| TASKS                                        | MOTOR SKILL LEARNING OBJECTIVES                                                                                                                                                                                          | ATTITUDE LEARNING OBJECTIVES | TASK EXPECTATION RATING |
| Conduct Before Takeoff Checks                | Can conduct a briefing that includes procedures for emergency and abnormal situations (e.g., powerplant failure, windshear), which may be encountered during takeoff, and state the planned action if they were to occur |                              | High                    |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 3 |                                                                                                                                                                                                      |                              |                         |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| TASKS                                        | MOTOR SKILL LEARNING OBJECTIVES                                                                                                                                                                      | ATTITUDE LEARNING OBJECTIVES | TASK EXPECTATION RATING |
| Conduct Rejected Takeoff                     | Can execute aborted takeoff if the powerplant failure occurs at a point during the takeoff where the abort procedure can be initiated and the airplane can be safely stopped on the remaining runway |                              | Medium                  |
| Conduct Rejected Takeoff                     | Can execute prompt reduction of power and maintain positive aircraft control using drag and braking devices, as appropriate, to come to a stop                                                       |                              | Medium                  |
| Conduct Rejected Takeoff                     | Can coordinate with crew, if applicable, and complete the appropriate procedures, checklist(s), and radio calls following a rejected takeoff in a timely manner                                      |                              | Medium                  |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 3    |                                                                                                                                                                                        |                              |                         |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| TASKS                                           | MOTOR SKILL LEARNING OBJECTIVES                                                                                                                                                        | ATTITUDE LEARNING OBJECTIVES | TASK EXPECTATION RATING |
| Conduct Normal Takeoff and Climb with Crosswind | Can coordinate with crew and complete the appropriate checklist(s) prior to takeoff in a timely manner                                                                                 |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can perform radio calls as appropriate                                                                                                                                                 |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can verify assigned/correct runway                                                                                                                                                     |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can verify the airplane is configured for takeoff                                                                                                                                      |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can execute clearing of the area and taxi into takeoff position and align the airplane on the runway centerline                                                                        |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can maintain centerline and proper flight control inputs during the takeoff roll                                                                                                       |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can confirm takeoff power and proper engine and flight instrument indications prior to rotation and perform callouts as appropriate, for the airplane or per the operator's procedures |                              | High                    |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 3    |                                                                                                                                             |                              |                         |
|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| TASKS                                           | MOTOR SKILL LEARNING OBJECTIVES                                                                                                             | ATTITUDE LEARNING OBJECTIVES | TASK EXPECTATION RATING |
| Conduct Normal Takeoff and Climb with Crosswind | Can perform rotation and lift off at the recommended airspeed                                                                               |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can maintain a power setting and a pitch attitude to maintain the desired climb airspeed/V-speed, $\pm 5$ knots for each climb segment      |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can maintain desired heading $\pm 5^\circ$                                                                                                  |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can perform Retraction of the landing gear and flaps in accordance with manufacturer or operator procedures and limitations, as appropriate |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can perform wake turbulence avoidance                                                                                                       |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can follow noise abatement procedures                                                                                                       |                              | High                    |
| Conduct Normal Takeoff and Climb with Crosswind | Can execute appropriate after-takeoff checklist(s) in a timely manner                                                                       |                              | High                    |
| Conduct Instrument Takeoff                      | Can coordinate with crew and execute the appropriate checklist(s) prior to takeoff in a timely manner                                       |                              | Medium                  |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 3 |                                                                                                                                 |                              |                         |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| TASKS                                        | MOTOR SKILL LEARNING OBJECTIVES                                                                                                 | ATTITUDE LEARNING OBJECTIVES | TASK EXPECTATION RATING |
| Conduct Instrument Takeoff                   | Can execute setting of the applicable avionics and flight instruments prior to initiating the takeoff                           |                              | Medium                  |
| Conduct Instrument Takeoff                   | Can perform radio calls as appropriate                                                                                          |                              | Medium                  |
| Conduct Instrument Takeoff                   | Can verify assigned/correct runway                                                                                              |                              | Medium                  |
| Conduct Instrument Takeoff                   | Can perform clearing the arrival area and execute taxiing into takeoff position and align the airplane on the runway centerline |                              | Medium                  |
| Conduct Instrument Takeoff                   | Can maintain centerline and proper flight control inputs during the takeoff roll                                                |                              | Medium                  |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 3 |                                                                                                                                                                                    |                              |                         |

