Re: FLL Runway Geometry Update – Record of Changes

Fort Lauderdale/Hollywood International Airport (FLL) Runway Geometry Update (RGU):

The following memorandum outlines the actions taken to update the 2008 version of the FLL Existing Airport Layout Plan (ALP), Future ALP, and Data Sheet drawing files with the geometry and data associated with the proposed Runway 10R/28L project. This update has been conducted on behalf of the Broward County Aviation Department (BCAD). This record of changes serves as a guideline to facilitate the review process by identifying the key alterations between the approved 2008 ALP and the March 2011 Runway Geometry Update (RGU).

The list of changes is followed by a request for clarification on items requiring attention prior to submitting the RGU to the FAA.

Changes to Existing Airport Conditions Drawing

The following is a list of changes made to the Existing Airport Conditions drawing since the last ALP submission.

1. Revised all Runway elevation data relative to landing thresholds, displaced thresholds, high points, low points, and Touch Down Zone elevations to reflect NAVD 88 vertical datum.
2. Updated Embraer facility to show expansion of Building N-22 (north side area)
3. Updated Sheltair facility by adding Building N-12 to the drawing (north side area)
4. Removed canopy from AeroTerm Building N-19 (north side area)
5. Removed Building N-16, which was demolished, from the drawing (adjacent Building N-15 and N-17, north side area)
6. Removed Maxihut structure located south of Taxiway C, west of Taxiway E, and north of SW 39th Street
7. Modified Localizer Critical Areas on all runways to current safety area standards
8. Deleted Localizer Critical Area depicted at Runway 13 threshold (31 Approach Localizer)
9. Deleted Localizer Critical Area depicted at Runway 9R threshold (27L Approach Localizer)
10. Removed portions of Building N-19 and Building N-12 that have been demolished from the Building Legend (reflected in aerial imagery)
11. Added newly constructed Building N-24 and Building N-25 to the Building Legend (reflected in aerial imagery)
12. Expanded Building N-39 (reflected in aerial imagery)
13. Updated airfield geometry for Taxiways A4, B, B1, B2, B3, B4, B5, D, E, Q, S , and T5 (reflected in aerial imagery)
14. Removed Taxiway E1 from the drawing (reflected in aerial imagery)
15. Removed Taxiway E3 from the drawing (reflected in aerial imagery)
16. Removed the Service Road adjacent to Taxiway D and Q that was near the midpoint of Runway 13/31 (reflected in aerial imagery)
17. Relocated VOR to temporary position south of Taxiway C near Runway 9L threshold
18. Taxiway H, H1, H2, H3, H4, and a section of Taxiway Q south of Runway 9R/27L are closed and will be decommissioned
19. Labeled Taxiway B7 near Runway 27R threshold
20. Removed Building W-24, which was demolished, from the Building Legend (**not** reflected in aerial imagery)
21. Added Ramp Control label, adjacent to Building N 35, to the drawing
22. Widened Taxiway E pavement near intersection with Runway 13/31
23. Relocated RTR from south of SW 39th Street to location between SW 42nd Ct. and Lee Wagener Blvd.
24. Updated drawing notes and legends as appropriate

Changes to Future Airport Conditions Drawing

Changes to the Future Airport Conditions drawing reflect the addition of the new Runway 10R/28L as well as the taxiways/taxilanes associated with the project. The Future Airport Conditions drawing reflects both a "Phase 1" and "Ultimate" Airport development program. Phase 1 includes the Airport development program through approximately 2014. The Ultimate Airport development program reflects BCAD's long-range plans.

25. Changed designations for Runway 9L/27R and 9R/27L to Runway 10L/28R and 10R/28L, respectively
26. Revised new Runway 10R/28L and associated taxiways to reflect 60% design drawings. Runway end elevations are now 7.5 feet MSL for the Runway 10R threshold and 64.9 feet MSL for the Runway 28L threshold.
27. Included future Runway 10L/28R site topography in the RGU
28. Changed the approach light system for Runway 10R/28L from a MALSR to a MALSF
29. Relocated Maxihut facility adjacent to the Lee Wagener Blvd overpass of I-95
30. Added Note – EMAS at Runway End 27R to be extended and existing localizer to be relocated
31. Added the Terminal 4 Canopy Extension Project to the drawing
32. Added the RON pavement and lighting project, east of Terminal 1, to the drawing
33. Removed proposed Concourse A project from the drawing
34. Depicted location of relocated VOR/DME, ASOS, and ASR on the drawing
35. Discarded Building E-29's "To Be Removed" identifier in the drawing
36. Revised FBO development plans adjacent to Runway 10R threshold (Sheltair). Centerline of the ramp area taxilane (Aircraft Design Group [ADG] III) accessing the proposed Sheltair development site has been set back 215 feet from the new Taxiway H (ADG V). This provides ADG V to ADG III specific taxiway clearance plus allowance for potential increase in ADG III wingspans being contemplated by the FAA.
37. Added the Revised Taxiway C project based on engineering design documents
38. Included Phase 1 and Ultimate Terminal development plans in the drawing
39. Updated Future ARP
40. Depicted relocated localizer for Future Runway 10L approaches on the drawing. Localizer was relocated approximately 225 feet to the east.
41. Removed Security Gate 174 adjacent to Taxiway J4 from the RGU
42. Identified Building E-4, Concourse H, as "Proposed Demolition"
43. Updated drawing notes and legends as appropriate

