

## Lost C&C Link

In the event of lost command and control link:

Upon loss of radio link, aircraft shall continue on the predetermined course for 20 seconds

If link is re-established – mission continues

Else

Aircraft assumes a “return to launch” flight path and maintains for an additional 20 seconds.

If link is re-established – mission continues or PIC has option to abort and return to launch point.

Else

Aircraft will cut throttle and land at the point where 20 second time limit expires.
