

GOVERNMENT/INDUSTRY AERONAUTICAL CHARTING FORUM
Instrument Procedures Group
(Transcribed/Re-Formatted)
HISTORY RECORD

FAA Control # 97-02-192

SUBJECT: Waypoint contraction Change.

BACKGROUND/DISCUSSION: It was suggested at previous forums to drop the "WPT" from waypoint designators and chart these waypoints with a 5 letter identifier and a symbol. It is apparent that this charting change is being processed on NOS charts. It was also suggested that textual instructions be charted with a 5 letter identifier followed with "WP". This change has not been started.

RECOMMENDATION: It is recommended that waypoints charted for textual instructions be 5 letter identifiers followed by the contraction "WP" in lieu of "WPT".

COMMENT: This recommendation affects Interagency Air cartographic Committee (IACC) U. S. Government specifications.