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

Changes to Data Sheet

44. Added Taxiway/Taxilane Data Table
45. Updated Data Sheet notes as appropriate
46. Updated the following data elements:
    - NAVAID facility information
    - Existing and future building numbers and names
    - Existing and future building elevations
    - Runway coordinates and associated elevations
    - Magnetic declination
    - Critical Aircraft and Design Group
    - Future ARP
    - Airport Data Tables
    - Runway Data tables

Previous Comments on the 2008 version of the ALP

The following discussion addresses comments coordinated between the FAA, BCAD, and designers on the 2008 version of the ALP, and actions taken with the 2011 Runway Geometry Update (RGU) to satisfy any outstanding issues.

Comments Addressed According to BCAD Response to FAA Comments Dated October 17, 2008

1. FAA COMMENT: The Future Runway 9R-27L Extension will require the relocation of the existing localizer and the PAPI for Runway 27L. A Reimbursable Agreement (RA) between the FAA/ATO and Broward County Aviation Division will have to be drafted to accomplish the relocation work. To discuss the details of the RA, please contact Angela Freeman, Lead Planner, Office of Planning & Integration, at (404) 305-7054.

BCAD COMMENT: BCAD will coordinate with the FAA – Air Traffic Office to execute the Reimbursable Agreement as part of the design and development phase of the project.

2011 RGU ACTION: None, comment regarding funding of relocated NAVAIDs continues to be valid.

2. FAA COMMENT: The Draft ALP indicates an ILS and a MALSR to be installed on both ends of 9R-27L. Programs for these systems have not been identified by the Planning and Requirements Group. The sponsor needs to contact Dave Gigowski at (404) 305-7107 for additional information on the proposed ILS and MALSR.

BCAD COMMENT: BCAD will coordinate with the FAA Planning and Requirements Group regarding this issue as part of the design and development phase of the project.

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

2011 RGU ACTION: ILS continues to be proposed on Future Airport Conditions drawing. MALSR installation at Future Runway 10R/27L Ends has been changed from MALSR to MALSF. BCAD coordination efforts with FAA Planning regarding this effort will occur during design and development.

3. FAA COMMENT: The Airway Facilities Division has not seen the decommission letter of the use of Runway 13-31, therefore cannot comment on its impacts. Impacts to FAA facilities resulting from development identified on the Draft ALP, cannot be determined until more definitive plans (building dimensions, locations and elevation) have been developed.

BCAD COMMENT: BCAD will coordinate with the FAA – Airway Facilities Division once a schedule for development of the new runway program is established.

2011 RGU ACTION: None, comment continues to be valid.

4. FAA COMMENT: Line-of-sight (LOS) from the existing ATCT to existing and future operational surfaces shall be protected from obstruction. "Shadow studies" for planned structures and/or parked aircraft shall be submitted to the FAA for approval

BCAD COMMENT: LOS studies need to be conducted and the results need to be submitted to FAA for proposed terminal development, apron, and areas of concern for existing infrastructure (i.e., hangars) as part of design and development phase of the project.

2011 RGU ACTION: None, comment continues to be valid.

5. FAA COMMENT: Changing the location of the runway threshold will require RNAV approaches to Runway 9R-27L, and LOC R08R, to be revised. Flight Procedures (FPO) requests that they be provided the expected date that the runway construction will be complete (at least 12 months in advance) so that approaches can be developed/amended.

BCAD COMMENT: BCAD will coordinate with the FAA – Flight Procedures Office as part of design and development phase of the project.

2011 RGU ACTION: None, comment continues to be valid.

6. FAA COMMENT: In review of the various pages in the ALP there are several sheets that show obstructions. If these obstructions are surveyed to a 2C accuracy it would be beneficial to have them added into the obstruction database. These obstructions can be added through this web site: https://tpss.faa.gov/etpss. By entering the obstructions into the database, FPO can better evaluate current and proposed obstructions. Questions on the TPSS site can be directed to Gary Raymond 404-305-8692.

