

Aeryon Scout Visual Observers

Visual observers will be in several locations in support of Scout Flight operations under this COA. One will be located on top of a building on the old USAF radar sight which is the highest point for miles around. This observer will be able to see aircraft at a minimum of three miles and probably five miles on any particular day.

A second observer will be within verbal range of the PIC and pass any radio traffic from the other observer or aircraft traffic as necessary.