Limits should be noted for use of wet or icy runways as far as directional control or stopping performance is concerned, and flight crews should be familiar with appropriate constraints related to braking reports and the obscuration of appropriate lighting or markings. Refer to AC 91-79 for detailed information on runway contaminants and condition reporting. | High                    |

| Conduct Landing from a No Flap or Nonstandard Flap Approach | Can perform non-normal configuration approaches and landings in instrument conditions. For these approaches, the simulated weather minima may be above, or well above, the lowest minima authorized. Minima should be at levels that might typically be experienced in line operations for a landing with the non-normal condition used. During these approaches, representative autoflight, instrument, and aircraft system configurations or combinations of configurations should be demonstrated (e.g., F/D, autopilot, HUD, vision systems, autothrottles, raw data, and inoperative electrical or hydraulic components). |                                    | High                          |

| Conduct approach and landing with pitch mistrim |                                                                                                                                   |                                    | High                          |
| Conduct approach and landing with pitch mistrim |                                                                                                                                   |                                    | High                          |
| Conduct approach and landing with pitch mistrim |                                                                                                                                   |                                    | High                          |
| Conduct approach and landing with pitch mistrim |                                                                                                                                   |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can coordinate with crew and execute after landing checklists(s).                                                                 |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can perform radio calls as appropriate                                                                                            |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can maintain a ground track that ensures the desired traffic pattern will be flown taking into consideration obstructions and ATC |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can confirm the airplane is aligned with the correct/assigned runway or landing surface.                                          |                                    | High                          |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 5    |                                                                                                                                                                                             |                                    |                               |
|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-------------------------------|
| TASKS                                           | MOTOR SKILL<br>LEARNING<br>OBJECTIVES                                                                                                                                                       | ATTITUDE<br>LEARNING<br>OBJECTIVES | TASK<br>EXPECTATION<br>RATING |
| Conduct approach and landing with pitch mistrim | Can scan runway or landing surface and adjoining area for traffic and obstructions.                                                                                                         |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can select a suitable touchdown point considering wind, landing surface, and obstructions.                                                                                                  |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can perform establishing the recommended approach and landing configuration and airspeed, $\pm 5$ knots, and adjust pitch attitude and power as required to maintain a stabilized approach. |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can maintain directional control and appropriate crosswind correction throughout the approach and landing.                                                                                  |                                    | High                          |
| Conduct approach and landing with pitch mistrim | Can perform smooth, timely, and correct control application before, during, and after touchdown.                                                                                            |                                    | High                          |

| HS-125 COURSE 1 - SIMULATOR (SIM) TRAINING 5    |                                                                                                                                                                                                                                                                                   |                                    |                               |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-------------------------------|

| Conduct Stall Prevention and Recovery Scenario per AC120-109A | <p>Can execute Scenario-Based Training (SBT). The goal of SBT is to develop decision-making skills relating to stall prevention and recovery during Line-Oriented Flight Training (LOFT). Emphasis should be placed on preventing conditions that may lead to a stall event. SBT would normally be used after a pilot demonstrates proficiency in maneuver-based training and during advanced stages of training, such as upgrade training and recurrent training.</p> <p>(1) Scenarios. When possible, scenarios should include accident, incident, ASAP, FOQA, and/or ASRS data to provide realistic opportunities to see how threat situations may develop and how they should be managed during line operations. Sample SBT lesson plans are provided in Appendix 3.</p> <p>(2) Briefing. Pilots should not normally be briefed that they are receiving SBT. The concept is line-oriented flying, which allows the pilots to recognize and manage the expected or unexpected stall threats as they develop during</p> |                                    | High                          |

| Conduct Stall Prevention and Recovery Scenario per AC120-109A | <p>Can appreciate USING SURPRISE IN TRAINING. Surprise has been a factor in stall incidents and accidents. Although it may be difficult to create surprise in the training environment, if achieved, surprise events may provide a powerful lesson for the crew. The goal of using surprise in training is to provide the crew with a surprise experience to reinforce timely application of the effective recovery technique under potentially confusing circumstances. Considerable care should be used in surprise training to avoid a negative learning experience. Surprise should not be used during checking. Stall prevention training should incorporate event conditions and variables typical of an unintentional stall that are likely to result in surprise due to the unexpected stall development, presentation, and behavior.</p> |                                    | High                          |

| <u>Missed Approach - OEI</u>                                                                       |              |             |               |
| <u>Precision Approach</u>                                                                          |              |             |               |
| <u>Landing From a Precision Approach</u>                                                           |              |             |               |
| <u>Lower than Standard Minimum Takeoff</u>                                                         |              |             |               |
| <u>Powerplant Failure During Second Segment</u>                                                    |              |             |               |
| <u>OEI Climb to En Route Altitude</u>                                                              |              |             |               |
| <u>Nonprecision Approach</u>                                                                       |              |             |               |
| <u>Approach and Landing with a Powerplant Failure</u>                                              |              |             |               |
| <u>Inflight fire and smoke</u>                                                                     |              |             |               |
| <u>Flight by reference to standby flight instruments, backup instrumentation, or partial panel</u> |              |             |               |
| <u>Emergency evacuation</u>                                                                        |              |             |               |