BCAD COMMENT: The obstruction data used for the Draft ALP were obtained from sources that included the NOAA database and the last ALP. With the proposed airfield improvements, a new comprehensive airport airspace survey is being conducted in accordance with the latest versions of FAA Advisory Circulars 150/5300 -16, -17, and -18, in coordination with the National Geodetic Survey (NGS) and FAA Airports-GIS. Upon final approval, the survey data can be submitted to the Third Party Survey System (TPSS) for incorporation into the database.

2011 RGU ACTION: None, to be handled with new survey under a separate contract currently underway.

7. FAA COMMENT: Runway 9L: The potential for adverse effects of localizer (LOC) critical area penetration created by craft on the canal west of RWY 9R are addressed. Runway 27R: The electro magnetic force generated by the FPL Power Lines east of the RWY may derogate or prohibit use of the localizer signal. This needs potential problem should be evaluated in the early stages of runway usage planning.

BCAD COMMENT: The localizer antenna for Runway 9R approaches, situated near the Runway 27L end, was depicted incorrectly. The revised submittal of the ALP set will show it located on top of the new earth berm, inside the retaining wall, beyond the end of the EMAS bed.

2011 RGU ACTION: Runway 9R approach localizer depicted on top of earth berm, inside the retaining wall in the 2011 RGU.

8. FAA COMMENT: During the construction, if only Runway 9L-27R is available, airport delays could be costly and the length of delays may be substantial if future seasonal operations meet or exceed past levels. The Air Traffic Organization (ATO) strongly recommends that construction of the temporary runway be reconsidered so that a one-runway operation can be limited to the least amount of time possible.

BCAD COMMENT: At this time, BCAD and FAA-ADO jointly made a decision not to build a temporary runway as part of the proposed runway Environmental Impact Statement. If during design, a temporary runway needs to be developed to address operational conditions, it will be a part of the design documents for that project. At this time a temporary runway is not recommended for depiction in the ALP set. Through the design and development stages of the project BCAD will also consider the temporary use of a taxiway as a runway if, under a single-runway scenario, the runway must be closed for short periods due to an emergency.

2011 RGU ACTION: None, comment continues to be valid.

9. FAA COMMENT: During July 7-10, 2008, the Draft ALP runway design was studied at the FAA Technical Center's AFTIL Lab and tower simulator during a Safety Management Study. The review team observed aircraft operations that provided insight and a level of validation for the remarks below. The

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

future development of FLL and increased operations will require a proportional increase in taxiways and areas to hold aircraft in the center of the airport. The ATO considers the following recommendations essential for the future efficient operations at FLL:

Comments Regarding Visibility Concerns

A. Group 4 aircraft on the east end of the new Taxiway (TWY) H obstruct the tower controller's visibility of aircraft at the Runway (RWY) 27L departure point. The ASDE-X (with Safety Logic) has been installed and will be required to conduct efficient operations. Alternate ATC procedures will be developed for times when the ASDE-X may be out of service.

B. The Sheltair Hanger, as depicted, blocks the view of small aircraft on approximately 150' of the new TWY G. The distance between the hanger and TWY G may penetrate protected taxiway surfaces and BCAD will be required to analyze this situation.

Comments Regarding the Runway, Taxiway and Holding Pads

C. The taxiway exits for RWY 9R/27L are insufficient and create high runway occupancy times. Two additional runway exits should be added and locations should be based upon runway slope and aircraft performance data.

D. All runway exits should be shaped with trajectories to expedite runway exiting and reduce runway occupancy time (high speed taxiways).

E. The holding pad, north of the RWY 27L entry point, should be expanded to the maximum extent possible for increased capacity and flexibility to offset the limitations of a single taxiway to access the runway.

F. The RWY 27L departure point, where aircraft enter the runway, should be expanded by filling in the grass area between the east end and the adjacent taxiway connector. Three lead in lines to the runway in this expanded area should be created. The added runway access is needed to change the departure sequence as typically required in daily operations.

G. The RWY 9R departure point where aircraft enter the runway should be expanded by filling in the grass area between the west end and the adjacent taxiway connector. Also, the grass area to the north, between TWY H and TWY G, should be filled in for additional runway access. Additional lead in lines to the runway should be added in this area.

Comments Regarding the Terminal Area

H. The capacity of the Midfield Holding Bay is insufficient and an additional holding bay is needed to avoid a rapid build up of ground congestion. The recommended location of an additional bay is northwest of the Midfield Holding Bay (south of TWY C, east of TWY E and west of TWY P / TWY D).

I. At least three taxiway connectors are needed between TWY Q and the terminal area.

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

J. Add a taxiway connector between TWY P and TWY Q is needed south of the midfield holding bay and north of TWY G.

K. All taxiway connectors between TWY C and Taxi Lane T should be wide enough for two aircraft to pass simultaneously. The north terminal ramp area east of Concourse E and south of TWY C is minimal. Continuous aircraft movement is essential.

L. Add a taxiway connector to exit the Shelt Air Ramp south to TWY G.

M. Eliminate the taxiway connector between TWY G/H and TWY P/Q.

Obstruction Evaluation

From an obstruction evaluation standpoint, we offer no objection to the approval of the ALP provided: 1) all future projects (including any part 77 penetrations) are studied separately; 2) any future project has no permanent IFR effect; 3) any future project does not cause any line of sight problems from the FLL ATCT to movement areas; 4) the OE/AAA database is updated to reflect the new ALP; and, 5) a copy of the final ALP is forwarded to the FLL ATCT.

BCAD COMMENT: In developing the Draft Interim ALP, the airfield layout reflects the EIS. Before a final ALP is altered and re-submitted, a separate airfield planning study that will involve the sponsor, EIS Team, and FAA should be undertaken to address and resolve the issues presented below, and other issues that may be of concern to the sponsor or other stakeholders. Following satisfactory resolution of the issues, a revised ALP can be re-submitted.

2011 RGU ACTION: As indicated in the response to comments from July 2008, BCAD has been diligently working with ATCT and other FAA divisions, airlines, and other stakeholders to ensure adequate taxiway infrastructure is provided for the safe and efficient movement of aircraft. A number of additional taxiways and hold areas have been included in the central portion of the airfield as well as high speed exits and holding areas at the runway ends for both Runways 10L/28R and 10R/28L. The Sheltair hangar, Building W-31, will be partially demolished to provide sufficient setback for ADG V aircraft clearance on Taxiway H as well as clear sight lines from the ATCT cab.

Comments Addressed According to FAA Approval Letter Dated January 22, 2009

1. COMMENT: The existing RSA for Runway 9R/27L does not meet current FAA Airport Design Standards. Therefore, the FAA requires that you improve the RSA as proposed on this ALP as soon as possible, but no later than concurrently with your next project to overlay, strengthen, or extend the runway. A request to provide federal funds to do the work on this runway will not be approved unless the funding request includes improvement of the RSA since the improvement to the RSA has been determined practicable by the FAA.

2011 RGU ACTION: Future Runway 10R/28L design mitigates currently deficient RSAs.

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

2. COMMENT: Existing RSA for Runway 13/31 does not meet current FAA Airport Design Standards. This runway will be close as a part of the proposed development plan.

2011 RGU ACTION: None. Runway 13/31 continues to be depicted as closed in the 2011 RGU.

Comments Addressed In Relation Runway Profiles

FAA airport design criteria relative to the development of future Runway 10R/28L and the manner in which the 2011 RGU addresses these criteria is detailed below:

1. **CRITERIA:** Runway Longitudinal Grade (0.8% runway gradient for each runway end portion, and maximum gradient for central two quarters of runway is 1.5%)
   2011 RGU ACTION: Future Runway 10R/28L gradient is depicted in the 2011 RGU as follows:
   Runway 28L End ¼ Portion Grade……..0.80%
   Runway 10R End ¼ Portion Grade……..0.09%
   Central Portion Grade……..1.31%

2. **CRITERIA:** Pilot's Line of Sight (all Runway points 5 feet above the runway surface must be visible for a minimum of half the runway length)
   2011 RGU ACTION: Pilot's Line of Sight criteria have been accounted for and, therefore, future Runway 10R/28L as detailed in the RGU is consistent with runway design standards.

3. **CRITERIA:** Localizer signal line of sight (CAT I Approach; 100 feet above threshold. Cat II/II Approach; actual Threshold Crossing Height)
   2011 RGU ACTION: Localizer Line of Sight has been designed to accommodate the most demanding criteria. Both runway approaches for Future Runway 10R/28L as depicted in the RGU maintain a clear localizer line of sight 50 feet above each threshold.

Actions Taken to Address Comments Received from Rebecca Henry March 1, 2011

1. COMMENT: The EMAS shown on both ends of Runway 9R-27L appears to be a smaller bed than we anticipated. Was the length of the beds determined by the manufacturer and was specific FLL fleet mix information used to determine the size of the bed?

2011 RGU ACTION: Placed footnote in safety area table on Future Airport Conditions Drawing in regards to Future Runway 10R/28L EMAS (referenced as Runway 9R/27L above) "Dimensions are all approximate, actual design dimensions may vary".

2. COMMENT: The taxiway centerlines leading up to the Runway 9R-27L: each end of the runway shows the taxiway center line splitting off into three separate lead in lines for three separate take off positions. Each of the three centerlines will require a different name which should be marked on the pavement (i.e., J1, J2, J3, etc.)

2011 RGU ACTION: Taxiways have been labeled J6, J7, and J8 at Future Runway 28L Threshold, and taxiways have been labeled H1, H2, and H3 at Future Runway 10R Threshold to address this comment.

Landrum & Brown

Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

3. COMMENT: The depiction of the Runway 9R-27L RSA on the ALP is incorrect. The RSA must be clear and graded, and capable of supporting an aircraft if there is an aircraft excursion. This ALP depicts "holes" in the RSA--you can see the road beneath it.

2011 RGU ACTION: Roadway infringing on RSA in this area has been depicted as demolished in order to address this comment.

Re: FLL Airport Layout Plan Update – Record of Changes

Fort Lauderdale/Hollywood International Airport (FLL) Partial Airport Layout Plan (ALP) Update:

The following memorandum outlines the actions taken to update the 2008 version of the FLL Existing ALP, Future ALP, and Data Sheet drawing files. This record of changes serves as a guideline to facilitate the review process by identifying the key alterations between the approved 2008 ALP and the May 2011 Partial ALP update.

The list of changes is followed by a request for clarification on items requiring attention prior to submitting the ALP to the FAA.

Changes to Existing ALP

The following is a list of changes made to the Existing ALP since the last ALP submission in 2009.

1. Update Embraer facility, Building N-22 expanded (north side area)
2. Update Sheltair facility, Building N-12 added to drawing (north side area)

memo

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

3. Remove Canopy from AeroTerm Building N-19 (north side area)
4. Building N-16 was demolished and removed from the ALP (Adjacent Building N-15 and N-17, north side)
5. Removed Maxihut structure located south of Taxiway C, west of Taxiway E, and north of SW 39th Street
6. Localizer Critical Areas on all runways were modified to current safety area standards
7. Deleted Localizer Critical Area depicted at Runway 13 threshold (31 Approach Localizer)
8. Deleted Localizer Critical Area depicted at Runway 9R threshold (27L Approach Localizer)
9. Portions of Building N-19 and Building N-12 have been demolished, removed from Building Legend (reflected in aerial imagery)
10. Building N-24 and Building N-25 constructed, added to Building Legend (reflected in aerial imagery)
11. Building N-39 expanded (reflected in aerial imagery)
12. Airfield geometry updates to Taxiways A4, B, B1, B2, B3, B4, B5, D, E, Q, S , and T5 (reflected in aerial imagery)
13. Taxiway E1 removed from ALP (reflected in aerial imagery)
14. Taxiway E3 removed from ALP (reflected in aerial imagery)
15. Service Road adjacent to Taxiway D and Q near midpoint of Runway 13/31 removed (reflected in aerial imagery)
16. VOR relocated to temporary position south of Taxiway C near Runway 9L threshold
17. Taxiway H, H1, H2, H3, H4, and a section of Taxiway Q south of Runway 9R/27L are closed and will be decommissioned
18. Labeled Taxiway B7 near Runway 27R threshold
19. Building W-24 demolished, removed from Building Legends (**not** reflected in aerial imagery)
20. Ramp Control label added to drawing, adjacent to Building N-35
21. Drawing notes and legends updated as appropriate

Changes to Future ALP

Changes to the Future ALP drawing reflect the addition of the new Runway 10R/28L as well as the associated taxiways/taxilanes associated with the project. The Future ALP reflects both a "Phase 1" and "Ultimate" Airport development program. Phase 1 includes the Airport development program through approximately 2014. The Ultimate Airport development program reflects the long-range Airport plans.

22. Designations for Runway 9L/27R and 9R/27L are changed to Runway 10L/28R and 10R/28L, respectively
23. Revised new Runway 10R/28L and associated taxiways to reflect 60% design drawings. Runway end elevation are now 7.5 feet MSL for the Runway 10R threshold and 64.9 feet MSL for the Runway 28L threshold. SEE ITEM #43
24. Runway 10R/28L approach light system was changed from a MALSR to a MALSF

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

25. Maxihut facility was relocated adjacent to the Lee Wagener Blvd overpass of I-95
26. Added Note – EMAS at Runway End 27R to be extended and existing localizer to be relocated
27. Terminal 4 Canopy Extension Project added to drawing
28. RON pavement and lighting project, east of Terminal 1, added to drawing
29. Removed proposed Concourse A project from drawing
30. Location for relocated VOR, ASOS, and ASR depicted on drawing
31. Building E-29 is no longer identified as "To Be Removed" in the Future ALP
32. Revised FBO development plans adjacent to Runway 10R threshold (Sheltair). Centerline of the ramp area taxilane (Aircraft Design Group [ADG] III) accessing the proposed Sheltair development site has been set back 215 feet from the new Taxiway H (ADG V). This provides ADG V to ADG III specific taxiway clearance plus allowance for potential increase in ADG III wingspans being contemplated by the FAA.
33. Revised Taxiway C project added based on engineering design documents
34. Phase 1 and Ultimate Phase Terminal Projects have been included in the ALP
35. Future ARP updated
36. Drawing notes and legends updated as appropriate

Changes to Data Sheet

37. The following data elements have been updated:
    - NAVAID facility information
    - Updated runway coordinates and associated elevations
    - Updated magnetic declination
    - Critical Aircraft and Design Group
    - Future ARP
    - Airport Data Tables
    - Runway Data tables
38. Added top elevation of buildings
39. Added Taxiway/Taxilane Data Table
40. Data Sheet notes updated as appropriate

Changes to ALP Set from March 4th through May 3rd 2011

Changes to Existing ALP

41. Added Inner Approach OFZ Surfaces to Runway 9L/27R
42. Added Inner Transitional OFZ Surfaces to Runway 27R Approach

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

Changes to Future ALP

43. Revised new Runway End 10R elevation to 10.0' MSL. 60% Design drawings identified Runway 10R elevation to be 7.5 feet MSL, however, recent design considerations have changed the elevation of Runway End 10R to 10.0 feet MSL.
44. Added runway hold lines for proposed Runway 10R/28L taxiway system
45. Added Inner Approach OFZs to proposed Runway 10R/28L
46. Removed Proposed Modification of Standard Table regarding RSA dimensions for Runway 9L/27R (10L/28R)
47. Removed Safety Area Standards Table from drawing title block
48. Added Multi-use Path on east side of airport

Changes to Data Sheet

49. Added OFZ Penetrations Table

Previous Comments on the 2008 version of the ALP

The following discussion addresses comments coordinated between FAA and BCAD on the 2008 version of the ALP and actions taken with the 2011 version of the ALP to satisfy any outstanding issues.

Comments Addressed According to BCAD response to FAA comments Dated October 17, 2008

1. FAA COMMENT: The Future Runway 9R-27L Extension will require the relocation of the existing localizer and the PAPI for Runway 27L. A Reimbursable Agreement (RA) between the FAA/ATO and Broward County Aviation Division will have to be drafted to accomplish the relocation work. To discuss the details of the RA, please contact Angela Freeman, Lead Planner, Office of Planning & Integration, at (404) 305-7054.

BCAD COMMENT: BCAD will coordinate with the FAA – Air Traffic Office to execute the Reimbursable Agreement as part of the design and development phase of the project.

2011 ALP ACTION: None, comment regarding funding of relocated NAVAIDs continues to be valid.

2. FAA COMMENT: The Draft ALP indicates an ILS and a MALSR to be installed on both ends of 9R-27L. Programs for these systems have not been identified by the Planning and Requirements Group. The sponsor needs to contact Dave Gigowski at (404) 305-7107 for additional information on the proposed ILS and MALSR.

BCAD COMMENT: BCAD will coordinate with the FAA Planning and Requirements Group regarding this issue as part of the design and development phase of the project.

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

2011 ALP ACTION: ILS continues to be proposed on Future ALP. MALSR installation at Future Runway 10R/27L Ends has been changed from MALSR to MALSF. BCAD coordination efforts with FAA Planning regarding this effort will occur during design and development.

3. FAA COMMENT: The Airway Facilities Division has not seen the decommission letter of the use of Runway 13-31, therefore cannot comment on its impacts. Impacts to FAA facilities resulting from development identified on the Draft ALP, cannot be determined until more definitive plans (building dimensions, locations and elevation) have been developed.

BCAD COMMENT: BCAD will coordinate with the FAA – Airway Facilities Division once a schedule for development of the new runway program is established.

2011 ALP ACTION: None, comment continues to be valid.

4. FAA COMMENT: Line-of-sight (LOS) from the existing ATCT to existing and future operational surfaces shall be protected from obstruction. "Shadow studies" for planned structures and/or parked aircraft shall be submitted to the FAA for approval

BCAD COMMENT: LOS studies need to be conducted and the results need to be submitted to FAA for proposed terminal development, apron, and areas of concern for existing infrastructure (i.e., hangars) as part of design and development phase of the project.

