TAAC Air Show Lost Link/Mission Procedures

Air show procedures are:

- 1) Lost Link Point (LLP) will be near the middle of the box.
- 2) LLP point will be confirmed by the TAAC Mission Commander prior to requesting flight authorization from the Air Boss.
- 3) Lost link time will be the minimum for that particular UAS.
- 4) If link margins are not "good, green, or other designation of steadily good" then the flight will be cut short.
- 5) If a UAS loses link, until the situation is resolved, no other flights will ensue until the problem is resolved and the UA has been recovered.
- 6) Two (2) Flight Termination Points have been selected for any required terminations. These are designated on the map and are in good locations for the emergency/fire crew to easily access.

As discussed with UAPO ASI Marcello Mirabelli, UAPO has a extensive knowledge of the systems and did not need specific procedures on each system.
