| Operational Description | Requested Effective Period | Beginning | |
| | | End | |
| | | Light out operation | No |
| | | VFR operation | Yes |
| | | IFR operation | No |
| | | Day operation | Yes |
| | | Night operation | No |
| | | Program Executive Summary | Request for COA renewal; reference - ASN# 2007-AHQ-2-COA Case Status: Approved submitted 02/15/2007. The Systems Engineering Directorate (SED) of the NASA Langley Research Center desires to fly a "suite" of similar generic Unmanned Aircraft System (UAS) aircraft (Radio Control Models) at Blackstone (BKT), Virginia (Each vehicle weighs less than 100 pounds). This project activity is provided to the NASA Aviation Safety Program (AvSP) Office request for developing an Airborne Subscale Transport Aircraft Research (AirSTAR) generic transport aircraft test bed for conducting experiments. AirSTAR UAS will be flown at Blackstone Airfield in support of the Control Upset Prevention and Recovery (CUPR) element of the AvSP. The typical flight agenda at Blackstone Airfield will consist of takeoff, traffic pattern maneuvers, and landing. All flight operations will be conducted in day and VFR "see and avoid" conditions within the confines of the airfield property. The AirSTAR Project UAS will be flown in a manner consistent with policy and procedures applicable with the airfield flight operations at Blackstone. Flight operation can be easily accomplished at altitudes between the surface and 1,500 feet AGL and ~ 2.5 mile radius of the airfield. A Notice to Airman (NOTAM) will be filed with the Leesburg Flight Service in accordance with controlled airspace. The AirSTAR Project UAS vehicles are utilized specifically for development of safety pilot skills. These skills require pilot proficiency to fly UAS vehicle configurations with wing loads up to 144 ounces per square foot. These skills are required for the AirSTAR Project Control Upset research testing that will be conducted at Wallops Flight Facility, Goddard Space Flight Center. |
| | | Operational Summary | The NASA Langley UAS lab intends to utilize the airspace on an average of two days per week (Monday through Friday) between the hours of 8:30 am to 5:30 pm (local time). Each UAS flight activity has duration of approximately 12 minutes in length and on a good weather day, will complete 8 to 12 flights. |

| | | Instrument | Yes |
| | | Commercial | No |
| | | Air Transport | No |
| | | Unique Trained Pilot | Yes |
| | | Unique Trained Pilot Description | All NASA UAS pilots have, as a minimum, passed the Private Pilot written exam. Four of the five pilots hold Private Pilot Land certifications, one pilot is instrument rated. Additionally, each NASA UAS pilot must possess a current Turbine Waiver Certification that is renewed annually. The guidelines and qualifications for holding a Turbine Waiver are defined and regulated by the Academy of Model Aeronautics. The skills for obtaining an AMA Turbine Waiver are defined in the AMA "Turbine Qualification Flight Attestation" document 510-D". All NASA UAS pilots are in good standing with current Turbine Waiver Certifications. |
| | | DOD certified/trained | No |
| | | Other Certified Training | No |
| | | Trained on FAR Part 91 Requirement | Yes |
| | | Medical Certification Class (FAA or DOD equivalent) | 3 |
| | | Currency Status | All NASA UAS pilots have current class 3 medical certifications. |