2011 ALP ACTION: None, comment continues to be valid.

5. FAA COMMENT: Changing the location of the runway threshold will require RNAV approaches to Runway 9R-27L, and LOC R08R, to be revised. Flight Procedures (FPO) requests that they be provided the expected date that the runway construction will be complete (at least 12 months in advance) so that approaches can be developed/amended.

BCAD COMMENT: BCAD will coordinate with the FAA – Flight Procedures Office as part of design and development phase of the project.

2011 ALP ACTION: None, comment continues to be valid.

6. FAA COMMENT: In review of the various pages in the ALP there are several sheets that show obstructions. If these obstructions are surveyed to a 2C accuracy it would be beneficial to have them added into the obstruction database. These obstructions can be added through this web site: https://tpss.faa.gov/etpss. By entering the obstructions into the database, FPO can better evaluate current and proposed obstructions. Questions on the TPSS site can be directed to Gary Raymond 404-305-8692.

BCAD COMMENT: The obstruction data used for the Draft ALP were obtained from sources that included the NOAA database and the last ALP. With the proposed airfield improvements, a new comprehensive airport airspace survey is being conducted in accordance with the latest versions of FAA Advisory Circulars 150/5300 -16, -17, and -18, in coordination with the National Geodetic Survey (NGS) and FAA Airports-GIS. Upon final approval, the survey data can be submitted to the Third Party Survey System (TPSS) for incorporation into the database.

2011 ALP ACTION: None, to be handled with new survey under a separate contract currently underway.

7. FAA COMMENT: Runway 9L: The potential for adverse effects of localizer (LOC) critical area penetration created by craft on the canal west of RWY 9R are addressed. Runway 27R: The electro magnetic force generated by the FPL Power Lines east of the RWY may derogate or prohibit use of the localizer signal. This needs potential problem should be evaluated in the early stages of runway usage planning.

BCAD COMMENT: The localizer antenna for Runway 9R approaches, situated near the Runway 27L end, was depicted incorrectly. The revised submittal of the ALP set will show it located on top of the new earth berm, inside the retaining wall, beyond the end of the EMAS bed.

2011 ALP ACTION: Runway 9R approach localizer depicted on top of earth berm, inside the retaining wall in the 2011 ALP update.

8. FAA COMMENT: During the construction, if only Runway 9L-27R is available, airport delays could be costly and the length of delays may be substantial if future seasonal operations meet or exceed past levels. The Air Traffic Organization (ATO) strongly recommends that construction of the temporary runway be reconsidered so that a one-runway operation can be limited to the least amount of time possible.

BCAD COMMENT: At this time, BCAD and FAA-ADO jointly made a decision not to build a temporary runway as part of the proposed runway Environmental Impact Statement. If during design, a temporary runway needs to be developed to address operational conditions, it will be a part of the design documents for that project. At this time a temporary runway is not recommended for depiction in the ALP set. Through the design and development stages of the project BCAD will also consider the temporary use of a taxiway as a runway if, under a single-runway scenario, the runway must be closed for short periods due to an emergency.

2011 ALP ACTION: None, comment continues to be valid.

9. FAA COMMENT: During July 7-10, 2008, the Draft ALP runway design was studied at the FAA Technical Center's AFTIL Lab and tower simulator during a Safety Management Study. The review team

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

observed aircraft operations that provided insight and a level of validation for the remarks below. The future development of FLL and increased operations will require a proportional increase in taxiways and areas to hold aircraft in the center of the airport. The ATO considers the following recommendations essential for the future efficient operations at FLL:

Comments Regarding Visibility Concerns

A. Group 4 aircraft on the east end of the new Taxiway (TWY) H obstruct the tower controller's visibility of aircraft at the Runway (RWY) 27L departure point. The ASDE-X (with Safety Logic) has been installed and will be required to conduct efficient operations. Alternate ATC procedures will be developed for times when the ASDE-X may be out of service.

B. The Sheltair Hanger, as depicted, blocks the view of small aircraft on approximately 150' of the new TWY G. The distance between the hanger and TWY G may penetrate protected taxiway surfaces and BCAD will be required to analyze this situation.

Comments Regarding the Runway, Taxiway and Holding Pads

C. The taxiway exits for RWY 9R/27L are insufficient and create high runway occupancy times. Two additional runway exits should be added and locations should be based upon runway slope and aircraft performance data.

D. All runway exits should be shaped with trajectories to expedite runway exiting and reduce runway occupancy time (high speed taxiways).

E. The holding pad, north of the RWY 27L entry point, should be expanded to the maximum extent possible for increased capacity and flexibility to offset the limitations of a single taxiway to access the runway.

F. The RWY 27L departure point, where aircraft enter the runway, should be expanded by filling in the grass area between the east end and the adjacent taxiway connector. Three lead in lines to the runway in this expanded area should be created. The added runway access is needed to change the departure sequence as typically required in daily operations.

