

Systems Working Group 5/8/14

IAASS Input on Suborbital Safety Guidelines

Finding

There are distinct differences in the approach taken by IAASS regarding Spaceflight Safety and future regulation than that taken by the US

Observation

IAASS Information more extensive than could be reviewed in the course of the SWG committee meeting, leaving potential for missed opportunity for constructive collaboration

Recommendation

SWG and IPCWG committees review the analysis and input provided by IAASS to identify potential future points of collaboration as COMSTAC moves to develop guidelines for commercial spaceflight regulatory regime.
