 2018, TNC acquired over 2,000 acres of coastal prairie, loma thornforest, and tidal flats added to the Bahía Grande unit of Laguna Atascosa. We advocate protection of more undeveloped habitat in this unspoiled landscape which is under threat from the area's continued rapid growth.

We are concerned that the impacts of SpaceX's existing operations and planned future expansion may permanently affect and impair conservation values for which these lands were established. We believe that the PEA does not fully evaluate all potential impacts on the diverse resources at risk or present an adequate suite of alternatives that could potentially reduce the impacts of SpaceX operations on the surrounding ecosystem. The PEA presents only two alternatives, a No Action alternative and a single Proposed Action alternative of issuing new permits or licenses to the various elements of SpaceX's proposals. Of those two, TNC prefers the No Action alternative, and we suggest limiting activities at the VLA to only operations addressed in the 2014 EIS. If SpaceX plans to continue to develop the more

extensive Super Heavy/Starship Program at Boca Chica, a full accounting of direct and indirect impacts and a new Environmental Impact Study are warranted which should consider additional alternatives and recommend appropriate mitigation measures.

Boca Chica is one of the most sensitive natural areas in the state of Texas and the southwestern United States – a place where numerous species and habitats important to the public overlap and cooccur. The intersection of the Rio Grande, the region’s largest river, and the Laguna Madre, the world’s largest hypersaline bay system, creates a highly unusual mosaic of habitats including expansive wetlands of mud and algal wind-tidal flats, coastal prairies, Tamaulipan thornforest on clay dunes (lomas), barrier island dune grasslands, and Gulf beaches. The diversity and remoteness of these environments makes Boca Chica an important habitat for federally endangered species including piping plovers, red knots, sea turtles, and occasional ocelots and jaguarundis. The lower Laguna Madre is also vital habitat (significant at continental and hemispheric scales) for wintering waterfowl including large numbers of important game species, as well as migrating shorebirds and wintering raptors. The PEA recognizes this diversity by enumerating numerous species of greatest conservation need potentially inhabiting the project area.

TNC is concerned that the direct and, especially, indirect impacts of planned SpaceX operations on these habitats were not evaluated and cannot be fully mitigated for under the 2014 EIS. The seven-year-old EIS contemplated a very different scale of facility and activities – up to 12 launches annually of proven and tested rockets for which explosions (or “anomalies”) are rare. The Federal Aviation Administration (FAA) recognizes that current operations are a substantial departure from those considered in the 2014 EIS; however, SpaceX was permitted to proceed with these operations after only completing internal programmatic reviews. Additionally, the public was not permitted to comment during the review process. Since 2014, Starbase has become a center of operations for testing rockets far more powerful than those evaluated in the original EIS; explosions have occurred and polluted wind-tidal flats with debris and potentially harmful substances. The greatly expanded scope of operations at Starbase and the VLA warrants a new and complete EIS process through which FAA and SpaceX can engage the state and federal agencies and the public in addressing concerns and mitigating ongoing impacts. In addition, the following specific items should be addressed:

- Impeding public and official access: SpaceX has proposed up to 800 hours of closures (500 for testing and 300 for debris removal) of State Highway 4, the only access road to several thousand acres of public land as well as the popular Boca Chica Beach. This is a significant increase over what was originally approved. These closures have already significantly curtailed access to parks and refuge lands, limiting access for land management and research – including USFWS-permitted research to assess biological changes that may result from SpaceX operations. The extent of interruption and hindrance of the refuge’s ability and responsibility to access and manage their properties in accordance with their mandate constitutes a “constructive use” of Section 4(f) lands – an assertion which has been made repeatedly by the affected agencies and with which we agree.
- Loss of recreational enjoyment: The excessive closures of State Highway 4 have denied public access to a public beach. Boca Chica is frequented by local citizens, particularly Latino families with limited access to other recreational lands. The frequency of beach closures for a private enterprise is inconsistent with provisions of the Texas Open Beaches Act and the Texas

Constitution which protect Texans' right to access state-owned beaches. The analysis of alternatives proposes that local beach users can join the multitudes who visit South Padre Island. The local Boca Chica beach is more accessible to Brownsville-area citizens and much less crowded, and provides a very different, family-friendly experience than South Padre Island beaches.