G. The RWY 9R departure point where aircraft enter the runway should be expanded by filling in the grass area between the west end and the adjacent taxiway connector. Also, the grass area to the north, between TWY H and TWY G, should be filled in for additional runway access. Additional lead in lines to the runway should be added in this area.

Comments Regarding the Terminal Area

H. The capacity of the Midfield Holding Bay is insufficient and an additional holding bay is needed to avoid a rapid build up of ground congestion. The recommended location of an additional bay is northwest of the Midfield Holding Bay (south of TWY C, east of TWY E and west of TWY P / TWY D).

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

I. At least three taxiway connectors are needed between TWY Q and the terminal area.

J. Add a taxiway connector between TWY P and TWY Q is needed south of the midfield holding bay and north of TWY G.

K. All taxiway connectors between TWY C and Taxi Lane T should be wide enough for two aircraft to pass simultaneously. The north terminal ramp area east of Concourse E and south of TWY C is minimal. Continuous aircraft movement is essential.

L. Add a taxiway connector to exit the Shelt Air Ramp south to TWY G.

M. Eliminate the taxiway connector between TWY G/H and TWY P/Q.

Obstruction Evaluation

From an obstruction evaluation standpoint, we offer no objection to the approval of the ALP provided: 1) all future projects (including any part 77 penetrations) are studied separately; 2) any future project has no permanent IFR effect; 3) any future project does not cause any line of sight problems from the FLL ATCT to movement areas; 4) the OE/AAA database is updated to reflect the new ALP; and, 5) a copy of the final ALP is forwarded to the FLL ATCT.

BCAD COMMENT: In developing the Draft Interim ALP, the airfield layout reflects the EIS. Before a final ALP is altered and re-submitted, a separate airfield planning study that will involve the sponsor, EIS Team, and FAA should be undertaken to address and resolve the issues presented below, and other issues that may be of concern to the sponsor or other stakeholders. Following satisfactory resolution of the issues, a revised ALP can be re-submitted.

2011 ALP ACTION: As indicated in the response to comments from 2008, BCAD has been diligently working with ATCT and other FAA divisions, airlines, and other stakeholder to ensure adequate taxiway infrastructure is provided for the safe and efficient movement of aircraft. A number of additional taxiways and hold areas have been included in the central portion of the airfield as well as high speed exits and holding areas at the runway ends for both Runways 10L/28R and 10R/28L. The Sheltair hangar, Building W-31, will be partially demolished to provide sufficient setback for ADG V aircraft clearance on Taxiway H as well as clear sight lines from the ATCT cab.

Comments Addressed According to FAA Approval Letter Dated January 22, 2009

1. COMMENT: Existing RSA for Runway 9R/27L does not meet FAA standards….

2011 ALP ACTION: Future Runway 10R/28L mitigates currently deficient RSAs.

Landrum & Brown
11279 Cornell Park Drive
Cincinnati, OH 45242
513.530.5333 | 513.530.1278 fax
www.landrum-brown.com

2. COMMENT: Existing RSA for Runway 13/31 does not meet current FAA Airport Design Standards. This runway will be close as a part of the proposed development plan.

2011 ALP ACTION: None. Runway 13/31 continues to be depicted as closed in the 2011 ALP update.

Actions taken to address comments received from Rebecca Henry March 1, 2011

1. COMMENT: The EMAS shown on both ends of Runway 9R-27L appears to be a smaller bed than we anticipated. Was the length of the beds determined by the manufacturer and was specific FLL fleet mix information used to determine the size of the bed?

2011 ALP ACTION: Placed footnote on Sheet 3 in safety area table in regards to Future Runway 10R/28L EMAS (referenced as Runway 9R/27L above) "Actual dimensions are all approximate, actual design dimensions may vary".

2. COMMENT: The taxiway centerlines leading up to the Runway 9R-27L: each end of the runway shows the taxiway center line splitting off into three separate lead in lines for three separate take off positions. Each of the three centerlines will require a different name which should be marked on the pavement (i.e., J1, J2, J3, etc.)

2011 ALP ACTION: Taxiways have been labeled J6, J7, and J8 at Future Runway 28L Threshold, and taxiways have been labeled H1, H2, and H3 at Future Runway 10R Threshold to address this comment.

3. COMMENT: The depiction of the Runway 9R-27L RSA on the ALP is incorrect. The RSA must be clear and graded, and capable of supporting an aircraft if there is an aircraft excursion. This ALP depicts "holes" in the RSA--you can see the road beneath it.

2011 ALP ACTION: Roadway infringing on RSA in this area has been depicted as demolished in order to address this comment.
