Operational Description	Requested Effective Period	Beginning	
		End	
		Light out operation	No
		VFR operation	Yes
		IFR operation	No
		Day operation	Yes
		Night operation	No
		Program Executive Summary	<p>The Systems Engineering Directorate (SED) of the NASA Langley Research Center, desires to fly a "suite" of similar generic Unmanned Aircraft Systems (UAS) aircraft (Each vehicle weighs less than 100 pounds) at the 31VA Aberdeen Airfield of Smithfield, Virginia. This project activity is provided to the NASA Aviation Safety and Security Program (AvSSP) Office request for developing an Airborne Subscale Transport Aircraft Research (AirSTAR) generic transport aircraft test bed for conducting experiments. AirSTAR UAS will be flown at Aberdeen Airfield in support of the Control Upset Prevention and Recovery (CUPR) element of the AvSSP. The typical flight agenda at 31VA Aberdeen Airfield will consist of takeoff, traffic pattern maneuvers, and landing. All flight operations will be conducted in day and VFR "see and avoid" conditions within the confines of the airfield property.</p> <p>A letter of agreement dated January 1, 2004 between NASA Langley Research Center, and Smithfield Foods, Inc., is in existence authorizing NASA to use the privately owned airfield. The AirSTAR Project UAS will be flown in a manner consistent with the applicable letter of agreement. Flight operation can be easily accomplished at altitudes between the surface and 1,500 feet AGL and ~ 2.5 mile radius of the airfield. A Notice to Airman (NOTAM) will be filed with the Leesburg Flight Service in accordance with controlled airspace. The closest operational airfields are Newport News Williamsburg Airport (PHF) and Felker Army Airfield (FAF), of Fort Eustis, Virginia. The AirSTAR Project UAS vehicles are utilized specifically for development of safety pilot skills. These skills require pilot proficiency to fly UAS vehicle configurations with wing loads up to 144 ounces per square foot. These skills are required for the AirSTAR Project Control Upset research testing that will be conducted at Wallops Flight Facility, Goddard Space Flight Center.</p>
		Operational Summary	The NASA Langley UAS lab intends to utilize the airspace on an average of two days per week (Monday through Friday) between the hours of 8:30 am to 5:30 pm (local time). Each UAS flight duration is approximately 12 minutes in length and on a good weather day, will complete 8 to 12 flights.

Flight Aircrew Qualifications	Pilots	Private (Written)	Yes
		Private (Certified)	Yes
		Instrument	Yes
		Commercial	No
		Air Transport	No
		Unique Trained Pilot	Yes
		Unique Trained Pilot Description	All NASA UAS pilots have, as a minimum, passed the Private Pilot written exam. Four of the five pilots hold Private Pilot Land certifications, one pilot is instrument rated. Additionally, each NASA UAS pilot must possess a current Turbine Waiver Certification that is renewed annually. The guidelines and qualifications for holding a Turbine Waiver are defined and regulated by the Academy of Model Aeronautics. The skills for obtaining an AMA Turbine Waiver are defined in the AMA "Turbine Qualification Flight Attestation" document 510-D". All NASA UAS pilots are in good standing with current Turbine Waiver Certifications.
		DOD certified/trained	No
		Other Certified Training	No
		Trained on FAR Part 91 Requirement	Yes
		Medical Certification Class (FAA or DOD equivalent)	3
		Currency Status	All NASA UAS pilots have current class 3 medical certifications.