- Conversion of wetlands: The PEA claims that loss of upland and wetland vegetation and habitats due to direct impacts are “self-mitigating” due to “habitat available in the Lower Rio Grande Valley.” This conclusion does not adequately value the irreplaceability of habitats at Boca Chica. Mitigation for SpaceX’s planned conversion of 31.6 acres of wetland and upland habitats to impervious cover must address not only direct loss of those wetlands but impacts to hydrology and morphology of surrounding habitats.
- Environmental effects of explosions: Explosions resulting from rocket tests have impacted resources on state-owned and federal-owned public lands and waters, both directly and through debris recovery activities. These impacts of SpaceX operations are considerably beyond what is presented in the PEA.
- Threats to federally protected species: SpaceX launches are immediately adjacent to state and federal lands set aside for protection of a number of threatened and endangered species. Some potential negative effects of launches and tests on terrestrial and estuarine habitats include noise pollution, greatly increased vehicle traffic, day and night operations, towering infrastructure, and lighting. Construction of Starbase facilities (e.g., the planned desalination plant) may additionally affect salinity and turbidity of marine habitats used by sea turtles. All these activities may negatively affect animal populations in numerous ways, including causing abandonment of habitat set aside by the public explicitly for their conservation. For example, surveys carried out by Coastal Bend Bays and Estuaries Program researchers indicate a precipitous decline in abundance of piping plovers on tidal flats surrounding SpaceX operations (2018-2021). SpaceX should work with agencies and researchers to ensure that monitoring of all listed species is conducted to accurately assess downward trends and inform mitigation actions. Mitigation for these species must match the scale of the impacts of SpaceX’s operations.
- Noise impacts to wildlife: The noise addendum in the PEA associated with test and launch operations does not analyze sound level impacts. There is no analysis or even conjecture as to how noise levels will affect wildlife. Comparisons to data at Cape Canaveral may not be applicable due to the unprecedented size of Super Heavy rockets. The PEA also fails to address seismic effects on the environment, particularly to benthic communities in tidal flats. Benthic communities are key parts of food webs that sustain thousands of migrating shorebirds that pass through this ecosystem.
- Effect of carbon dioxide emissions: The project is expected to emit 47,522 metric tons of carbon dioxide per year. The PEA does not address this impact. Considering the massive emissions associated with current operations, the drastic increase in emissions expected from a major expansion of testing activities (and rocket size) warrants a thorough analysis vetted by agencies and personnel with sufficient expertise.

- Assessment of other planned infrastructure: A 250 MW power plant, a natural gas plant, and desalination plant are now contemplated in addition to the operational expansion. Each of these projects alone could potentially warrant an EIS. In short, only through a full EIS can all these projects be fully evaluated, and their impacts and mitigation requirements properly assessed. FAA's tiered approach indicates a failure to recognize the magnitude of potential impacts.

Although the PEA states that both state and federal natural resource agencies have been consulted throughout the modifications, agencies with regulatory authority over water and air pollution – the U.S. Environmental Protection Agency (EPA), National Marine Fisheries Service (NMFS), and Texas Commission on Environmental Quality (TCEQ) – should also be included as participants.

The PEA does not indicate whether the FAA will solicit additional public input during programmatic reviews or written reevaluations. The public deserves to have a voice and be kept informed of all aspects of the projects and of FAA's decisions as these impact public lands, protected habitat and public access to public roads and beaches.

The Nature Conservancy has spent over 30 years partnering with USFWS, TPWD, other agencies and conservation groups, and the local community to protect Boca Chica and its mosaic of habitats. This work was funded or leveraged using public dollars and resulted in lands available for public recreation, education, and enjoyment. The impact of SpaceX's operation to these lands and natural resources has been and will continue to be significant. As a company whose mission is to explore and appreciate the vast resources of the universe, SpaceX must understand and recognize that the species and ecosystems adjacent to the Boca Chica facility are some of the rarest on this planet and deserve due consideration, including detailed planning for mitigation and monitoring to ensure the continued survival of these vital species.

If you would like to discuss these comments further, please contact me through email at [REDACTED] or call [REDACTED]

Sincerely,

Suzanne B. Scott
Texas State Director

Subject: Comments on Draft Environmental Review of SpaceX Starship/Super Heavy Program

Dear Ms. Zee,

In response to the request for comments from public on the Draft Programmatic Environmental Assessment for the SpaceX Starship/Super Heavy Launch Vehicle Program (Draft PEA), I, as a member of public, would like to offer my comments as follows :

SpaceX has been an inspiring model for sustainable progress, with the goal of making humanity a multi-planetary species. It is currently our best shot at becoming a spacefaring civilization, the significance of which increases manifold as a risk management plan for humanity in the face of the difficulty in mitigating the impacts of climate change around the world, in spite of our best efforts, and other existential threats to our planet.

After reviewing the Draft Programmatic Environmental Assessment, the following points stood out to me :

- 1) The proposed plan has no significant impacts to air quality, and emissions are not expected to exceed the National Ambient Air Quality standards.
- 2) The cumulative noise in the surrounding communities is estimated to be below the levels associated with adverse noise exposure.
- 3) The Memorandum of Agreement will mitigate any potential to adversely affect historic properties.
- 4) Night-time light emissions and visual presence of launch related infrastructure & vehicles are an expected part of this program, and more importantly, have no impact on the environment. This should be nothing but a minor inconvenience, considering that the presence of SpaceX has been a catalyst for substantial economic growth in a previously underdeveloped area.
- 5) The filling of wetlands and floodplains will be mitigated through SpaceX's Clean Water Act.
- 6) Any potential effects to endangered species will be mitigated through the Endangered Special Act Consultation process.
- 7) No adverse effects to any listed species and cultural habitats under NMFS (National Marine Fisheries Service) are expected.
- 8) The proposed program is consistent with current and existing land uses at the Boca Chica Launch site and only temporary, expected impacts on access and availability of certain properties are expected.
- 9) Last but not the least, there are no significant impacts related to children's environmental health or safety due to the program.

Any stated opposition to the program seems to be based on uninformed emotion based arguments, rather than logic. The increased demand for workforce, higher revenues and increased per capita income in the local area, has in fact, led to an improvement in the regional economic health status. This is in addition to the tax revenue collection and increased tourism to view launches that generate additional revenues, which can have an improved positive economic impact on the efforts by non-profits & authorities toward preserving the natural ecosystem, than was previously possible.

Considering the facts above and SpaceX's stated commitment to creating an ecological oasis by going above and beyond the recommended environment restoration measures, I request you to approve the permit/license application for the SpaceX Starship/Super Heavy Launch Vehicle Program at the earliest.

Regards,

Tina Sebastian
Lewis Center, OH

Subject: Concerned citizens

The SpaceX project has already proven to have harmed our wildlife in the last two years. We cannot bring back species of birds or animals once they are gone and SpaceX has done nothing to deter this from happening. They keep adding on and on to their project without getting FAA approval and have disregarded ethics and protocols along the way in regards to our wildlife and other issues. Our beach is no longer our beach-it is being controlled and slowly taken away. Within 5 years I predict we (residents of Cameron county) will no longer be able to have access to it. SpaceX is already changing the name to that area and trying to change the surrounding street names as well. All this happening now was not part of the agreement when they first showed up. Or maybe it was, and the public was not privy to its secret future plans. The harm it brings , for many reasons , outweigh any benefits.

Concerned citizen,
Michelle Cavazos 10-29-21

Subject: Elon Musk is a colonizer

Dear Federal Aviation Administration,

I am writing in opposition to SpaceX's proposed Starship/Super Heavy Launch Vehicle expansion project on Boca Chica Beach.

The SpaceX expansion project would be incredibly detrimental not only to the wildlife habitat and wetland ecosystems around it, but to the nearby communities of Brownsville, South Padre Island, and Port Isabel as well.

This project will require a massive scale of new industrialization that includes a rocket launch pad, gas power plants, desalination plant, gas drilling, and more near residential communities, between wildlife refuges, and at a public beach. Not to mention, the explosive rocket launch operations are less than six miles away from two highly flammable proposed liquefied natural gas (LNG) and a pre-existing gas pipeline.

An accident on the scale of a Starship/SuperHeavy launch vehicle would be a devastating catastrophe for the Laguna Atascosa Wildlife refuge, the Lower Rio Grande Valley Wildlife refuge as well as for nearby communities of color and endangered species like the ocelot and aplomado falcon.

At the very least, the FAA should conduct a comprehensive Environmental Impact Statement because of the size and scale of SpaceX's new launching operations. This Environmental Assessment is extremely inadequate, because it only evaluates an "initial mission profile," and does not address:

1. The FAA's claims that SpaceX's mission is to launch larger rockets in pursuit of National Space Policy goals, which were updated by Trump in 2020. These policy goals should be evaluated by the new Biden Administration, and actually reflect whether space exploration is in the interest of the public rather than private corporations seeking to profit.
2. The already damaged land and wildlife that SpaceX has already caused, in addition to the new plans that will permanently destroy acres wetlands and floodplains,
3. SpaceX's rocket launching schedule results in beach closures that would further strip away people of color's rights to fish and recreate at Boca Chica Beach by up to 800 hours per year, about an entire month.
4. Elon Musk, using his social media platforms to attract outsiders to displace a historically marginalized community. Already, longtime residents are being forced away from their beach and homes, and it doesn't help when outsiders, attracted by Elon Musk and his social media presence, displace residents by moving here or soliciting comments and opinions from people who've never even been to the region.
5. SpaceX has never consulted with the Carrizo/Comecrudo Tribe of Texas, who have ancestral ties to the region, about operations. Under the United Nation's Free, Prior, and Informed Consent, SpaceX should not be authorized without consultation and consent of the Tribe.

Additionally, the FAA should have to redo its regulatory process to accommodate the Spanish-speaking population because the public hearings and materials are not translated.

About 80% of the Rio Grande Valley community, which is directly impacted by SpaceX, speaks primarily Spanish at home. The FAA should not allow SpaceX to continue to expand to launch the Starship/Super Heavy project at Boca Chica Beach

because the potential for further wildlife and land damage along with the potential explosions it could cause is just not safe for the residents of the area and is not safe for the environment.

Sincerely,

Courtney Naquin

Subject: FAA and SPACE X - WE NEED SPACEX

Dear FAA please let Space X launch Starships in to orbit for the continuance of existence of mankind to make this planet more stable from projectiles hitting the Earth. Starship can easily aid in building bigger and better Space Station for our sustainability, research in better medicine and materials. Also we need Starships for Space Force! United State of America needs to stay ahead of all foreign country's in space or we will never make it for all mankind on this planet or any where else in this galaxy.

I would like to voice my opinion of approval for spaceX at Boca Chica, The upcoming Orbital Launch attempt, and the Starship program in general. With concerns to the environment, Elon Musk has an excellent track record for going above and beyond to ensure the stability and care of the environment. Best example: Tesla. And all it has done to accelerate electric vehicles and clean energy storage and production. Space X will be no different. Starship represents a huge leap forward in lowering cost and increasing capability in space in general, but also to ensure America remains as the leader in technology. If space X is held back by regulations, America is held back in technological superiority. Government should be helping, not hindering, the progress of a technology that can help America and overall help humanity.

Regarding the environmental concerns regarding SpaceX. In my opinion, there are far worse atrocities going on around us that we take no notice of because it's not in our backyard. Cutting down the rainforest to drill for oil is fine but developing science to make humans multi planetary is suddenly a problem. We must think of the future and the benefits space can and will bring for us on earth. As long as relevant measures are taken to not damage the habitats around Boca Chica then I say let it fly!

Dear FAA, Please require a complete EIS from SpaceX before allowing them to move forward with their plans that are covered in the current draft PEA. The draft PEA leaves out too much information that should be detailed. For example, a power plant is mentioned only in passing. The Clean Air act amendment of 1977 labels this in its "Major Sources of Emissions" which subjects it to extra scrutiny that is not completed with merely an EA. A cooling tower is mentioned twice in passing. A cooling tower this size would require hundreds of millions of gallons per year, but the PEA clais the entire project will consume 5.4 million gallons/year. Also, the USFWS refuges that surround SpaceX property were created there in the 1980s to protect fragile soils and habitat for species that are (now at least) protected, such as piping plover, red knot, all 5 species of sea turtles (Kemp's Ridley is the most highly endangered, and they have been documented nesting on the Boca Chica beach), cat-eyed snake, Texas tortoise, indigo snake, and ocelots, among many others. The loma landform/vegetation that exists there is only found in 4 counties in Texas and nowhere else in North America. Birds simply can't go somewhere else; an equivalent doesn't exist. When SpaceX explodes a rocket, which happens regularly, they have to retrieve all the pieces of the neighboring USFWS and TPWD lands by dragging it out across the sand. They are raining pieces down from the launch site all the way to South Padre Island. They have already caused reductions in the bird populations at Boca Chica beach, and this is with the smaller rocket they launch. The larger rocket will be loud enough to deafen animals nearby. They own no buffer, such as was purchased by NASA when they built Cape Canaveral. The launch site for the Super Heavy is right at the edge of the SpaceX property. SpaceX has ignored rules they already agreed to, such as being limited to launching 1 day per month, only during daylight hours, driving 35 mph down the road, etc. You warned them not to build the tower for the Super Heavy until the PEA was approved, and they did. You (FAA) have been completely impotent in this process even though USFWS has submitted many documents to you detailing the problems they are creating for wildlife and its habitat. Do the right thing for wildlife and for taxpayers who have been supporting public lands for years! Terry Hanzak Kingsville, TX

SpaceX are the ONLY option for sending humanity to a different world. SpaceX are not doing this for profit (unlike Besos and Branson), they are doing this for humanity. We WILL need this type of technology in the future, and to leave it to NASA is unviable, as we would all be extinct before they get off the ground. As regards Co2 emissions, this would pale into insignificance compared to Russia, China USA and Arab states. As for ecology, the way the climate is changing, they won't be around much longer either. I for one can't think of a better development for the future of mankind. SpaceX deserves support, not red tape and bureaucracy. Regards
Simon Hainsworth

Every step forward comes with a cost, as an African scientist obliged to do commerce to provide for my family, i understand that humanity safety comes first. But, the space X situation is different, FAA must see the big picture, from The Congo we are very hopeful for the dream of an amazing future across the milky-way. What NASA, ESA, RosCosmos and recently the Chinese SpaceProgram are doing is not only for them but for humanity. As a private company, SpaceX is the key to that glorious tomorrow. We would like FAA to be comprehensive of the fact that time is running fast, we need this orbital test to take place so it paves the way for ARTEMIS and Mars missions. Thanks a lot for the amazing job you're doing to ensure Humans are safe from accidental flights. God bless America and the World.

Starship and Superheavy are the only rockets in development that have a chance of becoming Environmentally sustainable. As a Permaculture Designer, it's my job to know how this can happen and I would be overjoyed to share that knowledge. E. Musk's drive to encourage more Engineers, the transparency of SS development, the relationships that he's developed with the local people in BChica - these matter as much as the overwhelming optimism which the development and it's potential imbue. Us futurists have been waiting over 25 years for EXACTLY what E Musk is building. Finally humanity is moving forward again, where it's been almost completely stagnant and in the control of people who don't want us to be exploring space. FOR THE SAKE OF ALL OF US, SUPPORT STARSHIP. WE'RE SENSIBLE, GET (SOME OF :) US OUT OF HERE!

Please approve SpaceX launch site at Boca Chica for upcoming Starship launch tests. The success and advancement of this program is important to NASA return to the Moon program (Artemis). This is also critical because China is advancing rapidly with their space program. Clearly the potential for benefit far outweighs any risks associated with these unmanned launches.

LET STARSHIP LAUNCH!!!!!! I hear people are trying to stop human progress because of some environmental concerns. If you stop SpaceX for these reasons then I suggest you ground all aircraft in the sky and ban them from taking off again as they pour carbon directly into the atmosphere. Also they are at risk of crashing into some wildlife sanctuary somewhere on the Earth at any time. You see how ridiculous it is to restrict one company with a pretty small footprint compared to commercial airlines around the world? Thanks for reading

Please give SpaceX permission to launch their game changing new rocket Starship/Superheavy. They are literally trying to save humans by getting us onto more than only one planet. We don't yet know when we will need that, but one day we will or face extinction. But even more important, about the environment: SpaceX's project here will open up much cheaper access to space, enabling us (humans) to step by step put industries into space that would otherwise harm our precious planet earth. Things like asteroid mining will enable us to stop mining certain resources on earth, so we can stop destroying nature to get to those resources. It all will be a long process, of course. But someone has to start somewhere. And SpaceX is going full steam ahead right now, bringing humanity forward in an unbelievable pace. Wasting this huge opportunity by forbidding it to them... That would be a shame. So please allow them to continue their process and help them to be as fast as they can!

Hi, it is my belief that SpaceX should be allowed to proceed with all testing at Boca Chica Texas site unimpeded. Humanity's interplanetary future at this time depends on it, and without the drive that Elon and SpaceX deliver I fear it may never happen. Please approve the launch tower and approve the orbital launches.

SpaceX's orbital Starship development program at Boca Chica represents the single most important advance in US space technology since the Saturn 5 program and Kennedy's mission statement about putting a man on the moon in May 1961. SpaceX has demonstrated that it is pushing the frontier of space technology in a responsible fashion while systematically overcoming the technical and safety challenges posed. The FAA is right to play an oversight role in the process but should not delay the SpaceX timeline as long as the company continues to demonstrate that it acts responsibly. Thank you! Markus F. Robinson, Tunkhannock, PA.

The following comments are given in regards to the FAA's "Draft PEA for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas" so that the FAA's final determination on it's content and comments can be completed. The first comment I want to make regarding the FAA's Draft PEA for the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas is that I fully support this SpaceX program entirely. The reasons I have in supporting the entire Starship and Super Heavy booster project is that these particular vehicles have very important role in providing this country with a new class of heavy lift and large payload capable space vehicles which will not only be instrumental in achieving NASA's and this countries goal of reaching and landing on the Moon and setting up a continuously manned base there, but will also make possible any newer and even larger projects in the future. In regarding the Socioeconomics of having SpaceX's operations in Cameron County, Texas, I want to comment on the positive aspects of having SpaceX manufacture and launch its Starship/Super Heavy Launch Vehicle system in Cameron County, Texas. Much like any of this nations other rocket manufacturing and launching facilities, SpaceX's operations as a whole will provide the Cameron County community with an economic boost by providing more employment opportunities for all who live there. As of now, I've read that SpaceX employs over 500 people at it's Boca Chica/Cameron County location, and as the Starship and Super Heavy Booster program advances there will be even more employment opportunities for the people living in and around Cameron County, not only in working for SpaceX itself but within the community at large as well. And the Cameron County community has already recognized the higher standard of living that SpaceX's operations have brought them. Also, the Cameron County community will gain a sense of pride in knowing that their community is contributing to this nation's important Artemis space program along with any future missions. And since SpaceX's Boca Chica facilities in Cameron County now only works towards the success of their Starship and Super Heavy Launch Vehicles, which includes all the supporting facilities that is needed to build and test these vehicles, the economic consequences of lengthy delays or a complete shutdown regarding SpaceX's operations would cause undo harm to the Cameron County community, as well as this nations planned projects regarding the moon and beyond, so its imperative that the FAA issue whatever permits or licenses needed to keep SpaceX's Starship and Super Heavy booster program going forward as planned. I do want to comment on the fact that SpaceX's operations in Cameron County, Texas utilizes a very small area within the coastal wetlands of Texas, so any harm to the environment and wildlife would be slight, if at all. SpaceX has already contacted and is working with several agencies to help mitigate any possible harm to the area's environment and wildlife in both the area occupied by SpaceX's facilities as well as the surrounding area, and as an example, there was an article posted online which told of SpaceX employees being trained to help sea turtles that are dazed from the cold so they wouldn't perish. SpaceX also scans the beach areas before and after a launch to insure the safety of sea turtles. Sea Turtle Inc. a local organization is 'not concerned' about SpaceX activities in the area. I'm quite sure SpaceX will be a good steward to the land and wildlife surrounding their facilities, even with the growth that is planned within the facilities boundaries. Also, I believe a final comment regarding Americans slogans is needed now. Ever since the 50's we have known ourselves to be the "America First" nation and the "Can do" nation, which were both coined, I believe, during the space race between America and Russia. These two slogans boosted America's moral then, and now, during this time of political turmoil and our facing the Covid-19 pandemic everyday, I would not like to lose title to those American slogans and we certainly don't need another

hit to our countries moral. It's my contention that when SpaceX finally gets successful in launching and landing it's Starship and Super Heavy Booster spacecraft, we Americans will applaud this achievement by knowing how important this occasion is in getting America back to the moon through NASA's Artemis program, and America will be able to keep that "America First" attitude as this nation finally lands on the moon once again. In making these comments and for these reasons I ask the FAA to declare a finding of "No Significant Impact" regarding the SpaceX Starship/Super Heavy Launch Vehicle Program at the SpaceX Boca Chica Launch Site in Cameron County, Texas. Thank you. Lawrence Curtis

I fully support space x and Elon Musk. Space x should be able to proceed with the development and launches of their ever evolving spaceport and space programs. Elon Musk has demonstrated throughout the years his commitment to being environmentally friendly, community minded. I do believe he has benefited very community he has set up in by providing jobs and injecting money into the local economy. I'm boca chicka I do believe his company helped save a lot of sea turtles recently during a cold snap. He cares about the environment. The road closures and noise may be an inconvenience for some who like to frequent the beach but the impact on the community as a whole outweighs that. There are a finite number of locations suitable for space launch in our country and I would hate to see such an amazing company move across the border because of a few naysayers. The work this company does benefits the entire country. And in fact this country will be left behind in the new space race as country's like China catch up and start surpassing our capabilities. Nobody in the USA is even close to what SpaceX has and will accomplish not even NASA. If it wasn't for Elon musk we would still be pathetically asking for rides from Russia. Please don't delay or set back the time schedules of space x. Let's work together to help them move forward for the benefit of all mankind. The United States should always be the leader in space for our security and science.

As a Wildlife educator, and a Texan, I can say that the FAA should approve activities and future testing at the SpaceX Starbase facility in Boca Chica. I understand the FAA is evaluating the environmental impact. The FAA can look at Cape Canaveral to see exactly what kind of positive environmental effects the Starbase will have. Much like Cape Canaveral, a new Spaceport facility along the coastline in Texas will help to insure that construction along the coast will have to be a certain distance from the facility. This will guarantee the future habitat for wildlife. Cape Canaveral is thriving with native wildlife in and around the facility. The facility will also create jobs that will be around for a long time. We have to progress as a species and extend our presence in the solar system, and SpaceX is one of the organizations doing just that.

Regarding SpaceX launches from Boca Chica, TX, Please do not impede the modest launch schedule you have put in place. Allow SpaceX to develop this incredible launch system. While they are doing so it should be possible to collect enough data to better understand what launch cadence the environment can reasonably sustain. If it is determined that the ambitious launch schedule SpaceX has been planning for will be too much, the future of American space industry and science can be supported by allowing the far lower levels of stress that would allow SpaceX to hop lightly fueled boosters and payload vehicles from Boca Chica out to the offshore facilities that SpaceX is building. The United States will gain so much respect worldwide if we maintain the rapid paced development that SpaceX has developed. It will produce a huge infusion of wealth and jobs world-wide and we will be the leaders. Please allow this to go forward, while you, like SpaceX, learn from every launch. Sincerely,
Dr. David R. King, PhD ME, EM (ret)

This is the future of human civilization. Not only to explore, learn, make America a dominate force in the spae industry, ect... But it is also the future of point to point travel on earth. They will build their own roads as to not disturb public rd. Traffic. Yes there will be closures to near by areas. Im guessing the same as Cape Canaveral. This will pump tons of money into the local economy as it has already done. And will grow into a nation wide company in the future. There will be minimal damage of not any due to any anomalies. Definetly less thrn some natural disasters (hurricanes/tornadoes). This will keep america from falling into a mental state of stupidity as well. All great things.

Please allow SpaceX to continue its research/development and transition to operations work at Boca Chica, TX. Full transparency: I do not have stake in the Texas area as I currently reside in Ohio, but I have stake in humanity. Thus far, no government or organization has committed to a mission statement like that of the Starship program, and SpaceX is obviously committed. The transition from waterfall to Agile development and rapid prototyping is apparent in what they do, leaving the "old ways" and "how it's always been done" attitude behind. As a USAF retired member who still contracts to the USAF acquisition community, performing technical cybersecurity work, I feel that the methods SpaceX are using coincide with the DoDs guidance: Fail fast, rapidly prototype, innovate, and learn. This has enabled the DoD to meet its mission so much faster than in the past. Preventing or limiting SpaceX from doing the same will prevent or limit them from achieving their mission. Excessive red-tape and regulation stifles innovation. You've seen it, you know. Sometimes you have to take risks, big ones, which is what SpaceX is trying to do. China is the only one with a space program that has the funding and capability, and now risk tolerance, to work towards interplanetary travel, which would all be government controlled. The FAA is now the deciding factor on whether capitalism or communism prevails. Who gets there first matters. If the FAA continues to force SpaceX to hold-short, they're definitely not going to make it. I am in favor of allowing SpaceX to continue to operate out of Boca Chica. I'm also in favor of SpaceX hiring an environmental specialist to do their best to monitor and manage environmental impacts and I'm sure there will be some just like there was in Florida at the start of the Apollo program. Without risk, there is no reward. Thank you for your consideration. Edward Glaze [REDACTED] [REDACTED]

Dear FAA, What Space X is doing has potential to be the start of the next chapter in human history and the gateway to moving polluting activities such as mining, mass production, resource gathering away from the planet. By moving towards being a true space faring and multi planetary species we stand to be able to take the increasing presure away from Earth and make real efforts to protect our environment. It is clear that our planet is under threat and we will run out of resoures and room if we continue in the way that we are. The COP26 meeting will, if the trend continues, not be enough to address the issues that we face. As a species we are bad at responding to slow developing problems. Often, its only when we hit a crisis are we better and taking the required actions. However, by the time the crisis come for our environment it may already be too late. The enviromental crisis can be averted by finding more space to grow as a species and reduce the presure on the planet that is already causing unpresidented enviromental change, extreme weather events, habitat and species loss. We can only have growth and development and save the planet (and ourselves) by moving towards initiatives that SPACEX is currently pioneering in Boca Chica. Please take the long view, the pioneering view, and continue the spirit of exploration that is unique to our species. We can make it to the next phase but only if we make the big decisions now that will facilitate the process now that will take us to the stars. Thanks Chris Hodgkins Senior Clinical Psychologist England, UK

Message

I am strongly in favor of letting SpaceX proceed with their test campaign in Boca Chica, TX. The capability they are developing is key to our future success in space, is a boon to the local economy, and as a reusable launch system, Starship will break new ground in sustainable, environmentally sound, and efficient space launches of heavy cargo. Please let SpaceX move forward without unnecessary bureaucratic speed bumps and slow downs.

While I know this project has the potential for dramatic localized environmental impact, I feel that the impacts of the facility were well understood prior to undertaking. If conditions are sufficient to halt the project on environmental conditions, then I feel SpaceX should be given the opportunity to offer substantial mitigation in return for approval. For example, a component of SpaceX's success depends on the ability to capture and/or convert environmental carbon into methane. perhaps mitigation could improve habitat quality and reduced fragmentation near the facility as well as design and production of technology that could further US interest in balancing our carbon balance.

Hi there, I'm writing to express concern over the environmental and social impacts of SpaceX's Starship/Super Heavy rockets on the Boca Chica community and , and to ask for an new, rigorous Environmental Impact Statement to address ongoing disruptions to the sensitive wildlife refuge and broader RGV communities. SpaceX's growing operations have disrupted local communities' access to public lands (beaches, wildlife, quiet enjoyment of natural spaces) and have not adequately considered the impact of rocket failures on local homes and nature. The lack of Spanish-language inclusion in previous FAA public input processes itself shows how local voices could not have been considered in the previous EIS and throughout SpaceX's domineering impact on the Boca Chica community. As a birder and visitor to the region, I also am concerned how SpaceX's operations, nighttime lighting, and unprecedented habitat disruption (in an area where any remaining native habitat is already so precious) will impact this critical migration corridor for endangered species and shorebirds, all of which attract millions of dollars of revenue to the region. SpaceX's plans include the infill of wetland areas without mitigation plans, and failed to consider shock on wildlife from launches and other growth. From an outside perspective it just seems like SpaceX's planning for local communities and the environment was always an afterthought and the community has paid a price. As regulators, it's your duty to get SpaceX to do their due diligence and provide an honest account for their impact on Boca Chica.

I support the Starship Development at Boca Chica Texas. Starship will provide a delivery tool for many systems that can benefit the global environment and human populations. Just one example is the StarLink space-based communications which will displace the impacts of installing the ground-based cables, poles, ditches, and towers, and would include the extraction impacts of the mineral and energy resources for this system. There are many others. The wealth from the launch systems can provide powerful mitigation economics that can be asked of SpaceX and other benefiting organizations. The mitigation will far exceed the local impacts and may indeed protect habitat and species globally.

Dear Federal Aviation Administration: I strongly in favor of approving proposal of Space Exploration Systems (SpaceX) to operate the Starship/Super Heavy launch vehicle at its existing Boca Chica Launch Site in Cameron County, Texas and conduct launches originating from this site. I am equally in favor of granting an experimental permit and/or a vehicle operator license from the FAA to operate the Starship/Super Heavy launch vehicle. SpaceX has shown itself to be a good steward of the environment, the local community, and, unusually, tax payer dollars. Perhaps most importantly, SpaceX has shown itself to be a trustworthy partner that honors its agreements and keeps its promises. Further, SpaceX is, as a trusted partner of NASA, doing work which is important for science, exploration, and defense. Again, I strongly support the proposal and licensure of SpaceX and sincerely hope that this project will be allowed to more forward. Sincerely, Christopher Wolfla MD Milwaukee, WI

The work that SpaceX is working is critical for the national security of this country, and its future technical status and competitiveness. FAA must get out of the way and stop slowing down SpaceX's progress and launches. The FAA has already proven its incompetence for decades, and is currently continuing that trend. There is an old saying that you are either part of the solution or you are part of the problem. As this time the FAA is part of the problem.

In regards to your review of the Boca Chica launch facility that SpaceX is building. I believe that any hindrance to the SpaceX operations in regards to the Starship program, to be of the utmost importance from a strategic standpoint in competing with technologies from China or Russia. The rate of technological development is exponential in nature and any limitations imposed on the forefront of innovation only does harm to our standing on the world stage and promote the advancement of other actors, like China or Russia. I do understand that while they did not have approval to build the Launch Integration Tower, removing what has been already built could potentially lead to the complete failure of the project and any technological advancements that would be gained from it. Perhaps a solution would be to issue a fine(s) for each issue at hand and then allow them to continue their work? Something that I don't understand, is your blatant limitation of advancing our technological supremacy compared to our peers. It's to the level at which I am greatly concerned that there is possibly an external force acting in the disinterest of the U.S.A. and interest of one of our adversaries... Best wishes!

Dear Sir/Ma'am, Thank you for the opportunity to voice my support for the SpaceX Starship/Super Heavy Program. I have worked for the U.S. Air Force in Contracting and as a Contracting Officer for 13 years, and understand/respect the importance of following the necessary procedures, rules, or processes. That said, Dr. Will Roper, who is the Assistant Secretary of the Air Force for Acquisition, Technology and Logistics came into my organization to push for more rapid development and innovative thinking (within the bounds of the law) in order to maintain an advantage over the neer-peer adversaries of the U.S. This approach has provided a positive impact, enabling more rapid innovation and development throughout the Air Force. I mention all of this in the hopes that while considering issuance of permit approval; that you please consider finding any ways that are possible (again within the bounds of the law) which will allow for the continuance of this program at a rapid pace which has the potential to provide many benefits to the U.S. and humanity as a whole for generations to come. Thank you again for your time and consideration! Best, David Price

Right now in the world, there exist many problems. Problems that can feel larger than life itself. Climate change, risk of poverty and society collapsing is just naming a few. In those trying times, it's essential to have a goal of the same magnitude and perhaps a larger goal than any problem. A goal that unifies us as a human species. A goal that is greater than ourselves. But that is not something new. In the 60's problem with wars treating to collapse the society was prevalent. But we all stopped to hear here the words "We choose to go to the moon...". Then in the same decade, Neil Armstrong said, "That's one small step for man, one giant leap for mankind." This kind of awe innerspring moment is more needed than ever. Once again, the world would look at America and say, "Wow, they did it. They placed a human on mars". With this movement created, a new generation could once again be inspired to fix all the other problems. But if you decide to stop this, only god will know what will happen, but it would be good. Thus, as a human bean, I'm compiled to support SpaceX for our survival on this planet. Best regards: Magnus Sörensen, Sweden.