## 6 Ground School Learning Objectives – Course 2

### 6.1 Course 2 – Ground School Learning Objectives

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                             |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                   |
| Aircraft General, Water and Waste                   | Understand determining climb performance per AFM | Can explain the location, purpose and operation of emergency equipment in the aircraft      |
| Aircraft General, Water and Waste                   | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology |
| Aircraft General, Water and Waste                   | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                          |
|-----------------------------------------------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                |
| Aircraft General, Water and Waste                   | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device                                                                                                        |
| Aircraft General, Water and Waste                   | Understand determining climb performance per AFM | Can describe normal and abnormal operation of the aircraft exits, galleys, water and waste systems, lavatories, cargo areas, crewmember and passenger seats, bulkheads, seating and/or cargo configurations, and nonemergency equipment and furnishings. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Aircraft General, Water and Waste                   | Understand determining climb performance per AFM | Can describe Any aircraft characteristics relevant to all weather operations, such as flight deck visibility cutoff angles and the effect on flight deck visibility of proper eye height, seat position or instrument lighting intensities related to transition through areas of varying brightness levels. Pilots should be aware of the effects on flight visibility related to use of different flap settings, approach speeds, use of various landing or taxi lights, and proper procedures for use of windshield wipers and rain repellent. If windshield defog, anti-ice, or de-icing systems affect forward visibility, pilots should be aware of those effects and be familiar with proper settings for use of that equipment related to low-visibility landing. |
| Aircraft Manuals                                    | Understand determining climb performance per AFM | Can obtain information from OEM manuals with regard to the systems and components                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                  |
| Aircraft Manuals                                    | Understand determining climb performance per AFM | Can obtain information from OEM manuals with regard to the systems and components                          |
| Aircraft Manuals                                    | Understand determining climb performance per AFM | Can obtain information from OEM manuals with regard to the systems and components                          |
| Aircraft Manuals                                    | Understand determining climb performance per AFM | Can explain that AFM guidelines supersede all other information                                            |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can demonstrate familiarization with the contents of OEM manuals with regard to the systems and components |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                      |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                    |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                             |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                                                                             |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                             |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                   |
| Auxiliary Power Unit                                | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device                                                                           |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that RNAV 2 requires a total system error of not more than 2 NM for 95 percent of the total flight time                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that Receiver Autonomous Integrity Monitoring (RAIM) is a technique used within a GPS receiver/processor to monitor GPS signal performance and is achieved by a consistency check among redundant measurements. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                               |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that a SID is a published IFR air traffic control (ATC) DP providing obstacle clearance and a transition from the terminal area to the en route structure.                                                                                                  |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that the onboard navigation data must be current and appropriate for the region of intended operation and must include the navigation aids, waypoints, and relevant coded terminal airspace procedures for the departure, arrival, and alternate airfields. |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that at system initialization, pilots must confirm the navigation database is current and verify the aircraft's present position.                                                                                                                           |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                    |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that RNAV DPs and STAR procedures must be retrieved by procedure name from the onboard navigation database and conform to the charted procedure                                                                                                                                                                                                  |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that whenever possible, RNAV routes should be extracted from the database in their entirety, rather than loading RNAV route waypoints from the database into the flight plan individually. Selecting and inserting individual, named fixes from the database is permitted, provided all fixes along the published route to be flown are inserted |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that pilots must use a lateral deviation indicator (or equivalent navigation map display), flight director and/or autopilot in lateral navigation mode on RNAV 1 routes. The full-scale course deviation indicator (CDI) deflection value of $\pm 1$ NM is acceptable |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that pilots of aircraft without GPS/GNSS, using DME/DME/IRU, must ensure the aircraft navigation system position is confirmed, within 1,000 feet, at the start point of takeoff roll. The use of an automatic or manual runway update is an acceptable means of compliance with this requirement. A navigation map may also be used to confirm aircraft position, if pilot procedures and display resolution allow for compliance with the 1,000-foot tolerance requirement |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the depiction of waypoint types (flyover and flyby) and path terminators                                                                                                                                                                                                                                                                                                                                                                                                   |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                |
|-----------------------------------------------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                      |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain the types of navigation sensors (for example, DME, IRU, GPS/GNSS) utilized by the RNAV system and associated system prioritization/weighting/logic |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                                    |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                                    |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                             |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                                                                                |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |

| Avionics and Communications                         | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                                                                                |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can list required equipment for RNP operations                                                                                                    |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                    |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                          |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can interpret aircraft automation, mode annunciations, changes, alerts, interactions, reversions, and degradations |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain functional integration with other aircraft systems                                                     |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can list the types of navigation sensors used by the RNP system and their annunciations                            |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can interpret electronic displays and symbols                                                                      |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                      |
|-----------------------------------------------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                            |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain the importance of maintaining the published path and maximum airspeeds while performing RNP operations with Radius to Fix (RF) legs (if applicable)      |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe flightcrew contingency procedures for a loss of RNP capability; and                                                                                     |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain the performance requirement to couple the autopilot (AP)/flight director (FD) to the navigation system's lateral guidance on RNP procedures, if required |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can describe the meaning and proper use of aircraft equipment/navigation suffixes                                                                                    |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                 |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                       |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can state the definition of RAIM                                                                                                                                                |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that Pilots must extract waypoints, NAVAIDs, and fixes by name from the onboard navigation database and comply with the charted procedure or route                  |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that pilots may not manually enter published procedure or route waypoints via latitude/longitude, place/bearing, or place/bearing/distance into the aircraft system |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                    |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that Operators operating under parts 91K, 121, 125, 129, and 135 must also be equipped with at least one other independent navigation system in addition to an installed and operable RNAV system. This additional system must be suitable, in the event of loss of navigation capability of the RNAV system, for proceeding safely to a suitable airport and completing an instrument approach. |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that for the purposes of flight planning, any required alternate airport must have an available IAP that does not require the use of GPS.                                                                                                                                                                                                                                                        |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                               |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                     |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain RAIM prediction requirements when using GPS as a substitute means of navigation                                                                                                                                   |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that RNAV systems using WAAS input may be used as an alternate means of navigation without restriction.                                                                                                           |
| Avionics and Communications                         | Understand determining climb performance per AFM | Can explain that RNAV systems using DME/DME/IRU, without GPS input, may be used as an alternate means of navigation where valid DME/DME position updating is published as available (for example, by NOTAM or authorization). |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Avionics and Communications                         | Understand determining climb performance per AFM | <p>Can explain that In order to use a substitute means of navigation on departure procedures, pilots of aircraft with RNAV systems using DME/DME/IRU, without GPS input, must ensure their aircraft navigation system position is confirmed, within 1,000 feet, at the start point of takeoff roll. The use of an automatic or manual runway update is an acceptable means of compliance with this requirement. A navigation map display may also be used to confirm aircraft position, if pilot procedures and display resolution allow for compliance with the 1,000-foot tolerance requirement.</p> |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Flight Controls                                     | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain system or component limitations                                                 |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals          |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Flight Controls                                     | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Flight Controls                                     | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Flight Controls                                     | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                      |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                    |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                             |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                                                                             |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Flight Controls                                     | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |

| Flight Controls                                     | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Flight Controls                                     | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Flight Controls                                     | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                                |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Flight Controls                                     | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain why OEI data may not ensure climb gradient compliance nor obstacle clearance                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                             |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                   |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain considerations for OEI departure development                                                                    |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can state the definition of takeoff segment                                                                                 |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can state the definitions of gross and net flightpath                                                                       |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain that there are two types of DPs: Standard Instrument Departures (SIDs) and Obstacle Departure Procedures (ODPs) |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                            |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                  |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain that SIDs are primarily designed for air traffic system enhancement to expedite traffic flow and to reduce pilot/controller workload.                                          |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain that ODPs are recommended for obstruction clearance and may be flown without ATC clearance unless an alternate DP (SID or radar vector) has been specifically assigned by ATC. |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how an unstabilized approach can contribute to a runway overrun                                                                                                                |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how high airport elevation can contribute to a runway overrun                                                                                                                  |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                      |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how excess airspeed can contribute to a runway overrun                             |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how airplane landing weight can contribute to an aircraft overrun                  |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how landing beyond the intended touchdown point can contribute to a runway overrun |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how downhill runway slope can contribute to a runway overrun                       |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain how landing with a tailwind can contribute to a runway overrun                     |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                     |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                           |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain predeparture planning versus runway condition at time of arrival                                                                        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain that factors affecting landing distance are cumulative, and why multiple small errors during landing can contribute to a runway overrun |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define declared runway distance                                                                                                                 |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define landing distance available                                                                                                               |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define actual landing distance                                                                                                                  |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                          |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can interpret and make proper runway condition reports                                   |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define "adjusted landing distance"                                                   |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define "unfactored (certified) landing distance"                                     |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define "factored landing distance"                                                   |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                       |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                             |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effect of downhill runway slope on required landing distance                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the impact of excess airspeed on landing distance                                        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the purpose and variables involved in a landing performance assessment at time of arrival |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the effect of wind on landing performance                                                 |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can identify critical condition combinations that increase risk of a runway overrun                   |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                               |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                     |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the difference between AFM dry, certified/approved data and advisory/supplemental data                                            |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can calculate the required effective landing distance for dispatch under part 91 and part 135 operations                                      |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can reference applicable regulations for preflight planning                                                                                   |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the Can U StoP process                                                                                                            |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the difference between the generic samples in table 3-2 where cumulative errors are made, and table 3-3 where errors are not made |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                                                                                                                   |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                                                                                                                   |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the effects of meteorological conditions on performance for any phase of flight and apply these factors to a specific chart, table, graph, or other performance data |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                          |
| Flight Planning and Performance                     | Understand determining climb performance per AFM |                                                                                                                                                                                   |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                           |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES |
| Flight Planning and Performance                     | Understand determining climb performance per AFM |                                           |
| Flight Planning and Performance                     | Understand determining climb performance per AFM |                                           |
| Flight Planning and Performance                     | Understand determining climb performance per AFM |                                           |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define Takeoff Distance               |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define Takeoff Run                    |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                      |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                            |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define Accelerate-Stop Distance                                                                  |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define Decision Speed                                                                            |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define $V_1$ as Action Speed                                                                     |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain why using OEI data to comply with TERPS procedures is an unnecessary burden on operators |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can locate FAA TALPA videos online                                                                   |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can state the different causes of RTOs                                            |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the difference between Takeoff Distance and Takeoff Run               |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can define $V_1$ and determine when $V_1$ is critical                             |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the Balanced Field Concept                                            |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain why $V_1$ can be no less than $V_{MCG}$ nor can be no more than $V_R$ |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain when takeoff field length and $V_1$ are critical and the consequences |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the impact of wet runways on landing distances                        |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain the importance of a timely $V_1$ call.                                |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can conduct a complete takeoff briefing and explain its importance                |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the segments of an instrument departure procedure                    |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                         |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can explain basic purpose and applicability of OEI departure procedures                                           |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the drawbacks of using OEI data to comply with TERPS procedures                                      |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | Can describe the meaning and proper use of aircraft equipment/navigation capability codes used on the flight plan |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Flight Planning and Performance                     | Understand determining climb performance per AFM | <p>Can demonstrate familiarization with aircraft performance or weight limit information to ensure safe obstacle clearance for “all engine” or “engine inoperative” missed approaches or rejected landings. Performance information should consider, as appropriate, flap settings, go-around procedures, acceleration segments or transition following an engine failure between the specified “all-engine lateral flightpath” (or radar vectors) and any specified “engine-inoperative lateral flightpath,” using flap retraction, and cleanup height procedures. Refer to AC 120-91 for further information.</p> |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                             |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                   |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the definition of a runway incursion: Any occurrence at an aerodrome involving the incorrect presence of an aircraft, vehicle, or person on the protected area of a surface designated for the landing and takeoff of aircraft. |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain why thorough planning for taxi operations is essential for a safe operation                                                                                                                                                     |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                          |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can conduct briefing of the expected taxi route to include any hold short lines and runways to cross, hot spots, and any other potential conflicts. (Once taxi instructions are received, the pretaxi route should be reviewed and monitored. It is essential that any changes to the taxi route be understood by all crewmembers) |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                           |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can identify critical locations on the taxi route, where verbal coordination between the PIC and the SIC is important to avoid a runway incursion. (e.g., hot spots/complex intersections, crossing intervening runways, entering and lining up on the runway for takeoff, and approaching and lining up on the runway for landing) |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can conduct briefing of requirements and special considerations during low visibility operations such as: the low visibility taxi chart, if published for the airport                                                                                                                                                               |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                               |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                     |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can maintain knowledge of the aircraft's precise position throughout the taxi operation and mentally calculate the next location on the route that will require increased attention (e.g., a turn onto another taxiway, an intersecting runway, or hot spots) |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can interpret and use all visual aids, and signage and lighting on the airport surface                                                                                                                                                                        |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can write down complex taxi instructions or copy taxi instructions into the scratch pad of the CDU                                                                                                                                                            |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                       |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                             |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain that before entering a runway for takeoff, the flightcrew should verbally coordinate to ensure correct flap setting, identification of the runway, compass heading, FMC entry, and receipt of the proper ATC clearance to use that runway |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the parameters and importance of a stabilized approach                                                                                                                                                                                    |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain how excessive height over the runway threshold can contribute to a runway overrun                                                                                                                                                         |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain how delayed use of deceleration/maximum braking can contribute to a runway overrun                                                                                                                                                        |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                      |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                            |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe the point at which landing configuration should be established in a stabilized approach |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe a stabilized approach profile for both VMC and IMC conditions                           |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe the characteristics of a stabilized descent rate                                        |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe the characteristics of indicated airspeed during a stabilized approach                  |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                 |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                       |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain that ATP criteria for touchdown point is the aiming point markings - 250/+500 feet, or where there are no runway aiming point markings 750 to 1,500 feet from the approach threshold of the runway. |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain proper landing and braking technique                                                                                                                                                                |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can discuss the chain of events that lead to an overrun in this example, and relate it to their own experiences                                                                                                 |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                                                                                                                                                 |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                          |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                          |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                          |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                          |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the airspeeds used during specific phases of flight                          |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the information available on an airport diagram, chart supplement and NOTAMS |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                            |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                  |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can interpret taxi instructions including published taxi routes                                                                                            |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can identify airport and runway markings, signs, and lights                                                                                                |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe appropriate aircraft lighting for day and night operations                                                                                    |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe appropriate flight deck activities prior to taxi, including route planning, identifying the location of Hot Spots, and coordinating with crew |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                 |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                       |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe proper procedures for entering or crossing runways                                                                                                 |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain procedures for taxi on one engine                                                                                                                   |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the hazards of low visibility taxi operations                                                                                                       |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe conditions and situations that could warrant a rejected takeoff (e.g., takeoff warning systems, powerplant failure, other systems warning/failure) |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                 |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                       |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe safety considerations following a rejected takeoff                                                 |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the procedure for accomplishing a rejected takeoff                                                  |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain accelerate/stop distance                                                                            |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can define relevant V-speeds for a rejected takeoff                                                             |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain situations that would require an emergency descent (e.g., depressurization, smoke, or engine fire). |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                               |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                     |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain declaring an emergency and selection of a suitable airport or landing location    |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the importance of timely and correct decisions related to rejected takeoffs (RTO) |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the importance of timely decisions in relation $V_1$                              |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain how use of published approach guidance in visual conditions can reduce errors     |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                       |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can identify The runway and taxiway characteristics concerning width, safety areas, obstacle free zones, markings, hold lines, signs, holding spots, runway slope, suitability of threshold crossing height (TCH), critical area protection, taxiway position markings, runway distance remaining markings, runway distance remaining signs, and LVO/SMGCS should be addressed. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                               |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | <p>Can explain proper recovery procedures should emphasize that a reduction of the AOA is required to initiate recovery of all stall events. Additional information to incorporate into recovery training includes:</p> <p>Recognition of impending stall indications and understanding of the need to initiate the stall recovery procedure at an impending stall.</p> |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | <p>Can explain proper recovery procedures should emphasize that a reduction of the AOA is required to initiate recovery of all stall events. Additional information to incorporate into recovery training includes:</p> <p>Recognition of full stall indication (see paragraph 1-7) with the realization that most swept-wing transport category aircraft exhibit full stall characteristics different from those typically experienced in General Aviation (GA) aircraft used during certification training.</p> |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                          |

| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                             |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain an awareness of the factors that may lead to a stall event during automated and manual flight operations including: Unexpected transition from automated to manual flight.                                |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain an awareness of the factors that may lead to a stall event during automated and manual flight operations including: Contamination (ice), including the effect of icing on stall speed and stall warnings. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                       |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can demonstrate an understanding of AOA indicators (if installed) or interpretation of other representations of AOA such as pitch-limit indicators or speed display symbology that can assist in stall prevention.                                              |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain specific stall and low-speed buffet characteristics unique to the airplane type and any implications for the expected flight operations and airplane-specific stall recovery procedure (e.g., underwing mounted engines, t-tail, propellers, etc.). |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain for envelope protected airplanes, stall protection capabilities in normal and degraded modes.                                                                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                     |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                           |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can describe thrust settings and its application.                                   |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can demonstrate awareness of autoflight mode indications.                           |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain incorrect use of (including input errors) flightpath automated systems. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                     |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the operation and function of stall protection systems in normal, abnormal, and emergency situations, including the hazards of overriding or ignoring stall protection system indications. Awareness of the factors that may lead such systems to fail, as well as degraded modes, indications, or behaviors that may occur with system failures. |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain buffet boundary and margins in flight planning and operational flying.                                                                                                                                                                                                                                                                            |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                      |

| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                            |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the lower margins for stall onset and recovery (i.e., coffin corner) and possible buffet cueing differences on the high-speed versus the low-speed margin.                                                                                               |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the principles of high altitude aerodynamics, performance capabilities, and limitations; including high altitude operations and flight techniques (i.e., the need to avoid secondary stall by extended nose-down recovery, compared to lower altitudes). |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                         |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | Can explain the differences in airplane performance (e.g., thrust available) during high versus low altitude operations, the effects of those differences on stall recovery, and the anticipated altitude loss during a recovery. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | <p>Can explain the differences between transport category airplane certification and GA airplane certification regarding use of flight controls at high AOA. For example, if the roll control system is compromised and the ailerons are unable to produce the required roll recovery, the rudder may be used with care during stall prevention and recovery. To maintain structural integrity, it is important to guard against control reversals—avoid rapid full-scale reversal of control deflection</p> |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | <p>Can demonstrate general awareness of example events. Although significant emphasis should be placed on preventing stall events, it is important for pilots to understand that, although rare, stall events continue to occur. Studying the causes and contributing factors of stall events give pilots more knowledge to help prevent or if necessary, recover from a stall event. A review of stall-related accidents, incidents, ASAP, FOQA, and ASRS data for the specific airplane type or class should be included in ground training.</p> |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Flight Profiles and Maneuvers                       | Understand determining climb performance per AFM | <p>Can explain the STICK PUSHER. For airplanes equipped with a stick pusher, stall recovery training includes ground training and practical training in an FFS. It is important for pilots to experience the sudden forward movement of the control yoke/stick during a stick pusher activation. From observations, most instructors state that, regardless of previous academic training, pilots usually resist the stick pusher on their first encounter. Usually, they immediately pull back on the control yoke/stick rather than releasing pressure as they have been taught. Therefore, pilots must receive practical stick pusher training in an FFS to develop the proper response (allowing the pusher to reduce AOA) when confronted with a stick pusher activation. Stick pusher training should be completed as a demonstration/practice exercise, including repetitions, until the pilot's reaction is to permit the reduction in AOA even at low altitudes. Pilot response to a deliberate activation of the pusher is not a checked maneuver.</p> |

