Application Process

FAA UAS PUBLIC SAFETY

FSLTT Law Enforcement DiSCVR API Application Process

1 DHS GII Access Request gii.dhs.gov/gii

2 Invitation or request group membership via a DHS LE sponsor

3 DHS sponsor assigns roles and access

4 User acknowledges DiSCVR API data requirements and responsibilities

5 User will have access to respective tools associated with a group to include query capability

The Drone Information, Safety, Compliance, Verification, and Reporting (DiSCVR) Tool is an Application Programming Interface (API) that brings together FAA's Drone Zone Database and Low Altitude Authorization and Notification Capability (LAANC).

DiSCVR can assist you in identifying legally flying drones that have FAA authorization and proper registration, so you may rule them out for further investigation.

As of March 16, 2024, all drones over 249g or operating under Part 107 are required to broadcast a Remote ID number. Many have compared this Remote ID number to a digital license plate—a number that can be seen by everyone, but only specific entities can look up its registration. Currently, law enforcement can retrieve registration, waiver, and authorization information by contacting FAA's Law Enforcement Assistance Program. DiSCVR will enable law enforcement's direct access for specified purposes.

For information on authorities and reporting use the:
