

Report on the Outcome of the Providers' Meeting (PM/31)

JCAB and FAA held the first day of PM/31 earlier this week on Tuesday.

We discussed many topics that were on yesterday's FIT agenda, as well as today's Plenary agenda.

These topics included:

- The current status and future plans for the NOPAC Redesign project
- VHF-to-satellite transition issues
- Data link network outages
- Rocket launches
- GPS spoofing and jamming
- Upcoming enhancements to the FAA's ATOP oceanic control system.

We will close PM/31 on Friday by continuing the discussion on NOPAC Redesign and any other topics that carry over from today's meeting.