| Hydraulic System                                    | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology |
| Hydraulic System                                    | Understand determining climb performance per AFM | Can explain system or component limitations                                                 |
| Hydraulic System                                    | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals          |
| Hydraulic System                                    | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Hydraulic System                                    | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Hydraulic System                                    | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that regulations prohibit takeoff when snow, ice, or frost is adhering to wings, propellers, or control surfaces of an aircraft.      |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                           |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                 |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that the degradation in aircraft performance and changes in flight characteristics when frozen contaminants are present are wide ranging, unpredictable, and highly dependent upon individual aircraft design |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that the PIC has the ultimate responsibility to determine if the aircraft is clean and that the aircraft is in a condition for safe flight.                                                                   |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                              |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that in order to achieve compliance with the clean aircraft concept, it is imperative that takeoff not be attempted in any aircraft unless the pilot-in-command (PIC) is certain that critical components of the aircraft are free of frozen contaminants. |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that for aircraft type specific procedures, pilots should refer to the aircraft flight manuals or other manufacturer documents developed for that particular type aircraft                                                                                 |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                             |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that icing conditions (during flight or ground operations) can occur, and ice protection systems or procedures should be activated when OAT is below 50 degrees F (10 degrees C) and visible moisture in any form is present or when there is standing water, ice, or snow on the runway and/or taxiways. |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                                                                                                                                                                                                                                           |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that residual ice or slush accumulated on airframe components during landing and taxi operations on contaminated runways, taxiways and ramps, can remain in place if low temperatures and other weather conditions exist unless identified and removed. Contaminants of this type are commonly found in wheel wells, on landing gear components, trailing edge flaps, undersurfaces of wings and horizontal stabilizers |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                                                                       |
|-----------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                                                             |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that the deicing process is intended to restore the aircraft to a clean configuration so that neither degradation of aerodynamic characteristics nor mechanical interference from contaminants will occur |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that it is essential that the PIC have a thorough understanding of the deicing and anti-icing process and the approved procedures necessary to ensure that the aircraft is clean for takeoff.             |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain that anti-icing should be performed as near to the takeoff time as possible to minimize the risk of exceeding the useful life or time of effectiveness of the anti-icing fluid                            |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                             |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                   |
| Ice Protection                                      | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain system or component limitations                                                 |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals          |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                          |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                   |
|-----------------------------------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                         |
| Ice Protection                                      | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device    |
| Ice Protection                                      | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device |
| Ice Protection                                      | Understand determining climb performance per AFM | Can describe the operation of the airplane systems and components using correct terminology                                                       |
| Ice Protection                                      | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                       |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                |
|-----------------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|

| Thrust Reverse                                      | Understand determining climb performance per AFM | Can explain system or component limitations                                                                                                    |
| Thrust Reverse                                      | Understand determining climb performance per AFM | Can explain all notes cautions or warnings listed in the OEM manuals & OEM manuals                                                             |
| Thrust Reverse                                      | Understand determining climb performance per AFM | Can explain immediate action items or memory items, if appropriate                                                                             |
| Thrust Reverse                                      | Understand determining climb performance per AFM | Can use the appropriate checklists and NORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem or device |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                                                                                                                            |
|-----------------------------------------------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                                                                                                                                  |
| Thrust Reverse                                      | Understand determining climb performance per AFM | Can use the appropriate checklists and ABNORMAL procedures to demonstrate or describe the proper use of the airplane system, subsystem, or device                          |
| Weight and Balance                                  | Understand determining climb performance per AFM | Can reference air carrier weight and balance procedures if applicable                                                                                                      |
| Weight and Balance                                  | Understand determining climb performance per AFM | Can explain and demonstrate the use of charts, tables, and data to determine performance                                                                                   |
| Weight and Balance                                  | Understand determining climb performance per AFM | Can demonstrate proficient use of appropriate performance charts, tables, graphs, or other data to determine airplane performance and limitations for all phases of flight |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                                    |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES                          |
| Windshear                                           | Understand determining climb performance per AFM | Can discuss windshear recognition                                  |
| Windshear                                           | Understand determining climb performance per AFM | Can discuss windshear pilot technique                              |
| Windshear                                           | Understand determining climb performance per AFM | Can discuss windshear encounter during takeoff after liftoff       |
| Windshear                                           | Understand determining climb performance per AFM | Can discuss windshear encounter during takeoff while on the runway |
| Windshear                                           | Understand determining climb performance per AFM | Can discuss windshear encounter on the approach                    |

| HS-125 COURSE 2 – GROUND SCHOOL LEARNING OBJECTIVES |                                                  |                                                  |
|-----------------------------------------------------|--------------------------------------------------|--------------------------------------------------|
| COURSE 2                                            | TASKS                                            | KNOWLEDGE & COGNITIVE LEARNING OBJECTIVES        |
| Windshear                                           | Understand determining climb performance per AFM | Can discuss general windshear recovery technique |