SpaceX should get the green light to test the orbital Starship without obstruction. Compared to any other launch vehicle ever made, the environmental impact will be much smaller. Reusable rockets are the way to a cleaner future. Slowing this progress down is bad for humanity.

We highly support space X and Elon Musk in their endeavors needed to make the global orbiter test to ensure the American leadership in space and space related industries. As a proven innovator and industry leader we firmly believe the tests and like actions will bring us as a country and national space and aerospace that much closer to the goals of space X and national dominance in the rapid moving innovations that all countries and companies are engaged in.

I am a Texas resident and we in Texas believe in going big. What SpaceX is doing, not only does impact our nation but entire world. After decades of incompetence by other companies, someone is finally helping humanity reach back to the stars. If we can't help them, fine, but we don't have any right to stop them from taking such a huge step. All the opposing parties have been influenced by campaigns that benefit a few corrupt people/corporations that seek to destroy capitalist competition and liberty in our country. Blocking SpaceX would be helping them. Let's do it the Texas way, take a huge step towards putting us back in Space!

I'm a resident of Texas and I write you today in support the first orbital flight of SpaceX. This team is pushing the boundaries of technology and human spaceflight not seen in years! With each flight comes a treasure of data that comes of it whether the flight successful or not and can be applied to the next development. Each delay is only withering away the opportunity to make these flights proficient and safer for future generations.

Hi FAA, I love space x as much as the next person, however I do feel they don't seem to take environmental issues seriously enough, this isn't the 60's anymore at the Cape and the local wildlife should take precedence over spacex demands. The full sound wave of the booster at launch could be detrimental to local wildlife, disturbing it to the point that irreparable damage to the eco system is done. Thank you for taking the time to read my message.

Fully supported by me this adventure to start to explore your solar system. If we don't start now it might never happen. Your planet has so much to offer but space offers so much more. We love our planet and we can change wots happening here but don't let that stop us expanding the frontier of space. We need to do this and Elon and spacex are the key to the future of Earth.

Stop standing in the way of progress and allow this program to continue unfettered. As a government agency you are best suited to supervising other government agencies. How you could even begin to regulate a project of this type and scale only shows the great overreaching ineptitude of the leaders at the FAA. Stick to what you know and go back to regulating the airlines.

I am a proud progressive; but I FIRMLY believe that SpaceX and it's mission to populate the moon, Mars, and then the rest galaxy later on with that preliminary knowledge, is ESSENTIAL in furthering our society to a point where technology helps to solve our major global problems. I know that was a mouthful, and a run-on sentence; but I stand by the statement. Global food distribution, water creation and de-salination, redesigning global travel, and many more incredible things can naturally come from this endeavor. I have seen the opposing viewpoints; but simply don't think they are either very important, or things that can't be remedied. In any regard, SpaceX has proven itself se far to be a company with a positive record for caring about surrounding communités growth, local floral and fauna, and keeping clean land practices or their build sites and properties. I have EVERY confidence that approving SpaceX's environmental footprint would be a very, very positive thing for the community, county, state, country, and World at large. PLEASE give concent at a rapid pace, so we can come together as a country again! Never before have I seen a topic bring two sides of a debate together; and watching two Falcon 9 boosters coming in and landing at the SAME TIME was downright inspiring. Later, Starship finally sticking the landing and proving it's viability was another bonding moment - of which I witnessed PERSONALLY. I am a Aeronautical Engineer with certification to CFII. Studied at Gateway Technical College in Wisconsin. I am intimately aware of this topic. Many hours of research have gone into my decision to support SpaceX, and their using Starbase, Tx. as the PRIMARY INTERGALACTIC SPACEPORT OF OUR PLANET. Thank You for your time and do diligence in keeping technological progress from being suppressed. Have a blessed day.

Let Space X do what they want to do , I Michael Thomas 38 have seen a lot in my little time here. but nothing , compares to the pure magic Space X is producing. there is a time for rules and regulations, but not at the expense of innovation. let them bring us into the new age, let them innovate and create a new frontier for us to explore...Earth is too small a place to house our incredible ego's, so we must go to the stars...and whoever is reading this is going to help...and these folks are going to build us what we need to expand. support them... support us...support the world and all of human kind...Let them fly. -Michael Thomas

I fully support the important work that SpaceX is doing at the Boca Chica, Texas site. Of course, to some of the local populace, the development and expansion of the production and launch site facilities over the last few years have made a big change to their way of life - but generally, progress (especially world-changing processes like SpaceX is working towards) does result in some changing of the status quo. While not all change is good, in the long run, I feel that the scientific value (not to mention the potential value to humans as a species) of what they are attempting at Boca Chica is worth some inconvenience. Over time, these impacts will be lessened, then embraced as "the new normal" as the facilities there continue to develop and mature. Please allow them to continue their plans to develop their Starship rocket systems at Boca Chica. Thank you.
