

CDRA COA Application System Description – Certified Components (TSO)

It is impossible to determine what certified components may exist within any UAS until such time as a UAS proponent that intends to support NMSU's UAS research and development activities submits the necessary documentation. Each proponent's UAS documentations will be analyzed to determine if any components have been certified and possesses a Technical Standard Order (TSO) certification. All TSO certified components will be noted and listed in NMSU's documentation of that particular UAS. An example of a TSO certified component is the Microair T2000SFL Transponder C74C Class 1a that is part of the Aerostar UAS.