## 7 Simulator Training Learning Objectives – Course 2

### 7.1 Course 2 – SIM 1 Learning Objectives

| HS-125 COURSE 2 - SIMULATOR (SIM) TRAINING 1 |                                                                                                              |                              |                         |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| TASKS                                        | MOTOR SKILL LEARNING OBJECTIVES                                                                              | ATTITUDE LEARNING OBJECTIVES | TASK EXPECTATION RATING |
| Conduct after landing, parking and securing  |                                                                                                              |                              | High                    |
| Conduct after landing, parking and securing  | Can demonstrate runway incursion avoidance procedures.                                                       |                              | High                    |
| Conduct after landing, parking and securing  | Can comply with ATC instructions and perform radio calls as appropriate.                                     |                              | High                    |
| Conduct after landing, parking and securing  | Can coordinate with crew, if applicable, and execute the appropriate checklist(s) after clearing the runway. |                              | High                    |
| Conduct after landing, parking and securing  | Can perform parking in the appropriate area, considering the safety of nearby persons and property.          |                              | High                    |

| HS-125 COURSE 2 - SIMULATOR (SIM) TRAINING 1 |                                                                                                    |                                                                                                                        |                               |
|----------------------------------------------|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| TASKS                                        | MOTOR SKILL<br>LEARNING OBJECTIVES                                                                 | ATTITUDE LEARNING<br>OBJECTIVES                                                                                        | TASK<br>EXPECTATION<br>RATING |
| Conduct after landing, parking and securing  | Can execute a postflight inspection and document discrepancies and servicing requirements, if any. |                                                                                                                        | High                          |
| Conduct after landing, parking and securing  | Can perform securing the airplane.                                                                 |                                                                                                                        | High                          |
| Conduct after landing, parking and securing  |                                                                                                    | Can identify, assess, and manage risks, encompassing inappropriate activities and distractions.                        | High                          |
| Conduct after landing, parking and securing  |                                                                                                    | Can identify, assess, and manage risks, encompassing confirmation or expectation bias as related to taxi instructions. | High                          |
| Conduct after landing, parking and securing  |                                                                                                    | Can identify, assess, and manage risks, encompassing propeller, turbofan inlet, and exhaust safety.                    | High                          |

| HS-125 COURSE 2 - SIMULATOR (SIM) TRAINING 1          |                                    |                                                                                                        |                               |
|-------------------------------------------------------|------------------------------------|--------------------------------------------------------------------------------------------------------|-------------------------------|

| Conduct Landing from a No Flap or Nonstandard Flap Approach | Can perform non-normal configuration approaches and landings in instrument conditions. For these approaches, the simulated weather minima may be above, or well above, the lowest minima authorized. Minima should be at levels that might typically be experienced in line operations for a landing with the non-normal condition used. During these approaches, representative autoflight, instrument, and aircraft system configurations or combinations of configurations should be demonstrated (e.g., F/D, autopilot, HUD, vision systems, autothrottles, raw data, and inoperative electrical or hydraulic components). |                                 | High                          |

| Conduct Stall Prevention and Recovery Scenario per AC120-109A | <p>Can execute Scenario-Based Training (SBT). The goal of SBT is to develop decision-making skills relating to stall prevention and recovery during Line-Oriented Flight Training (LOFT). Emphasis should be placed on preventing conditions that may lead to a stall event. SBT would normally be used after a pilot demonstrates proficiency in maneuver-based training and during advanced stages of training, such as upgrade training and recurrent training.</p> <p>(1) Scenarios. When possible, scenarios should include accident, incident, ASAP, FOQA, and/or ASRS data to provide realistic opportunities to see how threat situations may develop and how they should be managed during line operations. Sample SBT lesson plans are provided in Appendix 3.</p> <p>(2) Briefing. Pilots should not normally be briefed that they are receiving SBT. The concept is line-oriented flying, which allows the pilots to recognize and manage the expected or unexpected stall threats as they develop during normal operations. However, situations may arise where pilots exhibit excellent stall prevention skills and initiate a recovery prior to the</p> |                                 | High                          |

| Conduct Stall Prevention and Recovery Scenario per AC120-109A | <p>Can appreciate USING SURPRISE IN TRAINING. Surprise has been a factor in stall incidents and accidents. Although it may be difficult to create surprise in the training environment, if achieved, surprise events may provide a powerful lesson for the crew. The goal of using surprise in training is to provide the crew with a surprise experience to reinforce timely application of the effective recovery technique under potentially confusing circumstances. Considerable care should be used in surprise training to avoid a negative learning experience. Surprise should not be used during checking. Stall prevention training should incorporate event conditions and variables typical of an unintentional stall that are likely to result in surprise due to the unexpected stall development, presentation, and behavior.</p> |                                 | High                          |

| Conduct TCAS<br>Resolution<br>Advisory (RA)  |                                    | Can appreciate that TCAS only considers intruders that it believes to be a threat when selecting an RA. As such, it is possible for TCAS to issue an RA against one intruder that results in a maneuver towards another intruder that is not classified as a threat. If the second intruder becomes a threat, the RA will be modified to provide separation from that intruder. | High                          |
| Conduct TCAS<br>Resolution<br>Advisory (RA)  |                                    | Can appreciate the consequences of both responding to, and not responding to, an RA                                                                                                                                                                                                                                                                                             | High                          |
